exercises off the East Coast and in the Caribbean. In 1959 she joined Task Force 47 for the Inland Seas Cruise to the Great Lakes through the newly completed St. Lawrence Seaway. Nearly 75,000 mid-westerners visited this representative of the "salt-water navy" in her 2-month cruise.

When a crisis erupted in the fall of 1962 over offensive missiles stationed in Cuba, *Henley* joined the fleet "quarantining" the island and reasserting America's commitment to democracy as well as self-defense. Following this impressive demonstration of sea power, she then returned to a peacetime pattern of readiness operations.

On 1 October 1964, *Henley* became a Group I, Naval Reserve training ship assigned to the Anti-Submarine Warfare Component of the Naval Reserve. Following overhaul at Newport News, Va., and refresher training at Guantanamo Bay, Cuba, she began the first of numerous Naval Reserve training cruises out of Norfolk, Va., 1 May 1965. Manned by a nucleus crew, she cruised along the Atlantic Coast and into the Caribbean during the next 2 years and provided valuable service as an at-sea training platform for hundreds of Naval Reservists. Into mid-1967 she continued this vital duty both for officers and men of the Naval Reserve and the Nation. With her anticraft and shore bombardment capabilities, *Henley* maintains a state of readiness that would allow the ship to begin immediate operations with the Atlantic Fleet in any emergency.

Henley, John D., see *John D. Henley* (DD-553)

Henlopen

A former name retained.

(SP-385; dp. 254; l. 150'; b. 24'; dr. 9'; s. 12 k.; a. 1 3')

Henlopen, a wooden fishing vessel, was built in 1912 by W. G. Abbott of Milford, Del. She was acquired from her owner, James W. Elwell & Co., New York City, 12 December 1917 at New York, and commissioned 26 January 1918.

Henlopen was only retained by the Navy for a short time, being transferred 27 March 1918 at New York to France for use as a tug and minesweeper.

Hennepin

A county in Minnesota.

(AK-187: dp. 2,382 (lt.); l. 338'6"; b. 50'; dr. 21'1"; s. 11.5 k.; cpl. 85; a. 1 3", 6 20mm.; cl. *Alamosa*; T. C1-M-AV1)

Hennepin (AK-187) was laid down under Maritime Commission contract by Walter Butler Shipbuilders, Inc., Superior, Wis., 29 December 1943; launched 27 June 1944; sponsored by Mrs. F. P. Heffelfinger; acquired by the Navy 7 June 1945; and commissioned 3 July 1945 at Galveston, Tex., Lt. Comdr. Gavin L. Field in command.

After shakedown in the Gulf of Mexico, *Hennepin* departed Galveston 22 July to load cargo at Gulfport, Miss., and New Orleans, La. She departed New Orleans 6 August, steamed via the Panama Canal and the Marshalls, and arrived Cebu, Philippines, 23 September. Assigned to Service Squadron 8, she operated in the Philippines until 19 November when she departed Tacloban, Leyte, for Australia. During the next month she loaded cargo at Melbourne, Sydney, and Brisbane before sailing 17 December with provisions for occupation troops in Korea. Steaming via Okinawa, she reached Jinsen 7 January 1946; then sailed for Japan the 25th. She arrived Yokosuka 30 January, decommissioned 16 February, and transferred to the Army.

Hennepin was operated by the Army for the Supreme Commander of Allied Forces in Japan until 1 July 1950

when she was reacquired by the Navy. After refitting at Mitsubishi Shipyard, Kobe, Japan, she was assigned to MSTs 28 February 1951 and designated T-AK 187. Manned by a civilian crew, she participated in the Korean supply run during the American effort to repel Communist aggression in South Korea. Operating primarily out of Moji and Sasebo, she transported vital military cargo to American-held Korean ports during the remainder of the conflict.

Following an uneasy truce in Korea, *Hennepin* continued supply runs between Japan and South Korea. In response to the scheduled transfer of North Vietnam to Communist control, she departed Yokohama 30 August 1954 to provide support for Operation "Passage to Freedom." She arrived Haiphong, North Vietnam, 7 September, and for more than 3 months she transported cargo southward to St. Jacques and Saigon. After completing three runs to Saigon, she departed St. Jacques for Japan 22 December and arrived Sasebo 3 January 1955.

Between 1955 and 1958 *Hennepin* remained in the Far East, supporting America's determination to keep the peace and contain Communism in Asia. She continued to operate primarily between Japanese and South Korean ports, but cargo runs in 1957 and 1958 again sent her to Southeast Asia. Between 13 May and 3 July 1957 she operated out of Saigon and Bangkok, and in addition steamed to Karachi, Pakistan, and Bahrein Island in the Persian Gulf. During September 1957 and April 1958 she steamed out of Yokohama, carrying cargo to Saigon. After returning to Yokohama from Pusan, Korea, 21 June 1958, she was inactivated by the Navy 16 July. She transferred to the Maritime Administration 27 March 1959.

Hennepin received one battle star for Korean war service.

Henrico

A county in Virginia.

(APA-45; dp. 8,100 (lt.); l. 492'; b. 69'6"; dr. 26'6"; s. 16 k.; cpl. 479; a. 2 5", 8 40mm.; cl. *Bayfield*; T. C3-S-A2)

Henrico (APA-45), originally *Sea Darter*, was launched 31 March 1943 under Maritime Commission contract by Ingalls Shipbuilding Co., Pascagoula, Miss.; sponsored by Mrs. W. D. Pelan; acquired 23 June 1943; and commissioned next day for transfer to her conversion yard, Bethlehem Steel Co., Hoboken, N.J. Decommissioned 8 July 1943, *Henrico* was converted into AP-90 and recommissioned 26 November 1943, Comdr. J. H. Willis in command.

Following shakedown training in Chesapeake Bay, the attack transport remained to train Army combat teams before departing Norfolk for New York 2 February 1944. Arriving next day, *Henrico* embarked troops and sailed for Scotland 11 February. Arriving the Firth of Clyde 22 February, the ship began strenuous amphibious training in preparation for the invasion of Normandy.

Henrico embarked her invasion troops 26 May at Portland, England, and sailed 5 June as a part of Rear Admiral Hall's Omaha Beach Assault Force. On the following day, the world's greatest amphibious invasion took place. *Henrico* landed her troops in the first assault wave in the face of heavy seas and strong enemy fortifications. As the tempo of fighting increased, the ship received casualties from the beaches, returning to Portland later on D-day. As the all-important assault area was secured and the advance began, *Henrico* stood by for shuttle duty, finally sailing for the Firth of Clyde 19 June.

With the liberation of France underway, the transport sailed 4 July 1944 to the Mediterranean for the invasion of the southern coast of France. Arriving 16 July at Naples, *Henrico* took part in amphibious rehearsals before departing 13 August from Castellamare for the invasion area. She landed her troops at Baie de Pomponne against light opposition and departed the next day for Oran, Algeria. For the next 2 months she brought

troops and cargo into the beach area and on her last shuttle brought English and Polish repatriates to Naples.

Henrico sailed from Naples 17 October 1944, arriving Boston 8 November to prepare for duty in the western Pacific. She departed Norfolk with troops and replacement boats 13 December, steaming via the Panama Canal and San Diego to Pearl Harbor, where she arrived 23 January 1945. Five days later she sailed for the Philippines, arriving Leyte 21 February after stops at various Pacific bases. In the Philippines the ship engaged in amphibious exercises leading to the invasion of Okinawa, last operation on the long island road to Japan itself.

The veteran ship was assigned to the Kerama Retto attack group under Rear Admiral Kiland, and began the landing 26 March. The important islands, needed as a base for the invasion of nearby Okinawa, were secured 30 March. *Henrico* retired at night during the operation, and Japanese air attacks were nearly constant. While retiring 2 April, the ship was attacked by a fast suicide bomber diving out of a cloud formation. Although *Henrico* quickly brought guns to bear, the plane crashed into the starboard side of the bridge, her bombs exploding below. The ship lost power but her well-trained fire parties soon brought the flames under control. Forty-nine officers and men were killed in this attack, including *Henrico's* captain, her embarked division commander, and the two troop commanders. Her executive officer took command, however, and brought the ship to Kerama Retto. She sailed under her own power for San Francisco 14 April and arrived 13 May, having contributed much to the decisive campaign in the Pacific.

Henrico sailed from San Francisco Bay 1 September with replacement troops for the Philippines. She continued to serve the "Magic Carpet" fleet assigned to return the thousands of American soldiers from the Pacific, until May 1946. She sailed 25 May from Pearl Harbor to take part in the atomic tests at Bikini—Operation "Crossroads." For the next 3 months *Henrico* supported these vital scientific experiments, returning to San Francisco 29 August 1946. After operations on the West Coast, she sailed 6 February 1947 for a cruise in the western Pacific, returning in July. From 6 July 1948 to 25 February 1949 the ship operated in the Tsingtao, China, area in support of American troops.

Early in 1950 *Henrico* took part in amphibious exercises in the Caribbean, returning to San Diego 8 April 1950. Soon afterward peace was shattered by the invasion of South Korea, and *Henrico* was immediately called back to the western Pacific. As Korean and American ground troops struggled to stem the Communist advance, *Henrico* and other ships embarked the 1st Marine Brigade and sailed 12 July for Korea. She developed mechanical trouble which forced a return 2 days later, but skillful repair work had her at sea again 18 July and by 2 August she was with the original formation as they steamed into Pusan with the vitally needed troops.

In the early stages of the Korean Conflict, *Henrico* played an important part. She landed troops at the decisive Inchon beachhead 15 September 1950, one of the most brilliantly executed amphibious operations in history; and, as United Nations troops swept northward, she sailed to various ports deploying and supplying the soldiers. In November Chinese troops made their appearance on a massive scale, and by December U.N. ground units in the Wonsan-Hungnam area were cut off. During December *Henrico* and other ships evacuated thousands of soldiers from the two ports to stabilize the lines farther south. Command of the sea had again, as so many times in history, meant the critical difference.

The veteran attack transport arrived Seattle 22 March 1951, and after repairs and amphibious exercises sailed again for Korea 16 October 1951. During this second tour she carried troops to strategic points on the coast, and took part in amphibious operations for training purposes. She arrived San Diego 26 July 1952, and in September returned to Pearl Harbor for repairs and training.

Henrico sailed again for Korean waters 7 March 1953, resuming the important job of redeploying troops along the

coasts and to Japan. During July and August she operated between Pusan and Japan, and joined in the transfer of prisoners following the armistice agreement. For her outstanding performance during the first months of the conflict, *Henrico* was awarded the Navy Unit Commendation.

Arriving San Francisco 24 August 1953, the attack transport engaged in coastal training operations for the next year. She sailed for another tour in the Far East 24 October 1954, and participated in an amphibious training exercise in December. As war over the Tachen Islands threatened in February, *Henrico* and other naval units moved in 8 February 1955 to evacuate Nationalist Chinese troops. After arriving Keelung, Formosa, 13 February; she carried troops between the Philippines and Hong Kong before returning to San Diego 22 April 1955.

Hereafter the ship deployed annually to the western Pacific with the 7th Fleet to engage in amphibious warfare training exercises in Korea, in Okinawa, and in the Philippines, contributing to the combat readiness of both United States Marines and the troops of SEATO members.

Henrico was diverted to the Caribbean Sea 27 October 1962 after deployment of communist missiles in Cuba brought a swift and strict American quarantine of the island. *Henrico* arrived on the scene 5 November. Her embarked Marines provided part of a ready force to supplement the naval blockade if this proved necessary. When the missiles were removed, the crisis subsided, and *Henrico* departed the Caribbean 6 December for San Diego, Calif., arriving 15 December.

The ship resumed amphibious training duties on the West Coast until 16 December 1964, when she deployed again with the 7th Fleet in the western Pacific. Loading a Marine Battalion Landing Team at Okinawa, the ship departed 11 January 1965 for Hong Kong, arriving 14 January. On 20 January she commenced special operations in the South China Sea as the 7th Fleet joined in the intensive buildup of strength in southeast Asia.

In an impressive display of mobile power, *Henrico* disembarked her Marines at Da Nang, South Vietnam, in early March, returned to Okinawa for a second landing team which reached Da Nang 15 April. By 21 April, the ship embarked a third landing team bound for Chu Lai, South Vietnam. Offloading these troops 7 May, *Henrico* made a fourth passage to Okinawa to return with the headquarters unit of the 3d Marine Division, which arrived in Chu Lai 21 May.

Following her performance off South Vietnam, the ship sailed from Yokosuka, Japan, 28 May for San Diego, arriving 16 June. During the next 13 months *Henrico* operated out of San Diego along the coast of Southern California, conducting squadron exercises and supporting amphibious training operations. After embarking Marines at San Diego, she sailed for the Far East 27 July, and debarked her passengers at Da Nang a month later. During the next 7 months she carried troop reinforcements and replacements from Okinawa and the Philippines to American bases in South Vietnam. In addition she ranged the coastal waters of Vietnam from the demilitarized zone to the Mekong Delta, supporting important amphibious assaults against Viet Cong coastal strongholds. She departed Vietnam late in March 1967 and returned to San Diego the following month. Maintaining her readiness in support of amphibious assault operations, *Henrico* into mid-1967 remained ready to resume her important duty as part of America's powerful naval force in the Far East.

Henrico earned three battle stars for World War II service and nine for Korean War service. She won a Navy Unit Commendation in Korea.

Henry, George G., see George G. Henry

Henry IV, see YM-27

Henry Aristo Wiley was born in Pike County, Ala., 31 January 1867 and graduated from the Naval Academy in 1888. He served in *Maple* during the Spanish-American War and attained his first command, *Villalobos*, in 1904. During the First World War Wiley commanded battleship *Wyoming* attached to the 6th Battle Squadron of the British Grand Fleet and received the Distinguished Service Medal for his outstanding performance. After various shore and fleet commands, he was appointed Admiral in 1927 and served as Commander-in-Chief, U.S. Fleet, until his retirement in 1929 after over 40 years of service. Admiral Wiley served in the years that followed as Chairman of the Maritime Commission and in other important government posts until being recalled to active duty in 1941. In the next year he headed the Navy Board of Production Awards. Admiral Wiley retired once more 2 January 1943 and died 20 May 1943 at Palm Beach, Fla.

(DM-29: dp. 2,200; l. 376'5"; b. 41'; dr. 15'8"; s. 34 k.; cpl. 336; a. 3 5", 8 20mm.; cl. *Robert A. Smith*)

Henry A. Wiley (DM-29) was launched 21 April 1944 as DD-749 by Bethlehem Steel Co., Staten Island, N.Y.; sponsored by Mrs. Elizabeth W. Robb, daughter of Admiral Henry A. Wiley; reclassified DM-29 20 July 1944 and commissioned 31 August 1944, Comdr. R. E. Gadrow in command.

After shakedown in the Caribbean, the new minelayer rendezvoused with the battleships *Texas*, *Arkansas*, and *Missouri* and sailed 8 November for the Pacific to earn her nickname "Hammering Hank." *Henry A. Wiley* reached Pearl Harbor 9 December to prepare for the impending Iwo Jima campaign. As escort to the battleship *New York*, she rendezvoused with other ships of the Gun Fire and Covering Force off the rocky Japanese island 16 February 1945, 3 days before the initial landings. She remained there until 9 March, to provide fire support and screen ships often operating a mere 400 yards from Mount Suribachi. The minelayer poured some 3,600 rounds into the Japanese fortress.

A second and even more arduous campaign followed for *Henry A. Wiley*—Okinawa, the largest amphibious operation of the Pacific war. Reaching her position 23 March, D-day minus eight, she began to screen minesweepers as they cleared channels for transports and support ships. Japanese resistance was fierce and air attacks were almost unceasing. On 28 March *Henry A. Wiley* splashed two kamikazes, and the next morning in 15 hectic minutes saw a bomb explode 50 yards astern, downed two more kamikazes, and rescued a downed fighter pilot. While screening transports on 1 April, D-day at Okinawa, *Henry A. Wiley* destroyed his fifth kamikaze.

The battle-ried ship then shifted to radar picket duty and spent a total of 34 days on this important task alerting other ships of enemy air attacks. In this period *Henry A. Wiley* took 64 enemy aircraft under fire, destroying several. The morning of 4 May proved especially eventful. She began by splashing a Betty at 0307. When her sister ship *Luce* was reported sinking, *Henry A. Wiley* proceeded to her aid, but came under heavy air attack. In less than a quarter hour of heavy fighting, the valiant ship splashed three kamikazes and two Baka bombers, one of which was closing from the starboard quarter when it was hit by *Henry A. Wiley's* accurate fire. It hit the water, bounced over the fantail, and exploded just off the port quarter. Having expended nearly 5,000 rounds of 5 inch and AA ammunition, the minelayer then proceeded to rescue survivors from *Luce*. For her intrepid actions off Okinawa, which resulted in the destruction of 15 Japanese planes, *Henry A. Wiley* received the coveted Presidential Unit Citation, and her skipper the Navy Cross and Legion of Merit.

From Okinawa *Henry A. Wiley* sailed for the East China Sea, entering 12 June to screen minesweepers attempting to clear that vast body of water. She remained on this duty, with brief respites at Buckner Bay, until

peace came. Even this was ushered in to the sound of "Hammering Hank's" guns, as on the night of 14 August, 24 hours before final orders to cease offensive operations against the Japanese were received, she went to General Quarters 6 times at the approach of enemy aircraft, finally opening fire on the 6th run as an attack run was commenced. *Henry A. Wiley* remained in the Pacific to screen and guide minesweepers through the end of 1945. She streamed her homeward bound pennant 17 January 1946 and on 7 February reached San Francisco via Eniwetok and Pearl Harbor. *Henry A. Wiley* decommissioned at San Francisco 29 January 1947 and went into reserve at San Diego, where she remains into 1967.

In addition to the Presidential Unit Commendation, *Henry A. Wiley* received four battle stars for her participation in World War II.

Henry Andrew

A merchant name retained.

(ScStr: t. 177; l. 150'; b. 26'; dph. 7'6"; a. 2 32-pdr., 1 20-pdr.)

Henry Andrew was originally built in 1847 at New York as a sailing brig, and converted to steam in 1859. She was purchased from her owner, Mr. Van Santvoord, at New York 10 September 1861. Her first commanding officer was Acting Master S. W. Mather.

Assigned to the South Atlantic Blockading Squadron, *Henry Andrew* arrived on her blockading station in November 1861. She reconnoitered the Vernon River 11 December and 20 December was sent to blockade the entrance to Wassaw Sound. Being of light draft, *Henry Andrew* was especially valuable in stopping blockade running and gaining intelligence in the shallow rivers and sounds of the coast. She participated 17 January-18 February 1862 in an expedition up Wright's and Mud Rivers for the purpose of finding a channel into the Savannah River, encountering no Confederate opposition except a small battery near Red Bluff.

Henry Andrew was reassigned to Fernandina, Fla., 18 March, and took up duties off Fernandina and Mosquito Inlet. Boats from the steamer and *Penguin* entered Mosquito Inlet on a reconnaissance 21 March and next day were fired upon by batteries and musketry, killing the captains of both *Henry Andrew* and *Penguin*. Subsequently, the ship was active in the blockade off Mosquito Inlet, Stono River, and other points on the coast until sent to Winyah Bay, S.C., where she arrived 21 June 1862.

An expedition up the Santee River was organized in late June and *Henry Andrew* was designated to accompany it. The ships entered the river 24 June, reconnoitered the area, and were fired on by shore batteries on the shore. Returning 3 July, *Henry Andrew* resumed blockading duties off Stono River until ordered to New York in August for extensive repairs.

While steaming north, *Henry Andrew* encountered heavy weather off Cape Hatteras. She was battered about badly and went ashore south of Cape Henry, Virginia, 24 August 1862. No lives were lost but the ship was a total wreck and was not salvaged.

Henry B. Wilson

Henry Braid Wilson was born 23 February 1861 at Camden, N.J., and graduated from the Naval Academy in 1881. During the early days of his career he served in *Tennessee* and *Saratoga* and on coast survey expeditions to the Bering Sea. During the Spanish-American war Wilson was attached to gunboat *Baneroft* and was commended for bravery. In the years that followed he served in many ships, and was *Pennsylvania's* first commanding officer in 1916. He commanded the Atlantic Fleet's patrol forces during the First World War, and was responsible for the safe convoying of troops and supplies to Europe. For his outstanding service Wilson was

awarded both the Navy and War Department Distinguished Service Medals. Following the war, he was Commander-in-Chief U.S. Atlantic Fleet and later the Battle Fleet commander. In 1921 Admiral Wilson took over as Superintendent of the Naval Academy, and in his 4 years at Annapolis did much to raise its academic standing and improve the quality of education. Admiral Wilson retired in 1925 after nearly 50 years of service as seaman, leader, and educator. He died 30 January 1954 at New York City.

(DDG-7: dp. 3,370; l. 437'; b. 47'; dr. 22'; s. over 30 kc.; cpl. 340; a. Tartar mis., ASROC, 2 5"; cl. *Charles F. Adams*)

Henry B. Wilson (DDG-7) was launched 22 April 1959 by Defoe Shipbuilding Co., Bay City, Mich.; sponsored by Mrs. Patrick J. Hurley, daughter of Admiral Wilson; and commissioned 17 December 1960, Comdr. L. D. Caney in command.

One of a new class of destroyers built from the keel up to fire guided missiles, *Henry B. Wilson* was the first ship of her size to be side-launched and when launched was the largest warship ever constructed on the Great Lakes. Because of these unique circumstances, she was christened not with the traditional champagne but with a bottle filled with water from the Great Lakes, the St. Lawrence River, and the Atlantic Ocean. Following shakedown in the Caribbean she arrived in early May 1961 at her new home port, San Diego. During the months that followed *Henry B. Wilson* conducted tests and drills of her missile systems, fleet exercises, and type training.

The guided missile destroyer sailed 6 January 1962 for duty in the Western Pacific, the first ship in that region to be armed with Tartar missiles. Stopping at Pearl Harbor and Yokosuka, she carried out antisubmarine exercises until returning to the United States 19 July 1962.

Training off the California coast, punctuated with several missile firings, occupied *Henry B. Wilson* until 17 October 1963, when she sailed with carrier *Kitty Hawk* for duty with 7th Fleet in the Western Pacific. During the next 5 months she operated as part of America's mobile peacekeeping fleet between Japan and the Philippines. After returning to San Diego 16 April 1964, she resumed ASW and fire support operations.

Henry B. Wilson sailed on her third deployment to the Far East 4 June 1965. Arriving Subic Bay, Luzon, 21 June, she became flagship for Destroyer Squadron 21, then began rescue and air defense picket duty in the Gulf of Tonkin 31 July, along with shore bombardment support. As escort for *Midway* (CV-41), she departed Subic Bay 7 November and arrived San Diego the 24th.

After a year's operation off the West Coast, *Henry B. Wilson* departed San Diego for the Far East 5 November 1966. She resumed picket duty off Vietnam 23 December. During the first 3 months of 1967 she cruised the South China Sea and Gulf of Tonkin, performing search and rescue missions and pounding enemy coastal positions in support of ground operations. She returned to San Diego early in May. Into mid-1967 she continued to maintain the peak readiness of her crew and equipment for whatever task the defense of the Nation and the free world might demand.

Henry Brinker

A former name retained.

(ScStr: t. 108; l. 82'; b. 26'7"; dph. 6'2"; s. 7 k.; a. 1 30-pdr.)

Henry Brinker was built in 1861 in Brooklyn, N.Y., and was purchased at New York by the Navy 29 October 1861 from her owner, Henry Brinker. She arrived Hampton Roads 15 December 1861 and commissioned that day, Acting Master John E. Giddings commanding. After sailing to Baltimore 24 December, *Henry Brinker* arrived

Hatteras Inlet 10 January 1862 to begin her duties as a unit of the North Atlantic Blockading Squadron. Her first major action was the joint attack on Roanoke Island, the gateway to Albemarle Sound. *Henry Brinker* engaged Confederate shore batteries 7 February and helped to clear the obstructions next morning which paved the way for the capture of the Southern positions. Thus Norfolk was cut off from its lines of supply and the Union gained an important advantage.

The Confederate squadron under Flag Officer Lynch which had been at Roanoke Island withdrew up the Pasquotank River, with Union ships in hot pursuit. *Henry Brinker* and the other ships of Commander Rowan's flotilla engaged the squadron and batteries at Elizabeth City, capturing or sinking all the Southern vessels and occupying the town.

Continuing their series of spectacular successes in North Carolina, Commander Rowan and General Burnside next captured New Bern. The flotilla, composed of thirteen warships including *Henry Brinker* and a group of troop transports, got underway 12 March from Hatteras Inlet and arrived New Bern the next day. The Confederate forts were engaged by gunboats, the obstructions surmounted, and troops landed under cover of Navy guns. New Bern and a great quantity of important supplies were soon in Union hands.

Henry Brinker was assigned to Albemarle Sound following the victory at New Bern, patrolling to suppress trade and contain the Confederate guerrilla activity. On this duty she participated in a reconnaissance up the Chowan River 3-23 August 1862.

For the next months *Henry Brinker* patrolled from her base at Hatteras Inlet, stopping frequently at Plymouth, and New Bern, N.C. During this period she performed occasional guard duty at Hatteras Inlet as well. The ship participated 22 June 1863 in another expedition, this time up the Bay River, and in company with *Shawsheen* captured Confederate schooner *Henry Clay* and another small schooner carrying turpentine. *Henry Brinker* continued her operations in the Sound until ordered back to Hampton Roads in November 1863 for repairs. Stopping at Hampton Roads, she continued to Baltimore, where she repaired until 9 April 1864, when she was assigned as a tender to *Minnesota* at Newport News, Va. Remaining inactive at Newport News until June, *Henry Brinker* was sent up the Pamunkey River to White House, Va., 23 June to support the Army in local operations. After briefly rendering fire support, the ship returned to Yorktown.

Henry Brinker returned to Hampton Roads to repair 1 July 1864, and remained there until decommissioned 29 June 1865. She was sold 20 July 1865.

Henry Clay

Henry Clay was born in Hanover County, Va., in 1777, studied law under the great George Wythe, and became a practicing lawyer in 1797. He moved from Virginia to Kentucky, quickly gained a reputation as a lawyer and orator, and served as a state and national legislator. Clay served in the House of Representatives with various interruptions from 1811 to 1825, was a leader of the "War Hawks," and acted as spokesman for western expansionist interests. Much of the time serving as speaker, he wielded great power through the formulation of his American system, and was responsible for the Missouri Compromise of 1820. Clay ran for the presidency in 1824; and after helping to swing the election to John Quincy Adams in the House of Representatives, served as Adams' Secretary of State from 1825 to 1829. He was elected to the Senate in 1831 and beaten by Jackson in the presidential election of 1832. During his years in the Senate Henry Clay fought for the National Bank and internal improvements and was a chief bulwark of the Whig party. His efforts to prevent sectional conflict, culminating in the Compromise of 1850 earned him the name "The Great Compromiser." In 1844 Polk defeated him in his third try for the presidency. He continued his efforts to save the

Union until his death in 1852, closing 50 years of service which won him a permanent place in history as one of America's greatest statesmen.

(SSB(N)-625: dp. 7,250; l. 425'; b. 33'; dr. 32'; s. over 20 k.; cpl. 122; a. Pol. mis.; cl. *Lafayette*)

Henry Clay (SSBN-625) was launched 30 November 1962 by Newport News Shipbuilding & Dry Dock Co., Newport News, Va.; sponsored by Mrs. Green B. Gibson, great-granddaughter of Henry Clay; and commissioned 20 February 1964, Comdr. J. C. Lewis (gold crew) and Comdr. T. A. Bryce (blue crew) in command.

A modern atomic-powered submarine designed to fire the second generation Polaris ballistic missile, *Henry Clay* conducted shakedown off the coast of Florida beginning 28 February 1964. She completed her first submerged firing 6 April 1964 and returned to Newport News 29 May 1964. The submarine then sailed to her new home port, Charleston, S.C., and departed for her first deployment 17 August 1964. Joining America's strong and mobile deterrent force beneath the seas, she began her operations in the protection of the free world. By January 1967 she had completed 11 patrols as a ready and powerful deterrent to aggression. At present assigned to Submarine Squadron 14, *Henry Clay* in mid-1967 continues to cruise the depths of her assigned patrol areas where she serves both as an instrument of peace and, at a moment's notice if need be, as a lethal weapon of war.

Henry County

Counties in Alabama, Georgia, Illinois, Indiana, Iowa, Kentucky, Ohio, Tennessee, and Virginia.

I

(IX-34; dp. 3,640; l. 253'6"; b. 43'8"; dr. 15'6"; cpl. 37)

The first *Henry County* (IX-34) was built by the American Ship Building Co., Cleveland, Ohio. She commissioned at Portsmouth, Va., on 27 May 1930, Comdr. B. V. McCandlish in command.

She sailed for the West Coast on 12 July, transiting the Panama Canal on 23 July and arriving in San Diego via Corinto, Nicaragua, on 13 August. *Henry County* decommissioned at Mare Island, Calif., on 22 August 1930 and was loaned to the State of California that same day. She was renamed *California State* on 23 January 1931 and was finally transferred to the Maritime Commission on 30 June 1940.

II

(LST-824: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 266; a. 8 40mm., 12 20mm.; cl. *LST-511*)

The second *Henry County* (LST-824) was laid down as *LST-824* by Missouri Valley Bridge & Iron Co., Evansville, Ind., 28 September 1944; launched 8 November; sponsored by Mrs. Harry W. Groot; and commissioned 30 November, Lt. Jesse D. Jones in command.

After shakedown off Florida, *LST-824* departed New Orleans 4 January 1945 for San Diego, arriving there on the 24th. She embarked 107 bluejackets, then sailed for Pearl Harbor 26 January. During February she performed training exercises out of Hawaii, then loaded troops and equipment to depart Pearl Harbor 12 March.

For the next month she steamed through the Pacific, stopping at Eniwetok, Guam, and Saipan before proceeding to Okinawa. American forces were already engaged in the fierce struggle to wrestle Okinawa from enemy control when *LST-824* departed Saipan 12 April. Five days later she arrived off China Wan and commenced discharging troops and equipment on the embattled island. The landing ship returned to Saipan 27 April for reinforcement troops and cargo, and again steamed for Okinawa. For the remainder of World War II, she shuttled supplies between Okinawa and the Philippines in preparation for a possible invasion of Japan.

After the Japanese surrender, *LST-824* operated with occupation forces in the Far East until sailing for the United States in November. Arriving Portland, Oreg., 5 December, she decommissioned there 15 May 1946, and joined the Pacific Reserve Fleet. While berthed with the Columbia River Group, *LST-824* was named *Henry County* 1 July 1955.

Henry County recommissioned 5 September 1959, Lt. R. L. Dodd in command. After refresher training, *LST-824* departed the West Coast 19 March 1960 for the Far East, arriving Yokosuka 2 weeks later. During the next 4 months she transported supplies, performed training exercises with U.S. Marines, and engaged in joint operations with Korean forces before returning Long Beach 19 August.

Following 20 months of operations along the West Coast, *Henry County* sailed for the mid-Pacific in April 1962, then performed transport and amphibious duties out of Hawaii. In September she was assigned to Task Force 8 for the nuclear tests in Operation "Dominic." Since the tests were considered vital to the nation's security, the Navy demonstrated her ability once again to keep pace with the advances of technology developed to maintain peace through strength.

From December 1962 through December 1964, *Henry County* performed amphibious training operations off the California coast.

LST-824 received one battle star for World War II service.

Henry Gibbins

An Army name retained. Major General Henry Gibbins was Quartermaster General of the Army.

(T-AP 183: dp. 10,556; l. 489'; b. 70'; dr. 26'; s. 16.5 k.; T. C3-1N P&C)

Henry Gibbins (T-AP 183) was laid down as *Biloxi* under Maritime Commission contract by Ingalls Shipbuilding Corp., Pascagoula, Miss., 23 August 1941; launched 11 November 1942; sponsored by Mrs. H. I. Ingalls, Jr.; delivered to the Army Transportation Service 27 February 1943. She was renamed *Henry Gibbins* and served the Army as a troop transport during World War II.

She was acquired by the Navy from the Army 1 March 1950, and assigned to the Military Sea Transportation Service. During the Korean War she transported men and equipment from New York to Caribbean and Canal Zone ports, prior to their assignment in the Pacific. In 1953, *Henry Gibbins* operated on the New York to Bremerhaven, Germany, and Southampton, England, runs, making a total of 12 cruises to these European ports.

From 1954 until late 1959 the veteran transport steamed from New York to the Caribbean over 75 times, sailed to the Mediterranean on 3 occasions, and crossed the Atlantic to Northern Europe 8 times. During this time *Henry Gibbins* shuttled thousands of troops and tons of supplies between the United States and her foreign bases.

Henry Gibbins was transferred from MSTs to the Maritime Administration 2 December 1959, at Fort Schuyler, N.Y., for service with the New York Maritime College.

Henry Janes

A merchant name retained.

(Sch: t. 260; l. 109'9"; b. 29'8"; dph. 9'; a. 1 13" mortar, 2 32-pdr.)

Henry Janes, a motor schooner, was purchased by the Navy from her owners, Van Brunt and Slaght, at New York 27 September 1861. She commissioned at New York Navy Yard 30 January 1862, Acting Master L. W. Pennington commanding.

Chosen by the department to be a part of Comdr. D. D. Porter's Motor Flotilla, *Henry Janes* was fitted with a mortar and proceeded to rendezvous with the other vessels under Porter's command at Key West. With the

flotilla formed by the end of February, it sailed to join the West Gulf Blockading Squadron for the Mississippi River operations specifically aimed at the capture of New Orleans.

Henry Janes and the other ships passed over the bar and into the Mississippi River 18 March in preparation for the attack on Forts Jackson and St. Phillip. Below New Orleans the mortars opened fire on the forts 18 April and kept up a steady and devastating bombardment until Flag Officer Farragut passed with his fleet 24 April, defeated the Confederate Squadron, and steamed triumphantly to New Orleans. The loss of this great shipping center, largest and wealthiest city in the South, was a disaster from which the South had no hope of recovery.

After thus aiding in the key victory at New Orleans, the mortar schooners returned to Ship Island, Miss., 6 May. There they remained until they were called upon to aid in the bombardment of another Confederate stronghold—Vicksburg. Arriving below the city 20 June, *Henry Janes* and the other ships supported Farragut with their fire as he passed the batteries 28 June to join with Commodore C. H. Davis farther up the river. The ships remained off Vicksburg in July and *Henry Janes* bombarded the city's defenses on the 15th, before proceeding downriver, engaging shore batteries as she went.

Assigned to the blockading forces off the coast of Texas, the schooner's next action, at Sabine Pass, was against Confederate batteries near Sabine City. The Union vessels entered the pass 21 September and forced the defenders to evacuate their fortifications 4 days later. Although Sabine City was captured, the Union could dominate only the waters in the area as no occupying troops were available. *Henry Janes* returned to blockading duties, with occasional boat expeditions into the innumerable passes and inlets of the Texas coast. On one such expedition, 20 November 1862, an entire boat crew from the schooner was captured by Confederates at Matagorda Bay.

For the next 18 months, *Henry Janes* performed blockade and gunfire duties at various stations of the West Gulf Blockading Squadron. She was below Port Hudson in June 1863 and from February to May 1864 operated off Fort Powell, near Mobile, and Pensacola, Fla. She was sent to New York 5 May 1864 for repairs to her hull and replacement of her mortar. The ship was subsequently turned over to the ordnance department 8 August, and assigned to the North Atlantic Blockading Squadron as an ordnance vessel.

Henry Janes sailed from New York 30 August to report in the sounds of North Carolina on ordnance duty. She remained there until sent north in June 1865, decommissioned 12 July 1865, and was sold to George Burnham, Jr., 20 July 1865 at Portsmouth, N.H.

Henry L. Stimson

Henry Lewis Stimson, born in New York City 21 September 1867, graduated from Yale in 1888. After graduate work and law school at Harvard, he entered the law firm headed by Elihu Root in 1891 and two years later became a partner.

In 1906 President Theodore Roosevelt appointed him U.S. Attorney for the Southern District of New York. Here he made a distinguished record prosecuting anti-trust cases. After defeat as Republican candidate for governor of New York in 1910, Stimson was appointed Secretary of War in 1911. He continued the reorganization of the Army begun by Root, bringing it to high efficiency prior to its vast expansion in World War I.

Following the outbreak of war, he was a leader in the American effort to aid the stricken people of Belgium. After the United States became a belligerent, he served in France as an artillery officer reaching rank of Colonel in August 1918.

His success in several important diplomatic assignments and as Governor-General of the Philippine Islands led to Stimson's appointment as Secretary of State in 1929. His

management of the Nation's foreign affairs was highlighted by his strong opposition to Japanese occupation of Manchuria, the first aggressive step which led to World War II.

Returning to private life at the end of President Hoover's administration Stimson was an outspoken advocate of strong opposition to Japanese aggression. In 1941 President Roosevelt returned him to his old post at the head of the War Department and he skillfully directed the tremendous expansion of the Army to the force of over 10,000,000 men which crushed Axis ground forces in Europe and the Pacific.

Stimson retired from public office 21 September 1945 and died at Huntington, N.Y., 20 October 1950.

(SSB(N)-655: dp. 7250; l. 425'; b. 33'; dr. 32'; s. over 20 k.; cpl. 122; a. 16 A-3 Polaris missiles, 4 21" tt.; cl. *Lafayette*)

Henry L. Stimson (SSB(N)-655) was laid down 4 April 1964 by the Electric Boat Division of General Dynamics Corp., Groton, Conn.; launched 13 November 1965; sponsored by Mrs. Thomas J. Dodd, wife of Senator Dodd of Conn.; and commissioned 20 August 1966, Captain Richard E. Jortberg (blue crew) and Comdr. Robert H. Weeks (gold crew) in command.

Following shakedown, *Henry L. Stimson* prepared for her role as one of the Navy's nuclear-powered submarines silently and invisibly roving the seas as a mighty deterrent against aggression, preserving peace and protecting freedom.

Assigned to Submarine Squadron 16, *Henry L. Stimson* departed Charleston, S.C., 23 February 1967 on her first deterrent patrol. After successfully completing patrols in her assigned areas with each of her two crews, she continues in mid-1967 to serve the Nation as part of the first line of defense against any hostile power.

Henry P. Williams

Henry P. Williams (SP-509) was a converted yacht which served as a minesweeping training craft and patrol boat 1917-18. Built as yacht *Ilawarra* by Bath Iron Works, Bath, Maine, in 1896, she was originally taken into the Navy in 1898 as *Oncida* (q.v.).

Henry R. Kenyon

Henry Russell Kenyon, Jr., was born 4 February 1916 in Bronxville, N.Y., and enlisted in the Navy 5 November 1940. He was discharged in 1941 to accept an appointment as Aviation Cadet and was commissioned Ensign 4 August 1941. After undergoing advanced flight training Kenyon joined Torpedo Squadron 8 for duty in the Pacific. He flew as a member of that squadron from famous carrier *Hornet* in the Battle of Midway 4 June 1942. The squadron took off to attack the enemy fleet without fighter cover in the face of murderous opposition. Knowing that they had insufficient fuel to return to the carrier. Kenyon and his comrades attacked gallantly until all were shot down. Ens. Kenyon was presumed dead 5 June 1942 and was awarded the Navy Cross posthumously for his heroic actions.

(DE-683: dp. 1,400; l. 306'; b. 37'; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3", 4 1.1", 8 20mm., 2 dct., 8 dcp., 1 dcp. (h.h.), 3 21" tt.; cl. *Buckley*)

Henry R. Kenyon (DE-683) was launched by Bethlehem Steel Co., Quincy, Mass., 30 October 1943; sponsored by Mrs. Verna Markham Kenyon, widow; and commissioned 30 November 1943, Comdr. C. M. Lyons, Jr., in command.

After her shakedown off Bermuda, *Henry R. Kenyon* returned to Boston. She was underway 26 January 1944 on a tour of convoy escort duty in the Caribbean, a fertile field for German submarines. Returning to Boston again 6 June, the ship underwent training in Casco Bay, Maine, and had her torpedo tubes replaced by additional

antiaircraft guns. Assigned to an Atlantic escort group, she made five transatlantic voyages between 4 July 1944 and 30 August 1945, providing antisubmarine and anti-aircraft protection in the Atlantic and eastern Mediterranean.

With the Battle of the Atlantic won, the destroyer escort proceeded 15 May from Norfolk through the Panama Canal and into the western Pacific theater. Arriving off Leyte 7 July, she spent the remainder of the war escorting ships in the Philippines and to New Guinea and Okinawa. After the surrender of Japan in August, *Henry R. Kenyon* continued to operate in the Philippines and off the coast of Japan until departing Manila for the United States 26 November.

Arriving San Diego 17 December, she remained in that port except for periodic training cruises until decommissioning 3 February 1947. She joined the Pacific Reserve Fleet and berthed at Mare Island, Calif., later to be moved to Stockton, Calif.—a part of the "Reserve Sea Power" essential to the security of our Nation.

Henry R. Mallory

A former name retained.

(ID-1280: dp. 10,910 n.; l. 440'2"; b. 54'6"; dr. 24'; s. 15 k.; a. 4 5")

Henry R. Mallory, a troop transport, was built by Newport News Shipbuilding & Drydock Co., Newport News, Va., in 1916, and operated by Mallory Lines before being acquired by the Navy 13 April 1918. She commissioned 17 April 1918.

The transport was used to carry members of the American Expeditionary Force to Europe through the submarine-infested waters, carrying up to 2,200 troops per passage. After the war, she was transferred to the War Department, 23 October 1919, and later acquired by Agwilines, Inc. After many years of passenger service, she was used as a troopship by the War Shipping Administration in World War II. *Henry R. Mallory* was torpedoed and sunk 500 miles south of Iceland 9 February 1943.

Henry Seymour

A former name retained.

(SchBar: t. 160; l. 91' (b.p.); b. 30'7"; dr. 10')

Henry Seymour (SP-3225), a wooden schooner barge, was built in 1890 by A. C. Brown, Staten Island, N.Y.; purchased by the Navy from her owner, Merritt & Chapman Co., New York City, in 1918; taken over 22 September 1918; and commissioned 18 October 1918. Assigned to the 3d Naval District, she operated out of New York harbor as a salvage barge. She decommissioned 15 May 1919 and was sold by the Navy the same day.

Henry T. Allen

An Army name retained.

(AP-30: dp. 21,900 limiting; l. 535'; b. 72'; dr. 31'3"; s. 16 k.; a. 1 5", 4 3")

Henry T. Allen (AP-30) was launched as an Army transport under the Shipping Board in 1920 by New York Shipbuilding Corporation, Camden, New Jersey. Completed in 1921 as *Wenatchee*, she was operated by Pacific Steamship Co. until November 1922, and renamed *President Jefferson*. She then operated for and was purchased by Admiral Oriental Line. The ship was laid up in Seattle in 1938, and was purchased by the Army in October 1940. Renamed *Henry T. Allen* by the Army, the ship was then acquired by the Navy 6 December 1941 and placed in partial commission for conversion to Navy use at Moore Dry Dock Co., Oakland, Calif. *Henry T. Allen* commissioned in full 22 April 1942, Captain P. A. Stevens commanding.

After completion of outfitting, *Henry T. Allen* made one troop carrying voyage to Honolulu and return. Arriving San Diego 18 June 1942, she took part in amphibious landing exercises until August, helping to mold the potent American assault forces which would be a decisive factor in the Pacific war. The ship sailed 22 August via the Canal Zone for Norfolk, where she arrived 11 September for more landing training on the Maryland coast.

Henry T. Allen was to take part in cross-ocean invasion, Operation Torch. The ship departed 23 October for North Africa as part of the Northern Attack Force, serving as flagship for transports in that phase of the operation. The force arrived off Mehedia, near strategic Port Lyauzey, 7 November and *Henry T. Allen* began that morning to unload her Army troops from the transport area. She remained off the beaches occasionally subjected to fire from shore batteries until 15 November. She then helped consolidate the successful landing by mooring at Casablanca to unload cargo. The transport sailed 17 November and arrived Norfolk the 30th.

Following the important North Africa landings, during which much was learned about amphibious operations, *Henry T. Allen* was assigned to the Pacific, a theater in which amphibious assaults were to play a central role. Carrying Marines, she sailed 17 December and arrived Tutuila, Samoa group, via the Canal Zone, 13 January 1943. The ship also transported troops to Noumea and Espiritu Santo and while at the latter port 1 February 1943 was redesignated an attack transport, APA-15.

Until March 1944 *Henry T. Allen* operated between New Guinea and Australian ports, carrying both American and Australian troops in support of the Allied offensive in New Guinea and the Solomons. She made many passages through the dangerous waters of the Coral Sea, and on one occasion, 13 July 1943 detected a torpedo track approaching her port bow. Alert action brought the transport around and out of danger, the torpedo passing a scant 50 yards ahead.

Henry T. Allen sailed from Buna 26 March for training exercises on Goodenough Island with the U.S. 24th Division, completing 16 April. The ship then got underway 17 April for the important Hollandia operation, the joint attack on Central New Guinea. *Henry T. Allen* joined Admiral Barbey's group for the landings at Tanahmerah Bay 22 April and after their success was assured steamed to Cape Sudest, New Guinea, 24 April. The ship spent the next few weeks transporting troops into Hollandia to consolidate gains and prepare for the next step in the westward advance toward the Philippines. *Henry T. Allen* anchored at Aitape 15 May to load troops for the Wakde-Sarmi landings, and got underway the next day for a run of 120 miles undetected by the Japanese. Under a brisk naval bombardment the transport unloaded on the 17th and returned to Hollandia.

The veteran transport spent the rest of her career as a flagship for various amphibious commands. Until September 1944 she performed training exercises on Bougainville and New Guinea, and after a voyage to Queensland, Australia, arrived Hollandia 3 October 1944. There she received additional equipment and supplies to allow her to better perform her headquarters function. *Henry T. Allen* remained at Hollandia until January 1945 as the administrative base of the famous 7th Amphibious Force. She shifted her base to Leyte Gulf as American forces swept north and west, arriving 28 January 1945.

After the final surrender of Japan *Henry T. Allen* steamed to Manila 3 September and departed for the United States 15 November. She arrived 10 December 1945, decommissioned 5 February 1946, and was redelivered to the War Department. After a period in reserve at Suisun Bay, she was sold to Boston Metals Co., Baltimore, Md., and scrapped in March 1948.

Henry W. Tucker

Henry Warren Tucker was born 5 October 1919 in Birmingham, Ala. He enlisted in the Naval Reserve 24

June 1941 and after being trained as a pharmacist's mate reported to the oiler *Neosho* 15 January 1942. On 7 May 1942, in the opening phase of the Battle of the Coral Sea, *Neosho* and her escorting destroyer were attacked by three waves of Japanese planes. The escort sank and *Neosho* was so severely damaged that the skipper ordered all hands to prepare to abandon ship. Many of the oiler's crew, believing that "abandon ship" orders had been given, went over the side at once. As the men struggled through the water trying to reach the few undamaged life rafts, Henry W. Tucker swam among them, treating the burned and wounded. Disregarding his own safety, he helped many of his shipmates to safety on the life rafts while refusing a place himself, at the cost of his life. For his gallant and devoted service to his wounded comrades, Pharmacist's Mate Third Class Henry W. Tucker was posthumously awarded the Navy Cross.

Henry W. Tucker (DE-377) was building at Consolidated Steel Corp., Orange, Tex., but was cancelled 6 June 1944.

I

(DD-875: dp. 2,425; l. 390'6"; b. 41'1"; dr. 18'6"; s. 34.5 k.; cpl. 367; a. 6 5", 8 40mm., 5 21" tt.; cl. *Gearing*)

Henry W. Tucker (DD-875) was launched 29 May 1944 by the Consolidated Steel Corp., Orange, Tex.; sponsored by Mrs. Henry Walton Tucker, mother of the late Pharmacist's Mate Third Class Henry W. Tucker; and commissioned 12 March 1945, Comdr. Bernard H. Meyer in command.

After shakedown, *Henry W. Tucker* was converted to a radar picket destroyer and participated in radar and anti-aircraft exercises off the Maine coast until sailing for Pearl Harbor 4 November. From the Hawaiian islands she continued to Yokosuka, arriving 22 December, to aid in the occupation of Japan and repatriation of Japanese nationals. Her first tour of duty in the Far East ended 25 March 1946 as she set course for her new homeport, San Diego. In the next 3 years *Henry W. Tucker* made two more such cruises, alternating them with tactical exercises and operations along the east coast. In March and April 1948 the destroyer patrolled off Eniwetok in connection with United States atomic tests in the Pacific islands. She was reclassified DDR-875 18 March 1949.

Undergoing overhaul at the time Communist troops launched their attack on South Korea in June 1950, *Henry W. Tucker* speeded up preparations and joined the fleet operating off Korea in November. After 5 months of hunter-killer and patrol operations, she joined the screen for Task Force 77, a fast carrier force whose jets struck hard and often at enemy supply lines and troop concentrations. The destroyer also participated in shore bombardment and landed several raiding and intelligence parties on the western coast of the war-torn peninsula. On 28 June 1951 as she steamed into Wonsan Harbor *Henry W. Tucker* was hit by six enemy shells. Two men were injured and extensive damage was done to her radar gear, but the destroyer's return fire effectively silenced enemy shore batteries. Returning to San Diego 8 August, *Henry W. Tucker* engaged in intensive training exercises before returning to Korea to join TF-77 off the east coast 25 March 1952. Screening and plane guard duty with the fast carrier force alternated with ASW patrol and shore bombardment duties until she sailed for home 13 September.

Henry W. Tucker entered the Mare Island Naval Shipyard for installation of the newest radar equipment in September, emerging 14 April 1953. Her new duties, centered primarily on the detection of enemy attack through extensive radar coverage, were to take her on eight more WesPac cruises in the next 10 years. In addition to the lonely patrols along the radar picket line, *Henry W. Tucker* also patrolled the important Formosa Straits and the Korean coast. When not deployed with the 7th Fleet, the radar picket destroyer participated in tactical training exercises and fleet maneuvers out of her

San Diego homeport. Streaming her homeward bound pennant at Yokosuka 2 November 1962, *Henry W. Tucker* sailed for Boston via Pearl Harbor, San Diego, Acapulco, and the Panama Canal. She reached the Naval Shipyard there 13 December to begin fleet rehabilitation and modernization overhaul, designed to lengthen her life as an active member of the fleet by 10 to 15 years. While undergoing modernization, she was reclassified DD-875 on 15 March 1963. The FRAM overhaul was completed 4 December 1963 and *Henry W. Tucker* began a program of intensive training, until 26 May, when she departed for the western Pacific and a station on the Taiwan Patrol. Almost immediately she was diverted to the South China Sea where the 7th Fleet brought swift power to bear in answer to continued Communist aggression.

Tucker alternated between antisubmarine patrol off Vietnam and off Taiwan until April 1965, when she joined Operation "Market Time," a close surveillance of Vietnamese coastal traffic to prevent the shipment of supplies to the Viet Cong on the South Vietnamese coast. On 16 May the veteran destroyer pounded Viet Cong coastal concentrations southeast of Saigon and thus became the first U.S. ship to provide naval gunfire support against enemy targets in South Vietnam. During the next 14 months she continued her varied but important assignments against Communist aggression.

She provided gunfire support for ground operations dozens of times; and during a 40-day period in August and September fired over 5,000 rounds from her 5-inch guns, destroying or damaging numerous enemy positions. In addition to "Market Time" patrols, she screened hard-hitting attack carriers in the South China Sea and the Gulf of Tonkin and served as a search and rescue control ship to recover downed pilots at sea. This vital duty sent her close to enemy-controlled shores; however, joined by daring SAR helicopters which refueled and replenished from the destroyer while in flight, she provided maximum protection for planes returning from strikes over North Vietnam. She refueled more than 80 helicopters while on SAR assignments. Known as "Tuck's Tavern" to the brave "chopper" pilots, she became the first destroyer 6 November to refuel an in-flight helicopter at night. Coordinated training with these versatile aircraft paid off 26 June 1966 when two pilots from *Constellation* (CVA-64) and *Ranger* (CVA-61) were plucked from the sea less than 3 miles from the North Vietnamese coast and carried to *Henry W. Tucker*.

After more than 2 years of almost continuous duty off Vietnam, *Henry W. Tucker* returned to Long Beach early in August. Following a 4-month overhaul and intensive training out of San Diego and Long Beach, she deployed to the Far East in June 1967. She resumed carrier screening duty late in July; and, following the disastrous fire on board *Forrestal* 29 July, she took part in survivor rescue and escort operations. As the conflict in South Vietnam continued in 1967, *Henry W. Tucker*, a battle-tested veteran of two struggles against Communist aggression in the Far East, remained "on the line" ready to meet the challenge of new assignments efficiently, effectively, and with dispatch.

Henry W. Tucker was awarded seven battle stars for her participation in the Korean conflict.

Henshaw

(DD-278: d. 1,308.; l. 314'4"; b. 30'11"; dr. 9'4"; s. 34.75 k.; cpl. 122; a. 4 4', 1 3'; cl. *Belknap*)

Built by the Bethlehem Ship Building Co. of Squantum, Mass., *Henshaw* was launched 28 June 1919, Miss Ethel H. Dempsey sponsor. She commissioned at Boston on 10 December 1919, Lt. Comdr. Martin J. Peterson in command.

The new destroyer sailed to Newport, R.I., for torpedoes and ammunition and from there left for the Caribbean, arriving at Guantanamo 9 February 1920. From 24 February until 4 March *Henshaw* was part of the Navy fleet standing off Port Cortes, Honduras, to protect American

lives and interests should revolution erupt in Guatemala, which it didn't. She then sailed for the West Coast, joining the destroyer squadron, Pacific Fleet, at San Diego on 1 April. Her first duty was to escort HRH the Prince of Wales, later Edward VIII, in HMS *Renown* into and out of San Diego on 7-8 April.

After exercises with the fleet off the California coast, *Henshaw* sailed to Seattle, where on 10 July she joined the cruise of Josephus Daniels, Secretary of the Navy, Admiral Hugh Rodman, Commander of the Pacific Fleet, and John B. Payne, Secretary of the Interior. While inspecting Alaskan coal and oil fields, and looking for possible fleet anchorages, the cruise touched at nine northern ports, including Ketchikan, Sitka, Dundas Bay, and Juneau, before *Henshaw* returned to San Diego on 17 August. During the cruise she had been visited by all the dignitaries involved, and had transported Thomas Briggs, Governor of the territory of Alaska, and his party, from Sitka to Juneau. Training and battle exercises along the California coast and an occasional run to Puget Sound with passengers occupied *Henshaw* until 15 June 1922, when she decommissioned at San Diego.

Recommissioning there on 27 September 1923, Lt. E. G. Herzinger commanding, *Henshaw* again served with the destroyer squadron, Pacific Fleet. Her itinerary for 1924 typifies her activities for the next 6 years: departing San Diego on 2 January, she transited the Panama Canal and engaged in tactical maneuvers with the combined fleets in the Caribbean, returning to San Diego on 24 April. After overhaul at Bremerton, she returned to California for further exercises and training. In 1925 this routine was slightly varied, as the fleet exercises took place off Pearl Harbor and Lahaina Roads, Hawaii.

Henshaw decommissioned at San Diego on 11 March 1930. Her name was stricken 22 July 1930 and she was scrapped and sold 14 November 1930.

Hepburn

Arthur Japy Hepburn, born 15 October 1877 in Carlisle, Pa., graduated from the Naval Academy 5 June 1897. During the Spanish-American War he served as Passed Midshipman in battleship *Iowa*, and he participated in the defeat of Admiral Cervera's Spanish Squadron off Santiago, Cuba, 3 July 1898. Commissioned Ensign 1 July 1899, during the next two decades he assisted in making oceanic surveys in the Pacific and performed a variety of duties ashore and afloat, including service in *Georgia*, *Olympia*, and *South Carolina*. During World War I he commanded the seized German liner *Kaiser Wilhelm II* and the Submarine Chaser Base, New London, Conn., until ordered to Europe in July 1918 to command the subchaser base at Queenstown, Ireland. After the armistice, he served in *Chester*, inspecting German naval ships and aircraft in accordance with naval terms of the Armistice. From 1919 to 1922 he was Assistant Chief of the Bureau of Steam Engineering, and from 1922 to 1924 he served as Chief of Staff of the U.S. Naval Detachment in Turkish Waters. During the years prior to World War II, he served a wide variety of important posts both ashore and afloat. He took command of *West Virginia* (BB-48) in May 1925; became Director of Naval Intelligence in July 1926. From 1927 to 1930 he served as Chief of Staff with Battle Fleet and U.S. Fleet and on 23 May 1931 took command of Submarine Forces, U.S. Fleet. Between June 1932 and July 1933, he served as a naval member to the three-power Limitations of Arms Conference as Naval Adviser to the Geneva Delegation in Switzerland and to the American Representative at the London Naval Conference.

After serving as Commander 4th Naval District, and commanding destroyers of the U.S. Fleet, he became Commander-in-Chief, U.S. Fleet 24 June 1936, serving in the rank of Admiral. Two years later he headed a board which reviewed America's national defense structure during the deteriorating international situation. The "Hepburn Board Report" was the basis for the massive

Shore Establishment expansion that took place prior to World War II. In 1942, Admiral Hepburn was appointed Chairman of the General Board of the Navy, serving in that capacity throughout the war. He also served as a delegate to the Dumbarton Oaks meetings, which established guidelines for founding the United Nations. Admiral Hepburn retired from active duty 10 December 1945, and died 31 May 1964.

(DE-1055; dp. 2,624; l. 414'6"; b. 44'; dr. 18'; s. 27.4 k.; cpl. 247; a. 15", 4 21" tt., ASROC, DASH; cl. *Knox*)

Hepburn (DE-1055) was laid down 1 June 1966, by Todd Shipyard Corp., San Pedro, Calif.; and launched 25 March 1967; sponsored by Mrs. Arthur J. Hepburn and Mrs. Joseph R. Barse. Once completed and commissioned, she will possess the capabilities to screen attack and support ships and to operate effectively against submarines. Operating either alone or with a hunter-killer group and equipped with the latest ASW equipment, the escort will be able to seek out and destroy enemy submarines. Moreover as is so important in these days of potential conflict, her ability to perform blockade, surveillance, search, and evacuation missions at a moment's notice will add readily to the Navy's deterrent force and assist in the continuing task of "keeping the peace." Her commissioning is scheduled for 1969.

Herald

A bearer of news.

I

(Ship: dp. 279; l. 92'8"; b. 26'3½"; cpl. 140; a. 18 guns)

The first *Herald* was built at Newburyport, Mass., and purchased at Boston from Edward Davis 15 June 1798.

Wearing a splendid figurehead of a man, she sailed from Boston 22 August 1798. She cruised in the West Indies from 1799 to 1800, protecting American commerce; and, after the treaty of peace with France had been ratified 18 February 1801, returned to the West Indies 23 March 1801 to recall the U.S. naval force.

Herald was sold at Boston in 1801.

(Ship: t. 274)

Herald, a ship-rigged sailing ship, was one of a group of 16 old whaling vessels purchased at New Bedford 27 September 1861. This "Stone Fleet" was towed to Charleston and sunk inside the main bar to obstruct the channel in December 1861.

II

(AM-101; dp. 890; l. 221'2"; b. 32'; dr. 10'; s. 18 k.; cpl. 105; a. 1 3", 2 40mm., 6 20mm., 2 dct., 5 dep.; cl. *Auk*)

The second *Herald* (AM-101), a steel-hulled diesel-powered minesweeper, was launched by General Engineering & Dry Dock Co., Alameda, Calif., 4 July 1942; and commissioned 23 March 1943, Comdr. D. B. Poupenny in command.

Following her shakedown training off the California coast, *Herald* got underway 16 May 1943 for Dutch Harbor, Alaska, where she took part in patrols and was present for the unopposed landing on Kiska Island 15 August. The ship resumed her patrol and escort duties; but, after suffering severe damage in a storm 6 November 1943 returned to Seattle 10 December for repairs.

The minesweeper returned to duty 12 February 1944, sailing to Pearl Harbor on the 22d. After two convoy voyages to the Marshalls, she got underway 30 May to join the fleet at Eniwetok for one of the most important amphibious operations of the war, the invasion of the Marianas. *Herald* arrived off Saipan on D-day, 15 June, and performed minesweeping and escort duties. While the U.S. fleet won a great victory at the Battle of the Philippine Sea 19 to 21 June, the minesweeper protected the transport and fueling areas off Saipan. She sailed

to Tarawa 17 July to escort a group of LST's back to Pearl Harbor, where she arrived 26 July.

In the months that followed, *Herald* performed vital convoy work in the Marshalls and Marianas, including patrol and some minesweeping work. In early 1945 she served as an escort ship for submarines returning to Ulithi from war patrols. *Herald* sailed from Pearl Harbor for the United States 11 May 1945, arriving San Francisco 7 days later.

At San Francisco at war's end, the minesweeper sailed 1 September 1945 to take part in the giant sweeping operations necessary for rapid and safe occupation of the former Japanese islands. Arriving Sasebo, Japan, 26 October, *Herald* operated in the South China Sea until departing 15 January 1946 for the United States. Arriving San Diego 17 February after stops at Eniwetok and Pearl Harbor, she decommissioned 31 May 1946 and was placed in reserve.

Herald recommissioned 5 March 1952 at San Diego and spent the remainder of the year in shakedown training and minesweeping drills on the east coast of the United States. Operating out of Charleston, the ship made two cruises to the Mediterranean in the spring of 1953 and the summer of 1954, strengthening the 6th Fleet in that troubled region. *Herald* continued to take part in fleet maneuvers and training off the east coast and in the Caribbean until arriving Jacksonville, Fla., 10 February 1955. She decommissioned at Green Cove Springs 15 April 1955 and entered the Atlantic Reserve Fleet. Reclassified MSF-101, 7 February 1955, she is now berthed at Orange, Tex.

Herald received two battle stars for World War II service.

Herald of the Morning

A Maritime Commission name retained.

(AP-173; dp. 6,556 light; l. 459'2"; b. 63'; dr. 25'9" max.; s. 16 k.; a. 1 5", 4 3")

Herald of the Morning (AP-173) was launched under Maritime Commission contract by Moore Dry Dock Co., Oakland, Calif., 14 August 1943; sponsored by Mrs. J. R. Moore. After service with U.S. Lines, she was converted to Navy use at United Engineering Co., Alameda, Calif.; and acquired by the Navy on a loan-charter basis 22 April 1944. She commissioned 22 April 1944, Comdr. H. A. Dunn in command.

After a brief shakedown cruise, the ship loaded troops and supplies and sailed 2 May for the Hawaiian Islands. Arriving 6 days later, *Herald of the Morning* engaged in amphibious training exercises for the upcoming invasion of the Marianas, an important step in the historic island-hopping campaign toward Japan. The ships departed for the Marshalls 1 June. *Herald of the Morning* was assigned to a reserve group, and arrived Saipan 16 June, the day after Vice Admiral R. K. Turner's Marines had stormed ashore. The transport unloaded her supplies, debarked troops, and retired to Eniwetok 26 June. There she remained 1-13 July before sailing to Pearl Harbor to load more troops for the Pacific fighting.

Herald of the Morning arrived Pearl Harbor 31 July, brought troops and supplies on board, and sailed 12 August 1944 for training operations in the Guadalcanal area. Assigned to the Peleliu operation, the ship departed 8 September and arrived off the Palau 7 days later. On 17 September she engaged in a diversionary landing on Babelthup Island, in the group, pulling back her units just before they hit the beaches. In the meantime, a full landing had been made on Angaur Island, where *Herald of the Morning* discharged her troops and cargo the next day.

As events in the western Pacific picked up momentum, the transport sailed 21 September for Ulithi, debarked the remainder of her men and cargo, and arrived Seeadler harbor, Manus, 28 September. There she began preparations for the return to the Philippines—the invasion of Leyte. Assigned to the Northern Attack Force, the trans-

port got underway from Manus 12 October and discharged her troops and cargo during the initial assault phases 20 October. *Herald of the Morning* then returned to Guam via the Palaus to embark more troops. As the Japanese moved to challenge the invasion of the Philippines in a giant sortie which resulted in the decisive Battle of Leyte Gulf, *Herald of the Morning* took on board reinforcements, and shifted to Manus for additional troops 16 November. Two days later she sailed for the Philippines, discharging troops north of Dulag 23 November. During this period the ship was forced to fight off enemy air attacks, but suffered no important damage.

Herald of the Morning departed 24 November for New Guinea, arriving 30 November, and spent the next month in training near Sansapor for the next strike in the Philippines, the Lingayen Gulf operation. She sailed 30 December and despite heavy air attacks on the convoys arrived in the gulf 9 January for the initial invasion. There the ship endured heavy air attacks before successfully disembarking her units and retiring to anchorage. With the important invasion underway, *Herald of the Morning* sailed 12 January 1945 for Leyte Gulf. She loaded troops there 14 January and at Biak 22 January, unloading these much-needed reinforcements on Mindoro 9 February.

Returning to Leyte 12 February, *Herald of the Morning* sailed 3 days later for Ulithi and Iwo Jima, where she embarked veterans of the early fighting on that bitterly contested island 9-27 March. Departing 27 March, the ship brought her troops to Pearl Harbor and San Francisco, steaming through the Golden Gate 23 April.

With replacement troops on board and repairs made, the transport sailed 29 June for Manila, via Eniwetok and Ulithi. She arrived Manila 29 July, unloaded her troops, and began the long voyage back to the United States. As *Herald of the Morning* sailed for San Francisco with returnees, the surrender of Japan was announced. The ship arrived 11 September, and was assigned to Operation "Magic Carpet," the gigantic task of bringing home the thousands of American servicemen. She made four more voyages to the islands of the Pacific on this mission, and was released for deactivation 21 June 1946. Returning to Olympia, Washington, in July, she decommissioned 9 August and was returned to the Maritime Commission. Subsequently sold to Waterman Lines, the ship sailed as *Citrus Paeker* until 1958 when she was sold to Gulf-South American Lines as *Gulf Trader*.

Herald of the Morning received five battle stars for World War II service.

Herbert

Hilary Abner Herbert, born in Laurensville, S.C., in 1834, was educated at the University of Alabama and the University of Virginia. He was admitted to the South Carolina bar in 1856 and practiced law in Greenville until the Civil War.

The future Secretary of the Navy entered the Confederate Army as a second lieutenant and served his cause with gallantry for 4 years. After the war, Herbert returned to his law practice and was elected to Congress in 1877. During his tenure as Congressman, Herbert was chairman of the Committee on Naval Affairs and was largely responsible for the increased appropriations which led to the revival of the American Navy.

In 1893 President Grover Cleveland appointed Herbert as Secretary of the Navy. Secretary Herbert was able to muster support for an enlarged navy, despite the Depression of 1893, and brought the fleet to some level of preparedness for the Spanish-American War. From 1897 to his death 6 March 1919 Herbert practiced law in Washington, D.C.

(DD-160 : dp. 1,090 ; l. 314'5" ; b. 31'8" ; dr. 9'4" ; s. 35 k. ;
cpl. 124 ; a. 4 4" , 3 3" , 12 21" tt. ; cl. *Wicks*)

Herbert (DD-160) was launched 8 May 1919 by the New York Shipbuilding Corp., Camden, N.J.; sponsored by Mrs. Benjamin Micon, daughter of the late Hilary A.

Herbert; and commissioned 21 November 1919, Lt. Comdr. E. A. Logan in command.

After shakedown in South Atlantic waters, *Herbert* trained in the Caribbean until 1 May 1920, returning there 20 July with the Atlantic Fleet destroyer squadron. *Herbert* participated in torpedo practices, antiaircraft drills, and short range battle practice along the east coast. She decommissioned at Philadelphia 27 June 1922.

Herbert recommissioned 1 May 1930 and joined the Scouting Fleet at Newport, R.I. For the next 4 years she operated in both East and West Coast waters, playing important roles in annual fleet problems and battle practice. From 16 January 1935 until August 1939, *Herbert* served as a training ship for naval reserves and midshipmen. As war swept across Europe, she sailed to Portugal via the Azores 2 October 1939 and remained there until July 1940.

Returning to the States, the destroyer underwent overhaul and 10 October reported to New London for sound school training. *Herbert's* training kept pace with the steadily intensifying war in Europe as she spent most of 1941 in battle practice, torpedo drills, and antisubmarine work.

With America's entry into the war, *Herbert* operated as a convoy escort along the American coast from Key West north to Halifax and Iceland. Guiding virtually defenseless merchant ships through coastal and Caribbean waters infested with U-boats, *Herbert* carried out frequent depth-charge attacks on marauding submarines. From April through June 1943 she visited Gibraltar and North Africa, as the build-up for the invasion of Sicily intensified. A hunter-killer patrol followed. After a second HUK patrol, *Herbert* escorted a convoy from Bermuda to Casablanca, returning to Charleston 22 November 1943 for conversion to a high-speed transport.

Herbert now APD-22 sailed for the Pacific, reaching San Diego for amphibious training and continuing on to Cape Sudest, New Guinea, via Pearl Harbor 23 March 1944. She disembarked troops for the initial invasion at Humboldt Bay, New Guinea, 22 April and then spent a month on convoy escort duty before landing troops for the invasion of Biak Island 27 May. Landings at Warsai in the Cape Sansapor Area 30 July followed further patrol and escort duty, and 15 September found *Herbert* off Morotai. Troops landed under naval cover to secure the airfield, which was within easy striking distance of the Philippines, next major step in the island-hopping war across the Pacific. On 17 October, 2 days before the initial landings at Leyte Gulf, *Herbert* landed Rangers on Homonhon Island which controlled the entrance to the Gulf. The destroyer remained in the Philippines, under almost constant Japanese air attack, throughout the rest of 1944; and, in January 1945, landed support troops at Lingayen Gulf.

From the Philippines *Herbert* moved north for escort duty to Iwo Jima, returning to Leyte 18 March 1945 to prepare for the invasion of Okinawa, the largest amphibious operation of the Pacific war. Arriving Okinawa 31 March, the day before the initial landings, *Herbert* took up patrol and escort duties. Suicidal kamikaze attacks wounded ships all around her, but *Herbert* remained untouched. After two runs escorting convoys from back staging areas up to Okinawa, the destroyer headed home, reaching San Diego 19 June. *Herbert* decommissioned at San Diego 25 September 1945 and was sold for scrap to the Boston Metal Co. of Baltimore 23 May 1946.

She received six battle stars for World War II service.

Herbert C. Jones

Herbert Charpiot Jones was born 21 January 1918 at Los Angeles and enlisted in the Naval Reserve 14 May 1935. He was commissioned Ensign 14 November 1940 and reported to *California* at Pearl Harbor 2 weeks later. On 7 December 1941, the 23-year-old Ensign was about to relieve the officer-of-the-deck on battleship *California* when Japanese planes swooped in to attack. In the first wave,

a torpedo and a bomb hit the ship. Ens. Jones dived into a smoke-filled hatchway and crawled along oil-slick decks to rescue a stricken sailor before being temporarily overcome by fumes. Reviving, Ensign Jones saw an anti-aircraft battery without a leader and, staggering to his feet, took command. As a second wave of Japanese planes came in, the young officer fired his guns until all their ammunition was expended. Since the torpedo had put *California's* ammunition hoist out of action, Ens. Jones quickly organized a party of volunteers to go below and pass the ammunition up by hand. The vitally needed shells had just begun to reach the battery when a bomb hit the ship and mortally wounded him. As the men tried to carry him to safety, the gallant Ensign told them "Don't bother about me. I'm done for. Save yourself before the magazines go off!"

In posthumously awarding Ens. Herbert C. Jones the Medal of Honor, President Franklin D. Roosevelt cited him for "conspicuous devotion to duty, extraordinary courage, and complete disregard of his own life above and beyond the call of duty."

(DE-137: dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; cpl. 186; a. 3 3", 2 40mm., 8 20 mm., 3 tt.; 2 dct., 8 dep., 1 dep. (h.h.); cl. *Edsall*)

Herbert C. Jones (DE-137) was launched 19 January 1943 by the Consolidated Steel Corp., Orange, Tex.; sponsored by Mrs. Joanne Ruth Jones, widow; and commissioned 21 July 1943, Lt. Comdr. Alfred W. Gardes, Jr., in command.

After a Caribbean shakedown, *Herbert C. Jones* reported to the Naval Research Laboratory, Washington, D.C., to participate in experiments on the method of control used by the Nazis in their glider bombs. The new destroyer escort departed Norfolk 7 October for the Mediterranean, arriving Algiers via Gibraltar 16 October to begin a year of escort duty along the North African coast. In a German attack 6 November, *Herbert C. Jones* destroyed one enemy plane. As she escorted a convoy bound from Algiers to Bizerte, *Herbert C. Jones* distinguished herself in an intensive 2-hour German attack the afternoon of 26 November. In addition to splashing one fighter, the ship studied the performance characteristics of enemy radio-directed glider bombs. As a result of these under-fire investigations, *Herbert C. Jones* and her sister ship *Frederick C. Davis* were fitted with powerful radio-jamming sets in early December to counteract and misdirect the glider bombs. This new electronic warfare capability was to find almost immediate use as *Herbert C. Jones* patrolled off the Italian coast 22 January 1944 while Allied troops stormed ashore to establish the Anzio beachhead. With her special gear, *Herbert C. Jones* jammed and decoyed into the sea the great majority of the many glider bombs directed at the naval task force. She also intercepted radio messages which enabled her to give warning of impending German air attacks. *Herbert C. Jones* received the Navy Unit Commendation for her work off Anzio.

The destroyer-escort saw her next major action as she arrived off the French coast 16 August, D-day plus one, to support Operation "Anvil," the invasion of southern France. After 2 months of antisubmarine patrol, *Herbert C. Jones* reached New York 17 October for overhaul and coastal convoy duty.

In December 1944 she joined a hunter-killer task force for antisubmarine patrol in the Atlantic out of Norfolk. Remaining on this duty until V-E Day, *Herbert C. Jones* sailed for the Pacific 24 June 1945 after training exercises in Cuba. She was at Pearl Harbor when news of the Japanese capitulation was received 15 August, and from there sailed to the Marshall Islands for precautionary air-sea patrol duty. *Herbert C. Jones* sailed to Green Cove Springs, Fla., via San Diego, the Panama Canal, and New York City 15 March 1946. She decommissioned and was placed in reserve 2 May 1947. In 1967 she was berthed at Philadelphia.

For her participation in World War II, *Herbert C. Jones* was awarded three battle stars.

Herbert J. Thomas

Herbert J. Thomas was born 8 February 1918 in Columbus, Ohio. From July to October 1941, he had enlisted service with the Army Air Corps. Sergeant Thomas enlisted in the Marine Corps Reserve 3 March 1942 at Charleston, W. Va., and after basic training was assigned to the 2d Marine Brigade. He was killed while serving with the 3d Marine Division during the battle at the Koromokina River, Bougainville, Solomon Islands, 7 November 1943. Discovering a gun emplacement difficult to approach, he carefully placed his men around him in strategic positions from which they were to charge after he had thrown a grenade into the emplacement. When the grenade struck vines and fell back into the midst of his group, Sergeant Thomas deliberately flung himself upon it to smother the explosion, valiantly sacrificing his life for his comrades. For his heroic conduct he was awarded the Medal of Honor.

(DD-833: dp. 2,425; l. 390'6"; b. 40'10"; dr. 18'6"; s. 35 k.; cpl. 435; a. 6 5", 14 40mm., 16 20mm., 6 dep.; cl. *Gearing*)

Herbert J. Thomas (DD-833) was launched 25 March 1945 by Bath Iron Works Corp.; sponsored by Miss Audrey Irene Thomas, sister of Sergeant Thomas; and commissioned 29 May 1945, Comdr. Robert T. S. Keith in command.

After shakedown along the East Coast and in the Caribbean *Herbert J. Thomas* transited the Panama Canal and joined the Western Pacific Forces supporting the occupation of Japan and Korea at war's end.

After operations with the 7th Fleet out of Japan during most of 1946 and patrol duty in Korean waters, she sailed late November via Guam and Pearl Harbor, arriving San Diego 21 December. *Herbert J. Thomas* sailed 6 January 1947 via the Canal Zone arriving Newport, R.I., 6 February. Between February 1947 and 22 May 1950 she conducted operations along the East Coast and in the Caribbean and made three deployments with the 6th Fleet to the Mediterranean. During the latter part of 1948 she was assigned duty as a Naval Academy practice ship, giving 6-day antisubmarine indoctrinations.

Herbert J. Thomas had just returned from the Mediterranean and was in Cartagena, Colombia, when hostilities broke out in Korea in June 1950. She immediately proceeded to Pearl Harbor and joined the Pacific Fleet. In July she joined Task Force 77 (7th Fleet Striking Force) operating off the coast of Korea in the Yellow Sea, effectively checking the enemy. A month later *Herbert J. Thomas* was assigned to the blockading force on Korea's east coast, and rendered highly effective gunfire support missions for our forces at Pohang, inflicting much damage on the enemy. While operating with the blockading forces, she furnished interdiction fire all along the eastern coast and fired a diversionary mission for British commandos who were landed from submarine *Pereh* to destroy a vital railroad tunnel.

At 1329 on the afternoon of 4 September, *Herbert J. Thomas* was on picket duty about 60 miles north of Admiral Ewen's main force when she made radar contact on unidentified aircraft and reported this to *Valley Forge* planes passing overhead. A division of Corsairs which was orbiting northeast of the force was vectored out. The raid was now estimated on course 160°, speed 180 knots. As the fighters turned to meet it, it separated into two parts, one retiring in the direction whence it came. Sighting the fighters, the bogey nosed down, increased speed and began evasive action, but turned toward Korea rather than westward toward China. The division leader flew over him in an attempt to identify and reported a twin-engine bomber with red star markings. The intruder opened fire and was subsequently shot down. *Herbert J. Thomas* proceeded to the spot where the plane splashed and recovered the body of a Russian aviator. Artificial respiration continued for an hour but brought no sign of life.

For the next 3 months she was assigned patrol duty and operations with Task Force 77. Departing 24 January 1951, *Herbert J. Thomas* arrived San Diego 12 February and spent the remainder of the year operating in that area. Returning to Korea 25 January 1952 she joined Task Force 77 for 1 month and spent 2 weeks on the bomblines performing vital gunfire support and screening duties. Late February *Herbert J. Thomas* took up patrol duty in the Formosa Straits and in April was assigned duty in the Songjin area. In this she coordinated the operations of several ships in the Songjin-Chongjin area.

After a brief period with the 7th Fleet Striking Force she joined the Blockading and Escort Force off the east coast of Korea. On 11 May she dueled with shore batteries in Wonsan Harbor where she received one hit with no casualties and slight damage. Quick to retaliate, *Herbert J. Thomas* dealt severely with the enemy, inflicting much damage. The remainder of the month was spent on patrol, bombarding and furnishing fire support for mine-sweeping operations in the Sensan, Songjin and Chongjin areas.

Retiring to Yokosuka *Herbert J. Thomas* sailed 8 June for San Diego, arriving the 26th. Assigned the new homeport of Long Beach, she operated in that area until departing 2 February 1953 for duty with the Far Eastern Naval Forces. Arriving Yokosuka 27 February, *Herbert J. Thomas* joined the 7th Fleet Striking Force and screened the carriers launching strikes on North Korea. From 4 April to 19 May she was assigned electronics countermeasures duties in addition to call fire missions on gun emplacements and radar stations, effectively checking the enemy.

Herbert J. Thomas joined Task Force 72, 12 June and operated out of Kaoshiung, Formosa, enforcing the blockade between Formosa and the Communist China mainland. Sailing from Yokosuka 14 August she reached Long Beach 30 August for overhaul and armament conversion.

Herbert J. Thomas departed 5 May 1954 for her fourth tour in the Far East. After operating in the Philippines and out of Yokosuka, she proceeded 23 July to Kaoshiung, Formosa, to take up patrol duty. Returning to Long Beach 5 December, she spent the next 5½ months operating with carrier *Kearsarge* in that area.

From 14 June 1955 to 1 March 1958 *Herbert J. Thomas* made three more deployments to the Far East. During these tours she operated with the fast carrier task forces and had duty on the Taiwan Patrol, helping to stabilize the Chinese situation and protect vital American interests.

On 25 October 1958, *Herbert J. Thomas* deployed again with other units of the 7th Fleet to the Far East, serving with pride as a good-will ambassador for the United States. She trained with Japanese destroyers in antisubmarine exercises and operated again with fast carrier groups.

"*Thomas*" deployed regularly to the Far East until 9 July 1963, when she entered Mare Island Naval Shipyard, Vallejo, Calif., and remained in commission in reserve for a 12½-month modernization overhaul which gave her protection against biological, chemical, and atomic warfare agents. Returning to full commission 31 July, *Herbert J. Thomas* completed her FRAM I conversion 30 August and operated along the West Coast until sailing for the Far East 14 September 1966. Arriving Yankee Station off South Vietnam 16 October, she joined CTG 77.7 in screening *Franklin D. Roosevelt* (CVA-42) during strikes against Communist targets ashore. She retired toward the Philippines 16 November, arriving Subic Bay 3 days later en route to Kaoshiung, Taiwan, for patrol duty in the Strait of Formosa 24 November through 16 December. Back off Vietnam 19 December, *Herbert J. Thomas* aided ground forces with naval gunfire support. In the ensuing fortnight, her guns killed at least 9 Viet Cong; destroyed 90 buildings, 12 bunkers; and damaged 90 buildings, 6 bunkers, as well as several bridges and sophisticated trench systems. Her mission accomplished, she headed for Hong Kong 3 January 1967 to prepare for future action.

Herbert J. Thomas received six battle stars for Korean War service.

Herbert L. Pratt

Herbert L. Pratt was acquired from the Atlantic Refining Co. and commissioned at Philadelphia 10 June 1918, Lt. Comdr. A. H. Peterson in command.

Taking on a full cargo of fuel oil, she sailed for France on 30 July, arriving in Brest on 2 September via New York and Halifax. At Brest she discharged her cargo to American destroyers and other ships, returning to New York 28 September. A second transatlantic voyage, from New York to Plymouth, England, occupied *Herbert L. Pratt* from 17 October to 11 December 1918.

The tanker decommissioned at New York 18 January 1919 and was returned to her former owner.

Hercules

Hercules, the son of Zeus and Alcmene, was celebrated in Greek mythology for his great strength. He was especially famous for the 12 "Herculean" tasks or "labors" imposed on him as a result of the hatred of Hera, Zeus' jealous wife.

I

Originally named *Quinsigamond* (q.v.). Name changed to *Hercules* 15 June 1869; changed again to *Oregon* 10 August 1869.

II

(YT-13: d. 198 t.; l. 101'; b. 20'6"; dr. 9'; sp. 12 k.)

Hercules, an iron tug, was built at Camden, N.J., by J. H. Dialogue & Son in 1888. She was purchased from the Standard Oil Co. 26 April 1889 for use in the Spanish-American War.

After being employed in various capacities along the South Carolina and Florida coasts from 1898 to 1900, *Hercules* was ordered to the Norfolk Navy Yard for service as a yard tug. She continued this duty until 1913 when, after extensive overhaul at Portsmouth, N.H., she was employed as a cargo carrier. Departing Philadelphia 9 September 1914, *Hercules* reached Pearl Harbor 4 December via Norfolk, the Panama Canal, and Acapulco. From there she carried cargo to various Pacific bases including Guam and the Philippines.

Hercules returned to the East Coast in the summer of 1915, putting in at Norfolk, her new base, 4 September. She carried cargo from Norfolk to various Caribbean ports until 1923, when she became a harbor tug serving at Norfolk and Philadelphia.

Hercules decommissioned at Philadelphia 17 December 1931. Stricken from the Navy List 4 December 1936, *Hercules* was sold to Atlantic Construction Corp., Norfolk, Va., 25 January 1937.

III

(YE-30: d. 233 t.; l. 111'8"; b. 32'; dr. 9'6"; sp. 7 K.; cpl. 22)

Hercules (YE-30) was built by Kelly, Spear, & Co. of Bath, Maine, in 1906. Purchased from the Boston Sand & Gravel Co. in 1918, she served as an ammunition lighter at the Hingham Ammunition Depot until stricken from the Navy Register 2 August 1922. *Hercules* was sold 24 March 1923 to Charles Reineke of New York City.

IV

Cargo ship *Hercules* was commissioned as *Canton* (q.v.) 18 June 1918.

V

(AK-41: dp. 5,150 lt.; l. 473'1"; b. 66'; dr. 27'2"; sp. 16 k.; cpl. 129; a. 1 5", 4 3", T. C3E)

Hercules (AK-41), ex-S.S. *Exporter*, was launched 18 July 1939 by the Fore River Ship Building Co., Quincy,

Mass., for American Export Lines Inc. Acquired by the Navy 15 July 1941, she continued to be operated by civilian crews until 30 November 1942, when she commissioned at San Francisco, Comdr. W. H. Turnquist, USNR, in command.

Departing San Francisco 18 December, *Hercules* reached Noumea, New Caledonia, 6 January 1943 to discharge her cargo. She returned to San Francisco 20 February and repeated the voyage from 11 March to 5 July. *Hercules* sailed for Pearl Harbor 6 August and reached Hawaii 6 days later. As flagship for Admiral Willis A. Lee, CTF 11, she sailed for action 25 August and on 1 September was off Baker Island as the Army began occupation. Remaining off Baker Island until 16 September discharging cargo, *Hercules* returned to Pearl Harbor and from there sailed for San Francisco.

Taking on passengers and cargo, she sailed again for the Pacific war areas 13 October, reaching Funafuti, Ellice Islands, 14 November after discharging cargo at Pearl Harbor. After miscellaneous cargo trips in the southern Pacific, *Hercules* returned to Pearl 28 January 1944 for repairs. Two round-trips with cargo and passengers to San Francisco brought her into the summer and on 30 May she sailed with the initial invasion force for Saipan. *Hercules* reached Saipan 15 June, D-Day, and remained there discharging cargo until 24 June. Although Japanese planes filled the air and attacked her several times, *Hercules* emerged unscathed as American forces continued to sweep across the island to Japan. Departing Saipan 24 June, she returned to Pearl Harbor and from there sailed to Guadalcanal.

Hercules sailed from Guadalcanal 8 September to participate in the invasion of Peleliu, Palau Islands, 15 September. After this hard fought operation she continued on to Hollandia, New Guinea, discharged her cargo, and 13 October sailed for the Philippines. *Hercules* remained in the Philippines, with several trips back for supplies, for both the initial invasion of San Pedro Bay 20 October and the landings on Lingayen Gulf 9 January 1945, as American forces returned victorious to the Philippines.

Reaching Ulithi 24 January 1945, *Hercules* embarked troops with cargo and 17 February sailed for Iwo Jima. The invasion of that rugged island began 2 days later, and *Hercules* steamed in the retirement area until 27 February when she disembarked reserve troops on the beach and received wounded. After discharging her cargo, she remained in the Iwo Jima area until 20 March when, loaded with Marines and their equipment, she sailed for Pearl Harbor. Reaching Pearl 4 April, *Hercules* carried cargo to Guam and Eniwetok before reaching San Francisco 22 June for a much-needed overhaul.

The war in the Pacific ended while *Hercules* was still undergoing repair, but she sailed west again 24 October 1945. Loading ammunition in the Philippines and the Admiralty Islands, she transited the Panama Canal 16 March 1946 and docked at Norfolk 26 March. After a brief trip up the coast to New York and New Jersey, *Hercules* sailed to Norfolk 18 May and hauled down her commissioning pennant 28 June 1946. *Hercules* was transferred to the Maritime Commission 18 July. Returning to merchant service, she was renamed *Exermont*, and later *Bostonian*.

Hercules received five battle stars for World War II service.

Hercules No. 36, see YD-83

Herkimer

A county in New York.

(AK-188: dp. 2,382 (lt.); l. 338'6"; b. 50'; dr. 21'1"; s. 11.5 k.; cpl. 85; a. 1 3', 6 20mm.; cl. *Alamosa*; T. C1-M-AV1)

Herkimer (AK-188) was laid down under Maritime Commission contract by Walter Butler Shipbuilders, Inc., Superior, Wis., 10 April 1944; launched 2 July 1944; sponsored by Miss Ann Farley; acquired by the Navy 25 June 1945; and commissioned at New Orleans, La., 14 July 1945, Lt. Carlton W. Crocker, Jr., in command.

After shakedown in the Gulf of Mexico, *Herkimer* loaded cargo at Gulfport, Miss., then departed 22 August for the Western Pacific. She reached Subic Bay, Luzon, 7 October; unloaded refrigerated cargo; and sailed the 13th carrying Army equipment for occupation forces stationed in Japan. She arrived Sasebo 20 October and operated there until 30 December when she departed for Yokosuka. Following her arrival 2 January 1946, she was stripped of Navy gear. She then steamed to Yokohama 16 January, decommissioned 1 February, and transferred to the Army.

Herkimer was operated by a Japanese merchant crew for the Supreme Commander of Allied Forces in Japan until 1 July 1950 when she was reacquired by the Navy. After refitting, she was assigned to MSTs 28 February 1951 and designated T-AK 188. Manned by a civilian crew, she participated in the Korean supply run from Japan supporting the repulse of Communist aggression in South Korea. Operating out of Moji, Kure, and Yokohama, she transported vital military cargo to American-held South Korean ports during the remainder of the conflict.

Following the establishment 27 July 1953 of an uneasy truce, *Herkimer* continued supply runs between Japan and South Korea. In response to the scheduled transfer of North Vietnam to Communist control, she departed Yokohama 6 November 1954 to provide support for Operation "Passage to Freedom." She reached Haiphong, North Vietnam, 15 November; and during the next 2 months she transported cargo southward to St. Jacques and Saigon. After completing three runs to South Vietnamese ports, she departed Saigon 23 January 1955 and arrived Kobe, Japan, 1 February.

Resuming cargo runs out of Japanese ports, *Herkimer* has remained in the Western Pacific since 1955. Cargo operations have sent her primarily to Inchon, Pusan, and other South Korean ports; and she has made numerous cargo runs along the Japanese coast from Wakanai and Hakodate, Hokkaido, to Kagoshima and Nagasaki, Kyushu. In addition she has steamed from Korea to Southeast Asia while supporting America's determination to maintain peace and contain Communism in the Far East. She has steamed from ports in Japan and the Philippines, transporting military supplies to Formosa between 1961 and 1965. And in response to American efforts to protect the integrity and independence of South Vietnam from external Communist aggression, she resumed intermittent cargo runs to South Vietnam in February 1962. Into 1967 she remains in the Western Pacific, serving the forces of freedom in the Far East as a veteran carrier of vital military cargo.

Herman Frasch

A former name retained.

(No. 1617: dp. 9,000; l. 345'; b. 48'4"; dr. 25'3"; s. 11 k.; cpl. 89)

Herman Frasch (No. 1617) a service collier, was built by Fore River Shipbuilding Co., Quincy, Mass., in 1910. She was owned by Union Sulphur Co., prior to her duty in the Army Transport Service. *Herman Frasch* was taken over and manned by the Navy on a bare boat basis 19 September 1918, and assigned to the home port of New York. On 4 October 1918 after completing only 2 weeks of service in the Navy, *Herman Frasch*, carrying cargo and a crew of 89 men, collided with the tanker *George G. Henry* shortly after midnight. The collision took place about 150 miles southeast of the Nova Scotia coast. The impact was so fierce that *Herman Frasch* went under in 7 minutes. *George G. Henry* stood by all night rescuing

survivors from life rafts scattered among the debris. When daylight came she abandoned her search after 65 men had been rescued.

Herman S. Caswell

A former name retained.

(SP-2311: t. 63'; l. 82'9"; b. 17'7"; dr. 7'6"; s. 10 k.)

Herman S. Caswell, a passenger yacht, was built in 1878 at Noank, Conn.; acquired by the Navy from New York Sightseeing Yachts under a charter agreement on 8 October 1918; and placed in service, Ens. C. N. Allison, USNRF, in command. Assigned to the 3d Naval District, she performed patrol and harbor operations until 7 March 1919 when she was placed out of service and was returned to her owner.

Hermana, see YP-410

Hermes

The messenger of the gods in Greek mythology.

(Str: dp. 340 t.; l. 89.4'; b. 25.4'; dr. 7'6"; cpl. 26)

Hermes, built by W. F. Stone of Oakland, Calif., in 1914, was a German vessel in port at Honolulu when the United States entered World War I in April 1916. Taken over by the Navy on Executive order, she commissioned at Honolulu on 1 April 1918, Lt. John T. Diggs in command.

Originally intended as a submarine patrol vessel, *Hermes* performed this duty out of Honolulu during the summer of 1918. On 31 August she sailed on a cruise among the islands northwest of Hawaii, including Laysan and Wake, to search for survivors of shipwrecks, signs of enemy activity, and to conduct a survey on wildlife and particularly birds for the Biological Survey Commission, Washington. After returning to Pearl Harbor on 2 October, she continued as a patrol craft.

Hermes was ordered decommissioned on 16 January 1919 and placed at the disposal of the Hawaiian territorial government for use as a tender to leper colonies. When the territorial government decided they could not afford her upkeep, *Hermes* was turned over to the Pacific Air Detachment, whom she served as a store ship and general auxiliary craft. She was sold on 21 October 1926.

Hermione, see *Hawk* (IX-14)

Hermit, see YP-142

Hermitage

Hermitage is the name of President Andrew Jackson's famed estate just outside of Nashville, Tenn. Acquired by Jackson in 1788, the land was improved with a series of one floor log cabins by 1805. In 1819 Jackson built on the site a two story brick home with one story wings, one of which extended in the rear to form an ell. Hermitage was razed by fire in 1822 but rebuilt and today stands, a national shrine, exactly as it was when Jackson lived there. The seventh President of the United States died at the Hermitage 8 June 1845.

I

(AP-54: dp. 24,465; l. 655'; b. 66'1"; dr. 27'; s. 20 k.; cpl. 909; a. 15', 63')

Hermitage (AP-54), ex-SS *Conte Biancamano*, was launched in 1925 by the William Beardman & Co. Ltd., Glasgow; sailed as a luxury liner for Lloyd Triestino So.

Anon. di Nav. of Italy; was interned at Balboa, Canal Zone, when Italy declared war on the United States; converted to a transport by Cramp Shipbuilding Co., Philadelphia; and commissioned 14 August 1942, Captain Donald F. Patterson in command.

Embarking 5,600 army troops and sailors, on 2 November *Hermitage* departed New York with her skipper acting as convoy commodore. Six days later the North African invasion began, and *Hermitage* on 18-25 November debarked her passengers at Casablanca to participate in the momentous campaign. Returning to Norfolk 11 December, *Hermitage* next headed for the Pacific with nearly 6,000 passengers embarked. After embarking and debarking passengers at Balboa, Noumea, Brisbane, Sydney, Pago Pago, and Honolulu, the former luxury liner put in at San Francisco 2 March 1943.

Hermitage's next swing westward, begun 27 March took her to Wellington, New Zealand; Melbourne; and Bombay. At Bombay she embarked some 707 Polish refugees, including nearly a hundred children, for a voyage back to California which ended 25 June. In the next year *Hermitage* made three similar cruises through the South Pacific, with battle-bound marines, soldiers and sailors, civilians, and Chinese and Indian refugees among her diversified passengers. *Hermitage* reached New York 28 May from the South Pacific via Noumea, Goodenough Island, and the Panama Canal.

Departing New York 16 June 1944 with over 6,000 passengers, most of them bound for the invasion of Europe just begun at Normandy, *Hermitage* sailed to Liverpool and Belfast to debark the troops before returning to New York 12 July. From then until the end of the war she made 10 more such voyages, principally to Le Havre, to bring replacements to the European theater and transport wounded Allied soldiers and prisoners of war back to the States. V-E Day, 8 May 1945, found *Hermitage* part of the celebration in Le Havre harbor as Allied ships greeted the end of 6 years of war with a cacophony of bells, whistles and sirens screaming through air illuminated by hundreds of signal flares and rockets.

War's end did not mean the end of *Hermitage's* duty as she continued to cross the Atlantic, this time bringing veterans home, through December. Departing New York 12 December, the well-traveled transport sailed to Nagoya, Japan, to embark some 6,000 homeward bound veterans and return to Seattle 4 February 1946. Assigned to the San Francisco-Marianas run for Operation "Magic Carpet," the return of thousands of Pacific troops, she made three further voyages before decommissioning at San Francisco 20 August 1946. While serving the Navy, the former luxury liner had sailed approximately 230,000 miles and transported 129,695 passengers, including American, British, Australian, French, and Netherlands fighting men as well as Chinese, American, Polish, and British civilians and German and Italian prisoners. *Hermitage* was returned to the Italian Government in May 1947.

II

(LSD-34: lt. dp. 6,880; l. 510'10"; b. 84'4"; dr. 19'; cpl. 301; s. 23 k.; a. 12'3"; cl. *Thomaston*)

Hermitage (LSD-34) was launched 12 June 1956 by the Ingalls Shipbuilding Corp., Pascagoula, Miss.; sponsored by Mrs. Alfred M. Pride, wife of Vice Admiral Alfred M. Pride; and commissioned 14 December 1956, Captain Leonard A. Parker in command.

While on shakedown in the Caribbean, *Hermitage* was informally inspected by Admiral Arleigh Burke, then Chief of Naval Operations. After training operations out of Norfolk, she sailed for the Mediterranean in late August to join the 6th Fleet. *Hermitage* participated in exercises with NATO units and visited Sicily, Crete, Turkey, Italy, Greece, and Spain before returning to the States 16 November 1957. Operations primarily with fast amphibious helicopter assault equipment and tactics occupied her until November 1959. With a cargo of Presidential helicopters embarked, *Hermitage* sailed to Karachi

2 December via the Atlantic, Mediterranean, Suez Canal, and Red and Arabian Seas to furnish quick and safe transportation for President Dwight D. Eisenhower on his Asian and European tour. Mission successfully completed, she returned home via Barcelona 17 January 1960.

Foreign waters called *Hermitage* by the end of the year as she sailed 28 November as flagship for Admiral A. L. Reed, COMSOLANT, for a good will cruise to South America and Africa. In the midst of this important cruise, *Hermitage* was diverted 19 January 1961 to carry grain to the Congo to help the United Nations combat starvation in that revolution-torn country. Relieved as flagship 3 May by *Spiegel Grove*, *Hermitage* returned to Virginia 16 May and soon resumed her pattern of operations and exercises off the Virginia Capes and in the Caribbean.

When the presence of Soviet nuclear missiles in Cuba threatened war in October 1962, *Hermitage* sailed to Guantanamo to transport Marines to that threatened base and underline America's determination to maintain her position there. A second cruise to the Mediterranean from May to October 1963 took *Hermitage* to Naples, Athens, Genoa, Cannes, Sardinia, Malta, and Rota as well as other ports in the 6th Fleet's continuing role of peace-keeping and protection of American interests in that crucial area.

After an assignment in February 1964 to the Caribbean Ready Squadron 12 based in Panama, early in May *Hermitage* undertook a logistics lift to Bermuda and Sydney and Halifax, Nova Scotia, and in the fall took part until

late November in the Navy-Marine Corps peacetime exercise "Steel Pike I," visiting ports of Malago and Gibraltar. In June 1965 she participated in a 3-month deployment to the Caribbean area during the later stages of the Dominican Republic crisis, making practice amphibious landings at Vieques Island. After completion of overhaul in February 1966 followed by refresher training and amphibious training, *Hermitage* transported a marine battalion to the Caribbean in May. Through 1967 she continued in her assignment to the Atlantic Fleet.

Herndon

William Lewis Herndon, one of the Navy's outstanding explorers and seamen, was born 15 October 1813 in Fredericksburg, Va. Appointed Midshipman 1 November 1828, he cruised in Pacific, South American, Mediterranean, and Gulf waters from then until 1842. From 1842 to 1846 Herndon served in the Depot of Charts and Instruments (to become the U.S. Naval Observatory) with his cousin and brother-in-law, Matthew Fontaine Maury, preparing oceanographic charts and performing other scientific work invaluable to the safe and accurate navigation of the seas. During the Mexican War, Herndon commanded brig *Iris* with distinction.

In 1851 Herndon headed an expedition exploring the Valley of the Amazon, a vast area as uncharted as the wildest part of central Africa. Departing Lima, Peru, 21 May 1851, Herndon and his small party of six men

USS *Hermitage* (LSD-34) on 19 November 1956

pressed into the wild and treacherously beautiful jungles. After a remarkable journey of 4,366 dangerous miles, which took him through wilderness from sea level to heights of 16,199 feet, Herndon reached the city of Para 11 April 1852. On 26 January 1853 Herndon submitted an encyclopedic and profusely illustrated 414-page report to Secretary of the Navy, John P. Kennedy.

After 2 years of active service in *Potomac* and *San Jacinto*, Herndon, now a commander, was given leave in 1855 to command the Pacific Mail steamer *George Law*, renamed *Central America*, 20 June 1857, on the New York to Aspinwall run. Making his way up the coast from Aspinwall with \$2,000,000 in gold and 474 passengers, as well as 101 crew members, Herndon encountered a heavy gale off Cape Hatteras 7 September 1857. The gale steadily increased in savagery until the 12th, and *Central America* was shipping water through several leaks. As the ship pitched and rolled through the pounding seas, water in her hold put out her boiler fires. Commander Herndon reluctantly admitted that, despite the valiant efforts of crew and passengers alike, his ship was doomed and summoned aid by firing the ship's minute guns. At 2 p.m., West Indian brig *Marine* arrived to aid the stricken steamer. Disregarding his own life, Commander Herndon supervised the loading of women and children into lifeboats and watched them pull to safety in *Marine*. Herndon's bravery and his concern for his passengers and crew helped save 152 of the 575 people on board. Commander Herndon was last seen in full uniform, standing by the wheelhouse with his hand on the rail, as the ship gave a lurch and went down. A monument at Annapolis commemorates this intrepid explorer and gallant seaman.

I

(DD-198: dp. 1,190; l. 314'5"; b. 31'9"; dr. 9'4"; s. 35 k.; cpl. 122; a. 4 4", 3 3", 12 21" tt.; cl. *Clemson*)

The first *Herndon* (DD-198) was launched 31 May 1919 by the Newport News Shipbuilding & Drydock Co., Newport News, Va.; sponsored by Miss Lucy Taylor Herndon, niece of Commander Herndon; and commissioned 14 September 1920 at Norfolk, Lt. Comdr. L. H. Thebaud in command.

After shakedown in New England waters, *Herndon* was placed in reserve in Charleston 3 November 1920. She served in reserve for training exercises and maneuvers along the East Coast until she decommissioned at Philadelphia 6 June 1922. *Herndon*, after serving in the Coast Guard from 1930 to 1934, recommissioned in the Navy 4 December 1939. Following trials and shakedown, she reached Guantanamo Bay 23 January 1940 to join the Caribbean Neutrality Patrol. In July and August she operated out of the Canal Zone in connection with tactical and antisubmarine maneuvers so valuable in the long naval struggle to come.

Herndon decommissioned and was turned over to Great Britain under the lend-lease program at Halifax, Nova Scotia 9 September 1940. As HMS *Churchill*, she served as leader of the first "Town"-class flotilla in transatlantic convoys and patrol duty off the western approaches to the British Isles. High points in her career in the Royal Navy include participation in the search for *Bismarck* after the German superbattleship had sunk *Hood*, and a visit by her namesake, the redoubtable Prime Minister, on his way home from the momentous Atlantic Conference with President Roosevelt in August 1941. *Churchill* also served as an escort for the pre- and post-invasion buildup for Operation Torch, the Allied invasion of North Africa. Transferred to the Russian Navy 16 July 1944, the destroyer was renamed *Dclatelnji* (Active) and was sunk by a U-boat 16 January 1945 40 miles east of Cape Tereberski while escorting a convoy over the treacherous route from Kola Inlet to the White Sea.

II

(DD-638: d. 1,630; l. 347'9"; b. 36'; dr. 17'5"; s. 37 k.; a. 4 5", 4 20mm., 5 21" tt.; cpl. 261; cl. *Gleavcs*)

The second *Herndon* (DD-638) was launched 2 February 1942 by the Norfolk Navy Yard; sponsored by Miss Lucy Herndon Crockett, great-grandniece of Commander Herndon; and commissioned 20 December 1942, Comdr. Granville A. Moore in command.

After shakedown off the Maine coast, *Herndon* escorted a convoy from New York to Casablanca, returning to New York 14 May 1943 escorting a tanker. Sailing from Norfolk 8 June, she reached Algiers 24 June and prepared for a key role in the Sicilian campaign. As Allied amphibious forces under the overall command of General Dwight D. Eisenhower launched the initial strike at "the soft underbelly of Europe" 10 July 1943, *Herndon* performed antisubmarine patrol duty as well as fire support for Patton's 7th Army and Montgomery's British 8th Army. Departing the Mediterranean 3 August, *Herndon* spent the next 9 months escorting troopships across the Atlantic from New York to various British ports as the massive buildup for the invasion of France hit full stride. On D-day 6 June 1944, *Herndon* was off Omaha Beach, down front in "Bald-headed Row" ahead of the first assault waves. Despite heavy counterfire from enemy batteries, she effectively bombarded enemy targets ashore.

Herndon remained off the Normandy beaches providing fire support, screening troopships, and antisubmarine patrol until 19 June, when she served as a screen for Allied landings at Baie de la Seine. Further screening duties followed until 11 July, when she reported to Belfast for training as an escort in the Mediterranean. Operation Anvil was the Allies' next major blow in the struggle to liberate "Festung Europa." *Herndon* was part of the joint task force screening carriers 15 August when the invasion of southern France was begun.

The battle-trained destroyer remained in the Mediterranean until sailing for New York 3 September. After 2 weeks of experimental operations in Chesapeake Bay for the Naval Research Laboratory *Herndon* headed back toward the Mediterranean as a convoy escort 14 October. Returning to the States 12 November, she conducted battle exercises in Casco Bay and escorted convoys along the Atlantic coast through February 1945. In that month, *Herndon* escorted President Roosevelt on the first leg of his historic voyage to Yalta.

The veteran destroyer and her crew turned south 21 April 1945 and headed for the still-hot war in the Pacific, reaching Pearl Harbor via the Panama Canal and San Diego 15 May. After training exercises and duty as a carrier plane guard, *Herndon* sailed to Eniwetok 12 July and remained in the rear area escorting convoys between Eniwetok, Guam, and Saipan through the end of the long Pacific war.

Japanese capitulation came at last with the formal signing of the surrender in Tokyo Bay 2 September, and *Herndon* proceeded to the China coast to enforce provisions of the peace. Reaching Dairen, Manchuria 10 September, she continued to Tsingtao, China 16 September. On that day Vice Admiral Kanako, IJN, and his staff came aboard *Herndon* to sign and implement the unconditional surrender of all Japanese-controlled combatant and merchant vessels in the Tsingtao area.

Herndon spent the fall and winter escorting Japanese prize vessels along the coast, patrolling the Korean and China coasts, and assisting the repatriation of Japanese soldiers and the movement of Chinese Nationalist troops. On 5 December 1945 she was detached from this duty to participate in Operation "Magic Carpet", the transfer of veterans from the Pacific to the States, and reached San Diego via Shanghai, Eniwetok, Okinawa, and Pearl Harbor 27 December. After disembarking some of the veterans, *Herndon* continued on to New York with the rest, arriving 15 January 1946. *Herndon* arrived Charleston 28 January 1946 and decommissioned there 8 May and entered the Atlantic Reserve Fleet. She was moved to Philadelphia January 1947 and at present is berthed at Orange, Tex.

Herndon received three battle stars for World War II service.

Hero

The schooner *Hero* and the steamer *Hero* are former names retained. The monitor *Hero* is named for a priestess of Aphrodite at Sestos who, according to Greek legend, threw herself into the Hellespont after her lover, Leander, had drowned while swimming from Abydos to meet her.

I

The wooden schooner *Hero* was purchased at Baltimore 13 August 1861 to obstruct inlets to Pamlico Sound, N.C., near Cape Hatteras. She was apparently sunk in Ocracoke Inlet 14 November 1861 with two other schooners of the stone fleet.

II

The screw steamer *Hero* was purchased at Philadelphia 11 July 1864; commissioned at the Philadelphia Navy Yard 14 July, Acting Ensign James Brown in command; and renamed *Moccasin* (q.v.) 25 July.

III

The light draft monitor *Casco* (q.v.) was renamed *Hero* 15 June 1869 while laid up at the Washington Navy Yard.

Heroic

Worthy of a hero; brave or valiant.

(AMc-84: dp. 195; l. 97'1"; b. 22'; dr. 9'1"; s. 10 k.; cpl. 17; a. 2.50 cal.; cl. *Accntor*)

Heroic (AMc-84), a wooden-hulled coastal minesweeper, was launched 5 May 1941 by Warren Boat Yard, Inc., Warren, R.I.; sponsored by Miss Sybil E. Alder; and commissioned 25 March 1942, Lt. (j.g.) A. M. White in command.

Heroic reported to Mine Warfare School, Yorktown, Va., for intensive training 11 April 1942 and then proceeded to Bermuda for further training. She was assigned to patrol and minesweeping duty in the 5th Naval District and was based at Norfolk 20 July 1942 and served there throughout the remainder of the war. *Heroic* decommissioned at Portsmouth, Va., 18 December 1945 and was turned over to the Maritime Commission for disposal 26 September 1946.

Heron

A long-necked, long-legged wading bird indigenous to Louisiana and the vast coastal marshes.

I

(AM-10: dp. 840; l. 187'10"; b. 35'6"; dr. 9'9"; s. 14 k.; cpl. 78; a. 2.3"; cl. *Lapwing*)

Heron (AM-10) was launched 18 May 1918 by the Standard Shipbuilding Co.; sponsored by Miss Astrid Rundquist, daughter of the mine sweep's prospective commanding officer; and commissioned 30 October 1918, Lt. K. Rundquist in command.

Departing Boston 17 November 1918, *Heron* performed experimental mine sweeping work until 8 March 1919, when she returned to Boston to be fitted out for foreign duty. She departed Provincetown and sailed for Kirkwall, Orkney Islands to participate in mine sweeping in the North Sea. She remained in the area for 7 months helping to remove the countless mines laid there during World War I.

Returning to Hampton Roads 1 November, she proceeded to New York and then to the West Coast. *Heron* reached San Diego 27 January 1920 to report for duty with the Pacific Minesweeper Division. She sailed for Pearl Harbor to join the Asiatic Fleet. In early October *Heron* sailed for the Philippines with *Avocet* and *Finch*.

The mine sweeper served in the 4th Division mine detachment until she decommissioned at Cavite 6 April 1922.

Heron recommissioned 18 December 1924 and reported to the Aircraft Squadron, Asiatic Fleet for duty as a seaplane tender. She operated principally in Chinese and Philippine waters, performing such diverse tasks as patrol, survey, target-towing, and plane-tending in addition to tactical maneuvers. *Heron* was reclassified AVP-2 on 22 January 1936 and continued to play an important role in protecting American citizens and interests in the Far East.

When the Japanese sneak attack on Pearl Harbor thrust America into war 7 December 1941, *Heron* (Lt. Comdr. William L. Kabler) was stationed in Port Ciego, Philippines. After supporting General MacArthur's gallant defense of the Philippines, *Heron* retired to the Moluccas and set up a base at Ambon. Upon hearing that *Pearcy* (DD-226) had been bombed and was in need of help, she got underway 29 December with oil and spare parts intending to rendezvous with the stricken destroyer at Ternate.

Next morning, upon learning that *Pearcy* had left, she headed back to Ambon. The following morning, 31 December, an enemy aircraft came in on a bombing run. *Heron* opened fire with every gun on the ship, and apparently enough machine gun fire hit the plane to discourage a bomb drop on the first run. The bomber came in twice more to aim bombs at the twisting and turning seaplane tender, but the agile ship always managed to dodge in time.

Heron then made a run for a rain squall to the southwest. Some 2 hours later the weather cleared, and a Japanese flying boat was sighted on the water on *Heron's* starboard beam. The aircraft took off and circled *Heron* for almost 4 hours. About 1430 two sections of three four-engine Japanese patrol planes were sighted.

Half an hour later, one of the sections broke off and came in on a horizontal bombing attack. Although this section made three bombing attacks, in each case the ship was maneuvered to avoid the bombs. The second section came in next on a bombing attack, and, on their first run, *Heron* drew first blood by hitting one of the planes with a 3-inch shell. The plane started smoking, dropped out of formation, and retired to the north. *Heron* was again able to out-maneuver the bombs unleashed by the two remaining planes on a final pass.

About this time five twin-engine land-based bombers and three additional four-engine patrol bombers were sighted. The five bombers made a pass over the ship but did not release any bombs until they had circled again. On the rerun they dropped a stick of bombs. One hit directly on the top of the mainmast, and three others hit just off the port bow. Pieces of shrapnel cut all the mainmast stays to the boat booms, injuring most of the gun crew there. The near misses off the port bow set the paint locker in the forward storeroom on fire, damaged the port 3-inch gun, killed one of the lookouts, and injured all the gun crew on the port 3-inch gun and the gun crews on the port machine guns.

Next, three four-engine patrol planes made torpedo attacks: one plane on the starboard bow; one on the port bow; and the other on the port quarter. *Heron* maneuvered skillfully, and all three torpedoes missed.

They then strafed the ship, doing considerable damage. However, the crew of one 3-inch gun shot down one of the planes as it came in to attack. *Heron* had approximately 26 casualties, or about 50 percent of the crew, as a result of the attack.

During that night the fires were extinguished; the forward hold was pumped out to bring the ship back to an even keel; and the 3-inch gun was repaired. When the ship arrived back at Ambon, she resumed tending seaplanes and continued this duty until she retired to Australia at the end of February. For her valiant action during this period, *Heron* received the Navy Unit Commendation.

The seaplane tender remained in and around Australia through early 1944 as an advance base tender. *Heron*

also conducted salvage operations and served as an aviation gasoline and fuel oil transport. Departing Australia 22 March 1944, she next participated in the landings in the Admiralty Islands during April and then continued her plane tending duties. Steaming to the Solomons 1 September, *Heron* served as tender for Patrol Squadron 101, which was engaged in search and rescue work as the Pacific campaign moved into high gear. When the Navy brought MacArthur back to the Philippines in the momentous Leyte campaign, *Heron* was there, reaching San Pedro Bay 21 November. In the thick of almost continuous enemy air attacks, *Heron* spent over a month in the Philippines tending seaplanes before returning to New Guinea for repairs.

Heron again returned to the Philippines in April 1945 to participate in the wrap-up of the war in that quarter, and remained there through the end of World War II. She decommissioned at Subic Bay, Philippines 12 February 1946 and was transferred to the State Department (Foreign Liquidation Commission) in July 1947 for disposal.

Heron earned four battle stars for World War II service.

II

(YMS-369: dp. 215; l. 136'; b. 24'6"; s. 13 k.; a. 1 3',
2 20mm.; cpl. 50)

The second *Heron* (YMS-369) was launched as *YMS-369* 24 July 1943 by Wheeler Shipbuilding Corp., White-stone, N.Y.; sponsored by Miss Frances J. McCarthy, an employee of the firm; commissioned 9 October 1943, Lt. H. A. Wilson, Jr., in command.

YMS-369's World War II service consisted of mine-sweeping operations around the home islands after the Japanese surrender. On 2 March 1946, she sailed for home after 4 months in Japanese waters and decommissioned. She was named *Heron* and reclassified AMS-18 7 February 1947.

After recommissioning 15 July 1949, *Heron* engaged in training exercises on the West Coast until 4 October 1950 when she sailed for Korea to support United Nations opposition to aggression. She patrolled off the peninsula, and was of invaluable assistance for her clearing of channels for blockading ships in the siege of Wonsan

Harbor, Korea, in March 1951. She maintained surveillance of North Korean sea traffic after the cease-fire until January 1954, when she retired to Sasebo, Japan, for training duties. Reclassified MSC(O)-18 on 17 February 1955, *Heron* decommissioned again 21 March, and was turned over to the Japanese Maritime Self Defense Force the same day to serve as *Numajima*. *Heron* was returned to Navy custody 31 March 1967, struck from the Navy List the same day, and used as a fire target by the Japanese Maritime Staff Office.

Heron earned one battle star for World War II service, and eight stars for her participation in the Korean conflict.

Herreshoff #306

Named for the builder.

(SP-1841: dp. 60; l. 112'5"; b. 15'2"; dr. 4'; s. 24
k.; a. 1 6-pdr.)

Herreshoff #306 (SP-194), a steel-hulled patrol boat, was built by Herreshoff Manufacturing Co. in 1917 at Bristol, R.I. She was contracted for originally by Alfred I. DuPont of Wilmington, Del. at the urging of Assistant Secretary of the Navy F. D. Roosevelt, with the intention of later allowing her to be bought by the Navy. *Herreshoff #306* was purchased by the Navy, taken over 14 February 1918 and commissioned 27 February 1918 at Newport, R.I.

The ship was first taken to New London, Conn., in company with two other Herreshoff-built vessels, to be fitted with listening gear. She subsequently sailed 5 May for the Canal Zone in company with SP-2232 and SP-2235, stopping at Charleston, Key West, and Guantanamo Bay, Cuba, en route. *Herreshoff #306* arrived Cristobal 1 June 1918 and assumed duty as harbor patrol vessel. She continued to perform this duty until the end of World War I, after which she served the 15th Naval District as a patrol craft. The boat was then loaned to the War Department 2 October 1920 for use by the Army Air Service in the Canal Zone. Returned to the Navy in March 1921, she was taken to Philadelphia and placed on sale, finally being sold to W. A. D. Smith, of New York City, 1 December 1922.

USS *Heron*

Herreshoff #308

Named for the builder.

(SP-2232; dp. 60; l. 112'5"; b. 15'2"; dr. 4'; s. 24 k.; a. 1 6-pdr.)

Herreshoff #308, a steel-hulled patrol boat, was built by the Herreshoff Manufacturing Co. of Bristol, R.I., in 1917. She was contracted for by R. E. Tod, of New York City, who had asked Assistant Secretary of the Navy Roosevelt how he might contribute to the war effort and was told he might have a boat built for later sale to the Navy. *Herreshoff #308* was accordingly bought by the Navy, taken over 21 February 1918, and commissioned 23 February at Newport, R.I.

After spending a short time at New London, Conn., fitting out with listening gear, *Herreshoff #308* sailed 5 May in company with two other small craft (*SP-1841* and *SP-2235*) for the Canal Zone, stopping at Charleston, Key West, and Guantanamo. She arrived at Cristobal 1 June 1918 and was assigned as a patrol vessel. For the next 2 years she was engaged in patrolling at Balboa and Colon, Canal Zone. *Herreshoff #308* was loaned to the War Department for use by the governor of the Canal Zone 14 October 1920, used by the Canal Zone as a patrol craft, and returned to the Navy September 1923. She was stricken from the Navy List 12 September 1923 and sold to J. A. Kenny, Brooklyn, N.Y., 27 May 1924.

Herreshoff #309

Named for the builder.

(SP-1218; dp. 25; l. 80'; b. 12'6"; dr. 3'6"; s. 17 k.; a. 1 3-pdr., 1 1-pdr.)

Herreshoff #309, a motor patrol boat, was designed and built for government use by Herreshoff Manufacturing Co., Bristol, R.I., in 1917, and leased by the Navy from her owner, Winthrop W. Aldrich of Newport, R.I. Taken over 26 October 1917, she commissioned 15 November, Chief Boatswain's Mate J. Fitzpatrick commanding.

The motor boat was assigned to 2d Naval District, based at Newport, and was assigned section patrol duties off Block Island, and in Narragansett Bay. She was returned to her owner 31 December 1918.

Herreshoff #313

Named for the builder.

Herreshoff #313, a wooden yacht, was ordered delivered and assigned to the 1st Naval District, Boston, Mass., 6 October 1917. She was not taken over, and apparently saw no service.

Herreshoff #321

Named for the builder.

(SP-2235; dp. 60; l. 112'5"; b. 15'2"; dr. 4'; s. 24 k.; a. 1 6-pdr.)

Herreshoff #321, a steel-hulled sub-chaser, was built by Herreshoff Manufacturing Co., Bristol, R.I. Owner Payne Whitney of New York had inquired of Assistant Secretary of the Navy F. D. Roosevelt what he might do to help the war effort and it was suggested that he might contract for a sub-chaser to be later purchased by the Navy. *Herreshoff #321* was taken over and commissioned 24 March 1918 at Newport, R.I.

After steaming to New London, Conn., for the installation of listening gear, *Herreshoff #321* departed 5 May in company with two other similar boats for duty in the Canal Zone. Stopping at Charleston, Key West, and Guantanamo Bay en route, they arrived Cristobal, Canal Zone, 1 June 1918. *Herreshoff #321* was assigned duty

as a patrol vessel in Panama Bay and was used for aerial patrol off Panama. After being first offered for sale, the motor boat was designated for duty at Torpedo Station, Keyport, Wash. 7 December 1920. While being towed to Washington 7 October 1921, however, the towing hawser parted and before *Nitro*, the towing vessel, could make her fast again the boat sank. The sinking occurred off the coast of southern California; *Herreshoff #321* was stricken from the Navy List 8 October 1921.

Herreshoff #322

Named for the builder.

(SP-2373; dp. 40; l. 83'4"; b. 12'8"; dr. 3'; s. 26 k.; a. 1 3-pdr., 1 1-pdr.)

Herreshoff #322, a steel motor boat, was built by Herreshoff Manufacturing Co. of Bristol, R.I., in 1917. Built to government specifications, she was originally contracted for by H. V. Morgan of Philadelphia, Pa., on the understanding that she would be later purchased by the Navy. She was taken over 22 March 1918 at Newport, R.I., and commissioned 2 April 1918, Ens. F. A. Judson, USNRF, in command.

After a period of outfitting and training, *Herreshoff #322* was assigned to 3d Naval District as a patrol craft. She operated during World War I and after in Ambrose Channel, East River, and Long Island Sound as a patrol boat until being withdrawn from active service and laid up at Marine Basin 28 August 1919. Subsequently, *Herreshoff #322* was loaned to the Dock Department of New York City 9 March 1920, but was found too large to be economically operated and so was returned to the Navy for a smaller boat 19 November 1920. *Herreshoff #322* was sold 18 July 1921 to W. Lindberg of Birmingham, Ala.

Herreshoff #323

Named for the builder.

(SP-2840; dp. 60; l. 112'5"; b. 15'2"; dr. 4'; s. 24 k.; a. 1 6-pdr.)

Herreshoff #323 was built as a motor boat to government specifications by the Herreshoff Manufacturing Co., Bristol, R.I., in 1918. She was contracted for by J. P. Morgan of New York City under an agreement with Assistant Secretary of the Navy F. D. Roosevelt to purchase or lease her upon completion. She was acquired by the Navy from Morgan 6 June 1918 and commissioned 15 June 1918 at Newport, Ens. W. A. Flagg, USNRF, in command.

Herreshoff #323 was first taken to New London, Conn., for outfitting 19 June and then assigned to 1st Naval District, Boston, Mass., for duty as section patrol boat. Based at Boston, she operated as a patrol craft off Nantucket and in Boston harbor, until transferred to 2d Naval District temporarily in December 1918. *Herreshoff #323* was later transferred back to Boston and 3 December 1920 was assigned as a general purpose craft at Naval Torpedo Station, Alexandria, Va. She remained on this duty until 10 July 1923, when she was transferred to Naval Torpedo Station, Newport, R.I., as a patrol craft and dispatch boat. She was sold 3 May 1927.

Herring

A very valuable food fish which reaches a length of about 1 foot and is extraordinarily abundant in the temperate and colder parts of the North Atlantic.

(SS-233; dp. 1,526; l. 311'8"; b. 27'4"; dr. 15'3"; s. 20 k.; cpl. 60; a. 10 21" tt., 1 3"; cl. *Drum*)

Herring (SS-233) was launched 15 January 1942 by the Portsmouth Naval Shipyard, Portsmouth, N.H.; sponsored by Mrs. Ray Spear, wife of Rear Admiral Ray

Spear, Chief of the Bureau of Supplies and Accounts; and commissioned 4 May 1942, Lt. Comdr. Raymond W. Johnson in command.

After shakedown, the new submarine was one of five sent to the Mediterranean to take station off the North African coast prior to Operation Torch, the invasion of North Africa. Reaching her position off Casablanca 5 November, *Herring* remained there spotting but not attacking several targets. On the morning of 8 November as the invasion was launched, the patient sub had her chance, sinking the 5,700 ton cargo ship *Ville du Havre*. *Herring* returned to Roseneath, Scotland, 25 November and departed for her second war patrol 16 December, on which targets were scarce. On her third patrol *Herring* attacked and sank a marauding Nazi submarine, *U-163* 21 March 1943. The fourth war patrol, an antisubmarine sweep in Icelandic waters, and fifth patrol, which took her back to the States 26 July 1943, netted *Herring* no more kills.

Herring departed New London for the rich hunting grounds of the Pacific 9 August 1943. After intensive training at Pearl Harbor, she sailed 15 November 1943 on her sixth war patrol to join the ranks of the American submarines systematically decimating Japanese shipping and destroying the Japanese economy. She scored two kills, the 3,948-ton *Hakozaki Maru* on 14 December and the 6,072-ton *Nagoya Maru* to celebrate New Year's Day 1944. *Herring's* next patrol was a frustrating one as 24 March 1944 she stalked a large aircraft carrier but was detected and driven deep before she could attack.

Herring's eighth war patrol was to be both her most successful and her last. Topping off at Midway 21 May 1944, *Herring* headed for the Kurile Islands patrol area. Ten days later she rendezvoused with *Barb*, and was never heard from or seen again. However, Japanese records prove that she sank two ships, *Ishigaki* and *Hokuyo Maru*, the night of 30-31 May. *Herring's* exact manner of loss can be determined from these records also. Two more merchant ships, *Hiburi Maru* and *Iwaki Maru*, were sunk while at anchor in Matsuwa Island, Kuriles, the morning of 1 June 1944. In a counter-attack, enemy shore batteries scored two direct hits on the submarine's conning tower and "bubbles covered an area about 5 meters wide, and heavy oil covered an area of approximately 15 miles." On her last patrol, *Herring* had sunk four Japanese ships for a total of 13,202 tons. In all she had sunk six marus totalling 19,959 tons, an Axis cargo ship, and a German U-boat.

Herring received five battle stars for her service in World War II.

Hersey, Francis C., see *Francois C. Hersey*

Hersey, General M. L., see *General M. L. Hersey* (AP-148)

Herzog

William Ralph Herzog was born in Troy, N.Y., 29 December 1909 and was commissioned Lieutenant, junior grade, USNR, 8 April 1942. Lieutenant Herzog was assigned as Officer-in-Charge of the Armed Guard detachment on board SS *Pan New York*. When his ship was torpedoed in the North Atlantic 29 October 1942, Herzog found his gun crew trapped amidships. He attempted to batter the door with his shoulder unsuccessfully, and after aiding the radio operator to escape through a porthole courageously returned to force the door by breaking the lock with his pistol. Herzog was again unable to free his men, and fell unconscious in the attempt. He was posthumously awarded the Navy and Marine Corps Medal for his heroism.

(DE-178: dp. 1,240; l. 306'; b. 36'8"; dr. 8'9"; s. 21; cpl. 186; a. 3 3", 3 tt., 2 dct.; 8 dep; 1 dep (h.h.); cl. Cannon)

Herzog (DE-178) was launched by Federal Shipbuilding & Drydock Co., Newark, N.J., 5 September 1943; sponsored by Mrs. Alice A. Herzog, mother of the namesake; and commissioned 6 October 1943, Lt. Comdr. J. C. Toft, Jr., in command.

After conducting shakedown operations out of Bermuda, *Herzog* steamed from New York 29 November 1943 on her first escort mission, accompanying *Ariel* to the West Indies and back to New York. Arriving 18 December, she got underway as part of the escort for a merchant convoy. Protecting the ships through the dangerous Caribbean passages, *Herzog* arrived at the Canal Zone 27 December. Subsequently she served as escort ship on shorter voyages between Recife, Brazil, and Trinidad.

From 14 April 1944 until 14 July *Herzog* served with Task Group 41.6 on patrol in the South Atlantic. Working with escort carrier *Solomons* she searched the seas in the never ending battle against German submarines. On 15 June she was detached to pick up survivors from a German sub sunk by aircraft, and after returning to the group steamed to Recife, arriving 23 June. After another brief cruise with the Task Group, she returned to Recife 16 July. She sailed to the Brazilian Naval Base at Natal 28 July and was placed out of commission and loaned to the Brazilian Navy under lend-lease 1 August 1944. The ship served Brazil as *Beberibe* (D-23), and 30 June 1953 was transferred outright to that country under the Mutual Defense Assistance Program.

Herzog (DE-277) was built by Boston Navy Yard, Boston, Mass. in 1943. She was renamed HMS *Gore* while building and transferred to Great Britain under lend-lease 14 October 1943. Serving throughout the war as *Gore*, she was returned to the United States 2 May 1946 and sold 10 June 1947.

Hesperia

An astronomical body.

(AKS-13: l. 441'7"; b. 56'11"; dr. 27'7"; s. 12 k.; cpl. 195; a. 1 5", 1 3"; cl. *Acubens*)

Hesperia (AKS-13), originally *Sam Dale*, was launched under Maritime Commission contract by Delta Shipbuilding Co., New Orleans, La., 18 November 1944; sponsored by Mrs. Marie Owen; converted to Navy use by Norfolk Naval Shipyard and commissioned 1 April 1945, Lt. Comdr. William G. Dutton in command.

Following a period of training and shakedown, *Hesperia* loaded her cargo of general stores for the fleet and sailed 16 May 1945. Transiting the Panama Canal, she arrived Pearl Harbor 13 June 1945. The stores ship then proceeded to the western Pacific for the important job of supplying operating units with some of the thousands of items—from clothing to spare parts—necessary to a modern fighting ship. She arrived Ulithi 6 July and after issuing stores to the ships present sailed with a convoy for Okinawa, site of the Pacific's largest amphibious assault just 3 months earlier. *Hesperia* anchored in Buckner Bay, Okinawa, 21 July and began issuing supplies of all kinds to the fleet and shore installations. She continued to function as a mobile supply base, interrupted only by occasional enemy air attacks, until after hostilities ended in mid-August. Having issued her entire stock the ship departed Okinawa 26 August for Manus. She arrived 7 September, loaded another full stock of replacement items, and sailed 22 September.

Hesperia encountered the great typhoon which had devastated Okinawa during her voyage to Korea, but after altering course temporarily continued to Jinsen, arriving 17 October. During the next month she serviced nearly 100 ships and small craft engaged in the Korean and Chinese occupations, operating from Jinsen, and later Taku, China. After this vital support duty, allowing the ships to remain on station for longer periods of time, she

returned to Guam for a fresh issue 29 November 1945. Loading completed, she sailed 20 December to Yokosuka, Japan, and after her arrival 6 days later issued stores to over 500 ships and small craft and the shore activities connected with the occupation of Japan.

Her job in Japan temporarily completed, *Hesperia* got underway 2 March 1946 for the United States, and arrived San Francisco 30 March. During the next months she made two more voyages to supply the fleet, one to Pearl Harbor, the other to Pearl Harbor and Kwajalein. Returning to San Francisco 23 December 1946, she decommissioned 27 February 1947, was delivered to the Maritime Commission, and joined the National Defense Reserve Fleet. She is berthed at present at Suisun Bay, California.

Hetman

A cossack headman.

(SP-1150; dp. 20; l. 60'; b. 10'; dr. 22'; s. 28 k.;
a. 1 3-pdr.)

Hetman, a small motor boat, was built in 1917 by Greenort Basin & Construction Co., Greenpoint, Long Island, for the Russian Government, but purchased by the Navy from the builder in August 1917. Originally designated simply #277, her name was changed to *Hetman* and she commissioned 24 October 1917, Chief Boatswain Mate C. A. Dale, USNRF, commanding.

Assigned to the 3d Naval District, *Hetman* was used as a patrol boat in New York harbor until her departure for Miami 20 November 1917. Travelling the inland route, she arrived Beaufort, N.C., 30 November and Naval Station, Miami, Fla., 15 December. There *Hetman* took up duties which consisted of towing disabled seaplanes in Biscayne Bay and occasionally assisting in salvage work.

Taken to Key West Naval Station after the close of the war, *Hetman* was offered for sale in May 1919, and finally sold to C. J. Haskell of New York City 1 March 1921.

Hetzcl

A Coast Survey name retained.

(SwStr: t. 200; a. 1 9", 1 80-pdr.)

Hetzcl, a sidewheel steamer, was built in 1861 at Baltimore for the U.S. Coast Survey and was transferred to the Navy Department 21 August 1861. Her first commanding officer was Lt. H. K. Davenport.

Hetzcl was assigned to the North Atlantic Blockading Squadron, and arrived Newport News, Va., 18 November 1861. Her first taste of action came 2 December, when Confederate steamer *Patrick Henry* stood out into Hampton Roads and engaged several Union gunboats, including *Hetzcl*. The Federal ships succeeded in damaging *Patrick Henry* in a 2-hour engagement.

The ship was next sent to the coast of North Carolina to participate in a series of successful moves by joint forces in that area. Arriving 4 January 1862 off Hatteras Inlet, *Hetzcl* got underway with the fleet 5 February for the joint amphibious assault on Roanoke Island. She took part in the initial bombardment of the Confederate works 7 February, and, after the landing of troops under cover of naval guns, helped to consolidate the Union victory next day. Commander Rowan's forces quickly capitalized on their important victory by pursuing the retreating Confederate squadron up the Pasquotank River. At Elizabeth City *Hetzcl* and the other ships engaged Confederate batteries and destroyed or captured five Southern gunboats 10 February as Union forces strengthened their hold on the sounds of North Carolina.

USS *Hetzcl*, a Side-wheel Steamer that saw service during the Civil War

As the joint operations in North Carolina continued, *Hetzcl* took part in the attack on New Bern, 13 and 14 March 1862. Getting underway and steaming up the Neuse River at night, the gunboats under Commander Rowan supported the landings by Army and Marines at the town, passed obstructions in the river, and carried troops for the occupation. This combined operation behind the big guns of the Navy captured the key depot at New Bern with a veritable arsenal of supplies. *Hetzcl* was assigned to the sounds of North Carolina following this victory, and spent much of the rest of the war on blockading duty in that area. She participated in an expedition to Hamilton and Williamston 2-9 November 1862 to look for ironclads rumored to be building by Confederates in the area, but found none. In March 1863 the ship assisted in the defense of Fort Anderson, opposite New Bern, when it was threatened by Confederate troops. They attacked 13-14 March and the accurate fire of *Hetzcl*, *Hunchback* and other gunboats was credited with saving the fortification from capture.

Hetzcl was active in the sounds of North Carolina, at New Berne and Washington, until November 1864. She acted during this time as command ship for the area, as her commander was senior officer of the sounds. During the course of the war she shared in the capture of five steamers, six schooners, and one sloop, as Union blockaders effectively shut off the Confederacy from outside trade. *Hetzcl* returned to Hampton Roads in November 1864 for much-needed repairs, sailing for North Carolina and her former blockading station again 29 May 1865. She finally returned north in October 1865 and was returned to the Coast Survey during that month.

Hewell

An island off the coast of Maine.

(AG-145: dp. 515; l. 177'; b. 33'; dr. 10'; s. 13 k.; cpl. 52; a. 2 50 cal. mg.; cl. *Camano*)

Hewell (AG-145) was launched in 1944 by United States Concrete Pipe Corp., Los Angeles, Calif.; served the United States Army as FS-391; acquired by the Navy 2 February 1948, and commissioned 5 June 1948, Lt. (j.g.) J. W. Hinkleman in command.

Hewell's shakedown took her through the Pacific to Guam, Midway, and Saipan. As part of the Service Force, Pacific, *Hewell* operated in support of America's far-flung Asian defenses. Reclassified AKL-14 in June 1949 she continued her duties of transporting cargo through the vast Pacific areas covered by the U.S. Navy. When Communist troops began their onslaught on the Korean peninsula in June 1950, *Hewell* shifted her base of operations to Japan. Shuttle trips to the Korean coast kept American and Allied units, both naval and land, supplied with stores and ammunition. Overhaul at Pearl Harbor and tactical training designed to keep *Hewell* in a state of readiness varied her duties out of Japan.

With the end of hostilities in Korea in August 1953, *Hewell* continued to make frequent supply voyages from Japan to occupying troops until June 1954, when she made a final swing through the Pacific island bases. *Hewell* departed Hawaii for home in mid-October 1954, remaining at Astoria, Oreg., until she decommissioned there 15 March 1955 and joined the Pacific Reserve Fleet. *Hewell* remained there until 1 November 1959 when her name was stricken from the Navy List and sold to Steve Pickard 2 June 1960.

Hewell received seven battle stars for Korean service.

Hewes, Joseph, see *Joseph Hewes* (AP-50)

Heyliger

George Heyliger was born 8 May 1919 in Boston and enlisted in the Marine Corps there 3 February 1942. Private First Class Heyliger was serving with the 1st Marine Division at Guadalcanal 9 October 1942 when his

platoon's position was attacked by approximately 150 Japanese. The fighting swiftly changed from automatic weapons to bayonets and then hand-to-hand combat. Heyliger refused to be dislodged from his position by the enemy and, after exacting a tremendous toll on them, heroically died at his post. For his extraordinary heroism and gallantry, PFC Heyliger was posthumously awarded the Navy Cross.

(DE-510: dp. 1,350; l. 306'; b. 36'8"; dr. 9'5"; s. 24 k.; cpl. 186; a. 2 5", 4 40mm., 16 20mm.; cl. *John C. Butler*)

Heyliger (DE-510) was launched 6 August 1944 by the Federal Shipbuilding & Drydock Co., Kearny, N.J.; sponsored by Mrs. Augusta Foss, mother of Private First Class Heyliger; and commissioned at New York 24 March 1945, Lt. Comdr. Arthur F. Chase, USNR, in command.

After shakedown in the Caribbean, *Heyliger* sailed from Norfolk for the Pacific 25 May, reaching Pearl Harbor via the Panama Canal and San Diego 19 June. The new destroyer-escort spent 6 weeks at Pearl for various training exercises and then departed for Guam 14 August, the day before Japan agreed to unconditional surrender. *Heyliger* reached Guam 30 August and then continued on to Rota Island in the Marianas, where Colonel H. H. Stent, USMC, accepted the surrender of the Japanese garrison 2 September. From 19 September to 21 October *Heyliger* searched through the Carolines to find Allied survivors and Japanese soldiers, as well as examining conditions in the islands. After a stint of patrol and air-sea rescue operations, *Heyliger* returned to the States 22 January 1946 and decommissioned at Green Cove Springs, Fla., 20 June.

Heyliger recommissioned at Green Cove Springs 28 March 1951 and reported to her new home port, Brooklyn. From there she participated in tactical exercises and fleet maneuvers along the American coast and in Caribbean waters. Antisubmarine work, her main mission, took *Heyliger* to European waters 13 June-10 July 1953 and again 17 June-15 July 1955. She decommissioned and was placed in reserve at Bayonne, N.J., 2 January 1958 and later transferred to Philadelphia. *Heyliger* was struck from the Navy List 1 May 1966 and sunk as a target by the Atlantic Fleet.

Heywood

Charles Heywood was born in Maine 3 October 1839. He was appointed a second lieutenant in the United States Marine Corps 5 April 1858. At the outbreak of the Civil War, Heywood was attached to *Cumberland* and commissioned major by brevet for his gallant services during the fight between *Cumberland* and Confederate iron-clad *Virginia*. At the Battle of Mobile Bay, 5 August 1864, he commanded the Marine guard of *Hartford*, and for gallant service was commissioned lieutenant colonel by brevet. Heywood also took part in the capture of Forts Morgan, Gaines, and Powell, ram *Tennessee*, steamers *Gaines* and *Selma*, and the destruction of the steamer *Morgan*. In addition he served in *Sabine* and *Ticonderoga* during the Civil War. Heywood was appointed Colonel Commandant of the Marine Corps 30 January 1891; Brigadier General Commandant 3 March 1899; and Major General Commandant 1 July 1902. He was the first commandant to attain the rank of Major General. Ending 45 years of active service in the Corps. Major General Heywood retired 3 October 1903. He died 26 February 1915 at the age of 76.

The name *Heywood* was assigned to Transport #2 on 7 February 1919; but construction of the proposed transport, authorized by Congress 29 August 1916, was postponed. Classified AP-2 on 17 July 1920, *Heywood* remained on the Navy List until 5 March 1941 when she was renamed *Doyen* (q.v.) prior to the start of construction.

(AP-12: dp. 14,450; l. 507'; b. 56'; dr. 25'6"; s. 16.8 k.; cpl. 540; a. 4 3", 8 40mm.)

Heywood (AP-12) was built in 1919 as *Steadfast* by the Bethlehem Steel Corp., Alameda, Calif. As SS *City of Baltimore* she made New York-San Francisco passenger runs for the Panama Pacific Lines throughout the 1930's. She was acquired by the Navy 26 October 1940, renamed *Heywood* (AP-12), and fitted out as a troop transport at Portland, Oreg., where she commissioned 7 November 1940, Captain Herbert B. Knowles in command.

Heywood cruised as far west as Hawaii before transiting the Panama Canal for Charleston, S.C., arriving 14 June 1941. She carried garrison forces for the defense of Iceland and performed neutrality patrol in waters of the West Indies until the infamous raid on Pearl Harbor. She departed Norfolk 10 April 1942 with reinforcements for the Soman Islands, then replenished at San Pedro before sailing for Wellington, New Zealand. She embarked Marines for amphibious warfare training, then sailed to land them in the amphibious assault in the Tulagi-Guadalcanal area 7 August 1942. She shot down an enemy plane 8 August and frequently repelled air attacks as she shuttled desperately needed supplies and troops into Guadalcanal from the New Hebrides, New Caledonia and ports of Australia. Outbound from the besieged Solomons, she evacuated wounded Americans and Japanese captives.

Heywood returned to San Pedro, Calif., 16 January 1943 for repairs. She sailed north 24 April, carrying fighting men who landed 11 May in an amphibious assault on Attu, Aleutian Islands. She returned nearly 500 wounded veterans of the campaign for Attu to San Francisco 6 June, then put to sea with occupation troops landed to occupy Kiska 15 August 1943.

Heywood returned to Wellington, New Zealand, 1 October 1943 to train and embark fighting men landed in amphibious assault on bloody Tarawa in the Gilbert Islands 20 November. She returned to Pearl Harbor 3 December for amphibious warfare training culminating in the amphibious assault for the capture of the Marshall Islands which commenced 31 January 1944. She put garrison troops ashore at Kwajalein and Majuro, then landed assault units as Americans swiftly swept on to Eniwetok. With the Marshalls secured, the transport overhauled in San Pedro, Calif., then returned to the Marshalls 11 May to prepare for the invasion of the Marianas Islands. She landed assault troops at Saipan 16 June and on nearby Tinian 24 July as America took a giant sea step toward Japan herself.

Heywood participated in the long overseas sweep to Leyte in the Philippines, landing assault troops in the initial invasion of 20 October 1944. She had a brief rest at Manus in the Admiralties where she embarked assault troops landed on the shores of Lingayen Gulf 9 January 1945. She landed reinforcements to assist in securing Mindoro 9 February 1945, then returned to the States for overhaul before embarking reinforcements for the capture of Okinawa, the last stepping stone to Japan.

The close of hostilities with Japan 15 August 1945 found *Heywood* in the Philippine Islands. She carried occupation troops into Tokyo Bay 8 September 1945 and continued trooplift operations between Japan and the Philippines until 25 October 1945 when she set course for the western seaboard. After setting veterans ashore at San Diego and at Philadelphia, she arrived in Boston 3 February 1946. She decommissioned there 12 April 1946 and transferred 2 July 1946 to the custody of the Maritime Administration. She was subsequently renamed *City of Baltimore*.

Heywood received seven battle stars for service in World War II.

Heywood L. Edwards

Heywood Lane Edwards was born in San Saba, Tex., 9 November 1905 and graduated from the Naval Academy

in 1926. After serving in battleship *Florida*, cruiser *Reno* and other ships, he underwent submarine instruction in 1931, served in several submarines, and was assigned to cruiser *Detroit* in 1935. Lt. Comdr. Edwards assumed command of destroyer *Reuben James* 6 April 1940. His ship became the first in the U.S. Navy to be sunk in the Battle of the Atlantic when it was torpedoed by a German submarine while on convoy duty west of Iceland 30-31 October 1941. Lt. Comdr. Edwards and 99 of his crew perished with the ship.

(DD-663: dp. 2,700; l. 376'6"; b. 39'8"; dr. 13'; s. 35 k.; cpl. 319; a. 5 5"; 10 21" tt.; cl. *Fletcher*)

Heywood L. Edwards (DD-663) was launched by Boston Navy Yard 6 October 1943; sponsored by Mrs. Louise S. Edwards, mother of the namesake; and commissioned 26 January 1944, Comdr. J. W. Boulware in command.

Heywood L. Edwards conducted her shakedown beginning 25 February off Bermuda and after gunnery exercises off the Maine coast departed to join the Pacific Fleet. Sailing from Boston 16 April, she transited the Panama Canal, stopped at San Diego, and arrived Pearl Harbor 8 May. There *Heywood L. Edwards*, took part in training maneuvers with Task Force 52 under Vice Admiral R. K. Turner, helping to weld the coordinated amphibious force which was to sweep across the Pacific. The ships got underway from Pearl Harbor 29 May for the Marianas with *Heywood L. Edwards* acting as screening unit for the transport group, and during the initial landings on Saipan 15 June the destroyer took up patrol station to seaward of the invasion beaches. From 21-30 June she closed the beaches to deliver vital fire support for the advancing Marines, and continued that highly effective duty until 2 July. *Heywood L. Edwards* then joined cruiser *Montpelier* for the bombardment of Tinian, another island objective of the Marianas campaign.

The destroyer returned to her gunfire support role off Saipan 6 July, and the next night, 7 July, she was called upon to rescue a group of soldiers cut off from the American lines and stranded on the beach. *Heywood L. Edwards* put over her whaleboat and made four shuttle trips over the treacherous reefs to rescue the 44 men, transferring them to a nearby LCI. Between 19 and 21 July she fired more bombardment missions off Tinian in support of the impending landing there, returned to Saipan fire support duties for a few more days, and got underway from the Marianas 30 July for Eniwetok.

With the Marianas secured, the next objective in the push across the Pacific was the capture of advance bases for the invasion of the Philippines. *Heywood L. Edwards* took part in the Peleliu operation, departing 18 August for training exercises with amphibious forces on Florida Island and sailing for the western Carolines 6 September. Arriving 11 September, the destroyer maintained an anti-submarine patrol around the heavier bombardment units until 13 September, when she was detached to provide close support for underwater demolition teams working on beach obstructions. On 15 September, the day of the assault on this strategic island, *Heywood L. Edwards* provided fire support to forces ashore, illumination fire at night, and succeeded in knocking out an ammunition dump next day as the struggle continued. She encountered a group of barges loaded with reinforcements shortly after midnight 23 September, and after illuminating them with star shell opened with her main battery. By dawn she had sunk 14 of the barges, aided by landing craft, and had helped prevent the landing of some 650 Japanese troops.

The landing a success, *Heywood L. Edwards* proceeded to Manus, Admiralty Islands, where she arrived 1 October. There she joined with Rear Admiral Oldendorf's fire support and bombardment group for the historic return to the Philippines, departing for Leyte 12 October 1944. She conducted pre-invasion bombardment 18-20 October and provided gunfire support for the landings 20 October. This work continued for 4 days under frequent enemy air attack. Then *Heywood L. Edwards* joined once more with Rear Admiral Oldendorf's force for the impending

Battle of Surigao Strait, as the Japanese made a desperate attempt to destroy the landing force.

As Oldendorf's masterfully deployed forces waited at the end of Surigao Strait, *Heywood L. Edwards* headed section 3 of Destroyer Squadron 56, screening the left flank of the cruiser line. Torpedo boats and destroyers made the initial attacks, farther down the strait, and just after 0300 25 October *Heywood L. Edwards* and her unit were ordered to attack. In company with *Leutze* and *Bennion* the destroyer steamed down the port side of the enemy column and ran through a hail of gunfire to launch torpedoes. Two hits were obtained on Japanese battleship *Yamashiro*, with *Albert W. Grant* on the American side damaged but afloat. After this intrepid attack, the Japanese steamed into Oldendorf's trap. As the destroyers retired, his heavy units pounded the enemy line, allowing only cruiser *Mogami* (later sunk by aircraft) and one destroyer to escape. As morning broke over Surigao Strait, *Heywood L. Edwards* took station on the port bow of the cruisers in search of enemy cripples, patrolled the eastern entrance to the strait for a day, then returned to take up station in Leyte Gulf.

With the American victory complete at sea, *Heywood L. Edwards* remained in the invasion area until 25 November, patrolling and protecting the shipping building up in the gulf. She arrived Manus for a much-needed rest and repair period 29 November. Soon underway again, however, she sailed 15 December, and after training exercises in the Palau Islands departed 1 January with Oldendorf's group for the second important phase of the Philippine invasion, Lingayen Gulf. Fighting off suicide planes as they steamed, the ships arrived Lingayen Gulf 6 January, and *Heywood L. Edwards* downed two of these aircraft during a strong attack that day. She then took up her fire support duties for UDT teams, and with the landings 9 January covered troops on the beachhead and fired at strongpoints ashore. She continued these assignments in addition to protecting arriving and departing convoys until 22 January, when she departed for Ulithi.

Next on the relentless timetable of Pacific victory was Iwo Jima, seen as a key base for B-29 operations against the mainland of Japan. *Heywood L. Edwards* participated in landing rehearsals 12-14 February 1945 and screened heavy units during the pre-invasion bombardment. As the Marines stormed ashore 19 February she began firing support missions, aiding the hard fighting ashore until 27 February, when she sailed for Saipan. The destroyer then sailed on to Ulithi and formed with the supporting forces for the coming invasion of Okinawa.

The task force for this landing departed Ulithi 21 March, and after her arrival 4 days later *Heywood L. Edwards* covered the UDT teams' reconnaissance of Kerama Retto. As those islands were captured 27 March in preparation for the larger landings, the destroyer found herself in the midst of heavy suicide attacks and shot down many of the kamikazes. She covered the UDT landings on Okinawa 30 March, bombarded an airfield ashore that afternoon, and 1 April joined in the bombardment of the assault areas. During the next weeks of bitter fighting ashore, naval forces effectively sealed off the island from any possible reinforcement and effectively supported the troops with gunfire. *Heywood L. Edwards* and the other vessels had to fight off continuing suicide attacks and other menaces. When destroyer *Longshaw* ran aground on a reef 18 May, *Heywood L. Edwards* knocked out shore batteries which had opened on the stricken ship. She then continued performing fire support and radar picket duties off Okinawa until 28 July, when she sailed for Leyte Gulf. She had helped to carry out one of the most prolonged and successful fire support operations in the history of amphibious warfare.

The destroyer departed Leyte 2 August, and after a time at Saipan and Eniwetok she got underway again 29 August. Sailing toward Japan, *Heywood L. Edwards* covered the initial occupation of the Ominato area 6 September 1945 and departed that port 22 October for the United States, via Pearl Harbor. She arrived Seattle 10 Novem-

ber, decommissioned 1 July 1946, and entered the Long Beach Group, Pacific Reserve Fleet. Brought out of reserve in 1959, she was loaned to Japan under the Military Assistance Program, where she serves as *Ariake* (DD-183).

Heywood L. Edwards received seven battle stars for her service in World War II and a Navy Unit Commendation for her outstanding part in the great amphibious operations of 1944-45.

Hiamonee

A former Seminole village on the Okloknee River in North Florida.

(YTB-513: dp. 325; l. 100'; b. 25'; dr. 9'7")

Hiamonee (YTB-513), a diesel-powered tug, was launched 19 September 1945 by Commercial Iron Works, Portland, Oreg.; and placed in service November 1945.

Hiamonee served as a harbor tug in the 12th Naval District until March 1946, when she entered the Pacific Reserve Fleet at Bremerton, Wash., where she remains.

Hiawatha

Title and hero of a poem by Longfellow; a famous Mohawk chieftain.

I

(SP-183; dp. 89; l. 98'; b. 17'; dr. 5'; s. 10 k.; a. 1 3-pdr., 1 1-pdr.)

Hiawatha, a steam yacht, was built as *Donaire* by Lawley & Sons, Boston, Mass., in 1914. She was acquired from her owner, A. W. Stanley, of Miami, Fla., and commissioned 10 May 1917 at Norfolk Navy Yard.

Assigned to the 5th Naval District, *Hiawatha* operated in Hampton Roads and vicinity as a patrol craft and dispatch boat during the First World War. After the war she remained inactive in Norfolk until loaned to the Maryland State Conservation Commission 11 December 1919 to 16 March 1920. She was subsequently sold to the Department of Agriculture, Forest Service, 1 October 1920, and was taken to Alaska for use in the administration of Alaskan National Forests.

II

(SP-2892: dp. 69; l. 65'5"; b. 17'; dr. 8'; s. 8 k.)

The second *Hiawatha*, a wooden steam tug, was built by Brown, Tottenville, of Staten Island, N.Y., in 1903; acquired by the Navy in 1918; and commissioned 1 August 1918 at New York.

Assigned to the 3d Naval District, *Hiawatha* operated with and was manned by sailors from guard ship *Amphitrite*. The tug performed guard duty in the harbor and boarded ships to inspect cargo until she was detached from service 5 December 1918. *Hiawatha* was returned to her owner 5 May 1919.

III

(YT-265: dp. 237; l. 100'; b. 25' dr. 9'7"; s. 13 k.)

Hiawatha (YT-265), a harbor tug, was built as *Port Angeles* under Maritime Commission Contract by Birchfield Boiler Inc., Tacoma, Wash.; launched 3 April 1942; and sponsored by Mrs. Violet Davies. Acquired by the Navy 30 April 1942, the tug's name was changed to *Hiawatha*; and she was placed in service.

Hiawatha performed harbor tug duties for the 13th Naval District at Seattle, Wash., during the remainder of World War II and after. She was redesignated YTB, large harbor tug, 15 May 1944. In 1948 she was assigned to the 12th Naval District and operated as a tug for the San Francisco Naval Shipyard. *Hiawatha* was redesignated YTM-265, medium harbor tug, in February 1962; and she continues to serve at San Francisco Naval Shipyard.

Hibiscus

I

Any of the herbs, shrubs, or trees of genus *Hibiscus*; many of which have large showy flowers.

(ScStr: t. 490; s. 9 k.; a. 2 30-pdr., 4 24-pdr.)

Hibiscus was purchased at New York from S. M. Pook on 16 November 1864; and commissioned there on 29 December 1864, Lt. William L. Martine in command.

She sailed from New York on 29 January 1865 and reached Tampa, Fla., via Port Royal, S.C., and Key West on 17 February. *Hibiscus* patrolled out of Tampa until the end of July, putting in at Cedar Keys and St. Andrews Bay as well as Key West during this period. On 11 April 1865 off Crystal River *Sea Bird*, which served as tender to *Hibiscus*, captured small Confederate sloops *Florida* and *Annie* with cargoes of loose and baled cotton. With the end of the war, *Hibiscus* sailed north and on 11 August stood into New York. She decommissioned there 19 August 1865 and was sold 5 October 1866.

II

(T. 876; l. 190'; b. 30'; dr. 13'; sp. 11 k.)

Hibiscus was built in Camden, N.J., in 1908. Acquired from the Lighthouse Service, Department of Commerce, she commissioned 11 April 1917 and served as a patrol vessel at Boston. *Hibiscus*, after decommissioning, was returned to the Lighthouse Service 1 July 1919.

Hibiscus, see *Spry* (PG-64)

Hickman

(NOTS: dp. 10,562 t.; l. 377'; b. 52'; dr. 23'10"; sp. 10.5 k.; cpl. 90)

Hickman was built by Standard Steamboat Co. of New York in 1918; acquired from the USSB on 16 November 1918; and commissioned at Shooters Island, N.Y., on 16 November 1918, Lt. Comdr. Carl Gustave Muller in command.

After loading cargo at New York, *Hickman* sailed for France on 7 December 1918, arriving at La Pallice Roads on 22 December after a rough passage in which one of the crew was lost overboard. She unloaded cargo there and, taking on a few passengers for the States, sailed on 27 January 1919 and arrived at New York on 17 February in an even rougher passage with winds in the North Atlantic reaching hurricane force. She decommissioned there 5 March 1919 and was returned to the USSB.

Hickman County

There are two Hickman Counties in the United States. Hickman County of middle Tennessee has an area of 655 square miles; its county seat is Centerville. Hickman County of western Kentucky has an area of 244 square miles; its county seat is Clinton.

(LST-825: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 266; a. 8 40mm., 12 20mm., cl. LST-511)

Hickman County (LST-825) was launched as LST-825 11 November 1944 by the Missouri Valley Bridge & Iron Co., Evansville, Ind.; sponsored by Mrs. John Spindler; commissioned at New Orleans 8 December 1944, Lt. Henry V. Hartsell in command.

After shakedown in the Gulf of Mexico, LST-825 loaded oil and cargo at New Orleans and sailed for the West Coast. She arrived at San Diego 30 January 1945, discharged her cargo and continued on to Seattle, arriving

4 February. Loading oil, ammunition and embarking troops, LST-825 sailed for the Pacific 26 February 1945. The momentous Pacific campaign was in full swing at Okinawa when LST-825 reached that rocky Japanese fortress via Pearl Harbor, Guam, Eniwetok, and Ulithi on 21 April to discharge troop reinforcements and cargo.

LST-825 retired to Saipan, where she loaded cargo and supplies for the famed Seabees and returned to Okinawa 26 June. A late July convoy took the LST to Iwo Jima with cargo and supplies; and she returned to Okinawa 4 September. Hostilities having ended on 15 August, LST-825 embarked troops and equipment of the 5th Army Air Force destined to participate in the occupation of Japan. Entering Tokyo Bay 25 September, she disembarked the occupation forces and their equipment and set course for Okinawa.

During November 1945, LST-825 completed a second Okinawa-Japan trip. On the 16th the landing ship embarked 514 enlisted men at Guam and sailed for the United States via Pearl Harbor as part of the "Magic-Carpet" fleet bringing home veterans, arriving San Francisco 22 December. After a few months of tactical operations along the West Coast, LST-825 decommissioned at Swan Island, Portland, Oreg., and joined the Pacific Reserve Fleet 22 May 1946.

With the outbreak of hostilities in Korea, LST-825 recommissioned 3 November 1950, Lt. Thomas R. Ashton in command. After training out of San Diego, LST-825 entered Pearl Harbor 8 April 1951 where she transported passengers and cargo among the Hawaiian Islands until returning stateside 1 July. On 17 September she returned to Hawaii and operated there until her return 16 December to San Diego. Departing San Diego 26 April 1952, the LST arrived at Yokosuka 11 June via Pearl Harbor and Midway. She made several cruises to the Korean coast to participate in tactical amphibious exercises and maneuvers of U.S. and Republic of South Korean troops. LST-825 also carried Communist prisoners-of-war from Korea to Japan. She returned to San Diego 5 March 1953, for scheduled amphibious landing exercises and fleet tactics along the western seaboard.

Her second Western Pacific cruise began on her departure from California 20 January 1954. Spring and early summer were spent in operations along the Japanese and Korean coast as well as cargo duty between Eniwetok and Bikini. On 11 August 1954, LST-825 departed Yokosuka for French Indochina, where she assisted the humanitarian "Passage to Freedom." When the French began to pull out of Indochina following their defeat by Communist rebels, over 800,000 North Vietnamese chose to forsake their homes and cast their lot with the southern half of their country rather than to live under communism.

Nearly 100 ships of the U.S. Navy under Rear Admiral Lorenzo S. Sabin helped transport the refugees in a mass exodus to freedom. In all, the U.S. Navy evacuated 310,848 North Vietnamese as well as 68,757 tons of cargo and over 8,000 vehicles. Hard-pressed and cramped sailors were rewarded when many of the 184 children born on the "Passage to Freedom" were named after U.S. ships and officers. Part of this humanitarian task force from 26 August to 5 October 1954, LST-825 made five trips from the Northern capital, Haiphong, to Southern ports with Vietnamese refugees and French troops and equipment. For an outstanding job done during this worthy cause, the ship was awarded the Vietnam Presidential Unit Citation.

LST-825 returned to San Diego 27 November 1954, and operated out of there until decommissioned 20 September 1955, having been renamed *Hickman County* 1 July.

Hickman County recommissioned in service at San Diego 22 March 1963, Lt. Edward F. Powers in command. Assigned to LST Reserve Squadron 2, she reported to the U.S. Naval Amphibious Base at Little Creek, Va., 19 June 1963, to conduct amphibious warfare training. For the next 2 years she underwent various phases of training in amphibious warfare.

In May 1965, the Dominican Republic crisis erupted and *Hickman County* sailed from Norfolk 8 May laden with

supplies for the logistical support of the U.S. Armed Forces keeping the peace in that country. *Hickman County* remained in the Caribbean area as a standby ship supplying the United States contingency at the Dominican Republic until 15 July when it called at Puerto de Haina, Dominican Republic, to embark Army troops and sailed for Sunny Point, N.C., debarking them 22 July 1963. From 26 August until 9 December, the busy ship transferred military personnel and cargo between the United States and the Dominican Republic and acted as host to foreign ships at San Juan, P.R. On 10 December she arrived at Little Creek, Va., departing for Brooklyn, N.Y., 4 days later for overhaul. On 23 February 1966, the ship transited the Panama Canal, arriving at Pearl Harbor 19 March and departed Kaneohe Bay, Oahu, 4 April 1966 for the Western Pacific, where she presently serves.

Hickman County earned two battle stars for service in Korea and the Vietnam and Korean Presidential Unit Citations.

Hickox

Ralph Hickox was born 29 August 1903 in Washington D.C. Enlisting in the United States Marine Corps 23 September 1921, he was appointed to Annapolis 18 July 1923 and commissioned ensign 2 June 1927. In the peacetime Navy Hickox served in a variety of ships and stations and was finally appointed commanding officer of the destroyer *Truxtun* 3 October 1941. He had been commissioned lieutenant commander 1 July of that year. When his ship went aground in heavy seas off St. Lawrence, Newfoundland, 18 February 1942, Lt. Comdr. Hickox remained on the bridge directing rescue operations in a cool and fearless manner which inspired the officers and men under him and was instrumental in effecting the rescue of many of the members of his crew. However, Hickox was swept from the bridge by the pounding seas and lost.

(DD-673: dp. 2,050 t.; l. 376'6"; b. 39'8"; dr. 17'9"; s. 37 k.; cpl. 319; a. 5 5", 10 40mm., 7 20mm., 10 21" tt., 6 dep., 2 dct.; cl. *Fletcher*)

Hickox (DD-673) was launched 4 July 1943 by Federal Ship Building & Drydock Co., Kearny, N.J.; sponsored by Mrs. Ralph Hickox, wife of the late Commander Hickox; and commissioned 10 September 1943, Comdr. William M. Sweetser in command.

After shakedown in the Caribbean, *Hickox* departed Norfolk 21 November and reported to Pearl Harbor 12 December. Joining Admiral Mitscher's fast carrier Task Force 58 as part of the destroyer screen, *Hickox* sailed 16 January 1944 to participate in the first "neutralization" raids against Marshall Islands airfields. In the next few months she helped shepherd the powerful carriers through raids on Truk, the Marshalls, and New Guinea. On 1 April *Hickox* teamed up with *Hunt* to destroy two small Japanese cargo vessels off Woleai Island. She chalked up another enemy ship, a small picket boat, 13 June in the Marianas. After guarding the carriers as their planes launched initial strikes on both Wake and Saipan in early June, *Hickox* accompanied other units of the task force in patrolling western Marianas waters in anticipation of engagement with a large enemy surface force. These anticipations were met 19 June as the Battle of the Philippine Sea was joined. In this 2-day air struggle, the Japanese fleet lost 395 (92%) of its carrier planes, 31 (72%) of its float planes, and an estimated 50 land-based planes. During the famed "Marianas Turkey Shoot," as the Navy fondly termed it, *Hickox* was in on the kill of at least five aircraft and also rescued three splashed fliers. Japanese naval air never recovered from this defeat.

For the rest of the summer she remained with TF 58 as the carriers launched preliminary air strikes against enemy positions on Iwo Jima and Guam. On 11 September *Hickox* joined Admiral "Bull" Halsey's 3d Fleet in Philippine waters to protect carriers whose planes 2 days later launched initial strikes against the former American

islands. After raids on Okinawa and Formosa 12-13 October, *Hickox* turned back to Philippine waters to participate in the Battle for Leyte Gulf, Japan's last desperate effort to resist the overwhelming American advance across the Pacific. In 4 separate battles 24-26 October the once-proud Japanese fleet was decimated by the loss of 3 battleships, 10 cruisers, 4 carriers, 9 destroyers, and a submarine. Through 7 November *Hickox* remained with the 3d Fleet, under almost constant Japanese air attack, to screen air strikes against Manila before retiring to Ulithi.

Rejoining the carriers 14 November, *Hickox* escorted them to further strikes in the Philippines and 11 December support of the Mindanao landings. In the savage typhoon which struck the Philippines 17 December, *Hickox* lost steering control in howling winds estimated at 115 knots, but regained power and control in time to shepherd a group of tankers to safety at Ulithi 23 December. Rejoining Task Force 58 1 February 1945, *Hickox* screened the carriers 16 February as they launched the first raids against Tokyo since the famed Halsey-Doolittle raid of April 1942. Further strikes against the Japanese home islands and in support of the already-launched Iwo Jima invasion kept *Hickox* at sea well into the spring. On 19 March the carrier *Franklin* was severely damaged by a kamikaze and *Hickox* lowered her whaleboat and steamed in the listing ship's wake to rescue her crew. After rescuing some 70 men from the water, the daring destroyer sailed directly under the flaming carrier's fantail to rescue 18 men from the ship and 3 more from the water. In addition, *Hickox's* effective antiaircraft fire drove off two more kamikaze attacks on the damaged *Franklin*. After escorting the carrier to Ulithi 24 March, *Hickox* sailed 5 April to join support forces off Okinawa, where battle had been raging 4 days as American forces sought to take the Japanese bastion, last obstacle before invasion of the home islands.

Off Okinawa *Hickox* engaged in screening and radar picket duties. While coming under fierce air attack, the battle-hardened DD gave as good as she received, downing and assisting in the kill of several Jap planes. Detached from duty there 29 May, *Hickox* proceeded to Guam and from there sailed for home via San Pedro and Pearl Harbor. Steaming under the Golden Gate Bridge 6 July, the veteran warrior underwent repairs, her first since departing the States 18 months earlier, and was still there when the long Pacific war ended 2 September with the signing of the armistice in Tokyo Bay. *Hickox* decommissioned and went into reserve at San Diego 10 December 1946.

Hickox recommissioned 19 May 1951, following the outbreak of war in Korea that accelerated the need for seapower. She arrived Newport, R.I., her new home port, 13 October to join the Atlantic Fleet. After tactical exercises along the coast and in the Caribbean, she and the other destroyers of DesRon 20 sailed 6 September on what was to become an around-the-world cruise. *Hickox* spent two long winter months on duty off Korea screening the fast carriers of Task Force 77, furnishing gunfire support, and patrolling along the Communist-impelled peninsula. She and her sister ships returned to Newport in April 1953 via Singapore, Calcutta, Ceylon, Naples, and Gibraltar to terminate their 7½-month cruise. Further exercises occupied her until 8 September 1954, when *Hickox* sailed for a 5-month cruise to Northern and Mediterranean Europe. NATO and fleet maneuvers as well as good-will visits consumed most of *Hickox's* tour. Returning to the States 7 February 1955, *Hickox* made one more Mediterranean cruise in the summer of 1957 during which she stood by in the eastern Mediterranean to prevent further unrest and bloodshed in the wake of an attempted coup against King Hussein of Jordan. Returning to the States 30 August, *Hickox* sailed to Philadelphia 2 weeks later and decommissioned there to join the Atlantic Reserve Fleet 20 December 1957.

Hickox received nine battle stars for World War II service and two for Korean service.

Hidalgo

A county in New Mexico.

(AK-189: dp. 7,125 full load; l. 338'6"; b. 50'; dr. 21'; s. 12 k.; cpl. 85; a. 1 3"; cl. *Alamosa*)

Hidalgo (AK-189), a diesel-powered C1-M-AV1 cargo hull, was launched 28 July 1944 under Maritime Commission contract by Walter Butler Shipbuilding, Inc., Superior, Wis., sponsored by Mrs. Claude Pepper, wife of the Senator from Florida; placed in service while being towed to Galveston, Tex., and commissioned 4 August 1945, Lt. John W. Thompson in command.

After conducting a brief shakedown cruise off the coast of Texas, *Hidalgo* sailed to the Canal Zone for routing to the Pacific 5 September 1945, but the war's end brought orders to proceed to Norfolk. The ship arrived in Hampton Roads 11 March 1946 and decommissioned 26 April 1946. Subsequently, she was sold to Turkey and serves as cargo ship *Rize* in merchant service.

Hidatsa

An Indian group of the Sioux Tribe of North Dakota, now living on the Fort Berthold Reservation.

(AT-102: dp. 1,240; l. 205'; b. 38'6"; dr. 15'4"; s. 16 k.; cpl. 85; a. 1 3", 2 40mm.; cl. *Cherokee*)

Hidatsa (AT-102) was launched 29 December 1943 by the Charleston Shipbuilding & Drydock Co., Charleston, S.C.; sponsored by Mrs. Dorothy S. White; and commissioned 25 April 1944, Lt. Carroll F. Johnson in command. She was reclassified ATF-102 15 May 1944.

After shakedown in Chesapeake Bay, *Hidatsa* departed Norfolk 3 June 1944 with two floating destroyer workshops in tow and reached Manus Island, Admiralties, via the Panama Canal, Borabora, and Espiritu Santo 4 September. On 20 September *Hidatsa* towed two pontoon barges to Morotai to be used in docks assembled on that newly taken island. Next, she towed seven more barges to Mios Woendi. Then, as the long Pacific campaign moved steadily northward, the fleet tug departed Mios Woendi 13 October with a gasoline barge, a crane barge, and a PT drydock in tow, for use in the invasion of the Philippine Islands. As *Hidatsa* reached Leyte Gulf, scene of the initial landings, 25 October she could observe gun flashes from the Battle of Surigao Straits, part of Japan's desperate attempt to deny America the Philippines. But for brief voyages to Manus and Hollandia, *Hidatsa* remained at Leyte on fire fighting, towing and salvage assignments until 3 January 1945. That day she sailed to participate in the initial landings at Lingayen Gulf where she remained 9-18 January during the vicious Japanese kamikaze attacks.

Hidatsa next participated in landings at Zambales and Grande Island, where she was active in salvage and towing work. On the morning of 17 February, while returning from the initial assault landings at Corregidor, the tug struck a mine in Mariveles Harbor killing 8 of her crew and injuring another 12. Towed to Subic Bay 18 February, *Hidatsa* remained there for repairs and trials until she sailed 2 August 1945 for Manus Island, where she received the welcome news of Japan's surrender. Although the war was over, there was much work to be done, and the fleet tug remained in the Philippines for salvage operations until 7 April 1946.

Reaching San Pedro, Calif., via Eniwetok and Pearl Harbor, 13 June, *Hidatsa* engaged in training operations. She returned to the Pacific in 1947 for salvage and towing operations, primarily at Eniwetok and Kwajalein. *Hidatsa* departed Mare Island for Alaska 28 August 1947 and spent most of the next 2 months operating in the northern waters. Operations along the California coast, with a February 1948 cruise to Pearl Harbor, occupied *Hidatsa* until she decommissioned and went into reserve at Long Beach, Calif., 5 May 1948.

In 1962 *Hidatsa* was transferred to the Maritime Commission, National Defense Reserve Fleet at Suisun Bay, California, where she remains.

Hidatsa earned two battle stars for her service in World War II.

Hi-Esmara, see Niagara (AGP-1)

Higbee

Lenah S. Higbee, first woman to receive the Navy Cross while still living, was born 18 May 1874 in Chatham, New Brunswick, Canada. After completing nurses' training at New York Postgraduate Hospital in 1899 and further training at Fordham Hospital, she engaged in private practice until entering the U.S. Navy Nurse Corps 1 October 1908. Widow of the late Lieutenant Colonel John Henley Higbee, USMC, Mrs. Higbee became Chief Nurse 14 April 1909 and second commandant of the Nurse Corps 20 January 1911. For her World War I service she received the Navy Cross 11 November 1920. Mrs. Higbee retired from the Nurse Corps 30 November 1922 and died 10 January 1941 at Winter Park, Fla. She is buried beside her husband at Arlington National Cemetery.

(DD-806: dp. 2,425; l. 390'6"; b. 41'1"; dr. 18'6"; s. 35 k.; cpl. 367; a. 6 5", 12 40mm., 11 20mm., 10 21" tt., 6 dp., 2 dct.; cl. *Gearing*)

Higbee (DD-806) was launched 13 November 1944 by the Bath Iron Works, Bath, Maine; sponsored by Mrs. A. M. Wheaton, sister of the late Mrs. Lenah S. Higbee; and commissioned 27 January 1945, Comdr. Lindsay Williamson in command.

Higbee immediately sailed to Boston, where she was converted to a radar picket destroyer. After shakedown in the Caribbean, she sailed for the Pacific 24 May, joining the famed Carrier Task Force 38 less than 400 miles from Tokyo Bay 19 July. "Leaping Lenah," as she had been dubbed by her crew, screened the carriers as their planes launched heavy air attacks against the Japanese mainland until the end of hostilities 15 August. She helped clear Japanese mine fields and supported the occupation forces for the following 7 months, finally returning to San Diego 11 April 1946. The post-war years saw *Higbee* make two peacetime Western Pacific cruises as well as participate in fleet exercises and tactical training maneuvers during both these cruises and off the West Coast. On her second WestPac cruise, *Higbee* escorted the heavy cruiser *Toledo* as they paid official visits to the recently constituted governments of India and Pakistan in the summer of 1948.

When Communist troops plunged into South Korea in June 1950, *Higbee*, redesignated DDR-806 18 March 1949, was immediately deployed to the Korean coast with the 7th Fleet. Most of her Korean War duty came in screening the Fast Carrier Task Force 77 as their jets launched raids against Communist positions and supply lines. On 15 September she formed part of the shore bombardment and screening group for the brilliant amphibious operation at Inchon. *Higbee* returned to San Diego 8 February 1951. In two subsequent stints in Korea, she continued to screen the carrier task force and carry out shore bombardment of enemy positions. In order to protect against the possibility of Communist invasion of Nationalist China, *Higbee* also participated in patrol of Formosa Straits. Returning to the States 30 June 1953, she entered the Long Beach yard for a 6-month modernization which saw major structural alterations made, including an enlarged Combat Information Center, new height-finding radar, and an improved anti-aircraft battery.

The radar picket destroyer's peacetime duty then fell into a pattern of 6-month WestPac cruises alternating with upkeep and training out of San Diego. Operating with the 7th Fleet on her WestPac cruises, *Higbee* visited Australian and South Pacific ports frequently as well as engaging in fleet maneuvers with units of SEATO navies. Her home port was changed to Yokosuka, Japan, 21 May

1960. From there *Higbee* continued to cruise in the Pacific and along the China coast to strengthen American force in Asia and show her determination to protect democracy against the inroads of Communism. After 2 years duty in Japan, *Higbee* returned to her new home port, San Francisco, 4 September 1962. On 1 April 1963 the destroyer entered the shipyard there for a fleet rehabilitation and modernization overhaul designed to improve her fighting capabilities and lengthen her life span as an active member of the fleet. *Higbee* was redesignated DD-806 on 1 June 1963.

Ready for action 3 January 1964, *Higbee* trained on the West Coast until departing for Japan 30 June and reached her new homeport, Yokosuka, 18 July. During the Tonkin Gulf Incident in August, the destroyer screened carriers of Task Force 77 in the South China Sea. In February 1965 *Higbee* supported the 9th Marine Brigade at Danang, Vietnam. In May she participated in Gemini recovery in the Western Pacific. On 1 September *Higbee* helped to rescue the crew from *Arsinoe* after the French tanker had grounded off Scarborough Shoals in the South China Sea. The remainder of September was spent in naval gunfire support off South Vietnam.

While operating northeast of Luzon in late January 1966, *Higbee* sighted Russian hydrographic ship *Gidrifon*. Returning to South Vietnam in April, *Higbee* bombarded enemy positions near Cape St. Jacques and the mouth of the Saigon River. On 17 June she departed Yokosuka for the West Coast, arrived Long Beach, her new home port, 2 July and operated out of there into 1967.

Higbee earned one battle star for her service in World War II and seven battle stars for her service in the Korean War.

High Ball

A former name retained.

(SP-947: l. 45'; b. 6'6"; dr. 2'6"; s. 35 k.; a. 1 mg.)

High Ball, a wooden motor boat, was built in 1910, acquired from her owner, W. J. Green of Utica, N.Y., 21 May 1917, and commissioned 1 June 1917 at New York Navy Yard.

High Ball was assigned to the 3d Naval District and spent her commissioned service as a tender to *Amphitrite* in New York Harbor. She was returned to her owner 21 May 1919.

II

(YP, l. 31' wl.)

The second *High Ball* was a small motor boat acquired by the Navy from her owner, W. W. Smithers, of Cape May, N.J., November 1918. Assigned to the 4th Naval District, she was returned to her owner 2 December 1918.

High Point

A city in central North Carolina.

(PCH-1: dp. 110; l. 115'; b. 32'; dr. about 17' with foils down; s. over 30 k.; cl. *High Point*)

High Point (PCH-1), an hydrofoil patrol craft, was launched 17 August 1962 by J. M. Martinac Shipbuilding Corp., Tacoma, Wash., in conjunction with Boeing Co., Seattle; sponsored by Mrs. William H. Allen; and placed in service 15 August 1963, Lt. H. G. Billerbeck in charge.

High Point is the first of a series of hydrofoil craft designed to evaluate the performance of this kind of propulsion in the modern Navy. She has three submerged foils containing propulsion nacelles and propellers, and is also capable of riding on her hull like a more conventional ship. On her foils, *High Point* is capable of very high-speed operation, and can add mobility and flexibility to America's antisubmarine forces. The craft carried out tests in Puget Sound during 1963 through 1967.

Highland Light

A former name retained.

(IX-48: l. 68'7"; b. 15'4"; t. 32)

Highland Light (IX-48), an auxiliary cruiser, was built by George Lawley & Son, Neponset, Mass., in 1931, and was given to the Navy by the estate of Dudley A. Wolf of Boston for use at the Naval Academy. The craft was acquired 26 October 1940 and remained in service at the Naval Academy at Annapolis through 1965 until struck from the Navy List 1 April 1965.

Highlands

A county in Florida.

(APA-119: dp. 6,873; l. 455'; b. 62'; dr. 24'; s. 17 k.; cpl. 536; a. 15", 12 40mm.; cl. *Haskehl*; T. VC2-S-AP5)

Highlands (APA-119), a "Liberty ship" transport, was launched 8 July 1944 under Maritime Commission contract by California Shipbuilding Co., Wilmington, Calif.; sponsored by Mrs. G. W. D. Dashiell; acquired by the Navy and commissioned 5 October 1944, Captain G. D. Lyon commanding.

The new transport conducted shakedown training out of San Pedro until 30 October. Following a rigorous period of drills, which would serve her well in the months to come, *Highlands* sailed to San Francisco to embark her troops, and got underway 23 November for Hawaii.

Arriving Pearl Harbor 29 November, the ship again turned to amphibious training, in preparation for the epochal Iwo Jima landings, one of the most important steps in the Navy's island campaign that drove relentlessly toward Japan. *Highlands* sailed with her task group 27 January 1945 via Eniwetok for Saipan, where she arrived 11 February. Five days later she sailed for Iwo Jima and commenced unloading on the beaches the morning of 19 February. For the next 6 days the transport unloaded troops and supplies during the day and retired under escort cover each night. Japanese air attacks were heavy during this period, claiming escort carrier *Bismarck Sea* in a kamikaze attack 21 February and damaging several other ships, including *Saratoga*. In addition to her regular duties, *Highlands* received over 150 survivors of *Bismarck Sea* 22 February, as well as casualties from the hard-pressed Marine units ashore.

Highlands departed Iwo Jima 25 February and after debarking casualties at Saipan proceeded to Espiritu Santo, arriving 15 March 1945. There she took on fresh troops for the next major assault of the Pacific War, the invasion of Okinawa, called by Winston Churchill "... among the most intense and famous of military history." *Highlands* did not take part in the initial landings, arriving in the Ryukyus 3 April. The transport remained at Kerama Retto until 11 April, when she took part in the early morning assault on Tsugen Jima, a small but key island controlling the approaches to the large bay on Okinawa's east side. As Marines gained control of the island, *Highlands* took casualties on board, and moved directly off Hagushi beaches 12 April to disembark reserve troops. During the 3 days that followed antiaircraft fire and smoke screens helped protect the transport from almost continuous air attack, and after completing her mission *Highlands* sailed for Saipan 16 April.

Arriving Saipan 20 April *Highlands* unloaded casualties and proceeded the next day to Ulithi. She departed 22 May for Guam and then Leyte, arriving in Leyte Gulf 31 May. The transport now busily prepared for the expected amphibious landings on the Japanese mainland, operations which were terminated by the surrender 15 August 1945. *Highlands* had been operating off Panay Island when the surrender came; she sailed 21 August to load occupation troops on Luzon. *Highlands* and other transports of her group entered Tokyo Bay the day of

USS *High Point* (PCH-1)—Notice space between bottom of her hull and surface of the water.

the formal ceremony, 2 September, and landed the 1st Cavalry Division on Japanese soil.

Highlands returned to the Philippine Islands and Okinawa for more occupation troops in September and after the clearing of mines from Japan's inland sea landed troops at Kure 6 October. The veteran ship sailed 11 October for Okinawa and San Diego carrying returnees, arriving in the United States 2 November. She made an additional voyage to Japanese ports 17 November–26 December, returning to San Francisco, and departed 11 January 1946 for the Panama Canal and Norfolk. *Highlands* arrived Hampton Roads 26 January, decommissioned 14 February and was placed in the Maritime Commission's National Defense Reserve Fleet, James River, where she remains.

Highlands received two battle stars for World War II service.

Highway

A British name retained.

(LSD-10: dp. 4,490; l. 457'9"; b. 72'7"; dr. 18'; s. 15 k.; cpl. 290; a. 1 3", 12 40mm., 16 20mm.; cl. *Ashland*)

LSD-10 was laid down by Newport News Shipbuilding & Dry Dock Co., Newport News, Va., 23 November 1942;

launched as *Claymore* 19 July 1943; sponsored by Mrs. R. M. Challoner, Jr.; transferred to the United Kingdom under lend lease 19 October 1943; and commissioned as HMS *Highway* the same day. She served in the Royal Navy during the remainder of World War II and was returned to the custody of the U.S. Navy at Norfolk, Va., 23 April 1946. She was sold to Atlas Metals Corp. 17 December 1948.

Hilarity

Boisterous mirth.

(AM-241: dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.; cpl. 104; a. 1 3", 4 40mm.; cl. *Admirable*)

Hilarity (AM-241) was launched 30 July 1944 by Winslow Marine Railway & Shipbuilding Co., Inc., Winslow, Wash.; sponsored by Mrs. L. H. Hirschy; and commissioned 27 November 1944, Lt. J. B. McEvoy in command.

Following her shakedown training off California, *Hilarity* took part in exhaustive minesweeping and anti-submarine exercises to ready herself for participation in the Pacific war. She sailed 10 February 1945 from San Pedro and, after her arrival at Pearl Harbor 7 days later, operated in Hawaiian waters on training exercises. Beginning 12 April the minesweeper took up convoy escort

duties, sailing to Eniwetok, Saipan, and finally to Okinawa, arriving Kerama Retto 30 May 1945.

Joining the massive naval forces taking part in the capture of Okinawa, *Hilarity* served as a picket ship off the bitterly contested island, protecting the transports and landing beaches. She remained at Okinawa until the Japanese surrender, and sailed 30 August to sweep mines around Korea and the Japanese home islands preparatory to the occupation. *Hilarity* operated in the harbors of Jinsen, Korea, and Nagasaki, as well as in the East China Sea during the remainder of 1945. The ship sailed 28 December from Sasebo for the United States, and arrived San Pedro 6 February 1946 via Saipan, Eniwetok, and Pearl Harbor.

Hilarity departed 26 February for New Orleans via the Panama Canal, and decommissioned 26 August 1946 at Consolidated Shipyard, Orange, Tex., and joined the Atlantic Reserve Fleet, remaining there until being sold to Mexico 30 August 1962. Her classification was changed to MSF-241 on 7 February 1955, while in reserve. *Hilarity* now serves Mexico as *DM-02* (D-2).

Hilarity received two battle stars for World War II service.

Hilary P. Jones

Hilary Pollard Jones, born 14 November 1863 in Hanover County, Va., graduated from the Naval Academy in 1884. As a young Ensign he was commended for his bravery and skill in helping to save *Nipsic* from sinking during the great Samoan hurricane of 1889. During the Spanish-American War Jones served in *Dorothea* on patrol duty off Cuba. In the next years he sailed in various ships of the fleet, rising to command *Rhode Island* in 1912. In 1913 he commanded the Washington Navy Yard; and, during World War I he commanded patrol units and later a division of the Transport Force. He received the Distinguished Service Medal for his outstanding service. Following the war Admiral Jones had important commands at sea, culminating in 1922 in the post of Commander in Chief, U.S. Fleet. In 1923 he left this duty to join the General Board. Admiral Jones retired in 1927 but served as naval advisor at the Geneva Disarmament Conference and the London Naval Conference of 1930. A prominent member of the Society of the Cincinnati, Admiral Jones died 1 January 1938.

(DD-427: dp. 1,620; l. 348'; b. 36'1"; dr. 11'9"; s. 33 k.; cpl. 191; a. 5 5", 12 .50 cal. mg., 5 21" tt.; cl. *Benson*)

Hilary P. Jones (DD-427) was launched by the Charleston Navy Yard 14 December 1939; sponsored by Mrs. Hilary P. Jones, widow of Admiral Jones; and commissioned 6 September 1940 at Charleston, Lt. Comdr. S. R. Clark in command.

Following shakedown in the Charleston area and exercises off Newport, *Hilary P. Jones* departed 11 December for duty with the Neutrality Patrol in the Caribbean. She performed escort duties in those waters until 11 March 1941, when she returned to Hampton Roads. Training exercises off New England followed until 28 April, when the destroyer departed New York as a convoy escort. She steamed to Newfoundland, and for the next dangerous months before Pearl Harbor escorted cargo ships and transports in the North Atlantic. During one of these voyages to Iceland, 31 October 1941, *Reuben James*, the first naval vessel to be lost in the war, was torpedoed and sunk. *Hilary P. Jones* rescued 11 survivors of the attack before arriving Reykjavik 3 November.

The destroyer continued the hazardous North Atlantic convoy duty after America's entry into the war, battling both German submarines and the elements to bring sorely needed troops and supplies to the Allies. *Hilary P. Jones* transferred to Mediterranean duty in January 1944 as production of escort vessels and frigates allowed the larger destroyers to be used for other assignments. The destroyer departed with her squadron 16 January 1944 to screen cruiser *Philadelphia* off Anzio. She alternated at the bitterly contested Anzio beachhead with convoy duty

between there and Naples until 20 March, often exchanging fire with German shore batteries off Anzio. After a brief respite the ship returned to her gunfire support duties at Anzio during April and early May, occasionally engaging in escort and antisubmarine patrol operations. With three escort vessels the destroyer detected and attacked *U-616* off Algeria May 1944, sending it to the bottom after a lengthy battle 17 May.

During June and July *Hilary P. Jones* acted as escort ship for vital Mediterranean convoys and took part in training for the invasion of southern France. She departed Naples 13 August in convoy with French and British ships for the invasion, arriving 3 days later. The destroyer not only provided gunfire support missions during the assault, but also acted as electronic jamming vessel in the successful attempt to prevent radio-controlled bombs from harassing the area. In the weeks that followed she continued to range up and down the coast in support of the First Airborne Task Force destroying bridges, gun emplacements, railroad facilities and coastal vessels. She was attacked by a German "E-boat" 21 August, but destroyed the craft with gunfire. Neither these deadly boats nor submarine, nor human torpedoes stopped *Hilary P. Jones* from performing her vital missions, and for her outstanding record during this period the ship received the Navy Unit Commendation.

Detached from her coastal support duties 1 October 1944, the destroyer continued convoy duties in the Mediterranean until returning to New York 12 January 1945. Following overhaul and training off Casco Bay, Maine, she sailed with her last transatlantic convoy 26 February-9 April 1945. *Hilary P. Jones* was then designated for Pacific Fleet, and departed New York 24 April for the Canal Zone and Pearl Harbor.

Operating at Pearl Harbor from 18 May 1945, until 2 June, she then sailed for the advance base at Ulithi. Upon her arrival 13 June *Hilary P. Jones* joined the surface patrol forces in the Carolines, making occasional escort voyages to Okinawa, as Navy amphibious units moved ever closer to victory. At Ulithi when Japan surrendered, she steamed 18 August to Okinawa, Subic Bay, and then Tokyo. As an escort unit for 8th Army occupation troops, she entered Tokyo Bay 2 September as the surrender document was being executed on board *Missouri*. Subsequently, she made two more voyages with occupation groups to Japan before ending her long war service and departed for the United States 5 November.

Hilary P. Jones sailed to Charleston via Pearl Harbor and the Panama Canal and decommissioned there 6 February 1947. She was placed in the Charleston Group, Atlantic Reserve Fleet until being loaned to the Republic of China under the Military Assistance Program 26 February 1954. She serves the Nationalist Chinese Navy as *Han Yang* (DD-15).

Hilary P. Jones received four battle stars for World War II service, in addition to her Navy Unit Commendation.

Hilbert

Aviation Ordnanceman Ernest Lenard Hilbert was born 14 June 1920 at Quinn, S.Dak., and enlisted in the Navy 10 April 1940 at Los Angeles, Calif. In November 1940 he was assigned duty with Bombing Squadron 6 and took part in attacks on the Marshall Islands, Wake Island, and Marcus Island. Hilbert was killed during an aerial attack against enemy forces during the Battle of Midway, 4-6 June 1942. By maintaining skillful and continuous fire from his free machine guns, Hilbert enabled his pilot to escape the devastating enemy fighter attacks. While pursuing the same bold and fearless tactics in the second attack, he was shot down. Hilbert was posthumously awarded the Distinguished Flying Cross.

(DE-742: dp. 1,240; l. 306'; b. 36'7"; dr. 11'8"; s. 21 k.; cpl. 216; a. 3 3", 2 40mm., 10 20mm., 3 2" tt., 2 dct., 9 dep.; cl. *Cannon*)

Hilbert (DE-742) was launched 18 July 1943 by Western Pipe & Steel Co.; sponsored by Mrs. Fern Hilbert Wier, sister of Aviation Ordnanceman Hilbert; and commissioned 4 February 1944, Commander J. W. Golinlink, USNR, in command.

After shakedown out of California *Hilbert* departed San Francisco 13 May 1944 escorting a transport. Arriving Pearl Harbor 20 May, she proceeded to Kwajalein and joined the 5th Fleet. From June through August *Hilbert* screened the fueling group of Admiral R. K. Turner's Northern Attack Force for the capture of Saipan and Tinian. The Marianas were stoutly and bitterly contested, requiring great flexibility and fortitude before our fleet conquered the rugged and well-defended islands.

Hilbert also played a key role in protecting our oilers which fueled Admiral Marc Mitscher's Fast Carrier Task Force engaged in the Battle of the Philippine Sea—one of the most decisive battles of the war.

In October *Hilbert* joined Admiral Halsey's 3d Fleet and screened the logistics group for the Battle of Leyte Gulf. She also participated in supporting actions in the operations against the Philippines, Iwo Jima, Okinawa and the Japanese home islands.

Hilbert, with other units of the 3d Fleet, anchored for the first time in Japanese waters at Sagami Wan 9 September 1945. Departing Tokyo 29 September *Hilbert* sailed to Philadelphia via Los Angeles and the Canal Zone, and thence to Green Cove Springs, Fla., arriving 17 December. She decommissioned 19 June 1946 and joined the Reserve Fleet. In February 1952 *Hilbert* joined the Reserve Fleet at Philadelphia where she now remains.

Hilbert received eight battle stars for World War II service.

Hildegarde

A former name retained.

(SP-1221: dp. 184; l. 136'6"; b. 26'3"; dr. 18'3"; a. none)

Hildegarde, a schooner-rigged yacht, was built by Harlan and Hollingsworth, Wilmington, Del., in 1897. She was leased from her owner, Edward R. Coleman, of Lebanon, Pa., 21 September 1917 at New London, Conn. She was not commissioned, but her first commanding officer was A. L. Thompson, Chief Boatswain's Mate.

Hildegarde was used as a floating barracks at New London, Conn., from January until June 1918, when she was transferred to duty as station ship at the harbor entrance, New London. She continued these and other duties at the 2d Naval District Base at New London until returned to her owner 6 February 1919.

Hill

Edward Hill was born 4 October 1894 in Philadelphia and enlisted in the Navy in 1912. Chief Boatswain Hill was awarded the Medal of Honor for distinguished conduct during the attack on the U.S. Fleet at Pearl Harbor by the Japanese 7 December 1941.

(DE-141: dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; sp. 21 k.; cpl. 186; a. 3 3", 2 40mm., 8 20mm., 3 21" tt.; 2 dct., 8 dcp., 1 dep. (h.h.); cl. *Edsall*)

Hill (DE-141) was launched 28 February 1943 by the Consolidated Steel Corp., Orange, Tex., sponsored by Mrs. Edward Hill, widow of Chief Boatswain Hill; and commissioned there 16 August 1943, Lt. Comdr. G. R. Keating in command.

After shakedown out of Bermuda, *Hill* tested new torpedo explosives and engaged in training along the New England coast. Departing Hampton Roads 5 December, *Hill* escorted a convoy to Casablanca via Ponta del Gada, Azores, and returned to the States 18 January 1944. During the next year the destroyer escort made four more transatlantic voyages to the North African coast as Allied forces pushed up the Italian peninsula and

began their assault on southern France. On her fourth voyage, *Hill* performed antisubmarine patrol at Bahia, Brazil, and Cape Town, South Africa.

Following operations in the Caribbean February-March 1945, *Hill* proceeded to Argentina, Newfoundland, 3 April to serve as convoy screen and plane guard for escort carrier *Mission Bay*. After repairs at New York she participated in training exercises until sailing for the Caribbean 2 July. Two weeks later *Hill* sailed for the Pacific via the Canal Zone. En route to Hawaii, *Hill* received word of Japanese capitulation and, after putting in at Pearl Harbor sailed for home again. *Hill* reached Green Cove Springs, Fla., via San Pedro, the Panama Canal, and Charleston 27 October 1945. She decommissioned and was placed in reserve there 7 June 1946 where she remains.

Hillsborough County

A county in Florida.

(LST-827: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 266; a. 8 40mm., 12 20mm.; cl. *LST-511*)

LST-827 was laid down by Missouri Valley Bridge & Iron Co., Evansville, Ind., 13 October 1944; launched 22 November; sponsored by Mrs. Clark H. Woodward; and commissioned 12 December, Lt. R. L. Olander in command.

After shakedown off Florida, *LST-827* loaded smokepots on her tank deck, then departed Mobile, Ala., 17 January 1945. Following brief stops at the Canal Zone and Pearl Harbor, she arrived Eniwetok early in March. Sailing for Guam on the 13th, she unloaded her cargo, and for the next 2 months transported men and equipment between the Marianas and the Philippines.

After embarking Squadron 212, Marine Air Group 14, *LST-827* departed San Pedro Bay, Philippines, 24 May en route to Okinawa. When she arrived 5 days later, American forces were already engaged in a 2-month campaign to push the enemy from its Pacific stronghold. After unloading men and equipment, she steamed to the Philippines for additional reinforcements. For the remainder of World War II, *LST-827* operated in the vicinity of Okinawa and the Philippines, transporting men and supplies for the final drive to the enemy's homeland.

Following the Japanese surrender, the landing ship serviced the occupation forces in the Far East until she sailed for the United States 15 November, arriving San Diego 16 December. Joining LST Squadron 1 there in May 1946, she operated along the West Coast performing fleet maneuvers and tactical training exercises for the next 3 years. *LST-827* decommissioned 7 June 1949 at San Diego and joined the Pacific Reserve Fleet.

Her respite was brief, however, as President Truman met the communist challenge of aggression in Asia by sending U.S. forces to aid the beleaguered South Koreans. Recommissioned 3 November 1950, Lt. S. G. Ruskey in command, *LST-827* departed San Diego 27 January 1951 for the Far East. After a brief stop at Pearl Harbor, she arrived Yokosuka 3 March.

Assigned to the Korean supply run, she carried supplies from Japan to Pusan, Ulsan, and Inchon for the next 4 months. *LST-827* returned to the United States 9 August to operate there until early 1952. Departing San Diego 17 February, she steamed for her second tour in the Western Pacific, touching Pearl Harbor, Marshall Islands, and the Philippines before arriving Yokosuka 26 April. From May to October she shuttled supplies and troops between Japan and Korea to strengthen the Allied forces against the threat of Communism.

Departing Japan 10 October *LST-827* was to perform another historic service to her country by operating with the units assigned to the first hydrogen bomb tests. She returned San Diego 30 November and received major alterations at Mare Island in preparation for her next assignment. From 1953 through 1956 *LST-827* sailed on two WestPac cruises, engaged in amphibious exercises off the West Coast and steamed to the Arctic on three oc-

casions to supply stations on the Dewline radar network. *LST-827* was named *Hillsborough County* 1 July 1955. During 1957 she participated in exercises off the California coast, and on 1 November was placed in commission in reserve.

Hillsborough County decommissioned 28 January 1958. She was then used as a target and sunk in the Gulf of California 15 August 1958.

LST-827 received one battle star for World War II service and three stars for the Korean conflict.

Hillsdale County

A county in Michigan.

(LST-835: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 266; a. 8 40mm., 12 20mm.; cl. *LST-511*)

LST-835 was laid down by American Bridge Co., Ambridge, Pa., 6 September 1944; launched 25 October 1944; sponsored by Mrs. I. Raphael; and commissioned 20 November, Lt. William H. McHenry in command.

Following shakedown off Florida, *LST-835* loaded ammunition at New Orleans and departed there 28 December. After brief stops on the West Coast and Pearl Harbor, she steamed for the western Pacific, arriving Guam 18 March 1945. For the next 6 weeks she transported troops, trucks, and other equipment from the Marianas to Iwo Jima.

Sailing from Saipan 25 April, *LST-835* carried vital ammunition to Okinawa, where American forces were engaged in a fierce battle for control of this strategic island. For the remainder of World War II, the landing ship shuttled cargo and troops throughout the American staging areas in the Pacific. After V-J Day she operated with the occupation forces in the Philippines and Japan for the next 2 months.

Departing Nagoya, Japan, 8 November, *LST-835* stopped for cargo at Saipan before proceeding to the United States. She arrived San Francisco 8 January 1946, and later that month sailed to Astoria, Oreg., and decommissioned there.

While berthed with the Columbia River Group, Pacific Reserve Fleet, *LST-835* was named *Hillsdale County* 1 July 1955. *Hillsdale County* was struck from the Navy List in October 1959 and sold in April 1961 to Japan to serve as *Shimokita* (LST-4002).

LST-835 received one battle star for World War II service.

Hilo

A city on the island of Hawaii.

(AGP-2; dp. 2,350; l. 278'11"; b. 38'3"; dr. 17'; s. 14 k.; cpl. 116; a. 1 3")

Hilo (AGP-2), originally yacht *Caroline*, was built in 1931 by Bath Iron Works, Bath, Maine, and was purchased by the Navy as *Moana* from William B. Leeds 28 November 1941. Converted to Navy use at Craig Shipbuilding Co., Long Beach, Calif., she commissioned as *Hilo* (PG-58) 11 June 1942, Lt. Comdr. F. A. Munroe in command.

One of the first ships to be used as a motor torpedo boat tender, *Hilo* departed Long Beach to load supplies at San Diego 19 June and sailed for Pearl Harbor 28 June. The ship arrived Pearl Harbor, 5 July 1942, and was immediately sent to Palmyra Island to tend a torpedo boat squadron there. *Hilo* remained in the vicinity fueling and providing supplies to the boats then under training until returning to Pearl Harbor again 4 October 1942. She was soon underway, however, steaming by way of Palmyra to Canton Island, in the Phoenix Group, where she arrived 29 October. There she took on passengers and proceeded to Funafuti, arriving 2 November.

The ship remained at Funafuti until 25 November, tending torpedo boats and engaging in rescue operations

as American forces prepared for the coming assault on the Gilberts and Marshalls. *Hilo* and other units from Funafuti rescued the gallant Rickenbacker party after their 21-day ordeal in rubber boats 12 November. She next sailed for Noumea, New Caledonia, arriving 2 December, and from there escorted four PT boats to Cairns, Queensland, where she moored 11 December. *Hilo* was then sent to set up the first torpedo boat base in New Guinea, at Milne Bay, arriving 17 December. Commencing operations soon after their arrival, *Hilo's* boats contributed to the hard-fought Buna-Gona campaign in New Guinea as allied forces began their return to the Philippines. The boats fired at Japanese ashore, destroyed barges loaded with men and supplies, and even fought submarines in support of the troops ashore. During this period, 13 January 1943, her designation was changed to AGP-2.

During February 1943 *Hilo* explored the coast for a suitable advance PT boat base, and by the 28th had established one at Kana Kope. The torpedo boats stationed there with *Hilo* soon had a chance to fight, as Japanese efforts to reinforce their Lae and Salamaua garrisons led to the Battle of the Bismarck Sea 2-4 March 1943. The tender remained at Kana Kope until late April, when she began to move up the New Guinea coast to various anchorages. As *Hilo's* torpedo boats continued to take part in the successful New Guinea campaign, *Hilo* herself underwent many air raids and endured extremes of climate and disease before being relieved 20 October 1943. The tender sailed to Sidney, Australia, arriving 13 November, and sailed again 9 February 1944 for Milne Bay.

Hilo again took up her tending duties in the New Guinea area and was transferred to Talasea, New Britain, 26 March 1944. She remained there until 4 June tending two squadrons of torpedo boats, after which she shifted her operations to Mios Woendi and became a command ship for torpedo boat operations in the 7th Fleet her tender equipment removed. There the ship remained until 6 November 1944.

With the invasion of the Philippines and the epochal events it precipitated then underway, *Hilo* sailed to Leyte Gulf, arriving 12 November. During the next months the ships in the Gulf were under almost constant air attack. *Hilo* was nearly hit 26 November as suicide planes attacked San Juanico Straits, but the suicide plane crashed some 250 yards ahead of the tender. *Hilo's* gunners scored several kills during this period. Commander, Motor Torpedo Boat Squadrons, 7th Fleet, shifted to *Cyrene* 16 January, and for the next 9 months *Hilo* was occupied with passenger voyages to various islands, including Mios Woendi and the Palaus. She departed Samar Island 26 October 1945 for the United States via Eniwetok and Pearl Harbor. She arrived 1 December 1945, decommissioned 3 March 1946 and was sold by the War Shipping Administration to Pillsbury & Martingnoni, San Francisco, Calif.

Hilo received four battle stars for service in World War II.

Hilton

Former name retained.

(Str: d. 6,600; l. 313'6"; b. 46'; dr. 20'8"; s. 9 k.; cpl. 65)

Hilton (No. 1574) was built by the Newport News Shipbuilding & Drydock Co. in 1911 and chartered from A. H. Bull Steamship Co., New York, by the Army in September 1917. A year later she was acquired by the Navy, and commissioned at Cardiff, Wales, on 6 November 1918, Lt. Comdr. Walter L. Farnsworth in command.

Out of Cardiff, *Hilton* delivered two cargos in France—to Bordeaux early in December and St. Nazaire in January. She returned to Cardiff and went on to Southampton to load, sailing for home 6 March.

Hilton arrived Hampton Roads 27 March and decommissioned there 16 April 1919, being redelivered to her owners.

Hilton Head

An island along the lower coast of South Carolina where the Spanish explorer Lucas Vasquez de Ayllon landed in 1525.

Hilton Head (LSD-24) was renamed *Point Defiance* (q.v.) 30 December 1944, prior to the start of construction.

Hingham

A city in Massachusetts.

(PF-30; dp. 1,430; l. 303'11"; b. 37'6"; dr. 13'8"; s. 20 k.; cpl. 190; a. 3 3', 2 dct., 1 dep. (h.h.), 8 dcp.; cl. *Tacoma*)

Hingham (PF-30), originally designated PG-138, was launched under Maritime Commission contract by Walter Butler Shipbuilders, Inc. 27 August 1943; sponsored by Mrs. Katherine F. Harrington; and commissioned 3 November 1944 after outfitting at Plaquemine, La. Her first commanding officer was Lt. Comdr. W. K. Earle, USCG.

Following shakedown training out of Bermuda, *Hingham* finished conversion to a weather ship at Boston and after escorting a merchant ship from Argentina to Boston reported 3 January 1945 to the North Atlantic Weather Patrol. The ship then took up the arduous duties of weather patrol in the North Atlantic during winter, performing the task of reporting so vital to convoying and warship movements alike. She remained on station after the close of the war, returning to Boston 4 May 1946. *Hingham* then sailed to Charleston, where she decommissioned 5 June 1946. The frigate was sold 15 August 1947 to Sun Shipbuilding & Dry Dock Co., Chester, Pa., and scrapped.

Hinsdale

Named for Hinsdale County, Colorado.

(APA-120; d. 6,873 light; l. 455'; b. 62'; dr. 24'; sp. 17.7 k.; cpl. 509; a. 1 5'; cl. *Haskell*)

Hinsdale (APA-120), ex-*MCV Hull-30*, was launched by the California Shipbuilding Corp., Wilmington, Calif., 22 July 1944; sponsored by Mrs. M. E. Harper; and commissioned 15 October 1944, Comdr. Edward Flood Beyer, USNR, in command.

After shakedown in the San Diego-San Pedro area, the new attack transport sailed for the Pacific, reaching Pearl Harbor 12 December with 175 passengers. The war in the Pacific was steadily advancing across the ocean toward the Japanese home islands, and on 27 December 1944 *Hinsdale* embarked some 1,200 marines for the Iwo Jima invasion, a prelude to the invasion of Japan herself. Acting as flagship for Transport Division 44, she spent nearly a month of intensive practice-landings in preparation for the assault. *Hinsdale* sailed from Hawaii 27 January 1945, pausing at Saipan to join a huge transport flotilla, and arrived off Iwo Jima's rockbound heights at dawn on D-day, February 19.

Hinsdale's leatherneck passengers swarmed ashore with the first wave of the invasion forces, and she remained in the Iwo Jima area over a week embarking and disembarking troops and valuable cargo. Some of her most important work was as an auxiliary hospital ship, caring for the seriously wounded. Disembarking troops, offloading cargo, and tending the injured all took place under continuous mortar and artillery fire from well-entrenched Japanese shore batteries, but *Hinsdale* had only one close call. On the morning of 25 February, a projectile burst close aboard the transport, killing a Marine captain standing on deck and wounding several others. On 27 February, *Hinsdale* sailed from Iwo Jima, stopping at Saipan for fuel, and reached Guam 3 March to disembark 166 casualties.

The Pacific war neared its climax. *Hinsdale* had only a brief rest at Guam before returning to Saipan 9 March to embark troops for the upcoming invasion of Okinawa, the largest amphibious operation of the Pacific war. With nearly 1,500 combat-bound marines and sailors on board, she again spent long hours in practice for the landings. On 27 March 1945 *Hinsdale* left Saipan to take her place in the Joint Expeditionary Force-1,213 ships loaded with over a half million troops, headed for Okinawa.

Sunday 1 April 1945, D-day for Okinawa, was very nearly *Hinsdale's* last day in the Pacific. As she steamed toward the transport area through the pre-dawn blackness, marines already on deck and ready to disembark, *Hinsdale's* lookouts spotted an enemy plane skimming low over the water. With only a few seconds warning, *Hinsdale* could not evade the kamikaze; at 0600 the suicide plane crashed into her port side just above the water line and ripped into the engine room. Three explosions rocked the troop-laden transport as the kamikaze's bombs exploded deep inside her and tore the engine room apart—only one member of the watch survived death by scalding steam from the exploding boilers.

Power failed immediately—lights and internal communication, so vital to damage control parties, were gone. *Hinsdale* came to a dead stop in the water, with three gaping holes in her port side. Marines on deck who had been ready to disembark were hastily shifted to the starboard rails to counteract a serious list to port. Below decks *Hinsdale's* crew were groping through the smoke-filled darkness to fight fires started by the kamikaze and to jury-rig patches. Fifteen men were dead; 40 missing or wounded. Despite the injury *Hinsdale* carried out her job to put the marines ashore.

Limited power was finally restored through an auxiliary diesel; the dangerous list to port of 13 degrees corrected; the ship taken in tow by *ATR-80* at an agonizing 5 knots, for Kerama Retto, some 20 miles away. Emergency repair work began immediately amidst continued kamikaze attacks; *Hinsdale* exacted some revenge by assisting in the kill of at least two of the suicide craft. Her cargo, mainly equipment and stores needed by the Marines was shifted to *Pitt* (APA-223), and then *Hinsdale* was pressed into service as a receiving ship for survivors of other kamikaze victims.

On 14 April she departed Kerama Rotta, towed by *Leo* (AKA-6) in a convoy of LST's. Sailing slowly the convoy reached Ulithi 23 April; there *Hinsdale*, after a month of intensive work by repair ship *Vulcan*, was ready for sea, and on 20 May sailed for the States.

Hinsdale put into the Brooklyn Navy Yard 2 July 1945 for a complete overhaul. While she was there undergoing repairs, the Japanese surrendered, but *Hinsdale* was destined to make one last Pacific voyage. Departing 21 November, to participate in operation "Magic Carpet," the return of Pacific veterans, she sailed via Pearl Harbor to Sasebo and Nagasaki, embarked over a thousand troops and reached San Francisco 24 January 1946. Thence she sailed to Norfolk Navy Yard arriving 20 February, was decommissioned 8 April 1946, returned to the Maritime Commission for disposal 12 April, and her name stricken from the Navy Register 1 May 1946. *Hinsdale* was subsequently placed in the National Defense Reserve Fleet and is berthed in the James River near Norfolk.

Hinsdale received two battle stars for World War II service.

Hinton, John B., see *John B. Hinton* (No. 485)

Hippocampus

A former name retained.

(SP-654; dp. 23; l. 55'; b. 11'4"; dr. 2'6"; s. 11 k.; a. 11-pdr.)

Hippocampus, a gasoline-powered yacht, was built by New York Yacht, Launch, & Engine Co. in 1912 and was

leased by the Navy from her owner, James F. Porter, of Chicago, Ill., 21 June 1917. She commissioned 25 June at Rockland, Maine, Chief Boatswain Mate F. L. Greene in command.

Assigned to the 1st Naval District, *Hippocampus* served as a harbor patrol craft at the harbor entrance, Rockland, Maine, and in Penobscot Bay during World War I. She decommissioned 30 November 1918 and was returned to her owner 5 April 1919.

Hisada

A clan or subdivision of the Ponca Indian tribe.

(YTB-518: dp. 325; l. 100'; b. 25'; dr. 9'7'')

Hisada (YTB-518), a diesel-powered tug, was launched by Gibbs Gas Engine Co., Jacksonville, Fla., 6 April 1945; sponsored by Lt. (j.g.) Sarah Davis; and placed in service 2 August 1945.

Hisada served as a tug with the Pacific Fleet until being placed in reserve in the 14th Naval District 28 July 1947. In November 1947 she was brought out of reserve and assigned to Service Squadron 3 in the Far East, where she helped keep America's naval forces in that critical area at peak efficiency. In 1950 she was assigned to Yokosuka Naval Base, Japan, where she continues to perform harbor duties into 1967. *Hisada* was reclassified YTM-518 on 1 February 1962.

Hisko

(Str: d. 14,995; l. 401'; b. 54'3''; dph. 32'9''; dr. 26'; s. 10 k.; cpl 53)

Hisko, a tanker (#1953), was built by the Chester Ship Building Co., Chester, Pa., and launched 15 October 1917. Acquired by the Navy from the U.S. Shipping Board, she commissioned 6 December 1917 at Philadelphia, Lt. Comdr. Louis E. Congdon in command.

After two short runs from New York to Hampton Roads, *Hisko* sailed for England on 26 January 1918, arriving in Plymouth, through severe winter storms on 12 February. She returned to New York on 8 March. In the following year and a half, the tanker made 11 similar voyages carrying fuel oil to American ships in such scattered points as Devonport, Brest, the Canal Zone, Ponta Delgada, Glasgow, and Newfoundland. *Hisko* took on oil at New York for most of this period, although she did make three trips to the Gulf of Mexico to load fuel at Port Arthur, Tex., and Baton Rouge, La. Several ships in her convoys, including a French cruiser, were torpedoed by German U-boats, but *Hisko* escaped unscathed with her valuable cargo.

Hisko returned to New York from her final overseas trip on 28 September 1919. She decommissioned there 1 October 1919 and was returned to the U.S. Shipping Board.

Hissem

Joseph Metcalf Hissem was born 31 December 1917 in Mt. Carroll, Ill., and enlisted in the Naval Reserve 9 January 1941. Following flight training he was appointed Ensign 30 August 1941. Though he was assigned to a patrol squadron in Hawaii, Ensign Hissem volunteered for temporary duty with Torpedo Squadron 8. Thus he found himself at a turning point in history, the Battle of Midway, 4-5 June 1942. In the first attack in the pivotal battle between carrier fleets, Hissem and his squadron took off from *Hornet*, and without fighter protection pressed home an attack on the Japanese carriers. Enduring a withering fire the aircraft maintained the offensive until all were shot down. Although no ships were sunk in the gallant attack, they diverted air cover and forced a re-arming of Japanese planes which brought victory for the U.S. fleet. Ensign Hissem was posthumously awarded the Navy Cross and the Purple Heart for his heroism.

(DE-400: dp. 1,200; l. 306'; b. 36'7''; dr. 8'7''; s. 21 k.; cpl. 186; a. 3 3'', 2 40mm., 8 20mm., 2 dct., 8 dcp., 1 dcp. (h.h.), 3 21'' tt.; cl. *Edsall*)

Hissem (DE-400) was launched by Brown Shipbuilding Co., Houston, Tex., 26 December 1943; sponsored by Miss Elizabeth D. Hissem, sister of Ensign Hissem; and commissioned 13 January 1944, Lt. Comdr. W. W. Low in command.

Following a shakedown cruise to Bermuda, *Hissem* steamed via Charleston to New York, where she arrived 20 March 1944. Her first combat duty was as an escort ship with convoy UGS-37, carrying vitally needed troops and supplies to the Mediterranean. The convoy departed Norfolk 23 March and entered the Mediterranean without attack. Then near Algiers the night of 11-12 April the Luftwaffe attacked. About 35 bombers and torpedo planes struck in a coordinated attack, and were repulsed by accurate gunnery and evasive chemical smoke. *Hissem's* gun crews splashed one torpedo plane and damaged another, as the escorts prevented damage to the huge convoy of transports. The only ship struck was escort ship *Holder*, torpedoed but able to make port. The new German tactics for stopping Mediterranean convoys were beaten by training and accurate gunnery.

Subsequently, *Hissem* performed regular escort duty across the Atlantic interspersed with anti-submarine and anti-aircraft training on the East Coast of the United States. The versatile ship even transported over 500 paratroopers in March 1945, taking them on board in the Azores, transferring them to SS *Althone Castle*, and escorting the ship through submarine waters to Liverpool. Braving both the Germans and the heavy weather of the North Atlantic, *Hissem* made a total of seven convoy voyages from June 1944 until she returned to New York 28 May 1945.

With the war in Europe over, the destroyer escort prepared to join the Pacific Fleet in dealing the death blows to the Japanese Empire. She sailed 20 June from New York and after operations in the Caribbean arrived Pearl Harbor 26 July 1945. *Hissem* remained at Hawaii until after the surrender of Japan, and steamed 30 August for Eniwetok and Ulithi. The ship then continued to Japan, arriving Tokyo 7 October 1945 to assist occupation operations. Sailing to Guam 29 October, the versatile ship transported occupation troops to nearby islands, acted as air-sea rescue ship, and steamed as a weather ship through the western Pacific.

Hissem sailed for the United States 9 January 1946. Arriving San Pedro 25 January, she got underway 2 days later for the Panama Canal and Philadelphia, where she arrived 11 February. After repairs the ship steamed to Green Cove Springs, Fla., 23 March and decommissioned 15 June 1946.

Hissem was brought out of reserve in 1955 and converted for use as a radar picket ship at Boston Navy Yard. Equipped with the latest electronic detection devices, she recommissioned at Boston 31 August 1956. After shakedown the ship joined the Atlantic Barrier, cruising as a sea extension of the DEW line to strengthen the northern defenses of Canada and the United States. In the years that followed, first out of Boston and later Newport, *Hissem* alternated 1 month of lonely picket duty with a month of in-port or training time, often experiencing the characteristic heavy weather of the North Atlantic. In 1959 and 1962 she made visits to Northern European and Mediterranean ports.

Hissem saw varied duty in 1963. After two tours of picket duty she acted as command ship during the search for lost submarine *Thresher* 16-21 April. A month as school ship for sonar training at Key West was followed by two more days of duty on *Thresher* search operations 27-28 June. Taking up new duties, *Hissem* sailed 12 August for New Zealand and Operation Deepfreeze, the Navy's continuing effort at exploration and scientific work in Antarctica. The radar picket ship operated between the continent and New Zealand as a navigational beacon and rescue ship for flights to and from the Navy's air

facility at McMurdo Sound. Overlooking the air base a memorial cross in memory of Captain Robert F. Scott, R.N, is inscribed with words by Tennyson which exemplify not only his fighting spirit, but that of *Hissem* and the Navy as well: "To strive, to seek, to find, and not to yield."

Hissem remained a member of Operation "Deep Freeze" from 19 September to 28 February 1964. She then returned to the Atlantic Fleet by way of the Mediterranean, arriving 15 May. Early in 1965 *Hissem* was transferred to the Pacific Fleet in order to meet the growing threat to world peace by Communist aggression. After a 5-month training period at Pearl Harbor, she sailed for Vietnam 2 September. From January 1966 to March *Hissem* was a member of TF-115 operating in the Tonkin Gulf to prevent the infiltration of supplies to the insurgent Viet Cong. On 8 March *Hissem* sailed for Pearl Harbor, where she underwent repairs and training. Once again ordered to Vietnam, *Hissem* left Hawaii 2 September and arrived Subic Bay 23 September. She resumed her previous duties of protecting Vietnam from Communist aggression and operated off Southeast Asia into 1967.

Hissem received one battle star for World War II service.

Hist

(ScrStr: l. 174'; b. 23'; dr. 9'10"; a. 1 3-pdr., 4 1-pdr.; cpl. 56)

Hist, formerly *Thespia*, was built in 1895. She was purchased at Norfolk from David Dows, Jr., on 22 April 1898 for use in the Spanish-American War. *Hist* commissioned 13 May at New York, Lt. Lucien Young in command.

Arriving at Guantanamo via Charleston 25 June, *Hist* joined the blockading fleet off Santiago on the 29th. The following day was a memorable one. That morning, in company with *Hornet*, *Hist* captured the Spanish schooner *Nickerson*. Their prize in tow, the two ships were joined by *Wompatuck* and the column headed for Manzanillo Bay. On their way, they engaged a Spanish gunboat, which they sank, and were fired on by shore troops at Niguero. Reaching Manzanillo, the intrepid flotilla took on an enemy torpedo boat, four gunboats, four pontoons, a battery of field artillery, enemy troops firing from the shore, and a Spanish-held fort. When the smoke and fire lifted after an hour and 40 minutes of sharp fighting, *Hornet* had been disabled but towed to safety by *Wompatuck*, *Hist* had been hit 11 times; the Spanish had received the worst of the battle, losing a gunboat, a pontoon, and a sloop loaded with troops as well as suffering serious damage to the gun and torpedo boats. No American casualties resulted.

Hist returned to Manzanillo Bay twice more during the war, 15 July and 12 August. In the first of these return engagements, 10 Spanish ships were sent to the bottom and many others seriously damaged. For her part in this action *Hist* received commendation from General S. H. Rios, commanding the Cuban troops rebelling against Spanish rule. The second engagement at Manzanillo Bay was no less successful.

On 3 July *Hist* followed up her early success by joining the fleet in battle off Santiago as the Spanish attempted to break the blockade. Under constant enemy fire, *Hist* rescued 142 Spanish sailors from their disabled and burning ship, *Viscaya*. Eight days after this engagement, she and *Wompatuck* cut the important cable connecting Media Luna and Quizaro Islands. *Hist* also cut the cable between Punta Carapacho and Cayo Obispo 21 July, the day after she had participated effectively in the bombardment of Santa Cruz. When not in combat, *Hist* patrolled the Cuban coast, searching ships, and also served as a dispatch boat between the blockading fleet at Santiago and Guantanamo.

With the end of the war *Hist* headed north, reaching Key West 22 January 1899 and decommissioning there two weeks later, 2 February 1899. While out of commis-

sion, *Hist* traveled up the coast to Newport, R.I., where she recommissioned 18 July 1902, Lt. Victor Blue commanding. *Hist* sailed to the Caribbean 16 November 1902 and served there as a patrol and dispatch ship, returning to Newport 4 February 1903. On 4 March she was assigned duty with new submarines being tested in Long Island Sound. After this, on 27 June *Hist* was attached to the First Naval District as a tender, continuing to operate out of Newport. On 28 September 1905 she was assigned to the Training Station at Newport as tender to the famed frigate *Constellation* and remained on this duty until decommissioning 3 May 1907.

Hist recommissioned 16 October 1907 at Newport, Lt. C. E. Courtney commanding, and became tender to the 2d Submarine Division. On 6 October 1908, she was assigned to the Cape Cruz-Casilda surveying expedition under Comdr. Armistead Rust. Returning to the Caribbean once more, *Hist* served the expedition as a supply and dispatch vessel for almost 3 years. Putting in at Portsmouth, Virginia, 18 May 1911, she decommissioned there 24 July. *Hist* was stricken from the Navy Register 27 July 1911 and sold 20 November of that year.

Hitchiti

A tribe of Creek Indians who lived in Florida and Georgia. The word "hitchiti" means "to look up the stream."

(ATF-103: dp. 1,240; l. 205'; b. 38'6"; dr. 15'4"; s. 16 k.; cpl. 85; a. 1 3", 2 40mm.; cl. *Cherokec*)

Hitchiti (ATF-103) was launched 29 January 1944 by the Charleston Shipbuilding & Drydock Co., Charleston, S.C.; sponsored by Mrs. Olin D. Johnston, wife of then-Governor Johnston; and commissioned 27 May 1944, Lt. H. A. Guthrie in command.

After shakedown in the Chesapeake Bay area, the fleet tug sailed for the Pacific, reaching Pearl Harbor with four tows 26 August 1944. *Hitchiti* was engaged in towing operations at Eniwetok and Ulithi until October, when she joined the support unit off the Philippine Islands during the momentous Battle of Leyte Gulf. She returned to Ulithi for further towing operations until 29 December when she joined the 3d Fleet for the seizure of Luzon. *Hitchiti* also took part in towing and rescue operations during the hard-fought Iwo Jima and Okinawa campaigns as the Pacific war drew near to the Japanese home islands in the spring of 1945. Work off Okinawa alternated with operations in the Philippines that summer, and as the war ended *Hitchiti* remained in the Pacific for salvage and towing operations. In 1946 she performed harbor duty in Japanese waters as well as at various Pacific island bases, returning to the United States in September for overhaul at Bremerton. After further harbor work at Pearl Harbor and Kwajalein, *Hitchiti* reached San Francisco 26 December 1947 and decommissioned there 30 April 1948.

Recommissioned at Alameda, Calif., 3 January 1951, *Hitchiti* joined the fleet in Javanese waters 21 April to participate in operations off the Korean coast. Escort duties alternated with salvage operations along the war-torn peninsula until she returned to Pearl Harbor 5 February 1952. *Hitchiti* participated in towing and salvage work at Pearl Harbor and along the California coast until sailing for Alaskan waters 23 March 1954. Her 7 month tour in the north was followed by further duty in Hawaii and off the West Coast until she returned for a brief tour in September 1955. *Hitchiti* sailed for Sasebo, Japan, 22 May 1956 to begin her first Western Pacific cruise. This and six subsequent cruises took her to Hong Kong, Guam, Okinawa, and the Philippines for towing and salvage as well as tactical training.

Hitchiti's Western Pacific deployments, interspersed with duty at Pearl Harbor and off the California coast, were varied by visits to Mexico in 1959 and 1961 as well as a third cruise to Alaskan waters 21 October 1960-14 Janu-

ary 1961. From 19 September to 14 November 1962 the veteran fleet tug participated in U.S. nuclear testing at Johnston Island in the Pacific. All of 1963 was spent serving the fleet in Hawaiian waters. On 26 October *Hitchiti* freed *Hai Fu* off Honolulu after the Chinese merchant ship had grounded.

Hitchiti joined the 7th Fleet on 18 May 1964 and operated off Vietnam. She once again returned to Pearl Harbor 7 October for a brief refitting. From 25 January 1965 to 23 March, *Hitchiti* made a birdlife study on South Pacific islands for the Smithsonian Institute. She once again joined the 7th Fleet off Vietnam 25 October and operated in the war zone until 12 April 1966. *Hitchiti* arrived back at Pearl Harbor 27 April having 9,000 miles of towing and four salvage operations to her credit during the deployment. She then operated in Hawaiian waters into 1967.

Hitchiti received one battle star for World War II service.

Hitide, see YP-483

Hival, see YP-355

Hivassce

A river in North Carolina.

(AOG-29: dp. 845; l. 220'6"; b. 37'; dr. 13'11"; s. 10 k.; cpl. 62; a. 1 3', 2 40mm., 3 20mm.; cl. *Mettawee*)

Hivassce (AOG-29), a motor gasoline tanker, was launched 30 August 1944 under Maritime Commission contract by East Coast Shipyard, Inc., Bayonne, N.J.; sponsored by Miss Harriet Savage; acquired 17 October 1944 and commissioned 24 October 1944, Lieutenant R. Rawcliffe, USCG, in command.

Following shakedown training *Hivassce* sailed through the Panama Canal to join the giant Pacific Fleet for the final phases of its island campaign, carrying her precious aviation gasoline and lubricating oil. She arrived Ulithi 1 April 1945, the day of the landings on Okinawa, and departed 24 April for that important island. Arriving 1 May, the ship began shuttling gasoline ashore, protected from the numerous air attacks by smoke screen. She remained off Okinawa after it was secured and until decommissioning 20 February 1946. *Hivassce* was turned over to the Army at Okinawa for use there, but was repossessed by the Navy at Subic Bay, Philippines 25 March 1947. The tanker was subsequently sold to Luzon Stevedoring Co.

Hivassce received one battle star for World War II service.

Hiyu, see YAG-34

Hobart Bay

A bay along the coast of Alaska.

Hobart Bay (CVE-113) was laid down 12 May 1944 by Todd-Pacific Shipyards, Inc., Tacoma, Wash., and was renamed *Pugct Sound* (q.v.) 5 June 1944.

Hobby

James H. Hobby was born 27 April 1835, at New Boston, Hillsborough County, N.H. Appointed 3d Assistant Engineer 1848, he resigned 21 June 1855 but was reappointed 2d Assistant Engineer 4 June 1861 and served with distinction throughout the Civil War. As 1st Assistant Engineer of *Sassacus*, Hobby participated in an engagement with the Confederate ships *Bombshell* and *Albemarle* in Albemarle Sound 5 May 1864. Although fearfully scalded when a shot from *Albemarle* cut *Sas-*

sacus's steam pipes, Engineer Hobby remained at his post to control the engines, thus enabling the vessel to retire successfully from the action and preventing an explosion. When *Sassacus* was out of danger, the badly-wounded engineer was carried to the deck for medical attention. For his heroism Hobby was promoted 30 numbers in grade. He was placed on the retired list 19 October 1870 and died 17 November 1882.

(DD-610: dp. 1,620; l. 348'4"; b. 36'1"; dr. 17'4"; s. 38 k.; cpl. 259; a. 4 5', 4 20mm., 5 21' tt.; cl. *Benson*)

Hobby (DD-610) was launched 4 June 1942 by the Bethlehem Steel Co., San Francisco; sponsored by Mrs. Walter Davis, whose four sons were on active duty with the Navy; and commissioned 18 November 1942, Lt. Comdr. Ernest Blake in command.

After shakedown off the West Coast, *Hobby* proceeded to New York City 12 February 1943, to begin transatlantic convoy duty between there and Casablanca. In five voyages to the Mediterranean that year, *Hobby* developed several U-boat contacts and was credited with inflicting severe damage on one marauder 9 May. She sailed from Norfolk 2 January 1944 for the Pacific, where she remained in the New Guinea area until 22 August providing fire support and ASW screen for various invasions in the Admiralty and Schouten Islands. Sailing north in the fall, *Hobby* provided fire support for Peleliu and Ngesebus island invasions and then remained on screening duty through November. Despite frequent contacts with Japanese aircraft, she emerged untouched.

On 10 December *Hobby* sortied with the fast carriers of Task Force 38 for strikes on the important Philippines target of Luzon. She remained with the carriers through further strikes on the Philippines, Formosa, and the China coast into 1945, as U.S. naval power pushed closer to Japan. On 16 February *Hobby* joined Admiral M. A. Mitscher's fast carriers of the 5th Fleet as they carried out the first air strikes against Tokyo since the Halsey-Doolittle raid of April 1942. In addition to screening tankers for the carrier force, she operated off Iwo Jima and later off Okinawa as part of the valuable tankers ASW screen. Detached from Pacific duty at the end of June, *Hobby* arrived Seattle 17 July 1945 for overhaul. News of the Japanese capitulation reached her while she was in drydock.

Hobby sailed to New York 6 October to participate in Navy Day ceremonies, during which she hosted foreign naval attachés and congressmen during the Presidential Review of the victorious fleet. Proceeding to Charleston 1 November 1945, *Hobby* decommissioned there and went into reserve 1 February 1946. *Hobby* was transferred in January 1947 to Orange, Tex., where she remains.

For her participation in the major campaigns of World War II, *Hobby* was awarded 10 battle stars.

Hobby, William M., see *William M. Hobby*
(DE-236)

Hobcaw

A former name retained.

(SP-252: dp. 19; l. 52'6"; b. 12'6"; dr. 2'6"; s. 8 k.; a. 1 1-pdr.)

Hobcaw, a motor boat, was built by L. B. Newman of Long Branch, N.Y., in 1907, and acquired by the Navy from her owner, B. M. Baruche of New York City, 27 August 1917. She commissioned 10 September 1917 at Georgetown, S.C., Ens. B. T. Daggett in command.

Assigned to the 6th Naval District, *Hobcaw* performed harbor patrol in Winyah Bay, S. C., based at Charleston, until transferred to Paris Island, S.C. Arriving at the Marine Base 1 August 1918, *Hobcaw* acted as a towing boat and carried passengers until entering the Charleston Navy Yard for repairs 19 September 1918. *Hobcaw* was returned to her owner 18 November 1918.

Hobe Sound

A sound off the coast of Florida.

Hobe Sound (AV-20), a *Tangier*-class seaplane tender, was to be built at Newport News Shipbuilding & Dry Dock, Newport News, Va., but was cancelled 28 October 1944. Her appropriations were used to build *Bryce Canyon* (AD-36) at Charleston, S.C.

Hobo II

A former name retained.

(SP-783: dp. 24; l. 75'; b. 10'; dr. 4'; s. 14 k.)

Hobo II, a motor boat, was built by Elco Co., Bayonne, N.J., in 1905, and was acquired from her owner, J. S. Melcher of New York City, 23 June 1917. She commissioned at Boston, Mass., 24 August 1917, Boatswain G. R. Hadlock in command.

Hobo II was assigned to the 1st Naval District as a patrol craft, operating out of Bar Harbor, Maine, on harbor patrol. She was transferred to Boston, Mass., 21 January 1918, and performed dispatch and general patrol duties until being returned to her owner 17 February 1919.

Hobson

Richmond Pearson Hobson was born 17 August 1870 in Greensboro, Ala., and graduated from the Naval Academy in 1889. After duty in *Chicago* he underwent additional training and was appointed Assistant Naval Constructor in 1891. Hobson then served at various Navy Yards and facilities, including a tour of duty as instructor at the Naval Academy. In the early days of Spanish-American War, he was with Sampson in *New York*, and arrived off Santiago 1 June 1898. In order to bottle up Cervera's squadron Hobson took temporary command of collier *Merrimac*, which he would attempt to sink as an obstruction in the channel. The gallant attempt was made early 3 June under heavy Spanish fire, which disabled the steering gear of the collier. Hobson did sink *Merrimac*, but was unable to place her in the shallowest part of the channel. With his intrepid crew of six, he was picked up by Admiral Cervera himself, and treated quite chivalrously for his gallant expedition. Hobson was advanced 10 numbers in grade after the war and later, in 1933, awarded the Medal of Honor for his heroic attempt to block the channel. After the Spanish-American War he worked on the repairing and refitting of captured Spanish cruisers at Cavite and at various shore stations of the Navy. Resigning in 1903, Hobson remained a staunch supporter of the Navy and during his subsequent career as a Congressman from Alabama, 1905-15, was a firm advocate of naval expansion. In 1934, by special act of Congress, he was advanced to Naval Constructor with a rank of Rear Admiral, and placed on the retired list. Rear Admiral Hobson died 16 March 1937 in New York City.

(DD-464: dp. 1630; l. 348'1"; b. 36'1"; dr. 15'8"; s. 38 k.; cpl. 208; a. 4 5", 4 1.1", 5 21" tt., 5 dep., 2 dct.; cl. *Bristol*)

Hobson (DD-464) was launched by Charleston Navy Yard, Charleston, S.C., 8 September 1941; sponsored by Mrs. R. P. Hobson, widow of Rear Admiral Hobson; and commissioned 22 January 1942, Comdr. R. N. McFarlane in command.

Following extensive shakedown and training operations in Casco Bay, Maine, the new destroyer joined veteran carrier *Ranger* at Norfolk and sailed 1 July to escort her to Africa. Carrying a vital cargo of 72 P-40 aircraft, *Ranger* arrived safely via Trinidad, unloaded the planes and returned with *Hobson* 5 August 1942. The destroyer then conducted training exercises off Newport and Norfolk

until 3 October, when she departed Norfolk for Bermuda on escort duty.

As the Allies prepared to land in North Africa in a bold amphibious assault across the Atlantic, *Hobson* joined the Center Attack Group. Her main job was to screen and to protect *Ranger* while the carrier's mobile air power supported the assault. Departing 25 October from Bermuda, *Hobson's* group arrived off Fedhala 8 November and as the landings proceeded provided the indispensable air support. *Ranger's* planes hit shore batteries, immobile French battleship *Jean Bart*, and later helped turn back the attack by French ships on the transport area. *Hobson* screened *Ranger* until she sailed 11 November for Norfolk leaving the Allies fully in command of the assault area.

Upon her return to Norfolk 27 November 1942, the destroyer took part in exercises in Casco Bay, later steaming with a convoy to the Canal Zone in December. The ship again joined *Ranger* in early 1943 and the antisubmarine patrol group sailed 8 January to patrol the western Atlantic. Groups such as *Ranger's* did much to protect Allied shipping in the Atlantic from U-boats and contributed mightily to the eventual victory in Europe. Typical of *Hobson's* versatile performance was her rescue of a group of survivors from SS *St. Margarec* off Bermuda 2 March 1943.

In April *Hobson* and *Ranger* arrived Argentina and began operations out of that base. The ships provided air cover for convoys and antisubmarine patrol, and in July 1943 had the honor of convoying HMS *Queen Mary*, carrying Prime Minister Churchill to the Quebec Conference. The veteran destroyer arrived Boston 27 July to prepare for new duties.

Hobson sailed with *Ranger* and other ships 5 August to join the British Home Fleet at Scapa Flow. Arriving 19 August, she operated under Royal Navy orders in northern waters, helping to provide cover for vital supply convoys to Russia. While at Scapa Flow 21 September, she was inspected by Secretary of the Navy Knox and Admiral Stark. *Hobson* accompanied *Ranger* on a daring raid 2-4 October 1943, as carrier aircraft staged a devastating attack on German shipping at Bodo, Norway. Following this operation the destroyer continued to operate with Home Fleet. She screened HMS *Formidable* during flight operations in November and after two convoy voyages to Iceland returned to Boston and U.S. control 3 December 1943.

During the first 2 months of 1944, *Hobson* trained in Chesapeake Bay and operated with carriers between the East Coast and Bermuda. She joined escort carrier *Bogues* and other escorts at Norfolk, departing 26 February. These hunter-killer groups played a major part in driving German U-boats from the sea lanes, and this cruise was no exception. After patrolling for over 2 weeks, the destroyers spotted an oil slick, made sonar contact, and commenced depth charge attacks on the afternoon of 13 March. Weather-reporting submarine U-575 was severely damaged and was forced to surface, after which gunfire from *Hobson* and the other ships sank her. After further antisubmarine sweeps as far east as the Azores, *Hobson* returned to Boston 2 April.

For some time the Allies had been building up tremendous strength in England for the eventual invasion of France, and the destroyer sailed 21 April 1944 to join the vast armada which would transport and protect the soldiers. She spent a month on patrol off Northern Ireland, arriving Plymouth 21 May for final preparations for the invasion. Assigned to Rear Admiral Moon's Utah Beach Assault Group, *Hobson* arrived off Normandy with other ships of the bombardment group at 0140 6 June, and blazed away at German shore batteries. During the early hours *Corry* struck a mine and sank, after which *Hobson* and *Fitch* fired at German shore positions while simultaneously rescuing survivors from the water. *Hobson* continued to lend powerful fire support until returning to Plymouth later that afternoon.

The destroyer was not long out of the fray, however, returning 8 June to screen the assault area. She also

jammed glider bomb radio frequencies 9-11 June and provided channel convoy protection. With the Allies sorely in need of a good port in France, *Hobson* steamed to Cherbourg 25 June to assist in the bombardment. She fired at the large batteries, screened battleships *Texas* and *Arkansas*; and when the battleships were dangerously straddled, *Hobson* and *Plunkett* made covering smoke which allowed all to retire. A few days later the Allies occupied Cherbourg.

Hobson's next duty took her to the Mediterranean; she arrived Mers el Kebir, Algeria, 11 July, and for a month performed convoy duties to and from Taranto, Italy. Joining Rear Admiral Rodgers Delta Assault Force, she sailed from Taranto 11 August for the invasion of Southern France. Early on 15 August she acted as spotter for *Nevada's* preliminary bombardment; and, as troops stormed ashore, provided direct fire support with her own batteries. The destroyer remained in the assault area until the next evening, arriving Palermo 17 August to take up Mediterranean convoy duty.

As the allied offensive in Europe gained momentum, *Hobson* steamed as a convoy escort between Algeria, Italy, and France protecting vital supplies and troops. She sailed for the United States 25 October 1944, and arrived Charleston via Bermuda 10 November. There she entered the Naval Shipyard and was converted to destroyer-mine-sweeper, and reclassified DMS-26, 15 November 1944. Through December she underwent trials and shakedown training off Charleston and Norfolk.

Hobson sailed 4 January 1945 via the Panama Canal to join the naval strength deployed against Japan in the Pacific. Arriving Pearl Harbor 11 February, the ship underwent further mine warfare training before sailing 24 February for Eniwetok and a part in the last and greatest of the Pacific amphibious operations, Okinawa.

Sailing 19 March with the minesweeping group, *Hobson* arrived Okinawa well in advance of the assault troops to sweep the offshore areas, and was often attacked by Japanese planes. As the assault began 1 April, the ship also took up patrol duties and provided night illumination during the first critical days of the campaign. As desperate enemy suicide attacks were repulsed with heavy losses, *Hobson* was called upon 13 April to take up a radar picket station on which *Mannert L. Abele* had been sunk in a heavy attack the previous night. She continued picket and sweeping duty into 16 April, when another suicide attack approached at about 0900. *Hobson* splashed one of the attackers, but another crashed *Pringle*, causing a violent explosion. Only minutes later, another plane was splashed just off *Hobson's* starboard side, but her bomb exploded on the main deck starting a major fire. Still firing on kamikazes, the ship restored power, fought fires, and picked up over 100 survivors from the sunken *Pringle*. After the attack she anchored at Kerma Retto, returning to Ulithi 29 April and Pearl Harbor 16 May. *Hobson* then sailed via San Diego and the Canal Zone to Norfolk Naval Shipyard, where she arrived 16 June 1945 for repairs.

The surrender of Japan came with *Hobson* still undergoing repairs; and, after completing shakedown training, she spent February 1946 on minesweeping operations out of Yorktown, Va. The remainder of the year was spent in training and readiness exercises in the Caribbean and off Norfolk. Until 1950 the ship continued to operate off the East Coast and in Caribbean waters on amphibious and mine warfare operations. In late 1948 she visited Argentina and Halifax on minesweeping operations with Canadian ships.

With the outbreak of the Korean conflict in June 1950, *Hobson's* schedule of training intensified. She took part in amphibious exercises off North Carolina and in Puerto Rico 1950-51 and took part in carrier operations as a plane guard and screening ship. During one such operation, with carrier *Wasp*, *Hobson* was steaming in formation 700 miles west of the Azores on the night of 26 April 1952. While the ships turned into the wind so that *Wasp* could recover aircraft, *Hobson* crossed the carrier's bow from starboard to port and was struck amidships. The force of the collision rolled the destroyer-mine-sweeper

over, breaking her in two. *Rodman* and *Wasp* rescued many survivors, but the ship and 176 of her crew were lost, including her Commanding Officer, Lt. Comdr. W. J. Tierney. Thus ended in tragedy the long career of a gallant ship.

Hobson received six battle stars for World War II service, and shared in the Presidential Unit Citation awarded to the ships in the *Bogue* antisubmarine task group in the Atlantic.

Hocking

A county in Ohio.

(APA-121 : dp. 6,873 light ; l. 455' ; b. 62' ; dr. 24' ; s. 18 k. ; cpl. 536 ; a. 1 5' ; cl. *Haskell*)

Hocking (APA-121 was launched under Maritime Commission contract by California Shipbuilding Co., Wilmington, Calif., 6 August 1944; sponsored by Miss Frances Sims; acquired by the Navy on a loan-charter basis and commissioned 22 October 1944, Comdr. C. D. Shutz in command.

The new transport conducted shakedown and training exercises off California, departing for Pearl Harbor 4 December to join U.S. forces in the giant amphibious sweep across the Pacific. After her arrival at Pearl Harbor 10 December, *Hocking* embarked marines and took part in amphibious exercises and rehearsal preparatory to the Iwo Jima invasion, destined to be one of the most important and hard-fought of the war. She joined the vast armada of transports 27 January 1945 en route to Eniwetok and after a stopover at that island base arrived Iwo Jima 19 February. There *Hocking* debarked her troops and unloaded equipment in the early waves of the assault. She then anchored offshore, received casualties, and departed 27 February for Saipan, where she arrived 2 March.

With the Iwo Jima campaign underway, thoughts were turned to the next major objective, Okinawa. *Hocking* sailed to Espiritu Santo 15 March, embarked fresh amphibious assault forces, and sailed to Okinawa by way of Ulithi. The ship arrived off Okinawa during the difficult first weeks of the fighting, 9 April. She debarked her replacement troops and their cargo, and again received battle casualties for transportation out of the forward area. *Hocking* departed 14 April for Saipan and Ulithi, and arrived Marianas 7 May to load troops at Tinian. These were transported to Okinawa and landed 27 May, after which the transport again carried casualties from the battle-torn island. She arrived Pearl Harbor via Saipan and Eniwetok 26 June and sailed on to San Francisco, arriving 3 July.

With the war nearing its close, *Hocking* embarked replacement troops and sailed 20 July, stopping at Eniwetok and Ulithi before landing her troops at Okinawa 22 August. She then turned to duties connected with the occupation of former enemy territory, embarking troops at the Philippine base on Leyte 5 September and at Panay island 10 September. They were taken to Jinsen, Korea, and put ashore to aid in the peninsula occupation. *Hocking* sailed 25 September to Luzon, bringing troops to Jinsen, and made still another passage 18 October-3 November. She got underway from Jinsen 7 November, brought troops on board 2 days later at Shanghai, and sailed for the United States as a unit of operation "Magic-Carpet", bringing home thousands of American troops in the Pacific.

Hocking arrived San Pedro 5 December, and subsequently made another voyage to Guam and the Philippines bringing home veterans. Departing San Pedro 1 March 1946, she was designated for return to the Maritime Commission and sailed via the Canal Zone to Norfolk, where she decommissioned 10 May. *Hocking* joined the National Defense Reserve Fleet and is at present berthed in the James River, near Norfolk.

Hocking received two battle stars for World War II service.

Hodges

Flournoy Glen Hodges, born 22 January 1919 in Dover, Ga., attended the University of Georgia and entered the

Naval Reserve 13 May 1940 at Macon, Ga. He had preliminary flight training at the Naval Reserve Aviation Base at Miami, and was appointed aviation cadet 15 August 1940. After more flight training at the Naval Air Stations at Pensacola and Miami, he was commissioned an Ensign 15 April 1941 and ordered to a torpedo squadron in the Pacific. He was shot down and reported missing during the Battle of Midway 4 June 1942. Ens. Hodges was posthumously awarded the Navy Cross and promoted to Lieutenant (j.g.) 15 June 1942.

(DE-231: dp. 1,450; l. 306'; b. 36'10"; dr. 9'8"; s. 24 k.; cpl. 186; a. 2 5", 4 40mm., 10 20mm., 2 dct., 9 dep., 3 21" tt.; cl. *Rudderow*)

Hodges (DE-231) was launched 9 December 1943 by the Charleston Navy Yard; sponsored by Miss Dorothy Jane Hodges, sister of Ensign Hodges; and commissioned 27 May 1944, Lt. Comdr. Victor B. Staadecker in command.

After shakedown off Bermuda, *Hodges* returned to Charleston before steaming to the British West Indies for antisubmarine patrol. After more operations along the East Coast, she sailed 14 October 1944 from New York, reaching New Guinea 20 November via the Canal Zone. After operations off New Guinea, *Hodges* sailed 20 December for the Philippines where she took up antisubmarine patrol and escort duty.

In early January 1945, *Hodges* sailed with Vice Admiral Barbey's San Fabian Attack Force for the landings at Lingayen Gulf, 9 January. Shortly after 0700, 9 January, as *Hodges* was on her screening station a kamikaze started a dive on her. Misjudging the target angle, the plane knocked down her foremast and radio antennas and splashed without inflicting a single casualty. *Hodges* quickly made emergency repairs and continued providing air coverage—thus playing a key role in successfully landing the 6th Infantry Division and General Wing's 43d Division.

After repairs at Manus *Hodges* arrived Humboldt Bay, New Guinea, 15 February to escort a convoy to Leyte.

Through the last of March she was assigned patrol and escort duty for convoys bringing in supplies to the Philippines. On 11 April, *Hodges* conducted shore bombardment on enemy gun emplacements in the vicinity of Legaspi, Luzon, then for the remainder of April and May operated out of Manila Bay training with submarines.

After more patrol and escort duty out of Subic Bay, *Hodges* sailed for Ulithi 26 June. From 1 July until 18 December she was assigned patrol and plane guard duty between Ulithi and Okinawa. *Hodges* departed Samar 18 December, arriving San Francisco 9 January 1946 via Eniwetok and Pearl Harbor. *Hodges* decommissioned at San Diego 22 June 1946 and joined the Reserve Fleet, where she remains.

Hodges received one battle star for World War II service.

Hodges, General H. F., see *General H. F. Hodges* (AP-144)

Hoe

One of various sharks, especially the dogfish.

(SS-258: dp. 1,526; l. 311'9"; b. 27'3"; dr. 15'3"; s. 20 k.; cpl. 60; a. 10 21" tt., 1 3", 2 .50 2 .30 cal., cl. *Gato*)

Hoe (SS-258) was launched by Electric Boat Co., Groton, Conn., 17 September 1942; sponsored by Miss Helen Hess; and commissioned 16 December 1942, Lt. Comdr. E. C. Folger in command.

After shakedown *Hoe* sailed 19 April via the Panama Canal to Pearl Harbor, where she arrived 15 May 1943. She departed on her first combat war patrol 27 May, and patrolled the Guam-Palaus area. *Hoe* damaged two freighters before returning 11 July to Pearl Harbor via Ulithi and Midway.

Hoe's second patrol conducted west of Truk, was marred by considerable engine trouble. The submarine departed

21 August, damaged one tanker, and eluded several depth charge attacks before returning to Pearl Harbor 18 October 1943. She also took part in the search for downed aviators off Wake, 8-9 October.

Following extensive repairs, *Hoe* set out on her third patrol 26 January 1944. Patrolling between Mindanao and Halmahera, the submarine made an attack 16 February which damaged one ship. Although shadowed by escort vessels, *Hoe* detected another convoy 25 October and in two separate attacks sank tanker *Nissho Maru*. She returned to Fremantle, Australia, 5 March for refit and training.

Hoe began her fourth war patrol from Fremantle 4 April, and operated in the South China Sea, the vital Japanese sea supply line. She attacked a convoy 8 May, but scored no hits. Two more attacks 17 and 19 May resulted in several damaged freighters and severe retaliatory depth charge attacks on *Hoe*. She returned to Fremantle 2 June 1944. Her fifth war patrol, in the same area, was conducted between 29 June and 23 August 1944.

The veteran submarine sailed on her sixth patrol 15 September as leader of a coordinated attack group consisting of *Hoe*, *Aspro*, and *Cabrilla*. Operating southwest of Lingayen Gulf, the submarines accounted for some 38,000 tons of valuable Japanese shipping in five night surface attacks. *Hoe* was credited with the sinking of passenger-cargo ship *Kohoko Maru* 8 October, and returned to Fremantle 22 October. Her seventh patrol, 23 November to 3 January 1945, resulted in no sinkings. Part of this cruise was conducted in coordination with *Flasher* and *Becuna*.

Hoe's final war patrol began 8 February 1945, when she again headed for the South China Sea. By this time the vigorous American submarine offensive had taken its toll and little Japanese shipping found. The submarine did detect a tanker and her escort vessel 25 February and in a well-conducted submerged attack sank the escort, *Shinan*. Two days before, while patrolling off Indochina, she and *Flounder* had been involved in one of the most unusual accidents of the war. While steaming at a depth of 60 feet *Hoe* struck an object and broached, sustaining only light damage. Subsequent analysis proved that she had actually collided with *Flounder*, one of the only submerged collisions on record. Ending her last patrol at Pearl Harbor 6 March, *Hoe* returned to the United States for repairs. She sailed again for the Western Pacific 5 July 1945 and was just entering Apra Harbor, Guam, when the war ended. A few days later she sailed for the East Coast via Pearl Harbor and the Panama Canal, arriving New York 29 September 1945.

Hoe decommissioned 7 August 1946 at New London, Conn., and joined the Atlantic Reserve Fleet. In September 1956 she was taken out of reserve to act as a Naval Reserve Training Ship in a noncommissioned status in the 3d Naval District. She was subsequently sold 23 August 1960 to Laneett Inc., Boston, Mass.

Hoe received seven battle stars for World War II service. Her first, third, fourth, sixth, and eighth patrols were designated successful.

Hoel

William R. Hoel, born 7 March 1825 in Ohio, was a Mississippi River steamboat pilot who entered the Navy 19 October 1861. On 6 February 1862, while serving as the First Master of *Cincinnati*, Hoel was wounded during the Battle of Fort Henry. Less than 2 months later, on 4 April he volunteered to pilot gunboat *Carondelet* in her famous run past the Rebel batteries at Island Number 10 to reach Maj. Gen. John Pope's Army at New Madrid. The gunboat's valiant dash through a hailstorm

of Confederate fire enabled Union forces to cross the river and to take this key island with quantities of cannon, equipment and stores. It thus opened the Mississippi for operations by Union gunboats bringing the Federal Armies in a long stride to within sight of Memphis. Hoel's courageous and skillful service on this occasion won the praise of Flag-Officer Andrew H. Foote, the thanks of the Navy from Secretary Gideon Welles, and promotion to the rank of Acting Volunteer Lieutenant effective 29 April 1862.

On 10 May 1862 Hoel assumed command of *Cincinnati* when serious wounds incapacitated her Captain, Commander Roger N. Stembel. The new commander of the Western Flotilla, Captain Charles H. Davis, took this opportunity to express his admiration of Hoel. "I can not praise more than they deserve his high valor and ability. He sets the highest example to those below him, and if it were possible to give him a permanent position worthy of his merits, the Navy would be the gainer . . ."

On 29 October, Hoel then took command of *Pittsburg* on which he served with distinction in the campaign to take Vicksburg. One of Lieutenant Hoel's exploits during this campaign is of special interest since it foreshadowed the heroism of the World War II destroyer which bore his name, USS *Hoel* (DD-533). On 29 April 1863, as Acting Rear Admiral Porter's flotilla was bombarding the Confederate Batteries at Grand Gulf, his flagship, USS *Benton*, became unmanageable and was caught under heavy fire in a position where she could neither steer nor reply to the enemy guns. On seeing Porter's predicament, Hoel slipped the *Pittsburg* in between *Benton* and the flaming Rebel batteries to protect her by taking the fire himself. In the next 10 minutes his heroism cost the *Pittsburg* 6 men killed and 8 wounded, but the sacrifice allowed *Benton* to extricate herself from the deadly trap. The bombardment was so successful that the next day General Grant safely moved his troops across the Mississippi to begin the operations which at long last isolated and captured Vicksburg.

Hoel was promoted to Acting Volunteer Lieutenant Commander on 10 November 1864. Detached from *Pittsburg*, he then took command of *Vindicator* 1 March 1865 on which he served until 7 July 1865. He was honorably discharged on 30 December 1865.

I

(DD-533: dp. 2,100; l. 376'3"; b. 39'8"; dr. 13'; s. 36 k.; cpl. 273; a. 5 5', 10 21" tt., 6 dep., 2 dct.; cl. *Fletcher*)

Hoel (DD-533) was launched 19 December 1942 by the Bethlehem Steel Co., San Francisco, Calif.; sponsored by Mrs. Charles Bunker Crane, Jr., granddaughter of the namesake; and commissioned 29 July 1943, Commander William Dow Thomas, USN, in command.

Hoel sailed from San Francisco Bay 16 August 1943 for shakedown training in operating areas out of San Diego during which she made seven depth charge runs on an underwater sound contact with unknown results. After returning to Mare Island Navy Yard 17 September for final alterations, she cleared San Francisco 26 October as a part of the screen for a convoy which reached Pearl Harbor 31 October 1943 where *Hoel* reported to Captain A. G. Cook, Commander of Destroyer Squadron 47, who then shifted his flag to her from *Heermann*.

Fifth Fleet, which was then preparing to take the Gilbert Islands in Operation GALVANIC, assigned *Hoel* to Admiral Richmond K. Turner's Northern attack force, TF 52. She joined destroyers *Morris*, *Franks*, and *Hughes* and minesweeper *Revenge* in guarding Air Support Group 52.3 composed of escort carriers *Liscome Bay*, *Coral Sea*, and *Corregidor*.

Hoel sortied from Pearl Harbor with her group 10 November and guarded her "baby flattops" as their planes pounded Makin in a dawn preinvasion attack 20 November 1943. For the next 3 days torpedo bombers and fighters from Air Support Group 52.3 supported Major General Ralph C. Smith's 27th Infantry Division as it struggled to take Makin. Thousands of bombs and countless

rounds from the guns on these planes smashed Japanese troop concentrations, gun emplacements, and shore installations on the beleaguered island. Before dawn 24 November, a torpedo fired by Japanese submarine *I-175* struck *Liscome Bay* amidships and lookouts on the fantail of *Coral Sea* spotted the wake of a second torpedo which barely missed their ship. Bluejackets on board *Hoel* saw smoke and flame rise at least a thousand feet when the torpedo ripped into *Liscome Bay* and detonated her bomb magazine. Rear Admiral Henry M. Mullinnix, commander of the Air Support Group, Captain Irving D. Wiltzie and 642 officers and men perished with the ill-fated carrier which slipped beneath the surface some 23 minutes later after spewing smoke, flame and red-hot plane parts for miles around. The group's destroyers rescued 272 survivors. At dusk the following day, Thanksgiving, Japanese planes spotted Rear Admiral Turner's task force steaming a few miles off Butaritari Island and dropped both float and parachute flares on each side of his ships to light them up as targets for 13 torpedo bombers which swooped in to attack. However, spirited gunnery and perfectly timed radical simultaneous turns enabled the American vessels to thwart the attackers by escaping without suffering a single hit.

When the escort carriers cleared the area at night 27 November 1943, *Hoel* joined the screen protecting Abemama Group I which was unloading on the island of that name. The next morning she rejoined Rear Admiral Turner's task force and arrived off Tarawa 1 December for antisubmarine patrol five miles off the lagoon entrance. Two days later she joined the escort for battleship *Tennessee* and a group of transports sailing for Pearl Harbor where they arrived 11 December 1943. Captain A. G. Cook, commander of Destroyer Squadron 47 shifted his flag from *Hoel* to *McCord* 14 December 1943.

Hoel with fleet units of the 5th Amphibious Force, began intensive training for the invasion of the Marshall Islands. Departed Pearl Harbor 23 January 1944 with the transport screen of Reserve Force, T.G. 51.1 which steamed east of Kwajalein while Rear Admiral Turner's Joint Expeditionary Force landed on that atoll 31 January 1944. *Hoel* escorted the group's transports into Kwajalein Lagoon 2 February, and the following day took station as a radar picket patrol ship south of Kwajalein where she also was on call for gunfire support. On 6 February she accompanied *Miller* DD-535 on a tour of inspection in the Roi-Namur area for Admiral Nimitz.

When Task Forces 51 and 53 dissolved and their ships reverted to Task Force 51, *Hoel* was assigned to Fire Support Section 3, TU 51, 17.3 of the Eniwetok Expeditionary Group. In the early morning darkness of 17 February *Hoel* reentered Eniwetok Lagoon with cruiser *Portland* to bombard Parry and Japtan Islands. *Hoel* picked up several aviators from a wrecked scout plane from cruiser *Indianapolis* and returned them to their ship. That afternoon *Hoel's* guns destroyed several small craft on the beach of Parry Island and fired on pillboxes and troop concentrations inland. She then anchored in standby position while the rest of the force bombarded the two islands. The next day *Hoel* took her turn at providing harassing fire and at night illuminated the beaches and the reef to prevent enemy troop movements. Just before daybreak 19 February she took station off Eniwetok for close fire support of the initial landings. When relieved by destroyer *Phelps* 21 February, *Hoel* steamed to a position off the deep entrance to Eniwetok Lagoon for patrol duty which continued until 26 February when she embarked a fighter director team from destroyer *Hazewood* and assumed duties of standby fighter director for the Eniwetok area. On 4 March 1944, 2 days later after the attack and occupation phase of Eniwetok was completed, the fighter-director team was transferred to the attack transport *Cambria*, freeing *Hoel* to depart for Majuro for repairs.

Hoel, in company with three other destroyers of DesRon 47, reported to Commander 3d Fleet at Purvis Bay, Florida Island, 18 March 1944. The next day she cleared that port to join Task Force 39, but 20 March she was ordered

to change course for Emirau Island which was then being occupied by marines. On 25 March 1944 destroyers *Trathen* and *Johnston* joined *Hoel* and the rest of DesRon 47 uniting the squadron for the first time.

Hoel then patrolled south and east of Cape Botianguen, New Hanover, where her guns destroyed an enemy warehouse 26 March 1944, and, the next day, captured documents which contained valuable information from a 40-foot outrigger canoe. That night she made four depth charge runs on an underwater sound contact with unknown results. She returned to Purvis Bay 8 April 1944 to screen a convoy carrying troops and supplies to Emirau Island.

Upon her return to Purvis Bay 14 April 1944 *Hoel* reported for duty to Rear Admiral R. W. Hayler, the commander of Cruiser Division 12 who kept her busy with training exercises and convoy duty until 14 August when she was assigned to the 3d Amphibious Force then preparing for the invasion of the Palau. She joined escort carrier *Kitkun Bay* at Espiritu Santo 24 August 1944 for passage to Purvis Bay. On 6 September they put to sea for the Palau Islands with Rear Admiral W. D. Sample's escort carrier task force unit to provide air support during the invasion of Peleliu. While continuing to screen the escort carriers, she rescued a pilot and passenger from a plane that had splashed on attempting to take off from *Ommancy Bay* and transferred them to *Mareus Island*. On 1 October 1944 *Hoel* made three depth charge runs on an underwater sound contact with unknown results.

After replenishing at Seadler Harbor of Manus, Admiralty Islands, *Hoel* cleared that base with a fire support group 12 October 1944 to join Rear Admiral Thomas L. Sprague's escort carrier group (Task Group 77.4) in invading the Philippines. Sprague's force was composed of three units, each comprising a group of escort carriers and a screen of destroyers and destroyer escorts. These units, known by their radio calls as the "Three Taffys", began operating off Samar 18 October 1944 to cover the landings on Leyte. *Hoel* was attached to "Taffy 3" (Escort Carrier Task Unit 77.4.3) commanded by Rear Admiral Clifton A. F. Sprague and comprising four escort carriers guarded by destroyers *Hoel*, *Heermann*, and *Johnston*. Before the decisive battle off Samar, "Taffy 3" was reinforced by the arrival of Admiral R. A. Oftsie with two more escort carriers and four destroyer escorts, *Dennis*, *John C. Butler*, *Raymond*, and *Samuel B. Roberts*.

Dawn of 25 October 1944 found "Taffy 3" steaming northeast of Samar operating as the Northern Air Support Group. "Taffy 2" was in the central position patrolling off the entrance to Leyte Gulf, and "Taffy 1" covered the southern approaches to the Gulf some 130 miles to the southeast of *Hoel's* "Taffy 3". Admiral T. L. Sprague was under the erroneous impression that Admiral Halsey's 3d Fleet was providing protection to the north and so was taken by surprise when at 0645 "Taffy 3's" lookouts observed anti-aircraft fire to the northward and within 3 minutes were under heavy fire from Kurita's powerful Center Force of 4 battleships, 6 heavy cruisers, 2 light cruisers, and 11 destroyers.

The only chance for survival of the little group of American "jeep" carriers and "tin cans" lay in fleeing to the south hoping that aid would arrive before their complete destruction. While the carriers launched all available planes to attack their numerous Japanese adversaries and then formed a rough circle as they turned toward Leyte Gulf, *Hoel* and her fellow destroyers *Johnston* and *Heermann*, worked feverishly to lay down a smoke screen to hide their "baby flattops" from the overwhelmingly superior enemy ships. At 0706, when a providential rain squall helped to hide his carriers, Admiral Clifton Sprague boldly ordered his destroyers to attack the Japanese with torpedoes. *Hoel* instantly obeyed this order by heading straight for the nearest enemy battleship, *Kongo*, then 18,000 yards away. When she had closed to 14,000 yards she opened fire as she continued her race toward the smoking muzzles of *Kongo's* 14-inch guns. A hit on her bridge which knocked out all voice radio communication did not deflect her from her course toward the enemy until she

had launched a half salvo of torpedoes at a range of 9,000. Although *Hoel's* "fish" all failed to strike their target, they caused *Kongo* to lose ground in her pursuit of the carriers by forcing her to turn sharply left and to continue to move away from her quarry until they had run their course. Minutes later *Hoel* suffered hits which knocked out three of her guns, stopped her port engine, and deprived her of her Mark-37 fire control director, FD radar, and bridge steering control. Undaunted, *Hoel* turned to engage the enemy column of heavy cruisers. When she had closed to within 6,000 yards of the leading cruiser, *Haguro*, the fearless destroyer launched a half-salvo of torpedoes which ran "hot, straight and normal." This time she was rewarded by the sight of large columns of water which rose from her target. Although Japanese records deny that these torpedoes hit the cruiser, there is no evidence to indicate any other explanation for the geyser effect observed.

Hoel now found herself crippled and surrounded by enemies. *Kongo* was only 8,000 yards off her port beam and the heavy cruiser column was some 7,000 yards off her port quarter. During the next hour the valiant ship rendered her final service by drawing enemy fire to herself and away from the carriers. In the process of fish-tailing and chasing salvos she demanded the attention of her antagonists by peppering them with her two remaining guns. Finally at 0830, after withstanding over 40 hits, an 8-inch shell stilled her remaining engine. With her engine room under water, her No. 1 magazine ablaze, and the ship listing heavily to port and settling by the stern, *Hoel's* stouthearted captain, Commander Leon S. Kinterberger, reluctantly ordered his crew to "prepare to abandon ship." The Japanese fire at the doomed ship continued as her surviving officers and men went over the side and only stopped at 0855 when *Hoel* rolled over and sank in 4,000 fathoms.

Only 86 of *Hoel's* complement survived while 253 officers and men died with their ship. Commander Kinterberger described the incomparably courageous devotion to duty of the men of the *Hoel* in a seaman's epitaph to the action: "Fully cognizant of the inevitable result of engaging such vastly superior forces, these men performed their assigned duties coolly and efficiently until their ship was shot from under them."

In addition to the Presidential Unit Citation, *Hoel* received the Philippine Republic Presidential Unit Citation Badge and five battle stars for World War II service.

Hoel (DD-768) was cancelled during construction 13 September 1946.

II

(DDG-13: dp. 4,500 (f.); l. 437'; b. 47'; dr. 22'; s. over 30 k; cpl. 334; a. "Tartar" guided missiles, "Asroc", 25"; cl. *Charles F. Adams*)

The second *Hoel* (DDG-13) was launched 4 August 1960 by Defoe Shipbuilding Co., Bay City, Mich.; sponsored by Mrs. Harry H. Long, granddaughter of the namesake; commissioned 16 June 1962. Commander Allen W. Slifer, USN, in command.

After fitting out at Boston, *Hoel* got underway for her first homeport, San Diego, putting in at Norfolk; Mayport and Fort Lauderdale, Fla.; Guantanamo Bay; Cartagena, Colombia; Canal Zone; and Acapulco, Mexico, during the voyage. During the passage from Cartagena to the Canal Zone she came upon sailing yacht *Stardrift* becalmed and adrift enroute to Sidney, Australia, from London. *Hoel* towed the 36-foot craft 100 miles to safety in Panama.

Hoel arrived San Diego 11 September 1962 and spent the ensuing months completing the various inspections, tests, and trials by the Board of Inspection and Survey. When successful firing of ASROC and TARTAR missiles completed her qualification and acceptance trials, *Hoel* joined the ready 1st Fleet.

After a 3-week cruise to Esquimalt, Canada, *Hoel* spent April and May of 1963 in Pearl Harbor conducting special

exercises. She then returned to waters off San Diego to participate in the Presidential Demonstration held for President Kennedy.

The months of July, August, and part of September were spent at Long Beach Naval Shipyard for the post-shakedown availability assigned each new ship approximately 1 year after commissioning. At this time improved fire-control radars were installed and tested by successful missile firings. *Hoel* departed Long Beach 17 October 1963 for duty in the Western Pacific to serve as the flagship of Commander Destroyer Division 12.

In ensuing years she alternated deployments in the Far East with operations off the West Coast. Her 1966 deployment to the Western Pacific began when she departed San Diego 28 July. On September she was on search and rescue patrol off Da Nang, Vietnam. On 8 December the guided missile destroyer became naval gunfire support ship in the Corps I area. She fired 2,100 rounds destroying at least 20 enemy structures and 2 trench networks; damaging 61 buildings, 3 bunkers, 8 trench networks, and 5 roads; and killing 24 Viet Cong while wounding 7. *Hoel* retired to Hong Kong 21 December but headed for Yankee Station the day after Christmas to screen *Coral Sea* (CVA-43). On this patrol she helped to rescue a pilot after his A-4 Sky Hawk had crashed.

Hoel returned to San Diego 3 February 1967 and operated on the West Coast through mid-year preparing for future action.

Hoga

A Sioux Indian word meaning "fish".

(YT-146: dp. 325; l. 100'; b. 25'; dr. 9'7")

Hoga (YT-146), a diesel-powered tug, was launched by Consolidated Shipbuilding Corp., Morris Heights, N.Y., 31 December 1940; and placed in service 22 May 1941.

Hoga served during World War II as a harbor tug in the 14th Naval District, and was reclassified YTB-146 15 May 1944. She was loaned to the city of Okland, Calif. in June 1948, and serves at present as a harbor tug into 1967. She was reclassified YTM-146 on 1 February 1962.

Hogan

Seaman Hogan entered the Navy on board the schooner *Revenge* at Boston, Mass., in 1811 and transferred to frigate *Constitution* 18 February 1812. During the War of 1812 he won distinction on board *Constitution* in an engagement with the British frigate *Guerriere*. When *Constitution's* flag was shot away from the main topgallant masthead, Hogan climbed the rigging and lashed the colors to the masthead. In later action between the *Constitution* and *Java* on 3 January 1813 he was severely wounded, losing the fingers of both hands. He died 1 September 1818.

(DD-178: dp. 1,060; l. 314'5"; b. 31'8"; dr. 8'6" s. 35 k.; cpl. 101; a. 4 4", 2 3", 12 21" tt., cl. *Wickes*)

Hogan (DD-178) was launched by Union Iron Works, San Francisco, Calif., 12 April 1919; sponsored by Mrs. Magnus A. Anderson, a sister of the Secretary of the Interior Franklin K. Lane; and commissioned 1 October 1919, Lt. Comdr. E. M. Williams in command.

After shakedown *Hogan* arrived San Diego 21 November to join the Pacific Destroyer Force. From 23 November to 6 February 1920 she sailed in company with her division and engaged in fleet maneuvers, patrol duty, torpedo exercises and target practice along the California coast. On 25 March she departed for Hawaii, where she operated for the next month. The destroyer rejoined her squadron at San Diego in late April for 5 months of gunnery exercises and trial runs in that area. She returned to San Diego in early 1921 and engaged in important experimental torpedo practice and divisional operations

until 9 December. For the remainder of her service *Hogan* assisted U.S. battleships in conducting torpedo firing exercises in the Pacific. She decommissioned at San Diego 27 May 1922.

Recommissioned 7 August 1940, *Hogan* underwent conversion to a high speed minesweeper at Mare Island and reclassified DMS-6. Her activity up to World War II consisted mainly of intensified minesweeper training and patrol duty in the Caribbean and along the Eastern Coast.

During the early months of the war *Hogan* acted as a convoy escort in the Caribbean and eastern Atlantic, protecting shipping from U-boat attack. The first major operation in which she took part was the invasion of North Africa in late 1942. For this important amphibious assault, mounted over an entire ocean, *Hogan* departed Norfolk 24 October and arrived with the Center Force off Fedhala for preliminary sweeps 7 November. As the landings began early next day, the minesweeper continued to patrol the vital transport area. Just after 0500 she was sent to investigate strange running lights and came upon a French steamer and escort vessel. *Hogan* ordered both ships to reverse course, and when the order was not obeyed fired a burst of machine gun fire across the escort's bow. The ship, *Victoria*, replied with fire of her own and attempted to ram the minesweeper, but *Hogan* avoided her and with 20-mm fire forced her surrender.

In the days that followed the minesweeper continued to conduct antisubmarine patrol off Fedhala, searching for submarines that attacked the transports 11 November. The ship entered Casablanca harbor 18 November, the invasion a success, and after patrol duties sailed for Norfolk, arriving 26 December.

Hogan next returned to coastal convoy duties until November 1943. She sailed 13 November from Norfolk to join the Pacific Fleet, transited the Panama Canal, arriving Mare Island 5 December. The minesweeper was needed for the first phase of the long island campaign toward Japan, the invasion of the Marshalls, and sailed for Pearl Harbor and Kwajalein 16 January 1944. *Hogan* carried out antisubmarine patrol off Roi Island before departing 4 February for Espiritu Santo, where she arrived 27 February.

After another period of convoy duty, *Hogan* arrived Milne Bay 7 April to prepare for the Hollandia operation. The attack group sailed 18 April and arrived Humboldt Bay 4 days later. *Hogan* and other minesweepers cleared enemy mines for Admiral Barbey's invasion force, after which the ship carried out shore bombardment and screening duties. She arrived Cape Sudest with HMAS *Westralia* 25 April.

Hogan sailed from Eniwetok 10 June to make preliminary sweeps of Saipan for the invasion to come. She remained off Saipan during the assault 15 June, coming under enemy shore fire, and moved to Guam the next day. As the Japanese fleet moved toward the Marianas for a decisive naval battle, *Hogan* returned to Saipan to protect the transports. In the great carrier battle which followed 19-20 June, the American fleet won a stunning victory, crippling the Japanese naval air arm and securing the Marianas operation from interference. *Hogan* returned to the staging base at Eniwetok 30 June, but returned to Guam 12 July to carry out screening and minesweeping duties for the assault there. She arrived Espiritu Santo 5 August 1944.

Following a tour of escort duty in the Solomons, *Hogan* steamed via Pearl Harbor to San Francisco for repairs, arriving 5 October. As the recapture of the Philippines gained momentum, the ship steamed from San Francisco 6 November and arrived Manus staging area 4 December 1944. Moving to Leyte Gulf before Christmas, *Hogan* sortied with the Minesweeping and Hydrographic Group 2 January 1945. Kamikaze attacks, symbol of Japanese desperation, began soon afterward, and continued during the voyage to Lingayen Gulf. The minesweepers entered the invasion area 6 January and began their dangerous sweeping operations. Four of the minesweepers were sunk or damaged, and *Hogan's* gunners were busy with

USS *Hogan* (DMS-6) on 29 July 1943

attacking aircraft. With the operation well underway, the ship arrived Leyte Gulf 16 January.

After retiring to Tinian, *Hogan* sailed once more 7 February to take part in the important assault on Iwo Jima. During this operation she swept mines, screened transports, and carried out shore bombardment before departing with a group of battleships and their escorts 7 March. Arriving Pearl Harbor 13 April via Ulithi she continued to San Diego 3 May 1945.

Hogan underwent major repairs and reclassified AG-105 5 June 1945. The veteran ship was assigned as a target ship for bombing tests and was sunk off San Diego 8 November 1945.

Hogan received six battle stars for World War II service.

Hogg, James S., see *James S. Hogg* (AK-139)

Hoggatt Bay

A bay on the southeastern coast of Baranof Island, Alaska.

(OVE-75: dp. 7,800; l. 512'3"; b. 65'; ew. 108'1"; dr. 22'6"; s. 19 k.; cpl. 860; a. 1 5", 16 40mm.; cl. *Casablanca*)

Hoggatt Bay (CVE-75) was launched under Maritime Commission contract by Kaiser Co., Inc., Vancouver, Wash., 4 December 1943. Originally classified AVG-75, she had been reclassified ACV-75, 20 August 1942. Sponsored by Mrs. Victor Sundrik, she was reclassified again to CVE-75, 15 July 1943 and commissioned at Astoria,

Oreg., 11 January 1944, Captain W. V. Saunders in command.

After intensive training off the California coast, *Hoggatt Bay* transported aircraft and crews to Pearl Harbor 10-25 March 1944. Upon her return and further training in antisubmarine work, she sailed 1 May for Pearl Harbor and Majuro. The combination of escort carriers and destroyers had proven itself effective against submarines in the Battle of the Atlantic, and was now to be used in the Pacific against the Japanese. *Hoggatt Bay* and a group of destroyers and destroyer escorts patrolled in the southwest Pacific 26 May-19 June with notable success. *Intrepid England* scored a kill on *Ro-105* 31 May and *Taylor* sank *Ro-111* with depth charges and gunfire 11 June. These operations and those of other groups did much to reduce Japanese submarine interference with the invasion of the Marianas.

Returning to the patrol area a brief stay at Eniwetok, *Hoggatt Bay's* group provided air support and cover for the Marianas operation 5 July-9 August, after which the ships returned to Manus. Next on the timetable of Pacific conquest was Peleliu, a valuable air base for further advances, and *Hoggatt Bay* sortied 1 September to furnish antisubmarine protection and search planes for the invasion. For nearly 2 months the escort carrier cruised these seas south and west of the Marianas in support of American operations. *Samuel S. Miles*, a member of her group, sank *I-177* 3 October, and later in the month planes from *Hoggatt Bay* helped provide air cover for crippled *Houston* as she struggled toward Ulithi.

The ship arrived Ulithi 28 October, and sailed 10 November to provide air support for the developing campaign in the Philippines. This was followed by amphibious exercises in Huon Gulf, New Guinea, in preparation for the

Lingayen Gulf operations. Arriving Manus 20 December 1944, *Hoggatt Bay* joined the great task force which departed from that and other staging bases in late December for Lingayen Gulf. The voyage through the Philippines was a perilous one, as the Japanese attacked with their last desperate weapon, the suicide plane. Crewmen on *Hoggatt Bay* and the other ships fought continuously after 3 January, downing many of the attackers, but *Ommaney Bay* was lost and other ships damaged. Arriving Lingayen Gulf 6 January, *Hoggatt Bay* sent her carrier planes in to support the landings and destroy strong points despite suicide attacks; this vital work continued until 17 January, when the ship set course for Ulithi, and then San Diego.

The veteran escort carrier returned to San Diego 15 February 1945, and after much-needed repairs sailed 6 April to join the vast fleet arrayed off Okinawa in support of the invasion. She arrived Okinawa 8 May via Pearl Harbor and Ulithi and immediately took station south of the island to lend her aircraft to the carrier air forces engaged in the operation. Her planes flew direct support missions, photographic flights, and supply drops during the period 8 May-24 June.

Hoggatt Bay arrived Leyte Gulf 27 June 1945 and after a month of training sailed 28 July for Adak, Alaska. The surrender came while the carrier was en route, however, and the planned operation was replaced by occupation plans. After her arrival 18 August, *Hoggatt Bay* sailed for Ominato. She arrived September and supported the occupation of Hokkaido and northern Honshu. During this period aircraft from the ship discovered many Japanese prison camps, and the ship had the pleasure of evacuating Lieutenant Colonel Devereux, Marine Commander at Wake Island when captured by the Japanese. *Hoggatt Bay* also participated in the occupation of Aomori before anchoring in Tokyo Bay 27 September.

The escort carrier departed Tokyo 30 September and after brief service with the "Magic Carpet" fleet returned to Boston and decommissioned 20 July 1946. Placed in the Atlantic Reserve Fleet, Boston, the ship was reclassified CVHE-75, 12 June 1955 and AKV-25, 7 May 1959. She was sold for scrap 31 March 1960.

Hoggatt Bay received five battle stars for World War II service.

Hoist

To raise, elevate, lift with tackle.

(ARS-40: dp. 1,360; l. 213'6"; b. 39'; dr. 14'4"; s. 15 k.; cpl. 120; a. 4 40mm., 6 20mm.; cl. *Diver*)

Hoist (ARS-40) was launched 31 March 1945 by Basalt Rock Corp., Napa, Calif.; sponsored by Mrs. William E. Howard; and commissioned 21 July 1945, Lt. Comdr. R. M. Brunner in command.

After shakedown *Hoist* sailed from San Francisco 6 September 1945 to begin salvage operations in the Far East. *Hoist* arrived Buckner Bay, Okinawa, 11 October and commenced salvage and repair duties until 23 December. Two days later she arrived Wakanoura Wan and operated there and at Sasebo until 15 March 1946.

Hoist returned to San Pedro 1 June and sailed for Norfolk 15 July. After overhaul she sailed to Bayonne, N.J., and trained students at the Naval Training Salvage School until 23 February. From March 1947 to December 1948, *Hoist* continued salvage operations along the East and Gulf coasts. She sailed 8 December for Narsak, Greenland, where she operated for 2 weeks before returning to Bayonne. In mid-January 1949 she sailed for the Azores to repair an underwater pipeline, returning 16 March. *Hoist* sailed 23 March to tow targets for aircraft

squadron exercises off Bermuda, helping maintain the high readiness of the fleet for service when needed, then sailed 9 May for the Virginia Capes for training operations. *Hoist* now based her operations out of Norfolk, and on 9 August steamed to assist *Simon Newcomb* (AGSC-14) aground in Mother Burns Cove, Labrador. Towing the vessel to Argentina, Newfoundland, *Hoist* resumed her salvage and repair duties out of Norfolk, with annual deployments to the North Atlantic and periodic operations in the Caribbean and Florida waters, keeping the Navy in top fighting condition to preserve the peace throughout the world. In addition to her salvage and repair services she acted as station ship, performed towing operations, and engaged in amphibious exercises.

From early 1960 through 1964, *Hoist* continued similar services, but concentrated on local salvage duties out of Norfolk and operations in Florida and the Caribbean.

From 29 May 1964 to 25 August *Hoist* operated with *Trieste II* at the site of the *Thresher* tragedy. Next, performing one of her many rescues, *Hoist* along with *Seneca* (ATF-92) and *Windlass* (ARSD-4), freed USNS *Bluejacket*, which had grounded 2 March 1965. *Bluejacket* was pulled free in 2 days saving her perishable cargo of frozen stores valued at \$2,000,000. From 11 October to 12 November *Hoist* was busy with towing operations when ordered to assist in the salvage of *Alamogordo* (ARDM-2), a floating drydock attached to the *Polaris* program. *Hoist* and *Recovery* (ARS-43) raised *Alamogordo* in 3 weeks. For the remainder of the year *Hoist* was active in local salvage duties.

On 16 February 1966 *Hoist* arrived at Palomares, Spain, to take part in the recovery of an H-Bomb. The un-armed weapon was dropped when a B-52 bomber and KC-135 flying tanker collided. On 7 April after successful completion of the mission *Hoist* returned to Norfolk, where she arrived 4 May. *Hoist* performed salvage operations in the Virginia Capes area into 1967.

Holbrook, *Willard A.*, see *Willard A. Holbrook* (AP-44)

Holder

Randolph Mitchell Holder was born 20 September 1918 in Jackson, Miss., and was commissioned Ensign 10 April 1940 following flight training. Reporting to Torpedo Squadron 6 in the famous carrier *Enterprise*, he took part in the early carrier operations in the critical months following Pearl Harbor and then fought in the pivotal Battle of Midway, first of the great American successes in the sea war. In the gallant attack of the torpedo planes early 4 June 1942, Holder and his comrades attacked the Japanese ships without fighter cover. Though Holder and many others were shot down while pressing this attack, they forced radical maneuvers and diverted Japanese air cover so as to make the later raids lethal to the enemy fleet. Lieutenant (j.g.) Holder was presumed dead next day, 5 June 1942, and was awarded the Navy Cross posthumously for his heroism.

I

(DE-401: dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; cpl. 186; a. 3 3", 2 40mm., 8 20mm., 2 dct, 8 dep, 1 dep (hh), 3 21" tt.; cl. *Edsall*)

The first *Holder* (DE-401) was launched by Brown Shipbuilding Co., Houston, Tex., 27 November 1943; sponsored by Mrs. Annette Holder, mother of Lieutenant (junior grade) Holder; and commissioned 18 January 1944, Lt. Comdr. G. Cook in command.

After completion of her shakedown cruise, *Holder* departed 24 March escorting a convoy bound for Mediterranean ports. Proceeding along the coast of Algeria the convoy was followed 10 and 11 April by German planes and just before midnight 11 April it was attacked by torpedo bombers. *Holder* and the other escorts immediately opened fire and began making smoke, but a tor-

pedo struck the escort vessel amidships on the port side, causing two heavy explosions. Though fires spread and flooding was serious. *Holder's* crew remained at their guns to drive off the attackers without damage to the convoy. Alert damage control kept the ship seaworthy and she arrived in tow at Oran for repairs. There it was decided to tow her to New York, where she arrived safely 9 June 1944. She decommissioned at New York Navy Yard 13 September 1944, and the forward part of her hull was used to repair *Menges* (DE-320). The remainder was sold for scrap to John A. Witte, Station Island, N.Y., 19 June 1947.

Holder received one battle star for World War II service.

II

(DD-819: dp. 2,425; l. 390'6"; b. 41'1"; dr. 18'6"; s. 35; cpl. 367; a. 6 5", 5 21" tt, 6 dep, 2 dct.; cl. *Gearing*)

The second *Holder* (DD-819) was launched by Consolidated Steel Corp., Orange, Tex., 25 August 1945; sponsored by Mrs. Annette Holder, mother of Lieutenant (j.g.) Holder; and commissioned 18 May 1946 at Orange, Tex., Comdr. B. K. Atkins in command.

Holder conducted her shakedown training in the Caribbean and returned to Norfolk 28 August 1946. After a period of training exercises along the coast she sailed for the Mediterranean 23 October. During the subsequent operations with the 6th Fleet in this troubled area, *Holder* visited Egypt and Saudi Arabia, arriving Newport 22 March 1947. She then took part in antisubmarine training exercises out of Newport and in the Caribbean.

The destroyer continued this pattern of operations for the years that followed. In June-July 1949 *Holder* took part in a Midshipman training cruise to northern Europe and upon her return moved her home port from Newport to Norfolk. Her classification was changed to DDE-819 4 March 1950, but she continued to alternate cruises to

Europe and the Mediterranean with periods of training and upkeep out of Norfolk and the Caribbean. When crisis flared in the Middle East over Egypt's seizure of the Suez Canal in 1956, *Holder* steamed to join the 6th Fleet in insuring the safety of American lives and property and helping to lessen the chance of a larger outbreak. Again in 1958 *Holder* sailed to the Mediterranean in March and in July took part in the landings at Beirut, Lebanon. Answering the call of the legitimate government, American surface ships and amphibious forces acted swiftly to avert the fall of the rightful government, a Communist takeover, and disaster in the Middle East.

The veteran destroyer, reclassified DD-819 again 7 August 1962, took part in another graphic demonstration of the importance of sea power, this time in the Western Hemisphere. When the introduction of offensive missiles into Cuba forced President Kennedy to proclaim a naval quarantine of that island, *Holder* and other ships took up station so as to intercept and inspect shipping. The destroyer made an inspection of a Russian ship leaving Cuba 8 November and remained on this duty until 21 November, when she steamed to Norfolk. Ships had once more given meaning and teeth to American policy in the cold war.

Holder entered Norfolk Naval Shipyard 17 December 1962 for Fleet Rehabilitation and Modernization Overhaul, a major repair and modernization job which added years to her useful life. New weapons, including ASROC and DASH, and a helicopter hanger and flight deck increased the ship's antisubmarine capability. Emerging in October 1963, the ship conducted shakedown training before returning to the Caribbean for maneuvers.

Holder devoted 1964 and 1965 to ASW training. From 12 January 1965 to 4 February she participated in the recovery of NASA's unmanned Gemini II capsule. Between 26 April and 17 May, *Holder* patrolled the Dominican Republic's coast during the struggle to prevent a Communist

USS *Holder* (DD-819)

take over of that island nation. She spent the next year on duty in the Atlantic.

On 6 June 1966 *Holder* sailed through the Panama Canal on her way to the Pacific Fleet. From 15 to 28 July she was plane guard ship for *Ranger* (CVA-61) in Tonkin Gulf. She then conducted naval gunfire support off Vietnam from 29 July to 8 August. In October *Holder* was plane guard for *Intrepid* (CVS-11), and also she acted in support of *Chicago* (CG-11). Sailing for home 10 November via the Suez Canal, *Holder* arrived in Norfolk 17 December to prepare for future action.

Holland

John Philip Holland, the man who developed the first true submarine accepted by U.S. Navy (spending 57 of his 74 years working with submersibles), was born in Liscanor, County Clare, Ireland, on 29 February 1840. As a youth, he considered the use of the submarine to further the cause of Irish Independence. Holland came to the United States in 1873. In 1875 his first submarine designs were submitted for consideration by the U.S. Navy, but turned down as unworkable.

Holland continued to improve his designs and worked on several experimental boats prior to his successful efforts with the privately built *Holland* launched in 1898. This was the first submarine having power to run submerged for any considerable distance. She was pur-

chased by the Navy after rigorous tests, and six more of her type were ordered.

On 12 August 1914, John Philip Holland died in Newark, N.J.

(SS-1: dp. 64; l. 53'10"; b. 10'3"; dr. 8'6"; s. 5 k.; cpl. 7; a. 3 18" tt, 1 8")

The first *Holland* was launched by Crescent Shipyards, Elizabeth, N.J., 1898; commissioned 12 October 1900, Newport, R.I., Lt. Harry H. Caldwell in command.

On 16 October 1900, *Holland* left Newport under tow of tug *Leyden* for Annapolis where she trained cadets of the Naval Academy as well as officers and enlisted men ordered there to receive training so vital in preparing for the operation of other submarines being built for the Fleet.

Holland proved valuable for experimental purposes in collecting data for submarines under construction or contemplation. Her 166-mile surface run from Annapolis to Norfolk 8 to 10 January 1901 provided useful data on her performance underway over an extended period.

Except for the period 15 June to 1 October 1901, which was passed training cadets at the Naval Torpedo Station, Newport, R.I., *Holland* remained at Annapolis until 17 July 1905 as a training submarine.

Holland finished out her career at Norfolk. Her name was struck from the Navy Register of Ships on 21 November 1910. She was sold as scrap to Henry A. Hitner & Sons, Philadelphia, on 18 June 1913. Her purchaser was required to put up \$5,000 bond as assurance that the submarine would be broken up and not used as a ship.

II

(AS-3: dp. 8,100; l. 483'10"; b. 61'1"; dr. 16'9"; s. 16 k; cpl. 388; a. 8 5', 4 3')

The second *Holland* was launched by the Puget Sound Naval Shipyard, Bremerton, Wash., 12 April 1926, sponsored by Miss Elizabeth Saunders Chase, daughter of Admiral J. V. Chase, and commissioned 1 June, Comdr. John B. Earle in command.

Holland arrived in San Francisco from Puget Sound Naval Shipyard on 24 April to become flagship of Captain J. T. Thompkins, Commander Submarine Divisions, Battle Fleet. On 24 September she was permanently assigned to base at San Diego, Calif., tending submarine divisions there with periodic tours to Panama to service submarines based at the Canal Zone. On 5 November 1930 *Holland* became flagship of Captain Chester W. Nimitz, Commander Submarine Divisions, Battle Fleet with additional duty as Commander of Submarine Division 20. The former command was abolished as of 1 April 1931 and Captain Nimitz retained his flag in *Holland* as Commander, of his submarine division, now designated Submarine Division 12. He left *Holland* on 17 June, relieved by Captain W. L. Friedell.

In addition to being the flagship of Submarine Division 12, *Holland* temporarily served as Submarine Force Flagship (March–July 1933). In June 1935 she became joint flagship of Submarine Squadron 6 and Submarine Division 12. This duty continued until June 1941 when she became flagship of Submarine Squadron 2.

On 22 November 1941 *Holland* arrived at Cavite Naval Base, P.I., to service submarines of the Asiatic Fleet. Due to the air raids in early December 1941, *Holland* was hurried out of Manila Bay under cover of night with her vital cargo of repair and replacement parts for submarines of the Asiatic Fleet. Heading south, she escaped un-

scathed from two air raids while at Balikpapan, Borneo, then repaired a battle-damaged submarine at Soerabaja, Java where she was joined by two destroyers that gave her escort to Port Darwin, Australia, which she reached on 2 January 1942 for round-the-clock operations which included the building of docks and floats as well as the constant repair and equipping of ships as well as submarines. On 3 February she was underway for Tjilaljav, Java, to remove Rear Admiral Charles A. Lockwood, Jr. and his Asiatic Fleet Submarine Force Staff to Australia. Her outstanding service to the Fleet during the first crucial months of the war brought *Holland* a Navy Unit Commendation.

While based in Australia, *Holland* serviced and overhauled several submarines before returning for overhaul at Mare Island Navy Yard in late February 1943. She reached Pearl Harbor from the West Coast in June and completed 22 refits and 13 repair jobs for submarines within the next 11 months. She shifted to Midway Atoll on 1 June 1944 and sailed the following month directly to support submarines in the Marianas Islands. *Holland* returned to Pearl Harbor late in November to be fitted out as headquarters ship for Vice Admiral Charles A. Lockwood, Jr., Commander Submarine Force, Pacific Fleet. In January 1945 she steamed out of Pearl Harbor for Guam where she embarked Vice Admiral Lockwood. By the close of hostilities, *Holland* had given 55 instances of refit to submarines, provided repair and service to 20 surface craft and completed various jobs on shore installations.

Vice Admiral Lockwood shifted his Submarine Force Flag ashore to his new quarters on Coconut Island in Apra Harbor on 30 August 1945, setting up operations and communications for the work ahead. This left *Holland* ready to begin a new career as a repair ship (ARG-18). Her value to the submarine force had diminished with the commissioning of many new and modern tenders better

USS *Holland* (AS-3) with submarines alongside at San Diego circa 1927—USS *Langley* (CV-1) appears at North Island with USS *Shawmut* (CM-4) astern of the carrier. The nearest destroyer on the left is USS *Edsall* (DD-219).

equipped to carry on the job of keeping our submarines in condition for their assaults against the enemy. With a few alterations she headed for Buckner Bay, Okinawa, where she embarked Rear Admiral Allen E. Smith, Commander of Service Squadron 10 and his staff before proceeding for Tokyo Bay where she dropped anchor on 29 September 1945.

Holland set course 6 June 1946 by way of Pearl Harbor for San Diego where she arrived on 28 June. She shifted to San Pedro for inactivation overhaul in the Terminal Island Navy Yard, then was towed to San Diego where she was decommissioned on 21 March 1947. She was assigned to the San Diego, Calif., group of the Pacific Reserve Fleet until her name was struck from the Navy Register on 18 June 1952. Her hull was sold for scrapping on 3 October 1953 to the Bethlehem Steel Co.

Holland earned two battle stars and the Navy Unit Commendation for World War II service.

III

(AS-32: dp. 19,000; l. 599'; b. 83'; dr. 23'4"; s. 18 k.; cpl. 1,190; a. 25"; cl. *Hunley*)

The third *Holland* was launched by Ingalls Shipbuilding Corp., Pascagoula, Miss., 19 January 1963; sponsored by Mrs. John C. Stennis, wife of U.S. Senator from the State of Mississippi; delivered to the Charleston Naval Shipyard, Charleston, S.C.; and commissioned 7 September 1963, Captain Charles W. Styer, Jr., in command.

Holland departed Charleston on 14 October for shake-down training at Guantanamo Bay, Cuba, returning to Charleston on 19 November. She commenced post-shake-down availability on 25 November.

While *Holland* is neither a submersible nor a combatant ship, she will be a vital link in support of our Nation's first line of deterrence—the Navy's Polaris Weapons System. She is capable of making any submarine repair other than major overhaul, including servicing and maintaining the nuclear power plants of Polaris-firing submarines.

The opening of 1964 found *Holland* at Charleston, S.C., making preparations for deployment to the Polaris replenishment anchorage at Rota, Spain. She arrived Rota 1 April and relieved *Proteus* (AS-19) as the FBM submarine tender shortly thereafter. *Holland* continued her vital service to the Polaris submarines until relieved 4 November 1966. *Holland* arrived Charleston 22 November. There she tended submarines of the Atlantic Fleet into 1967.

Holland, Joseph, see *Hannibal* (AG-1)

Hollandia

A town on the northern coast of New Guinea on Humboldt Bay. During World War II *Hollandia* was a major Japanese air base, and was taken by a brilliantly executed American amphibious operation 22 April 1944. The success of the operation had much to do with securing New Guinea and was a major step toward the eventual invasion of the Philippines.

(CVE-97: dp. 7,800; l. 512'3"; b. 65'; ew. 108'1"; dr. 22'6"; s. 19 k.; cpl. 860; a. 1 5", 16 40mm.; cl. *Casablanca*; T. S4-S2-BB3)

Hollandia (CVE-97), formerly AVG-97 and ACV-97, was launched under Maritime Commission contract as *Astrolabe Bay* (CVE-97) by Kaiser Co., Inc., Vancouver, Wash., 28 April 1944; sponsored by Mrs. William H. Wheat; renamed *Hollandia* 30 May 1944; and commissioned 1 June 1944, Captain C. L. Lee in command.

Following training off the West Coast, *Hollandia* sailed 10 July 1944 from San Diego for a shakedown cruise to Espiritu Santo. She also transported replacement aircraft on this cruise, and on the return voyage stopped at Manus and Guadalcanal, arriving Port Hueneme, Calif.,

27 August. During the next few months the escort carrier made similar cruises between the United States and the Navy's bases in the far Pacific, Manus, Ulithi, and Guam, bringing vitally-needed supplies and passengers.

Hollandia was anchored at Ulithi 1 April 1945 when the Navy's massive amphibious assault of Okinawa began. She got underway next day and operated off the Okinawan coast, sending fighters to support the advancing troops. The ship then returned to San Diego, arriving 1 May 1945. Following a cargo and passenger voyage to Pearl Harbor and return, *Hollandia* departed 7 June to take part in the climactic events of the Pacific war. Loading replacement aircraft at Pearl Harbor, the ship sailed 18 June to operate with 3d Fleet's logistic supply unit, and for the final 2 months of the war she brought valuable replacements to the carriers of the fast task forces pounding Japan.

Following the surrender of Japan, *Hollandia* underwent conversion at Guam for use as a passenger ship and joined Operation "Magic-Carpet", charged with the gigantic task of returning the thousands of American servicemen in the Pacific. After four such voyages, the ship returned to San Pedro. Departing 4 February 1946, she arrived Puget Sound 15 February and decommissioned 17 January 1947. She was reclassified while in reserve to CVU-97, 12 June 1955 and to AKV-33, 7 May 1959. *Hollandia* was sold to Eisenberg & Co., New York in July 1960, and later scrapped.

Hollandia received two battle stars for World War II service.

Holliday, Cyrus K., see *Gazelle* (IX-116)

Hollidaysburg

A borough in south-central Pennsylvania.

(PCS-1385: dp. 251; l. 136'; b. 24'6"; dr. 8'7"; s. 14.1 k.; cpl. 57; a. 1 40mm., 2 20mm., 4 dep., 1 dep. (h.h.), 2 det.; cl. *PCS-1376*)

PCS-1385 was laid down by Wheeler Shipbuilding Corp., Whitestone, Long Island, N.Y., 8 May 1943; launched 26 August 1944; sponsored by Mrs. Beatrice Leonard; and commissioned 5 October 1944 at New York. Lt. Wilson W. Tarleton in command.

After shakedown out of New York, *PCS-1385* departed New York 23 October for duty at Key West, Fla. Arriving 30 October, she was assigned to the Fleet Sonar School. She operated off the coast of Florida, training officers and men in the use of ASW equipment and in the tactics of detecting and destroying submarines. The submarine chaser remained off Florida for the rest of World War II; then on 1 October she sailed for duty in Miami. During the next 6 weeks she trained Chinese officers prior to their command of transferred patrol ships.

Departing Miami 8 November, *PCS-1385* sailed to Norfolk, and upon arrival 12 November she was designated photographic ship for the Atlantic Fleet Camera Party. She continued operations along the East Coast until she decommissioned 6 April 1956. *PCS-1385* was named *Hollidaysburg* 15 February 1956. Following assignment to Naval Reserve Training, she began important training duties in the 4th Naval District out of Cleveland and Toledo, which have continued through 1967.

Hollis

Ralph Hollis was born 10 September 1906 in Crawfordsville, Ga., and served in enlisted status 1923-26. He was appointed Ensign in the Naval Reserve 21 November 1934 and was called to active duty in May 1941. Ensign Hollis reported to battleship *Arizona* in September and was killed during the Japanese attack on Pearl Harbor 7 December 1941. Over his gallant ship now stands a monument to men like Ensign Hollis who died on board.

(DE-794: dp. 1400; l. 306'; b. 36'10"; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3", 4 1.1", 8 20mm., 2 dct., 8 dcp., 1 dep. (h.h.); 3 21" tt.; cl. *Buckley*)

Hollis (DE-794) was launched by Consolidated Steel Corp., Orange, Tex., 11 September 1943; sponsored by Mrs. Hermione C. Hollis, widow of Ensign Hollis; and commissioned 24 January 1944 at Orange, Lt. Comdr. G. D. Kissam in command.

Following shakedown in the Atlantic, *Hollis* made two escort voyages along the East Coast and then reported to Quonset Point, R.I., to assist in sonic research. The aim was to find countermeasures for the German acoustic torpedo, and the destroyer escort remained on this important duty until 28 May, when she sailed to Casablanca in a carrier screen. Returning to New York 17 June, *Hollis* was soon at sea again, this time as part of an escort and hunter-killer unit. She operated from July to mid-August escorting convoys in the Mediterranean, and escorted a convoy to the southern France invasion area 15 August as allied troops stormed ashore. In the months that followed, as the offensive gained momentum, *Hollis* continued to act as an escort in the Mediterranean, ensuring the flow of vital supplies and men. She sailed for the United States 28 December, and arrived 18 January to undergo conversion to a high-speed transport at Philadelphia Navy Yard.

Fitted out to carry amphibious assault troops, *Hollis* was reclassified APD-86, 24 January 1945, and conducted her shakedown in April and May off the Atlantic coast. Sailing from Miami 10 May, the ship transited the Panama Canal and sailed for Pearl Harbor and the Pacific war. She arrived 30 May and immediately began training with Underwater Demolition Teams, the Navy's famed "frogmen", on Maui island. Converted to a UDT flagship, *Hollis* sailed to Eniwetok and Guam as the Japanese were accepting surrender terms, arriving Apra Harbor 23 August 1945.

Hollis, now flagship for Pacific UDT forces, sailed to Tokyo Bay to assist in the occupation, arriving 1 September. There she witnessed the formal surrender ceremonies of the Japanese Empire the next day. Following occupation duties the ship sailed for San Diego, where she arrived 23 October, and thence via the Panama Canal to Boston. Arriving 15 February 1946, the transport spent 4 months at Charleston, S.C., before arriving Green Cove Springs, Fla., 13 October 1946. *Hollis* decommissioned 5 May 1947 and entered the Atlantic Reserve Fleet.

With the increase in fleet strength brought about by the Korean conflict, *Hollis* recommissioned 6 April 1951 and conducted shakedown training out of Norfolk. The ship sailed from her home port, Little Creek, Va., 8 October to take part in amphibious exercises in the Caribbean and on the coast of North Carolina, returning 20 November.

For the next 5 years *Hollis* continued to participate in amphibious exercises, antisubmarine training, and maneuvers. In 1954 and 1955 she served briefly as school ship for Fleet Sonar School, Key West. In 1954 she took part in a North Atlantic cold weather exercise off Labrador, and in 1955 her schedule included a month of NROTC midshipman training.

Hollis arrived Green Cove Springs, Fla., 17 July 1956, and decommissioned there 16 October 1956. She remains in the Atlantic Reserve Fleet, berthed at present in Orange, Tex.

Hollis received one battle star for World War II service.

Hollister

Lyle Eugene Hollister, born 6 July 1923 in Sioux Falls, S. Dak., enlisted in the Navy 26 March 1941 at Minneapolis, Minn. Radioman Second Class Hollister first served in *Prairie* before being assigned to *Plunkett* and *Relief*. After duty at the Naval Station, Key West, Hollister was reassigned to *Plunkett*. He was reported missing in action as result of an engagement of *Plunkett* with enemy aircraft during the assault on Anzio, September

1943. Two years younger than their brother, Lyle Eugene, twins William Howard and Richard Jerome Hollister were born 22 November 1925 at Sioux Falls, S. Dak. They enlisted in the Navy 2 March 1943 at Minneapolis. Both were serving in *Liscome Bay* when that carrier was torpedoed in the Gilbert Islands area 24 November 1943. William Howard Hollister died from wounds received in this action; Richard Jerome was reported missing and presumed dead. All three brothers were posthumously awarded the Purple Heart.

(DD-788: dp. 2,425; l. 390'6"; b. 40'11"; dr. 18'6"; s. 35 k.; cpl. 336; a. 3 5", 12 40mm., 8 20mm., 2 dct., 6 dcp., 5 21" tt.; cl. *Gearing*)

Hollister (DD-788) was launched 9 October 1945 by Todd Shipyard, Seattle; sponsored by Mrs. Howard J. Hollister, mother of the three Hollister brothers; and commissioned 29 March 1946, Commander W. T. Samuels in command.

After shakedown along the California coast, *Hollister* departed San Diego 9 November 1946 for operations in the Far East. She arrived Shanghai, 1 December and later that month assisted the Korean Government in the prevention of smuggling. She continued operations in Far Eastern waters until returning to San Diego 22 June 1947. For the next 14 months *Hollister* engaged in training exercises and fleet maneuvers along the West Coast.

Hollister departed 1 September 1948 for her second deployment in the western Pacific where she joined the 7th Fleet on peacekeeping operations. She returned to Long Beach 24 April 1949 and operated in California waters until July 1950.

Immediately after Communist North Korea invaded South Korea in June 1950, the United States committed its military might to halting aggression. *Hollister* was among the first reinforcements rushed to the battle area, departing San Diego 5 July. Operating with Fast Carrier Task Force 77, she served as a screening ship and performed plane guard duty. In mid-September *Hollister* engaged in support of the highly successful landing at Inchon.

The 3d Battalion, 5th Marines landed at 0633, 15 September. Later that day Gen. Douglas MacArthur praised the performance saying that "The Navy and Marines have never shone more brightly than this morning." A week later *Hollister* took Rear Admiral Ewen (TF-77) for a conference with Commander 7th Fleet. In a message to his command, Admiral Ewen echoed MacArthur in praising its work: "The performance of Task Force 77 throughout the Inchon operations has added another page to the glorious history of our Navy and its airpower. It has been made possible only through the determination, the relentless effort and the esprit de corps of a team that is really great. Task Force 77 will sail for the high seas soon and will stay at sea until the North Korean Communists have their bellies full . . ." In late September the destroyer was detached for diversionary bombardment in Communist-held areas, effectively weakening enemy positions as American forces smashed north.

In early November 1950, *Hollister* sailed with the Formosa Straits patrol, returning to Korea in mid-December for support of the Hungnam evacuation. She continued support operations, anti-junk patrols and shore bombardment before returning to San Diego 11 April 1951. *Hollister* operated in the San Diego area until she returned to Korean action a year later. In late April 1955, she resumed duties with Task Force 77, including fire-support missions, patrol, antisubmarine warfare exercises and screening duty. *Hollister* joined the Formosa patrol in August, but resumed operations in Korea before returning to San Diego 18 November.

The veteran ship operated out of San Diego until 21 July 1953 when she sailed for another Far Eastern tour. *Hollister* engaged in patrols both off Korea and Formosa to make clear America's objective of protecting her allies. After 6 months in this area she returned home 19 February 1954. In September, she was deployed to the Western Pacific at a time when the Chinese Communists were stirring trouble in the South China Sea. During the

next 3 months she engaged in hunter-killer operations off Japan and had patrol duty in the South China Sea. In late January 1955, *Hollister* accompanied the 7th Fleet in evacuation of Chinese Nationalists from the Tachen Islands. Constant aerial coverage from this powerful carrier force enabled the Nationalists to move from an untenable position. This was considered by some as "the most forthright U.S. action against communism since the Korean war." She returned to San Diego 13 March for local operations.

Another deployment to the Far East from 27 September 1955 to 11 March 1956, saw *Hollister* resume her important peace-keeping operations in this explosive area. Only 6 months passed before departing on another tour of duty with the 7th Fleet, this time visiting Samoa, New Zealand, Manus, and Guam en route to the South China Sea. In January and February 1957, she operated with the Formosa Patrol and conducted training out of Japan before returning to San Diego 24 March.

Hollister deployed 25 October on her ninth Western Pacific tour. In the early months of 1958 she operated with units of the 7th Fleet on Formosa Patrol. Units in this area were placed on alert as a crisis in Indonesia threatened the existing government. The presence of U.S. seapower exerted a powerful influence; the crisis subsided. The destroyer returned to San Diego 23 April but sailed again for the Western Pacific 18 December to operate with the 7th Fleet. Returning San Diego 13 June 1959, *Hollister* spent the remainder of the year engaged in tactical exercises out of San Diego.

Hollister departed 6 February 1960 for her 11th Western Pacific deployment and began patrol duty in the Formosa Straits. This tour of duty also saw her engaged in various antisubmarine warfare exercises with the Philippine Navy. She returned to San Diego 14 June to resume training and readiness operations.

Hollister entered the Puget Sound Naval Shipyard 15 March 1961 for FRAM (Fleet Rehabilitation and Modernization) overhaul, remaining there through the end of the year for addition of a helicopter deck and hangar aft. After refresher training, she departed Long Beach 7 June 1962 for duty with the 7th Fleet. This cruise came after the Laos crisis and Communist insurgency threatened Thailand. Once again the Navy came to the support of a small country whose freedom was in jeopardy.

She remained in the Far East until 21 December 1962 when she returned to Long Beach. During 1963 *Hollister* engaged in shore bombardment exercises and antisubmarine training off the coast of California and in Hawaiian waters.

In the first half of 1964, *Hollister* engaged in anti-submarine exercises on the American West Coast. On 19 June, she departed Long Beach, Calif., with an anti-submarine group bound for Pearl Harbor, arriving 27 June. After a passage to Japan, she took up station for contingency operations in the South China Sea on 4 August, and received the Armed Forces Expeditionary Medal for her patrol services off Vietnam. After continuing these operations intermittently until 17 November, *Hollister* began transit from Yokosuka, Japan, to Long Beach on 23 December, arriving 6 January 1965.

With 3 months of overhaul complete, the ship engaged in continuous training exercises from 28 May to 20 August. Deploying again to the western Pacific in August, *Hollister* was ordered to Taiwan Patrol duty on 14 September.

By 22 September, she returned to Subic Bay, Philippine Islands, to commence plane guard and antisubmarine screen duties supporting *Bon Homme Richard* (CVA-31). *Hollister* accompanied the aircraft carrier on Yankee Station off Vietnam, giving valuable support to the naval might exercised in preserving that country's independence.

On 19 December she left station and arrived in Yokosuka 30 December, prior to her departure for the United States the following day.

After a 6-month repair and training period, *Hollister* left Long Beach 25 June for the Far East once again. Arriving 15 July, she screened carriers and prevented infiltration of supplies to the Viet Cong. *Hollister* remained in the Far East, where she was on station in May of 1967.

Holly

Any of a genus of trees and shrubs having thick, glossy, spiny margined leaves and bright red berries.

I

(LHT: t. 367; l. 176'; b. 24'; dr. 8'6"; s. 9 k.; epl. 23)

The first *Holly*, a wood and steel lighthouse tender, was built in Baltimore in 1881, and was owned by the Department of Commerce, Lighthouse Service, until being

USS *Hollister* (DD-788) on 9 January 1962

taken over by the Navy 15 April 1917. She served in the 5th Naval District, operating from Norfolk on general and patrol duty during the balance of World War I. The steamer was returned to the Lighthouse Service by Executive order dated 1 July 1919.

II

(YN-14: dp. 560; l. 163'2"; b. 30'6"; dr. 11'8"; s. 12 k.; cpl. 48; 13"; cl. *Aloe*)

The second *Holly* (YN-14) was launched by Marietta Manufacturing Co., Point Pleasant, W. Va., 17 April 1941; and after the long trip down the Ohio and Mississippi Rivers was placed in service at Algiers, La., 11 October 1941, Ens. R. G. Coburn, Jr., in command.

The net tender spent the first year of her service at various Gulf and East Coast ports servicing harbor nets. She performed this duty at Key West, Newport, and Boston. *Holly* commissioned at Boston 15 December 1942, Lt. J. M. C. Tighe in command.

Holly sailed 24 December 1942 to tend nets in New York harbor and harbors on the island of Jamaica, en route to the Canal Zone where she arrived 19 January 1943. There she continued servicing net defenses until departing in convoy for Bora Bora 19 February. In the months that followed she steamed between Pago Pago, Suva Harbor, Noumea, and Espiritu Santo, working on vital net facilities which helped keep American bases and staging areas secure. *Holly's* classification was changed to AN-19, 20 January 1944.

In early 1944, the ship joined LST Flotilla 5 in preparation for the invasion of the Marianas. Arriving Kwajalein 6 June 1944, the ship sailed 3 days later with an LST group for the invasion area. During the preinvasion bombardment and reconnaissance 17 June, the fleet came under heavy air attack. *Holly's* guns assisted in downing several enemy planes; and, when *LCI-468* was damaged in the battle, moved swiftly to take her in tow. With the assault well underway, the net tender proceeded to Eniwetok 25 June, arriving 5 days later.

Holly resumed her net servicing duties in the South Pacific during the remainder of the war, returning to San Pedro soon after the surrender of Japan 15 August 1945. After a short voyage to Pearl Harbor to help dismantle net defenses September–October she arrived Bremerton, Wash., 28 October 1945, and decommissioned at Astoria 7 June 1946. *Holly* remained in the Pacific Reserve Fleet until being stricken 1 September 1962, and transferred to the National Defense Reserve Fleet, Olympia, Wash., under Maritime Administration custody.

Holly received one battle star for World War II service.

Hollyhock

(SwStr.: dp. 352; l. 135'; b. 26'9"; dph. 11'; s. 14 k.; a. 1 20½-pdr., 1 12-pdr. how.)

Roliance was a sidewheel steamer purchased by Rear Admiral Farragut at New Orleans 5 March 1863, to tow supplies upriver. She was present below Port Hudson in early March as Farragut prepared for his gallant passage of the batteries 14 March, and was subsequently sent to Berwick Bay, La., to take part in the relentless pressure of the blockade which strangled the South.

She was renamed *Hollyhock* in June or July 1863, and for nearly 2 years she served as a tender and supplyship based at New Orleans. On this vital service she plied the river from New Orleans to the mouth. *Hollyhock* did participate, however, in one of the most daring episodes of the war, the escape of the Confederate ram under Lt. Charles W. Read from the Red River. Read's ship, *William H. Webb*, ran the blockade of the mouth of the Red River 23 April, and sped toward New Orleans and the Gulf of Mexico, eventually hoping to make Havana. As *William H. Webb* passed New Orleans, all available ships including *Hollyhock* gave chase. The fleeing *Webb* finally encountered *Richmond*, sent upriver to stop her, and ran aground on the bank to avoid capture.

Hollyhock continued to serve at New Orleans until she was sold there to Mr. P. Bennett 5 October 1865.

Holmes

(PF-81: dp. 1,430; l. 303'11"; b. 37'8"; dr. 13'8"; s. 20 k.; cpl. 190; a. 3 3"; cl. *Tacoma*)

Holmes (PF-81), originally designated PG-189, was built under Maritime Commission contract by Walsh-Kaiser Co., Inc., Providence, R.I. Intended for use by the United Kingdom, she was reclassified PF-81, 15 April 1943, renamed *Hong Kong*, then *Tobago* and launched 27 September 1943, sponsored by Mrs. D. W. Ambridge, Ottawa, Canada. *Tobago* was then completed and transferred under Lend-Lease to the United Kingdom 12 August 1944 as part of the 21-ship "Colony" class. She served as a patrol and escort vessel until being returned to the United States 13 May 1946. The frigate was subsequently sold to Boston Metals Co., of Baltimore, Md., for scrapping, but was resold to Egypt in 1950 for use as a passenger vessel by Khedivial Mail Lines, Alexandria.

Holmes

Sir Robert Holmes, a British naval commander distinguished for service in the Dutch Wars.

(DE-572: dp. 1,400; l. 306'; b. 37'; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3", 2 dcl., 8 dcp., 1 dcp. (h.h.); cl. *Buckley*)

Holmes (DE-572) was launched by Bethlehem-Hingham Shipyard, Hingham, Mass., 18 December 1943. Designated for transfer to Great Britain under Lend-Lease, she was delivered and commissioned by the Royal Navy 31 January 1944. After serving throughout the rest of the war as an escort vessel, she was returned to the United States, stricken from the Navy List 7 February 1946, and sold to Walter H. Wilms & Co., Detroit, Mich., in October 1947. *Holmes* was subsequently scrapped.

Holmes County

Counties in Florida, Mississippi, and Ohio.

(LST-836: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 266; a. 8 40mm., 12 20mm.; cl. *LST-511*)

LST-836 was laid down by American Bridge Co., Ambridge, Pa., 11 September 1944; launched 29 October; sponsored by Mrs. H. E. Hetu; and commissioned 25 November, Ens. Elmo J. Sullivan in command.

After shakedown off Florida, *LST-836* loaded ammunition, lumber, and cement, then departed New Orleans 2 January 1945. She unloaded the cargo at Balboa, C.Z., and proceeded to San Diego, arriving on the 23d. In early February she sailed for Hawaii, where she trained, embarked troops, then steamed to the Marshall Islands. Following 3 weeks of preparation in the Marshalls and Carolines, the landing ship departed Ulithi 12 April for Okinawa. With the battle for this strategic base well underway, *LST-836* arrived 6 days later; unloaded troops and equipment and returned Ulithi 29 April.

For the rest of the war, she shuttled cargo and troops throughout the Pacific; then after VJ day was assigned to duty with the occupation forces in Japan. Returning to the United States *LST-836* arrived San Francisco 19 January 1946; and remained on the West Coast until she decommissioned at Vancouver, Wash., 25 July 1946.

Following 4 years in the Pacific Reserve Fleet, *LST-836* recommissioned at Bremerton 3 November 1950, Lt. Thomas J. McLaughlin in command. After refresher training she sailed for the Far East, to aid United Nations forces, in their struggle to stop Communist aggression in South Korea. Arriving Yokosuka 28 March 1951, the veteran landing ship was once again assigned to a battle zone and for the next 8 months shuttled cargo and troops between Japan and various Korean ports.

After a brief stateside overhaul in early 1952, *LST-836* departed San Diego 24 July for operations in conjunction with the first hydrogen bomb tests in the Marshall Islands. From August to November she aided scientists as they tested this new source of power that will affect mankind in both war and peace. She returned to San Diego: then, after a brief respite, sailed 16 March 1953 for further duty in the still raging Korean conflict. Arriving Yokosuka 22 April, *LST-836* immediately commenced cargo runs from the staging areas to Inchon.

When the fighting ended, *LST-836* remained in the Far East to transport cargo to the United Nations peacekeeping force stationed in Korea. From 1954 to 1959, she made three Westpac cruises and participated in training operations along the West Coast. On 1 July 1955, *LST-836* was named *Holmes County*.

Following a FRAM overhaul in late 1959, the landing ship was assigned to the Pacific Amphibious Force, and for the next 5 years *Holmes County* engaged in amphibious exercises along the West Coast and in the Hawaiian Islands.

When Communist aggression continued as an external threat to the people of South Viet Nam, the United States responded to preserve the freedom of the little Asian country. On 11 October 1965, *Holmes County*, a veteran of two conflicts, departed San Diego for operations in Southeast Asia. She arrived Da Nang, South Vietnam, 22 November and operated there for the rest of the year and into 1966. On 29 March 1966, after 89 days in the combat zone,

Holmes County steamed for Yokosuka, Japan, for upkeep before starting the 5,500-mile journey home. *Holmes County* received the following message from Commander 7th Fleet: "As you depart 7th Fleet Intra-Coastal Task Unit, be assured you leave behind an admiration for the extraordinary work you have done this cruise."

On 26 May *Holmes County* arrived home. After serving in the San Diego area for 4 months, she participated in Operation "Base Line" in October. This was one of the largest peacetime operations conducted by the Pacific Fleet.

LST-836 received one battle star for World War II service and three stars for the Korean Conflict.

Holston River

A river in East Tennessee.

(LSMR-509: dp. 790; l. 206; b. 35'; dr. 8'; s. 13 k.; cpl. 147; a. 1 5", 4 40mm., 8 20mm., 4 4.2" m., 10 rkt.; cl. LSMR-401)

LSMR-509 was laid down by Brown Shipbuilding Co. Inc., Houston, Tex., 7 April 1945; launched 5 May; and commissioned 2 June, Lt. William R. Hawes in command.

After shakedown in the Chesapeake Bay, *LSMR-509* engaged in training operations along the East Coast out of Little Creek, Va. Sailing 20 September, she cruised to New Orleans, then proceeded up the Mississippi and Ohio

USS *Holmes County* (LST-836) at San Diego 20 July 1964

Rivers arriving Pittsburgh 22 October for Navy Day ceremonies.

LSMR-509 returned to Little Creek 14 December, operated along the East Coast for the next 10 months, then departed Little Creek 18 October 1946, for the West Coast. Arriving San Diego 20 November, she operated in an inactive status until she decommissioned 5 February 1947, and joined the Pacific Reserve Fleet. While berthed with the San Diego Group she was named *Holston River* 1 October 1955. Her name was struck from the Navy List 1 October 1958.

Holt

William Mack Holt was born 9 September 1917, at Great Falls, Mont., and enlisted in the Navy 4 October 1940. Appointed an Aviation Cadet 26 December 1940, he reported to *Enterprise* as a fighter pilot 16 December 1941. Later transferred to the fighter group on board *Saratoga*, Holt participated in the air operations over Guadalcanal so vital in saving the marine beachhead. Sighting a group of about 27 enemy bombers with escort 7 August 1942, Holt led his two-plane section through the enemy fighters, downing several, and helped to turn back the bombers, continuing his relentless attacks until his own aircraft was shot down. Lieutenant (j.g.) Holt was posthumously awarded the Navy Cross for his heroism.

(DE-706: dp. 1450; l. 306'; b. 36'10"; dr. 9'8"; s. 24 k.; cpl. 186; a. 2 5", 3 21" tt., 2 dct., 8 dcp., 1 dep. (h.h.); cl. *Rudderow*)

Holt (DE-706), a destroyer escort, was launched by Defoe Shipbuilding Co. of Bay City, Mich., 15 February 1944; sponsored by Mrs. Robert Holt, mother of the namesake; and commissioned at New Orleans, La., 9 June 1944, Lt. Comdr. Victor Blue commanding.

Holt conducted her shakedown cruise off Bermuda and after a short stay in Boston reported to Norfolk, Va., 8 August 1944. Until 19 August she helped carry out shallow water tests in the Patuxent River, Md., and then joined Escort Division 74 at Norfolk. *Holt* screened escort carriers *Wake Island* and *Mission Bay* from Norfolk to Newport, R.I., and departed 5 September 1944 on antisubmarine operations along the Eastern seaboard. She came upon the torpedoed SS *George Ade* 12 September and joined in the search for the U-boat which had attacked her. The search had to be called off, however, as a hurricane approached the next day. *Holt* returned to Norfolk, and after escorting coastal convoys to Boston and New York sailed from Norfolk for the Pacific.

The escort and her division transited the Panama Canal 23 October and arrived Hollandia, New Guinea, via the Galapagos and Society Islands 21 November. The ship then became a unit of the 7th Fleet and departed 28 November to join carrier forces in Leyte Gulf providing protection for the vital military operations ashore. She completed this duty 11 December, and steamed with a convoy toward Mindoro for the establishment of a motor torpedo base on that island. During this invasion, an important step in the retaking of the Philippines, *Holt's* gunfire protected her supply convoy and shot down several planes attempting to attack the invasion forces during the landings 15 December. The destroyer returned to Leyte with a convoy 17 December and remained in San Pedro Bay until 22 December 1944.

Holt's next duty was guarding supply ships on the voyage to Hollandia, and after a stop at Manus Island she got underway once more from Hollandia 8 January with the resupply convoy for Lingayen Gulf. Steaming by way of San Pedro Bay, the task group reached Lingayen 21 January 1945, and *Holt* began antisubmarine patrol in support of troop movements ashore. She remained in the gulf until 27 January, downing a suicide plane which nearly crashed her 23 January and provided protection for the convoys off the beaches.

Departing Lingayen 27 January, *Holt* arrived San Pedro Bay 1 February, and after escorting another convoy to Lingayen Gulf entered recently-liberated Subic Bay 12

February 1945. *Holt* served as an escort to and from the harbor entrance until she steamed from Subic Bay 27 March to aid in one of the final operations for the securing of Luzon. Arriving off Legaspi 1 April, *Holt* provided fire support during the landing that day and then returned to Subic Bay to convoy supporting forces back to Legaspi for the landings 7-8 April. Possession of this area allowed American forces to control the shores of San Bernadino Strait, thus shortening the supply routes from Leyte Gulf to the assault areas on the western shores of the Philippines.

Returning to San Pedro Bay, *Holt* next steamed to Morotai to join a convoy in support of the assault on Tarakan Island, Borneo. The first target in the series of Borneo landings, Tarakan was taken by Australian forces under Marine and Navy air support 1 May, and *Holt* arrived with supply ships 5 days later. The ship was forced to remain constantly on the alert for suicide swimmers and limpet mines while in the roads, but departed Borneo safely 9 May for San Pedro Bay.

After repairs in floating drydock, *Holt* was assigned to weather patrol, and cruised the eastern South China Sea sending reports to help guide movements of the vast fleets then operating in the Pacific. On this duty until 18 December 1945, she departed that date with 75 persons on board for San Francisco via the Marshalls and Pearl Harbor, arriving 9 January 1946.

Decommissioned 2 July 1946, *Holt* was assigned to San Diego Group, Pacific Reserve Fleet, until December 1962, when she began preparations for transfer to a foreign country. Loaned to the Republic of Korea 19 June 1963 under the Military Assistance Program, she serves as *Chung Nam* (DE-73).

Holt received two battle stars for World War II service.

Holton

Ralph Lee Holton was born 19 September 1918, and graduated from the Naval Academy in December 1941. He was awarded the Navy Cross for his valiant rescue work aiding survivors of the stricken carrier *Lexington* 8 May 1942 in the Battle of the Coral Sea. As officer-in-charge of a boat detailed to rescue survivors from the burning carrier, Ensign Holton, under a hail of flaming debris from bombs, ammunition, and gasoline exploding on *Lexington*, persistently returned to the stricken ship and thus effected a series of daring rescues in which he saved the lives of many members of the ship's crew who otherwise would have been lost. Less than a month later, 6 June, Ensign Holton was reported missing and presumed dead as his ship, the destroyer *Hamman*, was sunk during the Battle of Midway.

(DE-703: dp. 1,400; l. 306'; b. 36'10"; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3", 4 1.1", 8 20mm., 3 tt., 2 dct., 8 dep., 1 dep. (h.h.); cl. *Buckley*)

Holton (DE-703) was launched 15 December 1943 by Defoe Shipbuilding Co., Bay City, Mich.; sponsored by Mrs. Edith Holton, mother of Ensign Holton; and commissioned 1 May 1944 at New Orleans, Lt. Comdr. J. B. Boy, USNR, in command.

After shakedown, the new destroyer escort sailed 24 July on the Norfolk-Bizerte convoy run, returning without incident to Boston 9 September. On her second transatlantic convoy, begun 2 October, *Holton* went into action 14 October as two ships, a cargo vessel and a tanker loaded with high octane gasoline, collided about 400 miles off the African coast and burst into flames. After picking up the crew of the Liberty ship, *Holton* remained close aboard and sent over a repair party to salvage the fiercely burning ship. Although her hull was being crushed from rolling against the other ship, *Holton* lay alongside through a long night with six hose lines running to the stricken ship and by morning had succeeded in getting the fire under control. The next day the ship's crew was transferred back on board and with *Holton* as escort she proceeded to Dakar, two-thirds of the cargo as well as the ship having been saved.

Ordered to the Pacific, *Holton* departed Norfolk Christmas Day 1944, and arrived at Manus, Admiralty Islands, 5 February 1945 for duty in the Philippines. From then through the end of the war some 6 months later, her principal duty was escorting convoys within the Philippine Sea Frontier boundaries. After escorting two Navy ships to Tokyo Bay 31 August, *Holton* shepherded a convoy from Okinawa to Korea 11-13 September and then made two similar voyages to the Chinese coast. Departing Okinawa 8 November, the DE streamed her homeward-bound pennant and reached Boston via Pearl Harbor, San Diego, and the Panama Canal 15 December. Proceeding down the coast, *Holton* berthed at Green Cove Springs, Fla., 20 January 1946 and remained there until decommissioning and going into reserve 31 May 1946. *Holton* was moved in January 1947 to Orange, Tex., where she remains.

Holy Cross, see *Kite* (AM-75)

Hombro

An Indian word meaning "Mr. Shoulders".

(YTB-506 : l. 100' ; b. 25' ; 9'7")

Hombro (YTB-506), a large harbor tug, was launched by Commercial Iron Works, Portland, Oreg., 1 May 1945, and placed in service 7 July 1945. She operated in the 13th Naval District, based at Seattle, Wash., until being placed in reserve out of service in July 1947 at Tacoma, Wash. She remained in reserve for 17 years.

In September 1964 the tug was called back to active service and at present operates in the 12th Naval District at San Francisco. *Hombro* was reclassified YTM-769 in March 1966.

Home

(ScStr: dp. 725 ; l. 165' ; b. 29'9" ; dph. 11' ; s. 6 k. ; a. 2 24-pdr. how., 1 12-pdr. r.)

Home, a screw steamer, was built as *Key West* in 1862 at Brooklyn, New York. She was purchased by the Navy at New York 14 August 1863, commissioned 21 August 1863, Acting Master W. H. Garfield commanding, and name changed to *Home*.

Assigned to the South Atlantic Blockading Squadron, *Home* sailed after commissioning for Charleston towing monitor *Lehigh*. *Home* was assigned by Rear Admiral Dahlgren as a rest ship, to which the exhausted crews of the steaming monitors could retire after the fierce bombardments of early September. She remained off Charleston with periodic trips to Port Royal for repairs until July 1864, when she was assigned to act as a hospital ship inside the bar at Charleston. She continued her combination blockader-hospital ship service until mid-1865, when she took up lightship duties in the harbor. During this period *Home* also sent members of her crew ashore on boat expeditions in the Charleston area, notably 5 March 1865 when an important reconnaissance of Charleston harbor obstructions was effected.

Home returned to New York in August 1865 and decommissioned 24 August 1865. Redocumented *Key West*, she returned to merchant service; she was stranded and lost off Cape Hatteras 12 October 1870.

Honduras

(SwStr: t. 376 ; l. 150' ; b. 27' ; dph. 10' ; s. 12 k. ; a. 2 12-pdr. r.)

Honduras, a side wheel steamer, was built in 1861 at New York and purchased from her owner, Simeon Ackerman, 31 July 1863. Converted to Navy use, she commis-

sioned at New York Navy Yard 8 September 1863, Acting Lieutenant T. Stites in command.

Assigned as a supply boat and dispatch steamer with the East Gulf Blockading Squadron, *Honduras* sailed for Key West soon after commissioning. She carried mail and dispatches, and in addition served on the blockade which so effectively strangled southern commerce and strength. She captured British blockade-runner *Mail* in the Gulf of Mexico 15 October 1863, and early the next year supported a joint operation at the mouth of the Caloosahatchie River. *Honduras* carried troops to the mouth of the river and disembarked them 4 January 1864. In addition to her regular dispatch duties, the steamer also participated in the capture of Tampa, Fla., by joint expedition, 4-7 May 1864. *Honduras*, with *Sunflower* and *James L. Davis*, carried General Woodbury and his troops to Tampa and provided a naval landing party which joined in the assault. During the successful operation the ships also captured blockade-running sloop *Neptune* 6 May.

Continuing to supply the squadron, *Honduras*, like many of the ships in that tropical climate, suffered from yellow fever among the crew during July 1864, and spent much of her time at Key West. She interrupted her regular itinerary among the stations of the squadron 4 January 1865 to come to the assistance of *San Jacinto*, stranded on a reef in the Bahamas. *Honduras* helped to salvage ordnance and equipment from the stricken ship.

Honduras also participated in a joint expedition to the mouth of the St. Marks River, Fla., 23 February-7 March 1865. Gunboats with troops embarked destroyed Confederate installations near the mouth of the river, and effectually blockaded it against illegal commerce. In July 1865 *Honduras* was ordered to New York, where she decommissioned 5 August. The steamer was sold 5 September 1865 to W. A. Lightfall and returned to merchant service, finally stranding off Key West, Fla., in 1870.

Honesdale

A borough of Wayne County, in northeastern Pennsylvania.

(PC-566: dp. 277 ; l. 178' ; b. 23' ; dr. 8' ; s. 20 k. ; cpl. 59 ; a. 1 3", 1 40mm., 2 20mm., 2 rkt., 2 dep., 2 det. ; cl. PC-461)

PC-566 was laid down by Brown Shipbuilding Co., Houston, Tex., 14 August 1941; launched 31 March 1942; sponsored by Miss Ruby Joyce Halfin; and commissioned 15 June, Lt. Comdr. H. C. Claudius in command.

After shakedown *PC-566* was assigned to patrol and escort operations in the Gulf of Mexico and Caribbean. Throughout the war, the subchaser remained in the Florida-Caribbean area on patrol and escort duty and also as a training ship out of Miami. In March 1945, she was attached to the Fleet Experimental Sonar School, Key West, then resumed duties the following month at the Naval Training Center in Miami.

After World War II, *PC-566* continued training exercises along the East Coast, and in the Caribbean until late 1946. *PC-566* decommissioned 8 January 1947, and joined the Atlantic Reserve Fleet. While berthed at Norfolk, she was named *Honesdale* 1 February 1956. *Honesdale* was struck from the Navy List 1 July 1960 and sold to Venezuela in June 1961.

Honesty

A British name retained. A common garden plant with large purple flowers.

Caprice (PG-90) (*q.v.*) was renamed HMS *Honesty* upon transfer to the United Kingdom under lend-lease 28 May 1943.

Honeysuckle

(ScStr: t. 241; l. 123'; b. 20'2"; dph. 10'; s. 12 k.; a. 2 20-pdr.)

Honeysuckle, a wooden screw steamer, was built as *William G. Fargo* in 1862 at Buffalo, N.Y., and was purchased 19 August 1863 at New York from her owner, Frank Perew. Renamed *Honeysuckle*, she commissioned at New York Navy Yard 3 December 1863, Acting Ensign Cyrus Sears commanding.

Intended for use as a tug and offshore blockader, *Honeysuckle* departed New York 24 December 1863 and sailed by way of Hampton Roads and Charleston to Key West, arriving about 8 January 1864. There she was assigned a blockading station in the Gulf of Mexico west of the Florida coast as part of the East Gulf Blockading Squadron. In the next few months the ship was very active, tightening the noose of the blockade. She captured *Fly* 11 January, *Florida* 20 March, and *Miriam* 27 April 1864.

Early in May *Honeysuckle* served as a dispatch vessel at Key West and during the next 2 months was hit by an epidemic of yellow fever among the crew. In August she became a supply vessel, making one notable trip to Indian River with medical supplies for *J. S. Chambers*, a ship stricken with fever. *Honeysuckle* continued to act as a supply vessel and tug until December 1864, when she was reassigned to active blockade duty after a repair period at Key West. Taking up station off Cedar Keys, she captured three more blockade runners in early 1865: *Augusta*, 17 January; *Sort*, 28 February; and *Phantom*, 2 March.

Honeysuckle sailed to Tampa at war's end, and thence to New York where she decommissioned 30 June 1865. Sold to a private buyer, she became merchant ship *Honeysuckle* late in 1865 and remained active until 1900.

Honolulu

The capital of Hawaii.

I

(dp. 4,902; l. 412'; b. 51'; dr. 25'3"; s. 12 k.; a. 1.5"; 1 3")

The first *Honolulu* was built as *Itasca* by Armstrong Whitworth Ltd., Newcastle, England, in 1905. She was taken over by Resolution of Congress 12 June 1917; transferred to USSB ownership and assigned to Army service. Although she operated as a U.S. cargo transport with Navy crew, there is no record of her commissioning. The name was changed to *Honolulu* 26 July 1918. Her service included cargo cruises between the United States and various French ports. Navy personnel were released in March 1919 and she was rejected for further service 2 April 1919. *Honolulu* was returned to the USSB and sold 26 January 1920. Her name was later changed to *Commercial Trader*.

II

(CL-48: dp. 9,650; l. 608'4"; b. 61'9"; dr. 19'5"; s. 34 k.; cpl. 868; a. 15 6", 8 5", 16 1.1", 8 20mm., 8 .50 cal. mg.; cl. *Brooklyn*)

The second *Honolulu* was launched 26 August 1937 by the New York Navy Yard; sponsored by Miss Helen Poindexter, daughter of the Governor of Hawaii; and commissioned 15 June 1938, Captain Oscar Smith in command.

After a shakedown cruise to England *Honolulu* engaged in fleet problems and exercises in the Caribbean. She sailed from New York 24 May 1939 to join the Pacific fleet, arriving San Pedro, Calif., 14 June. For the remainder of the year she engaged in exercises along the West Coast. During the first half of 1940, *Honolulu* continued operations out of Long Beach and after overhaul at Puget Sound, sailed 5 November for duty out of Pearl Harbor. She operated there through 1941 and was moored at the Naval Station when the Japanese

launched their sneak attack 7 December 1941. *Honolulu* suffered only minor hull damage from a near miss. Following repairs she sailed 12 January 1942 to escort a convoy to San Francisco, arriving 21 January. The cruiser continued convoy escort duty to Australia, Samoa, and the United States until late May.

With the Japanese pushing north toward the Alaskan peninsula, *Honolulu* departed 29 May to strengthen America's position in that area. After 2 months of continuous operations out of Kodiak, she proceeded to Kiska Island in the Aleutians 7 August, to begin bombardment of the island. On 21 August, she screened the first American landings in the Aleutians at Adak Island (a jumping-off place for future landings in the island chain). After a yard period at Mare Island, *Honolulu* departed San Francisco 3 November escorting a convoy to Noumea. Later that month *Honolulu* sailed from Espiritu Santo to intercept an enemy convoy attempting to reinforce positions on Guadalcanal. The Battle of Tassafaronga began shortly before midnight 30 November, continuing through the night. Although Admiral Wright's Task Force 67 suffered damage to cruisers *Minneapolis*, *New Orleans*, and *Pensacola* and lost *Northampton* in this battle, the enemy was denied the planned reinforcement of Guadalcanal.

Honolulu operated out of Espiritu Santo in early 1943 with Task Force 67 in an attempt to engage the "Tokyo Express." During May she engaged in heavy bombardment on New Georgia in the Solomon Islands. *Honolulu* departed Espiritu Santo 28 June for more bombardment of the Solomons. After supporting the landings on New Georgia on the 4th of July, she opened fire on enemy ships in the vicinity of Kula Gulf, knocking out one destroyer and assisting in the destruction of others.

The battle-proved cruiser had another opportunity to damage the Japanese fleet 13 July in the Battle of Kolombangara. Shortly after midnight contact was made with an enemy cruiser-destroyer force in the "Slot." At 0110, *Honolulu* opened fire on a *Sendai* class cruiser; after three salvos the target burst into flame and was soon dead in the water. *Honolulu* then shifted fire on an enemy destroyer, which was immediately hit and disappeared. At 0211, a torpedo very near the surface struck the starboard side of *Honolulu*, causing hull damage. The task force then retired to Tulagi for temporary repairs, and on 16 August *Honolulu* arrived Pearl Harbor for overhaul.

After additional repairs at Mare Island, *Honolulu* departed San Francisco 17 November to continue her effective role in the struggle against Japan. She arrived Espiritu Santo 11 December, resuming operations in the Solomons later that month. On 27 December she engaged in the bombardment of an enemy barge, troop, and supply concentration on Bougainville Island. In the early months of 1944 the cruiser continued bombardment and patrol of the Solomon Islands. She screened the landings off Green Island 13 February before retiring to begin preparations for the Saipan and Guam operations.

Honolulu took part in bombardment of the southeastern part of Saipan in early June as the American Navy drove steadily across the Pacific. While bombarding Guam in mid-June, *Honolulu* was deployed north to intercept the Japanese fleet. She returned to Eniwetok 28 June for replenishment before providing support for the invasion of Guam. She remained on station for 3 weeks performing great service with her accurate gunfire before returning to Purvis Bay, Florida Island, 18 August. *Honolulu* sailed 6 September to provide fire support for the landings on Palau Island, remaining in this area during September uncontested by the Japanese fleet. America now had decisive command of the sea and therefore full freedom of operations.

Honolulu departed the staging area at Manus Island 12 October and sailed for the Philippine Islands invasion. She began bombardment 19 October at Leyte Gulf and the next day began screening the landings. At 1600, 20 October an enemy torpedo plane was sighted as it aimed its torpedo at *Honolulu*. Despite the skillful maneuvering of

Captain Thurber to evade, the torpedo found its mark on the port side.

Honolulu sailed the next day, arrived Manus 29 October for temporary repairs, sailed for Norfolk 19 November, arriving 20 December via Pearl Harbor and San Diego. *Honolulu* remained at Norfolk for the duration of the war undergoing repairs and after a shakedown cruise in October 1945, sailed to Newport for duty as a training ship. *Honolulu* arrived Philadelphia 8 January 1946 and decommissioned there 3 February 1947 and joined the Reserve Fleet at Philadelphia. On 17 November 1949 *Honolulu* was sold for scrapping.

Honolulu received eight battle stars for World War II service.

Hood, John, see *John Hood* (DD-655)

Hooper

Stanford Caldwell Hooper was born in Colton, Calif., 16 August 1884, and graduated from the Naval Academy in 1905. Serving in various ships of the fleet, but always with an interest in the then new art of the "wireless", Hooper was appointed Fleet Radio Officer in 1912. A radio observer during the first part of World War I, he headed the Radio Division of the Bureau of Engineering until America's entry into the war. Hooper commanded destroyer *Fairfax* 1917-18 on convoy duty, and received the Navy Cross. Following the war he became the guiding force behind the development of radio communications and electronics in the Navy, serving in various technical posts until his retirement in 1943. Rear Admiral Hooper was retained on active duty until 1945, and held offices with civilian firms in the electronics field until his death 6 April 1955. He was the recipient of many awards

for his work in radio, and is honored annually by the Navy through the Rear Admiral S. C. Hooper Trophy, given to the outstanding electronics division in the Naval Reserve.

(DE-1026: dp. 1,450; l. 314'6"; b. 36'9"; dr. 13'9"; s. 25 k.; cpl. 170; a. 4 3"; Weapon ALFA, 1 dct., 8 dep., 2 21" tt.; c. *Evans*)

Hooper (DE-1026), originally *Gatch* but renamed 19 July 1956, was launched by Bethlehem-Pacific Coast Steel Corp., San Francisco, 1 August 1957; sponsored by Miss Elizabeth Hooper, daughter of Rear Admiral Hooper; and commissioned at San Francisco 18 March 1958, Lt. Comdr. J. K. Leslie in command.

One of a new class of fast escort vessels designed for convoy work, *Hooper* conducted shakedown training out of her home port, San Diego, before deploying with the 7th Fleet. The escort vessel took part in antisubmarine operations and joined the vital Formosa Patrol before returning to the United States 9 April 1959. Through 1961 she continued to operate with the 7th Fleet and in the San Diego area.

In January 1962, *Hooper* began a 2-month assignment as school ship at San Diego for antisubmarine training. Entering the yard at Hunter's Point in March, the ship had her after 3" mount replaced with a helicopter flight deck to increase her versatility, and also had the newest sonar equipment installed. Returning to her regular pattern of deployments to the Far East, *Hooper* continued to play an important role in keeping the peace in this vital area. In addition to her regular operations, she took part in SEATO maneuvers in the spring of 1963.

After serving in Hawaiian waters, *Hooper* returned to the Far East in July 1964. During November *Hooper* patrolled the Taiwan Strait. She returned to San Diego

Husband E. Kimmel

USS *Honolulu* (CL-48)—Admiral Husband E. Kimmel's flagship 1939 to February 1941

16 December where she conducted coastal operations through 1965.

On 6 January 1966 *Hooper*, along with *Bridget* (DE-1024), *Evans* (DE-1023), and *Bronstein* (DE-1037), escorted *Yorktown* (CVS-10) to Hawaii. She then departed Pearl Harbor 7 February for Yokosuka, Japan, where she arrived 17 February. From 21 February to 18 March, she patrolled the Formosa Strait again. During the next 6 months *Hooper* operated off Vietnam, contributing to the safety of the legitimate government of South Vietnam. On 15 July *Hooper* departed Yokosuka for San Diego. En route the ship assisted in the search for a downed Royal Thailand Army DC-3 carrying Brigadier General Joseph Stillwell, Jr. The search was fruitless. Arriving at San Diego 22 July, *Hooper* operated off the West Coast for the remainder of the year and into 1967.

Hooper Island

Named for an island located in the Chesapeake Bay.

(ARG-17, dp. 5,159; l. 441'6"; b. 56'11"; dr. 23'; s. 12 k.; cpl. 500; a. 1 5", 3 3", 4 40mm., 12 20mm., cl. *Luzon*; T. EC2-S-C1)

Hooper Island (ARG-17), ex-liberty ship *Bert McDowell*, was launched 30 October 1944 by Bethlehem-Fairfield Shipyards Inc., Fairfield, Md., under a Maritime Commission contract; sponsored by Mrs. Hattie Singer, and commissioned 13 July 1945, Commander E. B. Guernsey in command.

After shakedown off the Virginia coast, *Hooper Island* departed 1 September 1945 for the western Pacific and reached Sasebo, Japan, 9 November to provide repair services to the Pacific Fleet. She remained there on repair

duty until 31 October 1946, when she sailed for Tsingtao, China, to perform similar services in support of U.S. operations to stabilize China. *Hooper Island* completed her deployment 14 August 1947, when she sailed for San Francisco, arriving there 5 September. She remained there until she decommissioned at Alameda, Calif., 24 January 1948 and joined the Reserve Fleet.

With the outbreak of the Korean conflict, and the need for additional vessels to halt Communist aggression, *Hooper Island* was recommissioned 12 April 1952, Comdr. Frank H. Rile in command.

After shakedown and repair duty on the west coast, *Hooper Island* sailed from Long Beach 3 December 1952, bound for the trouble-filled waters of the Far East. From December 1952 until December 1955 she made three deployments to the Western Pacific in support of the 7th Fleet, thereby playing a major role in America's determination to stop the spread of communism. From August 1954 to July 1955 she supported units of the fleet when they evacuated almost 300,000 citizens of North Vietnam (scheduled to be handed over to Communist authority) to the South. Vietnamese President Diem responded to this humanitarian operation known as "Passage to Freedom" by saying: "In the name of all that you have helped, in the name of those who far away are hoping, in the name of all my compatriots whom you have brought south of the 17th parallel . . . with all my heart I thank you."

Hooper Island resumed her repair services at Long Beach, Calif., 5 December 1955, then shifted to San Diego 30 April 1956. After repair services at San Diego she arrived Seattle to undergo an overhaul. While in Seattle she performed repair services for two icebreakers engaged in Operation Deep-Freeze in the Antarctic, another of America's unending probes of the sea. She resumed her duties at San Diego 28 October and remained there until early 1958. On 15 March, *Hooper Island* sailed for repair

USS *Hooper* (DE-1026) preparing to refuel from USS *Chemung* (AO-30) in the Western Pacific 24 January 1963

operations in the Marshall Islands, returning to San Diego 19 July where she decommissioned and once again joined the Reserve Fleet 15 July 1959, where she remained until struck from the Navy List 1 July 1960.

For her participation in the Korean war *Hooper Island* was awarded one battle star.

Hope

The first *Hope* retained a former name. The second *Hope* was given a name descriptive of her duty.

(Sch: t. 134; l. 85'; b. 20'9"; dr. 9'; s. 10 k.; a. 1 20-pdr.)

The first *Hope*, a wooden schooner, was purchased by the Navy 29 November 1861 from T. P. Ives, and commissioned at New York 14 December 1861, Acting Master M. S. Chase in command.

Hope spent the war with the South Atlantic Blockading Squadron based at Port Royal. She acted as a dispatch vessel supply boat for ships to the southward. In 1862 she took part in the blockade off Fernandina and the adjacent coast of Florida. While patrolling off Charleston 27 January 1863, *Hope* captured schooner *Emma Tuttle* with a cargo of saltpeper for the Confederates. In June, the ship returned north for repairs at Philadelphia and in July resumed blockade station off Charleston.

Throughout most of 1864, *Hope* remained off Charleston as a blockader, helping to tighten the noose which did so much to choke the rebellion. She also performed limited dispatch and supply boat duty. *Hope* captured sloop *Racer*, her second prize, off Bull's Bay 1 August.

Shortly afterward the ship was fitted for diving duty and in October began salvage operations in the Savannah River, raising hulks and other obstacles. After the fall of Savannah in December, *Hope* worked on the salvage of C.S.S. *Savannah*, and in the spring moved to Charleston to carry out similar duties in the Charleston harbor.

Hope returned north and decommissioned at New York 6 September 1865. She was sold 25 October to T. Morley.

(AH-7: dp. 6,000; l. 417'9"; b. 60'; dr. 27'8"; s. 14 k.; cpl. 233; a. none; cl. *Comfort*; t. C1-B)

The second *Hope* (AH-7) was launched under Maritime Commission contract by Consolidated Steel Corp., Ltd., Wilmington, Calif., 30 August 1943; sponsored by Miss Martha L. Floyd; acquired by the Navy the same day for conversion to a hospital ship by U.S. Naval Dry Dock, Terminal Island, Calif.; and commissioned 15 August 1944, Commander A. E. Richards in command.

Manned by a Navy crew but carrying Army medical teams, *Hope* completed her shakedown cruise and sailed 23 September 1944 to render medical care during the climactic phase of the campaign against Japan. Steaming via Pearl Harbor and Manus, the ship arrived Kossol Passage, in the Palaus, and received soldiers wounded taking the islands of the group.

American soldiers, supported by a vast naval task force, returned to the Philippines 20 October. *Hope* arrived Leyte Gulf 7 November, to care for casualties and evacuated them to Hollandia. Thereafter the ship made four more voyages to Leyte to evacuate wounded. During the morning of 3 December she was followed by a Japanese submarine, and that afternoon was attacked unsuccessfully by a torpedo plane. Three days later, as she steamed toward Manus, the hospital was again attacked by aircraft. One bomb was dropped close aboard but no damage resulted. Continuing to evacuate wounded from the Philippines, *Hope* arrived Subic Bay 16 February 1945, just as paratroopers landed on Corregidor. The ship sailed on to Lingayen Gulf for evacuation, and sailed from Leyte 6 March for Ulithi.

Hope sailed 9 April to take part in the Okinawa operation, arriving off the bitterly-contested island 4 days later. During the next month she shuttled between Saipan and Okinawa, often under attack despite her distinctive markings. As Japanese suicide planes attempted vainly to stop the invasion, *Hope* assisted in rescuing sailors from

damaged ships and embarked wounded soldiers. Departing 12 May 1945, the ship moved back to the Philippines and arrived 3 July at Tarakan Island to assist, if needed, in the evacuation of Australian casualties in the invasion of Balikpapan. She then returned to the Philippines, greeting the surrender of Japan 15 August at Manila Bay.

Much medical and evacuation work remained to be done, however, and *Hope* sailed 20 August for Okinawa and Japan, arriving Wakayama 22 September to assist in the occupation. She sailed 22 October with returnees, arriving San Francisco 15 November, and subsequently made two more voyages to Guam and the Philippines to bring back the sick and wounded. *Hope* returned to San Francisco 22 March 1946 and decommissioned 9 May 1946. From 1946 to 1950 she was in custody of the War Department. She is at present in the National Defense Reserve Fleet berthed at Suisun Bay, Calif.

Hopestill

A former name retained.

(SP-191: dp. 83; l. 89'; b. 16'; dr. 5'; s. 13 k.; a. 1 3-pdr., 2 1-pdr.)

Hopestill, a yacht, was built by Robert Jacobs, City Island, N.Y., in 1916, and was acquired from her owner, Irving E. Raymond, of New York City in May 1917. She commissioned 26 July 1917 at Brooklyn Navy Yard, Ens. A. E. Hanscom, USNR, commanding.

Hopestill was assigned to the 3d Naval District, and served as a harbor patrol vessel in New York Harbor until 26 April 1918, when she was reassigned to the New York Naval Hospital. *Hopestill* carried patients for the hospital and stood by to transport emergency cases from ships in the harbor. She completed this duty in July 1919 and was stricken from the Navy List 21 August. *Hopestill* was sold to J. S. Milne, of Brooklyn, N.Y., 16 September 1919.

Hopewell

Pollard Hopewell entered the Navy as a Midshipman in June 1812, and reported to frigate *Chesapeake* 21 August. With a new crew Captain Lawrence put to sea to engage the crack British frigate *Shannon* 1 June 1813. Despite their captain's famous cry, "Don't give up the ship", the crew was overwhelmed and the ship taken. Midshipman Hopewell was among those killed, as was the gallant Lawrence.

I

(DD-181; dp. 1,060; l. 314'5"; b. 31'8"; dr. 9'4"; s. 35 k.; cpl. 101; a. 4 4", 2 3", 4 21" tt.; cl. *Wickes*)

The first *Hopewell* (DD-181) was launched by Newport News Shipbuilding and Dry Dock Co., Newport News, Va., 8 June 1918; sponsored by Mrs. Grote Hutcheson; and commissioned 22 March 1919 at Portsmouth, Va., Lt. Comdr. R. E. Rodgers in command.

Hopewell sailed from Norfolk 19 April 1919 to join the 3d Destroyer Squadron in New England waters, and in May was on observation station off the Azores during the historic crossing of the Atlantic by Navy seaplanes. The destroyer returned to New York 8 June to complete her interrupted fitting out, and rejoined her squadron in August for firing tests. The winter of 1920 was spent on intensive training and target practice in Caribbean waters.

The ship returned to New England in early May, where she remained until September training reservists and engaging in division maneuvers. Arriving Charleston 22 September, *Hopewell* carried out similar operations out of the South Carolina port, returning to New York in May 1921 for reserve training. Sailing from Newport 10 October, the destroyer was placed in reserve at Charleston until 10 April, when she departed for Philadelphia. *Hopewell* decommissioned there 17 July 1922.

She recommissioned 17 June 1940 as America girded herself for the conflict that was to come, and after operat-

ing with the Neutrality Patrol off New England arrived Halifax 18 September. She decommissioned 23 September 1940 and was transferred to Great Britain as part of the destroyers-bases exchange. Renamed *Bath*, the ship was manned by the Norwegian Navy and was sunk in August 1941.

II

(DD-681 : dp. 2,050; l. 376'6"; b. 39'8"; dr. 17'9"; s. 37; cpl. 319; a. 5 5", 10 40mm., 7 20mm., 10 21" tt., 6 dcp., 2 dct.; cl. *Fletcher*)

The second *Hopewell* (DD-681) was launched by Bethlehem Steel Co., San Pedro, Calif., 2 May 1943; sponsored by Mrs. R. A. Spruance, wife of Admiral Spruance; and commissioned at Terminal Island 30 September 1943, Comdr. C. C. Shute in command.

Hopewell conducted shakedown training in the San Diego area before sailing for Hawaii 13 January 1944. She got underway 23 January for the invasion of the Marshalls, as American amphibious task forces picked up momentum in their drive toward Japan. Steaming as a forward picket ship, *Hopewell* arrived off Kwajalein 31 January and delivered destructive gunfire support during the initial assault. That night she bombarded Roi and Namur Islands and 1 February moved to screening and patrol duties off the other islands of the group. With the success of the landings assured, *Hopewell* sailed to Pearl Harbor, arriving 24 February.

The destroyer arrived Purvis Bay, Florida Islands, 14 March to take part in the developing offensive on the northern coast of New Guinea. She carried out screening and patrol assignments, and contributed shore bombardment during the Aitape landings, part of the bold Hollandia operation. After Aitape, an unopposed operation carried out 22 April, *Hopewell* remained with 7th Fleet patrolling and screening. With three other destroyers she carried out a bombardment of Japanese positions on New Ireland 29 May, and in June joined escort carrier *Hoggatt Bay* on antisubmarine patrol.

Hopewell's next important operation was the invasion of Morotai, vitally necessary as an air base for the Philippines campaign to come. She arrived 16 September, the day after the initial landing, to assume screening duties, and shot down an attacking Japanese plane that day. On the 18th, she supported an auxiliary landing on Morotai, and sailed 25 September with a convoy for Humboldt Bay.

The long-awaited invasion of the Philippines began with the Leyte landings 20 October, and 4 days later *Hopewell* arrived with a reinforcement group. A damaged propeller kept her from taking part in the four-part Battle for Leyte Gulf, in which the Japanese Fleet suffered fatal defeat 24-25 October. Next day she departed in the van of a convoy and shaped course for Humboldt Bay, where repairs could be effected. At the eastern entrance to the Gulf the convoy was attacked, and in the battle that followed *Hopewell* made concealing smoke and shot down two aircraft.

The veteran ship sailed again 8 November for Leyte, and after two trips from Humboldt Bay and return with convoys, she joined the Mindoro invasion forces. After fighting off heavy air attacks en route, *Hopewell* arrived off the assault area 15 December and provided fire support as troops stormed ashore. As air attacks continued, the ship helped fight fires on *LST-472* and assisted in shooting down other planes before sailing again for Leyte at noon.

With Mindoro in allied hands, and air bases for the Luzon invasion under construction, *Hopewell* prepared for that operation, to be carried out initially at Lingayen Gulf. She sailed 4 January and fought off desperate Japanese kamikaze attacks on the passage to Lingayen, for the landings 9 January joined the screen of an escort carrier group providing air cover. *Hopewell* joined in the amphibious assault on Corregidor 14 February, and while clearing obstructions from Mariveles Harbor with gunfire engaged a large battery on "the rock". The destroyer laid smoke and moved in to help damaged *YMS-48*, and soon received four hits, putting her battery control

station out of commission. Although suffering 17 casualties, *Hopewell* remained in Manila Bay until 18 February, when she sailed to Manus for repairs.

The ship next continued to San Francisco, arriving 17 March, and after further repairs sailed for Pearl Harbor 28 May 1945. Training operations in Hawaiian waters occupied her until 20 July, when she sailed for Eniwetok and Guam. The day of the Japanese surrender, *Hopewell* sailed from Guam with a refueling group supporting famed Task Force 38 which had done so much to bring victory. She operated in Japanese waters in support of the occupation until 21 October 1945, when she sailed for the United States via Pearl Harbor. Arriving Puget Sound Navy Yard 8 November, she later moved to San Diego, where she decommissioned 15 January 1947 and was placed in the Pacific Reserve Fleet.

With the increased demands of the Korean conflict, *Hopewell* recommissioned 28 March 1951 at San Diego. Immediately following shakedown training she steamed westward to Korea 18 June, taking up screening duties with Task Force 77 as carrier based aircraft blasted Communist positions. The destroyer also bombarded Wonsan and served on the critical Formosa Patrol August-September 1951, returning to Mare Island Yard 5 February 1952.

Hopewell sailed for her second tour in Korea 11 August 1952 after shakedown and training exercises. During this period of stalemate in the land war, the Navy continued to operate against supply lines and strong points, and *Hopewell* screened the carriers and heavy ships of Task Force 77. Bombardment of Wonsan followed another period of Formosa Patrol, and in December the ship steamed to Formosa to help train Nationalist Chinese sailors. She returned briefly to Korea to screen giant battleship *Missouri* during bombardment operations late in January 1953, and sailed for the United States 3 March 1953.

After operating off the California coast for several months on antisubmarine training, *Hopewell* sailed again for the Far East 27 October 1953. She again took part in training exercises and patrol off Formosa, returning to San Diego 23 May 1954. As she began her fourth cruise, a new crisis between Communist China and Formosa developed, and in February *Hopewell* assisted in the evacuation of the Tachen Islands. Following this important Cold War operation, the destroyer took part in fleet exercises in the western Pacific, returning to San Diego 22 May 1955.

The veteran ship spent the remainder of 1955 on exercises off the coast. Disaster struck 11 November during an amphibious training operation when a single engine attack bomber crashed into *Hopewell* amidships, killing five and starting gasoline fires. Alert firefighters brought the flames under control and the ship returned to San Diego for lengthy repairs.

Returning to active operations again 24 March 1956, when she sailed for the Far East, *Hopewell* resumed her regular pattern of cruises to Japan, Formosa, and Okinawa interspersed with training and readiness exercises off the West Coast of the United States. She operated with Korean and Nationalist Chinese ships on maneuvers in 1958 and 1959 and continued to act as an integral part of America's peace-keeping fleet in the Pacific. On 12 November 1959 *Hopewell* returned to San Diego for extensive refitting and training. As Communist activity to overthrow the legal government of South Vietnam grew, *Hopewell* was repeatedly deployed from the West Coast to Vietnam from 1960 into 1967 in defense of the small republic. In February 1963 she rescued a crewman from a downed A-3B of *Ticonderoga* (CVA-14) in the South China Sea. During a 3-month cruise, which ended in August, *Hopewell* fired 2,276 rounds, destroyed 112 structures, and silenced a Viet Cong mortar attack upon ground forces. For the remainder of 1966, she acted as school ship in gunnery and ASW off the West Coast.

Hopewell received nine battle stars for World War II service and four for Korean service.

Hopi

A group of the Shoshonean Tribe of the Pueblo Indians.

(AT-71: dp. 1,240; l. 205'; b. 38'6"; dr. 15'4"; s. 16 k.;
cpl. 85; a. 1 3", 2 20mm.; 4 dep.; cl. *Cherokee*)

Hopi (AT-71) was launched 7 September 1942 by the Charleston Shipbuilding & Dry Dock Co., Charleston, S.C., sponsored by Miss F. E. L. Blackwell; and commissioned 31 March 1943, Lt. O. W. Huff in command.

After shakedown out of Key West, *Hopi* sailed to New York to sail 10 June 1943 with a convoy for North Africa. After arriving Oran the 21st, she performed towing service for several days before steaming to Bizerte to join Vice Admiral Hewitt's Western Naval Task Force for the assault on Sicily (10 July-17 August 1943). Departing Bizerte 8 July with pontoons in tow, *Hopi* landed them 2 days later and immediately set to work clearing the beaches of damaged landing craft, fighting fires on vessels in the transport areas, and performing a multitude of other jobs so vital to success in amphibious operations.

Hopi returned to Bizerte 10 August to prepare for the Salerno Operation (9 September-13 October 1943). She sailed early in September and again performed invaluable salvage work. At 0940, 11 September, cruiser *Savannah*, while lying-to in the support area awaiting calls for gunfire support, received a direct hit on No. 3 turret which left her dead in the water. *Hopi* and salvage tug *Moreno* immediately came alongside. Untiring and skillful work by the two tugs enabled *Savannah* to retire to Malta that evening under her own power. At 1427, 16 September, HMS *Warspite* was put out of action by two direct hits and two near misses from guided bombs. She was taken in tow by *Hopi* and *Moreno* and delivered to Malta without further incident.

Hopi next sailed for the assault on Anzio (22 January 1944) and remained there for the next month. On 15 February the liberty ship *Elihu Yale* was severely damaged by a direct bomb hit which left her burning fiercely. The ship had been abandoned except for one wounded man trapped below, though there were still some men clinging to life lines. After picking up survivors, *Hopi* maneuvered alongside and transferred fire fighting equipment to the stricken vessel. Over 2 days later the last fire was extinguished. *Hopi*, which handled the entire operation without outside assistance, had fought the fire with only some 40 men. The rest of the crew had remained on their stations during repeated air raids and heavy fire from shore; just one of many splendid examples of courage, devotion, and the "can-do" spirit of the Navy's small but gallant ships in the face of danger.

Reclassified ATF-71, 15 May 1944, *Hopi* was assigned duty towing various craft about the Mediterranean until August when she again joined Vice Adm. Hewitt's Western Naval Task Force for Operation Dragoon, the invasion of southern France. As flagship of the Salvage and Fire-fighting Group, *Hopi* again rendered invaluable service. After termination of this operation she resumed her towing duties, principally shuttling pontoons from Bizerte to Oran.

Hopi arrived Antwerp, Belgium, 25 June 1945 and took in tow the Army Power Plant *Seapower*. Delivering it to Bermuda 25 August, she sailed for Norfolk, arriving 28 August and remained there until 21 October. At that time she steamed to Boston and 1 December got underway to assist the coastal collier *Tristan*, who had lost her rudder in a storm. *Hopi* returned to Boston 3 December with *Tristan* in tow.

For the next 3 years she operated along the East Coast with frequent towing duties to Oran, Algiers, Newfoundland, and the Caribbean. During the Berlin Airlift in 1948-1949 as Navy tankers and other ships brought 12 million gallons of aviation gasoline, goods, and supplies into Bremerhaven, *Hopi*, with the 2d Task Fleet held maneuvers in the North Atlantic, showing American power at sea, visible evidence of United States strength if needed, to maintain sovereignty for free people everywhere.

In the 1950's *Hopi* resumed her operations along the

East Coast, performing towing and salvage services in Newfoundland and the Caribbean as well. She thus contributed to the operating efficiency of the fleet in its important peace-keeping operations. *Hopi* decommissioned at New London 9 December 1955 and joined the Atlantic Reserve Fleet. She was turned over to the Maritime Administration 27 March 1962 and moved to the National Defense Reserve Fleet, James River, Va., where she remains, following permanent transfer to the Maritime Administration 1 July 1963, into 1967.

Hopi received four battle stars for World War II service.

Hopkins

Esek Hopkins, Commander in Chief of the Fleet, was born 26 April 1718, in what is now Scituate, R.I. Prior to the Revolutionary War he made voyages to nearly every quarter of the globe, commanded a privateer in the French and Indian War, and served as a deputy to the Rhode Island General Assembly. Appointed a brigadier general to command all the colony's military forces 4 October 1775, he immediately began to strengthen Rhode Island's defenses. A few months later, 22 December 1775, he was appointed Commander in Chief of the Fleet authorized by the Continental Congress to protect American commerce.

Hopkins took command of eight small merchant ships that had been hastily altered as men of war at Philadelphia, then sailed south 17 February 1776 for the first U.S. Fleet operation that took the fleet to Nassau in the Bahamas. The amphibious assault on the British colony there 3 March 1776 was also the first U.S. Amphibious Assault. Marines and sailors landed in "a bold stroke, worthy of an older and better trained service," capturing munitions desperately needed in the War of Independence. The little fleet returned to New London 8 April 1776, having also made prizes of two British merchantmen and a six-gun schooner. John Hancock, President of the Continental Congress, wrote Hopkins: "I beg leave to congratulate you on the success of your Expedition. Your account of the spirit and bravery shown by the men affords them [Congress] the greatest satisfaction . . ."

Hopkins' little fleet was blockaded in Narragansett Bay by the superior British seapower, but he never wavered in his loyalty to the cause of American independence. He continued to serve the Rhode Island General Assembly through 1786, then retired to his farm where he died 26 February 1802.

I

(DD-6: dp. 420; l. 248'8"; b. 24'6"; dr. 6'; s. 29 k.;
cpl. 73; a. 2 3"-56 pdrs., 2 18" tt.; cl. *Bainbridge*)

The first *Hopkins* was launched by Harlin & Hollingsworth Co., Wilmington, Del., 24 April 1902; sponsored by Mrs. Alice Gould Hawes, great great granddaughter of Esek Hopkins; commissioned at Philadelphia Navy Yard 23 September 1903, Lt. M. M. Taylor commanding.

Hopkins sailed from Philadelphia 12 May 1904, and joined the Fleet at Norfolk. That summer the destroyer deployed with the Coast Squadron for the midshipmen at sea training. During the following 3 years she ranged into the Caribbean Sea, exercising with the Flotilla, engaging in torpedo practice, and Fleet problems. In September 1906, *Hopkins* was present for the Presidential Review off Oyster Bay. On 29 September she and *Lawrence* escorted the President in *Mayflower* to Cape Cod Bay to witness record target practice. In 1907-1908 *Hopkins*, as part of the Torpedo Flotilla, accompanied the Atlantic Fleet on a practice cruise to the Pacific. They sailed from Hampton Roads 2 December 1907, exchanging courtesies at various Mexican and South American ports en route. After target practice in Magdalena Bay, the Flotilla arrived at San Francisco 6 May 1908, in time for the review of the combined Atlantic and Pacific Fleets by the Secretary of the Navy.

On 1 June 1908, *Hopkins* joined the Pacific Torpedo Fleet for tactics along the West Coast, at sea training north to Alaskan waters, and south to the coast of Mexico. On

30 April 1917, after the United States entry into World War I, *Hopkins* departed San Diego for the Canal Zone. She performed patrol duty, convoyed submarines and assisted them in torpedo proving. On 3 August she arrived at Hampton Roads, Va., for escort and patrol ranging along the coast to Bermuda.

Hopkins entered the Philadelphia Navy Yard 29 January 1919, and decommissioned there 20 June. She was sold for scrapping 7 September 1920 to the Denton Shore Lumber Co.

II

(SP-3294: t. 34; l. 62'10"; b. 16'; dr. 4'; s. 11 k.)

Hopkins (SP-3294) merchant name retained, was launched by Hahnes Co., Portsmouth, Va., in 1917. She was purchased by the Navy from Hopkins Fish and Oyster Co., Norfolk, and placed in service 3 October 1918.

Hopkins was attached to the 5th Naval District for harbor duties at Norfolk. Following the close of war she transferred to the War Department 4 March 1920.

III

(DD-249: dp. 1,190; l. 314'5"; b. 31'8"; dr. 9'3"; s. 35 k.; cpl. 101; a. 4 4", 1 3", 12 21" tt.; cl. *Clemson*)

The third *Hopkins* (DD-249) was launched 26 June 1920 by the New York Shipbuilding Corp., Camden, N.J.; sponsored by Miss Sarah Babbitt, a descendant of Esek Hopkins; and commissioned 21 March 1921 at Philadelphia, Lt. Comdr. C. A. Bailey commanding.

After shakedown *Hopkins* arrived at Newport, R.I., 31 May for battle practice training during the summer. In November, she was assigned to Destroyer Squadron 15 for tactical training with the Atlantic Fleet along the East Coast.

Hopkins sailed from Hampton Roads 2 October 1922, and reached Constantinople 22 October for duty in Turkish waters. She protected American interests and cooperated with the Relief Mission in the Near East, ranging to Beirut, Jaffa, and Smyrna. She departed Constantinople 18 May 1923 for New York, arriving 12 June. For the next 7 years *Hopkins* operated out of New England ports in the summer, Charleston in the winter, and the Caribbean Sea in the spring. During the spring of 1930, *Hopkins* participated in force battle practice with air-

craft, attesting to the growing importance of naval aviation.

On 3 February 1932 *Hopkins* was one of the two naval ships rendering medical aid to earthquake victims at Santiago, Cuba. She departed 5 February to join the Pacific Fleet at San Diego. She had escort duty for President Roosevelt's cruise to Canada in July, 1936, then resumed training along the Western Seaboard.

Hopkins returned to Norfolk in April 1939, and performed Neutrality Patrol from September 1939 until sailing for San Diego 17 May, thence to Pearl Harbor. She converted to a high-speed minesweeper (DMS-13) in the Pearl Harbor Naval Shipyard.

When the Japanese attacked Pearl Harbor, *Hopkins* was at Johnston Island for war maneuvers, but immediately headed back to Hawaii. She continued patrol of the Hawaiian Sea Frontier, with a short break for overhaul in the States, until late summer 1942, when she joined the invasion fleet bound for Guadalcanal. As America's first offensive effort of the Pacific war began 7 August, *Hopkins* swept the transport area and covered the landings on Tulagi. In a heavy enemy air attack 9 August, she shot down two enemy planes. During the following months, *Hopkins* escorted transports, swept mines, and carried badly-needed supplies to Guadalcanal.

Hopkins served as flagship for Adm. R. K. "Kelly" Turner as the Russell Islands were invaded 21 February 1943. During the action, she downed her third enemy plane. Remaining in the southwest Pacific, she joined in the initial invasion of Rice Anchorage, New Georgia, 4 July, and of Bougainville 1 November. Convoy escort, antisubmarine patrol, and sweeping duties kept the four-stacker busy until the Solomons were secured.

As the Navy moved farther across the Pacific in the long island-hopping campaign, *Hopkins* arrived off Saipan 13 June 1944 to sweep the invasion approaches. She provided screen and fire support for the amphibious landings of 15 June 1944. She picked up 62 prisoners from sunken Japanese ships as well as rescuing a downed fighter pilot and a seaplane crew. A brief rest at Eniwetok was followed by a role in the capture of Guam. *Hopkins* reached that important Marianas island 14 July to participate in the preinvasion sweeping and bombardment. She also gave fire-support to the landings 16 July.

Following overhaul at Pearl Harbor, *Hopkins* arrived

USS *Hopkins* (DD-6) in 1908

in Leyte Gulf 27 December 1944 to prepare for the Lingayen landings. The minesweepers sailed 2 January 1945 to sweep Lingayen Gulf under unceasing attack from Japanese dive bombers and kamikazes. When her sister ship *Palmer* was hit and sank in 13 minutes the morning of 7 January, *Hopkins* rescued 94 survivors.

Hopkins departed the Philippines 15 January 1945 for a brief rest at Eniwetok, then swept the transport areas and channels off Iwo Jima to prepare for invasion 19 February 1945. She remained on patrol off Iwo Jima, emerging from heavy air and shore fire unscathed. Departing Iwo Jima 6 March, *Hopkins* next headed into battle off Okinawa, the "last stepping stone to Japan." While fighting off the constant raids and suicide attacks, "Lucky 13" shot down several Japanese planes. On 4 May 1945 she was struck a glancing blow by a flaming kamikaze just before it plunged into the sea.

On 7 June 1945 *Hopkins* steamed for overhaul at Leyte, Philippine Islands where she remained until cessation of hostilities. *Hopkins* then rendezvoused with units of the Third Fleet headed for Tokyo Bay. After two days of sweeping the entrances to Tokyo Bay, *Hopkins* anchored in sight of Mount Fujiyama 30 August 1945. The Japanese may have given up, but the elements had not. *Hopkins* had to ride out two typhoons with winds raging to 125 knots before her departure from Tokyo Bay 10 October 1945 for the Eastern Seaboard of the United States.

Hopkins arrived in Norfolk 28 November and decommissioned there 21 December 1945. She was sold for scrapping 8 November 1946 to Heglo Sales Corp., Hillsdale, N.J.

Hopkins was awarded two Navy Unit Commendations for heroism off Guadalcanal and in Lingayen Gulf. She also received 10 battle stars for service in World War II.

Hopocan

A Delaware chief who signed the first Indian treaty with the United States in 1778.

(YN-33: dp. 129; l. 90'; b. 22'6"; dr. 11'4"; s. 11 k.)

Hopocan (YN-33), a diesel-powered steel tugboat, was built as *Carmelite* in 1937 by Ira S. Bushey & Sons, Brooklyn, N.Y., and was acquired by the Navy from the builder 16 August 1940. Converted at the New York Navy Yard, she was placed in service as *Hopocan* (YN-33), a net tender, 9 September 1940.

Assigned to the 15th Naval District, *Hopocan* steamed from Hampton Roads 30 October 1940, and arrived the Canal Zone 13 November. She took up net-tending duties in the Canal area, helping to protect America's vital link between oceans. *Hopocan* was redesignated YNT-1, 8 April 1942, and departed Cristobal 17 July 1942 for duty with the 10th Naval District in the Aruba-Curacao area. There she remained on net-tending duty until assigned to Naval Base, Trinidad, in October 1944. Near the end of the war, 4 August 1945, she was redesignated YTM-728 and assigned harbor tug duties at Roosevelt Roads, P.R. Brought to New York in July 1946, *Hopocan* was placed out of service 2 August at Brooklyn, and stricken from the Navy List 15 August 1946. She was transferred to the Maritime Commission for disposal May 1947.

Hopping

Hallsted Lubeck Hopping was born in New York, N.Y., 25 September 1902 and graduated from the Naval Academy in 1924. After graduating from flight training, Hopping served with various squadrons, rising to the rank of lieutenant commander in 1939. He reported as Commander of Scouting Squadron 6 10 July 1941, and lost his life in a raid on Roi Island from carrier *Enterprise* 1 February 1942, the first aircraft squadron commander to lose his life in World War II.

(DE-155: dp. 1,400; l. 306'; b. 36'10"; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3', 4 1.1", 8 20mm., 2 dct., 8 dep., 1 dcp. (h.h.); cl. *Buckley*)

Hopping (DE-155) was launched by Norfolk Navy Yard, Portsmouth, Va., 9 March 1943; sponsored by Mrs. H. L. Hopping, widow of Lieutenant Commander Hopping; and commissioned 21 May 1943, Lt. Comdr. F. D. Giambattista in command.

The new destroyer escort conducted shakedown training out of Bermuda and after escorting an LST convoy to Norfolk made a voyage to Casablanca, where she arrived 2 September 1943. There *Hopping* formed with a new convoy and returned to New York 25 September.

In the year that followed *Hopping* made nine convoy crossings from New York to United Kingdom ports, bringing vital supplies for the war in Europe. While en route to Britain 3 May 1944 a sister ship, *Donnell* (DE-56), was torpedoed and seriously damaged as the escort vessels stalked a U-boat. *Hopping* helped to drive off the raider with numerous depth charge attacks and then took *Donnell* in tow. Struggling for 2 days in heavy seas, she managed to bring her sister ship within range of British salvage ships off Ireland, which towed her into Londonderry.

Hopping returned to Frontier Base, Staten Island, during October-November 1944, where she was converted to a high-speed transport. Reclassified APD-51, she underwent shakedown training in Chesapeake Bay and departed Norfolk 20 December 1944 to take part in the Pacific War, then entering its climactic stage. The new transport steamed via the Panama Canal and San Diego to Pearl Harbor, anchoring 15 January 1945. There she trained with Underwater Demolition Teams, the Navy's famed "frogmen", until 13 February, when she got underway for the Philippines. *Hopping* arrived Leyte Gulf 4 March to prepare for what was to be the last great amphibious campaign of the war, Okinawa.

Hopping sailed for Kerama Retto 21 March with UDT team No. 7 embarked, and during the early days of the campaign carried out many reconnaissance and demolition assignments. When not putting frogmen ashore, the ship acted as screening ship for larger units off Kerama Retto, and while on this duty assisted in splashing several planes the night of 28-29 March. As Marines landed on Okinawa itself 1 April *Hopping* turned to screening and patrol duties, fighting off numerous Japanese air attacks. While in Buckner Bay on a reconnaissance operation 9 April, the ship engaged a concealed enemy shore battery, and while silencing the gun, sustained several damaging hits. As a result she proceeded to Ulithi for repairs, arriving 23 April 1945.

Hopping was soon back in the thick of the fighting at Okinawa, however, returning 17 May to resume screening duties as the air and land battles raged. She remained off Okinawa continuously until the island was secured, fighting off countless mass attacks by the desperate Japanese. The ship sailed 8 August with a convoy bound for Leyte and while in the historic Gulf 15 August learned of the surrender of Japan.

The ship's first occupation duty was to aid in the evacuation of former prisoners of war from Japan. She arrived Japan 11 September and disembarked over 100 former Navy and Marine prisoners at Guam 19 September. Following convoy duty and antimine work in Japanese and Philippine waters, *Hopping* got underway from Tokyo Bay 24 November 1945 with returnees for the United States. She arrived San Diego 11 December.

Hopping departed San Diego 17 December and after spending short periods at Charleston and Norfolk arrived Green Cove Springs, Fla., 27 April 1946. She decommissioned 5 May 1947; entered the Atlantic Reserve Fleet; and remained berthed with the Texas group until she was struck from the Navy List in September 1964 and sold 15 August 1966 to Boston Metals Co., Baltimore, Md.

Hopping received one battle star for World War II service.

Hoptree

A small American tree having two seeded winged fruits which have been used in place of hops.

(AN-62: dp. 1,100; l. 194'6"; b. 37'; dr. 13'6"; s. 12 k.; cpl. 56; a. 1 3"; cl. *Ailanthus*)

Hoptree (AN-62), a wooden-hulled net layer, was launched 14 October 1943 by Snow Shipyards Inc., Rockland, Maine, as YN-83; sponsored by Lt. Ann Jameson; reclassified AN-62, 20 January 1944; and commissioned 18 May 1944, Lt. M. T. Birkle in command.

Arriving Melville Net Depot for shakedown 31 May, *Hoptree* performed training and readiness operations until 27 June, when she joined the net layer precommissioning and training group at Melville. She then departed 2 December for the West Coast and sailed 3 February 1945 from Naval Net Depot, Tiburon, Calif., for duty in the Pacific.

Hoptree arrived Pearl Harbor 13 February and was routed on to Eniwetok Atoll, where she arrived the 28th. From March through the end of the war the ship was engaged in the vital work of maintaining and repairing net defenses in the harbor, and after August she was occupied in dismantling them. She sailed back to the United States in November 1945, arriving San Francisco 8 November, and decommissioned 1 March 1946. The ship was sold to Van Camp Sea Food Co., San Pedro, Calif., 23 April 1947.

Hoqua

A former name retained.

(SP-142; dp. 35; l. 69'7"; b. 13'2"; dr. 4'; s. 11 k.; a. 1 3-pdr.)

Hoqua, a motor yacht, was built by Charles Seabury, Morris Heights, N.Y., in 1914, and acquired from her owner, Robert M. Curtis of Chicago, Ill., in June 1917. She commissioned at Brooklyn 27 July 1917, Chief Boatswain H. F. Delyse, USNRF, in command.

Assigned to the 3d Naval District, *Hoqua* performed general harbor duties at Brooklyn until 27 March 1918, when she arrived New Haven, Conn., for duty. She served there as an inshore patrol vessel and as an escort for submarines in and around New Haven harbor for the remainder of the war and was returned to her owner 6 February 1919.

Hoquiam

A coastal city in Washington.

(PF-5: dp. 1,430; l. 303'11"; b. 37'6"; dr. 13'8"; s. 20 k.; cpl. 190; a. 3 3", 4 40mm., 9 20mm., 8 dcp., 1 dcp. (h.h.), 2 dct.; cl. *Tacoma*; T. S2-S2-AQ1)

Hoquiam (PF-5) was laid down under Maritime Commission contract by Kaiser Cargo, Inc., Yard 4, Richmond, Calif., 10 April 1943; launched 31 July 1943; sponsored by Miss Helen Philbrick; and commissioned 8 May 1944, Lt. Comdr. P. E. Trimble, USCG, in command.

After shakedown off the coast of southern California, *Hoquiam* departed San Francisco 20 August, steamed via Seattle, and arrived Kodiak, Alaska, 27 August for duty with the Alaskan Sea Frontier. During the remainder of the war, she patrolled island waters along the Alaskan coast. After returning to Seattle for overhaul during June, 1945, she decommissioned at Cold Bay, Alaska, 16 August and transferred to Russia under lend-lease the same day.

Returned to the U.S. Navy 1 November 1949 at Yokosuka, Japan, *Hoquiam* recommissioned 27 September 1950, Lt. Comdr. E. A. Lane in command. Following a brief shakedown, she sailed to join in the repulse of Communist aggression in South Korea. Arriving off Wonsan, Korea, 25 October, she served as a harbor control and screening ship during amphibious landings. For the next 2 months she performed patrol, escort, harbor control, and communications duties along the northeastern coast of Korea.

In late December *Hoquiam* assisted with harbor control operations during the evacuation at Hungnam before sailing for Japan. Arriving Yokosuka 30 December, she

underwent a brief overhaul, then served as a drone target ship off the coast of Japan from late January until early March 1951. She returned to Korean waters 8 March and over the next 6 months operated along the east coast of Korea from Wonsan to Songjin. She participated in interdiction and harassment patrols, designed to destroy enemy coastal shipping. In addition she conducted ASW operations off Wonsan and bombarded enemy shore installations and coastal supply routes.

While engaging enemy shore positions 7 May, *Hoquiam* was hit by Communist gunfire. She returned to Japan, arriving Yokosuka 16 May for repairs. Following repairs, she sailed 4 June via Sasebo to Wonsan where she arrived 10 June to resume bombardment and interdiction duty. She continued patrolling the eastern coast until September. After returning to Yokosuka 9 September, she decommissioned 8 October and was leased to the Republic of Korea. She serves the Korean Navy as *Nae Tong* (PF-65).

Hoquiam received five battle stars for Korean war service.

Horace A. Bass

Horace Ancel Bass, Jr., was born in Roanoke, Va., 22 September 1915, and enlisted in the Navy 24 February 1941. In May he was designated Aviation Cadet, and after aviation training was appointed ensign 5 December 1941. Ensign Bass underwent further flight training and reported to carrier *Saratoga* in early 1942. Assigned to *Yorktown* during the pivotal Battle of Midway, he flew as part of the combat air patrol 4 June, and although his plane was damaged, shot down an attacking dive bomber and a fighter. For his important part in the battle Ensign Bass was awarded the Navy Cross. Assigned to Fighting Squadron 5 on board *Saratoga*. Bass again acted as combat air patrol during the Battle of the Eastern Solomons 23-25 August 1942. As he and his fellow pilots protected *Saratoga*, Ensign Bass was shot down and reported missing in action. He was presumed dead 24 August 1942, as Japanese fleet units were blocked from driving on Guadalcanal.

(APD-124: dp. 1,450; l. 306'; b. 37'; dr. 9'8"; s. 24 k.; cpl. 186; a. 2 5"; 4 40mm., 8 20mm., 2 dct., 8 dcp., 1 dcp. (h.h.), 3 21" tt.; cl. *Crosley*)

Horace A. Bass (APD-124) was launched, after being reclassified from DE-691, by Bethlehem Steel Co., Fore River, Quincy, Mass., 12 September 1944; sponsored by Mrs. H. A. Bass, Jr., widow of Ensign Bass; and commissioned 21 December 1944, Lt. Comdr. F. W. Kuhn in command.

The new high speed transport fitted out at Boston Navy Yard and conducted shakedown training off Bermuda, after which she sailed to New York, where she arrived 15 February 1945. Departing next day, *Horace A. Bass* escorted ammunition ship *Firedrake* to Panama, from where she proceeded to San Diego 3 March. After gunnery exercises in the area the ship sailed westward to join in the climactic phase of the Pacific War.

Horace A. Bass stopped at Pearl Harbor, Eniwetok, and Ulithi, en route to Okinawa, where the largest fleet assembled in the Pacific was engaged in what was to be the final major amphibious strike of the long war on the threshold of Japan. The ship arrived off Okinawa 6 April, just in time to take part in repelling one of the fiercest Japanese air assaults of the campaign. As the desperate attack was driven off, *Horace A. Bass* was credited with at least one plane splashed. As the battle raged ashore, she served on the vital picket line until 10 April, when she sailed with a convoy to Guam. On the return passage she sank submarine *RO-109* with a single accurate depth charge attack south of Okinawa 25 April. Arriving 26 April, the ship resumed the hectic picket duty interspersed with convoy voyages to Saipan and Guam. Though the island was secured in mid-June, the air attacks continued, and *Horace A. Bass* continued to provide anti-aircraft and antisubmarine protection to

the countless ships off Okinawa. Early 30 July, the ship was on picket duty in the area when a low-flying suicider crashed through her superstructure and fell alongside, her bomb exploding close aboard. *Horace A. Bass* suffered hull damage and 14 casualties, but was quickly repaired. She remained off Okinawa until sailing north toward Japan 14 August.

After the surrender 15 August, the transport remained off Japan with 3d Fleet units until the ships triumphantly entered Tokyo Bay 27 August 1945. *Horace A. Bass* took part in the occupation of the giant Yokosuka Naval Base, furnishing the prize crew which took possession of battleship *Nagato*, one of the very few major ships left to the Imperial Navy. The American ship remained at Yokosuka assisting in the occupation until sailing for the United States 14 January 1946.

Horace A. Bass arrived San Francisco 7 February 1946, and spent the remainder of the year in the San Diego area on training operations. The ship sailed again for the Far East 27 January 1947, this time to support American efforts to stabilize the volatile Chinese situation. Arriving Tsingtao 5 March, *Horace A. Bass* acted as a station ship until sailing again for San Diego 30 July. The second half of 1947 was spent on training exercises in California waters, and in early 1948 the ship operated off the Mexican coast. She proceeded to China again 16 June 1948, and again served as station ship at Hong Kong and Tsingtao, occasionally sailing to the Marshalls and Guam. As Communist troops began to gain the upper hand in the Chinese civil war, *Horace A. Bass* evacuated civilians of several nations from Nanking in November. The ship departed China 1 December 1948, arriving San Diego 21 December for repairs and training.

After exercises off San Diego and a large amphibious training assault in Hawaii, *Horace A. Bass* sailed from Hawaii 14 November 1949 for another tour of duty in China. Arriving Hong Kong 30 November, she remained in waters off China and southeast Asian countries to protect American interests in the area, arriving San Diego 12 June 1950.

With the outbreak of the Korean war in June 1950, American naval power moved swiftly into the Far East to support and make possible land operations. *Horace A. Bass* sailed 14 July to join the fleet units already deployed off Korea, arriving 2 August with troops of the 2d Marine Division. Underwater Demolition Teams and Marine Reconnaissance units were assigned to her, and the ship moved to the eastern coast of North Korea to carry out vital raids on Communist supply lines. Between 11 and 17 August she made three successful raids, destroying three tunnels and two bridges. During this period *Horace A. Bass* added bombardment during daylight hours.

As United Nations forces prepared to go on the offensive, the transport played an important part in the planning for the upcoming Inchon operation. Her raiding parties reconnoitered possible beaches 20-25 August, and departed Pusan 12 September for the main Inchon assault. *Horace A. Bass* put her troops ashore in the first wave 15 September, as the brilliantly successful amphibious operation suddenly reversed the course of the war.

As troops pushed northward, the fast transport resumed her raiding duties, making two attacks on tunnels and bridges near Songjin, 6-8 October 1950. For this operation *Horace A. Bass* carried Royal Marine Commandos. Late in October, she took part in operations to clear the port of Wonsan for another landing, assisting minesweeping groups. The ship then spent 3 months on beach survey duty before sailing for the United States 28 January 1951. For this highly successful tour of duty, *Horace A. Bass* and her Special Operations Group received the Navy Unit Commendation.

The veteran ship steamed toward Korea again 24 September 1951, and after stopping at Yokosuka resumed bombardment and raiding duties along the coast of North Korea. In 14 separate raids with American, British, and Republic of Korea landing parties *Horace A. Bass* did much to interrupt the all-important supply lines from the north, so vulnerable to mobile forces afloat. She com-

pleted her second tour of duty in Korea 3 July, when she sailed from Yokosuka. The ship arrived San Diego, 20 July 1952.

Horace A. Bass spent the next year in operations off the California coast, but sailed 15 July 1953 for her third tour of Korean duty. Upon her arrival Yokosuka 3 August, the ship became flagship of an Amphibious Control Squadron, and took part in various training landings in Japan. She also conducted three survey operations and two demolition assignments on the Korean coast, where the armistice was now in effect. The ship visited other Pacific ports during this period before departing Yokosuka 5 April 1954.

The ship operated off the West Coast on training cruises and antisubmarine exercises until getting underway for the Far East again 23 October 1954. She carried on practice landings in Korea and took part in fleet exercises until February, when she moved to the Formosa Straits to evacuate Nationalist Chinese troops from the Tachen Islands. With this important Cold War operation over, *Horace A. Bass* steamed to Haiphong, Indochina, 26 February to take part in operation "Passage to Freedom", as thousands of Vietnamese from the north fled Communist domination. The transporting of these civilians to the south was completed 20 March and the ship was underway from Sasebo, Japan, 4 April 1955, bound for San Diego.

After her arrival *Horace A. Bass* was transferred to the Atlantic Fleet, transiting the Canal 2-4 June and arriving Philadelphia 10 June 1955. She was then assigned to the 4th Naval District as a naval reserve training ship. During the years that followed the fast transport made short cruises with naval reservists to Caribbean ports, Nova Scotia, and Newfoundland, helping to maintain the skills of hundreds of reserve officers and men. She arrived Orange, Tex., 3 November 1958, and decommissioned 9 February 1959. *Horace A. Bass* entered the Atlantic Reserve Fleet at Orange, where she remains.

Horace A. Bass received two battle stars for World War II service, and six battle stars in addition to her Navy Unit Commendation for Korean War service.

Horace Beals

Former name retained.

(Barkentine: t. 296; l. 121'6"; b. 30'8"; dph. 11'8"; a. 132-pdr.; 130-pdr.)

Horace Beals was purchased in New York City 14 September 1861; and commissioned at New York Navy Yard 5 February 1862, Lt. Comdr. K. R. Breese in command.

Two days later she departed New York for Key West, where, upon her arrival 23 February, she became a supply ship for the flotilla of mortar schooners being organized by Comdr. D. D. Porter. The flotilla sailed from Key West 3 March, arrived Ship Island, Miss., and 5 days later crossed the bar at Pass a l'Ouvre. When, after almost a month of backbreaking labor, Farragut finally succeeded in getting his heavy deep-sea ships inside the mouth of the Mississippi on 16 April, he ordered the mortar flotilla to commence operations. Porter's ships, camouflaged with bushes and tree branches, moved up river to preassigned positions below Forts Jackson and St. Philip and opened fire 18 April. During the ensuing 6-day bombardment, *Horace Beals* kept the mortar schooners supplied with ammunition and provisions, took on board ordnance and other stores, and embarked and cared for sick and wounded from ships of the squadron.

After New Orleans and the forts protecting her had surrendered, the mortar flotilla sailed to Mobile Bay, Ala.; but Farragut then ordered Porter to return to the Mississippi, where the mortars were needed to engage the enemy's cliffside batteries at Vicksburg. The Confederates had cleverly placed these guns high on the bluffs of the Chickasaw Hills perfectly safe from the low trajectory cannon mounted on the Union's salt-water ships.

All vessels of Porter's flotilla were back at New Orleans 9 June. *Kensington* steamed up the Mississippi with *Horace Beals* and *Sarah Bruen* in tow 22 June. On the 26th the cruise upstream was enlivened by a duel with enemy batteries at Ellis Cliffs in which the Northern ships silenced the Confederate guns. The mortars opened fire on the batteries at Vicksburg 26 June and continued the attack while Farragut's ships ran by the thundering hillside cannon 28 June. They repeated the service when Farragut again ran the gauntlet on his return passage 15 July.

After withdrawing from the Mississippi with Admiral Farragut, *Horace Beals* spent the rest of the year supplying ships of the West Gulf Blockading Squadron, operating from Pensacola as a base. She was ordered back to New Orleans 22 December and arrived there 1 January 1863. She arrived below the Confederate batteries at Port Hudson 16 March two days after Farragut's heavy damage passing the enemy guns at that point. *Horace Beals* continued to supply ships operating against Vicksburg and Port Hudson until those last Confederate strongholds on the Mississippi were taken and President Lincoln could boast that "The Father of Waters again goes unvexed to the sea." During the remainder of the war this reliable supply ship operated between New York and stations in the Gulf of Mexico bringing indispensable war material to ships of the West Gulf Blockading Squadron. Shortly after the end of hostilities *Horace Beals* was sold in New York City to A. Leary 30 May 1865.

Horn Snake (Packet)

Horn Snake, or *Hornsnake*, was a small packet acquired or perhaps chartered by the Continental Navy during 1775 to 1776.

Hornbill

A large bulky bird, noted for the enormous size of the bill. Their flight is slow and heavy, and their plumage is chiefly black and white.

I

(AMc-13: l. 85'; dph. 10'5')

Hornbill (AMc-13), formerly *J. A. Martinolich*, was launched in 1938 by Martinolich Repair Basin, Tacoma, Wash. She was taken over by the Navy and commissioned 7 December 1940.

Hornbill was assigned to the mine force in the 12th Naval District. She engaged in coastal sweeping of the main ship channel for magnetic and acoustic type mines. After Pearl Harbor her service became more valuable with the Japanese threat to our West Coast sea traffic. On the morning of 30 June 1942, a lumber schooner, *Esther Johnson*, on passage from Coos Bay, Oreg. collided with *Hornbill* in San Francisco Bay. Approximately one half hour after the collision the minesweeper sank. The crew was saved and a small amount of equipment was safely removed to the lumber schooner. She was stricken from the Navy Register 24 July 1942.

II

(YMS-371: dp. 270; l. 136'; b. 25'; s. 15 k.)

The second *Hornbill* (YMS-371) was launched as *YMS-371*, 27 November 1943 by Weaver Shipyards, Orange, Tex.; and commissioned 29 February 1944, Lt. J. L. Grace in command.

After her commissioning, *YMS-371* participated in operations in the Gulf of Mexico until the summer of 1945, when she transited the Panama Canal en route to Okinawa, where she arrived 5 July to begin minesweeping

operations. On 17 August, she departed Okinawa for Japan to sweep mines in Tokyo Bay, around the island of Honshu and in the naval base of Sasebo. On 16 February 1946, she ended her occupation duties and sailed for San Pedro, Calif., arriving 4 April. On 7 February 1947, *YMS-371* was named *Hornbill* and reclassified AMS-19.

Hornbill served as a training ship on the West Coast and at Pearl Harbor until 1953, when she commenced duty with the U.S. Naval Schools of Mine Warfare, Yorktown, Va. Reclassified MSC(O)-19 on 17 February 1955, *Hornbill* decommissioned September 1957. She was struck from the Naval Register 1 November 1959, and sold 30 June 1960.

Hornbill earned two battle stars for her service in World War II.

Hornby

(PF-82: dp. 1,430; l. 303'11"; b. 37'8"; dr. 13'8"; s. 20 k.; cpl. 190; a. 33"; cl. *Tacoma*)

Hornby (PF-82), originally designated PG-190, was built under Maritime Commission contract by Walsh-Kaiser Co. Inc., Providence, R.I. Intended for use by the United Kingdom, she was reclassified PF-82 15 April 1943, renamed *Montserrat*, and launched 27 September 1943, Mrs. Harry Gray as sponsor. *Montserrat* was then completed and transferred under Lend-Lease to the United Kingdom 31 August 1944 as part of the 12-ship "Colony" class. She served as a patrol and escort vessel until being returned to the United States 11 June 1946. The frigate was subsequently sold to John J. Duane Co., Quincy, Mass., 30 November 1947 and scrapped.

Horne

Frederick Joseph Horne was born 14 February 1880 in New York, N.Y., and entered the Naval Academy in 1895. As a Naval Cadet, he saw service during the Spanish-American War in *Bancroft* and *Texas*, before graduating in 1899. Subsequently, he sailed in various ships during the Philippine Insurrection, served as an instructor at the Naval Academy in 1905, and filled various posts ashore and afloat until taking his first command in 1914, *Rainbow*. Horne rendered distinguished service as Naval Attaché at Tokyo 1915 to 1919, and until World War II exercised command of many ships and shore installations. In 1941 he was a Vice Admiral serving on the General Board of the Navy Department, and in March 1942 he was appointed Vice Chief of Naval Operations. From 1942 until 1945 Admiral Horne had particular cognizance over matters of logistics, intelligence, and communications, and was awarded the Distinguished Service Medal for his outstanding service. He retired 1 August 1946, after over 50 years of active duty with the Navy. Admiral Horne died in San Diego, Calif., 18 October 1959.

(DLG-30: dp. 7,900 ft.; l. 547'; b. 54'9"; dr. 28'10"; s. over 30 k.; cpl. 418; a. Ter. mis., ASROC, 2 5", 4 3", 8 21" tt.; cl. *Bellknop*)

Horne (DLG-30) was laid down 12 December 1962 by San Francisco Naval Shipyard, San Francisco, Calif.; launched 30 October 1964; sponsored by Mrs. Frederick J. Horne, widow, and commissioned 15 April 1967, Captain Stansfield Turner in command.

After shakedown, the new guided missile frigate joined the Pacific Fleet and operated out of San Diego, a major addition to American sea power.

Horner, T. D., see *T. D. Horner*

Hornell, see *YF-849*

Hornet

A large strong wasp whose sting is severe.

I

(Slp: a. 10 9-pdrs.)

The first *Hornet* was a merchant sloop chartered from Captain William Stone in December 1775 to serve under Stone as a unit of Esek Hopkins' Fleet.

Hornet fitted out at Baltimore, then sailed with Hopkins fleet 18 February 1776. Outside the Virginia Capes, she ran afoul of *Fly* and was unable to accompany the fleet for the amphibious assault on New Providence. She patrolled in the Delaware Bay for nearly a year, then ran the British blockade to convoy merchantmen to Charleston. Documents of service are incomplete after this time but it appears that *Hornet* fell into British hands on the coast of South Carolina in the summer of 1777.

II

(Slp: t. 71; cpl. 34; a. 10 guns)

The second *Hornet*, formerly merchant ship *Traveller* of Massachusetts, was purchased at Malta and joined the American blockade of Tripoli in April 1805, Lt. Samuel Evans in command. Her bombardment in company with *Argus* and *Nautilus* 27 April 1805 helped force the surrender of Derne to a land expedition bringing pressure to bear on the besieged port of Tripoli, where the Bashaw soon accepted terms of peace.

After helping to evacuate the expedition from Derne, *Hornet* joined the fleet in a show of strength off Tunis and other Barbary ports. This was effective in quelling threats of piratical acts against merchant shipping in the Mediterranean. *Hornet* continued patrol to insure safety of American commerce in the Mediterranean until 3 June 1806. After riding out a severe gale that carried away her top mast, she arrived in Philadelphia 9 August. *Hornet* decommissioned and was sold at Philadelphia 3 September 1806.

III

(Brig: t. 440; l. 106'9"; b. 31'5"; dr. 14'; a. 18 g.)

The third *Hornet* was launched 28 July 1805 by William Price of Baltimore, Md.; commissioned there 18 October 1805, Master Commandant Isaac Chauncey in command.

Hornet cruised the Atlantic coast until 29 March 1806 when she sailed to join the squadron protecting American commerce from threats of piracy in the Mediterranean. She returned to Charleston 29 November 1807 and was decommissioned.

Hornet recommissioned 26 December 1808. She transported General James Wilkinson to New Orleans, cruised in home waters to enforce the Embargo Act, and carried dispatches to Holland, France, and England. This service was intervened November 1810 to September 1811 during which time *Hornet* was rebuilt and ship-rigged in the Washington Navy Yard.

Cruising with Commodore John Rodgers' Squadron during the War of 1812, *Hornet* captured privateer *Dolphin* 9 July 1812, only to have *Dolphin* recaptured while en route to the United States. After assisting the blockade of the Brazilian port of Bahia, she captured HMS *Peacock* in a short but skillfully fought engagement off British Guiana 24 February 1813.

Hornet sailed north to New London after capturing *Peacock*. She was blockaded there until 14 November 1814 when she slipped past British cruisers and took another merchant prize en route to New York. Unaware that the war had ended, she sailed south and captured HMS *Penguin* 23 March 1815, off the island of Tristan da Cunha.

After a cruise to the West Indies and Copenhagen in 1818; and, a second to the Mediterranean in 1819, *Hornet* based at Key West and Pensacola, Fla., to help end piracy in the Caribbean Sea. She captured the pirate schooner *Moscow* 29 October 1821 off the coast of Santo Domingo.

She cruised throughout the Caribbean for the next 9 years, departing Pensacola the last time 4 March 1829. She set course for the coast of Mexico and was never seen again. On 27 October 1829 the commander of the West Indies Squadron received information that *Hornet* had been dismantled in a gale off Tampico 29 September 1829 and had foundered with the loss of all hands.

IV

(Sch: cpl. 57; a. 5 18-pdr.)

The fourth *Hornet* was purchased at Georgetown, D.C., in 1813, and commissioned 15 March 1814, Sailing Master Joseph Middleton in command. She served primarily as a dispatch ship along the eastern seaboard, assisting in some coast and harbor survey work before sold at Norfolk in 1820.

V

(SwStr: t. 835, l. 242'; b. 26'6"; dr. 13'3"; a. 8 g.)

The fifth *Hornet* was built as the Confederate blockade runner *Lady Sterling* at Blackwell, England, in 1864; taken prize and set afire off Wilmington, N.C., by *Eolus* and *Calypso* of the Atlantic Blockading Squadron 28 October 1864; sold by the New York Prize Court to the Navy; commissioned 24 April 1865, Acting Master Joseph Avant in command; and renamed *Hornet* 17 June.

After fitting out at the Washington Navy Yard, *Hornet* carried President Andrew Johnson, Secretary of the Navy Gideon Welles, and their party to Point Lookout 22 to 24 July and subsequently cruised to Norfolk in late September. Departing Washington 22 October, she joined *Rhode Island* at Norfolk and sailed south to escort the surrendered Confederate ram *Stonewall* from Havana to Washington. Separated from the other two ships in a severe gale, *Hornet* returned to Washington 24 November, two days ahead of them. She then transported 115 men from Norfolk to the Receiving Ship at New York, putting in at Philadelphia after her voyage. *Hornet* decommissioned there 15 December 1865 and was sold to private citizens 26 June 1869.

VI

(t. 301; l. 180'; b. 24'; dr. 11'; s. 15 k.; a. 3 6-pdrs.; 2 1-pdrs.)

The sixth *Hornet*, the former yacht *Alicia*, was built by Harlan and Hollingsworth, Wilmington, Del., in 1890; purchased from H. M. Flagler 6 April 1898; and commissioned at New York 12 April 1898, Lt. J. M. Helm in command.

Six days after she commissioned, *Hornet* sailed to join the American fleet blockading Spanish Cuba. Reaching Havana 24 April, she cruised in Cuban waters with several short trips to Key West. On 30 June 1898 *Hornet* was sent to reconnoiter cays and shoals off the Spanish fort at Manzanillo in company with *Hist* and *Wompatuek*. Early that morning she seized the schooner *Nickerson*, of English registry but loaded with provisions and under a Spanish crew, trying to make her way into the blockaded harbor. At 0815 the American ships spotted a Spanish gunboat anchored under the blockhouses of the Army, but closed for action anyway. Although under heavy and continuous fire from shore batteries and a small arms fusillade from Spanish troops, the American ships fired on and sank the gunboat, withdrawing with no casualties. That same day the three ships entered Manzanillo harbor and were soon deep in battle, with shells splashing in the water all around. *Hornet's* main steam pipe was cut by a Spanish shell and the ship filled with steam.

Although disabled, *Hornet* continued to fire on the enemy, her crew passing ammunition through the scalding steam as they drifted close in under the shore batteries. A small Spanish sloop came in from port, assuming that *Hornet's* attention was totally centered on her starboard batteries which were pounding the enemy. *Hornet's* alert crew shifted to port and with one well-placed shot from the six-pounder sent the sloop, rifles and

all, to the bottom. By now *Hornet* had drifted dangerously close to shoal water. *Wompatuck* steamed over to tow her, all guns still blazing. Despite the day's heated action, not one sailor had been lost.

On 11 July 1898 *Hornet* was back on station, joining *Hist* and *Wompatuck* to cut the cable near Santa Cruz del Sur, destroying telegraphic communication between Havana and Manzanillo. A week later she returned to Manzanillo as the American fleet entered the harbor. In an hour and forty minutes of sharp action, *Hornet* and her sister ships sank nine Spanish ships as well as four armed pontoons, while under heavy fire from shore batteries and enemy troops lining the harbor.

Departing Key West 10 August, *Hornet* reached Norfolk 2 weeks later and decommissioned 18 October 1898. Loaned to the North Carolina Naval Militia, she served with them until 1902 and then reported to Norfolk as tender to the receiving ship *Franklin*. *Hornet's* name was struck 18 March 1910. She was sold 12 July 1910 to N. S. Sterns of New Orleans.

VII

(CV-8: t. 19,800; l. 809'9"; ew. 144'; dr. 21'8"; s. 33 k.; cpl. 1,889; a. 8 5", 16 1.1 mg.; cl. *Hornet*)

The seventh *Hornet* (CV-8) was launched 14 December 1940 by the Newport News Ship Building & Dry Dock Co., Newport News, Va.; sponsored by Mrs. Frank M. Knox, wife of the Secretary of the Navy; and commissioned at Norfolk 20 October 1941, Captain Marc A. Mitscher in command.

During the uneasy period before Pearl Harbor, *Hornet* trained out of Norfolk. A hint of a future mission occurred 2 February 1942 when *Hornet* departed Norfolk with two Army B-25 medium bombers on deck. Once at sea, the planes were launched to the surprise and amazement of *Hornet's* crew. Her men were unaware of the meaning of this experiment, as *Hornet* returned to Norfolk, prepared to leave for combat, and on 4 March sailed for the West Coast via the Panama Canal.

Hornet arrived San Francisco 20 March. With her own planes on the hangar deck, she loaded 16 Army B-25 bombers on the flight deck. Under the command of Lieutenant Colonel James H. Doolittle 70 officers and 64 enlisted men reported aboard. In company of escort ships *Hornet* departed San Francisco 2 April and embarked on her mission under sealed orders. That afternoon Captain Mitscher informed his men of their mission: a bombing raid on Japan.

Eleven days later *Hornet* joined *Enterprise* off Midway and Task Force 16 turned toward Japan. With *Enterprise* providing air combat cover, *Hornet* was to steam deep into enemy waters where Colonel Doolittle would lead the B-25s in a daring strike on Tokyo and other important Japanese cities. Originally, the task force intended to proceed to within 400 miles of the Japanese coast; however, on the morning of 18 April a Japanese patrol boat, No. 23 *Nitto Maru*, sighted *Hornet*. The cruiser *Nashville* sank the craft which already had informed the Japanese of the presence and location of the American task force. Though some 600 miles from the Japanese coast, confirmation of the patrol boat's warning prompted Admiral William F. Halsey at 0800 to order the immediate launching of the "Tokyo Raiders."

As *Hornet* swung about and prepared to launch the bombers which had been readied for take-off the previous day, a gale of more than 40 knots churned the sea with 30-foot crests; heavy swells, which caused the ship to pitch violently, shipped sea and spray over the bow, wet the flight deck and drenched the deck crews. The lead plane, commanded by Colonel Doolittle, had but 467 feet of flight deck while the last B-25 hung far out over the fantail. The first of the heavily-laden bombers lumbered down the flight deck, circled *Hornet* after take-off, and set course for Japan. By 0920 all 16 of the bombers were airborne, heading for the first American air strike against the heart of Japan.

Hornet brought her own planes on deck and steamed at full speed for Pearl Harbor. Intercepted broadcasts, both in Japanese and English, confirmed at 1445 the success of the raids. Exactly one week to the hour after launching the B-25s, *Hornet* sailed into Pearl Harbor. *Hornet's* mission was kept an official secret for a year; until then President Roosevelt referred to the origin of the Tokyo raid only as "Shangri-La."

Hornet steamed from Pearl 30 April, to aid *Yorktown* and *Lexington* at the Battle of the Coral Sea. But that battle was over before she reached the scene. She returned to Hawaii 26 May and sailed 2 days later with her sister carriers to repulse an expected Japanese fleet assault on Midway.

Japanese carrier-based planes were reported headed for Midway the early morning of 4 June 1942. *Hornet*, *Yorktown*, and *Enterprise* launched strikes as the Japanese carriers struck their planes below to prepare for a second strike on Midway. *Hornet* dive bombers missed contact, but 15 planes comprising her Torpedo Squadron 8 found the enemy and pressed home their attacks. They were met by overwhelming fighter opposition about 8 miles from three enemy carriers and followed all the way in to be shot down one by one. Ens. George H. Gay, USNR, the only surviving pilot, reached the surface as his plane sank. He hid under a rubber seat cushion to avoid strafing and witness the greatest carrier battle in history.

Of 41 torpedo planes launched by the American carriers, only six returned. Their sacrifices drew enemy fighters away from dive bombers of *Enterprise* and *Yorktown* who sank three Japanese carriers with an assist from submarine *Nautilus*. The fourth Japanese carrier, *Hiryu*, was sunk the following day; gallant *Yorktown* was lost to combined aerial and submarine attack.

Hornet planes attacked the fleeing Japanese fleet 6 June 1942 to assist in sinking cruiser *Mikuma*, damaged a destroyer, and left cruiser *Mogami* aflame and heavily damaged. Hits were also made on other ships. *Hornet's* attack on *Mogami* wrote the finis to one of the decisive battles of history that had far reaching and enduring results on the Pacific War. Midway was saved as an important base for operations into the western Pacific. Likewise saved was Hawaii. Of greatest importance was the crippling of Japan's carrier strength, a severe blow from which she never fully recovered. The four large aircraft carriers sent to the bottom of the sea carried with them some 250 planes along with a high percentage of Japan's most highly trained and battle-experienced carrier pilots. This great victory by *Hornet* and our other ships at Midway spelled the doom of Japan.

Following the Battle of Midway, *Hornet* had new radar installed and trained out of Pearl Harbor. She sailed 17 August 1942 to guard the sea approaches to bitterly contested Guadalcanal in the Solomons. Bomb damage to *Enterprise* (24 August), torpedo damage to *Saratoga* (31 August), and loss of *Wasp* (15 September) reduced carriers in the South Pacific to one—*Hornet*. She bore the brunt of air cover in the Solomons until 24 October 1942 when she joined *Enterprise* northwest of the New Hebrides Islands and steamed to intercept a Japanese carrier-battleship force bearing down on Guadalcanal.

The Battle of Santa Cruz Island took place 26 October 1942 without contact between surface ships of the opposing forces. That morning *Enterprise* planes bombed carrier *Zuiho*. Planes from *Hornet* severely damaged carrier *Shokaku*, and cruiser *Chikuma*. Two other cruisers were also attacked by *Hornet* aircraft. Meanwhile, *Hornet*, herself, was fighting off a coordinated dive bombing and torpedo plane attack which left her so severely damaged that she had to be abandoned. Commented one sailor, awaiting rescue, when asked if he planned to re-enlist, "Dammit, yes—on the new *Hornet*!" Captain Mason, the last man on board, climbed over the side and survivors were soon picked up by destroyers.

The abandoned *Hornet*, ablaze from stem to stern, refused to accept her intended fate from friends. She still floated after receiving nine torpedoes and more than 400

rounds of 5-inch shellfire from destroyers *Mustin* and *Anderson*. Japanese destroyers hastened the inevitable by firing four 24-inch torpedoes at her blazing hull. At 0135, 27 October 1942, she finally sank off the Santa Cruz Islands. Her proud name was struck from the Navy List 13 January 1943.

Hornet (CV-8) received four battle stars for World War II service. Her famed Torpedo Squadron 8 was awarded the Presidential Unit Citation "for extraordinary heroism and distinguished service beyond the call of duty" in the Battle of Midway.

VIII

(CV-12: dp. 27,000; l. 872'; b. 147'6"; dr. 28'; s. 33 k.; cpl. 3,448; a. 12 5"; 40 40mm.; cl. *Essex*)

The eighth *Hornet* (CV-12) was launched 30 August 1943 by the Newport News Shipbuilding & Dry Dock Co., Newport News, Va.; sponsored by Mrs. Frank M. Knox, wife of the Secretary of the Navy; and commissioned 29 November 1943, Captain Miles M. Browning in command.

Hornet conducted shakedown training off Bermuda before departing Norfolk 14 February 1944 to join the Fast Carrier Task Force 20 March at Majuro Atoll in the Marshalls. After lending air support to protect the invasion beaches in New Guinea, she conducted massive aerial raids against Japanese bases in the Caroline Islands and prepared to support the amphibious assault for the occupation of the Marianas Islands.

On 11 June 1944 *Hornet* launched raids on Tinian and Saipan. The following day she conducted heavy bombing attacks on Guam and Rota. During 15 to 16 June, she blasted enemy air fields at Iwo and Chichi Jima to prevent air attacks on troops invading Saipan in the Marianas. The afternoon of 18 June 1944 *Hornet* formed with the Fast Carrier Task Force to intercept the Japanese First Mobile Fleet, headed through the Philippine Sea for Saipan. The Battle of the Philippine Sea opened 19 June 1944 when *Hornet* launched strikes to destroy as many land-based Japanese planes as possible before the carrier-based Japanese aircraft came in.

The enemy approached the American carriers in four massive waves. But fighter aircraft from *Hornet* and other carriers did a magnificent job and broke up all the attacks before the Japanese aerial raiders reached the task force. Nearly every Japanese aircraft was shot down in the great air battles of 19 June 1944 that became commonly known as "The Marianas Turkey Shoot." As the Japanese Mobile Fleet fled in defeat on 20 June, the carriers launched long-range airstrikes that sank Japanese carrier *Hiji* and so damaged two tankers that they were abandoned and scuttled. Admiral Ozawa's own flag log for 20 June 1944 showed his surviving carrier air power as only 35 operational aircraft out of the 430 planes with which he had commenced the Battle of the Philippine Sea.

Hornet, basing from Eniwetok in the Marshalls, raided enemy installations ranging from Guam to the Bonins, then turned her attention to the Palaus, throughout the Philippine Sea, and to enemy bases on Okinawa and Formosa. Her aircraft gave direct support to the troops invading Leyte 20 October 1944. During the Battle for Leyte Gulf she launched raids for damaging hits to the Japanese center force in the Battle off Samar, and hastened the retreat of the enemy fleet through the Sibuyan Sea towards Borneo.

In the following months *Hornet* attacked enemy shipping and airfields throughout the Philippines. This included participation in a raid that destroyed an entire Japanese convoy in Ormoc Bay. On 30 December 1944 she departed Ulithi in the Carolines for raids against Formosa, Indo-China, and the Pescadores Islands. En route back to Ulithi, *Hornet* planes made photo reconnaissance of Okinawa 22 January 1945 to aid the planned invasion of that "last stepping-stone to Japan."

Hornet again departed Ulithi 10 February for full-scale aerial assaults on Tokyo, then supported the amphibious landing assault on Iwo Jima 19-20 February 1945.

Repeated raids were made against the Tokyo plains industrial complex, and Okinawa was hard hit. On 1 April 1945 *Hornet* planes gave direct support to the amphibious assault landings on Okinawa. On 6 April her aircraft joined in attacks which sank the mighty Japanese battleship *Yamato* and her entire task force as it closed Okinawa. The following 2 months found *Hornet* alternating between close support to ground troops on Okinawa and hard-hitting raids to destroy the industrial capacity of Japan. She was caught in a howling typhoon 4 to 5 June 1945 which collapsed some 25 feet of her forward flight deck.

Hornet was routed back to the Philippines and from there to San Francisco, arriving 7 July 1945. Her overhaul was complete by 13 September 1945 when she departed as a part of the "Magic Carpet" operation that saw her return home troops from the Marianas and Hawaiian Islands. She returned to San Francisco 9 February 1946. She decommissioned there 15 January 1947, and joined the Pacific Reserve Fleet.

Hornet recommissioned 20 March 1951, then sailed from San Francisco for the New York Naval Shipyard where she decommissioned 12 May 1951 for conversion to an attack aircraft carrier (CVA-12). She recommissioned 11 September 1953 and trained in the Caribbean Sea before departure from Norfolk 11 May 1954 on an 8-month global cruise.

After operations in the Mediterranean Sea and the Indian Ocean, *Hornet* joined the mobile 7th fleet in the South China Sea where 25 July, search planes from her task group shot down two attacking Chinese Communist fighter planes. She returned to San Francisco 12 December 1954, trained out of San Diego, then sailed 4 May 1955 to join the 7th fleet in the Far East.

Hornet helped cover the evacuation of Vietnamese from the Communist controlled north to freedom in South Vietnam, then ranged from Japan to Formosa, Okinawa, and the Philippines in readiness training with the 7th fleet. She returned to San Diego 10 December 1955 and entered the Puget Sound Naval Shipyard the following month for conversion that included a hurricane bow and the installation of an angled flight deck which permits the simultaneous launching and recovery of aircraft.

Following her modernization overhaul, *Hornet* operated along the California coast. She departed San Diego 21 January 1957 to bolster the strength of the 7th fleet until her return from the troubled Far East 25 July. Following a similar cruise, 6 January-2 July 1958, she was converted to an Antisubmarine Warfare Support Carrier (CVS-12) in the Puget Sound Naval Shipyard. On 3 April 1959 she sailed from Long Beach to join the 7th fleet in antisubmarine warfare tactics ranging from Japan to Okinawa and the Philippines. She returned home in October, for training along the western seaboard.

In the following years, *Hornet* was regularly deployed to the 7th fleet for operations ranging from the coast of South Vietnam, to the shores of Japan, the Philippines and Okinawa. On 25 August 1966 she was on recovery station for the unmanned Apollo moonship that rocketed three-quarters of the way around the globe in 93 minutes before splashdown near Wake Island. Scorched from the heat of its re-entry into the Earth's atmosphere, the Apollo space capsule, designed to carry American astronauts to the moon, was brought aboard *Hornet* after its test.

Hornet returned to Long Beach 8 September, but headed back to the Far East 27 March 1967. She reached Japan exactly a month later and departed Sasebo 19 May for the war zone. She operated in Vietnamese waters throughout the remainder of spring and during much of the summer of 1967 aiding in the struggle to keep freedom alive in Southeast Asia.

Hornet received the Presidential Unit Citation and seven battle stars for service in World War II.

Hoste

(PF-83: dp. 1,430; l. 303'11"; b. 37'8"; dr. 13'8"; s. 20 k.; cpl. 190; a. 3 3"; cl. *Tacoma*)

Hoste (PF-83), originally designated PG-191, was built under Maritime Commission contract by Walsh-Kaiser Co. Inc., Providence, R.I. Intended for use by the United Kingdom, she was reclassified PF-83 15 April 1943, renamed *Nyasaland*, and launched 6 October 1943, sponsored by Mrs. William A. Cahir. *Nyasaland* was then completed and transferred under Lend-Lease to the United Kingdom 31 July 1944 as part of the 21 ship "Colony"-class. She served as a patrol and escort vessel until being returned to the United States 15 April 1946. The frigate was subsequently sold to Sun Shipbuilding & Dry Dock Co., Chester, Pa., 10 November 1947, and scrapped.

Hoste

Admiral Sir William Hoste (1780-1828), an outstanding British frigate captain who, in 1811, won the Battle of Lissa.

(DE-521: dp. 1,140; l. 289'5"; b. 35'1"; dr. 8'3"; s. 21 k.; cpl. 156; a. 3 3", 4 1.1", 9 21mm., 2 dct., 8 dep., 1 dcp. (h.h.); cl. *Everts*)

Hoste (DE-521) was launched 24 September 1943 by Boston Navy Yard, Boston, Mass.; accepted and transferred to Great Britain 3 December 1943 under Lend-Lease. This and other *Everts*-class destroyer escorts formed the *Captain*-class in the Royal Navy and played a vital part in allied antisubmarine operations during the Battle of the Atlantic. *Hoste* was returned to U.S. custody at Harwich, England, and commissioned 22 August 1945, Lt. C. G. Helm, Jr., in command.

The destroyer escort sailed 29 August from Harwich, arriving Philadelphia Navy Yard 9 September 1945. There she decommissioned 23 October and was eventually scrapped 7 May 1946.

Hotham

A British name.

(DE-574: dp. 1,400; l. 306'; b. 37'; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3", 2 dct., 1 dcp. (h.h.), 8 dcp.; cl. *Buckley*)

Hotham (DE-574) was launched by the Bethlehem-Hingham Shipyard, Hingham, Mass., 21 December 1943. Designated for transfer to Great Britain under Lend-Lease, she was delivered to the Royal Navy and commissioned by them 8 February 1944. *Hotham* served through the remainder of the war as an escort vessel, and was retained by the British after 1945 for experiments with gas turbine propulsion. She was returned to the U.S. Government 25 April 1952 and simultaneously transferred to the British under the Mutual Defense Assistance Program. The partially-stripped vessel was later returned to U.S. custody in February 1956, and her powerplant was sold to the Netherlands.

Hotham

(PF-75: dp. 1,430; l. 303'11"; b. 37'8"; dr. 13'8"; s. 20 k.; cpl. 190; a. 3 3"; cl. *Tacoma*)

Hotham (PF-75), originally PG-183, was built under Maritime Commission contract by Walsh-Kaiser Co. Inc., Providence, R.I. Intended for use by the United Kingdom, she was reclassified PF-75 15 April 1943, renamed *Bahamas*, and launched 17 August 1943, Mrs. James A. Gallagher as sponsor. *Bahamas* was then completed and transferred to the United Kingdom under Lend-Lease 6 December 1943 as part of the 21-ship "Colony" class. She served as a patrol and escort craft until being returned to the United States 11 June 1946. The frigate was

sold to John J. Duane Co., Quincy, Mass., 16 December 1947 and scrapped.

Hotspur

A former name retained.

Hotspur (AP-102) was renamed *La Salle* (q.v.) 6 April 1943.

Houghton

Communities in northwestern Michigan and southwestern New York.

The bark *A. Houghton* (q.v.) was incorrectly called *Houghton* and *Van Houghton*.

I

(PC-588: dp. 295; l. 174'; b. 23'; dr. 8'; s. 20 k.; cpl. 65; a. 1 3", 5 20mm., 2 rkt., 2 dep.; cl. *PC-461*)

PCC-588 was laid down by Leathem D. Smith Shipbuilding Co., Sturgeon Bay, Wis., 22 November 1941; launched 3 May 1942; sponsored by Mrs. Joshua L. Johns; and commissioned 22 June, Lt. J. R. Hinton in command.

After shakedown off Florida, *PC-588* was assigned to patrol and escort duty out of Key West and in the Gulf of Mexico. In late September 1942 she joined a convoy en route to the Pacific; after touching California ports, she arrived Pearl Harbor 28 November. From November 1942 until January 1944 the submarine chaser performed patrol and escort duty in the Hawaiian Islands.

Departing Pearl Harbor 18 January 1944, *PC-588* escorted SS *Richard Yates* to Makin, Gilbert Islands. For the remainder of World War II, she operated on patrol and escort duty in the South Pacific. Her efforts played an effective role in keeping the supply lines open during the final months of the war. *PC-588* returned to the United States in late 1945, decommissioned at Puget Sound 29 July 1946, and joined the Pacific Reserve Fleet.

While berthed with the Columbia River Group, *PC-588* was named *Houghton* 15 February 1956. She was struck from the Navy List and sold to Geomarine Services, Inc., 11 March 1960.

Houma

(Str: t. 10,387 (gr.); l. 435'; b. 56'; dph. 33'6"; dr. 26'; s. 10.5 k.)

Houma, a tanker, was built by the Bethlehem Ship Building Co., Sparrows Point, Md., and commissioned there on 22 January 1919, Lt. Comdr. C. Moore commanding.

After a trip up the coast to New York and Melville, R.I., the tanker sailed to Port Arthur, Tex., for fuel oil, arriving 24 April. Three days later she sailed, arriving at Ponta Delgada, Azores, 14 May to refuel American destroyers there. *Houma* remained in the Azores a month, servicing ships at Horta as well as Ponta Delgada refueling three destroyers at sea. She sailed for the States on 19 June arriving in New York 10 days later. *Houma* again sailed to Ponta Delgada, arriving there 24 July, and performed the same services as before. She returned to New York via Brest, France on 22 August.

Houma decommissioned at New York 4 September 1919, and was redelivered to the U.S. Shipping Board.

Housatonic

One of the rivers of New England which rises in Berkshire County, Mass., and flows southward into Connecticut before emptying into Long Island Sound a little east of Bridgeport.

I

(ScSlp.: t. 1,240; l. 207'; b. 38'; dr. 8'7"; s. 9 k.; cpl. 160; a. 1 100-pdr. Parrott rifle, 3 30-pdr. Parrott rifles, 1 11"

Dahlgren sb., 2 32-pdrs., 2 24-pdr. howitzers, 1 12-pdr. howitzer, 1 12-pdr. rifle)

The first *Housatonic* was launched 20 November 1861 by the Boston Navy yard; sponsored by Miss Jane Coffin Colby and Miss Susan Paters Hudson; and commissioned there 29 August 1862, Commander William Rogers Taylor in command.

Housatonic departed Boston 11 September and arrived Charleston 19 September to join the South Atlantic Blockading Squadron. She took station outside the bar. On 29 January 1863 her boats, aided by those of *Augusta*, *Blunt*, and *America*, boarded and refloated iron steamer *Princess Royal*. *Unadilla* had driven the blockade runner ashore as she attempted to slip into Charleston from England with a cargo consisting of two marine engines destined for Confederate ironclads and a large quantity of ordnance and ammunition. These imports were of such great potential value to the South that they have been called "the war's most important single cargo of contraband."

It was possibly in the hope of recovering this invaluable prize that Confederate ironclad rams *Chicora* and *Palmetto State* slipped out of the main ship channel of Charleston Harbor to attack the Union blockading fleet in the early morning fog 2 days later. They rammed *Mercedita* forcing her to strike her colors "in a sinking and perfectly defenseless condition" and moved on to cripple *Keystone State*. Gunfire from the rams also damaged *Quaker City* and *Augusta* before the Confederate ships withdrew under fire from *Housatonic* to the protection of shore batteries.

Housatonic captured sloop *Neptunc* 19 April as she attempted to run out of Charleston with a cargo of cotton and turpentine. She was credited with assisting in the capture of steamer *Secesh* 15 May. Howitzers mounted in *Housatonic*'s boats joined in the attack on Fort Wagner 10 July which began the continuing bombardment of the

Southern works at Charleston. In ensuing months her crew repeatedly manned boats which shelled the shoreline, patrolled close ashore gathering valuable information, and landed troops for raids against the outer defenses of Charleston.

Meanwhile *Housatonic* vigilantly maintained her station in the blockade outside the bar until just before 9 o'clock on the night of 17 February 1864. Her officer of the deck sighted an object in the water 100 yards off, approaching the ship. "It had the appearance of a plank moving in the water," he later reported. Although the chain was slipped, the engine backed, and all hands were called to quarters, it was too late. Within 2 minutes of the first sighting, *H. L. Hunley* rammed her torpedo into *Housatonic*'s starboard side, forward of the mizzenmast, in history's first successful submarine attack on a warship. Before the rapidly sinking ship went down, the crew managed to lower two boats which took all the men they could hold; most others saved themselves by climbing into the rigging which remained above water after the stricken ship settled on the bottom. Only two officers and three men in *Housatonic* were lost.

H. L. Hunley, with all her gallant crew, perished in the attack; but only after having written a fateful page in the history of naval warfare which foretold a giant role for undersea warfare in generations to come.

II

(SP-1697; dp. 7,620 n.; l. 405'1"; b. 48'; dr. 22'6"; s. 15 k.; cpl. 100; a. 1 5", 2 3", 2 mg.)

The second *Housatonic* was built in 1899 by Newport News Ship Building & Dry Dock Co., Norfolk, Va., and was acquired by the Navy from Southern Pacific Steam Ship Co., under the name *El Rio*. She commissioned 25 January 1918 and served as a mine planter in the 3d Naval District until decommissioning 5 August 1919 when she was returned to her owner.

USS *Housatonic* was destroyed by Confederate Submarine *H. L. Hunley* off Charleston Harbor 17 February 1864.

W S S Canandaigua

Off Charleston S.C.

February 18th 1861

378

Sir:

I have the honor to make the following report of the sinking of the U. S. S. Housatonic by a rebel torpedo, off Charleston S. C. on the evening of the 14th inst.

About 8.45 P.M. the officer of the deck Act Master J N Crosby discovered something in the water about one hundred yard from and moving towards the ship. It had the appearance of a plank moving in the water. It came directly towards the ship, the time from when it was first seen till it was close alongside being about two minutes.

During this time the chain was slipped, engine backed, and all hands called to quarters.

The torpedo struck the ship forward of the mizzen mast, on the starboard side in a line with the magazine. Having the
after

after first gun pivoted to port, we were unable to bring a gun to bear upon her.

About one minute after she was close alongside, the explosion took place, the ship sinking stern first, and heeling to port as she sank.

Most of the crew, saved themselves by going into the rigging while a boat was dispatched to the "Catawba". This vessel came gallantly to our assistance and succeeded in rescuing all but the

following named officers and men viz:

Ensign E. C. Haseltine, Captains O. C. Muzzey, Quartermaster John Williams, Landsman Theo. Parker, 2nd Cop. fireman John Hale. The above officers and men are missing and are supposed to have been drowned.

Capt. Peckering was seriously bruised by the explosion and is at present unable to make a report of the disaster.

Very Respectfully

Chas. H. Ser

A. J. Higginson

Lieutenant

To Rear Admiral

John A. Dahlgren

Comd'g South Atlantic Blockading Squadron

III

(AO-35: dp. 21,825 ft.; l. 520'0"; b. 68'0"; dr. 30'10"; s. 17 k.; cpl. 239; a. 1 4', 4 3"; cl. *Chicopee*)

The third *Housatonic* was a tanker completed in November 1941 by the Sun Shipbuilding & Dry Dock Co., Chester, Pa., under the name *Esso Albany*. After two voyages for Standard Oil Company of New Jersey, she was acquired by the Navy 9 January 1942, converted to a fleet oiler, and renamed *Housatonic*.

Shakedown training in Chesapeake Bay ended 10 March, and *Housatonic* joined Service Force, Atlantic Fleet. During the remainder of 1942 *Housatonic* carried fuel oil and aviation gas from the Gulf of Mexico to ports on the Atlantic Coast and in the Caribbean. A shortage of escorts necessitated the oiler's proceeding alone through waters infested with German submarines which were making many kills at that time. In July, the fleet oiler performed her first fueling at sea, servicing carrier *Ranger*, cruiser *Augusta*, and six destroyers engaged in ferrying Army P-40 fighter planes aboard the carrier from Port of Spain to Akkra on the Gold Coast of Africa. Fuel from *Housatonic* enabled this group to return to Port of Spain without stopping or putting into any port during the entire voyage.

In November, during Operation Torch, the invasion of North Africa, *Housatonic* fueled battleships, cruisers, and destroyers while they were at sea supporting the assault and capture of Cassablanca, French Morocco.

During 1943, the fleet oiler made four voyages to the Mediterranean from New York and Norfolk fueling destroyers at sea as they escorted convoys which supported the victorious allied campaigns in North Africa, Sicily, and southern Italy. In between these voyages she made one run from Norfolk to Argentina, Newfoundland and five from Texas ports to Norfolk. The close of the year found her at Bermuda training new destroyer escorts in the techniques of fueling at sea.

In 1944 *Housatonic* made three voyages from Norfolk to the Mediterranean, the first to Casablanca, the next to Oran, and the last to Naples. Then came a round trip from New York to Scotland and back with fast convoys. The highlight of this voyage came in Clyde where she fueled *Queen Elizabeth*.

Housatonic departed Norfolk 20 November for the Caroline Islands via Aruba, the Panama Canal, and Pearl Harbor. She arrived Ulithi 31 December and joined the Service Force, Pacific Fleet. From the first of the year until the surrender of Japan *Housatonic* was based at Ulithi whence she steamed to sea to fuel carriers, battleships, battle cruisers, cruisers, and destroyers of fast carrier groups which hammered Japanese installations as gigantic America sea power swept inexorably toward Japan. In this way she supported operations which took Luzon, Iwo Jima, and Okinawa and which bombarded the Japanese home islands.

After the surrender of Japan, *Housatonic* operated in the Yellow Sea fueling carriers, cruisers, and destroyers of the 7th Fleet which were supporting the occupation of North China and Korea. Floating mines made this duty particularly dangerous.

Housatonic arrived Tokyo Bay 17 October, and remained there until departing for the United States 12 November. She arrived San Francisco 26 November and decommissioned there 11 March 1946. She was transferred to the Maritime Commission 22 October and was sold to her former owner, The Standard Oil Company of New Jersey, 14 October 1947.

Houston

A city in Texas.

I

(AK-1: dp. 9,000; l. 392'; b. 50'9"; dr. 25'4"; s. 11 k.; cpl. 145; a. 4 3')

The first *Houston* (AK-1) was the former German freighter *Liebenfels*, built by Bremer Vulcan, Vegesack,

Germany, in 1903. Operated by the Hansa Line, she arrived Charleston, S.C., in August 1914, and remained there until 1 February 1917, when her crew scuttled her. Finding her sunk and abandoned, U.S. authorities set about to raise the ship and took her to Charleston Navy Yard for refitting 20 March 1917. She commissioned as *Houston* (AK-1) 3 July 1917, Lt. Comdr. W. H. Lee, USNRF commanding.

Assigned to the transport service, *Houston* departed Charleston 11 July, loaded coal and oil at Hampton Roads, and joined a convoy sailing from New York 7 August 1917. She arrived Brest 25 August and subsequently made four voyages to and from New York transporting such valuable cargoes as radio equipment, trucks, airplanes, and general supplies. Returning to New York 18 November, the ship was assigned to the Naval Overseas Transportation Service, and made four more voyages between the East and West coasts of the United States, departing on the first of these 15 December 1918 from New York. Until her return to New York 14 April 1921 *Houston* carried coal, ordnance, lumber, and general supplies between the coasts in support of the Navy's two-ocean operations.

Houston was next assigned to trans-Pacific duty. She sailed from New York 4 May, took on cargo at Philadelphia and Norfolk, and steamed by way of San Francisco, Pearl Harbor and Guam to Manila, arriving 22 October 1921. The ship departed Cavite 16 November, and arrived San Francisco 11 January 1922. *Houston* decommissioned 23 March 1922 and was sold 27 September 1922 to Frank M. Warren of Portland, Ore.

II

(CA-30: dp. 9,050; l. 600'3"; b. 66'1"; dr. 16'4"; s. 33 k.; cpl. 621; a. 9 8', 6 21' tt.; cl. *Northampton*)

The second *Houston* (CA-30) was launched by Newport News Shipbuilding & Dry Dock Co., Newport News, Va., 7 September 1929; sponsored by Miss Elizabeth Holcombe, daughter of the mayor of Houston, Tex.; and commissioned as CL-30 17 June 1930, Captain J. B. Gay commanding. Her designation was changed to CA-30, 1 July 1931.

After conducting shakedown cruise in the Atlantic *Houston* returned to the United States in October 1930. She then visited Houston, Tex., and joined the fleet at Hampton Roads. Steaming to New York, the cruiser departed 10 January 1931 for the Pacific, and after stopping at the Canal Zone and the Hawaiian Islands arrived Manila 22 February 1931. *Houston* became flagship of the Asiatic Station upon arrival, and for the next year participated in training operations in the troubled Far East.

With the outbreak of war between China and Japan in 1932, *Houston* got underway 31 January for Shanghai to protect American lives and property. She landed Marine and Navy gun platoons to help stabilize the situation and remained in the area, with the exception of a good will cruise to the Philippines in March and one to Japan in May 1933, until being relieved by *Augusta* 17 November 1933. The cruiser sailed to San Francisco to join the Scouting Force, and for the years preceding World War II participated in Fleet Problems and maneuvers in the Pacific. During this period *Houston* made several special cruises. President Roosevelt came on board 1 July 1934 at Annapolis, Md., for a cruise of almost 12,000 miles through the Caribbean and to Portland, Ore., by way of Hawaii. *Houston* also carried Assistant Secretary of the Navy Henry L. Roosevelt on a tour of the Hawaiian Islands, returning to San Diego 15 May 1935. After a short cruise in Alaskan waters, the cruiser returned to Seattle and embarked the President again 3 October 1935 for a vacation cruise to the Cerritos Islands, Magdalena Bay, Cocos Islands, and Charleston, S.C. *Houston* also celebrated the opening of the Golden Gate bridge at San Francisco 28 May 1937, and carried President Roosevelt for a Fleet Review at the same city 14 July 1938.

Houston became flagship of the U.S. Fleet 19 September 1938, when Rear Admiral Bloch broke his flag on board

her, and maintained that status until 28 December, when she returned to the Scouting Force. Continuing the now-familiar routine of training exercises, she got underway for Fleet Problem 20, 4 January 1939 from San Francisco, sailed to Norfolk and Key West, and there embarked the President and the Chief of Naval Operations, Admiral Leahy, for the duration of the problem. She arrived Houston, Tex., 7 April for a brief visit before returning to Seattle, where she arrived 30 May.

Assigned as flagship Hawaiian Detachment, the cruiser arrived Pearl Harbor after her post-overhaul shakedown 7 December 1939, and continued in that capacity until returning to Mare Island 17 February 1940. Sailing to Hawaii, she departed 3 November for the Philippine Islands as the world situation grew darker. Arriving Manila 19 November 1940, she became flagship of Admiral Hart, Commander Asiatic Fleet.

As the war crisis deepened, Admiral Hart deposed his fleet in readiness. On the night of the Pearl Harbor attack, *Houston* got underway from Panay Island with fleet units bound for Darwin, Australia, where she arrived 28 December 1941 by way of Balikpapan and Surabaya. After patrol duty she joined the ABDA (American-British-Dutch-Australian) naval force at Surabaya. Air raids were frequent in the area, and *Houston's* gunners splashed four planes 4 February as Admiral Doorman, RNN, took his force to engage Japanese reported to be at Balikpapan. *Houston* took one hit, disabling her No. 3 turret, and cruiser *Marblehead* was so damaged that she had to be sent out of the battle area. Doorman was forced to abandon his advance.

Returning to Australia, *Houston* departed 15 February with a small convoy to reinforce the garrison on Timor. Before the day was out, the group was forced to beat off numerous air attacks, and next morning the Japanese attacked in full force. During this defensive action, *Houston* distinguished herself by driving off nearly the entire raid without damage to her transports.

Receiving word that the major Japanese invasion force was approaching Java protected by a formidable surface unit, Admiral Doorman resolutely determined to meet and seek to destroy the main convoy. Sailing 26 February with *Houston*, HMAS *Perth*, HNMS *De Ruyter*, HMS *Exeter*, HNMS *Java* and 10 destroyers, he met the Japanese support force under Admiral Takagi consisting of 4 cruisers and 13 destroyers. In the Battle of the Java Sea which followed, Doorman's forces fought valiantly, but were doomed by lack of air cover and communication difficulties. The ships met for the first time in the late afternoon, and as Japanese destroyers laid smoke the cruisers of both fleets opened fire. After one ineffective torpedo attack the Japanese light cruisers and destroyers launched a second at 1700, this attack sinking *Kortenaer*. *Exeter* and destroyer *Electra* were hit by gunfire, *Electra* fatally, and at 1730 Admiral Doorman turned south toward the Java coast, not wishing to be diverted from his main purpose, the destruction of the convoy itself. With dogged fighting spirit he dodged another torpedo attack and followed the coastline, during which time *Jupiter* was sunk, either by mine or internal explosion. Then *Encounter* was detached to pick up survivors from *Kortenaer*, and the American destroyers, their torpedoes expended, were ordered back to Surabaya. Now with no destroyer protection, Doorman's four remaining ships turned north again in a last gallant attempt to stop the invasion of Java.

At 2300 the same night, the cruisers again encountered the Japanese surface group. On parallel courses the opposing units opened fire, and the Japanese launched a devastating torpedo attack 30 minutes later. *De Ruyter* and *Java*, caught in a spread of 12 torpedoes, exploded and sank, carrying their captains and Admiral Doorman down with them.

Before losing contact with *Perth* and *Houston*, Doorman had ordered them to retire. This was accomplished, but the next day the two ships steamed boldly into Banten Bay, hoping to damage the Japanese invasion forces there. The cruisers were almost torpedoed as they approached

the bay, but evaded the nine torpedoes launched by destroyed *Fubuki*. The cruisers then sank one transport and forced three others to beach. A destroyer squadron blocked Sunda Strait, their means of retreat, and on the other hand large cruisers *Mogami* and *Mikuma* stood dangerously near. The result was foreordained, but *Houston* and *Perth* fought valiantly. *Perth* came under fire at 2336 and in an hour had been sunk from gunfire and torpedo hits. *Houston* then fought alone, her guns blazing at the enemy all around her, a champion at bay. Soon after midnight she took a torpedo and began to lose headway. During this time *Houston's* gunners scored hits on three different destroyers and sank a minesweeper, but suffered three more torpedo explosions in quick succession. Captain Rooks was killed by a bursting shell at 0030 and as the ship came to a stop Japanese destroyers swarmed over her machine gunning the decks. A few minutes later the gallant *Houston*, her name written imperishably in the records of heroism, rolled over and sank, her ensign still flying.

Houston's fate was not known by the world for almost 9 months, and the full story of her courageous fight was not fully told until after the war was over and her survivors were liberated from prison camps. Captain Rooks received posthumously the Medal of Honor for this extraordinary heroism.

In addition to two battle stars, *Houston* was awarded the Presidential Unit Citation.

III

(CL-81 : dp. 10,000, l. 610'1'' ; b. 66'4'' ; dr. 20' ; s. 33 k. ; cpl. 992 ; a. 12 6'' , 12 5'' ; cl. *Cleveland*)

The third *Houston* (CL-81) was launched by Newport News Shipbuilding & Dry Dock Co., Newport News, Va., 19 June 1943; sponsored by Mrs. C. B. Hamill. Originally named *Vicksburg*, her name had been changed 12 October 1942. The ship commissioned 20 December 1943, Captain W. W. Behrens commanding.

Houston departed Norfolk 1 February 1944 for her shakedown cruise in the Caribbean and after a period of training out of Boston sailed for the Pacific 16 April. She arrived Pearl Harbor via the Panama Canal and San Diego 6 May, and after more training exercises arrived Majuro Atoll 31 May to join Vice Admiral Mitscher's famed fast carrier task force. *Houston* was to take part in the invasion of the Marianas, a spectacular amphibious operation and another important step in the drive across the Pacific Islands to Japan. Departing 5 June 1944, *Houston* screened carrier strike units which pounded the Marianas 12-13 June and the Bonins 15-16 June.

As the forces of Adm. Kelly Turner landed on Saipan 15 June, the Japanese made preparations to close the island for a decisive naval battle. The great fleets approached each other 19 June for the biggest carrier engagement of the war, and as four large air raids hit the American dispositions, fighter cover and antiaircraft fire from *Houston* and other screen ships decimated the attacking Japanese formations. In this great Battle of the Philippine Sea, the first phase of which is called "The Marianas Turkey Shoot," Japan's naval air power was struck a death blow and the invasion of the Marianas secured. After offensive raids had sunk carrier *Hiji*, the battle ended with the task force returning to protect the Marianas. *Houston* remained to screen carrier strikes and engaged 26 June in shore bombardment on Guam and Rota, destroying a radar station, an airstrip, and 10 aircraft on the ground. She then returned to Eniwetok 12 August to prepare for the next operation.

Assigned to the newly-designated Task Group 38.2 under Rear Admiral Bogen, *Houston* sailed 30 August for air attacks on the Palaus 6 September, after which the cruiser and a group of destroyers bombarded Peleliu and other islands preparatory to amphibious landings. The carrier group then turned to the Philippines for strikes against airfields and shipping, and returned to Peleliu to support the forces ashore 17-19 September.

Embarked in USS *Houston* (CA-30) in 1939, President Franklin D. Roosevelt and Admiral William D. Leahy observed a fleet problem

Returning to Ulithi 1 October 1944, *Houston* and her task group sailed 5 days later for an important operation into the western Pacific. Warming up with strikes against Okinawa 10 October, the carrier force moved toward its real objective 12 October—Formosa. In a devastating 3 days of attacks, naval air forces did much to destroy Formosa as a supporting base for the Japanese in the island battles still to come. Japanese forces retaliated with heavy and repeated land-based aircraft attacks. *Houston* splashed four aircraft in one attack on 12 October, and helped repel another attack next day, in which *Canberra* suffered damage. Taking *Canberra*'s old station 14 October, *Houston* and other ships met another heavy raid. Her gunners shot down three of the attackers but a fourth's torpedo hit her engine room, causing loss of power.

Captain Behrens requested a tow. This delicate operation was undertaken by *Boston*. By midnight both *Canberra* and *Houston* were under tow to Ulithi for repairs. *Pawnee*, fleet tug, assumed the tow 16 October. Late that afternoon one of the determined strikes from Formosa still trying to sink the ships placed another torpedo in *Houston*, in her stern. Evacuating surplus hands to escorting ships, the captain kept his damage control parties working and managed to keep *Houston* afloat and moving slowly toward Ulithi.

Learning that the Japanese believed "CripDiv I", as it was called, to be the battered remnants of Task Force 38, Admiral Halsey set a trap for the enemy fleet, hoping to lure them into an attack on the two crippled cruisers. The Japanese fleet actually did sortie from the Inland Sea but after an air attack evidently thought better of

the idea and retired. *Houston* and *Canberra* were soon out of land-based air range, and arrived Ulithi 27 October 1944. After temporary repairs she proceeded to Manus 20 December and eventually steamed to New York Navy Yard, arriving 24 March 1945.

Houston steamed out of New York harbor 11 October 1945, after extensive rebuilding. Following refresher training in the Caribbean she took part in training exercises out of Newport, R.I. She sailed 16 April 1946 for an extended goodwill tour of European ports, visiting cities in Scandinavia, Portugal, Italy, and Egypt. She returned 14 December 1946 and engaged in training and readiness operations until 17 May 1947, when she sailed with Cruiser Division 12 for a Mediterranean cruise. Returning to Philadelphia 16 August 1947, *Houston* decommissioned 15 December 1947, was placed in reserve, and finally stricken from the Navy List 1 March 1959 and scrapped.

Houston received three battle stars for World War II service.

Hoven

(Tk: dp. 14,530; l. 453'; b. 56'; dr. 26'; dph. 33'6"; s. 11 k.; cpl. 67)

Hoven, a tanker, was built by the Bethlehem Ship Building Co., Sparrows Point, Md.; and commissioned there 16 May 1919, Lt. Comdr. Alexander MacKenzie in command.

After loading fuel oil at Bayonne, N.J., the tanker sailed for Europe on 23 May, reaching Horta, Azores, on 31 May and continuing on to Brest on 5 June. At both ports she refueled American warships, and then returned to New

York on 22 June. *Hovey* sailed to Port Arthur for fuel oil and from 22 July to 9 August transited the Atlantic to Brest. She returned to New York on 31 August and decommissioned there 8 September 1919. *Hovey* was delivered to the USSB the day she decommissioned. *Hovey* was sold to Beacon Oil Co., Boston, Mass., in 1927 and renamed *Beacon Hill*.

Hovey

Charles Emerson Hovey was born in Portsmouth, N.H., 10 January 1885. Ensign Hovey graduated from the Naval Academy in 1907. He served in *Panganga* in the Philippines in 1911. While in charge of a shore party on the island of Basilan, Ensign Hovey was killed by gun shot when attacked by hostile natives 24 September 1911.

(DD-208: dp. 1,190; l. 314'4"; b. 30'8"; dr. 9'3"; s. 35 k.; cpl. 167; a. 4 4", 8 .50 cal. mg., 2 dct.; cl. *Clemson*)

Hovey (DD-208) was launched 26 April 1919 by William Cramp & Sons, Philadelphia; sponsored by Mrs. Louise F. Kautz, sister of Ensign Hovey; and commissioned 2 October 1919, Comdr. Stephen B. McKinney in command.

After shakedown off the coast of Florida and in the Caribbean *Hovey* sailed from Newport 19 December 1919 in company with *Chandler* for the Azores and Brest, France, for duty as station ship. She sailed from Dalmatia, Italy 10 July 1920 for the Adriatic to deliver important papers and claims. Arriving Constantinople 12 July she later visited various Russian ports as station ship until 17 December when she sailed for Port Said, Egypt, and duty with the Asiatic Fleet in the Philippines. *Hovey* remained on the Asiatic station until she returned to San Francisco 2 October 1922, decommissioning at San Diego, 1 February 1923.

Hovey recommissioned 20 February 1930 at San Diego, Commander Stuart O. Greig in command. After shakedown out of San Diego and Mare Island she served principally as training ship for reservists until 9 April 1934 when she transited the Panama Canal, arriving New York 31 May. After training and fleet exercises out of New England and off the Florida coast, *Hovey* returned to San Diego 9 November. After overhaul at Mare Island, she resumed her operations along the West Coast with additional exercises and fleet problems in the Canal Zone and Hawaiian waters.

With the advances in technology and the good foresight and judgment of our naval leaders in strengthening America's Navy, *Hovey* converted to a high speed minesweeper and was reclassified DMS-11 19 November 1940. After intensive training she sailed 4 February 1941 for duty at Pearl Harbor. When the Japanese bombed Pearl Harbor 7 December 1941 *Hovey* was steaming in company with *Chandler* as antisubmarine screen for *Minneapolis*, engaged in gunnery practice some 20 miles off Pearl Harbor. The minesweeper immediately took up patrol and convoy duty around Pearl Harbor until 20 May when she escorted a 20-ship convoy to San Francisco, arriving 31 May. *Hovey* returned to Pearl Harbor in mid-June and sailed 10 July for the southwest Pacific escorting *Argonne* in company with *Southard*. She reached the Fiji Islands 23 July and joined Minesweeping Group of Rear Adm. Richmond K. Turner's South Pacific Amphibious Force the 31st.

On 7 August during the invasion of Guadalcanal, the first amphibious assault in the long island-hopping campaign, *Hovey* was assigned a screening station for the transports. Then, shortly before 0800, she took a bombardment station to cover the landings east of Gavutu. Japanese shore batteries opened up but were quickly silenced by accurate fire from *Hovey* and the other ships providing fire support. She next joined other DMS's for sweeps between Gavutu and Bungana Islands. The next morning she steamed into Lengo Channel to help ward off an attack by a squadron of torpedo bombers. The fire from our own surface units was so intense that it caused the enemy to drop their torpedoes prematurely at too great

a range, thereby rendering the attack almost totally ineffective.

Hovey continued her operations around Guadalcanal before retiring to New Caledonia 13 September for replenishment. From there she proceeded to Samoa before returning to Ndeni, Santa Cruz, with a reconnaissance party of marines on board. Returning to New Caledonia, *Hovey* departed 10 October with two PT boats in tow and 127 drums of aviation gasoline on board, which she delivered to Tulagi two days later. *Hovey* continued escort duty between Guadalcanal and Espiritu Santo, until she returned to San Francisco 19 April 1943 for overhaul. She joined a convoy out of Mare Island 31 May for New Caledonia, arriving 10 August. She then resumed her escort and patrol duties until 30 October when she joined Rear Adm. T. S. Wilkinson's III Amphibious Force for the Cape Torokina landing, 1 November 1943. Never before in the Pacific had a major landing been made so close to a major enemy air base as Torokina was to Rabaul. But Wilkinson's force had excellent air coverage and the operations went off so well that he informed his transports that they could bombard Cape Torokina. For the next week during the seizure of Empress Augusta Bay, *Hovey* operated with the invasion forces, screening transports and making prelanding sweeps.

Hovey continued screening and escort duties in the Solomons until 5 April 1944 when she escorted *Lindewald* from Tulagi to Majuro, Marshall Islands. She returned to Espiritu Santo 11 April and on the 20th joined Task Unit 34.9.3 (Captain Kane in *Petrof Bay*) delivering replacement planes to other carriers at Manus. The task unit rendezvoused 29 April with Fast Carrier Task Force 58 to furnish replacement planes for the first strikes on Truk. Proceeding to Florida Island, *Hovey* departed for the West Coast, arriving 31 May via Pearl Harbor.

Repairs complete, *Hovey* sailed for Pearl Harbor 29 July to become flagship for Mine Squadron Two (Commander W. R. Loud). She sortied from Port Purvis 6 September as part of the antisubmarine screen for Rear Admiral Oldendorf's Western Gunfire Support Group for operations in the southern Palaus. After sweeps between Angaur and Peleliu Islands and in Kossol Passage *Hovey* took up antisubmarine patrol in the transport area off Peleliu Island. She joined the Minesweeping and Hydrographic Group of Rear Adm. Thomas Sprague's Escort Carrier Group for the Invasion of Leyte (17-25 October 1944). On the 17th she began sweeping ahead of the high speed transports and fire support vessels in the approach to the landing beaches on Dinagat Island. After more sweeps through Looc Bay and the Tacloban-Dulag approach *Hovey* retired to Manus 25 October.

As flagship for Commander Loud's Minesweeping and Hydrographic Group, *Hovey* departed Manus 23 December, arriving Leyte Gulf the 30th. She sortied 2 January 1945, proceeded south through Suriago Strait and passed into the Mindanao Sea en route to the landings on Lingayen, Luzon. Many snoopers harassed the convoy during the night but no attacks developed until morning of the 3d. From then on the convoy was under air attack so much that *Hovey* had to adopt the policy of not firing unless she was directly under attack, lest she expend all her ammunition. By 6 January the minesweepers were in the entrance to Lingayen Gulf. At 0800 the sweepers came under attack and *Hovey* immediately splashed one suicide plane. As the ships made a return sweep, two suicide planes made straight runs on the last two ships in the column, crashing *Brooks* and *Long*. *Hovey* slipped her gear and stood in to assist *Long*. *Long's* entire bridge and well deck was on fire, with intermittent explosions coming from the forward magazine and ready ammunition. Because of the explosions and air attacks, *Hovey* could not get alongside, but spent an hour picking up 149 survivors. At dark the sweepers made their night retirement and began steaming off the entrance to Lingayen Gulf. No more attacks occurred until 0425, 7 January, when enemy aircraft were picked up on radar. At 0450, one plane flying low to the water came in from the starboard quarter passing ahead of *Hovey*. A few moments later

another plane coming from the port beam was put on fire by *Chandler*. This plane passed very low over *Hovey* and crashed on the starboard beam. At 0455, the instant the burning plane crashed, *Hovey* was struck by a torpedo on her starboard side in the after engine room. Lights and power were lost instantly. The stern remained nearly level and sinking to the top of the after deck house, the bow listed 40 degrees to starboard and rose out of the water, the ship breaking in half. Two minutes later the bow listed to 90 degrees, rose vertically and rapidly sank in 54 fathoms of water, suffering 24 killed in addition to 24 more men who were survivors from *Long* and *Brooks*.

In 1778 John Paul Jones said "I wish to have no connection with any ship that does not sail fast for I intend to go in harms way". So it was with *Hovey*. Though lightly armed, she braved enemy shore fire, strafing and bombing attacks to complete minesweeping, fire support, escort duty, and many other missions. Constantly vigilant and ready for battle she fought her guns valiantly, inflicting serious damage on vital enemy units. She steamed boldly through enemy waters, contributing directly to the success of eight major operations. Her own gallant fighting spirit and the skill and courage of her entire crew reflected the highest credit upon *Hovey* and the U.S. Naval Service.

Hovey received eight battle stars for World War II service.

Howard

Charles W. Howard volunteered for service in the Navy during the Civil War, being appointed mate in October 1862. As acting ensign he served on board the *New Ironsides* and was in charge of the deck when that ship was attacked by the Confederate torpedo boat *David* in Charleston Harbor, on the night of 5 October 1863. Mounting the rail, he ordered the sentries to fire on the approaching enemy, and while exposed he received a mortal wound. He died 5 days later and was honored by being appointed acting master after his death "for gallant conduct in face of the enemy."

(DD-179: dp. 1,060; l. 314'5"; b. 31'8"; dr. 8'6"; cpl. 101; a. 4.4", 2.3", 12.21" tt.; cl. *Wickes*)

Howard (DD-179) was launched by Union Iron Works, San Francisco, Calif., 26 April 1919; sponsored by Marion Filmer, and commissioned 29 January 1920 at Mare Island, Calif., Comdr. L. M. Stewart in command.

Howard departed San Francisco 1 March 1920 to join the Pacific Destroyer Force at San Diego. After initial tactical maneuvers and gunnery training, she departed San Diego 3 May for Topolobampo, Mexico, where she was vitally needed to protect American interests. She rejoined her destroyer flotilla 17 May to participate in intensive and prolonged operations in the San Diego area, including torpedo practice, patrol, battle practices and exercises with submarines. *Howard* decommissioned 27 May 1922.

Recommissioned 29 August 1940, *Howard* was converted to a minesweeper and reclassified DMS-7. She sailed from San Diego in mid October, arrived at Norfolk on the 29th and proceeded 19 November for duty in the Caribbean. She remained there until 17 May 1941 conducting minesweeping assignments and patrol duty enforcing the Neutrality Act. *Howard* returned to Norfolk 19 May and participated in exercises along the Chesapeake Bay until the Japanese attack on Pearl Harbor 7 December 1941 plunged the United States into the war.

Howard was underway 8 December on escort duty, and in the months that followed, convoyed transports and tankers in the Caribbean and western Atlantic, keeping supply lanes open despite German U-boats. Plans called for an invasion of North Africa in 1942, a massive and hazardous amphibious operation projected across thousands of miles of ocean. In October, *Howard* joined Admiral Hewitt's Western Naval Task Force at Norfolk. She sailed 24 October and screened flagship *Augusta* during the Atlantic crossing. As troops landed 8 November

she performed both minesweeping and screening duties. During the first phase of the Naval Battle of Casablanca that day *Howard* screened *Augusta* as the cruiser engaged shore batteries and dueled French battleship *Jean Bart*. The destroyer then remained off Casablanca and Saï while the American soldiers consolidated their beachheads and moored with victorious naval units at Casablanca 16 November 1942. After performing antisubmarine patrol duties she returned to Norfolk 29 December.

During most of 1943, *Howard* plied the convoy lanes of the Atlantic and Caribbean protecting Allied ships from submarine and air attack. She steamed to the West Indies, Panama, Newfoundland, and Iceland on this duty, a key part of which was protecting the oil tankers so vital to the conduct of the war.

As the tempo of operations against Japan increased, *Howard* was transferred to the western Pacific theater, sailing from Norfolk 21 November 1943, and arriving San Diego 7 December. After repairs and training, the ship sailed 25 March, escorting ships to Pearl Harbor and Majuro. She screened a returning convoy to Pearl Harbor, arriving 24 April, and there began preparations for the gigantic invasion of the Marianas. Joining Adm. "Kelly" Turner's hard-fighting amphibious task force, *Howard* sortied 29 May and arrived off Saipan via Eniwetok 13 June. The ship swept minefields during the day and conducted patrol and harassing fire by night until the landings 15 June. *Howard* then was assigned to screen transports, and made two shuttle voyages to Eniwetok and back to the Marianas before returning to Pearl Harbor 10 August 1944. In capturing the Marianas, the Navy had taken a long stride toward Japan and, as a bonus, had wiped out enemy naval air strength while smashing the Japanese Navy's attempt to defend the strategic island group.

Howard's next operation was the long-awaited invasion of the Philippines, slated for October on the island of Leyte. Following training in the Hawaiian Islands she arrived Eniwetok 24 September, and steamed to Leyte Gulf 17 October. Once more she carried out dangerous minesweeping duties, clearing paths in Surigao Strait and Leyte Gulf, despite heavy weather. Her task completed, she departed 24 October for Manus with the invasion underway and during the first phase of the giant fleet battle for Leyte Gulf, which ended in a decisive victory for the U.S. Navy.

Training operations in the Admiralties occupied the ship for the next 2 months, but she sailed again from Manus 23 December to take part in the next phase of the Philippines operation, the invasion of Luzon. She rendezvoused at Leyte Gulf 30 December and departed in convoy for Lingayen Gulf, 2 January 1945. During this voyage through the Philippines, the Japanese made desperate suicide attacks, with *Howard* splashing one attacker and assisting in destroying many others. Unchecked, the invasion force drove on to the goal, arriving 6 January. The minesweepers began their work under almost constant air attack; and, by the time troops landed 9 January, three of *Howard's* sister ships had been lost. But the assault could not be blocked and proved another of a long series of outstanding amphibious victories, success assured. The veteran mincraft departed to arrive Leyte Gulf 15 January 1945, and Ulithi 5 February.

As the American amphibious sweep surged ever closer to Japan, *Howard* sailed from Tinian 13 February with the invasion force for Iwo Jima. Assuming her customary role in advance of the landings, she commenced exploratory sweeps off the island 16 February, fighting off numerous air attacks. After the assault 19 February the ship acted as a screening ship, arriving Saipan 2 March. Following another period of screening duty off Iwo Jima later in March, *Howard* arrived Pearl Harbor via Guam 4 April 1945.

Newer ships now took the 25-year-old veteran's duty on the front lines. Reclassified AG-106, 5 June 1945, she escorted submarines in Hawaiian waters and acted as plane guard for carrier operations before sailing for the United

USS *Howard* (DD-179) on acceptance trials in Santa Barbara Channel 13 January 1920 just prior to commissioning

States 2 October. Transiting the Panama Canal, *Howard* arrived Philadelphia 2 November and decommissioned 30 November 1945. In 1946 *Howard* was sold to Northern Metals Co., Philadelphia, Pa., and scrapped.

Howard received six battle stars for World War II service.

Howard D. Crow

Howard Daniel Crow was born in Alvarado, Tex., 2 February 1918, and was commissioned ensign after completing Naval Reserve Midshipman's School, Northwestern University, 14 March 1941. Ensign Crow reported to battleship *Maryland* 29 March. In the surprise Japanese attack on Pearl Harbor 7 December 1941, *Maryland* was moored inboard of *Oklahoma* and received two bomb hits, one of which killed Ensign Crow.

(DE-252: dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; cpl. 186; a. 3 3", 2 40mm., 8 20mm., 2 dct., 8 dep., 1 dcp. (h.h.), 3 21" tt.; cl. *Edsall*)

Howard D. Crow (DE-252) was launched by Brown Shipbuilding Co., Houston, Tex., 26 April 1943; sponsored by Miss Viola Elaine Warner; and commissioned 27 September 1943, Lt. Comdr. D. T. Adams, USCG, in command.

Manned by the Coast Guard, *Howard D. Crow* conducted shakedown training out of Bermuda during October and November, reporting to Norfolk for convoy duty 1 December. The destroyer escort sailed with her first convoy 15 December, saw it safely to Casablanca, and returned to New York 24 January 1944. In the months that followed *Howard D. Crow* made 10 arduous escort voyages to British ports, protecting the supplies which sus-

tained the great land offensive which was to end the war with Germany.

The destroyer escort was berthed at New York when Germany surrendered 8 May 1945, and after extensive refresher training in the Caribbean sailed from Guantanamo Bay for the Pacific War 2 July. Arriving Pearl Harbor via the Panama Canal 25 July, *Howard D. Crow* continued into the western Pacific for a tour of vital weather-reporting duty, so important to the operation of the great fleets. She sailed from Midway 13 December 1945, and after stopping at the Panama Canal and New York arrived Green Cove Springs, 15 March 1946. She decommissioned 22 May 1946 and entered the Atlantic Reserve Fleet.

With the Korean conflict came greater demands on the far-flung Navy, and *Howard D. Crow* recommissioned 6 July 1951 with a Navy crew. After shakedown training she reported to Key West as Sonar School training ship, helping develop new equipment and tactics in anti-submarine warfare. Moving north to Newport in 1952, the ship took part in fleet antisubmarine exercises off the coast. For the next 6 years *Howard D. Crow* followed this pattern of operations—antisubmarine training, exercises in the Atlantic and Caribbean, and periodic overhauls. In 1957 she took part in important NATO exercises with almost 50 ships from a dozen countries, and in 1958 the versatile ship acted as communications ship during a successful Jupiter nose-cone recovery off Puerto Rico.

Howard D. Crow was assigned to Galveston, Tex., as reserve training ship in September 1958. In this capacity she conducted 2-week training cruises for reservists, and at the same time maintained the ship in a high state of readiness for any emergency. Her periodic training cruises took the escort vessel to Key West and the Caribbean. In August 1961, however, the Berlin situation worsened, and *Howard D. Crow* was one of several reserve training ships returned to active service to increase the nation's readiness. She conducted refresher training at Guantanamo Bay and operated with the fleet in the Atlantic and Caribbean until August 1962.

The ship returned to reserve training duty 1 August 1962, again based at Galveston. She continued through 1963 into 1967 to provide at-sea training for naval reservists so vital in keeping America's defenses at the highest possible level of training and skill.

Howard F. Clark

Howard Franklin Clark was born in Wilmington, Del., 15 September 1914, and graduated from the Naval

Academy 2 June 1938. He served at sea until 1940, when he underwent flight training. Reporting to carrier *Lexington* 1 April 1941 as a member of Fighter Squadron 3, he won a Distinguished Flying Cross 20 February 1942 when he brought down an enemy bomber attempting to attack the carrier. During the Battle of the Coral Sea, Clark again and again engaged enemy aircraft, in utter disregard of his own safety, until his plane was shot down. Lieutenant (j.g.) Clark was posthumously awarded a second Distinguished Flying Cross for his heroism during the battle, 7-8 May 1942.

(DE-533; dp. 1,350; l. 306; b. 36'8"; dr. 9'5"; s. 24 k.; cpl. 186; a. 2 5'; 2 det., 8 dep., 1 dep. (h.h.), 3 21' tt.; cl. *John C. Butler*)

Howard F. Clark (DE-533) was launched by the Boston Navy Yard 8 November 1943; sponsored by Mrs. Howard Clark, widow of the namesake; and commissioned at Boston 25 May 1944, Lt. Comdr. E. B. Hayden in command.

Howard F. Clark conducted shakedown training off Bermuda, returned to Norfolk 16 August, and two days later got underway for the Pacific. She transited the Panama Canal, called briefly at San Diego, and reported for duty at Pearl Harbor 18 September. For the next 3 months *Howard F. Clark* participated in battle maneuvers and training exercises in preparation for her part in the Navy's sweeping island campaign against Japan. Acting as screening ship during carrier operations, and later training with the Pacific Fleet Gunnery and Torpedo School, she departed Pearl Harbor 11 December 1944.

The destroyer escort arrived Manus 22 December and joined Admiral Stump's escort carrier group, forming for the important Lingayen Gulf invasion. The ships got underway 27 December, with *Howard F. Clark* in screening position, were joined by fast troop transports, and arrived Leyte Gulf 3 January 1945, where the entire invasion group assembled. This formidable force departed the same day for Lingayen Gulf, and began soon after its departure to experience fierce Japanese air attacks. The next day, she succeeded in downing several attackers. The toll, especially from suicide attacks, was high, but the force proceeded to its objective after splashing many of the aircraft, and the troops stormed ashore at Lingayen 6 January 1945. During the important landing and the battle which followed, *Howard F. Clark* screened the escort carriers as they furnished air support to soldiers ashore and flew combat missions to keep the skies above clear of enemy aircraft. The destroyer escort had occasion both 8 and 9 January to rescue downed aviators from the water, and was detached soon after the second rescue to return to Ulithi with Admiral Durgin's carriers.

Arriving 23 January 1945, they got underway 1 February for the next major step in the campaign—Iwo Jima. She became part of an underway replenishment group off Eniwetok and steamed to the eastward of the Marianas, where the group refueled and replenished Task Force 58 13-14 February. During the next days she protected the refueling operations of many ships in support of the Iwo Jima landings to come, landings which would provide an important air base for attacks against Japan. She arrived off the bitterly-contested island 5 March, spent 2 days patrolling the refueling area offshore, and returned to Ulithi 10 March.

Howard F. Clark joined with ammunition-laden LST's at Ulithi and departed 21 March for Okinawa, the next island on the schedule of victory in the Pacific. Reaching recently-captured Kerama Retto 28 March with her precious convoy, she then steamed again for refueling rendezvous protecting the task force ships as they refueled. This duty engaged her until returning to Ulithi 13 April, after which the destroyer escort steamed back toward Okinawa 22 April with another refueling task force. Task Force 58 was again serviced 26 April, and 6 May *Howard F. Clark* departed again for Ulithi as part of the escort for battleship *Missouri*. She arrived 9 May and was soon at sea again screening another unit of Admiral

Beary's 5th Fleet replenishment group. More refueling operations were conducted in the ocean approaches to Okinawa until 10 June, when *Howard F. Clark* was detached to escort an oiler unit to Guam. They arrived 13 June and continued to Ulithi, 22 June.

Howard F. Clark continued her vital screening operations as Admiral Beary's group became part of 3d Fleet. Steaming from Ulithi 3 July 1945, the ships replenished Task Force 38, thus supporting the carrier strikes against the Japanese mainland. During these operations, 8 July, the alert escort vessel rescued a pilot after a forced landing on the starboard bow of escort carrier *Hollandia*. Subsequently, she made three voyages in support of the buildup on Okinawa, returning from the final passage 7 September 1945. After several weeks of patrol and training maneuvers off Ulithi, she arrived Guam 11 October. The ship made one more stop at Ulithi 22 October, then sailed to Guam with a cargo of spare parts. She departed 5 November for the United States.

The destroyer escort arrived San Pedro, Calif., via Pearl Harbor, 23 November 1945, and decommissioned 15 July 1946 at San Diego. Entering the reserve fleet, San Diego Group, she was later transferred to Stockton, where she remains.

Howard Greene

A former name retained.

(SP-2200; dp. 230; l. 92'; b. 22'; dr. 11'3"; s. 12 k.; a. 2 2-pdrs., 1 mg.)

Howard Greene (SP-2200), a steam harbor tug built in 1917 by the Baltimore S.B. & D.D. Co., Baltimore, Md., was purchased by the Navy 11 February 1918. While serving as a district tug at the Washington Navy Yard, she was renamed *Catawba* (q.v.) and classified YT-32 20 July 1920. Ordered to Norfolk 18 July 1922, the tug served in the Hampton Roads area until 1933 when she was transferred to Charleston, S.C.

Reclassified YTM-32 on 15 May 1944, she operated out of Charleston Harbor through World War II. *Catawba* was placed out of service 20 August 1946, transferred to the Maritime Commission 26 December 1946, and sold to Lockwood Bros., Charleston, S.C.

Howard W. Gilmore

Howard Walter Gilmore was born in Selma, Ala., 29 September 1902 and enlisted in the Navy 15 November 1920. In 1922 he was appointed to the Naval Academy and after commissioning in 1926 reported to battleship *Mississippi*. Gilmore underwent submarine training in 1930 and in the years that followed served in various submarines and at stations ashore. In 1941 he assumed his first command, *Shark*, only to be transferred the day following Pearl Harbor to take command of the still-unfinished *Growler*. Gilmore commanded his submarine skillfully during three Pacific war patrols, receiving the Navy Cross for an attack on enemy destroyers during the first and a gold star in lieu of a second Navy Cross for the second. The submarine continued to take a heavy toll of shipping on her fourth war patrol, and on the night of 6-7 February 1943 she approached a convoy stealthily for a surface attack. Suddenly a fast gunboat closed and prepared to ram. Commander Gilmore skillfully outmaneuvered his opponent and rammed him at 17 knots, seriously damaging *Growler*. What followed is perhaps most eloquently expressed in the official citation: "In the terrific fire of the sinking gunboat's heavy machine guns, Commander Gilmore calmly gave the order to clear the bridge, and refusing safety for himself, remained on deck while his men preceded him below. Struck down by the fusillade of bullets and having done his utmost against the enemy, in his final living moments Commander Gilmore gave his last order to the Officer of the Deck, 'Take her down!' The submarine dived; damaged but under control, she was brought safely to port by her well-trained

crew inspired by the courageous fighting spirit of their captain." Commander Gilmore received the Medal of Honor posthumously, and his inspiring words and courageous sacrifice have taken their place among the great traditions of the U.S. Navy.

(AS-16: dp. 9,250; l. 529'6"; b. 73'4"; dr. 23'6"; s. 18 k.; cpl. 1,303; a. 4 5"; cl. *Fulton*)

Howard W. Gilmore (AS-16), originally *Neptune* but renamed before launching, was launched by Mare Island Navy Yard, Mare Island, Calif., 16 September 1943; sponsored by Mrs. H. W. Gilmore, widow of Commander Gilmore; and commissioned 24 May 1944, Captain D. N. Cone in command.

For her first 2 months, *Howard W. Gilmore* conducted shakedown training out of San Diego. After loading parts and supplies she sailed 12 August for Pearl Harbor, arriving 18 August.

Howard W. Gilmore arrived Majuro Atoll 19 September 1944, and began her vital tending duties. In the 4 months that followed she made voyage repairs on submarines, replenished them, and helped in training both crewmen and repairmen. She thus did much to maintain the high-intensity attack on Japanese shipping which hastened the end of the war. The ship also provided repairs and parts for surface ships when necessary. Returning to Pearl Harbor 29 January 1945, she took on replacement crews for Australia-based submarines and sailed for Brisbane, arriving 23 February. But the busy tender was soon underway again, this time sailing via Humboldt Bay to Subic Bay, Philippines, with supplies for an advanced base. *Howard W. Gilmore* arrived 13 March and immediately started refitting 7th Fleet subs and setting up a recuperation area for their crews. She continued this

duty through the climactic days of the Pacific war, sailing for the East Coast, via Pearl Harbor and Panama 31 August 1945. Arriving New York 17 October, *Howard W. Gilmore* took part in the joyous Navy Day celebrations in New York Harbor, where the fleet was reviewed by President Truman.

After a short stay in New London, Conn., *Howard W. Gilmore* steamed to Portsmouth, N.H., to load torpedoes and then sailed to her new home port, Key West, where she arrived 25 January 1946. Serving Submarine Squadron 4, the ship was to stay in Florida for the greater part of the next 13 years, serving submarines on their far-flung training and readiness duties. The ship occasionally tended submarines at Norfolk, and deployed to the Caribbean twice during this period, notably for Operation Springboard, a giant fleet exercise in the Caribbean in 1958.

Howard W. Gilmore sailed into storied Charleston harbor 30 July 1959 to take up her tending duties from this new base. In addition to servicing submarines during the next 18 months, the ship rode out Hurricane Donna in September 1960 off Charleston. During 1961 she operated off the Florida coast before entering Charleston Naval Shipyard in November for a major overhaul. During this repair period *Howard W. Gilmore* was fitted with facilities for servicing nuclear submarines, increasing her versatility and usefulness for today's nuclear Navy. With this important Fleet Rehabilitation and Modernization Overhaul (FRAM) completed the ship returned to the Caribbean for refresher training before resuming tender duties at Charleston.

In October 1962 the introduction of offensive missiles into Cuba brought strong response from the American President and people—a naval quarantine of the island.

USS *Howard W. Gilmore* (AS-16) in May 1950

Howard W. Gilmore's crew worked 'round the clock servicing two squadrons of submarines for Caribbean operations. American naval power forced the removal of the Communist threat to the Western Hemisphere.

From 1963 into 1967, the veteran tender continued to serve submarines from her home port, Charleston, making short cruises for training off the South Carolina coast and in the Caribbean. *Howard W. Gilmore* and her sister tenders fulfill the goal expressed in the slogan: "Service for the silent service".

Howarda

A former name retained.

(SP-144: dp. 38; l. 75'; b. 16'; dr. 3'4"; s. 9 k.; a. 1 3-pdr.)

Howarda, a wooden yacht, was built in 1913 by the Essington Company of Pennsylvania, and acquired by the Navy 11 June 1917 from her owner, H. S. Kerner, of Boca Grande, Fla. She commissioned at Key West 19 June 1917.

Assigned to the 7th Naval District, *Howarda* was based at Egmont Key and patrolled waters in the Gulf of Mexico and Tampa Bay. The boat served as guard boat and section patrol craft until being stricken from the Navy List and offered for sale 31 March 1919. Later withdrawn, *Howarda* was transferred to the Department of the Treasury for Coast Guard use 1 July 1919.

Howell Cobb

A U.S. Coast Survey name retained.

Howell Cobb, a Coast Survey schooner, was taken over by the Navy 10 June 1861 by Comdr. J. H. Ward, commanding Potomac Flotilla. Her first commanding officer was Acting Master's Mate A. J. Frank. *Howell Cobb* was actively employed on the Potomac River as a convoy ship, assisting the Army to insure smooth movement of supplies. This was vital service at a time when rail traffic north of Washington had been cut off by riots in Baltimore. She was also engaged, in Breton's Bay and vicinity, in suppressing illegal trade on the shores of the waters controlled by the Union. Sent to Philadelphia Navy Yard for repairs, she arrived Philadelphia 9 July 1862, and did not return to active service in the Civil War. She was later returned to the Coast Survey.

Howett

(PF-84: dp. 1,430; l. 303'11"; b. 37'8"; dr. 13'8"; s. 20 k.; cpl. 190; 3 3"; cl. *Tacoma*)

Howett (PF-84), originally designated PG-192, was built under Maritime Commission contract by Walsh-Kaiser Co., Inc., Providence, R.I. Intended for use by the United Kingdom, she was reclassified PF-84 15 April 1943, renamed *Papua*, and launched 10 October 1943, sponsored by Mrs. William Eastham. *Papua* was then completed and transferred under lend-lease to the United Kingdom 25 July 1944 as part of the 21-ship "Colony" class. She served as a patrol and escort vessel until being returned to the United States 13 May 1946. The frigate was subsequently sold to Boston Metals Co., of Baltimore, Md., for scrapping, but was resold to Egypt in 1950 for use as a passenger vessel by the Khedivial Mail Line, Alexandria.

Howick Hall

(NOTS: d. 8,097 t.; l. 413'; b. 51'6"; dr. 25'11"; sp. 10'; cpl. 91)

Howick Hall was built by William Hamilton Co., Port Glasgow, Scotland, in 1910. Acquired from her owners,

the U.S. Steel Products Co., she commissioned at Baltimore on 24 August 1918, Lt. Comdr. Gust E. Jonsson in command.

After loading cargo at Baltimore, *Howick Hall* joined a convoy at New York and from there sailed to St. Nazaire, France, reaching that port on 30 September. She discharged cargo and on 31 October was back at Baltimore.

Her second transatlantic voyage began at Newport News, where she loaded cargo for La Verdun Roads, France, on 25 December. From there *Howick Hall* went to Bassens for fuel, and on 3 February 1919, sailed for the States. However, a case of spinal meningitis in the crew necessitated her stopping at Bermuda on 21 February. Ship and crew were placed in quarantine and denied communication with the island until they sailed for Baltimore on 25 February.

Howick Hall arrived at Baltimore via Newport News on 5 March and decommissioned there 13 March 1919. She was returned to her former owners the same day.

Howorth

William L. Howorth was born in Massachusetts 16 July 1841, and was appointed Acting Master's Mate 29 April 1863. Attached to *Monticello*, a blockader off North Carolina, Howorth accompanied the redoubtable Lt. W. B. Cushing on a reconnaissance up the Cape Fear River to Wilmington 23-24 June 1864, gaining valuable information about Confederate defenses. Later in the year, Howorth joined Cushing's famous expedition up the Roanoke River to sink Confederate ram *Albemarle*. The ram was destroyed 27 October, but the launch carrying the Federal sailors was destroyed. Cushing and one other man escaped, while Howorth and others were captured. In his report Cushing noted: "Acting Master's Mate William L. Howorth, of the *Monticello*, showed, as usual conspicuous bravery." Howorth was promoted to Acting Master and exchanged in February 1865. Honorably discharged in October, he reentered the Navy in 1866 and was appointed ensign 12 March 1868. He resigned 4 April 1869.

(DD-592: dp. 2,050; l. 376'6"; b. 39'8"; dr. 17'9"; s. 35 k.; cpl. 273; a. 5 5", 5 40-mm., 7 20mm., 10 21" tt., 6 dep., 2 dcl.; cl. *Fletcher*)

Howorth (DD-592) was launched by Puget Sound Navy Yard, Bremerton, Wash., 10 January 1943; sponsored by Mrs. R. P. Bromley; and commissioned 3 April 1944, Comdr. E. S. Burns in command.

After exhaustive shakedown training had been completed, *Howorth* sailed 22 July 1944, screening a large convoy carrying marines toward Pearl Harbor. The ship arrived 7 days later and began a second training period in Hawaiian waters. Departing 25 August she joined the 7th Fleet at Hollandia and, after brief stops at Purvis Bay and Manus on escort duty, she arrived at newly-taken Morotai 30 September. The next 2 weeks were spent in the busy Solomons on escort and antisubmarine duty.

Howorth steamed out of Humboldt Bay 16 October en route to Leyte. Arriving 22 October, three days after the initial landings, the ship guarded the transport anchorages while other fleet units decimated the Japanese in the epochal Battle for Leyte Gulf. She next made convoy voyages to Kossol Roads, Guam, and Manus before returning to Leyte for the Ormoc landings 7 December 1944. Next on the destroyer's schedule was the Mindoro operation. *Howorth* departed 12 December with *Nashville* and soon came under kamikaze attack. Upon arrival off Mindoro, the destroyer moved to Mangarin Bay for shore bombardment, aiding the assault troops by knocking out enemy emplacements. She was attacked by three suiciders, and while two were shot down close aboard, the third damaged *Howorth's* mast before splashing. Accordingly, the ship returned to Hollandia via Leyte, arriving 28 December. With the bases on Mindoro necessary for air support of Lingayen Gulf landings under construction, preparations continued for the invasion of Luzon.

The Lingayen operations got underway 9 January, and *Howorth* arrived with the first reinforcement group 13 January, after again fighting off suicide attacks en route. The ship was occupied until 1 February providing fire support to ground forces in the area, fighting off air attacks, and patrolling to seaward of the Gulf. From Luzon she sailed to Saipan 15 February to take part in rehearsals for the next major amphibious assault, Iwo Jima.

Howorth arrived off Iwo Jima with the invasion fleet 19 February and, as troops landed for what was to be one of the hardest fought campaigns of the war, she began nearly a month of continuous air action and shore bombardment. With accurate ground support fire *Howorth* contributed much to the taking of this strategic island. Departing 14 March, she spent only a short rest at Ulithi before getting underway again, this time for the Okinawa invasion, last stop on the island road to Japan itself.

The veteran destroyer screened a transport group from Ulithi, arriving Okinawa with the huge invasion fleet 1 April. Once again she performed shore fire and screening duties, and shot down many attacking aircraft as the Japanese made a desperate attempt to stop the landings. While proceeding with cruiser *St. Louis* to station 1 April, *Howorth* and the larger ship were attacked by no less than eight kamikazes. While literally splashing planes on every quarter, the destroyer was crashed in the superstructure. Nine men were killed, but while the fires were being extinguished the last kamikaze was shot down astern.

Howorth was routed back to the United States for repairs, arriving Mare Island 2 May 1945. After shake-down training in early July, the ship sailed 15 July for Pearl Harbor and was en route to Adak, Alaska 15 August when the surrender of Japan was announced. She departed Adak 31 August for Japanese waters to screen flight operations and receive former prisoners of war before mooring at Yokohama 17 September 1945. Escort work carried *Howorth* to Pearl Harbor and back to Japan in October. She sailed finally from Tokyo Bay 11 November, arriving San Francisco 28 November. She decommissioned 30 April 1946 at San Diego and remained in the Pacific Reserve Fleet until March 1962 when she was sunk in torpedo tests off San Diego.

Howorth received five battle stars for World War II service.

Howquah

(SwStr: t. 460; l. 120'7"; b. 22'10"; dr. 12'; s. 10 k.; a. 2 30-pdr. P. r., 1 12-pdr. r., 1 12-pdr.)

Howquah was purchased in Boston from G. W. Upton 17 June 1863, for action against Confederate commerce raider *Tacony* then preying upon Northern merchantmen during what Prof. Richard S. West has called "the most brilliant daredevil cruise of the war."

Howquah departed Boston 25 June 1863, Acting Volunteer Lieutenant E. F. Devens in command, to search for *Tacony* in the southern section of the Banks of Newfoundland; but her quarry had been destroyed the day before she sailed. *Tacony's* captain, Lt. Charles W. Read, CSN, in an effort to elude the Northern gunboats who were scouring the sea for his ship, shifted his guns to captured fishing schooner *Archer* and put the torch to *Tacony*. He and his crew were captured 3 days later while attempting to escape to sea from Portland, Maine, in still another prize, Revenue cutter *Caleb Cushing* (q.v. *Tacony*, p. 571, vol. II).

When *Howquah* returned to Boston 3 July, she received orders to sail for Wilmington, N.C., for blockade duty. Except for occasional brief interruptions for repairs, she remained in waters off Wilmington until close to the end of the war, usually stationed near New Inlet. There on 5 November 1863 she assisted *Nansemond* and Army transport *Fulton* capture *Margaret* and *Jessie* after the ship had run the blockade 15 times. Only 5 days later, she took *Ella*, a small, fast and new side-wheel steamer subsequently serving the Navy as a picket, patrol, and dispatch vessel. Next, on 11 December, she forced

an unidentified ship to run on the beach to be wrecked by a heavy sea.

On Christmas Eve she transported troops from Beaufort, N.C., to Bear Inlet to ruin salt works vital to the Confederate war economy. Again on 21 April 1864, she joined *Nippon* in an attack on salt works on Masonboro Sound. Her guns shelled the beach while a landing party smashed salt-making equipment ashore.

Early morning 7 May 1864, *Howquah* and five other blockaders engaged Confederate ironclad ram *Raleigh* and drove her back toward the harbor to run aground and "break her back" while attempting to cross the bar to safety. On 25 September, while chasing and firing on blockade runner *Lynx*, *Howquah* was caught in a cross fire from Fort Fisher and from "friendly guns" on two other Union ships, *Buckingham* and *Nippon*. In this operation one of her bluejackets was killed and four others were wounded, but her hull was not seriously damaged. *Lynx* ended up on the beach totally destroyed by fire.

Christmas Eve 1864 found *Howquah* engaged in amphibious operations. This time the objective was Fort Fisher, which protected Wilmington, one of the South's most successful centers of blockade running and her last port for overseas aid. *Howquah* landed troops who took the Flag Pond Hill battery and bombarded enemy positions to support Union forces ashore. Unfortunately, Maj. Gen. B. F. Butler nullified this success by ordering his troops to give up their beachheads and return to their ships; and *Howquah* had the unpleasant task of assisting in the evacuation. But in less than a month, the Northern ships were again attacking Fort Fisher in conjunction with the Army. *Howquah* anchored off Half Moon Battery 16 January 1865 and fired at targets ashore while her cutters evacuated the wounded. She remained in the area supporting Northern troops and the fleet's landing force with her guns until the last pockets of resistance along the Wilmington waterfront had been snuffed out.

Howquah was transferred to Key West for duty in the East Gulf Blockading Squadron. She was stationed in Saint George's Sound, Fla., until ordered North 1 June. She decommissioned at Philadelphia 22 June 1865 and was sold at public auction 10 August 1865.

Howze, General R. L., see *General R. L. Howze* (AP-134)

Hoxbar

(Str: dp. 14,530; l. 453'; b. 56'; dr. 26'; s. 11 k.; cpl. 71)

Hoxbar, a tanker, was built by the Bethlehem Ship Building Co., of Sparrows Point, Md., in 1918. She commissioned there 13 June 1919, Lt. Comdr. Morris E. Huntley commanding.

With a full load of fuel oil, *Hoxbar* sailed from New York on 21 June, arriving at Ponta Delgada, Azores, on 1 July. After refueling various U.S. destroyers based there, she continued on to Brest to service other American ships. She left Europe on 15 July and sailed to Port Arthur, Tex., via New York, arriving 3 August.

At Port Arthur *Hoxbar* took on another load of fuel oil and on 9 August sailed for Scotland. At sea her orders were changed and she reset her course for Hampton Roads, arriving 16 August. After discharging her cargo, *Hoxbar* decommissioned at Newport News on 28 August 1919 and was redelivered to USSB. In 1925 she was sold to Malston Co., Inc., Wilmington, Del.

Hoyt

(ScTug: l. 45'; b. 10'5"; dph. 4'7"; s. 7 k.; a. 1 spar torp.)

Hoyt, a former merchant tug *Luke Hoyt*, built at Philadelphia in 1863, was acquired 1 July 1864. She and steam tugs *Belle* and *Martin*, fitted as torpedo boats, were dis-

patched by Rear Adm. S. P. Lee to join Union Naval Forces in the rivers and sounds of North Carolina. These torpedo boats were intended as counter-weapons against much-feared Confederate rams rumored to be building up the Roanoke River. Admiral Lee described their armament: "This form of torpedo is intended to explode on impact, and to be placed on a pole or rod projecting not less than 15 feet, and if possible 20 feet, beyond the vessel using it. It contains 150 pounds of powder."

Hoyt took station at New Berne, N.C., waiting for combat opportunity that never came. She steamed north late in May 1865, and was sold 10 August 1865 at Philadelphia. She was a part of the small beginning of a most serious weapon in the 20th century. The Confederacy had first pointed the way to moderate success of torpedo warfare in the Civil War when a similarly-armed "David" damaged the *New Ironsides*. Union blockaders were much alarmed in February 1864 when the hand-powered submarine torpedo boat *H. L. Hunley*, armed with a spar torpedo, sank the steam sloop-of-war *Housatonic*. The importance of torpedo warfare was further underscored the night of 27-28 October 1864, when gallant Lieutenant Cushing and a daring crew of 14 sank the dreaded iron-clad ram *Albatross* with an improvised torpedo boat. These hardy pioneers cast a shadow far ahead toward the enormous underseas combat capabilities of the 20th century.

Hubbard

Joseph Charles Hubbard was born 24 January 1900 in Danbury, Conn., and graduated from the Naval Academy in 1920. After serving in various ships during his early career, Hubbard underwent submarine training in 1924-25 and reported on board his first command, *O-7*, in 1930. Following other assignments ashore and afloat, he reported to cruiser *San Francisco* in November 1939 as Damage Control Officer and First Lieutenant. Hubbard was appointed Commander in 1942 and died 13 November 1942 on board *San Francisco*. His ship, flagship for Admiral Callaghan, was crashed by a Japanese plane 12 November. Hubbard relieved the critically wounded executive officer, and it was in this post that he was killed next day during the Naval Battle of Guadalcanal, as American ships prevented a Japanese bombardment of the island.

(DE-211; dp. 1,400; l. 306'; b. 36'10"; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3", 8 20mm., 4 1.1"; 2 dct., 8 dcp., 1 dep. (h.h.), 3 21" tt.; cl. *Buckley*)

Hubbard (DE-211) was launched by Charleston Navy Yard, 11 November 1943; sponsored by Mrs. Helen L. Hubbard, widow of Commander Hubbard; and commissioned 6 March 1944, Lt. Comdr. L. C. Mabley in command.

Following shakedown training out of Bermuda, the new destroyer escort returned to Norfolk 7 May 1944. She then escorted oiler *Manatee* to the Caribbean, returning to Norfolk 23 May for armament changes. Armed with 40mm. guns in lieu of torpedo tubes, *Hubbard* sailed with her first convoy 1 June, seeing the transports safely to Bizerte, Tunisia, and returning to New York 19 July 1944. She subsequently made two more convoy crossings in 1944, and underwent antisubmarine training at Casco Bay, Maine, between voyages.

Hubbard sailed 26 December 1944 with other destroyer escorts to hunt down weather-reporting U-boats in the Atlantic. Equipped with the latest direction-finding gear, the ships scouted the suspected area until they came upon *U-248* 16 January 1945. Depth charge attacks sank the German raider late that morning. The ships arrived New York 6 February and after additional training in Casco Bay sailed again to search for submarines 4 April from Argentina. As part of Operation Teardrop, she took part in the destruction of the last desperate U-boat group to sortie, with escort carriers *Bogue*, *Core*, and many sister ships. *Frederick C. Davis* (DE-136) was torpedoed and sunk suddenly 24 April, and *Hubbard* joined in hunting the attacker. After many depth charge attacks, four by

Hubbard alone, *U-546* surfaced. The destroyer escorts' guns blazed away and the submarine quickly sank.

Hubbard returned to Boston 10 May 1945 and began her conversion to a fast transport, suitable for the still-hot Pacific war. She was reclassified APD-53, 1 June 1945 and emerged from Sullivan's Dry Dock, Brooklyn, 14 August, the day before the surrender of Japan.

Following 3 months of training operations in the Caribbean and Casco Bay, *Hubbard* arrived Green Cove Springs, Fla., 12 November 1945. She decommissioned 15 March 1946 and entered the Reserve Fleet, where she remained until she was struck from the Navy List 1 May 1966 and scrapped.

Hubbard received two battle stars for World War II service.

Hudson

William Levereth Hudson was born 11 May 1794 at Brooklyn, N.Y. His first service afloat was in the Mediterranean Squadron under Commodore Bainbridge in the schooner *Alert* and sloop *Ontario* from 1815 to 1817. Hudson was appointed midshipman 1 January 1816. In 1821-1823 he served in *Dolphin* on the Pacific coast of South America, and in Warren for a Mediterranean cruise 1826-1829. In 1830-1831 Hudson accompanied Lieutenant Ramsey on a tour to Russia, and then assumed duty at the New York Navy Yard. In June 1838 he was ordered to command *Peacock*, attached to the Wilkes Exploring Expedition. After strenuous service in the Antarctic, the South Seas, and along the coast of North America, *Peacock* was wrecked 18 July 1841 while attempting to cross the bar and enter the Columbia River on Wilkes' orders. Commander Hudson made every effort to free his ship but was forced to leave her, fortunately saving all his men and the scientific papers. In September 1849, after shore and lighthouse duty, he was ordered to command *Vincennes*, cruising the Pacific until 1852. In March 1857 Hudson, appointed captain 8 October 1855, assumed command of *Niagara*. That August, in conjunction with British ships, he made the first attempt at laying a transatlantic cable. This try was unsuccessful, but a second attempt met with success 10 August 1858. After commanding the Boston Navy Yard 1858-1862, Captain Hudson was made Inspector of the 3d Light House District. He died 15 October 1862 in Brooklyn.

I

(Frigate: t. 1,728; l. 177'; b. 45'; dr. 13'8")

Hudson, formerly *Liberator*, was built in 1826 for the Greek government by Smith & Dimon of New York. When Greece was unable to pay for her, she was purchased by the Navy and commissioned at New York.

In 1828, *Hudson* began fitting out for what was to be her only cruise, and during this period was inspected by President John Quincy Adams and his entourage. The frigate

sailed from New York 28 September 1828 to serve as Commodore John Creighton's flagship in the Brazil Squadron. In company with *Erie*, she touched at New London for supplies and ammunition before turning south to reach Rio de Janeiro 29 November to help eradicate the insidious traffic in slaves along those shores. From there *Hudson* conducted several patrols along the South American coast, stopping and boarding for inspection American as well as foreign ships. She also served as a harbor patrol vessel at Montevideo and Rio and cruised to Bahia and St. Catherine during her 3 years on station.

Hudson departed 13 June 1831 and reached New York via Bahia 5 August. She remained at New York as a receiving ship until 1844, when she was broken up and sold.

II

The second *Hudson* was loaned to the Navy for use in the Spanish-American War by the Treasury. The revenue cutter was acquired at New York 24 March 1898 and commissioned there, Lt. F. H. Newcombe in command.

Departing New York 24 April, *Hudson* sailed to Key West via Wilmington and Jacksonville. There, after brief patrol duty, she was pressed into use as a dispatch carrier and sent to the Fleet off Cuba. On the morning of 12 May the gunboat *Winslow* was disabled by heavy fire from Spanish shore batteries and five of her crew were killed. *Hudson*, under heavy fire from shore, towed the other ship to safety and took on board the dead and wounded of her crew. Finally delivering her dispatches to Havana 14 May, *Hudson* remained there on blockade duty for a while before returning to Key West. Another period of patrol ended 10 July as she returned to the blockading fleet with further dispatches. *Hudson* captured two small fishing sloops attempting to run the blockade off Havana. Reaching Norfolk via Key West and Charleston 21 August 1898,

Hudson was subsequently returned to the Treasury Department.

III

(DD-475: dp. 2,050; l. 376'6"; b. 39'8"; dr. 17'9"; s. 37 k.; cpl. 273; a. 5 5", 10 40mm., 7 20mm.; cl. *Fletcher*)

Hudson (DD-475) was launched 3 June 1942 by the Boston Navy Yard; sponsored by Mrs. Henry H. Hough, wife of Adm. Henry H. Hough (Ret.); and commissioned 13 April 1943, Comdr. Richard R. Pratt in command.

After shakedown and escort duty along the Atlantic coast, *Hudson* sailed for Efate, New Hebrides, where she was just in time to provide fire support for the initial landings on Bougainville 1 November. As the Japanese staged a heavy air attack 8 November, *Hudson* helped repel them by splashing two "bogies" and assisting on a third. She then made antishipping sweeps in the Truk area and participated in operations against the Green Islands 1 February 1944. En route to the invasion *Hudson* attacked and sank a Japanese submarine 31 January.

Following a brief respite in Australia, *Hudson* steamed to Kwajalein to join the armada readying for the invasion of the Marianas. After delivering shore bombardment to clear the way for landings on Saipan, Guam, and Tinian, the tough little destroyer took part in the Battle of the Philippine Sea 19 June. Here she contributed two kills to the massive destruction of Japanese planes later known as "The Marianas Turkey Shoot". In mid-July, as the invasion of Guam was launched, *Hudson* steamed off the island to screen transports and chalk up another "bogie" as well as rescuing three Navy pilots and a Japanese flier. From the Marianas, *Hudson* steamed to Palau to support landings on Peleliu and Angaur 12-25 September. Departing Manus, Admiralty Islands, 4 October, she reached San Francisco 2 weeks later for overhaul.

Frigate USS *Hudson* circa 1826 from an engraving by W. J. Bennett

After refresher training at Pearl Harbor, *Hudson* returned to battle, arriving off Iwo Jima 19 February 1945. Here she provided vital radar picket protection during the initial invasion of that enemy bastion. While retiring from Iwo Jima after the island was secured, *Hudson* rescued eight survivors of a B-29 Superfortress which had crashed at sea 8 March. Her next action came as she assumed duties as a radar picket ship off Okinawa 1 April, when American troops stormed the last enemy stronghold before the home islands. On 5 April the valiant *Hudson* gained credit for sinking her second Japanese submarine of the war as a 6-hour attack with six barrages of depth charges resulted in the death of RO-49 off Okinawa. Although under almost constant attack by kamikazes, *Hudson* was to come through the war with only one injury to a crewman; that was inflicted when a kamakaze crashed close aboard 22 April 1945, clipping a chief on the head with a wingtip but missing the ship.

It was off Okinawa that *Hudson* earned the title of the "destroyer who saved a carrier." On 4 May a kamikaze crashed in the escort carrier *Sangamon*. *Hudson* steered for the fiercely blazing carrier. Despite the exploding ammunition on board the drifting carrier, the superbly managed destroyer was able to go alongside three times, getting a total of 16 hoses over the side. The overhanging flight deck of the carrier caused extensive damage to *Hudson's* superstructure as burning debris—and a flaming plane jettisoned by *Sangamon's* crew which crashed into *Hudson's* depth charges on the fantail—caused scattered damage. When the fires were finally under control, *Hudson* had suffered damage equal to that of the original victim, although the carrier had been saved with small loss of life through the destroyer's efforts, and was routed to Guam for repairs 10 May.

Promptly repaired, *Hudson* joined the 3d Fleet off Okinawa 22 June and then proceeded to Eniwetok for convoy duty in the Marshalls. After escorting a convoy to the Aleutians, she returned to Northern Japan to take part in the occupation and control of the enemy home islands 8 September, 6 days after the signing of unconditional surrender in Tokyo Bay. From Japan, *Hudson* sailed to Alaska where she began carrying veterans back to the States in Operation "Magic-Carpet." She then put in at the Puget Sound Navy Yard, Bremerton, Wash., to prepare to decommission. Sailing to San Diego 15 March 1946, *Hudson* decommissioned and went into reserve there 31 May. In January 1947 *Hudson* was moved to Mare Island, Calif, where she remains.

Hudson received nine battle stars for World War II service.

Hudson, see *Gould Island* (YFB-31)

Hugh L. Scott

See *General H. L. Scott* for biography.

(AP-43: dp. 12,579; l. 532'; b. 72'; dr. 30'6"; s. 16 k.; cpl. 119)

Hugh L. Scott (AP-43) was built as *Hawkeye State* for USSB by Bethlehem Shipbuilding Co., Sparrows Point, Md., in 1921. Renamed *President Pierce*, she sailed for the Dollar Steamship Co., and later for the American President Lines as a passenger liner. Taken over by the Army 31 July 1941, she was renamed *Hugh L. Scott* and made four voyages to the Far East before sailing to the East Coast in July 1942. The ship was taken over by the Navy 14 August 1942, and converted to an attack transport at Tietjen and Lang (later Todd Shipbuilding & Drydock Co.), Hoboken, N.J. She commissioned 7 September 1942, Captain Harold J. Wright commanding.

The transport was slated for participation in the North Africa landings, the giant amphibious assault mounted across the entire width of the Atlantic. *Hugh L. Scott* joined Transport Division 3 for this, our first offensive move in the European-African theater, and sailed 24

October after intensive amphibious training. She approached the beaches at Fedhala, French Morocco, early on the morning of 8 November and after bombardment by surface ships, landed her troops. *Hugh L. Scott* then cleared the immediate invasion area, and did not return until 11 November, when she entered the refueling area and then anchored in the exposed Fedhala roadstead to unload her supplies.

During the evening of 11 November, German submarine U-173 slipped inside the protective screen to torpedo transport *Joseph Hewes*, tanker *Winooski*, and destroyer *Hamberton*. *Hugh L. Scott* and the other transports went to battle stations the entire night, and resumed unloading the next day. That afternoon, 12 November, another submarine, U-130, stalked the transports and torpedoed *Hugh L. Scott*, *Edward Rutledge*, and *Tasker H. Bliss*. *Hugh L. Scott*, hit on the starboard side, burst into flames and foundered, but owing to the availability of landing craft for rescue, casualties were held to a minimum—8 officers and 51 men. U-173 was later sunk by destroyers, but U-130 escaped.

Hugh Purvis

Hugh Purvis was born in Philadelphia in 1843 and enlisted in the Marine Corps 27 October 1869. He reported immediately to the marine detachment on board *Alaska* soon departing for the Far East. During the punitive expedition to Korea in 1871, he took part in the assault on an enemy fort on the Han River. In desperate hand-to-hand fighting, the sailors and marines stormed the walls of the citadel. Private Purvis ran immediately to the flagstaff which bore the enemy's colors and loosed the halcyards. He was joined by Cpl. Charles Brown, and the two tore down the flag. For his inspiring and heroic act Private Purvis was awarded the Medal of Honor. He was discharged in 1873 and served two later tours with the Marine Corps, 1874 to 1879 and 1879 to 1884, rising to Corporal.

(DD-709: dp. 2,200; l. 376'6"; b. 40'; dr. 15'8"; s. 34 k.; cpl. 336; a. 6 5", 12 40mm., 11 20mm., 6 dcp., 10 21" tt.; cl. *Allen M. Sumner*)

Hugh Purvis (DD-709) was launched by Federal Shipbuilding & Dry Dock Co., Kearny, N.J., 17 December 1944; sponsored by Mrs. Mary Alice Purvis, widow of Corporal Purvis; and commissioned 1 March 1945, Comdr. B. L. Gurnette in command.

Following shakedown training in the Caribbean, *Hugh Purvis* transited the Panama Canal to take part in training exercises in Hawaiian waters after the close of World War II, returning to Casco Bay, Maine, 16 April 1946. After a long overhaul at New York she trained in the Caribbean and arrived her new homeport, Newport, 14 December 1946. *Hugh Purvis* sailed for her first European cruise 2 February 1947 and after exercises with allied ships in the north Atlantic, formed a part of America's official party at the burial of King Christian of Denmark in April. The ship returned to Newport 14 August and took part in antisubmarine exercises off the New England coast the balance of the year.

Hugh Purvis departed Newport for her first cruise with the 6th Fleet 13 September 1948. For the next 5 months she took part in the fleet's vital work of peace-keeping. Returning to Newport 10 February 1949, she operated from that port until sailing 27 June for New Orleans. *Hugh Purvis* made reserve training cruises out of the gulf port until returning to Newport and regular fleet duties 10 December 1950.

As the demands on the Navy increased during the Korean conflict, *Hugh Purvis* continued intensive readiness training. She made another Mediterranean cruise March to October 1951, and took part in another giant NATO cruise in August 1952. Another 6th Fleet cruise was completed in July 1953 after which the veteran ship embarked midshipmen for a Caribbean training cruise. She participated in Operation Springboard in the Caribbean before returning to Newport 23 November 1953.

Hugh Purvis spent 1954 on training operations on this side of the Atlantic, but sailed 5 January 1955 for another important deployment with the 6th Fleet. She returned 26 May to join a hunter-killer group in antisubmarine exercises until July 1956. On 2 July she sailed again for duty in the troubled Mediterranean, joining other 6th Fleet units in that ancient center of civilization. During this period, American power afloat did much to dampen the Suez crises and to discourage foreign interference in this vital area. While in the Persian Gulf in October 1956, *Hugh Purvis* acted as an escort vessel during evacuation of refugees from Haifa, Israel, and the removal of United Nations Truce Team officials from Gaza, Egypt.

During the summer of 1957, the destroyer took part in another midshipman training cruise to Chile and the Canal Zone, and operated with NATO units in the north Atlantic. In early 1958 she trained in the Caribbean, sailing 12 June for visits to NATO countries in northern Europe. It was during this crucial period that the 6th Fleet was proving its peace-keeping power in the Lebanon crisis, and was successful in preventing a leftist revolt.

After her return from Europe in August 1958 she began 16 months of training and experimental work with the Destroyer Development Group designed to increase her fighting capacity for the modern Navy. In March 1960 she entered Boston Naval Shipyard to begin a FRAM (Fleet Rehabilitation and Modernization) overhaul, which included extensive refitting and the installation of a helicopter landing deck and hangar aft. Emerging with a greatly increased life span, the ship took part in antisubmarine exercises in January 1961, including the use of the new DASH antisubmarine drone helicopter. *Hugh Purvis* then sailed 8 March for her sixth deployment to the Mediterranean. During this cruise the fleet stood by for any eventuality during a deepening of the Berlin crisis, materially strengthening America's hand in this confrontation of power. The ship returned to Newport 4 October 1961.

In January 1962, as the dawning space age increased America's need for control of the sea, *Hugh Purvis* operated in the Atlantic recovery area, aiding in the historic recovery of Col. John Glenn's Mercury space capsule. Sonar exercises occupied her until late October, when the introduction of offensive missiles into Cuba precipitated another cold war crisis. *Hugh Purvis* joined the quarantine line off Cuba, helping to force the withdrawal of the missiles—another dramatic example of the power of the fleet when firmly used in checking communism and keeping the peace. She returned to Newport 20 December 1962 and throughout the next year took part in antisubmarine exercises with ASW carriers and helicopters in the Atlantic.

The year 1964 found her preparing for her annual operational readiness inspection and in February of that year she entered the Boston Naval Shipyard for a regular overhaul. After overhaul and a new radar radome mounted on a 30-foot mast she began evaluation of a new ASW sensor. On 18 January 1965 she sailed from Newport to become an important part of Operation "Springboard". At the completion of competitive year 1965, *Hugh Purvis* was awarded two Cruiser Destroyer Force, Atlantic Fleet, departmental excellence awards in operations and weaponry. During the latter part of 1965 *Hugh Purvis* was adapted for a new conformed planar array sonar at the Boston Naval Shipyard. This new equipment will increase the "vision" of the Fleet thereby providing a better tool to safeguard the peace and freedom of the world and the future of the American way of life.

Ready for action 21 January 1966 *Hugh Purvis* operated along the Atlantic coast and in the Caribbean through most of the year. On 6 March she rescued fishing boat *Good Will II* and her crew of five. The destroyer sailed for the Mediterranean 29 November, and transited the Straits of Gibraltar 7 December to join the 6th Fleet. She operated in the eastern Mediterranean into 1967, protecting the peace and security of the free world.

Hugh W. Hadley

Hugh William Hadley was born 17 February 1901 at Moro, Oreg., and was appointed to the Naval Academy in 1918. Commissioned Ensign 29 May 1922, he served on board many ships, including *Pennsylvania* and *S-27*, and various shore stations in the prewar years. After serving as Executive Officer of *Roper* 1936-1939 and on board *Maryland* 1941-1942, he was appointed Commander and assigned to command Transport Division 12 in the Pacific. Hadley's attack transports made nightly runs into Guadalcanal to support American troops there, and while on board *Little* 5 September 1942 Hadley was surprised by three Japanese destroyers off Lunga Point. His outgunned ship fought valiantly, but was sunk along with attack transport *Gregory*. Commander Hadley was killed in the action and was posthumously awarded the Silver Star for his outstanding performance in the bitter Solomons campaign.

(DD-774: dp. 2,220; l. 376'6"; b. 41'2"; dr. 15'8"; s. 34 k.; cpl. 336; a. 6'5"; 10 21" tt., 6 dcp., 2 dct.; cl. *Allen M. Sumner*)

Hugh W. Hadley (DD-774) was launched by Bethlehem Steel Shipbuilding Co., San Pedro, Calif., 16 July 1944; sponsored by Mrs. Hugh W. Hadley, widow of the namesake; and commissioned 25 November 1944, Comdr. L. C. Chamberlin in command.

After intensive shakedown training off the coast of California, *Hugh W. Hadley* sailed 21 February 1945 in company with HMS *Rance* for Pearl Harbor. The ships arrived 27 February, but *Hugh W. Hadley* was soon underway again, sailing 8 days later for Ulithi and the great Okinawa invasion. The ship departed in company with a large group of LST's and their escorts 25 March bound for the Japanese island stronghold, and arrived off the Okinawa group 31 March. As the night approach was made, *Hugh W. Hadley* led a group of LST's toward the beach, shooting down an attacking Japanese plane en route. The destroyer escorted her charges safely to the beach, watched them unload their troops and equipment the morning of 1 April, and then took up antisubmarine patrol station outside the transport area. As the bitter fighting ashore continued, *Hugh W. Hadley* helped protect against submarines and aircraft as the Japanese made a final effort to stop the invasion. The ship remained on patrol until 4 April, when she sailed with a group of transports to Saipan, arriving 14 April.

Hugh W. Hadley was soon on her way back to Okinawa, however, and arrived from Saipan 27 April to resume her outer patrol. For the next few days the destroyer fought off numerous air raids, picked up a downed fighter pilot, and carried out antisubmarine patrol. She went alongside destroyer *Brown* 7 May for transfer of communication equipment, and then took up additional duties as a fighter direction ship for the Combat Air Patrols, so vital to the invasion's air cover.

As radar picket ships were scarce, *Hugh W. Hadley* was assigned this duty on the afternoon of 10 May. Joining destroyer *Evans* (DD-552) and four smaller craft, she took station 15 west of Okinawa and early the next morning began vectoring aircraft to meet the oncoming Japanese. For nearly 2 hours the morning of 11 May, *Hugh W. Hadley* and *Evans* came under severe attack, as the Japanese mounted their sixth attack against American forces at Okinawa. Both ships maneuvered at high speed, downing many suicide planes and directing air attacks on formations of Japanese. The attackers numbered some 150 planes. After *Evans* took several serious hits and went dead in the water about 0900, *Hugh W. Hadley* fought on alone. At 0920, she was attacked by 10 planes simultaneously, from both ahead and astern. The ship destroyed all 10, but not without damage to herself. One bomb hit aft, a baka bomb hit, and two kamikaze crashes were inflicted on the gallant ship as her gunners ran low on ammunition. Finally, as the attack ended, all but 50 of the crew were ordered over the side in life rafts, the remaining men fighting fires and working to control the

U. S. S. HUGH W. HADLEY (DD-774)
U. S. FLEET POST OFFICE
SAN FRANCISCO, CALIFORNIA

The U. S. S. HUGH W. HADLEY (DD774) was assigned duty as RADAR PICKET SHIP AND FIGHTER DIRECTOR SHIP on Station #15 off Okinawa, Nansei Shoto, 10 May 1945. Ships in company were the U. S. S. EVANS (DD552), LCS (L) 84, LCS 82, LCS 83 and LSM (R) 193 as support ships. The Evans turned over the duties of Tactical Command to the Hadley.

The MISSION of this group of ships was to detect and report approaching enemy aircraft, to control the assigned Combat Air Patrol, and to prevent enemy planes from reaching the transport area of Okinawa.

On the night of 10 May, an enemy plane attacked our formation at 1935 and was taken under fire by both ships. The Evans reported seeing it destroyed. Throughout the night the ship was at General Quarters due to the threatening movements and a few attacks by enemy planes which were in the immediate vicinity of the formation.

At about 0755, numerous enemy planes were contacted by our instruments as coming towards the ship (and Okinawa) from the north, distance about 55 miles. One division of CAP was ordered out to intercept. Shortly thereafter, several enemy formations were detected, and the entire CAP was ordered out to intercept. Our Fighter Director Officer in CIC has estimated that the total number of enemy planes was 156 coming in at different heights in groups as follows: Raid ONE 36, Raid TWO 50, Raid THREE 20, Raid FOUR 20 to 30, Raid FIVE 20; Total 156 planes.

From 0830 to 0900 the Hadley was attacked by groups of planes coming in on both bows. Twelve enemy planes were shot down by the Hadley's guns during this period, at times firing all guns in various directions. The Evans which, at this time, was at a distance of about three miles to the northwest, was seen fighting off a number of planes by herself, several of which were seen to be destroyed. At 0900 the Evans was hit and put out of action. At one time toward the close of the battle when friendly planes were closing to assist us, the four support ships were prevented from shooting down two friendlies whom they had taken under fire. One plane was seen to splash inside their formation due to their own gunfire. However, I am not able to give an accurate account of their action. They were very helpful in picking up my crew who were in the water, in coming alongside and removing wounded and in helping us to pump.

For 20 minutes, the Hadley fought off the enemy singlehanded being separated from the Evans, which was out of action, by three miles and the four small support ships by two miles. Finally, at 0920, ten enemy planes which had surrounded the Hadley, four on the starboard bow under fire by the main battery and machine guns, four on the port bow under fire by the forward machine guns, and two astern under fire by the after machine guns, attacked the ship simultaneously. All ten planes were destroyed in a remarkable fight and each plane was definitely accounted for. As a result of this attack, the Hadley was (1) Hit by a bomb aft (2) By a BAKA bomb seen to be released from a low flying BETTY (3) Was struck by a suicide plane aft (4) Hit by suicide plane in rigging.

From this point on, a truly amazing, courageous and efficient group of men and officers with utter disregard for their own personal safety approached the explosions and the fire with hoses and for fifteen minutes kept up this work. The torpedoes were jettisoned, weights removed from the starboard side, and finally, the fire was extinguished and the list and flooding controlled and the ship was saved. Although the ship was still in an extremely dangerous condition, one fireroom bulkhead held and she was finally towed safely to the IE SHIMA anchorage.

The total number of enemy planes destroyed by the Hadley in this period of one hour and thirty-five minutes of continual firing was twenty-three. This number includes twenty shot down to the water and three suicide hits.

Our mission was accomplished. The transports at the Okinawa anchorage were saved from an attack by one hundred and fifty-six enemy planes by the action of our ships. We bore the brunt of the enemy strength and absorbed what they had to throw at us. It was a proud day for destroyer men.

PERSONNEL PERFORMANCE AND CASUALTIES: 1. Killed in action twenty-eight; wounded in action sixty-seven; missing in action none.

No Captain of a man of war ever had a crew who fought more valiantly against such overwhelming odds. Who can measure the degree of courage of men who stand up to their guns in the face of diving planes that destroy them? Who can measure the loyalty of a crew who risked death to save the ship from sinking when all seemed lost? I desire to record that the history of our Navy was enhanced on 11 May 1945. I am proud to record that I know of no record of a Destroyer's crew fighting for one hour and thirty-five minutes against overwhelming enemy aircraft attacks and destroying twenty-three planes. My crew accomplished their mission and displayed outstanding fighting abilities. I am recommending awards for the few men who displayed outstanding bravery above the deeds of their shipmates in separate correspondence. Destroyer men are good men and my officers and crew were good destroyer men.

B. J. MULLANEY

Fighting side-by-side off Okinawa 11 May 1945, USS *Hugh W. Hadley* (DD-774) and USS *Evans* (DD-552) splashed 38 planes.

damage. Though her engineering spaces were flooded and she was badly holed, *Hugh W. Hadley* was kept afloat by the determination and skill of her damage control parties and eventually arrived Ie Shima.

During this remarkable battle, *Hugh W. Hadley* had succeeded in downing some 23 enemy aircraft and aided in splashing countless others. After temporary repairs, the ship was taken to Kerama Retto 14 May, where men from repair ship *Zaniah* worked on her battered hull. *Hugh W. Hadley* subsequently was taken to Buckner Bay, Okinawa, in a floating drydock towed by *Avoyel* (ATF-150), 15 July 1945, and after 20 days there began the long voyage under tow to the United States. After encountering heavy weather during the passage the ship arrived Hunter's Point, Calif., via Pearl Harbor, 26 September 1945. Decommissioned 15 December 1945, she was sold 2 September 1947 to Walter W. Johnson Co., San Francisco, and scrapped.

In addition to one battle star for her World War II Service, *Hugh W. Hadley* received the Presidential Unit Citation for her performance in the action off Okinawa 11 May 1945.

Hugh Young, see *Zaurak* (AK-117)

Hughes

Edward Merritt Hughes, born 28 January 1850 in Ohio, was appointed to the Naval Academy in 1866. After service in a number of ships and stations ashore, he reached the high point in his career during the Spanish-American War. He was Executive Officer of *Petrol* during the Battle of Manila Bay. Immediately after the action, he commanded a small boat which boarded and set fire to five Spanish ships lying in Cavite Harbor, despite reports that fuses had been set to their magazines and in the face of a large and excited armed force on shore nearby. He was advanced five numbers in rank for eminent and conspicuous conduct on this occasion. Commander Hughes died at Yokohama, Japan, 28 September 1903.

(DD-410: l. 348'2"; b. 36'1"; dr. 17'4"; s. 35 k.; cpl. 450; a. 4 5", 8 21" tt.; cl. *Sims*)

Hughes (DD-410) was laid down 15 September 1937 by Bath Iron Works, Bath, Maine; launched 17 June 1939; sponsored by Mrs. Edward M. Hughes, widow of Commander Hughes; and commissioned at Boston Navy Yard, 21 September 1939, Lt. Comdr. Donald J. Ramsay in command.

Following shakedown in the Gulf of Mexico, *Hughes* joined the Atlantic Fleet. From July 1940 through December 1941, *Hughes* served in the Atlantic, first on patrol off Martinique to watch Vichy-controlled French Forces

there and then on Neutrality patrol off Iceland. During this time, she became the first American destroyer to escort a British convoy all the way to England.

Following the attack on Pearl Harbor, warships were urgently needed in the Pacific and *Hughes* sailed from Norfolk 18 December 1941, arriving San Diego in company with *Yorktown* (CV-5), 30 December. She departed San Diego 12 January 1942 as an escort for ships bringing reinforcements to Samoa. *Hughes* then sailed from Samoa as part of a carrier striking force built around carrier *Yorktown*. She screened the carrier in strikes on Jaluit, Makin, Mili, and Canton Islands; then supported the combined *Lexington-Yorktown* Task Force 17, as it attacked Japanese bases at Lae and Salamaua, 10 March 1942. Missing the Battle of the Coral Sea while escorting a tanker carrying fuel to Noumea, *Hughes* reached Pearl Harbor in time to participate in the Battle of Midway.

Hughes, while protecting carrier *Yorktown* during this action, shot down two torpedo planes and assisted in shooting down two others. After *Yorktown* was hit 4 June, *Hughes* continued an all-night vigil to prevent her capture. When the carrier was torpedoed by a submarine 6 June, *Hughes* helped damage the attacker with depth charges, and rescued the survivors when *Yorktown* sank the next day.

After a brief time as convoy escort, she joined American Forces at Guadalcanal, where she screened the carrier *Hornet* (CV-8) throughout the campaign. During the Battle of Santa Cruz, *Hughes* splashed one Japanese plane and assisted in downing two more. Despite her valiant efforts, *Hornet* was hit and sunk 27 October 1942. Joining Task Force 16, 10 November 1942, *Hughes* participated in the Naval Battle of Guadalcanal by screening *Enterprise* (CV-6). *Hughes* continued screening operations until the end of February 1943.

Following a refit and brief convoy duty, *Hughes* was detached from the South Pacific and sailed to Pearl Harbor, departing 18 April for the Aleutian Islands and arrived on the 24th. Bombardments of Kiska on 6 and 22 July were high points of her months in northern waters. After Kiska was occupied, *Hughes* departed the Aleutians for overhaul 25 August in San Francisco.

Following overhaul, *Hughes* sailed for Pearl Harbor 26 October to prepare for the invasion of the Gilbert Islands. She sailed 10 November as part of the screen for the escort carriers covering the invasion of Makin Atoll. When *Liscombe Bay* (CVE-56) was sunk 24 November, *Hughes* rescued 152 of the survivors. She began screening the transport group 27 November, and 2 days later departed for Pearl Harbor, and arrived there, 7 December 1943. On 13 January 1944, *Hughes* joined Task Force 53 for the invasion of the Marshall Islands. She joined in the preinvasion, 3 to 11 February 1944. The destroyer continued to support the escort carriers during the strikes against Palau 31 March.

Hughes took part in the invasion of Hollandia, New Guinea, 23 April, acting as a screen for the CVE group which provided air cover for the landings at Aitape and Tanahmerah Bay. Then *Hughes* remained off New Guinea as a convoy escort and fire-support ship of the 7th Fleet, until 25 September when she departed for the invasion of the Philippines. During this time, *Hughes* participated in the invasions of Biak, Noemfoor, Cape Sansapor, and Morotal, serving as flagship of Rear Adm. William M. Fechteler during the latter campaign.

During the invasion of Leyte, *Hughes* was the flagship of Rear Adm. Arthur D. Struble commanding the tiny task group detailed to capture the small islands of Dinigat and Homohon guarding the entrance to Leyte Gulf. Following the successful conclusion of this operation, *Hughes* screened Philippine bound convoys, making frequent trips to and from New Guinea until 6 December 1944 when she reembarked Admiral Struble and departed for the invasion of Ormoc Bay, Leyte. Following this operation, *Hughes* was serving as a picket destroyer off the southern tip of Leyte when she was hit by a kamikaze 10 December 1944. Badly damaged with one engine room demolished and much of her other machinery destroyed, *Hughes* was towed to San Pedro Bay, Leyte, where, after temporary repairs, she departed for Humboldt Bay, New Guinea, 19 December en route to Pearl Harbor, where she arrived 23 January 1945. Following more repairs, she sailed for San Francisco, arriving Hunter's Point Naval Drydocks 2 February. *Hughes* remained there for the next 3 months undergoing extensive overhaul.

After a long testing period, *Hughes* was declared combat ready and departed for Adak in the Aleutians 4 June 1945. Assigned to the Northern Pacific Force, she remained in the Aleutians until the end of the war, harassing enemy shipping and bombarding Japanese bases. *Hughes* then served as part of the patrol force off Northern Honshu until relieved 20 October. She sailed for the United States 10 days later with Destroyer Squadron 2. She was decommissioned 28 August 1946, and struck from the Navy List 26 November 1948.

Hughes earned 14 battle stars for World War II service.

Hulbert

Henry Lewis Hulbert, born in Kingston-upon-Hull, England, 12 January 1867, enlisted in the Marine Corps 28 March 1898. During the Philippine Insurrection, he received the Medal of Honor for an action on Samar 1 April 1899 when he refused to desert disabled comrades in the face of heavy fire. Soon after America entered World War I, Hulbert was appointed a marine gunner with the Fifth Regiment. During the Battle of Chateau Thierry 6 June 1918, despite serious wounds, he directed his platoon in a successful attack and received the Distinguished Service Cross for his heroism. Appointed First Lieutenant for his extraordinary service, Hulbert was killed near Mont Blanc 5 October 1918, and was posthumously awarded the Navy Cross.

(DD-342; dp. 1,190; l. 314'5"; b. 30'8"; dr. 9'3"; s. 36 k.; cpl. 126; a. 4 4", 2 3", 12 21" tt.; cl. *Clemson*)

Hulbert (DD-342) was launched by Norfolk Navy Yard, Portsmouth, Va., 28 June 1918; sponsored by Mrs. V. C. Hulbert, widow of Lieutenant Hulbert; and commissioned 27 October 1920, Lt. S. A. Maher in command.

Following shakedown training out of Norfolk, *Hulbert* took part in destroyer maneuvers in the Atlantic until June 1921, when she assisted in the famous ordnance tests on obsolete American and captured German ships. For

the next year, the ship operated out of Newport with other destroyers.

Hulbert sailed 20 June 1922 for duty on the Asiatic Station, steaming via the Mediterranean and Ceylon to Chefoo, China, 26 August. The ship patrolled Chinese and Philippine waters in the year that followed, protecting American interests during the raging Chinese Civil War. She also took part in periodic fleet exercises designed to keep her crew and equipment at maximum war readiness. *Hulbert* took part in the evacuation of American civilians and missionaries in March 1927 and September 1928. Completing this lengthy tour of duty in the Far East, she sailed 22 July 1929 from Yokohama, arriving San Diego 17 August.

During the remainder of the year, *Hulbert* acted as plane guard for carriers *Langley* and *Saratoga* off California, thus helping to develop carrier-group tactics. She took part in important fleet exercises on both coasts, during the period from 1930 to 1934 and arrived Philadelphia 14 August 1934. She decommissioned there 17 October 1934 and was placed in reserve.

Hulbert was converted to a seaplane tender 1939-1940, recommissioning at New York Navy Yard as AVP-6 on 2 August 1940. She arrived San Diego 24 August via Guantanamo Bay and the Canal Zone, and began servicing Patrol Wing 1 on operations off the West Coast, helping to perfect America's seaplane reconnaissance capability. *Hulbert* sailed 8 May 1941 for Pearl Harbor, where she became headquarters ship for the seaplane wing and continued servicing and repairing her planes.

On the fateful morning of 7 December 1941, *Hulbert* was moored at the Submarine Base, Pearl Harbor. General Quarters sounded just before 0800, and the ship's antiaircraft batteries instantly opened fire at attacking planes. As the Japanese directed their attention to Ford Island and the battleships, she shot down one torpedo plane and damaged several others. After the attack the ship assisted in the massive rescue effort. After loading ammunition, she moved to Hilo 9 December to set up an advance base for the all-important patrol bombers. *Hulbert* was also called upon to aid aircraft at sea, as on Christmas Day she repaired a seaplane at sea and then towed it for nearly 3 days when heavy seas prevented a safe takeoff. The ship also made supply runs to Palmyra before moving north to Kodiak 6 June 1942.

The Japanese had occupied Kiska and Attu as part of the abortive Midway Offensive, and *Hulbert* was assigned to tend the seaplanes of VP-43 during reconnaissance flights and bombing raids on those islands. The versatile ship also steamed to Segua Island 30 August 1942, landing a party of marines to search for a Japanese radio station. Next day, she arrived Atka to aid torpedoed tender *Casco*, alternating between salvage efforts and seaplane tending during September. *Hulbert* sailed 4 October for supplies and repairs at San Francisco.

She was again underway from Seattle 8 December 1942 for Kodiak where the veteran ship serviced patrol bombers during the first months of 1943. In May *Hulbert* moved to Amchitka, acting as communications ship during the recapture of Attu that spring. She moved again to Attu in June, to provide fuel and communications services for seaplanes and torpedo boats but was blown ashore in Massacre Bay during a severe storm 30 June 1943. *Hulbert's* hull was seriously damaged and, after temporary repairs at Dutch Harbor, she arrived Seattle 30 August for a major overhaul.

The ship was reclassified DD-342 on 1 December 1943, and sailed 15 January 1944 to San Diego to take up new duties as an escort ship. For the remainder of the war *Hulbert* acted as plane guard and screen ship for dozens of new escort carriers as they made ready to join America's powerful striking fleet in the Far East. The ship also served as a maneuvering torpedo target during pilot training and rescued a dozen pilots during this period. After the war's end, *Hulbert* sailed 30 September, escorting carrier *Ranger* to the Canal Zone and arrived Philadelphia 17 October 1945. She decommissioned 2 Novem-

ber 1945 and was sold for scrap in October 1946 to Ship Shape, Inc., Philadelphia.

Hubert received two battle stars for World War II service.

Hull

Isaac Hull was born in Derby, Conn., 9 March 1773 and was appointed Lieutenant in the U.S. Navy 9 March 1798. During the Quasi-War with France he served as Executive Officer of frigate *Constitution* under Silas Talbot, and distinguished himself by leading a successful expedition to capture the fort at Porto Plata, Santo Domingo. The intrepid Hull spiked the fort's guns, cut out a prize, and escaped from the harbor with it. In the war with Tripoli 1802-05 he added to his reputation while in command of brig *Argus*. In the War of 1812 Hull was given command of *Constitution*. In July 1812, while off the coast of New Jersey, he encountered a squadron of four British frigates and one ship of the line under Admiral Blake. As the wind was light or non-existent, Hull alternately towed *Constitution* with boats and hauled her ahead on her anchor. After three days of this skillful and strenuous work, she escaped. Later, on August 19th, Hull engaged HMS *Guerriere* in one of the classic battles of naval history, compelling the British ship to strike her colors and earning for his vessel the name "Old Ironsides". Promoted to Commodore, Hull commanded the Boston and Washington Navy Yards, the Pacific Squadron, and finally the Mediterranean Squadron in his later career. Commodore Hull died 13 February 1843 at Philadelphia.

I

(DD-7: dp. 408 n.; l. 248'8"; b. 24'6"; dr. 6'; s. 29 k.; cpl. 73; a. 2 3', 5 6-pdr., 2 18" tt.; cl. *Bainbridge*)

The first *Hull* (DD-7) was launched by Harlan & Hollingsworth of Wilmington, Del., 21 June 1902; sponsored by Miss Mabel Hull, a descendant of Commodore Hull; and commissioned 20 May 1903, Lt. S. S. Robinson in command.

During her first 2 years of service, *Hull* engaged in patrol and training maneuvers off Newport and in Chesapeake Bay. After a cruise to the Caribbean January-April 1905 she returned to League Island, Pa., where she decommissioned 30 September 1905.

Hull recommissioned 14 November 1906 at Philadelphia, and took part in winter exercises with fleet units in Cuban waters. After operations off Newport the ship returned to Norfolk in October 1907 to prepare for the voyage of the Great White Fleet. *Hull* sailed as an escort vessel 2 December and after stopping at many South American and Central American ports on the voyage around South America with the great battleships, arrived San Diego 28 April 1907. *Hull* was detached on the west coast, and the Great White Fleet continued on its cruise, showing the flag around the world. The destroyer remained in the vicinity of San Francisco until departing 24 August 1908 for a cruise to the South Pacific. She took part in various exercises in Hawaiian and Samoan waters before returning to San Diego in November.

Hull spent the years before World War I on patrol and training exercises off the California coast. She decommissioned 30 October 1912 and joined the Reserve Torpedo Division at Mare Island, with which she made occasional training cruises to California ports. When America entered the war in April 1917 *Hull* was being refitted at Mare Island. She sailed with other destroyers for the Canal Zone 25 April 1917 and for the next 3 months was engaged in defensive patrol off the western approaches to that vital waterway. She sailed to Norfolk 26 July for escort and patrol duty along the East Coast. In the months that followed *Hull* escorted ships to Bermuda and engaged in training maneuvers with other ships of the fleet as well. In June 1918 she broke up an attack by German submarine *U-151* on a merchant ship, and often rescued sailors from sinking ships. She continued this vital ocean patrol duty until the end of the war.

Hull arrived Philadelphia 29 January 1919, and decommissioned 7 July 1919. She was sold 5 January 1921 to Joseph G. Hitner of Philadelphia.

II

(DD-330: dp. 1,190; l. 314'5"; b. 31'8"; dr. 9'3"; s. 35 k.; cpl. 95; a. 4 4', 1 3', 12 21" tt.; cl. *Clemson*)

The second *Hull* (DD-330) was launched by Bethlehem Shipbuilding Corp., San Francisco, 18 February 1921; sponsored by Miss Elizabeth Hull; and commissioned 26 April 1921, Lt. T. J. Doyle in command.

Following shakedown along the California coast, *Hull* engaged in operations and tactical exercises out of San Diego for the remainder of the year. During 1922 she took part in charting and sounding operations along the coast of southern California. Upon completion of winter maneuvers off Panama and training exercises out of San Diego, *Hull* sailed 28 June 1923 to act as escort vessel on President Harding's trip to Alaska. It was on this voyage that the President was taken ill, and he died in San Francisco 2 August. The destroyer returned to San Diego 8 September and resumed operations and exercises in that area.

Hull sailed 2 January 1924 for operations in the Caribbean, which included a visit to Vera Cruz, Mexico, to protect American lives and property during the recurring Mexican revolution. In April the ship steamed to Seattle and operated between that city and Seward, Alaska, taking soundings for the new Alaskan cable. Upon her return in early May *Hull* resumed operations along the coast.

The destroyer continued to operate out of San Diego with occasional voyages to Panama until 1927. She then sailed in company with the Battle Fleet 17 November for tactical maneuvers in the Caribbean. *Hull* visited New York before returning to San Diego 26 June to resume her training operations. The ship arrived Mare Island 11 June 1929 for overhaul, and returned to San Diego in October, where she decommissioned 31 March 1930. *Hull* was sold for scrap 10 June 1931 in accordance with the London Treaty of 1930.

III

(DD-350: dp. 1,395; l. 341'4"; b. 34'3"; dr. 8'10"; s. 37 k.; cpl. 160; a. 5 5", 4 .30 cal., 8 21" tt.; cl. *Farragut*)

The third *Hull* (DD-350) was launched by New York Navy Yard 31 January 1934; sponsored by Miss Patricia Louise Platt; and commissioned 11 January 1935, Commander R. S. Wentworth in command.

Following a shakedown cruise which took her to the Azores, Portugal, and the British Isles, *Hull* arrived San Diego via the Panama Canal 19 October 1935. She began her operations with the Pacific Fleet off San Diego, engaging in tactical exercises and training. During the summer of 1936 she cruised to Alaska and in April 1937 took part in fleet exercises in Hawaiian waters. During this increasingly tense pre-war period, *Hull* often acted as plane guard to the Navy's Pacific carriers during the perfection of tactics which would be a central factor in America's victory in World War II. She continued these operations until the outbreak of the war, moving to her new home port, Pearl Harbor, 12 October 1939.

The pattern of fleet problems, plane guard duty, and patrolling was rudely interrupted 7 December 1941 when the Japanese attacked Pearl Harbor. *Hull* was alongside tender *Dobbin* undergoing repairs, but quickly put her anti-aircraft batteries into operation and assisted in downing several planes. As the main object of the raid was battleships, the destroyer suffered no hits and departed next day to join carrier *Enterprise* and escort her into Pearl Harbor. During the next critical months of the war, *Hull* operated with Admiral Wilson Brown's Task Force 11, screening *Lexington* in important strikes on Japanese bases in the Solomons. She returned to Pearl Harbor 26 March, and for 3 months sailed on convoy duty between San Francisco and Pearl Harbor. *Hull*

was soon back in the thick of combat, however, as she sailed 7 December for Suva, Fiji Islands, to prepare for America's first offensive land thrust, the amphibious assault on Guadalcanal. She departed 26 July for the Solomons, and on the day of the landings, 7 August 1942, screened cruisers during shore bombardment and then took up station as antisubmarine protection for the transports. Next day she helped repel strong enemy bombing attacks, shooting down several of the attackers, and that evening performed the sad duty of sinking transport *George F. Elliott*, burning beyond control. On 9 August the destroyer sank a small schooner off Guadalcanal, departing that evening for Espiritu Santo. During the next difficult weeks on Guadalcanal, *Hull* made three voyages with transports and warships in support of the troops, undergoing air attacks 9 and 14 September.

The ship returned to Pearl Harbor 20 October, and spent the remainder of the year with battleship *Colorado* in the New Hebrides. She sailed 29 January from Pearl Harbor bound for repairs at San Francisco, arriving 7 February 1943. Upon completion she moved to the bleak Aleutians, arriving Adak 16 April, and began a series of training maneuvers with battleships and cruisers in the northern waters. As the Navy moved in to retake Attu in May, *Hull* continued her patrol duties, and during July and early August she took part in numerous bombardments of Kiska Island. The ship also took part in the landings on Kiska 15 August, only to find that the Japanese had evacuated their last foothold in the Aleutian chain.

Hull returned to the Central Pacific after the Kiska operation, arriving Pearl Harbor 26 September 1943. She departed with the fleet 3 days later for strikes on Wake Island, and operated with escort carriers during diversionary strikes designed to mask the Navy's real objective—the Gilberts. *Hull* bombarded Makin during this assault 20 November, and with the invasion well underway arrived in convoy at Pearl Harbor 7 December 1943. From there she returned to Oakland 21 December for amphibious exercises.

Next on the island road to Japan was the Marshall Islands, and *Hull* sailed with Task Force 53 from San Diego 13 January 1944. She arrived 31 January off Kwajalein, screening transports in the reserve area, and through February carried out screening and patrol duties off Eniwetok and Majuro. Joining a battleship and carrier group, the ship moved to Mille Atoll 18 March, and took part in a devastating bombardment. *Hull* also took part in the bombardment of Wotje 22 March.

The veteran ship next participated in the devastating raid on the great Japanese base at Truk 29–30 April, after which she arrived Majuro 4 May 1944. There she joined Admiral Lee's battleships for the next major invasion, the assault on the Marianas. *Hull* bombarded Saipan 13 June, covered minesweeping operations with gunfire, and patrolled during the initial landing 15 June. Two days later *Hull* and other ships steamed out to join Admiral Mitscher's carrier task force as the Japanese made preparations to close the Marianas for a decisive naval battle. The great fleets approached each other 19 June for the biggest carrier engagement of the war, and as four large air raids hit the American dispositions fighter cover from the carriers of *Hull's* Task Group 58.2 and surface fire decimated the Japanese planes. With an able assist from American submarines, Mitscher succeeded in sinking two Japanese carriers in addition to inflicting fatal losses on the Japanese naval air arm during "The Great Marianas Turkey Shoot" 19 June, *Hull* assisting in several of these brilliant anti-aircraft engagements.

During July the destroyer operated with carrier groups off Guam, and after the assault 21 July patrolled off the island. In August she returned to Seattle, arriving the 25th, and underwent repairs which kept her in the States until 23 October, when she anchored at Pearl Harbor. *Hull* joined a 3d Fleet refueling group, departing 20 November 1944 to rendezvous with fast carrier striking forces in the Philippine Sea. Fueling began 17 December,

but increasingly heavy seas forced cancellation later that day. The fueling group became engulfed in an approaching typhoon next day, with barometers falling to very low levels and winds increasing above 90 knots. At about 1100 18 December *Hull* became locked "in irons", in the trough of the mountainous sea and unable to steer. All hands worked feverishly to maintain integrity and keep the ship afloat during the heavy rolls, but finally, in the words of her commander: "The ship remained over on her side at an angle of 80 degrees or more as the water flooded into her upper structures. I remained on the port wing of the bridge until the water flooded up to me, then I stepped off into the water as the ship rolled over on her way down".

The typhoon swallowed many of the survivors, but valiant rescue work by *Tabberer* and other ships of the fleet in the days that followed saved the lives of 7 officers and 55 enlisted men.

Hull received 10 battle stars for World War II service.

IV

(DD-945: dp. 3,990 fl.; l. 418'; b. 45'; dr. 14'9"; s. over 30 k.; cpl. 324; a. 3 5", 4 3", 4 21" tt., 1 dct.; cl. *Forrest Sherman*)

The fourth *Hull* (DD-945) was launched by Bath Iron Works, Bath, Maine, 10 August 1957; sponsored by Mrs. Albert G. Mumma; and commissioned 3 July 1958, Commander H. H. Ries in command.

Hull conducted her shakedown training in New England waters, steaming out of Newport 7 September 1958 to join the Pacific Fleet at San Diego. Arriving 13 October via the Panama Canal, she took part in fleet training exercises until departing for the Far East 15 April 1959. During this cruise she operated with the mighty 7th Fleet on Formosa Patrol, helping express America's determination to protect the island and maintain peace in the area. She returned to San Diego 3 September 1959 and after training operations sailed again for the Far East 7 July 1960. On this cruise she added hunter-killer group training to regular Formosa Patrol. *Hull* stopped at various ports in the region before returning to San Diego 26 November 1960.

The destroyer engaged in readiness exercises during January–August 1961, departing 31 August for another deployment to the strategic Far East. She operated off Formosa and in the South China sea, expressing American protection of the Southeast Asian countries in the fight against Communism. After fleet operations in Hawaiian waters she arrived San Diego 14 February 1962.

As the introduction of offensive missiles into Cuba precipitated another Cold War crisis, *Hull* sailed from San Diego 28 October 1962 to escort amphibious forces to the Canal Zone to strengthen American defenses and show her determination to resist incursion into the Western Hemisphere. As the crisis abated, again attesting to the power and importance of mobile seapower, *Hull* returned to her regular operations out of San Diego. She sailed once more for the Far East 17 October 1963, operating out of Subic Bay through December until returning to San Diego 16 April 1964. *Hull* operated on the West Coast until getting underway for the Orient 27 April 1965. During the deployment, she made three patrols off Vietnam. On 16 July she rescued an American flyer who had splashed in the Gulf of Tonkin. On 29 August she effectively shelled enemy strong points near Chu Lai. The veteran destroyer returned to San Diego 10 November.

Hull departed San Diego 18 January 1966 for the Long Beach Naval Shipyard and an overhaul until 26 April. From 12 to 22 July she participated in Exercise "Belaying Pin" off San Diego. Then on 17 August *Hull* departed San Diego for a 6-month WestPac deployment. She was the flagship of Commander Task Unit 70.8.9 for three 30-day patrols off South Vietnam. Between patrols the destroyer visited Kaoshiung, Taiwan; Hong Kong; Chinhae, Korea; and Sasebo, Japan. The third war patrol began 21 December and ended 16 January 1967. *Hull*

returned to San Diego in late January, arriving 11 February, for operations into the fall off the West Coast.

Humboldt

A bay on the northern coast of California, some 250 miles north of San Francisco.

(AVP-21: dp. 2,592; l. 310'9"; b. 41'1"; dr. 13'6"; s. 18 k.; cpl. 367; a. 2'5"; cl. *Barnegat*)

Humboldt (AVP-21) was launched by Boston Navy Yard 17 March 1941; sponsored by Mrs. William T. Tarrant; and commissioned 7 October 1941, Comdr. W. G. Tomkinson in command.

Following rigorous shakedown training off the Atlantic coast, the new seaplane tender sailed from Norfolk 13 May 1942 to join Rear Admiral Ingram's South Atlantic Force on the Brazilian coast. After stops at San Juan and Trinidad she arrived Recife 5 August and began tending the aircraft of VP-83. During the months that followed, these patrol aircraft, operating with ships of the Brazilian and U.S. Navies, patrolled the vital South Atlantic sea lanes and hunted down Axis submarines. *Humboldt* supplied and repaired seaplanes and, in addition, carried aviation gasoline to outlying air bases on the coast while engaging in antisubmarine patrol herself.

While at Natal, Brazil, 28 January 1943, *Humboldt* was the site of a conference between President Roosevelt, returning from the Casablanca Conference, and President Vargas of Brazil. Following this meeting, which helped to achieve even closer cooperation between the naval units of the two countries, the seaplane tender continued to visit isolated ports on the Brazilian coast with supplies, establishing a new seaplane base at Aratu in May 1943.

Humboldt headed north 1 July 1943, arriving Boston 17 July to take up new duties in the North Atlantic. Sailing 23 August, the ship carried supplies and parts to the Fleet Air Wings in Newfoundland, Iceland, and Britain. She continued this dangerous duty, often sailing unescorted, into the early months of 1944, occasionally sailing to Casablanca as well. She was at Casablanca in late May 1944 and upon hearing of the torpedoing of escort carrier *Block Island* and destroyer *Barr* steamed out to help with survivors and to escort *Barr* to safety. *Humboldt* was soon underway again, this time to bring an experienced submarine officer to rendezvous with *Guadalcanal's* hunter-killer group, which had just captured *U-505* in an epic encounter 4 June. The seaplane tender continued to bring supplies to squadrons in the Azores and North Africa until 22 March 1945 when she sailed from Norfolk for Brazil.

Returning to her original tending duties in the South Atlantic, *Humboldt* arrived Recife 5 April and remained on duty until the surrender of Germany, after which she sailed for Norfolk 10 June. She moved to Philadelphia Navy Yard 16 July for conversion to a Press Ship. Reclassified AG-121 30 July 1945, *Humboldt* was to serve as a broadcast and teletype center for correspondents during the final phases of the war against Japan; but the war ended before her conversion was completed. Arriving Orange, Texas, 22 November 1945, the ship decommissioned 19 March 1947 and entered the Atlantic Reserve Fleet. Loaned to the Coast Guard in January 1949, she now serves at Boston as a weather ship, designated WHEC-372.

Hummer

A hummingbird.

Hummer (AM-367), an *Admirable*-class minesweeper, was under construction at Puget Sound Bridge and Dredging Co., Seattle, Wash., but was canceled 6 June 1944.

Hummer (AM-401), an *Admirable*-class minesweeper, was under construction by Defoe Shipbuilding Co., Bay City, Mich., but was canceled 11 August 1945.

I

(YMS-372: dp. 215; l. 136'; b. 24'6"; dr. 6'; s. 13 k.; cpl. 50; a. 1 3')

Hummer (YMS-372) was launched as *YMS-372*, 23 December 1943 by Weaver Shipyards, Orange, Tex.; and commissioned 28 March 1944. She was named *Hummer* and reclassified AMS-20 on 17 February 1947.

After shakedown and operational training in early 1945, *Hummer* departed the United States to sweep mines and to patrol between Okinawa and Japan from 29 June to 31 July.

With the cessation of hostilities, the ship swept mines on the coasts of Japan and Korea until 21 February 1946 when she departed for the Western Seaboard.

Hummer decommissioned 23 June and joined the Pacific Reserve Fleet. She recommissioned 3 November 1950 to help support the United Nations commitment to containing aggression in Korea. Her training and readiness activities centered on the West Coast between San Diego and San Francisco until 13 November 1953 when she again decommissioned at Long Beach. Reclassified MSC(O)-20, 17 February 1955, the ship was transferred to the Japanese Maritime Self Defense Force 29 January 1959, serving as *Ninoshima*.

Hummer received three battle stars for her service in World War II.

Humming Bird

One of a family of small, brilliantly colored, nonpasserine birds.

(AMc-26: dp. 180; l. 90'5"; b. 19'10"; dr. 9'; s. 9 k.)

The first *Humming Bird* (AMc-26), a wooden dragger, was built as *Whaling City* in 1936 by Morse Shipyard, Thomaston, Maine; acquired by purchase 30 October 1940 from her owner, William Hayes of New Bedford, Mass.; converted to Navy use at Geo. Lawley & Son, Neponset, Mass., and placed in service 12 June 1941.

Humming Bird operated throughout the war as a minesweeper and minesweeping training vessel, largely in the vicinity of Mine Warfare Training School, Yorktown, Va. She was reclassified Small Boat C-13548, 12 June 1944 and placed out of service at New York 18 February 1945. Delivered to the Maritime Commission, the craft was eventually sold.

II

(MSC-192: dp. 290; l. 144'; b. 28'; dr. 9'; s. 13 k.; cpl. 39; a. 2 20mm.; cl. *Bluebird*)

The second *Humming Bird*, usually spelled *Hummingbird* (MSC-192), was originally classified AMS-192, but reclassified 7 February 1955. She was launched by Quincy Adams Yacht Yard, Inc., Quincy, Mass., 27 January 1954; sponsored by Mrs. Felice Low; and commissioned 9 February 1955, Lt. (j.g.) W. J. Whitley in command.

Following shakedown training off Key West in June, *Hummingbird* underwent minesweeping training at Charleston, S.C., in July. From 21 October to 14 November she took part in her first amphibious exercises, sweeping the landing area and dropping marker buoys to guide the simulated assault on the shores of North Carolina. Arriving New York 8 January 1956, she took part in surveying work for the Hydrographic Office until 15 February, after which *Hummingbird* returned to Charleston.

During 1957 and 1958 the ship was based at Mine Warfare School, Yorktown, Va., and in March 1958 she participated in another large amphibious operation at Onslow, North Carolina. In 1959 she shifted her home port to the amphibious base at Little Creek, Va., and continued to perform minesweeping duties during the periodic practice assaults on the Atlantic coast. She arrived Halifax, Nova Scotia, 6 October 1960 to take part in Sweep Clear V, a NATO minesweeping exercise with Canadian mine craft, returning to Little Creek 26 October. In July 1961

Hummingbird repeated this highly successful combined exercise in Canadian waters.

The year 1962 saw more rigorous mine warfare training for *Hummingbird*, with amphibious operations at Onslow and in the Caribbean. The versatile ship also took part in a search for a downed Air Force plane off Delaware 1 June before departing for Panama City, Fla., to take part in mine experiments. September included a third NATO minesweeping exercise. As American naval power quarantined Cuba in October, *Hummingbird* stood ready in case larger operations were necessary, and in early 1963 took part in patrols off Cuba. From 1963 to 1967 the veteran minesweeper continued her training and readiness operations, a vital part of America's fighting power on the seas.

Humphreys

Joshua Humphreys was born in Haverford, Pa., 17 June 1751, and as a youth was apprenticed to a shipbuilder in Philadelphia. During the Revolutionary War he was active as a designer, and played a major part in planning *Randolph*, a frigate, and a 74-gun ship which was never built. After the war Humphreys became an important shipbuilder in Philadelphia; and, when Congress in 1794 passed the act providing for the construction of six frigates, he was called upon to design them. He was appointed Naval Constructor 28 June 1794 and began work on these important ships, the beginnings of the U.S. Navy. *United States* was built by Humphreys in Philadelphia, and was the first of the new ships to be launched on 10 May 1797. These brilliantly designed and skillfully handled vessels, larger and faster than other ships of their class, formed the core of the Navy during the War of 1812, and scored several stirring victories against powerful British ships. Humphreys' genius is evident by the fact that two of these ships, *Constellation* and *Constitution* (Old Ironsides), are still afloat. The former is at Baltimore and in the process of restoration, and the latter on view at Boston as the oldest commissioned vessel in the U.S. Navy. Humphreys, an influential builder, died at Reading, Pa. 12 January 1838.

(DD-236: dp. 1,190; l. 314'5"; b. 31'8"; dr. 9'3"; s. 35 k.; cpl. 101; a. 4 4", 1 3", 2 .30 cal., 12 21" tt.; cl. *Clemson*)

Humphreys (DD-236) was launched 28 July 1919 by New York Shipbuilding Corp., Camden, N.J.; sponsored by Miss Letitia A. Humphreys, great-granddaughter of Joshua Humphreys; and commissioned at Philadelphia 21 July 1920, Comdr. W. Baggaley in command.

After completing her shakedown training in New England waters, *Humphreys* sailed 14 August for special duty in the Mediterranean. For the next year she operated primarily in the eastern Mediterranean with Turkish ships, protecting American and Turkish interests in the area during the conflict which followed the Russian revolution. *Humphreys* did surveying work and acted as station and communications ship. In November 1920 she evacuated civilians from the Crimea during the last stages of fighting in Russia, and, until August 1921, operated off Palestine, Turkey, and Egypt on maneuvers. She sailed from Constantinople 6 August 1921, arriving Newport, R.I. 23 August, and spent the rest of the year in training operations.

Humphreys spent the next 2 years on ship and fleet training exercises in Atlantic and Caribbean waters. She sailed 21 January 1925 via the Canal Zone for San Diego, and after her arrival 12 March took part in important fleet maneuvers off the California coast. In June she returned to New York and her regular schedule of training in the Caribbean. *Humphreys* maintained this operational pattern until decommissioning at Philadelphia 10 January 1930, taking part in annual reserve training cruises during the summers 1926-29.

Humphreys recommissioned at Philadelphia 13 June 1932, and sailed 15 August for maneuvers on the West Coast. The ship took part in two fleet problems, vital

tools in perfecting equipment and tactics, before sailing 19 April 1934 for New York. Upon her arrival 31 May *Humphreys* resumed her readiness operations on the East Coast, taking part in a fleet exercise off Haiti in October. From the Caribbean the ship returned to San Diego 8 November 1934 and for the next year took part in important carrier training exercises in the Pacific. Acting as screen ship and plane guard, *Humphreys* helped perfect the tactics of carrier warfare which were to exert a decisive influence on the coming war. She remained on the West Coast, with occasional voyages to Pearl Harbor and Midway, until decommissioning at San Diego 14 September 1939.

The veteran ship recommissioned once more 26 September 1939 as the beginning of the war in Europe necessitated an increase in America's readiness. *Humphreys* conducted shakedown off San Diego and sailed 13 November to join the Neutrality Patrol in the Caribbean, designed to protect American shipping. During May and June 1940 the ship took part in a sound school at Newport to increase her antisubmarine capacity, and sailed 4 December from Norfolk for San Diego, where she arrived 2 days before Christmas. There she continued Neutrality Patrol duty and engaged in antisubmarine training off California.

Humphreys was in San Diego when the Japanese attack on Pearl Harbor brought the United States into the war 7 December 1941. During the critical early months she operated as a coastal escort ship between San Pedro and Seattle, but in May she sailed northward to Kodiak, Alaska, arriving 31 May 1942. In the bleak Aleutians she escorted transports, patrolled American-held islands, and engaged in exercises with *Honolulu*, *Indianapolis*, and several destroyers. *Humphreys* arrived San Francisco 11 November and entered Mare Island Navy Yard for conversion to high-speed transport.

The veteran ship was reclassified APD-12 on 1 December 1942; and, following shakedown training, arrived Pearl Harbor 31 December to prepare for duty in the western Pacific. After amphibious training in Hawaiian waters, the ship sailed to Noumea 22 January 1943 and began ferrying troops and supplies from advance bases to Guadalcanal, Tulagi, and Florida Island. During these critical months as the ship repeatedly steamed into the Solomons in support of amphibious assaults, she often fought off bombing and strafing attacks by Japanese aircraft.

After training landings *Humphreys* embarked elements of the 1st Cavalry Division at Noumea and transported them to Townsville, Australia, in preparation for the invasion of Woodlark and Kiriwina Islands. Arriving Townsville 20 May 1943, the ship sailed for Milne Bay 21 June, and from there landed troops and equipment on Woodlark 23 June without enemy opposition. This first landing of the long New Guinea campaign was also the first for Admiral Barbery's 7th Fleet Amphibious Force, and provided invaluable experience for the numerous amphibious operations to come.

Humphreys sailed to Brisbane for repairs during July and August, and returned to Milne Bay 15 August 1943. There she prepared for VII Phib's next move up the coast of New Guinea to Lae. After putting their troops ashore early 4 September, the high-speed transports remained off the beach to protect landing craft from Japanese air attack. The Australian troops landed by *Humphreys* and the other ships soon took Lae, and the ship departed 7 September with casualties for Buna. On the 10th she returned with three other transports for a night sweep of Huon Gulf, driving away supply barges and bombarding Japanese positions around Lae.

Next on Barbery's amphibious timetable in New Guinea was Finschhafen, where *Humphreys* and her sisterships carried out a surprise landing 22 September. After bringing reinforcements 8 days later, the ship took casualties to Buna 8 October and arrived Goodenough Island 19 October for amphibious exercises.

Seizure of New Britain was vital to the advance toward the Philippines as it provided control of the strategic Vitiaz and Dampier Straits. The first step of the opera-

tion was to gain control of the harbor at Arawe. *Humphreys* sailed with other amphibious units for southern New Britain, arriving 15 December; put ashore raider units in rubber boats to seize harbor islands; then stood offshore to provide gunfire support before retiring to Buna that afternoon.

Humphreys also took part in the Cape Gloucester landings 26 December, remaining in the Cape Sudest area into February 1944. She then sailed for the landings in the Admiralties 27 February, arriving off Los Negros 2 days later. *Humphreys* landed troops at Hyane; steamed to Cape Sudest; and, when resistance stiffened in early March, returned off Hyane with vital reinforcements.

In April the ship began preparations for the three-pronged amphibious leap into central New Guinea, the Hollandia operation. *Humphreys* landed troops at Humboldt Bay 22 April against light opposition, and remained off the beaches providing gunfire support. Following the assault, she returned to Buna and sailed 12 May for the United States.

The veteran ship arrived San Francisco 30 May, and was converted to carry "frogmen," the Navy's skilled Underwater Demolition Teams. Sailing again 30 July, *Humphreys* trained in Hawaiian waters before sailing to Manus 28 September to join the giant invasion fleet for the return to the Philippines. Sailing 12 October, she carried UDT Team No. 5 to the Leyte beaches 18 October, remaining close in to provide fire support during this vital reconnaissance. Next day she patrolled Leyte Gulf for enemy submarines, and continued this work during the main landings 20 October 1944. The veteran ship assisted in shooting down a bomber 21 October before sailing in convoy for Manus.

The invasion of Luzon was next on *Humphreys'* schedule. After stopping at Noumea and Hollandia, she sortied from the Palau 1 January 1945 with the Lingayen invasion group. Steaming through the Philippines the ships encountered desperate suicide attacks and shot down many planes. These attacks became more intense as *Humphreys* entered Lingayen Gulf 6 January; and next day as her UDT team swam ashore for vital reconnaissance work, the ship provided gunfire cover. She remained in the Gulf until sailing with a convoy 10 January, 1 day after the main landings.

The ship arrived Ulithi 23 January 1945 and took on a new duty, screening logistics groups during at-sea replenishment and refueling of the wide-ranging carrier striking forces. She screened refueling operations for 5th Fleet escort carriers covering the Iwo landings, then steamed on to Iwo Jima itself 8 March 1945. There *Humphreys* acted as screening ship until arriving Leyte with a convoy 17 March.

As an important preliminary to the main landings on Okinawa, *Humphreys* took part in the assault of Keise Shima 31 March, screening LST's and performing escort duties until 3 April when she sailed for Ulithi. This last and largest of Pacific landings was then well underway, and the ship escorted resupply convoys from Ulithi to bitterly contested Okinawa until returning to Pearl Harbor 4 June 1945. From there she sailed to San Diego where she was reclassified DD-236 on 20 July 1945. *Humphreys* decommissioned 26 October 1945 and was sold for scrap 26 August 1946 to National Metal & Steel Corp., Terminal Island, Calif.

Humphreys received seven battle stars for World War II service.

Hunch

A former name retained.

(SP-1197: l. 35'2"; b. 6'3"; dr. 2'6"; s. 20 k.)

Hunch, a motor launch, was built by Charles Seabury & Sons, Morris Heights, N.Y., in 1907, and was acquired from her owner, R. A. Alger of Detroit, Mich., in August 1917. Her first C.O. was Ensign P. L. Emerson, USNRF.

Assigned to the 9th, 10th, and 11th Naval Districts, *Hunch* acted as a patrol boat on the Detroit River during

the First World War and was returned to her owner in 1918.

Hunchback

A former name retained.

(SwStr: t. 517'; l. 179'; b. 29'; dph. 10'; s. 12 k.; a. 3 9'', 1 100-pdr. Parrott r.)

Hunchback, a wooden steam ferryboat, was built in 1852 at New York City and was purchased by the Navy 16 December 1861. She sailed to Hampton Roads soon afterward and commissioned there 3 January 1862, Acting Lt. Edmund R. Colhoun in command.

Assigned to the North Atlantic Blockading Squadron, *Hunchback* steamed to Hatteras Inlet late in January to prepare for the coming amphibious operation to capture Roanoke Island. Departing 5 February, the strong force began its bombardment of Fort Barrow two days later, supported the capture of the forts by General Burnside's troops, and forced the Confederate squadron to withdraw up the Pasquotank. In this action *Hunchback* slugged it out with Fort Barrow at close range and suffered considerable damage, but contributed greatly to the victory which opened North Carolina to the Union and cut off Norfolk from its supply lines.

Hunchback, continuing to support Army operations in the area, landed troops up the Chowan River 18 February. She was under the command of Comdr. Rowan during the capture of New Bern, N.C., 14 March. Departing anchorage at Hatteras Inlet 12 March, the naval force sailed up the Neuse River to New Bern, engaged the batteries in heavy firing 14 March, and landed troops to capture the town and its immense depot of Confederate supplies.

Following these two important actions, *Hunchback* was assigned patrol duty in the sounds of North Carolina. She made an important series of reconnaissance expeditions up the Chowan River 12 to 22 May, destroying a battery and capturing four small ships. The ship then continued her patrol of the sounds. As Confederate forces gathered near Franklin, Va., on the Blackwater River, early in October, the Army commander sent an urgent request for Navy assistance. Lt. Comdr. Flusser sped to their support with *Hunchback*, *Commodore Perry*, and *Whitehead* 3 October, and, although the ships could not reach Franklin, they engaged Confederate troops for three hours below the town, and were forced to withdraw only as the Southerners began felling trees over the narrow river behind them.

Several expeditions and engagements occurred in *Hunchback's* next few months in the sounds. She took part in a reconnaissance expedition to Hamilton 2 to 6 November, and 14 March 1863 helped defend Fort Anderson from attack by Confederate troops. Later that month Confederate forces laid siege to the city of Washington, N.C., on the Pamlico River. Confederate positions lined the river; but Union ships passed the batteries, brought supplies to the town, and succeeded in breaking up the attack by 16 April.

Hunchback returned to New Bern before the end of the siege, and remained there for some time afterward. She sailed 6 September 1863 for Hampton Roads, her usefulness much impaired by damage and wear on machinery. Early in 1864 she repaired at Baltimore, and returned to Hampton Roads in May. She towed monitor *Saugus* up the James River 5 May, staying to shell Confederate troop positions in the continuing stalemate there. It was subsequently decided to keep her in the James, and she was occupied during the next months conveying and occasionally shelling Confederate positions. *Hunchback* also carried dispatches during this period, and was based at Deep Bottom, on the James.

Just before the end of the war 17 March 1865, *Hunchback* returned to her old patrol station, the sounds of North Carolina. After another expedition up the Chowan River 1 April, she was sent north, and decommissioned at New York 12 June 1865. She was sold 12 July 1865 to the

New York & Brooklyn Ferry Co., was renamed *General Grant* in 1866, and remained in service until 1880.

Hunley

Horace Lawson Hunley was born 29 December 1823, in Sumner County, Tenn. He early moved to New Orleans where he practiced law and represented Orleans Parish in the Louisiana State Legislature. On outbreak of the Civil War, he joined James R. McClintock and Baxter Watson in sponsoring the building of Confederate privateer submarine *Pioneer*, later scuttled to prevent capture when New Orleans fell. The three men built a second submarine at Mobile, Ala., but it sank in Mobile Bay. Hunley then provided the entire means for building a third submarine named *H. L. Hunley* in his honor. This manual powered submarine had successful trials in Mobile Bay, then was shipped to General Beauregard for the defense of Charleston in August 1863.

When early submarine operations at Charleston failed to produce a sinking, Hunley provided a crew headed by Lt. Georé A. Dixon, CSA. But Hunley took charge in the absence of Dixon 15 October 1863, and perished with his entire crew of seven when the submarine failed to surface from a dive under CSS *Indian Chief*.

Dixon raised and refitted CSS *H. L. Hunley*, armed her with a "Lee Spar Torpedo" and sank steam sloop-of-war *Housatonic* off Charleston Harbor 17 February 1864. Though submarine and crew perished in this mission, *H. L. Hunley* was the first submarine to sink a warship in combat, casting a long shadow into the 20th century.

(AS-31: dp. 19,000; l. 599'; b. 83'; dr. 23'4"; s. 18 k.; cpl. 1,190; a. 2 5"; cl. *Hunley*)

Hunley (AS-31) was launched 28 September 1961 by the Newport News Shipbuilding & Dry Dock Co., Newport News, Va.; sponsored by Mrs. J. Palmer Gaillard, wife of the Mayor of Charleston, S.C.; and commissioned 16 June 1962, Captain Douglas N. Syverson, in command.

Hunley has the distinction of being the first ship designed and built up from the keel to service and maintain the U.S. Navy's nuclear powered Ballistic Missile Submarine Fleet. She has complete facilities for servicing the complex Polaris Weapons Systems and for accomplishing any submarine repair other than a major shipyard overhaul.

Hunley sailed 25 July 1962 for shakedown training off Cuba. This completed 6 September, she visited several Gulf and Atlantic ports, including Mobile and Charleston. She returned north to Norfolk 28 September for postshakedown alterations until 8 December. She next paid a 3-day visit to New York City to host the Naval Reserve Officers Seminar "New Ships for the Modern Navy." She stood out of the Norfolk Operating Base 29 December 1962 for Holy Loch, Scotland, arriving 9 January 1963. Almost immediately she began taking the load off *Protocus*, whom she officially relieved 15 March 1963 as tender to Submarine Squadron 14 at Holy Loch, Scotland. This duty continued until 12 April 1964 when *Hunley* sailed for conversion that provided capability of handling the new A3 Polaris Missile. She resumed her duties at Holy Loch 15 June 1964.

A Polaris milestone was reached in December 1965 when *Thomas A. Edison* came alongside to commence the 100th refit of an SSBN by *Hunley*. This signified that one hundred SSBN submarines had gone out on time from *Hunley* and not one of them had to make an early return from patrol. This represents some 200 months of Polaris on station or 16½ years of submerged strategic deterrent since *Hunley's* arrival in Holy Loch 9 January 1963.

Among impressive jobs carried out by *Hunley* is welding on SSBN pressure hulls or reactor plant fluid systems. Once unheard of in submarine tending, these jobs are only a few of many tackled with confidence and skill by *Hunley*. These and many other alterations are carried out as a matter of routine to keep SSBN's on the line with the newest possible technical improvements and safety de-

vices. For example, an auxiliary "Sub-Safe" package was accomplished on *Theodore Roosevelt* in which over 40 fittings and more than 100 feet of new piping in a major system were installed. A battery replacement for *Ethan Allen* was completed in only 11 days. *Hunley* meets demands from making water-borne propeller replacements to encapsulation of AC induction motors; delicate repairs to navigation and fire control, and many other varied tasks to insure that each SSBN has the finest of care on each refit. The resolution, can-do spirit, and persevering fidelity of her officers and men give firm allegiance to *Hunley's* motto: "We Serve to Preserve Peace."

Hunley returned to the United States late in 1966 and in 1967 operates out of Charleston, S.C., laboring to keep sharp the edge of the Navy's underwater nuclear deterrent.

Hunt

William Henry Hunt, born in Charleston, S.C., 12 June 1823, was Secretary of the Navy under President Garfield. After studying law at Yale, he finished his professional training in his brothers' office in New Orleans, where he was admitted to the bar in 1844. Hunt opposed secession and favored the Union cause. He was nevertheless drafted into the Confederate Army and commissioned Lieutenant Colonel. However, he managed to avoid involvement in military operations until Admiral Farragut captured New Orleans.

In March 1876, Hunt was appointed Attorney-General of Louisiana, and in July of that year he was the Republican candidate for this office. Both parties claimed victory in the election, but Hunt lost the position when President Hayes recognized the Democratic government of the State. As compensation, the President appointed him Associate Judge of the United States Court of Claims, 15 May 1878. He served in this capacity until he became President Garfield's Secretary of the Navy.

Secretary Hunt rendered invaluable service by reporting that the Navy, grossly neglected after the Civil War, was no longer able to protect Americans abroad. He appointed the first Naval Advisory Board which undertook the work of rebuilding the Navy, emasculated by public apathy and lack of funds. After Vice President Arthur succeeded Garfield in the presidency, he retired Hunt from the cabinet by appointing him Minister to Russia 7 April 1882. He died February 1884, while representing the United States at Saint Petersburg.

I

(DD-194: dp. 1,215; l. 314'5"; b. 31'9"; dr. 9'4"; s. 35 k.; cpl. 101; a. 4 4", 1 3", 12 21" tt.; cl. *Clemson*)

The first *Hunt* (DD-194) was launched by the Newport News Shipbuilding & Dry Dock Co., Newport News, Va., 14 February 1920; sponsored by Miss Virginia Livingston Hunt; and commissioned 30 September 1920, Lt. Roswell H. Blair in command.

After shakedown, *Hunt* participated in training and readiness exercises with the Atlantic Fleet and conducted torpedo trials on the range out of Newport, R.I. She shifted her base of operations to Charleston, S.C., 3 December 1920. Sailing from Charleston Harbor 29 May 1922, she entered the Philadelphia Navy Yard 6 June and decommissioned there 11 August 1922. From 13 September 1930 to 28 May 1934 the U.S. Coast Guard had custody of the ship.

Hunt recommissioned at Philadelphia and cleared that port 26 January 1940 for neutrality patrol in the Caribbean Sea. She departed Panama Canal 3 April to escort submarine *Scaraven* to Cape Canaveral and then engaged in gunnery practice in Cuban waters en route to Norfolk arriving 17 April 1940. The next few months were devoted to maneuvers in Chesapeake Bay and training cruises down the eastern seaboard.

Hunt was 1 of the 50 "overage fourstacker destroyers" exchanged with the British for American bases in British

Charleston Sept 19th 1863.

General J. Beauregard.

Sir.

I am a part-owner of the torpedo boat at the Hunley. I have been interested in building this description of boat since the beginning of the war, and furnished the means entirely of building the predecessor of this boat which was lost in an attempt to blow up a Federal vessel off fort Morgan Mobile Harbor. I feel therefore a deep interest in its success. I propose if you will place the boat in my hands to furnish a crew (in whole or in part) from Mobile who are well acquainted with its management, & make the attempt to destroy a vessel of the enemy as early as practicable.

Very Respectfully,

Your Obedt. Servt.

H. L. Hunley.

USS *Hunley* (AS-31) in Holy Loch, Scotland, 17 January 1963

West Indies. She got underway from Newport 3 October 1940, and reached Halifax, Nova Scotia 5 October. The following day she embarked 100 English officers and blue-jackets for instructions in ship handling. On 8 October she decommissioned from the U.S. Navy and commissioned in the British Navy as HMS *Broadway*.

Broadway arrived at Belfast 24 October 1940, where she joined the 11th Escort Group, Western Approaches Command, with whom she engaged in escorting numerous convoys. On 9 May, with the help of destroyer *Bulldog* and corvette *Aubrietia*, she captured German submarine *U-110* between Iceland and Greenland. On the previous night, the U-boat had crept in to attack *Broadway's* convoy but was prevented from surfacing by the strong destroyer escort. She continued to shadow the Allied ships until early in the afternoon watch when she launched three torpedoes from periscope depth. *Broadway* and her fellow escorts promptly counterattacked and forced her to surface where she surrendered. Unfortunately the prize sank while in tow to port but only after her captors had recovered documents of great value and importance. This victory was especially sweet since *U-110* was commanded by Korvetten-Kapitan Lemp who had made the first kill of the war by sinking liner *Athenia* 3 September 1939, the day England declared war. Lemp was lost with 14 members of his crew, but a war correspondent, 4 officers and 28 men were rescued.

During 1942 and 1943 *Broadway* continued to escort Atlantic convoys. On 12 May 1943 she joined frigate *Lagan* and aircraft from escort carrier *Biter* in destroying another German submarine, *U-89*, which was sunk northeast of the Azores.

After refitting at Belfast in September 1943, *Broadway* became a target ship for aircraft and served as such at Rosyth in Scotland until the war ended in Europe. In May 1945 she left Rosyth for Northern Norway with one of the occupation forces. At Narvik, Norway, she took charge of a convoy of German submarines which was sailing for Trondheim. In the reduction of the British Navy after the war, *Hunt* was scrapped.

II

(DD-674; dp. 2,100; l. 376'3"; b. 39'8"; dr. 13'; s. over 30 k.; cpl. 273; a. 5 5", 10 21" tt., 6 dcp.; 2 dct.; cl. *Fletcher*)

Hunt (DD-674) was launched by the Federal Shipbuilding & Drydock Co., Kearny, N.J., 1 August 1943; sponsored by Mrs. Henry Kent Hewitt, wife of Vice Admiral Hewitt and granddaughter of the namesake; and commissioned 22 September 1943, Comdr. Frank P. Mitchell in command.

After shakedown off Bermuda and final alterations in New York Navy Yard, *Hunt* cleared Norfolk for the Pacific 2 December 1943. She entered Pearl Harbor 24 December 1943 and joined Vice Adm. Marc A. Mitscher's Fast Carrier Task Force 58 operating as a part of the anti-submarine screen for a task group which included *Essex* (CV-9), *Intrepid* (CV-11), and *Cabot* (CV-25). She sortied with the carrier task force 16 January 1944 to support the invasion of the Marshall Islands, the operation which, in the words of Rear Adm. Richard L. Conolly, "... really cracked the Japanese shell. It broke the crust of their defenses on a scale that could be exploited at once." At dawn 29 January, Mitscher's planes opened the operation with strikes against enemy-held airfields on Roi Island, Kwajalein Atoll, while *Hunt* protected the carriers from which they were launched. The next day she joined battleships *North Carolina* (BB-55), *South Dakota* (BB-52) and *Alabama* (BB-60) in shelling pill boxes and other targets on the northern beaches of Roi and Namur Islands. After 2 days on bombardment station she rejoined the screen of the carriers who were furnishing planes to support landing operations on the small islands adjoining Roi and Namur. She entered newly won Majuro Lagoon in company with *Essex* 5 February 1944 for replenishment.

On 12 February *Hunt* sailed with most of the Fast Carrier Force for Truk Atoll to neutralize that reputedly impregnable enemy air and naval base which threatened both General MacArthur's forces then encircling Rabaul and Rear Adm. H. W. Hill's amphibious vessels prepar-

ing to assault Eniwetok. In the early morning darkness of 17 February, *Hunt* arrived off Truk with the rest of the force which began the systematic destruction of the Japanese ships and planes caught in the area. A group of heavies—two battleships, two heavy cruisers, and four destroyers—circled the atoll to catch enemy ships attempting to escape, while carrier-based planes attacked targets on the islands and in the Lagoon. *Hunt's* role in the operation was to protect Admiral A. E. Montgomery's carrier group from submarine or air attack. When her task force steamed away the following evening, its planes and ships had sunk two light cruisers, 4 destroyers, 3 auxiliary cruisers, 6 auxiliaries of different types, and 137,091 tons of merchant shipping. Moreover, the destruction and damaging of between 250 and 275 enemy planes was especially gratifying to the Navy which, by this successful raid, had forced the Japanese Combined Fleet to shun Truk, its base since July 1942, in favor of safer areas closer to home.

After clearing Truk, *Hunt*, in company with carrier *Enterprise* (CV-6), cruiser *San Diego* (CL-53), and five other destroyers, left the main body of the task force to raid "leapfrogged" Jaluit Atoll, Marshall Islands, 20 February 1944. The next day she anchored in Majuro Lagoon from which, after a brief visit to Pearl Harbor, she put to sea as a part of the screen of the *Bunker Hill* carrier task group bound for the Palau Islands 22 March. She steamed on station as the first air strikes at Peleliu were launched 30 March. Intense and accurate anti-aircraft fire from *Hunt* and her sister ships drove off three flight groups of Japanese torpedo bombers as strikes continued during the next 3 days. On 1 April she left the formation with destroyer *Hickox* (DD-673) to destroy two 125-foot patrol craft which had been firing on American planes.

She returned to Majuro on 6 April for replenishment, then set course with the *Bunker Hill* carrier task group to lend support to the invasion and occupation of Hollandia, D.N.G. Planes from the carriers repeatedly struck enemy emplacements in the area, and night fighters successfully repelled all enemy planes which approached the warships. On the passage returning to Majuro *Hunt's* carriers paused off Truk 29 and 30 April for another raid on that weakened but reinforced enemy base. Thereafter Truk was almost useless to the Japanese.

May was a welcome interlude devoted to training exercises in the Marshalls enlivened by a diversionary raid on Wake Island 24 May to draw attention away from the Marianas. *Hunt* put to sea with the *Bunker Hill* carrier task group 6 June for the invasion of the Marianas. The first air strikes of the operation against the Island Group were launched on 11 June and continued until 15 June when the marines hit the beaches, and attention shifted to providing close support for troops ashore. On that day, Admiral Spruance received a warning from submarine *Flying Fish* that an enemy carrier force was approaching from San Bernardino Strait. In the early hours of 19 June it arrived within striking distance of the fast carrier force which guarded the amphibious forces off Saipan. The Battle of the Philippine Sea began in a series of dog-fights over Guam, where American planes were neutralizing Japanese land-based air forces. About an hour and a half later, the major phase of the battle, nicknamed "The Marianas Turkey Shoot", opened when the American flattops launched their fighters to intercept the first of four raids from the Japanese carriers. During the ensuing 8 hours of fierce, continuous fighting in the air, Japan lost 346 planes and 2 carriers while only 30 U.S. planes splashed and 1 American battleship suffered a bomb hit but was not put out of action. *Hunt* then steamed westward with the carriers in pursuit of the fleeing remnants of the enemy fleet. The following afternoon planes from the carriers caught up with their quarry and accounted for carrier *Hiyo* and two oilers while damaging several other Japanese ships. This carrier battle, the greatest of the war, virtually wiped out the emperor's naval air power which would be sorely missed in the impending battle for Leyte Gulf.

The next evening the task force gave up the chase and set course for Saipan. On the return passage, *Hunt* rescued four pilots and seven crewmen from planes which had been unable to land on their carriers. Once back in the Marianas, *Hunt* and her sister ships resumed the task of supporting the American forces which were taking Saipan, Tinian, and Guam. They continued this duty until fighting in these islands ended early in August.

After voyage repairs at Pearl Harbor, she departed 30 August as part of the screen for Admiral Halsey's flagship, *New Jersey*. *Hunt* joined the *Bunker Hill* Carrier Group off the Admiralty Islands 6 September for operations south of the Palau Islands. On 11 September she carried Admiral Halsey from *New Jersey* to carrier *Lexington* for a conference and returned him to his flagship. In the following days she guarded the carriers which were repeatedly raiding the Palaus to soften them up for the invasion. When marines landed on Peleliu 15 September, planes from these carriers supported the efforts on shore until the determined leathernecks finally stamped out the last organized resistance of the dogged Japanese defenders. *Hunt* entered Kossol Passage 30 September to embark Admiral Halsey and his staff for passage to Peleliu. *Hunt* put him ashore that afternoon and steamed off shore as stand-by flagship until the following afternoon when he again came on board to be returned to Kossol Passage.

On 6 October, she cleared port with the *Bunker Hill* carrier task group for air strikes against Okinawa Jima. *Hunt* rescued a pilot and two crewmen of a splashed *Bunker Hill* plane 10 October. She repeated this feat 2 days later when she saved a pilot and two crewmen whose plane had been downed during an attack on Formosan airbases.

Hunt accompanied the carriers off Northern Luzon during the landings on Leyte 20 October while they struck again and again at Japanese airfields throughout the Philippines to eliminate enemy airpower during General MacArthur's long-awaited return. During the decisive Battle for Leyte Gulf they went after the Japanese northern force and sank four carriers and a destroyer besides damaging several other ships.

For the rest of the year, *Hunt* continued to serve as a screening unit for the carrier strikes against Formosa and Japanese-held areas in the Philippines. On 16 February 1945, her fast carrier task force hit hard at the Tokyo Bay area in a furious 2-day attack. Then the flattops turned their attention to support the landings on Iwo Jima which began 19 February. That day her guns brought down an enemy plane as they repelled the first of the air raids against American ships off that bitterly-contested island. *Hunt* sailed from Iwo Jima 22 February for waters off Honshu, Japan and another swipe at Tokyo Bay, 25 February. On the way to Ulithi the carriers paused to strike Okinawa 1 March.

Hunt departed Ulithi 14 March for rendezvous with carrier *Franklin* (CV-13) off the Ryukyu Islands 18 March. The next day *Franklin* maneuvered closer to the Japanese mainland than had any other U.S. carrier up to that point in the war to launch a fighter sweep against Honshu and later a strike against shipping in Kobe Harbor. Suddenly a single enemy plane broke through the cloud cover and made a low level run to drop two semi-armor-piercing bombs on the gallant ship. The carrier burned furiously as the flames triggered ammunition, bombs, and rockets. *Hunt* closed the stricken ship to assist in picking up survivors blown overboard by the explosions. After rescuing 429 survivors, she joined three other destroyers in a clockwise patrol around the stricken ship which had gone dead in the water within 50 miles of the Japanese Coast. Cruiser *Pittsburgh* (CA-72) took the ship in tow and, after an epic struggle, managed to get her to Ulithi 24 March. *Hunt* put the survivors ashore and sped to the Ryukyus 5 April to support troops who were struggling to take Okinawa.

Hunt took up radar picket station off Okinawa 8 April. On 14 April a kamikaze roared in toward *Hunt* and was riddled by her guns during the approach. It struck the destroyer at deck level shearing off the mainmast and

slicing into the forward stack where it left its starboard wing. The fuselage of the suicide plane splashed into the water about 25 yards from *Hunt* whose crew quickly doused the small fires which had broken out on board. A second kamikaze which approached *Hunt* that day was knocked down by her alert gunners before it could reach the ship.

Hunt continued to guard the carriers as they gave direct support to troops on Okinawa, taking time out on 4 separate days for radar picket duty in dangerous waters. When she departed Ryukyus 30 May for tender overhaul in Leyte Gulf, her crew had been to general quarters 54 times.

Hunt sailed for the United States 19 June 1945, arrived in San Francisco for overhaul 6 July, and decommissioned 15 December 1945 at San Diego.

Hunt recommissioned at San Diego 31 October 1951, Comdr. Lynn F. Barry in command. After refresher training in local areas, she departed 14 February for Newport where she arrived 3 March 1952. She cruised from that port for the next 2½ years conducting antisubmarine and plane guard duty. She departed Newport 1 June 1954 for Yokosuka where she arrived 7 July and was underway again 16 July for task force maneuvers off the Philippine Islands. On 21 October she cleared Sasebo, Japan, on the second leg of a world cruise which took her to Hong Kong, Singapore, the Suez Canal, and Naples which she reached 20 November 1954. She passed through the strait of Gibraltar 12 December 1954 and arrived back in Newport 18 December.

The next 2 years were filled with intensive antisubmarine warfare and convoy exercises. *Hunt* departed Newport 6 November for patrol in the Eastern Mediterranean during the Suez Crisis and the Hungarian Revolution. She returned to Newport 27 February 1957 where more antisubmarine warfare and convoy exercises awaited. She embarked midshipmen at Annapolis for a training cruise which included the International Naval review in Hampton Roads on 12 June, and a visit to Rio de Janeiro, Brazil. She departed Newport for Belfast, Northern Ireland 3 September to participate in Operation "Seaspray", maneuvers with the combined forces of NATO. From 22 October 1957 through 1 August 1958 *Hunt* operated out of Newport. On the latter date while on a cruise to the

Caribbean she sped from San Juan, Puerto Rico to join attack carrier *Saratoga* (CVA-60) in the Mediterranean to augment the 6th Fleet during the Near Eastern crisis which had necessitated the landing of marines in Beirut, Lebanon to check aggression. She reached that port 28 August and 3 days later was underway for the Red Sea. She completed transit of the Suez Canal 11 September for Massawa, Ethiopia, and after calling at Aden, Arabia, set course 14 October for the Mediterranean and maneuvers with the 6th Fleet en route home to Newport, arriving 13 November.

Hunt operated out of Newport with occasional cruises in the Caribbean conducting exercises in antisubmarine warfare and battle practice. She won the Battle Efficiency Award for the fiscal year 1957 to 1958 and repeated the feat for the 1958 to 1959 period. She decommissioned 30 December 1963 and was berthed in the Atlantic Reserve Fleet at Philadelphia, Pa., where she remains.

Hunt, Colonel Henry J., see *Bastion* (ACM-6)

Hunt, S. B., see *Flambeau* (IX-192)

Hunter

A British name retained.

(Brig: t. 180; a. 10 guns)

Hunter, a brig, was built in 1806 as *General Hunter* for the Canadian Provincial Marine at Malden, Canada. She was part of Commodore Barclay's squadron on Lake Erie and was captured along with five other ships in the famous Battle of Lake Erie 10 September 1813. Commodore Oliver Hazard Perry had built his fleet literally from nothing, had forced his enemy to do battle, and courageously carried through to an important victory. *Hunter* was one of the ships spoken of in Perry's immortal dispatch to Gen. William Henry Harrison: "We have met the enemy and they are ours—two ships, two brigs, one schooner and one sloop." The victory secured the Lake region for the United States and ended the threat of in-

USS *Hunt* (DD-674) during 1959

vasion from that quarter. *Hunter* served on the Lake for the remainder of the war and was then sold.

Block Island (ACV-8) (*q.v.*) was renamed *Hunter* by the British upon transfer under Lend-Lease in 1943.

Hunter Liggett

An Army name retained.

(AP-27: dp. 21,900 limiting; l. 535'; b. 72'; dr. 31'3"; s. 15; cpl. 824; a. 4 3')

Hunter Liggett (AP-27) was built as S.S. *Pan America* in 1922 by Bethlehem Shipbuilding Corp., Sparrows Point, Md., and after sailing for many years as a passenger ship was transferred to the Army and renamed *Hunter Liggett* in February 1939. The transport operated from New York to San Francisco and from the West Coast to Hawaii until 27 May 1941, when she was turned over to the Navy. Converted to Navy use at Brooklyn Navy Yard, she commissioned as AP-27 9 June 1941, Captain L. W. Perkins, USCG, commanding. She was reclassified APA-14 1 February 1943.

Hunter Liggett and her Coast Guard crew were ordered to the Pacific in April 1942. Departing New York 9 April, the ship stopped at the Canal Zone and Tongatabu before arriving Wellington, New Zealand, 28 May. The transport was scheduled to take part in America's first offensive operation in the Pacific, the occupation of Guadalcanal, and after amphibious training and a rehearsal landing in the Koro Islands she sailed with other ships 31 July for the Solomons.

Hunter Liggett arrived off Guadalcanal the night of 6 August. In this assault, America's first amphibious operation since 1898, the ship was assigned to a later wave, but sent her boats to aid in the initial landings, 7 August. Air attacks began on the day after the landing, sinking fellow transport *George F. Elliott*. *Hunter Liggett's* gunners shot down several of the attackers as she remained off the beaches. Early on the morning of 9 August, men in the transport area could see the flashes of light from an engagement off Savo Island. As the Japanese attempted to reinforce their Solomons garrison and destroy the transports they surprised an American Task Force and inflicted heavy losses. *Hunter Liggett* and the other vulnerable transports got underway, but soon returned to the transport area. After noon 9 August, they began the grim job of rescuing survivors from the sunken cruisers *Vincennes*, *Astoria*, and *Quincy*. That afternoon the transport sailed with the wounded, in company with the damaged *Chicago*, to Noumea, where she arrived 2 days later. With the Guadalcanal campaign began the refinement of amphibious techniques which was to pay off so handsomely as the war progressed.

The transport spent the next month at Noumea and on local amphibious training operations. After a period of repair at Wellington she sailed 22 October for Efate, New Hebrides, loaded marines, and returned to bitterly-contested Guadalcanal 4 November. As she off-loaded near Lunga Point, Japanese shore batteries and air attacks made every moment a potentially fatal one. As the "Tokyo Express" was due that night, *Hunter Liggett* and the other transports retired in the evening, only to return next day to finish landing operations.

For most of the next year, *Hunter Liggett* remained on this hazardous duty, the support of Guadalcanal. She made numerous trips to the island bringing troops from Noumea and New Zealand, carried equipment, and transported wounded marines and Japanese prisoners from the embattled island. Constantly threatened from the air and by submarines, she continued this vital job until arriving 22 October 1943, when she anchored at Efate, New Hebrides.

At Efate, *Hunter Liggett* took part in training operations for another important amphibious operation, the invasion of Bougainville. As American strength grew and the Gilberts operation got underway to the east, the task

force sailed 28 October for Empress Augusta Bay, Bougainville. Arriving early 1 November the transports unloaded with startling efficiency during air attacks from Rabaul. *Hunter Liggett* remained in the area that night and once more witnessed from afar the Japanese attempt to break up the landing. This time, in the night action of Empress Augusta Bay, the Japanese were roundly defeated by Rear Admiral Merrill's task force. *Hunter Liggett* departed that day for Tulagi and after another passage to Bougainville to support the amphibious toehold there 11 November sailed for Espiritu Santo 18 November.

Loading wounded at Espiritu Santo, *Hunter Liggett* proceeded to Pago Pago for more casualties and sailed for San Francisco, arriving 9 December. For several months the transport underwent major repairs. Then, 3 April 1944, she steamed to San Diego to begin a new career as an amphibious training ship. For the next 8 months she imparted the lessons learned in the Solomons campaign to those who would carry out some of the largest and best executed assaults in our history—Leyte, Iwo Jima, Okinawa, and others.

Hunter Liggett joined the "Magic-Carpet" fleet 10 December 1945 to return to American servicemen from the Pacific. She made voyages to Ulithi, Guam, Pearl Harbor, and the Palaus before reporting to Olympia, Washington, for return to the Army 9 March 1946. She decommissioned 18 March, and was later sold to Boston Metals Co., 30 January 1948, and scrapped.

Hunter Liggett received four battle stars for World War II service.

Hunter Marshall

Hunter Marshall III was born in Charlotte, N.C., 6 October 1917 and enlisted in the Naval Reserve 12 July 1941. Called to active duty in September, Marshall was appointed Midshipman and attended Midshipman's School at New York. He later attended Armed Guard School and in April 1942, reported to Army transport *Merrimack* and took command of her naval Armed Guard Unit. Carrying military supplies to the Panama Canal Zone, the ship was torpedoed by submarine *U-68* south of Yucatan Channel 9 June 1942. Despite the danger of further attacks Ensign Marshall led his Armed Guard gun crews in furious resistance to the submarine until the forward part of the ship was actually awash. Because of his loyal and determined fighting spirit, Marshall was one of the last to leave the ship and was lost. He was presumed dead 10 June 1943, and was awarded the Silver Star for his gallantry.

(APD-112: dp. 1,390; l. 306'; b. 37'; dr. 12'7"; s. 24 k.; cpl. 204; a. 15", 6 40mm.; cl. *Crosley*)

Hunter Marshall (APD-112), originally classified DE-602, was launched 5 May 1945 by Bethlehem-Hingham Shipyard, Inc., Hingham, Mass.; sponsored by Mrs. Hunter Marshall, mother of Ensign Marshall; and commissioned 17 July 1945, Comdr. A. A. Campbell in command.

The new fast transport got underway from Boston 3 August 1945 to conduct shakedown training in Caribbean waters, and before completion, the surrender of Japan ended the war. She returned to Norfolk 5 September and remained there until 10 October 1945, when she joined other fleet units at Boston for the triumphant Navy Day Presidential Review. *Hunter Marshall* arrived Green Cove Springs, Fla., via Norfolk, 25 November 1945, decommissioned 30 May 1946, and entered the Atlantic Reserve Fleet. She was eventually stricken from the Navy list 1 June 1960 and sold in July 1961 to Ecuador.

Hunterdon County

A county in New Jersey.

(J.ST-838: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 268; a. 12 20mm.)

LST-838 was laid down by American Bridge Co., Ambridge, Pa., 20 September 1944; launched 8 November; sponsored by Miss Margaret Foster; and commissioned 4 December, Lt. Allen T. Larkins, Jr., in command.

After shakedown off Florida, *LST-838* loaded heavy construction equipment at New Orleans and departed 5 January 1945. Loading troops and additional cargo at Pearl Harbor, the landing ship sailed to the Mariana Islands, arriving Guam 4 March. She unloaded her cargo, then steamed to Saipan where she loaded equipment and embarked units of the 130th Naval Construction Battalion for the invasion of Okinawa.

Departing Saipan 25 March, *LST-838* was en route to the heavily fortified Japanese stronghold, arriving off the southern Okinawa beaches 1 April. Despite a futile effort by the enemy to salvage the last barrier protecting their homeland, Allied forces succeeded in securing a beachhead. On D-day, after *LST-884* was struck by a suicide plane, *LST-838* recovered 79 survivors from the heavily damaged ship. The landing ship stood off the Coast of Okinawa until 13 April when she approached Green Beach to discharge Seabees and construction equipment. The following day during one of the many raids she splashed a Japanese plane.

Departing Okinawa on the 16th, *LST-884* arrived Ulithi 6 days later. For the rest of the war she transported men and equipment throughout the South and Western Pacific Islands.

Following the victorious conclusion of World War II, *LST-838* moved men and equipment to Japan for occupation duties. She remained in the Far East until 7 November, when she departed Yokohama for Guam; then embarked 544 Army veterans and steamed to the United States, arriving San Francisco 23 December.

On 5 March 1946, *LST-838* sailed to Portland, Oreg., and decommissioned at Vancouver, Wash., 7 August. She joined the Pacific Reserve Fleet and remained there until she recommissioned at Vallejo, Calif., 10 September 1966 to help meet the large demands for ships in the Vietnam war. While in reserve *LST-838* was named *Hunterdon County* 1 July 1955. *Hunterdon County* operated out of San Diego until sailing for the Far East early in 1967. She arrived Subic Bay 8 March and promptly busied herself transporting men and materiel in support of the Allied struggle to thwart Communist efforts to take over the Republic of South Vietnam. She continued to operate off Southeast Asia through mid-1967.

LST-838 received one battle star for World War II service.

Hunting

An island on the southern coast of South Carolina.

(LSM-398: dp. 1,095; l. 203'6"; b. 34'6"; dr. 7'4"; s. 13 k.; cpl. 59; a. 2 40mm.)

Hunting (LSM-398) was launched as *LSM-398* by Charleston Naval Shipyard, Charleston, S.C., 6 January 1945; sponsored by Mrs. T. B. Thompson; commissioned 6 August 1945, Lt. L. L. Walters in command. Based at Little Creek, Va., the ship operated as a part of the Amphibious Fleet in the Atlantic, taking part in many training assaults in the Caribbean and on the Atlantic coast. In June 1953, she began a conversion to sonar research ship at Norfolk, and following completion she reported to Operational Development Force 1 October 1954.

In late 1954, the ship started a new career developing and testing experimental sonar equipment in conjunction with the famed Naval Research Laboratory. She was reclassified EAG-398 and assigned the name *Hunting* 13 June 1957. The ship's testing and evaluation activities took her from the Naval Research Laboratory near Washington into the Chesapeake Bay, the coastal waters off the Virginia Capes, and the Caribbean. She played a vital part in the development of new and better sonar equipment for the fleet. During 1961 the veteran ship was

severely limited by mechanical problems and was finally decommissioned 23 November 1962 at Portsmouth, Va. She was sold 30 July 1963 to Commercial Manufacturing Corp., Kansas City.

Huntington

A city in West Virginia.

I

(ACR-5: dp. 13,680 n.; l. 503'11"; b. 69'7"; dr. 24'1"; s. 22 k.; cpl. 829; a. 4 8", 14 6", 2 18" tt.; cl. *Pennsylvania*)

The first *Huntington* (ACR-5), an armored cruiser, was launched as *West Virginia* 18 April 1903 by Newport News Shipbuilding Co., Newport News, Va.; sponsored by Miss Katherine V. White; and commissioned 23 February 1905, Captain C. H. Arnold in command.

After shakedown training, *West Virginia* cruised with the New York Naval Militia as a unit of the Atlantic Fleet until 30 September 1906 when she sailed for duty with the Asiatic Squadron. The ship remained with the Asiatic Squadron on training operations for 2 years, and after overhaul at Mare Island in 1908 joined the Pacific Fleet for similar exercises along the West Coast of the United States. During 1911 and 1912 she made a cruise with the Fleet to Hawaiian waters and in 1914 steamed on special duty off the west coast of Mexico for the protection of American interests. She remained off Mexico during the Vera Cruz crisis, and returned to Bremerton, Wash., to become a part of the Pacific Reserve Fleet.

West Virginia remained at Bremerton until 20 September 1916 when she again sailed to Mexico for the protection of American lives and property and to back up U.S. diplomacy. While on this service, she was renamed *Huntington* 11 November to permit the assignment of her old name to a newly-authorized battleship, BB-48. After 5 months service off Mexico she steamed to Mare Island for the installation of catapult devices on the quarterdeck and equipment to accommodate four seaplanes on the boat deck ways.

Huntington was detached from the Reserve Force and placed in full commission 5 April 1917. She departed Mare Island 11 May and steamed to Pensacola, Fla., via the Panama Canal. Detached from the Pacific Fleet after her arrival in Florida 28 May, she spent the next 2 months at the Naval Aeronautic Station, Pensacola, engaging in a series of important early experiments with balloons and seaplanes launched from the deck. The cruiser then sailed for Hampton Roads 1 August and arrived New York 5 days later. There *Huntington* formed with a convoy of six troopships bound for France, departing 8 September. En route, several balloon observation flights were made, and on one of these, 17 September, the balloon was forced down by a squall and the balloonist became entangled in its rigging. Seeing the emergency, shipfitter Patrick McGunigal jumped overboard to release the pilot from the balloon basket, by then overturned and underwater. For his heroic action McGunigal was awarded World War I's first Medal of Honor. The day after the rescue the convoy was turned over to American destroyers in European waters; and *Huntington* steamed back to Hampton Roads, arriving 30 September.

After replenishing at Norfolk, *Huntington* sailed to New York 5 October to have her catapult and seaplanes removed. She got underway 27 October and arrived Halifax 2 days later to embark a high-level U.S. Commission to confer with the Allies. Presidential envoy, Colonel House; Adm. W. S. Benson; Gen. T. H. Bliss; and other dignitaries took passage in *Huntington*, arriving Davenport, England, 7 November 1917, to be met by British officials. *Huntington* departed for New York, via Hampton Roads, arriving 27 November.

Subsequently, the cruiser returned to the important duty of escorting convoys of troops and supplies to Europe,

making nine such voyages to Europe and back between 19 February and 13 November 1918. In addition, *Huntington* made three coastal convoy passages from New York to Hampton Roads. She entered Brooklyn Navy Yard 17 November 1918 for conversion to a troop transport.

Assigned to Transport Force, Atlantic Fleet, *Huntington* next sailed for France to bring home veterans of the European fighting. She departed New York 17 December, arrived Brest 29 December, and brought over 1,700 passengers to New York 14 January. The ship made five more voyages to France and return, bringing home nearly 12,000 troops, and terminated her last voyage at Boston 5 July 1919. Detached from Transport Force, she was reassigned to Cruiser Force and became flagship of Flying Squadron 1 8 July 1919. *Huntington* decommissioned at Portsmouth Navy Yard, Portsmouth, N.H., 1 September 1920. She was struck from the Navy List 12 March 1930 and sold in accordance with the London Treaty for the reduction of naval armaments 30 August 1930.

Huntington (CL-77) was under construction at New York Shipbuilding Co., Camden, N.J., 1941 to 1942, but was converted to an aircraft carrier while building to be launched as *Coupens* (CVL-25).

II

(CL-107: dp. 10,000; l. 611'2"; b. 66'6"; dr. 20'; s. 33 k.; cpl. 992; 12 6", 12 5"; cl. *Fargo*)

The second *Huntington* (CL-107) was launched by the New York Shipbuilding Corp., Camden, N.J., 8 April 1943; sponsored by Mrs. M. L. Jarrett, Jr.; and commissioned 23 February 1946, Captain D. R. Tallman in command.

After shakedown training off Guantanamo Bay, Cuba, *Huntington* sailed from Philadelphia 23 July 1946 for duty with the 6th Fleet in the Mediterranean. During the cruise she visited many ports, including Naples, Malta, Villefranche, and Alexandria, helping to stabilize the volatile post-war situation in Europe. Departing Gibraltar 8 February 1947, she took part in exercises off Guantanamo Bay, stopped at Norfolk and Newport, R.I., and departed the latter port 20 May 1947 for another tour of duty in the Mediterranean.

Returning from her cruise 13 September 1947, *Huntington* departed Philadelphia 24 October with Naval Reserve personnel for exercises off Bermuda and Newfoundland until 14 November 1947. The ship then entered Philadelphia Naval Shipyard and underwent an extensive overhaul until 12 April 1948. Returning to Norfolk 27 April from her refresher training cruise in the Caribbean, *Huntington* sailed to Newport and departed for another tour of duty in the Mediterranean 1 June 1948.

Huntington visited a variety of ports during June to August 1948, and after transiting the Suez Canal 22 September, embarked on a good will tour of Africa and South America, arriving Buenos Aires, Argentina, 6 November. There the ship was honored by an official visit from President Peron, and continuing to Uruguay received a similar visit from President Berres 10 November. *Huntington* called at Rio and Trinidad before returning from this valuable good will cruise 8 December 1948.

The cruiser made one short cruise from Philadelphia to the Caribbean, returned to Newport 22 January, and decommissioned 15 June 1949. She was finally struck from the Navy List 1 September 1961 after being in reserve, and was subsequently scrapped.

Huntington, Robert K., see *Robert K. Huntington* (DD-781)

Huntress

A former name retained.

I

(StwStr: dp. 211; l. 131'8"; b. 31'3"; dph. 4'2"; s. 5 k.; a. 2 30-pdr. P. r., 4 24-pdr. how.)

Huntress, a stern-wheel steamer, was built in 1862 in New Albany, Ind. She was purchased by the Navy at Louisville, Ky., in May 1864, taken to Cincinnati, Ohio, for outfitting and reported to the 8th District, Mississippi Squadron for duty 10 June 1864, Acting Master J. S. Dennis in command.

Assigned to the area of the river between Memphis, Tenn., and Columbus, Ky., *Huntress* engaged in the key role of keeping the vital river lines of supply open, stopping illegal trade in cotton along the riverbank and suppressing bands of guerrillas who attacked transports and gunboats. After repairs at Mound City, Ill., November 1864, she returned to active patrolling on the stretch of river between Mound City and Memphis. *Huntress* remained on that duty between March and July 1865, maintaining Union control of the Mississippi during the waning moments of the Civil War. In July, she returned to Mound City and, after brief service transporting ordnance at the Naval Base, decommissioned 10 August 1865. She was sold 7 days later to Samuel Black. Redocumented *Huntress* 2 October, she resumed her career as a river steamer but was lost after stranding near Alexandria, La., 30 December 1865.

II

(Sch: dp. 82; l. 97' wl.; b. 16'; dr. 7'3"; s. 14 k.; cpl. 20)

The second *Huntress*, a steam yacht with schooner rig, was built in 1895 at Nyack on Hudson, N.Y., by Charles L. Seabury & Co., and was purchased for the Navy from F. C. Fowler in June 1898. She commissioned 1 July 1898 after outfitting at New York Navy Yard, Lt. Felton Parker in command.

Used as an auxiliary gunboat, *Huntress* departed New York for patrol duties off Staten Island, and from 29 July to 12 August cruised in Long Island Sound. She then operated briefly around New York before decommissioning in August or September. *Huntress* departed New York Navy Yard 30 December 1898 for duty with the New Jersey Naval Militia.

The yacht remained with the New Jersey Naval Militia helping to train officers and men until 1907, when she was loaned to Missouri for Naval Militia training. *Huntress* was sold 3 December 1917.

Huntsville

Cities in Alabama and Texas. The first *Huntsville* retained her former merchant name.

I

(ScStr: dp. 860; l. 196'4"; b. 29'6"; dr. 19'5"; s. 11 k.; cpl. 64; a. 1 64-pdr., 2 32-pdrs.)

The first *Huntsville*, a wooden screw steamer, was chartered from her owner, H. B. Cromwell & Co., in New York City 24 April 1861; commissioned there 9 May 1861, Comdr. Cicero Price in command; and purchased by the Navy 24 August 1861 while on active duty.

Huntsville sailed for Key West, arriving 11 May 1861, and joined the Gulf Blockading Squadron. In early August she steamed from the Florida coast westward and almost immediately captured two small schooners off Mobile. She cruised on blockade duty from Alabama to Texas, and on 24 December she engaged *Florida* off Mobile Bay. Following an hour-long gun battle, she turned the blockade runner back into Mobile.

Huntsville returned to New York in the spring of 1862, and she decommissioned 5 April. She recommissioned 11 June, Lt. Howard Rogers in command, and returned to blockade duty along the Gulf Coast. By the end of July she had taken three prizes, Confederate steamers

Adela and *Reliance* and British schooner *Agnes*, carrying cargoes of cotton, rosin, and other commodities. Before the end of the year, she captured two additional blockade runners, schooners *Courier* and *Ariel*, trying to run into Mobile with cargoes of lead, tin, medicines, wines, and coffee.

As the relentless pressure of the blockade against the South continued, the third year of the war proved even more profitable for *Huntsville*. During 1863 she captured two Confederate ships, *Minnie* and *A. J. Hodge*; two British schooners, *Surprise* and *Ascension*; and Spanish steamer *Union*. In addition, she drove two others, *Cuba* and *Eugenia*, into the hands of other ships in the blockading fleet and was given partial credit in the capture of *Last Trial*, a Confederate sloop captured off Key West harbor. Among the variety of cargo seized, *Huntsville* captured 523 bales of cotton, the most valuable commodity in the South; and she prevented a great quantity of supplies, mainly from Havana and Nassau, from reaching the beleaguered South.

During the first part of 1864 *Huntsville* operated along the coast of Florida and off Cuba. Late in May she sailed to Tampa Bay to support landing forces. An outbreak of yellow fever in near-epidemic proportions struck the Union ships. *Huntsville* was one of the hardest hit, and the disease felled more than half her crew. Departing Tampa 23 July, she coaled at Key West and reached New York 3 August. Following a period of quarantine, she decommissioned 19 August.

Huntsville recommissioned 25 March 1865, Lt. Comdr. Edward F. Devens in command. Departing New York 2 April, she steamed via Mobile and arrived New Orleans 17 April. There she embarked passengers and prisoners and sailed for New York, arriving Brooklyn Navy Yard 1 May. She departed 14 May; touched at Baltimore to embark 150 men bound for Panama; and arrived Aspinwall 30 May. Departing Panama 5 June, she discovered survivors of the wrecked steamer *Golden Rule* on Roncador Island. With the aid of *State of Georgia*, she rescued the stranded voyagers and carried them to Aspinwall. She sailed 16 June with 85 members of *Golden Rule's* crew embarked and arrived New York nine days later.

After completing two passenger runs to Boston, *Huntsville* escorted monitor *Nausset* to Philadelphia where she arrived 22 August. She decommissioned there 28 August and was sold at New York 30 November to Russell Sturgis.

II

(T-AGM-7: dp. 5,498 (lt.); l. 455'; b. 62'; dr. 29'; s. 17 k.; cpl. 49; a. none; T. VC2-S-AP3)

The second *Huntsville* was laid down under Maritime Commission contract as *Knox Victory* by Oregon Shipbuilding Corp., Portland, Oregon, 2 March 1945; launched 13 April 1945; sponsored by Mrs. Charles B. Gilbert; and delivered to WSA 11 May 1945. During the remainder of the war she operated as a merchant ship under charter to Olympic Steamship Co., and she continued merchant service under bareboat charters from the Maritime Commission and the Maritime Administration until 1958 when she entered the National Defense Reserve Fleet at Olympia, Wash.

Knox Victory was acquired by the Navy from the Maritime Administration 11 August 1960 and assigned to MSTs. She was renamed *Huntsville* and designated T-AGM-7, a missile range instrumentation ship, 27 November. After conversion to a special projects ship by Triple "A" Machine Shop, Inc., San Francisco, Calif., *Huntsville* began duty as a range tracking ship in 1961.

Manned by a civilian crew, *Huntsville* operated out of Port Hueneme, Calif., and Honolulu, Hawaii, while assigned to special duties in the Pacific. During the next 4 years she made intermittent "on station" patrols in the Central Pacific, extending from the coast of Mexico to Wake Island and the Marshalls. She continued these patrols, which contributed mightily on America's space programs, until the spring of 1965; then she entered Avon-

dale Shipyards, Inc., Westwego, La., 2 June 1965 for conversion, completed 30 October 1966. In June 1967 *Huntsville* returned to the Pacific, where she operated with *Watertown* (T-AGM-6). As an improved sea-based tracking station, she provides an important link in communications during the scheduled "Apollo" moon shots, which will send American astronauts to the moon and back.

Hupa

A former name retained.

(SP-650: dp. 5; l. 63'; b. 8'; dr. 3'; s. 25 k.)

Hupa, a wooden motor boat, was built by George Lawley & Sons, Neponset, Mass., in 1905; was acquired by the Navy from her owner, L. T. Carey of Boston in June 1917; and commissioned 10 July 1917 at Boston.

Assigned to the 1st Naval District, *Hupa* served as a patrol craft in Cape Cod Bay and Cape Cod Canal, based at Provincetown, Mass. She was struck from the Navy List 25 October 1919 and offered for sale, finally being sold to the Hyde Engineering Works of Montreal, Canada 12 March 1920.

Huron

Center lake in the Great Lakes and a city in east central South Dakota. *Huron* IV and V were named after the city.

I

ScStr.: t. 507; l. 158'; b. 28'; dph. 12'; a. 1 11-inch D.sb., 1 20-pdr., 2 24" how.)

The first *Huron*, a schooner-rigged screw steamer, was launched 21 September 1861 by Paul Curtis, Boston under Navy contract; and commissioned 8 January 1862 at Boston Navy Yard, Lt. John Downes in command.

Huron joined the South Atlantic Blockading Squadron in February to take part in Union strangulation of Confederate commerce, and steamed off the coasts of Georgia and Florida. In addition to blockading duties, her men often took part in shore expeditions against the Confederates, as on 15 March 1862 on the Georgia coast. *Huron* chased a schooner ashore 12 April 1862 and 7 days later captured schooner *Glide* off Charleston with 100 bales of cotton and other cargo. She also captured schooner *Albert* 1 May and British blockade runner *Cambria* 26 May. As Union naval power increased the pressure on Charleston in coordination with the Army, *Huron* engaged batteries in the Stono River 30 May and took part in an engagement with Fort McAllister 29 July 1862. Back on regular blockade duty, she captured schooner *Aquila* 4 August.

Huron continued her patrol and blockading duties off Charleston into 1863. During the ironclad attack on the forts in Charleston Harbor 7 April 1863, the ship formed part of a reserve squadron outside the bar. Five days later, while patrolling with *Flag*, she detected blockade-running steamer *Stonewall Jackson* attempting to dash into Charleston. The two Union ships opened fire immediately, so damaging the blockade runner that she was forced to run aground and destroy her cargo, which included vitally needed Army artillery and shoes.

The veteran blockader made two more captures in December 1863-January 1864, and later in 1864 moved north to join the North Atlantic Blockading Squadron, whose main attention was turned to Wilmington, N.C., and its powerful defender, Fort Fisher. During the first attack on the fort 24 to 25 December 1864, *Huron* took part in the bombardment which was to cover the storming by Army troops. This first assault aborted, but preparations were quickly made for a second joint operation in January 1865. Again *Huron* provided a part of the devastating naval bombardment; and, with the help of a landing party of 2,000 sailors and marines, the Army assault forces captured Fort Fisher, 15 January 1865, effec-

tually closing Wilmington to blockade runners. Then, during the final months of the war, *Huron* took part in combined operations against the city itself, bombarding Forts Anderson and St Philip in February.

After Appomattox, responding to the attempted escape of President Davis of the Confederate States, *Huron* steamed to Key West in an effort to capture Confederate officials bound for Havana or Mexico by water. She arrived 2 May, but Davis was captured near Iwinville, Ga., 10 May 1865.

Huron served on South American station after the Civil War, returning to New York and decommissioning 8 October 1868. She was sold at New York 14 June 1869.

II

(ScStr.: dp. 1,020; l. 175'; b. 32'; dph. 15'; a. 1 11-inch D.r., 2 9-in. D.r., 1 60-pdr. P.r., 1 12-pdr. how., 1 G.g.; cl. *Alert*)

The second *Huron*, an iron sloop-rigged steamer, was built by John Roach, Chester, Pa., 1873-75, and commissioned at Philadelphia Navy Yard 15 November 1875, Comdr. George P. Ryan in command.

Huron arrived 11 December 1875 for duty at Norfolk, and spent the next 2 years cruising in the Caribbean and the Gulf of Mexico. She stopped at Vera Cruz and Key West on her first cruise, returning to Port Royal 4 August 1876, and visited many Caribbean and Venezuelan ports March-June 1877. After repairs at New York Navy Yard in August, the ship sailed to Hampton Roads, and departed 23 November 1877 for a scientific cruise on the coast of Cuba. *Huron* encountered heavy weather soon after departure, however, and was wrecked shortly after 1 a.m. next morning near Nag's Head, N.C. For a time her crew worked in relatively little danger, attempting to free their ship, but she soon heeled over, carrying 98 officers and men to their deaths.

Screw gunboat *Alliance* (q.v.) was launched as *Huron* 3 March 1875 but was renamed before commissioning.

III

(Str: t. 10,170; l. 523'; b. 60'; dr. 34'; s. 15 k.; cpl. 446)

The third *Huron* was built as *Friedrich Der Grosse* in 1896 by Vulcan Shipbuilding Corp. Stettin, Germany, and sailed the Atlantic for North German Lloyd Lines until being interned in New York Harbor in 1914. She was seized as a prize of war 6 April 1917. Her crew had sabotaged her boilers so the ship was taken to Robbins Drydock Co., Brooklyn for repairs. The USSB then turned the ship over to the Navy, and she commissioned at New York Navy Yard 25 July 1917 as *Fredrich Der Grosse*. The ship, Comdr. S. H. R. Doyle in command, was renamed *Huron* 1 September 1917.

Huron acted as a troop transport during the remaining years of the war. She made eight round trips to France before the Armistice, and then seven more, bringing American soldiers back from Europe.

She arrived New York after her last voyage 23 August 1919 and decommissioned 2 September for return to the USSB.

Huron operated in the Atlantic for the U.S. Mail Lines (later U.S. Lines) from 1920 to 1922. Renamed *City of Honolulu* in May 1922, she was turned over to the Los Angeles Steamship Co.; and on her maiden voyage caught fire 12 October and sank with no loss of passengers or crew.

Ocean tug *Allegheny* (q.v.) was originally named *Huron*, but renamed before launching.

IV

Armored cruiser *South Dakota* (q.v.) was renamed *Huron* 7 June 1920.

V

(PF-19: dp. 1,430; l. 303'1"; b. 37'6"; dr. 13'8"; s. 20 k.; cpl. 190; a. 3 3", 4 40mm.; el. *Tacoma*; T. S2-S2-AQ1)

The fifth *Huron* (PF-19), originally PG-127, was launched under Maritime Commission contract by American Shipbuilding Co., Cleveland, Ohio 3 July 1943; sponsored by Mrs. J. S. Tschetter, wife of the mayor of Huron, S. Dak.; acquired and commissioned 7 September 1944, Lt. Comdr. W. W. Collins, USCG, in command.

Manned by a coast guard crew, *Huron* conducted shake-down training off Bermuda during October and November. Returning to Norfolk, the ship sailed with a convoy bound from Norfolk to North Africa 1 December 1944. While bringing together merchant ships which had become separated during the night, *Huron* was rammed by SS *James Fenimore Cooper* shortly after midnight 8 December. Though the engine room flooded rapidly, the ship's damage control work was timely and skillful, keeping her afloat. After temporary repairs, *Huron* was towed through rough weather by *Choctaw*, arriving Bermuda 15 December 1944. From there she was taken to Charleston for conversion to a sonar-training ship.

Huron arrived Key West 22 February 1945 for training operations at the Fleet Sonar School. She spent the remainder of the war providing both technical and tactical antisubmarine training for officers and men. *Huron* departed Key West for Norfolk 19 March 1946 and decommissioned there 19 April 1946. She was sold to United Dock Corp. 15 May 1947.

Huron, Lake, see *Lake Huron*

Hurst

The first *Hurst* (SP-3196) retained her merchant name, The second *Hurst* (DE-250) was named for Edwin William Hurst. Born 16 October 1910 at Falls City, Nebr., he graduated from the Naval Academy in 1932. After serving in *Tennessee*, he completed flight training in 1935. He was then assigned to several squadrons and aviation shore facilities before reporting on board *Lexington* 19 May 1941. Hurst earned two Distinguished Flying crosses. During the critical Battle of the Coral Sea 7 to 8 May 1942, he daringly attacked carrier *Shoho*, scoring hits which contributed to her sinking; and the following day severely damaged carrier *Shokaku*. While flying over the uncharted Owen Stanley range, he pressed home a successful torpedo attack in the face of heavy anti-aircraft fire, severely damaging enemy shipping and installations at Salamaua and Lae, N.G., 10 March 1942. With his gallant carrier *Lexington* sunk during the Battle of the Coral Sea, Lt. Hurst flew from New Zealand until his death 9 June 1942 in a crash near Whemuapai.

I

(SP-3196: dp. 17; l. 62'7"; b. 12'8"; dr. 5'; s. 15 k.)

Hurst, a motor boat, was built by W. F. Dunn, of Norfolk, Va., in 1918 and was acquired by the Navy from her owner, T. C. Hurst, of Norfolk, 22 August 1918. She commissioned the same day, Boatswain's Mate 2/c Raymond Cash in command.

Hurst was assigned as a passenger and dispatch boat under the 5th Naval District and served the District Supervisor, NOTS, at Hampton Roads until being turned over to the Public Health Service, Department of the Treasury, 15 November 1919.

II

(DE-250: dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; epl. 186; a. 3 3"; 2 det., 8 dep., 1 dep. (h.h.); el. *Edsall*)

The second *Hurst* (DE-250), a destroyer escort, was launched by Brown Shipbuilding Co., Houston, Tex., 14 April 1943; sponsored by Mrs. Jeanette Harris Hurst,

widow; and commissioned 30 August 1943, Lt. Comdr. B. H. Brallier commanding.

Hurst departed Houston 3 September and after a short period of outfitting at Galveston sailed 12 September for shakedown training off Bermuda. After returning briefly to Charleston in November and screening a convoy to the Caribbean, *Hurst* arrived Norfolk, Va., 29 November 1943 to join Escort Division 20.

Assigned to the vital job of protecting ocean commerce from submarines, *Hurst* departed Norfolk with her first convoy 14 December 1943, stopped at Casablanca, and returned to New York 24 January 1944. She then conducted gunnery and antisubmarine warfare exercises in Casco Bay, Maine, before sailing with another convoy from New York 23 February. Enemy action was not the only hazard on such voyages as two days out of New York merchant vessels *El Coston* and *Murfreesboro* collided and sank during a heavy gale, the survivors being taken on board one of the ever-ready escort ships. *Hurst* reached Lisahally, Northern Ireland, 5 March 1944, and 1 week later returned to New York with another convoy.

Hurst made no less than 10 more escort voyages from Boston or New York to ports in Northern Ireland and Great Britain before returning to New York 11 June 1945. In this way she contributed mightily to winning the "Battle of the Atlantic". After her final voyage, the destroyer escort sailed with her division for training in Chesapeake Bay and at Guantanamo Bay, Cuba. Reassigned to the Pacific Fleet for these last months of the war, she transited the Panama Canal and arrived Pearl Harbor via San Diego 26 July 1945. There the ship took part in exercises with submarines and departed 27 August for the Samoan Islands. Arriving Pago Pago 25 September, *Hurst* spent the next weeks steaming among the small outlying islands of the Samoan, Fiji, and Society and other island groups, sending parties ashore to search for missing personnel and to investigate possible remaining enemy units. Completing this painstaking duty she departed Pago Pago 3 November 1945 and sailed for San Diego via Pearl Harbor. She arrived San Diego 23 November and sailed 2 days later for New York via the Panama Canal. *Hurst* entered New York harbor 10 December 1945, sailed to Green Cove Springs, Fla., and then decommissioned there 1 May 1946. She then entered the Atlantic Reserve Fleet at Green Cove Springs. In January 1947 *Hurst* was transferred to Orange, Tex., where she remains.

Hurst, Floyd, see *Floyd Hurst* (SP-2384)

Huse

Harry McLaren Pinckney Huse was born at the Military Academy, West Point, N.Y., 8 December 1858 and graduated from the Naval Academy in 1878. During the Spanish-American War, he served as Executive Officer in *Gloucester* and under Richard Wainright, took part in the famous Battle of Santiago. The converted yacht, off the harbor entrance when the Spanish fleet sortied, engaged enemy destroyers *Pluton* and *Furor*, defeating both. Lieutenant Huse was advanced five numbers in grade for "eminent and conspicuous conduct in battle." He later led a successful landing party at Guanica, Puerto Rico 25 July 1898. Following the war, Huse taught at the Naval Academy and commanded various ships, including *Vermont* and *Nevada*. He also took part in the landings at Vera Cruz 21-22 April 1914, and for his skillful direction and outstanding leadership received the Medal of Honor. In 1919 he went to France as a member of the Allied Naval Armistice Commission, and 24 June 1920 became Commander, U.S. Naval Forces in European Waters, with the rank of Vice Admiral. Admiral Huse's last active assignment was as a member of the General Board. Retiring in December 1922, he died 14 May 1942 at the Naval Hospital, Bethesda, Md.

(DE-145: dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; cpl. 186; a. 3 3", 2 40mm., 8 20mm., 2 dct., 8 dep., 1 dep. (h.h.), 3 21" tt.; cl. *Edsall*)

Huse (DE-145) was launched by Consolidated Steel Corp., Orange, Tex. 23 March 1943; sponsored by Mrs. L. M. Humrichouse, daughter of Vice Admiral Huse; and commissioned 30 August 1943, Lt. Comdr. W. A. Sessions in command.

Following exhaustive shakedown cruise off Bermuda, *Huse* returned to Charleston 25 October 1943. She then moved to Norfolk for additional training before joining her first Atlantic convoy there 13 November. After seeing this convoy safely to Casablanca, she returned to New York Christmas Day 1943. Following training exercises off Norfolk, *Huse* escorted another convoy to Africa 25 January-11 February 1944, then, before returning home, engaged in antisubmarine patrol work off Gibraltar with ships of the Royal Navy.

Returning to New York 8 March, the ship was given a new assignment: to join escort carrier *Croatan's* anti-submarine group in the Atlantic. Sailing from Norfolk 24 March to search for U-boats, the ships were rewarded with contact 7 April. The escorts dogged *U-856* until it surfaced and was destroyed by gunfire from *Huse* and *Champion*. After a brief period at Bermuda, the group stood out to the search area again 12 April. Carrier aircraft and escort vessels came upon another submarine 26 April, and the DE's sank U-boat *U-488*.

Huse spent the period 11 May-3 June at Brooklyn, departing the latter date with *Croatan* to search for submarines. They had not long to wait, beginning attacks on a submerged submarine the morning of 11 June. Six depth charge and two hedgehog runs brought no confirmation of a sinking, but the persistent ships remained in the area searching until just after midnight 12 June when radar revealed a surfaced submarine. The badly damaged *U-490* was finished off by gunfire. In the months that followed *Huse* continued to operate with the *Croatan* hunter-killer group that had much to do with keeping open the important supply lines to Europe. Replenishing as necessary at Norfolk, Bermuda, or Casablanca, they scoured the sea for enemy submarines. In addition, *Huse* rescued downed pilots from *Croatan's* air group on three separate occasions. She arrived Brooklyn 2 October 1944 for repairs and training, after which she conducted exercises in Chesapeake Bay and the Caribbean.

Huse joined *Croatan* for hunter-killer operations again 25 March 1945, and two of her sister ships scored a kill on *U-880* on 16 April 1945 in the Atlantic. They continued to operate in northern waters out of Argentina until returning to New York 14 May 1945.

The war against Germany over, *Huse* prepared to join the Pacific Fleet for the final effort to defeat Japan. She sailed 10 July 1945 for training exercises in the Caribbean, passing through the Panama Canal and arriving San Diego 7 August 1945. During the voyage to Pearl Harbor, the ship learned of Japan's collapse 15 August. After various exercises in Hawaiian waters, the veteran escort ship returned to Norfolk via San Diego and the Canal Zone 28 September 1945. She, subsequently, arrived Green Cove Springs, Fla., 19 January 1946; decommissioned 27 March; and joined the Atlantic Reserve Fleet.

Huse recommissioned in response to the increased needs of the Navy during the Korean conflict 3 August 1951. After shakedown training in the Caribbean, she arrived Key West 15 January 1952 to act as sonar-training ship. In May she steamed northward to take part in a cold-weather operation off Labrador. The ship then began regular training operations, based at Newport, R.I., taking her to the Caribbean and Key West. This antisubmarine readiness training was maintained until July 1955 when the ship sailed to Norfolk to embark NROTC Midshipmen on a training cruise to Northern Europe. *Huse* returned to Newport 3 September 1955 and resumed antisubmarine operations. This continued until early 1957 when she made preparations to join the crack Navy task group operating off the Atlantic Missile Test Range.

During May 1957 *Husc* operated off Puerto Rico in connection with the launching of a Vanguard satellite test vehicle, and the subsequent nose cone recovery efforts. After further tactical exercises at Key West, she sailed in September for important NATO exercises in Northern European waters, returning to Newport 21 October 1957. During 1958 and 1959, except for short cruises to the Caribbean and periodic overhaul, *Husc* remained in the Key West area on sonar-training operations.

Husc was assigned to the Naval Reserve Training program in March 1960, and for the next three months carried out training cruises with reservists from New York and Norfolk. She arrived New Orleans, her new home port, 6 July 1960 to begin reserve training cruises, designed to keep the Navy's reserve officers and men at a peak of training and professional knowledge should expansion of the navy be required to protect and defend the United States. In October 1962, when the introduction of offensive missiles into Cuba brought on just such a demand, *Husc* promptly steamed to Florida to bolster Naval strength in support of the quarantine operations. Through 1963 into 1965 she continued to operate out of New Orleans in the Gulf and the Caribbean performing her vital training function. In June 1965 *Husc* decommissioned and was placed in the Atlantic Reserve Fleet at Norfolk, Va., where she remains.

Husc received five battle stars for World War II service,

Husl, see YF-1124

Hustle

To push, move, or shove in a rude, rough, or hurried manner; to work or act rapidly or energetically.

The wooden ferry launch *Despatch* (q.v.) was renamed *Hustle* 11 April 1918 while serving at the Naval Training Station, Newport, R.I.

Hutchins

Carleton Barmore Hutchins was born in Albany, N.Y., 12 September 1904 and graduated from the Naval Academy in 1926. After serving in battleship *Pennsylvania* until 1928, he underwent flight training at Pensacola and was designated a naval aviator in February 1929. During the early thirties Hutchins flew fighters from *Saratoga*, scout planes from *Concord*, and studied aeronautical engineering at the California Institute of Technology. In 1937 he served with a seaplane squadron in the Caribbean and in November was transferred to Patrol Squadron 11 based on *Langley*. During fleet exercises 2 February 1938 off the coast of southern California, Lieutenant Hutchins' seaplane collided in mid-air with another PBX. His citation for the Medal of Honor reads: "Although his plane was badly damaged, Lieutenant Hutchins remained at the controls endeavoring to bring the damaged plane to a safe landing and to afford an opportunity for his crew to escape by parachutes. His cool, calculated conduct contributed principally to the saving of the lives of all who survived. His conduct on this occasion was above and beyond the call of duty." Lieutenant Hutchins lost his life in the crash and received the Medal of Honor posthumously.

(DD-476: dp. 2,050; l. 376'6"; b. 39'8"; dr. 17'9"; s. 37 k.; cpl. 273; a. 5 5", 6 40mm., 10 20mm., 10 21" tt.; cl. *Fletcher*)

Hutchins (DD-476) was launched by Boston Navy Yard, Boston 20 February 1942; sponsored by Mrs. C. B. Hutchins, widow of Lieutenant Hutchins; and commissioned 17 November 1942, Lt. Comdr. E. W. Herron in command.

After completing shakedown cruise in Casco Bay, Maine, *Hutchins* got underway from Boston 17 March 1943 and escorted two tankers to Galveston, Tex. From there she

proceeded through the Panama Canal to San Diego, where she arrived 11 April. Following an escort voyage to New Caledonia and Espiritu Santo, *Hutchins* arrived Pearl Harbor 30 May for armament alterations. While testing her guns in Hawaiian waters 25 June, an electrical failure caused the gun to fire into *Hutchins'* stack, killing 9 men and wounding 20. While repairing at Pearl Harbor, the ship was fitted with the newest Combat Information Center equipment.

The ship returned to San Diego 11 July 1943 for training, and got underway with an LST group 7 days later for the voyage to Adak Island in the Aleutians. She took part in the occupation of Kiska 15 August as the Japanese gave up their Aleutians foothold, and in the months that followed patrolled the islands and engaged in fleet training maneuvers.

Hutchins departed the bleak northern Pacific 18 November 1943 for the steaming and bitterly-contested coast of New Guinea. She arrived Milne Bay 19 December and soon afterward screened LST's during the landings at Cape Gloucester. Designed to secure the important straits between New Britain and New Guinea, the landings began 26 December. *Hutchins* and the other screening vessels came under severe air attack in the days that followed, with *Hutchins* downing one aircraft and assisting with another. After escorting a support convoy to Cape Gloucester from Buna, the destroyer steamed with another LST group to Saidor, farther up the coast of New Guinea. During a rain squall she collided with another destroyer in the congested assault area, and was forced to steam to Cairns, Australia 16 January for bow repairs.

Hutchins departed Cairns 22 February and, after important night tactical drills, sailed 28 February with Admiral Barbey's amphibious group for the Admiralties. Arriving next day, the ship carried out shore bombardment of Manus, the base which was to become so vital in the coming campaigns, and with Rear Admiral Crutchley, RN, in HMAS *Shropshire*, established a patrol off Manus. During late March and April *Hutchins* and other destroyers made bombardment sweeps of Wewak and Hansa Bay, encouraging the Japanese in the mistaken belief that the next amphibious assault would be in that area. In reality it was planned for much farther up the coast, at Hollandia.

Steaming from Cape Sudest 18 April, *Hutchins* arrived Hollandia 22 April and with other fleet units gave close gunfire support to the well-executed initial assault. She then retired to screen escort carriers providing air cover and, near the end of April, bombarded Wakde Island. The versatile destroyer steamed south of Truk 10 May to pick up survivors of a B-24 raid on the Japanese stronghold, returning south for the next step in New Guinea.

Hutchins next took part in the Wakde-Sarmi operation 17 May. After shore bombardment and screening operations she moved on to Biak with its vital airbase site 10 days later. Early in June the destroyer operated with Task Forces 74 and 75 off Biak, and on the night of the 8th, the ships detected Japanese ships approaching from the northwest. The enemy destroyers cast off their troop-laden barges and with *Hutchins* and the rest of Admiral Crutchley's force in pursuit, retired rapidly. During a long stern chase the destroyers exchanged gunfire at long range; Allied ships broke off the chase just before 0230 and returned to the assault area.

In July *Hutchins* took part in the Noemfoor landings, providing the all-important gunfire support, and operated with the nimble PT boats in the Aitape area 15-25 July in harassing Japanese communications. She also took part 30 July in the landings at Sansapor, completing the brilliant series of amphibious hops along the northern coast of New Guinea.

August 1944 was spent at Sydney and on fleet exercises off New Guinea, and, after a drydock period, *Hutchins* sailed from Humboldt Bay 12 September to take part in the Morotai landings, an important steppingstone to the Philippines. She bombarded airstrips 16 September and returned to Seeadler Harbor 29 September to prepare for

the invasion of the Philippines. The giant invasion fleet sortied to arrive Leyte Gulf 20 October. *Hutchins* took part in preinvasion bombardment, gunfire support, and patrolled the entrance after the initial phases of the assault.

As the Japanese fleet moved toward the Philippines in a gigantic three-pronged attempt to stop the invasion, *Hutchins* joined Admiral Oldendorf's surface forces waiting in Surigao Strait for Nishamura's Southern Force. In this major phase of the larger Battle for Leyte Gulf, *Hutchins*, carrying the flag of Captain McManes, DesRon 24, was stationed on the right flank of the powerful array of firepower Oldendorf had assembled. As Nishamura steamed up the strait early 25 October his ships were harassed by PT boats and then attacked by destroyers on both sides. *Hutchins'* group steamed boldly south, launched torpedoes at about 0330, and turned to close the range. As the large Japanese ships began to slow and scatter, the destroyers fired another spread of torpedoes, this time blowing up destroyer *Michishio*. After exchanging gunfire with the Japanese heavy ships, McManes brought *Hutchins* and the rest of the squadron out of range, their job gallantly and skillfully done, so that the big guns of the waiting fleet could open fire. Oldendorf won a smashing night victory, and Japanese naval power was dealt a death blow.

After the decisive actions of Leyte Gulf, *Hutchins* returned to screening. She ran onto an uncharted hulk 26 October and after helping to repel air attacks until 29 October, sailed for San Francisco via Pearl Harbor, arriving 25 November 1944 for repairs.

Hutchins returned to Pearl Harbor to resume her combat duty 26 January 1945. Training exercises were carried out until 3 February when she steamed toward Saipan to join a carrier force for the Iwo Jima operation. Her carrier group arrived 3 days before the landings to pound Japanese defenses and continued to support the operation during February and March 1945. With this important island in allied hands, *Hutchins* returned to Ulithi briefly before sailing 27 March for the giant Okinawa operation, last step on the long island campaign toward Japan. She screened a transport group during the landings 1 April and for 3 days following, undergoing numerous air attacks which she skillfully helped repel. Assigned to gunfire support 4 April, in the battle-filled days that followed *Hutchins* spent her days close to the beaches and her nights screening the larger ships during bombardment and air defense. *Hutchins* shot down several attacking planes during the great air attack 6 April, rescuing survivors from the stricken *Neucomb*, and was under severe attack again 12-13 April.

While on close support operations 27 April, *Hutchins* was attacked by a Japanese suicide boat. The small fast boat slipped through the formation and dropped a large explosive charge close aboard. *Hutchins* was shaken violently by the explosion and her hull severely damaged, but no casualties were suffered and damage control parties brought flooding under control. The ship retired to Kerama Retto for temporary repairs, thence to Portland, Oreg., 15 July 1945.

Still undergoing repairs at war's end *Hutchins* was towed to Puget Sound 20 September 1945. She decommissioned at Bremerton 30 November 1945, and was sold for scrap in January 1948 to Learner & Co., Oakland, Calif.

Hutchins received six battle stars for World War II service.

Hutchins, Johnnie, see *Johnnie Hutchins* (DE-360)

Hutchinson

A city in central Kansas.

(PF-45: dp. 1,430; l. 303'11"; b. 37'6"; dr. 13'8"; s. 20; cpl. 190; a. 3 3', 2 dct., 1 dep. (h.h.), 8 dep.; cl. *Tacoma*)

Hutchinson (PF-45), originally designated PG-153, was launched 27 August 1943 by Consolidated Steel Corp., Los Angeles, Calif., under Maritime Commission contract; sponsored by Mrs. A. T. Cole; and commissioned 3 February 1944, Comdr. C. H. Stober, USCG commanding.

The frigate engaged in shakedown training until 13 April 1944, and departed San Pedro 30 April for the southwest Pacific. She arrived via Pearl Harbor at one of the most important bodies of water in the Pacific area, Leyte Gulf, 10 November. There *Hutchinson* took up escort and patrol duties among the many transports supporting the landing. During her stay off Leyte the ship engaged in several battles with attacking Japanese aircraft. *Hutchinson* sailed for Fremantle, Australia, via New Guinea, 30 November 1944.

Assigned to the submarine base, Fremantle, for training duty with submarines, *Hutchinson* remained in Australia until 27 August 1945. Departing for the United States, she touched at Manus and Pearl before arriving Terminal Island, Calif., 10 January 1946. Here she converted to a weather ship. Following conversion, she proceeded to Seattle and got underway 6 February 1946 for weather station A in the northern Pacific. After performing the demanding and essential task of weather picket for two separate periods, *Hutchinson* sailed to San Francisco and decommissioned 15 April 1946. She was then recommissioned a Coast Guard vessel on loan from the Navy, and sailed westward to take up her weather ship duties once more. After two more such cruises, *Hutchinson* arrived Seattle in early September and decommissioned 23 September 1946.

Hutchinson was stricken from the Navy List 29 October 1946 and was sold to Mexico 24 November 1947. She served the Mexican Navy as *California* until scrapped in June 1964.

Hutchinson received two battle stars for World War II service.

Hyac

A former name retained.

(SP-216: dp. 48; l. 75'4"; b. 14'5"; dr. 5'; s. 10 k.)

Hyac, a yacht, was built in 1915 by Weckler Boat Co., Chicago, and was acquired from her owner, W. M. Derby, of Chicago, in 1917. Commissioned 5 July 1917, her first Commanding Officer was Lt. W. M. Derby, USNRF.

Assigned to the 9th, 10th, and 11th Naval Districts, *Hyac* served as a patrol boat on the Great Lakes between Chicago and Sault Ste. Marie, based at Chicago, until returned to her owner 26 November 1918.

Hyacinth

A well-known plant of the lily family having spikes of bell-shaped flowers.

I

(ScStr.: t. 50; dr. 6', s. 8 k.; a. 1 gun)

The first *Hyacinth* was a tug used by the Army under the name *Spitfire* on the upper Mississippi River in 1862. She captured Confederate transport *Sovereign* near Fort Pillow, Tenn., 5 June 1862; and 9 days later, took steamer *Clara Dolsen* after a long chase from Helena, Ark., ending on the White River a short distance above its mouth.

Spitfire was transferred by the War Department to the Navy 30 September 1862, and renamed *Hyacinth* 19 October. *Hyacinth* served the Mississippi Squadron until the end of the war. She was especially useful in operations which resulted in the fall of Vicksburg, and assisted in the salvage work which refloated *Indianola*. She was sold at public auction at Mound City, Ill., to A. T. Paine 17 August 1865.

II

(ScStr.: t. 738; l. 165'0"; b. 28'0"; dr. 11'6"; s. 11 k.; cpl. 25)

The second *Hyacinth* was a lighthouse tender launched for the U.S. Lighthouse Service 26 July 1902. She was transferred to the Navy with the entire Lighthouse Service by Executive order 11 April 1917. Throughout the war she continued to perform her former duties servicing lighthouses and other navigational aids in the Great Lakes. She was returned to the custody of the Department of Commerce 1 July 1919.

Hyades

A cluster of stars in the constellation Taurus, including Aldebaran, shaped like the letter "V".

(AF-28: dp. 7,700 lt.; l. 468'9"; b. 63'; dr. 25'11"; s. 16 k.; cpl. 252; a. 1 5", 4 3"; cl. *Hyades*; T. C2-S-E1)

Hyades (AF-28), ex-*Iberville*, was launched under Maritime Commission contract by Gulf Shipbuilding Co., Chickasaw, Ala., 12 June 1943; sponsored by Mrs. L. R. Sanford; and commissioned at Bethlehem Steel, Baltimore, after conversion, 1 August 1944; Comdr. M. C. Whyland in command.

Hyades got underway 11 September 1944 for Trinidad and the Panama Canal, escorted by destroyer *Warrington*. In the Caribbean the ships encountered a severe hurricane; by 13 September *Warrington* was foundering. The heavy weather had separated the two ships; when the destroyer went down, *Hyades* proceeded to her last known position to pick up survivors. She rescued 61 before proceeding to Panama, where she arrived 19 September.

The refrigerator ship steamed to Majuro to supply the fleet with foodstuffs 10 October, touching at Kwajalein, Eniwetok, and other bases before returning to San Francisco. Underway again 1 December 1944, the ship made two more voyages to the advance bases and the Philippines with stores, returning to Seattle from the second cruise 13 April 1945. She continued on this duty, so vital to the support of our huge Pacific fleet, until well after the surrender of Japan. In addition to supplying ships she brought food and supplies to many shore bases.

In 1946 *Hyades* brought supplies to American ground troops in China, spending March at Tsingtao and April at Hong Kong. In 1947 she continued to support the efforts to protect American interests and establish democracy in that troubled country, spending several months at Shanghai. Thereafter operating out of San Francisco, *Hyades* became a familiar sight to the various occupation groups and island outposts in the Pacific.

The ship sailed through the Panama Canal to Norfolk to join the Atlantic Fleet, arriving 14 June 1948. She departed for her first cruise to the Mediterranean 12 July 1948, during which she operated with the fast carrier forces serving as a mobile replenishment ship. During this troubled period, 1948-1955, U.S. fleet units did much to protect freedom in the area, notably in Greece and Turkey; *Hyades* brought supplies and showed the flag in many Mediterranean ports, including Piraeus, Naples, Valencia, and Gibraltar.

As tension mounted in the Mediterranean in early 1956, *Hyades* replenished destroyers patrolling the eastern Mediterranean, returning to Norfolk 28 February. She later rendezvoused with powerful fleet units in July, including *Iowa*, *New Jersey*, *Des Moines*, and *Macon*, as American naval power moved in to prevent the widening of the Suez crisis. In April of 1957 the ship replenished carrier *Lake Champlain* during moves to support the threatened government of Jordan and took part in an important NATO fleet exercise during September-October in northern European waters.

In the years that followed, *Hyades* continued to support the 6th Fleet in its cold war operations, keeping the peace in the Mediterranean. During August-September 1958, she visited Crete and Turkey when the latter country was threatened. In 1959, she sailed 11 May for fleet replenishment in response to the heightened Berlin crisis, effectively showing American might and determination. The veteran stores ship returned twice more to the Mediterranean in 1959, and again in 1960 and 1961.

Hyades responded quickly in the Cuban missile crisis of 1962, arriving at Guantanamo Bay 22 October to evacuate dependents as the introduction of offensive missiles forced a naval quarantine of the island. After the safe evacuation, the ship returned to the quarantine line for underway replenishment of the ships patrolling off Cuba. After the easing of the situation in December, *Hyades* entered Horne Bros. Shipyard in Newport News, Va., for the installation of a helicopter deck aft to increase her versatility and replenishment capabilities.

During 1963 the ship cruised with the 6th Fleet in July and August. In 1964 she took part in Operation Springboard in the Caribbean, returning to Norfolk 1 February 1964. *Hyades* continued to serve the Fleet through the mid 1960's and in the Fall of 1967 was based at Norfolk, Va.

Hyde

Countries in North Carolina and South Dakota.

(APA-173: dp. 6,873 (lt.); l. 455'; b. 62'; dr. 24'; s. 17 k.; a. 1 5"; cl. *Haskell*)

Hyde (APA-173) was launched under Maritime Commission contract by Oregon Shipbuilding Corp., Portland, Ore., 30 October 1944; sponsored by Mrs. James H. Bond; and commissioned 26 November 1944, Captain E. F. May commanding.

Following a brief shakedown cruise, *Hyde* arrived Seattle 27 January 1945 to embark troops and cargo, after which she sailed for Pearl Harbor in convoy 1 February. Carrying reinforcements for the Pacific campaign, then drawing to its climax, *Hyde* stopped at Eniwetok before anchoring at Iwo Jima 13 March. The ship remained off that battle-scarred island only long enough to unload, then steamed to Guam 15 March, where she embarked over 400 marine casualties. *Hyde* continued to Pearl Harbor, loaded more casualties 29 March, and arrived San Francisco 22 May 1945.

By June the Okinawa campaign, last step on the island road to Japan, was well underway, and *Hyde* sailed 6 June with cargo and troops. After stopping at Ulithi she arrived Okinawa 24 July. There she discharged her passengers and cargo under constant threat of air attack, getting underway for Ulithi 6 August. During this stay at the giant staging base, *Hyde* received the news of the surrender of Japan.

The transport immediately took up duties in connection with the occupation. She arrived Leyte 21 August, loaded troops, and disembarked them with the early occupation forces 8 September at Yokohama. *Hyde* then took on board Allied prisoners of war for transportation to Guam, where she arrived 23 September. Sailing to Tsingtao 11 October, the transport debarked marines for the occupation of China and to aid in the stabilization of that troubled country. She then steamed to Manila and thence to Haiphong, Indochina, arriving 2 November. At Haiphong, *Hyde* embarked 200 Nationalist Chinese troops for further transfer to Chinwangtao, China, and unloaded them 12 November to aid in the occupation. After a stop at Taku, the transport arrived Sasebo, Japan, 4 December 1945 to join in "Magic-Carpet," the vast operation designed to return veterans with the greatest possible speed. *Hyde* sailed for California 7 December and arrived San Diego 22 December. After a second voyage, to Pearl Harbor and back, she sailed 16 February 1946 via Panama for Norfolk. She arrived there 13 March, decommissioned 14 May and returned to the Maritime Commission 2 days later. She was placed in the National Defense Reserve Fleet and is berthed on the James River, near Norfolk, Va.

Hyde received one battle star for World War II service.

Hydra

A southern constellation of stars named for the nine-headed water monster in Greek mythology slain by Her-

cules as the second of 12 "Labors" which were imposed upon him by Eurystheus, the king of Argos.

The light draft monitor *Tunxis* (q.v.) was renamed *Hydra* 15 June 1869, while laid up out of commission at League Island, Pa.

I

(AK-82: dp. 1,677; l. 269'10"; b. 42'6"; dr. 20'9"; s. 10 k.; cpl. 83; a. 1 3'; cl. *Enceladus*; T. N3-M-A1)

Hydra (AK-82), formerly *Eben H. Linnell*, was launched 23 January 1943 under Maritime Commission contract by Penn-Jersey Ship Building Corp., Camden, N.J.; acquired by the Navy 1 January 1943; and commissioned 25 September 1943, Lt. E. F. McCotter, USCGR, in command.

Hydra arrived at Norfolk 1 October to prepare for her shakedown. For the next month she engaged in various operations, including speed trials and target runs in the Chesapeake Bay. She departed Norfolk in early November and sailed into Boston Harbor 5 November to begin transferring process. She decommissioned 19 November 1943 and transferred to the Army the same day. *Hydra* served in the Army as an ammunition ship and was subsequently returned to the Maritime Commission. *Hydra* was renamed *Madison Jordan Manchester* and arrived in the James River 20 August 1947 where she is berthed as part of the National Defense Reserve Fleet.

Hydrangea

(ScTug: t. 224; l. 120'; b. 20'3"; dph. 9'6"; s. 11 k.; a. 1 20-pdr. Parrott r.; 2 12-pdr. how.)

Hydrangea, a wooden steam tug, was built as *Hippodame* in 1862 at Buffalo, N.Y., and purchased by the Navy at New York, from her owner, C. W. Copeland, 16 October 1863. She commissioned at New York Navy Yard 18 April 1864, Ens. C. W. Rogers in command.

Reporting to Hampton Roads for duty with the North Atlantic Blockading Squadron, *Hydrangea* spent May towing monitors and acting as tender to *Onondaga*. She then took up station in the James River, where she acted as a tug and mail boat. Making two trips a day from Deep Bottom, near the front lines, to the large supply base at City Point, she helped support the Union efforts to break the military stalemate around Richmond. *Hydrangea* was then transferred to the South Atlantic Blockading Squadron 23 July 1864, and after repairing reported to Port Royal, S.C., 30 September. She was used as a blockading ship and tug inside the Charleston Bar until the end of the war. *Hydrangea* decommissioned at New York 1 September 1865, and was sold 25 October to S. and J. M. Flanagan. Redocumented *Norman* 4 January 1866, she returned to private service and was stranded and lost off Cape May, N.J., 17 November 1886.

Hydraulic

A former name retained.

(Sp-2584: dp. 30; l. 83'6"; b. 11'6"; dr. 5'6"; s. 13 k.)

Hydraulic, a steam yacht, was built by A. C. Brown Shipbuilding Co., Tottenville, N.Y., and was acquired from her owner Max Zickel of Hoboken, N.J., on a bare boat basis 29 May 1918. She commissioned 17 August 1918, Chief Quartermaster R. F. Supper in command.

Hydraulic was assigned to the 3d Naval District, and served in New York harbor throughout her commissioned career. Her duties included patrolling, transportation of passengers, and relieving port guards on neutral ships in the harbor. The yacht was returned to her owner 23 January 1919.

Hydrographer

One versed in the science of determining and making known the conditions of navigable waters, charting coasts, and surveying rivers.

I

(Str: dp. 146; l. 101'; b. 19'6"; dr. 6'9"; s. 10 k.; cpl. 23; a. 2 3-pdr., 1 mg.)

Hydrographer, a wooden steam launch, was built in 1901 at Port Jefferson, N.Y., and engaged in survey work for the U.S. Coast and Geodetic Survey until coming under Navy jurisdiction in 1917. She continued her surveying duties in the Gulf of Mexico and in addition performed section patrol in 1918. She was returned to the Coast and Geodetic Survey under an Executive order 1 April 1919.

II

(PY-30: dp. 1,044 (f.); l. 164'11"; b. 31'6"; dr. 11'6"; s. 10 k.; cpl.; a. 2 3")

The second *Hydrographer* (PY-30), originally classified PY-30 before commissioning, was built in 1928 by Spear Engine Works, Norfolk, Va., and operated as a survey ship along the Atlantic coast and in the Caribbean for the U.S. Coast and Geodetic Survey. Acquired by the Navy in April 1942, she was converted by Choctaw Boat Works, Ala.; and commissioned as AGS-2 at Mobile 20 May 1942, Comdr. W. M. Scaife, USCGS, in command.

Immediately after commissioning, *Hydrographer* steamed to Newfoundland, where she spent the remainder of 1942 charting the approaches and harbor to the important Allied base at Argentia. She returned to Norfolk 7 November 1942; and, after alterations to fit her for duty in the Pacific, sailed 30 December for San Diego, via the Canal Zone. The survey ship got underway 26 February 1943 for Atka Island, in the Aleutians, and arrived 22 March to carry out a survey of Korovin Bay, in preparation for the spring offensive to come. In April she moved to Adak for more survey work.

As combined forces moved on Attu 11 May, *Hydrographer* moved into the assault area. Steaming into Masacre Bay 12 May, she sent out survey parties to outline transport anchorages and chart shoals. Late in May, she landed parties on tiny Shemya Island to begin work on a bomber strip, after which she returned to Adak. *Hydrographer* also took part in the occupation of Kiska, sailing 13 August and reaching the island 2 days later, only to find that the Japanese had completely evacuated. With the Aleutians secured, the ship continued her all-important survey and sounding work until returning San Diego 22 September 1943.

Hydrographer arrived Pearl Harbor 10 November 1943 to take part in the great push across the Pacific to Japan. She arrived Abemama, in the Gilberts, 24 December and made surveys of the lagoon and anchorages. Makin Island was also surveyed before she moved on to the Marshalls, as the survey ship followed closely behind the amphibious groups. She remained at Kwajalein until May preparing charts; and, after survey work at Roi, sailed 24 July to Guam. Arriving 3 August 1944, *Hydrographer* surveyed Apra Harbor and other coves in the vicinity. During these operations the ship's shore parties were often fired upon by Japanese snipers; but, undaunted, carried out their vital hydrographic work.

As the fleet continued to press toward Japan in a series of striking amphibious successes, *Hydrographer* sailed from Guam 1 October bound for the Palaus. En route she rode out a large typhoon and arriving safely Kossel Passage, 14 October 1944. In the months that followed, the ship charted and surveyed many islands in the southern Palaus, helped to establish anchorages and sea-plane landing areas, and buoyed channels. She was occasionally harassed by night raids from the Japanese-held island, and on the night of 9-10 February 1945 helped destroy two swimmers approaching with an explosive raft.

Her work completed 25 February, she sailed via Guam and Pearl Harbor for San Francisco, where she arrived 22 April. The veteran survey ship trained off the West Coast until the end of the war. Getting underway again 16 August 1945, she made further surveys at Eniwetok, Wake, and Kwajalein before sailing from Pearl Harbor for the United States 3 January 1946. Transiting the Panama Canal, she arrived Norfolk 6 March and decommissioned 1 July 1946. She was simultaneously returned to the Coast and Geodetic Survey for peacetime operations.

Hydrographer received three battle stars for World War II Service.

Hydrus

A southern constellation between Horologium and Octans; the Water Snake.

(AKA-28: dp. 4,087 light; l. 426'; b. 58'; dr. 15'6"; s. 17 k.; cpl. 303; a. 1 5"; cl. *Artemis*)

Hydrus (AKA-28) was launched under Maritime Commission contract by Walsh-Kaiser Co., Inc., Providence, R.I., 23 October 1944; sponsored by Mrs. Alexander Hylek; and commissioned 9 December, Lt. Comdr. R. J. Wissinger in command.

Hydrus departed Providence 22 December for Hampton Roads and her shakedown training, completing this phase of her operations early in January 1945. The attack transport got underway 7 January for the Pacific theater, sailing via the Canal Zone to Pearl Harbor, where she arrived 27 January.

With the island campaign in the Pacific then entering its final phases, *Hydrus* sailed 1 February for Guadalcanal to participate in the extensive training operations for the projected invasion of Okinawa, last objective before the mainland itself. Arriving 11 February, she took part in practice landings on Guadalcanal until 15 March, when her group, Task Force 53, sailed for the final staging area, Ulithi. The period after her arrival 21-26 March, was spent in final preparations for the giant invasion, and 27 March found *Hydrus* and other transports of Task Force 53 steaming toward Okinawa with marines and their equipment. They arrived off the beaches 1 April and under the command of Vice Adm. Kelly Turner carried out the successful assault. *Hydrus* discharged her troops and equipment off the Hagushi beaches. Between 1 April and 9 April the ship remained off the bitterly-contested island, often undergoing heavy air attack. She departed 10 April for Guam and Pearl Harbor, arriving in Hawaii 26 April 1945.

Hydrus got underway 5 May for the United States, and arrived San Francisco 6 days later. After loading fresh cargo she once again sailed for Pearl Harbor, arriving 26 May. The next 2 months saw *Hydrus* operate temporarily as an inter-island cargo carrier, transporting supplies of various types among the myriad islands in the Hawaiian chain. After brief repairs, she sailed with a cargo for Christmas Island and Canton Island, but returned to Honolulu 3 August.

Slated for return to the western Pacific, *Hydrus* sailed 7 August for Ulithi and Okinawa. During this passage she received word of the war's end, and arrived Okinawa to unload her cargo 3 September. Except for 16-18 September, when she got underway to ride out the great typhoon, *Hydrus* remained at anchor off Okinawa until 25 September. She then sailed to Manus to embark units of a Marine Air Group for the occupation of the Chinese mainland. The transport arrived Tsingtao 17 October to put ashore her cargo and passengers, thus helping to speed the occupation and help stabilize the explosive internal situation in China. She subsequently embarked additional troops in the Philippines and carried them to Taku, China, 14 November.

Her role in the Chinese occupation over, *Hydrus* was assigned duty with "Magic-Carpet", the gigantic operation for the return of our Pacific veterans. She sailed from Shanghai 6 December and arrived Seattle, Wash., 23 De-

ember. Designated for return to the Maritime Commission, the ship sailed 11 January for the East Coast and arrived New York 2 February. There *Hydrus* was selected as a training ship for the New York State Maritime Academy, and steamed up the East River to Fort Schuyler 6 March 1946. She decommissioned there 26 March and became *Empire State II*.

After a 10-year career as a training ship for future maritime officers, the ship was placed in the Maritime Commission's National Defense Reserve Fleet in June 1956. She remained there until being sold in April 1964 to Union Minerals & Alloys Corp., of New York, and scrapped.

Hydrus received one battle star for World War II service.

Hylan, John F., see *Nahant* (No. 1250)

Hyman

Willford Milton Hyman was born in Pueblo, Colo., 16 August 1901, and graduated from the Naval Academy in 1924. He first served in battleship *New Mexico*, and in the years before World War II, was assigned to many ships and a variety of shore stations, including the Office of Naval Operations. He assumed command of destroyer *Sims* 6 October 1941. After convoy escort duty in the Atlantic, *Sims* moved to the Pacific in early 1942. In May, as the Japanese threatened to extend their conquest to Port Moresby, the ship was operating with oiler *Ncosho* in a fueling group for Admiral Fletcher's vital carriers. While the carrier fleets maneuvered for position, Japanese planes found *Ncosho* and *Sims* in the Coral Sea; and, thinking they were carrier and escort, attacked in strength. After Lt. Comdr. Hyman fought his ship through 2 air raids with great skill, 36 Japanese planes attacked the 2 ships. *Sims* took three 500-lb. bomb hits in this third attack. Realizing that the destroyer was damaged beyond repair, Hyman ordered "abandon ship" but remained on the bridge, calmly directing the evacuation until going down with his ship. The sacrifice of his ship and *Ncosho* had much to do with saving the Navy's carriers in the widely separated engagements known as the Battle of the Coral Sea. Lieutenant Commander Hyman received the Navy Cross for his heroic service.

(DD-732: dp. 2,200; l. 376'; b. 41'1"; dr. 15'8"; s. 34 k.; cpl. 336; a. 65", 11 20mm., 10 21" tt., 6 dcp., 2 dct.; cl. *Allen M. Sumner*)

Hyman conducted exhaustive shakedown training off Bermuda and in Casco Bay, Maine, before sailing from Boston 18 September to join the Pacific war. She steamed via the Canal Zone and San Diego to Pearl Harbor 12 October 1944. During the next few months she was occupied with training exercises, including practice amphibious assaults, and escort voyages to the advance base at Eniwetok.

As the amphibious pincers, one reaching across Micronesia and the other pushing through the Philippines, closed on Japan in early 1945, the island of Iwo Jima became a prime objective. *Hyman* sailed 27 January 1945, with the transports of Kelly Turner's expeditionary force, touching at Eniwetok before carrying out on Saipan a final rehearsal of the great Iwo Jima landing. On the morning of 19 February, the destroyer formed part of the screen for the transports; and, as the first wave landed, she turned her 5-inch guns shoreward and opened fire to provide support for the assaulting troops. She blasted enemy troops and bunkers until 23 February, when she made an antisubmarine sweep south of Iwo Jima. The next day, after returning to gunfire support station, *Hyman* fought off a fierce air attack. Fire support duties continued until the destroyer sailed for Leyte Gulf 2 March 1945. There she took part in practice bombardments for the upcoming invasion of Okinawa.

Hyman sailed with Admiral Hall's Southern Attack

Force 27 March 1945 and arrived Okinawa 1 April. As troops landed she took station off the transport area, protecting the American ships from enemy submarines and planes. In the following days she fought off several air attacks and on 5 April, led a search group hunting a reported midget submarine. Next day the ship was attacked in company with other picket and patrol ships west of Ie Shima as the Japanese made desperate suicide attacks in hopes of stopping the landing. Shooting at attacking planes on all sides, *Hyman* downed several before a damaged aircraft crashed near her torpedo tubes, its engine exploding on the main deck. While fighting fire and flooding, *Hyman* helped down two more suiciders before the engagement ended, leaving 10 of her men killed and over 40 wounded.

After emergency repairs at Kerama Retto 7 April arrived Saipan 11 days later. From there she steamed on one engine to San Francisco, arriving 16 May 1945.

The battle-tested destroyer was ready for sea again in late July 1945; and, after training exercises, sailed to Pearl Harbor, where she arrived the day of the Japanese surrender, 15 August. *Hyman* performed plane-guard duties in Hawaiian waters until arriving Kwajalein 5 September to assist in receiving the surrender of outlying Pacific islands. She received the surrender of Japanese forces on Kusaie 8 September and Ponape 11 September. Captain Momm, division commander on *Hyman*, assumed duties as military governor of Ponape next day. The ship remained as station ship, assisting in the occupation and repatriation until arriving Eniwetok 26 December 1945. After exercises out of Yokosuka early in 1946, the ship sailed via California and the Canal Zone to Casco Bay, Maine, where she arrived 16 April 1946. *Hyman* took part in antisubmarine training operations in the Caribbean through the end of 1946, and sailed for her first deployment to the Mediterranean 2 February 1947. During the next few months she visited many ports, helping to stabilize this troubled area then threatened by Communist aggression and subversion, before returning to Newport 14 August 1947. For the next year she operated in coastal waters, but sailed 13 September 1948 with a carrier and cruiser group for the Mediterranean. The ships supported the U.N. Peace Force in Palestine, showing American determination to maintain the peace. After this important cruise *Hyman* returned to Newport 23 January 1949.

Through 1949 and 1950 the veteran destroyer was assigned to reserve training duty out of Algiers, La., and on this duty she steamed for 2-week periods giving valuable training for reserve officers and men. With the outbreak of the Korean conflict in June 1950, *Hyman* engaged in maneuvers and training in the Caribbean, ending her reserve duty in September. After another cruise to the Mediterranean 6 March to 7 June 1951 she prepared for Korean duty, getting underway from Newport 2 October 1951. *Hyman* steamed with her division via the Panama Canal, San Diego, and Hawaii, arriving Yokosuka 31 October.

With the ground war in Korea then in stalemate, fleet air power, and surface bombardment carried much of the fight to the Communist enemy. *Hyman* arrived Wonsan for shore bombardment 6 November, remaining in the area until 19 November, when she moved farther out to sea as plane guard for Australian carrier *Sydney*. Returning to Wonsan Harbor the destroyer engaged in a gunnery duel with batteries on Kalmo Pando peninsula 24 November, sustaining minor shrapnel damage during the close-in exchange. She carried out search and rescue duties into December when she joined Task Force 77 in the sea of Japan during interdiction strikes on North Korea. *Hyman* returned to Yokosuka 22 February 1952 and soon afterward embarked on the long cruise home, completing her round the world voyage at Newport 21 April after visiting Ceylon, Saudi Arabia, Italy, and France.

The veteran ship sailed again for Mediterranean waters 7 January 1953. On this cruise she took part in joint operations with British and French ships, returning to

her home port 24 May 1953. During 1954 and 1955 *Hyman* took part in antisubmarine operations in the Caribbean and Atlantic. In 1956 she cruised to the Caribbean with midshipmen on training operations, and participated in NATO maneuvers off the Virginia Capes in May. In June 1957 the ship was part of the International Naval Review at the Jamestown Festival, commemorating the 350th anniversary of the first permanent English settlement in the New World.

After another Midshipman cruise, *Hyman* sailed 29 November 1957 for the Mediterranean, visiting various eastern Mediterranean ports with the 6th Fleet in its ceaseless effort to maintain peace and freedom in the region. She returned to the United States 12 April 1958 and for the remainder of the year was occupied with NATO exercises in the North Atlantic and antisubmarine training. Operations in home waters continued until 4 August 1960, when *Hyman* again sailed for duty with the 6th Fleet. In April 1961 the ship steamed west of the Azores as a station ship in America's historic Project Mercury.

During 1962 the destroyer made another cruise to Mediterranean and Middle Eastern ports, operating with naval units from many navies. While *Hyman* was undergoing repairs in October, the introduction of offensive missiles into Cuba precipitated another cold-war crisis, and the ship steamed to join the quarantine just as it was lifted in late November. Sea power again proved the strength and shield of American security.

Hyman sailed to Costa Rica in March 1963 in connection with President Kennedy's visit to that Central American country; and, after antisubmarine exercises, proceeded to waters east of Cape Canaveral for another Project Mercury assignment. She acted as part of the recovery group on Maj. L. Gordon Cooper's successful orbital flight. During the remainder of the year the ship conducted training exercises in the Caribbean.

During 1964 *Hyman* participated in ASW exercises and served as surveillance ship in Cuban waters. She entered Boston Naval Shipyard in April and departed for her 11th deployment with the 6th Fleet on 27 November. *Hyman* returned to Newport 13 March 1965 and received a new training assignment for Naval Reservists. This at sea training keeps her busy on the eastern seaboard, a vital link in keeping the U.S. Navy always at the ready.

While conducting training exercises in mid-September 1965, *Hyman* was ordered to search for a chlorine barge lost in the Mississippi river during Hurricane "Betsy." Although damaged by the same hurricane that sunk the barge, *Hyman* searched the Mississippi River for a week. Sonar sweeps and fathometer traces located the barge with its deadly gas near Baton Rouge, La., 17 September. With a job well done, *Hyman* went to Orange, Tex., for hull repairs. Training of Naval Reservists kept *Hyman* busy into 1967.

Hyperion

A satellite of Saturn named for one of the Titans of Greek mythology, the son of Uranus and Gaea and the father of Helios, the sun-god.

(AK-107: l. 441'6"; b. 56'11"; dr. 28'4"; s. 12.5 k.; cpl. 206; a. 1 5", 1 3"; cl. *Crater*)

Hyperion (AK-107), formerly liberty ship SS *Christopher C. Andrews*, was launched 24 June 1943 by Permanent Metals Corp., Richmond, Calif.; sponsored by Mrs. Percy Lindt; acquired by the Navy from WSA 10 July 1943; and commissioned 25 August 1943 at San Diego, Lt. Comdr. C. C. Newman in command.

With gasoline barge YOG-85 in tow, *Hyperion* sailed for the Pacific 18 September on what was to be a memorable voyage. During the 42-day trip, the tow was lost twice; lightning struck the mainmast; a crewman was lost in high seas; and emergency flares were spotted but nothing was found. *Hyperion* finally reached Espiritu Santo, New Hebrides 30 October 1943. The following half year saw the cargo ship shuttling among the Solomon Islands bringing valuable supplies—gasoline, diesel oil,

rolling stock, foodstuffs—to the staging area for some of the Pacific's most hard-fought campaigns.

On 5 April 1944 *Hyperion* steamed from the Solomons with 45 passengers in addition to her usual cargo of oil and supplies. Arriving 10 April at Emirau Island in the Bismarcks, occupied only 3 weeks earlier, *Hyperion* discharged cargo by day and steamed out to safety at night. She then returned to her valuable work in the staging areas, operating between New Caledonia, Guadalcanal, New Zealand, and the Bismarcks.

In the fall of 1944, as the war advanced steadily across the Pacific and culminated in the climactic Battle of Leyte Gulf, one of the greatest naval engagements of all time, *Hyperion* had her first taste of battle. Departing Espiritu Santo 22 September, *Hyperion* picked up stores at Tulagi and joined TG 78.8's reinforcement group which supported Admiral Daniel Barbey's Northern Attack Force TF 78. She sailed into Leyte Gulf in a 33-ship convoy 29 October, only 3 days after the conclusion of that great battle. During the next fortnight, *Hyperion* went to general quarters 87 times, fought off 37 Japanese air attacks, and splashed 2 enemy planes.

Another tour of duty shuttling cargo in the staging area between New Zealand and New Caledonia ended in late April 1945 as *Hyperion* loaded 6,500 tons of Army engineering equipment at Noumea and steamed for Okinawa, still the scene of bloody fighting. During the 18 days it took her to discharge cargo at Okinawa 8 May, *Hyperion* witnessed naval bombardments of the Japanese positions on the island, the battles of Naha and Shuri, and countless kamikaze attacks—she was anchored less than 500 yards from *New Mexico* when two suicide planes damaged the battleship 12 May.

As the war drew to a close, *Hyperion* sailed for San Francisco 4 August 1945 ending 2 years of continuous service in the Pacific. The cargo ship had steamed some 75,225 nautical miles, carried 150,000 tons of cargo, transported over 1,000 passengers, made 62 voyages to 29 islands and 37 ports, and had fought at Leyte and Okinawa. *Hyperion* had crossed the equator six times and the international date line four times (she celebrated two Fourths of July in 1944!).

After minor repairs at San Francisco, which she reached 24 August, *Hyperion* sailed for the East Coast via the Panama Canal. Reaching Norfolk 24 October 1945, she decommissioned 16 November and was returned to WSA the following day. *Hyperion* was placed in the Maritime Commission National Defense Reserve Fleet, and was berthed in the James River until she was scrapped in 1961.

Hyperion received three battle stars for World War II service.

I

I. J. Merritt

A former name retained.

(Str: l. 174'; b. 34'; dr. 13'6"; s. 11 k.)

I. J. Merritt, a salvage steamer, was launched 8 February 1919 by Brown's Shipyard, Staten Island, N.Y. She was taken over by the Commandant of the 3d Naval District 27 August 1919. After a period of limited service

she was sold to the Merritt, Chapman, & Derrick Wrecking Co. 13 December 1919.

I. N. Seymour, see Isaac N. Seymour

Iberville, see *Hyades* (AF-28)

Ibex

A variety of wild goat found in Europe, Asia, and Africa.

I

(SwStr: t. 235; l. 157'; b. 33'; dph. 4'6"; a. 2 30-pdr. P.r., 2 12-pdr. r., 4 24-pdr. how.)

Ibex, a tinclad, side-wheel gunboat formerly called *Ohio Valley*, was built at Harmer, Ohio, in 1863 and was purchased by the Navy at Cincinnati, Ohio, from Theodore Johnson 10 December 1864; and commissioned at Mound City, Ill., 4 April 1865, Lt. Comdr. R. L. May in command.

After fitting out as a gunboat at Mound City, *Ibex* was ordered to Memphis for duty with the Mississippi Squadron's 8th District 29 April 1865. She served faithfully in the Mississippi assisting Rear Admiral S. P. Lee in attending to many of the innumerable tasks entailed in closing the Mississippi Squadron. *Ibex* decommissioned at Mound City 5 August and was sold at public auction to Thompson Dean 17 August 1865. She was redocumented *Harry Dean* 5 October 1865 and lost when she exploded at Gallipolis, Ohio, 3 January 1868.

II

(IX-119: dp. 14,500 (lim.); l. 441'6"; b. 56'11"; dr. 28'4"; s. 11 k.; cpl. 176; a. 1 5", 1 3", 8 20mm.; T. EC2-S-C1)

The second *Ibex* (IX-119) was laid down as *Nicholas Longworth* under a Maritime Commission contract by the California Shipbuilding Corp., Wilmington, Calif., 16 October 1943; renamed *Ibex* 27 October; launched 15 November; sponsored by Mrs. A. T. Olson; acquired by the Navy 13 December 1943; and commissioned the same day, Lt. Comdr. John L. Frazer in command.

After shakedown off the West Coast, *Ibex* departed San Pedro 23 January 1944, arriving Noumea, New Caledonia, 18 February. Operating as a floating storage ship, she transported gasoline and lube oil in the South Pacific for the next 8 months. From October until the end of World War II she operated with Servron 8, 3d Fleet, which supplied the fighting units during the most crucial months of the war.

After VJ day she remained in the Far East servicing the occupation forces; then returned to the United States early in 1946. *Ibex* decommissioned at Norfolk 28 June 1946 and was returned to the Maritime Commission on the 30th. In 1948 she was sold to T. J. Stevenson Co., Inc. and renamed *Helen Stevenson*.

Ibis

A wading bird related to the heron.

I

(SP-3051: t. 299; l. 141'5"; b. 23'3"; dr. 13'6"; s. 11 k.; a. 1 3", 2 mg.)

The first *Ibis* (SP-3051), a trawler formerly named *Sea Gull*, was built in 1917 by Globe Shipbuilding Co., Superior, Wis.; acquired by the Navy in June 1918 from her owner, the Atlantic Coast Fisheries Co., of New York City. She was commissioned 19 August 1918.

Ibis was used as minesweeper during the months that followed, operating in the 1st Naval District. She was returned to her owner 3 March 1919.

II

(AM-134: dp. 590; l. 147'; b. 26'; dr. 13'; s. 12 k.; a. 2 6-pdr.)

The second *Ibis* (AM-134), a converted steel-hulled trawler, was built as *Tide* in 1937 by the Bethlehem Shipbuilding Co., Quincy, Mass.; acquired from her owner, General Sea Foods Corp., of Boston, 1 January 1942; and commissioned 23 May 1942, Lt. F. G. Crane in command.

Ibis was assigned to Woods Hole Section Base, Mass., as a training ship until spring 1943, when she took up mine-sweeping duties out of Newport, R.I. She decommissioned 1 May 1944. Her name was struck from the Navy List 16 September 1944 and she transferred to the Maritime Commission. She was subsequently sold to General Foods Corp., Boston, Mass.

Ice Boat

(Str: epl. 50; a. 4 32-pdr.)

Ice Boat, also known as *Refrigrator* and *Release*, was owned by the city of Philadelphia and offered to the Navy free of expense soon after the outbreak of the Civil War. She was placed in service at Philadelphia 23 April 1861, Comdr. Oliver S. Glissner in command.

She departed Philadelphia the same day to protect the landing of troops at Annapolis to encourage Maryland's adherence to the Union and to be available for the defense of Washington. *Ice Boat* was ordered to Washington for duty in the Potomac 21 May arriving 2 days later. Most of her service was off Aquia Creek where she labored to stop trade across the Potomac between Virginia and Maryland, occasionally engaging Confederate batteries on the Virginia shore. News of the Union Army's defeat at the First Battle of Bull Run caused *Ice Boat's* return to Washington to defend the Nation's Capital. A fortnight later the ship was back off Aquia Creek where she remained until she was returned to her owner late in November 1861.

Ice King

(No. 3160: dp. 10,562 n.; l. 392'6"; b. 52'; dr. 23'8"; s. 10 k.; epl. 86; a. 15", 13")

Ice King was launched as *War Unit* 22 December 1917 by Standard Shipbuilding Co., New York City, under Shipping Board contract with Cunard Steamship Co., acquired by Navy 2 July 1918 and commissioned next day at Brooklyn, Lt. Comdr. N. Fogarty in command. She carried the name *Passaic* in 1918 but was renamed *Ice King* shortly before commissioning.

Assigned to NOTS on Army account, *Ice King*, a refrigerator ship, transported vital supplies and foodstuffs to Allied troops in Europe. Departing Halifax 19 July, she sailed in convoy through the dangerous North Atlantic; and, while en route from Brest to Quiberon Bay 3 August, maneuvered clear of two torpedoes from a German U-boat. She continued to ply the Atlantic, making five more voyages to France before decommissioning 26 May 1919. *Ice King* was returned to the Shipping Board for service until laid up in 1923. The ship subsequently entered merchant service as *Georgian* and later as *Hilton*, for A. H. Bull Lines, until scrapped in 1950.

Icefish

Any member of the family *Salangidae*, small smeltlike fishes of China and Japan. Also known as whitebait.

(SS-367: dp. 1,526; l. 311'9"; b. 27'3"; dr. 15'3"; s. 21 k.; epl. 66; a. 1 5", 1 40mm., 1 20mm., 2 .50 cal. mg., 10 21" tt.; cl. *Perch*)

Icefish (SS-367) was launched 20 February 1944 by Manitowoc Shipbuilding Co., Manitowoc, Wis.; sponsored by Mrs. Stanley P. Mosely, wife of Captain Mosely; and commissioned 10 June 1944, Comdr. Richard W. Peterson in command.

After trials and diving tests in Lake Michigan, voyages down the Mississippi in the wake of Huckleberry Finn, and shakedown out of New Orleans, *Icefish* joined the

Pacific Fleet at Pearl Harbor 22 August. Assigned to Vice Admiral Lockwood's Task Force 17 (Supporting Submarines Pacific Fleet), she joined "Banister's Beagle's" (consisting of Comdr. A. B. Banister in *Sawfish* and *Drum*) and departed 9 September on her first war patrol which took her into Luzon Straits and the South China Sea. October 1944 was a peak month in the war of U.S. submarines on Japanese shipping: 322,265 tons were sunk, and almost one-third of that total consisted of tankers. In October *Icefish* and *Drum* together sank 26,901 tons of enemy shipping in "Convoy College," code name for the area extending across the East China Sea from Luzon Strait to Formosa and the coast of China. *Icefish* sank a 4,000-ton cargo vessel on 23 October and on 26 October she was credited with sinking a transport of 10,000 tons. She terminated her first war patrol at Majuro, Marshall Islands, 13 November.

Icefish departed Majuro 8 December on her second war patrol in company with *Spot* and *Balao*. This patrol lasted 43 days with no results and she was forced to return to Pearl Harbor 20 January 1945 due to materiel difficulties. The third war patrol began 20 February when she departed Pearl Harbor with *Sawfish* and *Kingfish*. This patrol was also conducted in the East China Sea, northeast and east of Formosa. As the war was coming to an end and Japanese shipping had dwindled away largely due to our Silent Service, *Icefish's* third war patrol terminated after 60 days at Apra Harbor, Guam.

Her fourth war patrol was conducted in the Hainan, Hong Kong, Formosa, Siam Gulf, and Java Sea areas. This patrol lasted 46 days with no contacts. Japan's sea arteries had withered away under the relentless attack of the U.S. Navy, and with it her dreams of empire and victory.

Instead *Icefish* carried out another very useful function of our submarines. On 7 June with a PBY Catalina for air cover, she rescued six Army aviators off the coast of Formosa. *Icefish* arrived Fremantle 4 July for refit by *Clytie* and sailed 29 July for her fifth war patrol. En route to station 7 August a small diesel lugger of 15 tons was intercepted. The crew consisted of two Japanese, two Eurasians, and five Chinese. One Japanese jumped overboard rather than be captured; the rest were taken on board *Icefish*. The lugger was sunk by gunfire.

Icefish arrived Tanapag Harbor, Saipan, 22 August 1945, thus ending her fifth and last war patrol. She departed Saipan 1 September arriving San Francisco the 18th. *Icefish* decommissioned at Mare Island 21 June 1946 and joined the Reserve Fleet.

Recommissioned at Mare Island 5 June 1952, *Icefish* transited the Canal Zone and arrived Groton, Conn., 14 July. She decommissioned there 29 July 1952 and once again joined the Reserve Fleet. Recommissioned 10 December 1952 at Groton, she remained in that area conducting various tests until 21 February 1953 when she was decommissioned and transferred to the Netherlands. She serves as *Walrus* (S-802).

Icefish received four battle stars for World War II service.

Ida

A former name retained.

(StTug: t. 104; a. 1 gun)

Ida was chartered by the Navy in New Orleans 3 February 1863 and purchased 6 March. She was assigned to the mortar flotilla for use as a dispatch vessel and for towing the motor boats in the swift and tricky currents of the Mississippi. She operated primarily below Port Hudson, maintaining communication between the flotilla and the squadron flagship. She was also used commanding and towing off any boats suitable for military use found in the river.

She came under fire while assisting *Iberville* 3 July but escaped damage. After Port Hudson fell 9 July clearing the entire Mississippi for Union shipping, *Ida* continued

to operate in the lower river towing oceangoing vessels between the mouth of the river and New Orleans.

Early in 1865 she was ordered to Mobile Bay, where she arrived 1 February. Two weeks later she took on board two smoothbore howitzers in preparation for picket duty.

While clearing the main channel of Mobile Bay, *Ida* struck a torpedo mine which crushed the timbers on her starboard side, burst her boilers, and tore up her decks 13 April 1865. In a few moments she flooded and sank in midchannel. Three members of her crew were killed and two were wounded. Her wrecked hull was sold 11 September 1865.

Ida and Joseph, see YP-376

Idaho

The 43d State of the Union, admitted in 1890.

I

(Ship: dp. 3,241; l. 298'; b. 44'6"; dr. 16'; s. 15 k.; a. 8 guns)

The first *Idaho* was launched as a wooden steam sloop 8 October 1864 by George Steers of New York. Her twin-screw machinery was of a novel design by E. N. Dickerson and was built by Morgan Iron Works. She was completed in 1866 but upon trials in May was found to be far slower than the contract speed of 15 knots, having been in commission between 2 April and 26 May under the command of Captain John L. Worden. A board of Naval Officers recommended her rejection, but Dickerson appealed to Congress and obtained a resolution in February 1867 for her purchase by the Navy. She was subsequently converted to a full-rigged sailing ship at New York and recommissioned 3 October 1867, Lt. Edward Hooker in command.

The converted *Idaho* was one of the fastest sailing ships of her day, and sailed 1 November 1867 for Rio de Janeiro. From there she continued the long voyage to

the Far East, arriving Nagasaki 18 May 1868. The ship remained there for 15 months as a store and hospital ship for the Asiatic Squadron.

In mid-August 1869 *Idaho* moved to Yokohama to prepare for the long voyage back to the United States, and soon afterward, 20 September, she got underway for San Francisco. Next day, however, the ship was hit by a raging typhoon. Her masts were carried away and her hull was severely damaged, but the stout ship stayed afloat and was brought back to Yokohama by her crew. Little more than a hulk, the gallant *Idaho* remained in the harbor until decommissioning 31 December 1873. She was sold in 1874 to East Indies Trading Co.

II

(BB-24: dp. 13,000 n.; l. 382'; b. 77'; dr. 24'8"; s. 17 k.; cpl. 744; a. 4 12", 8 8", 8 7", 12 3", 2 21" tt.; cl. *Mississippi*)

The second *Idaho* (BB-24) was launched by William Cramp & Sons, Philadelphia, 9 December 1905; sponsored by Miss Louise Gooding, daughter of the Governor of Idaho; and commissioned at Philadelphia Navy Yard 1 April 1908, Captain S. W. B. Diehl in command.

The new battleship conducted a shakedown cruise to Cuba April-May 1908, and after a visit to Panama returned to Philadelphia for alterations. The ship took part in the giant naval review in Hampton Roads 22 February 1909 celebrating the return of the Great White Fleet from its around the world cruise. In March she returned to the Caribbean for maneuvers, continuing to take part in training operations until October 1910. *Idaho* sailed 29 October for exercises in British and French waters, and upon her return participated in gunnery exercises in Chesapeake Bay 19 to 23 March 1911.

Idaho sailed from Philadelphia 4 May 1911 for a cruise up the Mississippi River to Louisiana ports. She then steamed to the east coast of Florida for battleship maneuvers, and continued to operate off the coast and in the Caribbean until entering the reserve at Philadelphia 27 October 1913. There she remained until 9 May 1914, when the ship sailed to the Mediterranean with midshipmen for at sea training. After visiting various ports

USS *Idaho* (BB-24) on review at New York October 1912

in North Africa and Italy and carrying out a rigorous training program, *Idaho* arrived Villefranche 17 July 1914, transferred her crew to *Maine*, and decommissioned 30 July. She was turned over to the government of Greece, whom she served as coastal defense ship *Kilkis* until being sunk in Salamis harbor by German aircraft in April 1941.

III

(SP-545: t. 23; l. 60'; b. 12'6"; dr. 4'; s. 11 k.; a. 1 mg.)

The third *Idaho* (SP-545), a motor boat, was built in 1907 by Stearns & McKay, Marblehead, Mass.; acquired from her owner, W. W. Vensel of Pittsburgh, in June 1917; and commissioned at Cape May, N.J., 12 July 1917, Chief Quartermaster W. H. Naylor, USNRF, in command.

Idaho was assigned to the 4th Naval District for patrol and general duties, serving on harbor entrance patrol and submarine net patrol in the Cape May and Philadelphia areas. She was out of commission during the winter of 1917-18, and finally returned to her owner 30 November 1918.

IV

(BB-42: dp. 32,000 n.; l. 624'; b. 97'5"; dr. 30'; s. 21 k.; cpl. 1,081; a. 12 14", 14 5", 4 3", 2 21" tt.; cl. *New Mexico*)

The fourth *Idaho* (BB-42) was launched by New York Shipbuilding Corp., Camden, N.J., 30 June 1917; sponsored by Miss H. A. Limons, granddaughter of the Governor of Idaho; and commissioned 24 March 1919, Captain C. T. Vogelgesang in command.

Idaho sailed 13 April for shakedown training out of Guantanamo Bay, and after returning to New York received President Pessoa of Brazil for the voyage to Rio de Janeiro. Departing 6 July with her escort, the battleship arrived Rio 17 July 1919. From there she set course for the Panama Canal, arriving Monterey, Calif., in September to join the Pacific Fleet. She joined other dreadnaughts in training exercises and reviews, including a Fleet Review by President Wilson 13 September 1919. In 1920 the battleship carried Secretary Daniels and the Secretary of the Interior on an inspection tour of Alaska.

Upon her return from Alaska 22 July 1920 *Idaho* took part in fleet maneuvers off the California coast and as far south as Chile. She continued this important training until 1925, taking part in numerous ceremonies on the West Coast during the interim. *Idaho* took part in the fleet review held by President Harding in Seattle shortly before his death in 1923. The battleship sailed 15 April 1925 for Hawaii, participated in war games until 1 July, and then got underway for Samoa, Australia, and New Zealand. On the return voyage *Idaho* embarked gallant Comdr. John Rodgers and his seaplane crew after their attempt to fly to Hawaii, arriving San Francisco 24 September 1925.

For the next 6 years *Idaho* operated out of San Pedro on training and readiness operations off California and in the Caribbean. She sailed from San Pedro 7 September 1931 for the East Coast, entering Norfolk Navy Yard 30 September for modernization. The veteran battleship received better armor, "blister" antisubmarine protection, better machinery, and tripod masts during this extensive overhaul, and was readied for many more years of useful naval service. After completion 9 October 1934 the ship conducted shakedown in the Caribbean before returning to her home port, San Pedro, 17 April 1935.

As war clouds gathered in the Pacific, the fleet increased the tempo of its training operations. *Idaho* carried out fleet tactics and gunnery exercises regularly until arriving with the battle fleet at Pearl Harbor 1 July 1940. The ship sailed for Hampton Roads 6 June 1941 to perform Atlantic neutrality patrol, a vital part of U.S. policy in the early days of the European fighting. She moved to Iceland in September to protect American advance bases and was on station at Hvalfjordur when the Japanese attacked Pearl Harbor 7 December 1941 and catapulted America into the war.

Idaho and sister ship *Mississippi* departed Iceland 2 days after Pearl Harbor to join the Pacific Fleet, and arrived San Francisco via Norfolk and the Panama Canal 31 January 1942. She conducted additional battle exercises in California waters and out of Pearl Harbor until October 1942, when she entered Puget Sound Navy Yard to be regunned. Upon completion of this work *Idaho* again took part in battle exercises, and sailed 7 April 1943 for operations in the bleak Aleutians. There she was flagship of the bombardment and patrol force around Attu, where she gave gunfire support to the Army landings 11 May 1943. During the months that followed she concentrated on Kiska, culminating in an assault 15 August. The Japanese were found to have evacuated the island in late July, thus abandoning their last foothold in the Aleutians.

Idaho returned to San Francisco 7 September 1943 to prepare for the invasion of the Gilbert Islands. Moving to Pearl Harbor, she got underway with the assault fleet 10 November and arrived off Makin Atoll 20 November. She supported the fighting ashore with accurate gunfire support and antiaircraft fire, remaining in the Gilberts until sailing for Pearl Harbor 5 December 1943.

Next on the Pacific timetable was the invasion of the Marshalls, and the veteran battleship arrived off Kwajalein early 31 January to soften up shore positions. Again she hurled tons of shells into Japanese positions until 5 February, when the outcome was one of certain victory. After replenishing at Majuro she bombarded other islands in the group, then moved to Kavieng, New Ireland, for a diversionary bombardment 20 March 1944.

Idaho returned to the New Hebrides 25 March, and after a short stay in Australia arrived Kwajalein with a group of escort carriers 8 June. From there the ships steamed to the Marianas, where *Idaho* began a preinvasion bombardment of Saipan 14 June. With this brilliantly executed landing assault underway 15 June, the battleship moved to Guam for bombardment assignments. As the American fleet decimated Japanese carrier air power in the Battle of the Philippine Sea 19 to 21 June, *Idaho* protected the precious transport area and reserve troop convoys. After returning briefly to Eniwetok 28 June to 9 July the ship began preinvasion bombardment of Guam 12 July, and continued the devastating shelling until the main assault eight days later. As ground troops battled for the island, *Idaho* stood offshore providing vital fire support until anchoring at Eniwetok 2 August 1944.

The ship continued to Espiritu Santo and entered a floating dry dock 15 August for repairs to her "blisters." After landing rehearsals on Guadalcanal in early September, *Idaho* moved to Peleliu 12 September and began bombarding the island, needed as a staging base for the invasion of the Philippines. Despite the furious bombardment, Japanese entrenchments gave assault forces stiff opposition, and the battleship remained off Peleliu until 24 September providing the all-important fire support for advancing marines. She then sailed for Manus and eventually to Bremerton, Wash., where she arrived for needed repairs 22 October 1944. This was followed by battle practice off California.

Idaho's mighty guns were needed for the next giant amphibious assault on the way to Japan. She sailed from San Diego 20 January 1945 to join a battleship group at Pearl Harbor. After rehearsals she steamed from the Marianas 14 February for the invasion of Iwo Jima. As marines stormed ashore 19 February *Idaho* was again blasting enemy positions with her big guns. She remained off Iwo Jima until 7 March, when she got underway for Ulithi and the last of the great Pacific assaults—Okinawa.

Idaho sailed 21 March 1945 as part of Rear Admiral Deyo's Gunfire and Covering Group and flagship of Bombardment Unit 4. She arrived offshore 25 March and began silencing enemy shore batteries and pounding installations. The landings began 1 April, and as the Japanese made a desperate attempt to drive the vast fleet away with suicide attacks, *Idaho's* gunners shot down numerous planes. In a massed attack 12 April the battle-

ship shot down five kamikazes before suffering damage to her port blisters from a near-miss. After temporary repairs she sailed 20 April and arrived Guam five days later.

The veteran of so many of the landings of the Pacific quickly completed repairs and returned to Okinawa 22 May to resume fire support. *Idaho* remained until 20 June 1945, then sailed for battle maneuvers in Leyte Gulf until hostilities ceased 15 August 1945.

Idaho made her triumphal entry into Tokyo Bay with occupation troops 27 August, and witnessed the signing of the surrender on board *Missouri* 2 September. Four days later she began the long voyage to the East Coast of the United States, steaming via the Panama Canal to Norfolk 16 October 1945. She decommissioned 3 July 1946 and was placed in reserve until sold for scrap 24 November 1947 to Lipsett Inc., of New York City.

Idaho received seven battle stars for World War II service.

Idalis

A former name retained.

(SP-270: t. 40; l. 67'8"; b. 14'2"; dr. 3'; s. 10 k.; a. 1 1-pdr.)

Idalis (SP-270), a motor yacht, was built in 1908 by Gas Engine & Power Co., Morris Heights, N.Y. Originally

Idalis, she was acquired by the Navy in June 1917 as *Amalia IV* from her owner, Carl Reinschild of New York City; renamed *Idalis*, she commissioned 25 August 1917, Lt. G. C. Fry, USNRF, in command.

Assigned to the 3d Naval District, *Idalis* served as a patrol craft in Long Island Sound and as training ship for officers at the Naval Reserve Training School, Pelham Bay Park, N.Y. She continued these duties until the close of the war, and was returned to her former owner 22 March 1919.

Ideal

A standard of perfection, beauty, or excellence.

(AMc-85: dp. 195; l. 97'1"; b. 22'; dr. 9'1"; s. 10 k.; cpl. 17; cl. *Accentor*)

Ideal (AMc-85), a wooden-hulled coastal minesweeper, was laid down 4 June 1941 by Warren Boat Yard, Inc., Warren, R.I., launched 20 September 1941; sponsored by Miss Edith C. Alder; and placed in service at Boston 24 April 1942.

After shakedown out of Boston, *Ideal* reported to Mine Warfare School, Yorktown, Va., 11 May 1942. The ship served subsequently in the 8th Naval District at Burrwood, La., and in the 5th Naval District as a mine warfare training ship. She returned to Norfolk 26 May 1946 and decommissioned there 10 June 1946. *Ideal* was turned over to the Maritime Commission 26 December 1946.

Idealia

A former name retained.

USS *Idaho* (BB-42) in 1925

(SP-125: t. 52; l. 75'8"; b. 13'8"; dr. 2'10"; s. 14 k.; a. 1 1-pdr.)

Idealia (SP-125), a motor yacht built in 1911 by the Elco Co., Bayonne, N.J., was acquired by the Navy and simultaneously commissioned 25 May 1917, Ensign Charles Clegg, USNRF, in command.

Idealia was assigned to the 4th Naval District, based at Cape May, N.J., and operated as a harbor entrance patrol craft at Philadelphia and in Delaware Bay. She was returned to her owner, Ira D. Bertolet, Jr., of Philadelphia, 22 November 1918.

Idyl, see *YHB-15*

Idylease

A former name retained.

(SP-119: t. 29; l. 65'; b. 13'6"; dr. 2'6"; s. 10 k.; a. 1 1-pdr.)

Idylease (SP-119), a motor yacht, was built in 1916 by Kyle and Purdy, City Island, N.Y.; acquired by the Navy from Richard Goldsmith of New York City in June 1917, and commissioned 9 July 1917, Chief Boatswain C. E. Geohegan, USNRF, in command.

Assigned to the 5th Naval District, *Idylease* performed patrol and radio inspection duties in Hampton Roads and on the Elizabeth River during the war. She was returned to her owner at Norfolk 30 April 1919.

Illinois

Illinois, the 21st State, was admitted to the Union 3 December 1818, and was named for a French rendition of the Algonquian word "Illini," meaning men or warriors.

Illinois, a screw sloop-of-war of 2,354 tons displacement, was laid down at Portsmouth Navy Yard, Portsmouth, N.H., in 1864, but was never completed. She was broken up in 1872.

I

(BB-7: dp. 11,565; l. 368'; b. 72'3"; dr. 23'6"; cpl. 660; s. 17 k.; a. 4 13", 14 6", 16 6-pdr., 6 1-pdr., 4 tt.; cl. *Illinois*)

Illinois (BB-7) was laid down 10 February 1897 by the Newport News Shipbuilding & Dry Dock Co., Newport News, Va., launched 4 October 1898; sponsored by Miss Nancy Leiter; and commissioned 16 September 1901, Captain G. A. Converse in command.

After shakedown and training in Chesapeake Bay, the new battleship sailed 20 November 1901 for Algiers, La., where she was used to test a new floating dry dock. She returned to Newport News in January 1902 and from 15 to 28 February *Illinois* served as flagship for Rear Admiral R. D. Evans during the reception for Prince Henry of Prussia. Bearing the flag of Rear Admiral A. S. Crowninshield, the battleship departed New York 30 April 1902 and arrived Naples 18 May, where the Admiral took command of the European Squadron. *Illinois* carried out training and ceremonial duties until 14 July 1902, when she grounded in the harbor of Christiana, Norway, and had to return to England for repairs. She remained at Chatham until 1 September 1902, then proceeded to the Mediterranean and South Atlantic for fleet maneuvers.

Illinois was detached from the European Squadron 10 January 1903 and assigned to the North Atlantic. She engaged in fleet maneuvers, gunnery and seamanship training, and ceremonial operations until December 1907, when she joined the Great White Fleet for the cruise around the world. Following a Presidential review, the mighty battleships sailed from Hampton Roads on their important voyage. The Atlantic Fleet joined the Pacific

Fleet 8 May 1908 in San Francisco Bay and after a review by the Secretary of the Navy the combined fleets continued their cruise. The ships visited Australia, Japan, Ceylon and other countries, arriving Suez 3 January 1909. At Suez word of the Sicilian earthquake sent *Illinois*, *Connecticut*, and *Culgoa* to Messina. After rendering valuable aid to victims of the disaster, the ships rejoined the fleet, returning to Hampton Roads 22 February 1909. President Roosevelt reviewed the fleet as it arrived, having given the world a graphic demonstration of America's naval might. *Illinois* decommissioned at Boston 4 August 1909.

The battleship was placed in reserve commission 15 April 1912 and recommissioned 2 November 1912, in time to take part in winter fleet exercises and battle maneuvers with the Atlantic Fleet. During the summers of 1913 and 1914 *Illinois* made training cruises to Europe with Midshipmen. In 1919 the ship was again laid up at Philadelphia Navy Yard and was later loaned to the State of New York 23 October 1921 for use by the Naval Militia.

Excluded from further use as a warship by the terms of the Washington Treaty, *Illinois* was fitted out as a floating armory at New York Navy Yard in 1924 and was assigned to the New York Naval Reserve. She remained there for more than 30 years, though reclassified IX-15 8 January 1941 and renamed *Prairie State* to allow her name to be assigned to a projected new battleship. During World War II she served as a U.S. Naval Reserve Midshipmen Training School at New York. Following the war, she was retained on loan to the State as quarters for a Naval Reserve unit until 31 December 1955.

Prairie State, after over 50 years of useful service to the Navy and the Nation, was towed to Baltimore and sold for scrap to Bethlehem Steel Co., 18 May 1956.

Illinois (BB-65), an *Iowa* class battleship under construction by Philadelphia Naval Shipyard, was canceled 12 August 1945.

Illinois, see *Albatross* (AM-71)

Illinois, see *YP-419*

Illusive

Deceiving by false show; unreal.

Illusive (AM-243), an *Admirable* class minesweeper, was under construction by Tampa Shipbuilding Co., Inc., Tampa, Fla., but was canceled 6 June 1944.

I

(AM-448: dp. 630; l. 172'; b. 36'; dr. 10'; s. 16 k.; cpl. 72; a. 1 40mm.; cl. *Agile*)

Illusive (AM-448) was launched by Martinolich Shipbuilding Co., San Diego, Calif., 12 July 1952; sponsored by Mrs. Vito Marino; and commissioned 14 November 1953, Lt. Comdr. J. E. Ruzic in command.

After shakedown and individual ship training out of Long Beach during 1954, the ship entered Long Beach shipyard for extensive modifications October 1954 to February 1955. She was reclassified MSO-448 7 February 1955. She continued to operate out of Long Beach, taking part in a major Pacific Fleet training exercise in November 1955. For the next year she trained in California waters.

Illusive again entered the yard in November 1956, this time to replace her engines with experimental Packard models, and until May 1957 was engaged in engineering evaluation trials. She then sailed for her first deployment to the Far East 1 August 1957. Through December she took part in the vital operations of the 7th Fleet for the maintenance of peace and security in East Asia. She

USS *Illinois* (BB-7)

took part in joint exercises with Japanese naval units 6-9 October and with the Chinese Nationalist Navy 15 to 17 December 1957. *Illusive* returned to Long Beach 15 February 1958.

The remainder of 1958 was spent in training operations out of Long Beach. In 1959 she remained in California waters, and took part in a large amphibious exercise off Camp Pendleton. *Illusive* then made ready for her second deployment to the western Pacific, sailing 8 January 1960 for Japan. During this critical period, in which American Navy ships were increasingly active in helping to prevent Communist takeover of the countries of Southeast Asia, the minesweeper carried out maneuvers off Japan, the Philippines, and Okinawa. *Illusive* returned to Long Beach 19 July 1960.

The year 1961 saw the ship return to the Far East. She sailed 24 August, and operated in the Philippines as well as out of Guam and Formosa. She moved to Sattahib, Thailand, 25 November, as American ships demonstrated support for that nation, and in December visited Bangkok. Thailand, and Saigon, capital of the struggling Republic of South Vietnam. During this period *Illusive* conducted training exercises with several Southeast Asian navies. She was particularly active in training South Vietnamese officers and men until sailing for Long Beach 3 March 1962.

The veteran ship returned to the far Pacific in August 1963 and after stopping at island bases along the way arrived Sasebo 23 September. In the months that followed *Illusive* took part in 7th Fleet training with Korean, Nationalist Chinese and Japanese minesweepers. She returned to Long Beach 7 March 1964 for yard overhaul, followed by refresher training off the coast of southern California.

On 13 August 1965 *Illusive* departed Long Beach for training in the Pacific that took her to Hawaii, the Marshalls, the Marianas, and the Philippines. She stood out of Subic Bay 2 October 1965 to join the "Market Time Patrol" vigilantly trying to stop the coastal flow of contraband by junks and boats to Vietcong the full length of Vietnam's 1,000-mile coastline. Her patrol service may include acting as a mother ship for replenishing the needs of "Swift" boats, providing gunfire support to U.S. forces

ashore, or conducting a hydrographic survey on shoreline depths, in addition to patrolling thousands of miles within the inspection zone to intercept Vietcong men and supplies. *Illusive* continued this vital duty until she turned homeward in February 1966. The minesweeper reached Long Beach 28 April. She operated along the West Coast for the remainder of 1966 and into 1967.

Imbue

To saturate or tinge deeply.

Imbue (AM-244), an *Admirable* class steel-hulled minesweeper under construction at Tampa Shipbuilding Co., Tampa, Fla., was canceled 6 June 1944.

Impeccable

Free from fault, blemish, or error.

(AM-320: dp. 890; l. 221'2"; b. 32'; dr. 10'; s. 18 k.; cpl. 105; a. 1 3", 2 40mm., 2 dct., 5 dep.; cl. *Auk*)

Impeccable (Am-320), ex BAM-7, was launched by General Engineering and Dry Dock Co., Alameda, Calif., 21 May 1943; sponsored by Mrs. Agnes W. Hanson; and commissioned 24 April 1944, Lt. Comdr. H. H. Smith in command.

The new minesweeper conducted shakedown training off the California coast before sailing 3 July 1944 on Pacific escort duty. Until November she steamed between Pearl Harbor and the advance base at Eniwetok, and during the last two months of 1944 operated on this vital duty in the Palaus. After patrol and escort duty out of Ulithi in early 1945, *Impeccable* departed 19 March 1945 to take part in the largest of the great Pacific amphibious assaults, Okinawa.

Arriving off the island 24 March in advance of the landing group, the minesweeper began her critical job of sweeping the approach and transport areas. She underwent air attack 28 March and with the main assault 1 April moved to screening duties. As the Japanese hurled

wave after wave of suicide planes at the invasion fleet in a desperate attempt to stop the capture of Okinawa, *Impeccable's* crew frequently manned their guns for long periods. She underwent air attack at Kerama Retto 6 April, and in the long days that followed patrolled both off the Hagushi beaches and on picket station. On 20 May she went alongside to give assistance to *Chase*, damaged by a kamikaze attack. She also performed rescue duties when other screening and escort ships were damaged by enemy air action. Despite the heavy raids, Okinawa was won, and *Impeccable* sailed 1 July for Guam.

The veteran minesweeper returned to Okinawa with a resupply convoy from Guam and sailed again 16 August, the day after the Japanese agreement to Armistice. Despite the end of hostilities, much necessary and dangerous work remained for units of the fleet. *Impeccable* returned to Okinawa 21 August; then in September and November swept the approaches to Wakayama, Japan, in support of occupation operations. *Impeccable* departed Sasebo 20 November, sailing via Pearl Harbor to San Francisco, where she arrived 15 December 1945. She remained there until decommissioning at Terminal Island 27 March 1947.

Impeccable recommissioned 12 March 1952 to strengthen American fleet units in Korea, and after shakedown sailed 3 September for Sasebo. She moved immediately to the Wonsan area to strengthen the naval siege and keep the harbor clear of mines. The ship also took part in the amphibious feint at Kojo 12 to 14 October, exchanging fire with shore batteries in the area. During the months that followed *Impeccable* remained on the eastern coast, aiding the naval blockade and helping to maintain our position on the offshore islands. She drove a sampan ashore off Hungnam 17 November 1952, and fought with Wonsan batteries 20 February 1953 while covering a minesweeping operation.

Her tour in the stalemated Korean conflict ended, *Impeccable* arrived Pearl Harbor 31 March and her homeport, Long Beach, 10 April 1953. For the rest of the year the ship operated on training and readiness exercises off Mexico and the Canal Zone. *Impeccable* remained on minesweeping and fleet maneuvers through the first half of 1955. *Impeccable* was reclassified MSF-320, 7 February 1955. She arrived Astoria, Oreg., 16 August 1955; decommissioned 14 October; and entered the Pacific Reserve Fleet at Bremerton, Wash., where she remains.

Impeccable received three battle stars for World War II service and two for Korean service.

Imperator

A German name retained.

(Str: l. 906'; b. 98'3"; dr. 35'2"; s. 23.5 k.)

Imperator, a German passenger liner, was built by Vulcan Works, Hamburg, Germany, in 1910. Following the Armistice 11 November 1918, she was taken over from Germany by the Food Shipping and Finance Agreement. She sailed to Brest, France; was acquired there by the Navy 5 May 1919; and commissioned the same day, Captain J. K. Robison in command.

After embarking 2,100 American troops and 1,100 passengers, *Imperator* departed Brest 15 May 1919, arriving New York 1 week later. Operating with the Cruiser-Transport Force from 3 June to 10 August she made three cruises from New York to Brest, returning over 25,000 troops, nurses, and civilians to the United States. While en route to New York 17 June, *Imperator* assisted the French cruiser *Jcannc D'arc*, which had broken down in the Atlantic. The President of Brazil was on board *Jcannc D'arc* and *Imperator* received him and his party for transport to the United States, arriving there several days later.

The troop transport was transferred to the 3d Naval District 19 September, decommissioned at New York 24 November 1919, and was delivered to the British Ministry of Shipping the same day.

Impervious

Impenetrable.

Impervious (AM-245), an *Admirable*-class minesweeper, was under construction by Tampa Shipbuilding Co., Inc., Tampa, Fla., but was canceled 6 June 1944.

I

(AM-449: dp. 630; l. 172'; b. 36'; dr. 10'; s. 16 k.; cpl 72; a. 1 40mm.; cl. *Agile*)

Impervious (AM-449) was launched by Martinolich Shipbuilding Co., San Diego, Calif., 29 August 1952; sponsored by Miss Mary Lin Moore; and commissioned 15 July 1954, Lt. Comdr. A. T. Ford in command.

Following shakedown and mine warfare training off the California coast, *Impervious* was reclassified MSO-449 on 7 February 1955. She sailed 1 July with her division for duty in the Far East with the 7th Fleet, arriving Sasebo via Pearl Harbor 5 August. During this deployment, she operated with ships of the Republic of Korea Navy and visited Taiwan before returning to her home port, Long Beach, 15 February 1956. During the next two years she operated out of Long Beach.

Impervious sailed for her second 7th Fleet deployment 3 January 1958, and during the next 6 months trained in Japanese waters. She also helped train Nationalist Chinese crews during April and May, preparing them to help to preserve the freedom and independence of Taiwan. The minesweeper returned to Long Beach 15 July 1958, and during September took part in a giant amphibious exercise off Camp Pendleton, Calif.

In April 1959 *Impervious* interrupted her regular training schedule to take part in a joint mine warfare exercise with Canadian ships, and spent the rest of the year on training exercises in California waters. In early 1960 the ship prepared for another deployment to the Far East, sailing 3 May for Japan. During August she participated in maneuvers with Korean and Nationalist Chinese ships, and in October *Impervious* operated with units of the Philippine Navy in similar operations off Corregidor. She sailed via Guam and Pearl Harbor to Long Beach, arriving 16 November.

The ship spent 1961 and early 1962 on important readiness operations, visiting several West Coast ports, and sailed again for 7th Fleet duty 7 April 1962. After training in the Philippines the minesweeper spent part of July on patrol with Vietnamese Naval units off Danang, and the Navy supported the South Vietnamese people in their fight for freedom. She visited Hong Kong and Yokosuka before arriving Pearl Harbor 8 September 1962. During October and November, *Impervious* took part in atomic tests at Johnson Island, and arrived Long Beach 21 November.

In March 1963 the ship took part in another large amphibious operation, "Steelgate", then worked out of Long Beach before again joining Canadian ships for mine warfare exercises off British Columbia in November. She got underway for the western Pacific again 8 May 1964, and after stopping at various islands moved to the coast of South Vietnam in September for special operations supporting the American Advisory unit. After mine exercises off the Philippines she returned Long Beach 7 December 1964. The following 12 months were spent in tactics and exercises along the coast of southern California, overhaul at Los Angeles, and readiness operations to prepare her for another Far Eastern deployment assisting Allied forces to defend freedom in Southeast Asia.

Impetuous

Moving with great force or violence.

(PC-454: dp. 140; l. 121'; b. 14'5"; dr. 6'; s. 16 k.; a. 6 30 cal. mg.)

The patrol yacht *Arlis* was built in 1915 by Robert Jacob Inc., City Island, N.Y.; acquired by the Navy 12 August 1940; and commissioned as *PC-454* 16 October 1940.

Assigned to the 15th Naval District, *PC-454* arrived Canal Zone in mid-November 1940, to patrol the approaches to the Panama Canal. From November 1940 to August 1944, she performed escort and patrol operations off Central America while on constant vigil for enemy submarines. *PC-454* was named *Impetuous* and reclassified PYc-46 15 July 1943. On 31 August 1944, the patrol yacht arrived Philadelphia and decommissioned there 27 September. *Impetuous* was struck from the Navy List 14 October, and sold by WSA 14 June 1945.

Implicit

To be understood though not expressed; implied.

I

(AM-246: dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.; cpl. 104; a. 1 3", 4 40mm.; cl. *Admirable*)

The first *Implicit* (AM-246) was launched by Savannah Machine & Foundry Co., Savannah, Ga., 6 September 1943; sponsored by Mrs. Helen P. Page; and commissioned 20 January 1944, Lt. Comdr. H. V. Brown in command.

Following her shakedown training in Chesapeake and Casco Bays, *Implicit* sailed from Norfolk 21 April 1944 on convoy duty to Bermuda. She steamed between Norfolk and Caribbean ports on escort duty until returning to Hampton Roads 16 June. The ship then prepared for her part in the invasion of southern France, sailing 24 July 1944 with transports bound for Oran, Algeria. She arrived off southern France 20 August, 5 days after the initial landings, and began a daily schedule of minesweeping and patrolling. She disposed of many floating mines, and exchanged fire with a shore battery 6 September and 10 September. *Implicit* sailed from San Rafael for Bizerte 23 October where she conducted minesweeping exercises.

The ship sailed from Palermo 18 January 1945 and after stopping at Athens and Istanbul arrived Yalta 31 January 1945 to be on hand at the historic Yalta Conference of Allied heads of state. After the conference she retraced her steps, arriving Palermo 21 February. After antisubmarine exercises, *Implicit* sailed in convoy for the United States, arriving Norfolk 5 May 1945. With the war in Europe over, she prepared for Pacific service, and sailed 5 July 1945 via the Panama Canal for San Diego. There the ship conducted minesweeping and countermeasures exercises in California waters before arriving Pearl Harbor 20 August, 5 days after the surrender of Japan.

The end of the war brought rigorous duty for fleet minesweepers, and *Implicit* sailed 3 September for Eniwetok, Saipan, Okinawa, and other Pacific Islands to take up minefields. She also performed this vital dangerous duty in Sasebo harbor and in the South China Sea, as well as in Formosa Strait. The ship sailed from Eniwetok 18 February 1946, and arrived San Pedro via the Hawaiian Islands 18 March. She remained there until 20 July, when the veteran ship got underway for transfer to China. Steaming via Eniwetok and the Philippines, she arrived Subic Bay 30 October 1946 and decommissioned 16 November 1946. After much delay she was eventually turned over to the Nationalist Chinese Navy 15 June 1948, where she serves as *Yung Chia* (MSF-47).

Implicit received two battle stars for World War II service.

II

(AM-455: dp. 630; l. 172'; b. 36'; dr. 10'; s. 16 k.; cpl. 72; a. 1 40mm.; cl. *Agile*)

Implicit (AM-455) was launched by Wilmington Boat Works, Wilmington, Calif., 1 August 1953; sponsored by Mrs. Landon Horton; and commissioned 10 March 1954, Lt. Comdr. A. C. Filiatrault in command.

One of a class of new minesweepers constructed entirely of nonmagnetic materials, *Implicit* conducted shakedown training in California waters during mid-1954. She then began an operational pattern which was to continue for 3 years—minesweeping exercises, fleet maneuvers, and training cruises in the California-Mexico area. The ship then got underway from her home port, Long Beach, 7 August 1957 to join the 7th Fleet in the strategic Far East. During this deployment, *Implicit* operated with Japanese ships, Nationalist Chinese minesweepers, and with regular units of the 7th Fleet on their daily mission of maintaining peace and security in the area. She returned to Long Beach 1 March 1958.

Training and readiness exercises out of Long Beach occupied the minesweeper until her second cruise to the Far East. She steamed out of Long Beach 8 January 1960 and during 6 months in the western Pacific took part in mine warfare exercises with 7th Fleet ships in the Philippines and off Okinawa. *Implicit* arrived Long Beach after this cruise 17 July 1960.

Training operations and mine countermeasures drill were carried out until August 1961, when the veteran minecraft took part in joint American-Canadian minesweeping exercises off British Columbia. Returning to Long Beach, the ship prepared for another Far Eastern deployment, this time in support of the American advisory effort in South Vietnam. Sailing 2 January 1962 for this embattled country, *Implicit* first participated in SEATO maneuvers and then moved to various ports in South Vietnam to assist in training officers and men in their struggle against Communist subversion. She returned to Long Beach from South Vietnam 17 August 1962.

Implicit resumed a schedule of underway training and fleet exercises out of Long Beach until her next deployment, sailing with her division 3 January 1964. Stopping at Guam and Midway en route, she arrived off Formosa for mine-warfare exercises in March. In May she returned to the Formosa Strait for a second operation, in which the ship acted under a Chinese Nationalist division commander in a demonstration of cooperation and smooth combined operations. Following her second SEATO exercise in the Pacific, *Implicit* returned to Long Beach 28 July 1964 for a yard overhaul and readiness tactics and training along the coast of California.

Implicit departed Long Beach 21 September 1965 for the Far East. A unit of Mine Division 91, she joined the "Market Time Patrol" along Vietnam's 1,000-mile coastline to intercept Vietcong men and supplies trying to infiltrate into South Vietnam. Once she was fired on by Vietcong while cruising close to shore and retaliated with her 40mm. and other machineguns.

After a 2-week stopover, *Implicit* departed Kaohsiung, Taiwan, 14 January to continue her "Market Time" patrols into late 1966. By 15 March she had boarded more than 1,000 junks and sampans for inspection. On 22 and 23 March, the minesweeper fired nearly 700 rounds of 40mm. ammunition supporting small South Vietnamese naval craft under fire from enemy shore batteries. On 28 June *Implicit* got underway with a mine division for Long Beach, Calif., via Guam, Kwajalein, and Pearl Harbor, arriving Long Beach, 2 August. From 13 to 20 September she participated in minesweeping Operation "Eager Angler" off Santa Rosa Island. *Implicit* joined a carrier task unit for Operation "COMPTUEX" through December and then continued training operations off Long Beach into 1967.

Improve

To make better or enhance.

(AM-247: dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.; cpl. 104; a. 1 3", 4 40mm.; cl. *Admirable*)

Improve (AM-247) was laid down 1 June 1943 by Savannah Machine & Foundry Co., Savannah, Ga.; launched 26 September 1943; sponsored by Mrs. J. E. Poythress; and commissioned 29 February 1944, Lt. P. W. Howle, Jr., in command.

After shakedown, *Improve* reported to Mine Warfare

School, Yorktown, Va., for duty as school ship. She was next assigned to convoy duty, sailed for Africa on 23 July, and arrived Mers-el-Kebir 10 August 1944. The minecraft arrived off southern France for duty 25 August.

During this period *Improve* swept coastal waters, occasionally exchanging fire with German shore batteries. The enemy still controlled the Italian coastline in this area, and menaced sweeping operations with one-man torpedoes and other devices. The ship helped sweep a channel into Mentone 9-10 September and assisted sinking a one-man torpedo on the 10th. From October until March 1945 *Improve* swept mines and performed patrol duties at Bizerte; Cagliari, Sardinia; and Palermo, Sicily. Her group developed the new technique of using a Navy blimp to spot floating mines.

Following a brief operation off Anzio 3 March, *Improve* resumed operations off Sardinia and Sicily, before departing Oran 17 April for the United States. She arrived Norfolk 5 May 1945 and, with the focus of war now shifted to the Pacific, sailed 5 July for duty in that theater. She proceeded via the Panama Canal to San Pedro, Calif., arriving 26 July, and remained there on training duty until after the end of the Pacific war. The need for minesweeping operations was still great, however, and *Improve* sailed 17 September for Pearl Harbor, Eniwetok, Saipan, and Okinawa. She arrived off Sasebo 17 November for additional minesweeping duty and finished the year working off Formosa and in the Pescadores. In March 1946 the ship was at Shanghai, earmarked for transfer to China, but she was subsequently returned to Seattle and decommissioned 6 November 1946. *Improve* was eventually turned over to the Maritime Commission and sold 24 February 1949 to Ricardo Granja.

Improve received two battle stars for World War II service.

Impulse

An impelling force or impetus.

(PG-68: dp. 925; l. 205'2"; b. 33'; dr. 14'6"; s. 16 k.; cpl. 89; a. 1 4', 1 3'; cl. *Tempress*)

Impulse (PG-68) was launched by Cook, Welton, and Gemmill, of Hull, England, 18 September 1940 as HMS *Begonia*; served in the Royal Navy until 1942; and commissioned *Impulse* at London 16 March 1942, Lt. C. M. Lyons in command.

One of a group of corvettes transferred to the U.S. Navy under reverse Lend-Lease, *Impulse* departed from Londonderry, Northern Ireland, 15 April 1942 as a convoy escort. Upon arrival at New York 4 May, the ship steamed to Norfolk and began regular operations as a coastal escort ship from Norfolk to Key West. *Impulse* returned to New York 25 August 1942 for duty protecting the important supply line between that port and Guantanamo Bay, Cuba. For the next 3 years she made repeated escort voyages to and from Cuba, effectively helping to counter the German U-boat menace.

Impulse arrived Boston 6 July 1945 for return to the Royal Navy. She departed 1 August and arrived Harwich, England, 15 August. Decommissioned 22 August 1945, the corvette was returned to the Royal Navy and sold in 1946.

Inaugural

Pertaining to an inauguration.

(AM-242: dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.; cpl. 104; a. 1 3', 4 40mm.; cl. *Admirable*)

Inaugural (AM-242) was laid down 22 May 1944 by Winslow Marine Railway & Shipbuilding Co., Winslow, Wash.; launched 1 October 1944; sponsored by Miss Jacqueline Gage; and commissioned 30 December 1944, Lt. J. H. Pace in command.

Following shakedown off the California coast, *Inaugural* sailed 14 March 1945 for Pearl Harbor, where she arrived 8 days later. For the next 2 months the minesweeper per-

formed patrol and escort duties between Hawaii and the islands of the western Pacific. She was at Saipan 22 May and departed that day with a convoy bound for Okinawa, site of the last and largest amphibious operation of the tough Pacific war. After a voyage enlivened by several attacks on suspected submarines, the convoy reached Okinawa 30 May 1945.

During the desperate struggle for Okinawa, *Inaugural* patrolled the seas around the island group, often firing at enemy planes as Japanese aircraft made a suicidal effort to stop American ground forces by destroying their support from the sea. Except for the period 19-24 July, when the ship put to sea to ride out the great typhoon, *Inaugural* remained in the dangerous waters around Okinawa until 30 August 1945.

With the war then over, she steamed to the waters around Japan and Korea for vital minesweeping operations that were a necessary prelude to occupation. She swept the approaches to Jinsen, Korea, in September, and later cleared mines in waters off Nagasaki and Sasebo, Japan. *Inaugural* proceeded to Okinawa for needed equipment 14-24 October and then returned to the important minesweeping operations around the Japanese home islands.

The veteran minesweeper sailed 24 December for the United States, via Saipan and Pearl Harbor, and arrived San Pedro, Calif., 7 February 1946. Sailing again 11 March, she proceeded to Galveston, Tex., and decommissioned there 9 September 1946. *Inaugural* entered the Atlantic Reserve Fleet, Texas Group, where she remained until struck from the Navy List 1 March 1967 and sold. She was reclassified MSF-242 on 7 February 1955.

Inaugural received two battle stars for World War II service.

Inca

Former names retained.

I

(Str: t. 120; l. 114'; b. 18'; dr. 7'; a. 1 1-pdr.)

Inca, a screw steamer, was built in 1898 by George Lawley & Son, South Boston, Mass., and was acquired by the Navy from F. B. McQuesten of Boston 13 June 1898. She commissioned 15 June, Lt. W. E. McKay in command.

Inca was assigned to Boston harbor during the Spanish-American War, serving as a patrol and training vessel. She decommissioned 27 August 1898, and was turned over to the Massachusetts Militia, which she served until 1908.

II

(Str: l. 100'; b. 28')

The second *Inca*, a steam ferry, was built for the Navy by Herreshoff Manufacturing Co., Bristol, R.I., in 1911, and accepted by the Navy 4 December 1911. She provided ferry service for Naval Training Station, Newport, until about 1920, when she was assigned to the Norfolk area. The ferry remained in service there until the thirties, when she moved to Philadelphia. *Inca* was stricken from the Navy List 28 February 1939.

III

(SP-1212: t. 23; l. 62'4"; b. 10'11"; dr. 2'6"; s. 21 k.; a. 1 1-pdr.)

The third *Inca* was a motor boat, built in 1917 by Herreshoff Manufacturing Co., Bristol, R.I.; and acquired by the Navy from her owner, F. B. McQuesten of Boston. She commissioned 28 July 1917 at Boston, Ensign R. B. Fuller, USNRF, in command.

A versatile craft, *Inca* was first assigned to the First Naval District and patrolled outer Boston Harbor. She also performed coast convoy duties with submarines during this period, and acted as test ship for submarine signalling and detector devices. She was reassigned to Fifth Naval District in October 1917 and arrived Hamp-

ton Roads 3 November. *Inca's* job was to serve as rescue ship for aircraft from the Naval Air Station on flights over the Chesapeake Bay and Potomac River. She also served as a seaplane tender during 1918, and spent time on harbor patrol in Hampton Roads. *Inca* was assigned 26 July 1918 to the Industrial Department, Hampton Roads, as a dispatch boat, and remained on this duty until returned to her owner 17 April 1919.

IV

(SP-3219: t. 103; l. 101'; b. 20'; dr. 7'9"; s. 12 k.; a. none)

The fourth *Inca*, an iron tug, was built in 1879 by J. H. Dialogue & Sons, Camden, N.J.; and acquired by the Navy 31 July 1918. She commissioned 2 August 1918.

The tug was assigned to the 6th Naval District, and operated until after World War I ended at Parris Island Marine Barracks, S.C. She was stricken from the Navy List 1 February 1919.

Liberty ships *Henry L. Abbott* and *William B. Allison* were both acquired by the Navy from WSA 30 July 1945 for use as floating storage. On 14 July 1945 *Henry L. Abbott* was renamed *Gamage* and classified IX-227; on 6 August 1945 *William B. Allison* was renamed *Inca* and classified IX-229. However, when the former *Henry L. Abbott* was subsequently found unfit for service, her acquisition was canceled; and the name, *Gamage* (q.v.), and the classification, IX-227, were given to the former *William B. Allison*. Nevertheless, occasional references to *Inca* (IX-229) appear in the ComServDiv 104 War Diary until January 1946.

Incessant

(AM-248: dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.; cpl. 104; a. 1 3", 4 40mm.; cl. *Admirable*)

Incessant (AM-248) was laid down 3 July 1943 by Savannah Machine & Foundry Co., Savannah, Ga.; launched 22 October 1943; sponsored by Mrs. Ralston Mingleddorf; and commissioned 25 March 1944, Lt. C. H. Romig in command.

After shakedown out of Casco Bay, Maine, *Incessant* departed Norfolk 24 May 1944 for escort and training duty in the Caribbean and the Gulf of Mexico. Returning to Norfolk 8 July she sailed in convoy 23 July and after stopping at Mers-el-Kebir arrived off the coast of Southern France.

As the Allies pushed northward from the beachheads, the powerful guns of the fleet protected the flanks and knocked out the German coastal batteries on the Italian Riviera while minesweepers cleared the channel off the French coast. *Incessant* and her sister ships performed dangerous sweeping in the harbors of southern France in spite of human torpedoes and enemy shore fire from the Italian side. *Incessant* helped clear the channel into Mentone 9-10 September and then continued her minesweeping and patrol duties at other Mediterranean points—Bizerte, the coast of Sardinia, and Palermo, Sicily. In January 1945 she was assigned new duties, and after transiting the historic Dardanelles, arrived Sevastopol 26 January. There *Incessant* met her Russian pilot and interpreter and began important air-sea rescue work in the Black Sea. She departed for Palermo 15 February and resumed Mediterranean operations until sailing from Mers-el-Kebir 17 April for the United States.

With the European war won, *Incessant* arrived Norfolk 5 May and after a period of training sailed 5 July for the western Pacific via the Panama Canal and San Diego, arriving Pearl Harbor 21 August, after the war's end. Minesweepers were still needed, however, and *Incessant* proceeded to Eniwetok, Saipan, and Okinawa, in the weeks that followed. She arrived Sasebo for sweeping operations incident to the occupation 25 October, and in November 1945 operated in the East China Sea. In March 1946 she was at Shanghai, earmarked for transfer to China, but was eventually returned to Seattle and

decommissioned 6 November 1946. *Incessant* was subsequently returned to the Maritime Commission and sold to R. A. Rutherford 30 November 1948.

Incessant received two battle stars for World War II service.

Inch

Richard Inch, born 29 June 1843 at Washington, D.C., was warranted Third Assistant Engineer 13 September 1863. He served in *Lancaster* and other ships during the Civil War. During his long career Inch served as special assistant at the White House, as Inspector of Coal, and as an officer in many of the ships of the fleet. He was at Mare Island Navy Yard during the Spanish-American war, but was assigned to Naval Station Cavite in March 1899. Inch served with distinction during this tumultuous time in the Philippines, and was later advanced three numbers in grade for his performance. He retired as a Rear Admiral in 1905 and died 21 April 1911 at Washington, D.C.

(DE-146: dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; cpl. 186; a. 3 3", 2 40mm., 8 20mm., 2 dct., 8 dep. 1 dep. (h.h.), 3 tt.; cl. *Edsall*)

Inch (DE-146) was laid down 19 January 1943 by Consolidated Steel Corp, Orange, Tex.; launched 4 April 1943; sponsored by Mrs. Philip L. Inch, daughter-in-law of Admiral Inch; and commissioned 8 September 1943, Lt. Comdr. C. W. Frey in command.

Following shakedown off Bermuda, *Inch* began convoy escort operations from New York to Norfolk. Early in 1945 she joined a special hunter-killer group in the Atlantic, built around escort carrier *Croatan*. The ships sailed 24 March for the convoy lanes to search for German U-boats. During the months that followed, *Inch* took part in many attacks on submarines. On the evening of 11 June the ship, in company with *Frost* and *Huse*, made a contact and proceeded to attack. After over 40 depth charges, the submarine surfaced, signalling SOS. Suspect a ruse, *Inch* and her companions opened fire and destroyed *U-490*. The entire crew of 60 German sailors was rescued by the escorts.

Soon after the attack on *U-490*, the escort vessels, operating as usual in concert with aircraft from *Croatan*, detected another submarine. They attacked 3 July and scored another kill, this time on *U-154*. *Inch* remained on this vital duty, so important in stopping the German submarine menace, until reaching New York 14 May 1945. She had had only brief in-port periods the preceding year, and after repairs conducted her second shakedown out of Guantanamo Bay, Cuba. With the war in the Atlantic won, *Inch* sailed to the Pacific, departing the Canal Zone 23 July. She touched at San Diego and Pearl Harbor, and remained in Hawaiian waters for exercises designed to train her for the planned invasion of Japan. Soon after her arrival 12 August, however, the capitulation was announced.

After completing training and readiness exercises, *Inch* sailed 5 September for Norfolk, via the Panama Canal, and arrived 28 September 1945. She decommissioned 17 May 1946, entered the Atlantic Reserve Fleet, and is now berthed at Norfolk.

Inch received four battle stars for World War II service.

Incredible

Extraordinary and improbable; hard to believe.

(AM-249: dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.; cpl. 104; a. 1 3", 4 40mm., 6 20mm., 2 .50 cal., 2 dct., 3 dep.; cl. *Admirable*)

Incredible (AM-249) was launched 21 November 1942 by Savannah Machine & Foundry Co., Savannah, Ga.; sponsored by Mrs. Herbert Hezlep; and commissioned 17 April 1944, Lt. R. N. Ekland, USNR, in command.

After shakedown along the East Coast and in the Caribbean, *Incredible* departed Norfolk 24 July, escorting a convoy to North Africa for the invasion of southern France, the Allies landing 15 August. She carried out her sweeping duties very effectively, sometimes without destroyer cover. On 10 September *Incredible* and her group gallantly repelled an attack of 12 human torpedoes, 2 of which she destroyed. She continued her minesweeping duties off southern France until 18 January 1945 when she sailed for a special mission to Russia and the Black Sea. *Incredible* performed sweeping duties out of Sevastopol, Russia, then served as air-sea rescue patrol ship in the Black Sea until returning to Palermo, Sicily, 20 February.

Incredible returned to Norfolk 5 May; and, after overhaul, departed 23 July for duty in the Pacific. She arrived Pearl Harbor 8 days after the fighting stopped via the Canal Zone and San Diego. The minesweeper sailed from Pearl Harbor 31 August for Operation "Skagway," clearing the minefields in the East China Sea-Ryukyus area. This important duty lasted until 17 February 1946 when she returned to San Pedro, Calif. She remained there until she decommissioned at Puget Sound 6 November, joining the Reserve Fleet. From 28 November 1947 to 28 September 1949 *Incredible* was "In Service, out of commission," based at Yokosuka, Japan.

In June 1950 when the Communists again tested the will of the free world by attacking South Korea, President Truman readily accepted the challenge and immediately ordered American forces into the area to drive the enemy back and establish peace in Korea. *Incredible* recommissioned 14 August 1950 at Yokosuka and departed 18 September for minesweeping and patrol duties in the Pusan area. While on patrol in mine-infested waters, on 12 October she rescued 27 survivors from *Pirate* which had struck a mine. Delivering her passengers to safety, she continued her operations in the battle zone, sweeping harbors and serving on patrol and escort duty. Returning to Yokosuka, *Incredible* sailed for Long Beach, arriving 4 August 1951.

The minesweeper operated along the West Coast and out of Pearl Harbor until 6 August 1953 when she sailed for the Far East. For the remainder of the year she operated out of Japan and on patrol along the coast of Korea. *Incredible* returned to Long Beach 11 March 1954 and decommissioned there 21 September, again joining the Reserve Fleet. Reclassified MSF-249, 7 February 1955, *Incredible* remained in the Long Beach Group, Pacific Reserve Fleet until she was struck from the Navy List 1 December 1959. She was sold 8 August 1960 to National Metal and Steel Corp.

Incredible received two battle stars for World War II service and four for Korean service.

Independence

Freedom of control by others; self-government.

I

(Slp: 10 guns)

The first *Independence* was a Continental sloop purchased and fitted out by the Marine Committee. In September 1776 she cruised under Captain John Young along the Atlantic Coast to the Caribbean to guard American merchant trade in the West Indies. During 1777 she sailed for France, arriving at L'Orient in late September with important diplomatic dispatches. She had captured two prizes en route and disposed of these before the British could interfere. She was in Quiberon Bay 14 February 1778 when John Paul Jones in *Ranger* received the first national salute to the flag—first official recognition of the American Republic by a foreign power. The following morning, Jones embarked in *Independence* and again exchanged salutes. *Independence* soon sailed for the United States. She was wrecked on the bar 24 April 1778 while attempting to enter Okracoke Inlet, N.C.

(SL: t. 2,243; l. 190'10"; b. 54'7"; dr. 24'4"; cpl. 790; a. 90 32-pdrs.)

Independence, first ship-of-the-line commissioned in the U.S. Navy, launched 22 June 1814 in the Boston Navy Yard. She immediately took on guns and was stationed with frigate *Constitution* to protect the approaches to Boston Harbor. Wearing the broad pennant of Commodore William Bainbridge, and under command of Captain William Crane, she led her squadron from Boston 3 July 1815 to deal with piratical acts of the Barbary Powers against American merchant commerce.

Peace had been enforced by a squadron under Decatur by the time *Independence* arrived in the Mediterranean. But she led an impressive show of American naval might before Barbary ports that encouraged them to keep the peace treaties concluded. Having served adequate notice of rising U.S. seapower and added to the prestige of the Navy and the Nation, *Independence* returned to Newport 15 November 1815. She continued to wear the pennant of Commodore Bainbridge at Boston until 29 November 1819, then was flagship of Commodore John Shaw until placed in ordinary in 1822.

Independence remained in ordinary at Boston until 1836 when she was razed or cut down to one covered fighting deck with poop and forecastle. She was rated down to 54 guns as her configuration gave way to that of a very large frigate. She proved to be one of the fastest and most powerful "frigates" of the Navy.

Independence recommissioned 26 March 1837 and sailed from Boston 20 May 1837 as flagship of Commodore John B. Nicholson. On board for her record passage across the Atlantic to England was the Honorable George Dallas, Minister to Russia. She arrived at Portsmouth, England, 13 June, called at Copenhagen; then proceeded into Cronstadt 29 July 1837 to receive a visit from the Emperor of Russia. Two days later a steamboat arrived to transport Mr. Dallas and his family to St. Petersburg.

Having received marked social courtesies from the Russian government, *Independence* departed Cronstadt 13 August 1837 for Rio de Janeiro, where she became flagship of the Brazil Squadron to guard American commerce along the eastern seaboard of South America. This duty continued into the spring of 1839 when Commodore Nicholson attempted mediation to end the war between France and Argentina. He reported 22 April 1839 that: "I volunteered, as I conceived it a duty I owed to my Country, as well as to all Neutrals, to endeavor to get peace restored that commerce should be allowed to take its usual course. In accordance of the feelings of humanity at least, I hope my endeavors will be approved by the Department . . . I see no probable termination of this War and Blockade which is so injurious to the Commerce of all Neutrals . . ."

Independence returned north to New York 30 March 1840. She was laid up in ordinary until 14 May 1842 when she became flagship of Commodore Charles Stewart in the Home Squadron. Basing at Boston and New York, she continued as his flagship until laid up in ordinary 3 December 1849. She recommissioned 4 August 1846 and the Nation was at war with Mexico as she departed Boston 29 August 1846 for the coast of California. She entered Monterey Bay 22 January 1847 and became the flagship of Commodore William B. Shubrick, commanding the Pacific Squadron.

Independence assisted in the blockade of the Mexican coast, capturing Mexican ship *Correo* and a launch 16 May 1847. She was present to support the capture of Guaymas 19 October and landed bluejackets and Marines to occupy Mazatlan 11 November 1847. She later cruised as far as Hawaii, arriving Honolulu 12 August 1848. *Independence* returned to the East Coast at Norfolk 23 May 1849 and decommissioned there 30 May.

Recommissioned 7 July 1849, *Independence* departed Norfolk 26 July under Captain Thomas A. Conover to serve as flagship of the Mediterranean Squadron under

Commodore Charles W. Morgan. She was the first U.S. man-of-war to show the flag at Spezia, Italy, arriving 23 May 1850 for an enthusiastic welcome. She returned to Norfolk 25 June 1852 and was placed in ordinary at New York 3 July 1852.

Independence recommissioned 4 September 1854 and departed New York 10 October to serve as flagship of the Pacific Squadron under Commodore William Mervine. She arrived Valparaiso, Chile, 2 February 1855. Her cruising grounds ranged northward to San Francisco and west to Hawaii. Proceeding from Panama Bay, she entered the Mare Island Navy Yard 2 October 1857. She served as receiving ship there until decommissioned 3 November 1912. Her name was struck from the Navy List 3 September 1913.

Independence did not leave the Mare Island Navy Yard until 28 November 1914. Sold to John H. Rinder, she was towed to the Union Iron Works, San Francisco. On 5 March 1915 she shifted to Hunter's Point, and remained for a week. Some repairs were made and a plan formulated to use her as a restaurant for the Panama-Pacific Exposition. But this plan was not executed though a permit was granted by Exposition authorities. Pig iron and ballast were removed from her hold and valuable hard wood salvaged from her orlop deck knees. The night of 20 September 1919, *Independence* was burned on the Hunter's Point mud flats to recover her metal fittings. The sturdy veteran of the days of wooden ships and iron

men had survived more than a century, 98 years of which were spent serving the U.S. Navy.

III

(Str: t. 4,980; l. 440'2"; b. 56'; dr. 28'8"; s. 11 k.; a. 25')

The third *Independence* was built in 1918 by Bethlehem Shipbuilding Corp., Alameda, Calif., for the USSB. She was delivered to the Navy and commissioned 16 November 1918, Lt. O. P. Rankin in command.

Independence sailed with a cargo of foodstuffs 6 December 1918, arrived New York 1 January 1918; and continued on to England. Upon her return to New York, the ship decommissioned 20 March 1919 and was returned to the USSB. She was later extensively rebuilt to be sold 7 August 1930 to Baltimore Mail Steamship Co. and renamed *City of Norfolk*. In 1940 she was reacquired by the Navy and served in World War II as troop transport *Neville* (q.v.)

IV

(CV-22: dp. 11,000; l. 622'6"; b. 71'6"; ew. 109'2"; dr. 26'; s. 31 k.; cpl. 1,569; a. 26 40mm.; cl. *Independence*)

The fourth *Independence* (CV-22), begun as *Amsterdam* (CI-59), was launched as CV-22 on 22 August 1942 by New York Shipbuilding Corp., Camden, N.J.; sponsored by Mrs. Rawleigh Warner; and commissioned 14 January 1943, Captain G. R. Fairlamb, Jr., in command.

No. 11

737.

311.

U. S. Ship Independence,
Boston, May 16, 1837.

Sir

I have the honor to transmit, for the information of the Honorable Secretary, the quantity of provisions calculated for a crew of six hundred and fifty men for six months, and the quantity now stowed on board the ship; as likewise the number of gallons of water in tanks and casks, the ship's draft of water, both forward amidships, and aft:

2,112 gal. beans - 75 bbl.	on board
2,112 " rice - 11 tierces, 11 half tierces, 22 bbl.	" "	" "
16,900 lbs. flour - 88 bbl.	" "
55,000 " beef - 275 "	" "
50,800 " pork - 254 "	" "
8,450 " suet and raisins, 38 kegs, 100 boxes, raisins, and 10 half bbl. suet on board.		
1,057 gallo. molasses - 835 gallo. on board, a supply for about 4 1/2 months		
1,057 " vinegar - 585 gallo. on board, a supply for about 3 1/2 months.		
7,394 " whiskey - 4,746 gallo. on board, a supply for about 4 months.		
6,337 lbs. cheese - 4,900 lbs. on board.		
2,112 " butter - 1,900 " " "		
103,512 " bread - a supply for about three and a half months - 700 bbls stowed in bread rooms, say, 61,200 lbs.		

Water in tanks... 48,741 gallons

" " casks... 19,051 "

67,792 " 104 days' water,

at 1 gallon per day per man, now full on board.

Deck of Ship.

Forward 22 ft. 3 inches

Aft 22 " 10 "

From lower part of hull forward 8 ft. 8 in. to the water.

" " " amid. 7. 1 " " " "

" " " aft 8 " 4 " " " "

I have the honor to be, Sir,
With the greatest respect,

Your obt. servant,

Wm. D. Mink

Capt.

Wm. H. H. & H. H. H.,
Secretary of the Navy.

The first of a new class of carriers converted from cruiser hulls, *Independence* conducted shakedown training in the Caribbean. She then steamed through the Panama Canal to join the Pacific Fleet, arriving San Francisco 3 July 1943. *Independence* got underway for Pearl Harbor 14 July, and after 2 weeks of vital training exercises sailed with carriers *Essex* and *Yorktown* for a devastating raid on Marcus Island. Planes from the carrier force struck 1 September and destroyed over 70 percent of the installations on the island. The carrier began her next operation, a similar strike against Wake Island 5 to 6 October, as CVL-22, redesignated 15 July 1943.

Independence sailed from Pearl Harbor for Espiritu Santo 21 October; and, during an ensuing carrier attack on Rabaul 11 November, the ship's gunners scored their first success—six Japanese planes shot down. After this operation the carrier refueled at Espiritu Santo and headed for the Gilberts and prelanding strikes on Tarawa 18 to 20 November 1943. During a Japanese counter-attack 20 November, *Independence* was attacked by a group of planes low on the water. Six were shot down, but the planes managed to launch at least five torpedoes, one of which scored a hit on the carrier's starboard quarter. Seriously damaged, the ship steamed to Funafuti 23 November for repairs. With the Gilberts operation, first step on the mid-Pacific road to Japan, underway, *Independence* returned to San Francisco 2 January 1944 for more permanent repairs.

The veteran carrier returned to Pearl Harbor 3 July 1944. During her repair period the ship had been fitted with an additional catapult; and upon her arrival in Hawaiian waters, *Independence* began training for night carrier operations. She continued this pioneering work 24 to 29 August out of Eniwetok. The ship sailed with a large task group 29 August to take part in the Palau operation, aimed at securing bases for the final assault on the Philippines in October. *Independence* provided night reconnaissance and night combat air patrol for Task Force 38 during this operation.

In September the fast carrier task force regularly pounded the Philippines in preparation for the invasion. When no Japanese counterattacks developed in this period, *Independence* shifted to regular daytime operations, striking targets on Luzon. After replenishment at Ulithi in early October, the great force sortied 6 October for

Okinawa. In the days that followed the carriers struck Okinawa, Formosa, and Philippines in a striking demonstration of the mobility and balance of the fleet. Japanese air counterattacks were repulsed, with *Independence* providing day strike groups in addition to night fighters and reconnaissance aircraft for defensive protection.

As the carrier groups steamed east of the Philippines 23 October, it became apparent, as Admiral Carney later recalled, that "something on a grand scale was underfoot." And indeed it was, as the Japanese fleet moved on a three pronged effort to turn back the American beachhead on Leyte Gulf. Planes from *Independence's* Task Group 38.2, under Rear Admiral Bogan, spotted Kurita's striking force in the Sibuyan Sea 24 October and the carriers launched a series of attacks. Planes from *Independence* and other ships sank giant battleship *Musashi* and disabled a cruiser.

That evening Admiral Halsey made his fateful decision to turn Task Force 38 northward in search of Admiral Ozawa's carrier group. *Independence's* night search planes made contact and shadowed the Japanese ships until dawn 25 October, when the carriers launched a massive attack. In this second part of the great Battle for Leyte Gulf, all four Japanese carriers were sunk. Meanwhile American heavy ships had won a great victory in Suriago Strait; and a light carrier force had outfought the remainder of Kurita's ships in the Battle Off Samar. After the great battle, which virtually spelled the end of the Japanese Navy as a major threat, *Independence* continued to provide search planes and night fighter protection for Task Force 38 in strikes on the Philippines. In these operations the ship had contributed to a major development in carrier group operations.

Independence returned to Ulithi for long-delayed rest and replenishment 9 to 14 November, but soon got underway to operate off the Philippines on night attacks and defensive operations. This phase continued until 30 December 1944, when the great task force sortied from Ulithi once more and moved northward. From 3 to 9 January the carriers supported the Lingayen landings on Luzon, after which Halsey took his fleet on a daring foray into the South China Sea. In the days that followed the aircraft struck at air bases on Formosa and on the coasts of Indo China and China. These operations in support of the Philippines campaign marked the end of the carrier's

night operations, and she sailed 30 January 1945 for repairs at Pearl Harbor.

Independence returned to Ulithi 13 March 1945 and got underway next day for operations against Okinawa, last target in the Pacific before Japan itself. She carried out preinvasion strikes 30 to 31 March, and after the assault 1 April remained off the island supplying Combat Air Patrol and strike aircraft. Her planes shot down numerous enemy planes during the desperate Japanese attacks on the invasion force. *Independence* remained off Okinawa until 10 June when she sailed for Leyte.

During July and August the carrier took part in the final carrier strikes against Japan itself, attacks which lowered enemy morale and had much to do with the eventual surrender. After the end of the war 15 August, *Independence* aircraft continued surveillance flights over the mainland locating prisoner of war camps, and covered the landings of Allied occupation troops. The ship departed Tokyo 22 September 1945, arriving San Francisco via Saipan and Guam 31 October.

Independence joined the "Magic-Carpet" fleet beginning 15 November 1945, transporting veterans back to the United States until arriving San Francisco once more 28 January 1946. Assigned as a target vessel for the Bikini atomic bomb tests, she was placed within one-half mile of ground zero for the 1 July explosion. The veteran ship did not sink, however, and after taking part in another explosion 25 July was taken to Kwajalein and decommissioned 28 August 1946. The highly radioactive hulk was later taken to Pearl Harbor and San Francisco for further tests, and was finally sunk in weapons tests off the coast of California 29 January 1951.

Independence received eight battle stars for World War II service.

V

(CVA-62: dp. 56,300 lt.; l. 1046'; b. 236'; ew. 249'6"; dr. 37'; s. 34 k.; epl. 3,950; a. 8 5'; cl. *Forrestal*)

The fifth *Independence* (CVA-62) was launched by New York Navy Yard 6 June 1958; sponsored by Mrs. Thomas Gates, wife of the Secretary of the Navy; and commissioned 10 January 1959; Captain R. Y. McElroy in command.

One of the newest class of "supercarriers" at the time of her commissioning, *Independence* conducted shakedown training in the Caribbean and arrived her home port Norfolk, 30 June 1959. She operated off the Virginia Capes for the next year on training maneuvers, and departed 4 August 1960 for her first cruise to the Mediterranean. There she added her great strength to the peace-keeping power of the 6th Fleet in that troubled region, remaining in the eastern Mediterranean until her return to Norfolk 3 March 1961. The remainder of the year was spent in training and readiness operations off the Atlantic Coast.

Independence sailed 19 April 1962 for 6th Fleet Duty in support of President Kennedy's firm stand on Berlin during a reoccurrence of stress in a critical area. She returned to Norfolk 27 August and sailed 11 October for the Caribbean Sea. She arrived off Puerto Rico in response to the Communist defiance in the Cuban Missile Crisis and took part in the quarantine operations which finally forced withdrawal of the Russian missiles. She then returned to Norfolk 25 November for readiness exercises along the eastern seaboard, overhaul in the Norfolk Naval Shipyard, and refresher training out of Guantanamo Bay.

Independence departed Norfolk 6 August 1963 to take part in combined readiness exercises in the Bay of Biscay with sea-air units of the United Kingdom and France; then entered the Mediterranean 21 August for further duty with the 6th Fleet. Cruising throughout the Mediterranean, she gained much valuable experience during combined NATO exercises, including close air support to Turkish paratroops, reconnaissance, communications, and convoy strike support. President Makarios of Cyprus paid her a visit 7 October, after which she joined in bilateral U.S.-Italian exercises in the Adriatic with Italian patrol torpedo boats, and U.S.-French exercises which pitted

her aircraft against French interceptors and a surface action with French cruiser *Colbert*. She returned to Norfolk 4 March 1964.

Following training exercises ranging north to New York and south to Mayport, Fla., *Independence* departed Norfolk 8 September 1964 for NATO "Teamwork" exercises in the Norwegian Sea and off the coast of France, thence to Gibraltar. She returned to Norfolk 5 November 1964 and entered the Norfolk Naval Shipyard for overhaul.

The first Atlantic Fleet carrier to deploy to the South China Sea in support of Vietnam operations, *Independence* and her embarked Air Wing 7 received the award of the Navy Unit Commendation for exceptionally meritorious service from 5 June to 21 November 1965. They participated in the first major series of coordinated strikes against vital enemy supply lines north of the Hanoi-Haiphong complex, successfully evading the first massive surface-to-air missile barrage in aviation history while attacking assigned targets, and executing, with daring and precision, the first successful attack on an enemy surface-to-air missile installation. The carrier launched more than 7,000 sorties in sustaining an exceptional pace of day and night strike operations against military and logistic supply facilities in North Vietnam. "The superior team spirit, courage, professional competence, and devotion to duty displayed by the officers and men of *Independence* and embarked Attack Carrier Air Wing 7 reflect great credit upon themselves and the United States Naval Service."

Independence returned to her homeport, Norfolk, Va., in December, arriving the 31st. During the first half of 1966, she operated off Norfolk, replenishing and training air groups. On 4 May she participated in Operation "STRIKEX." The carrier departed Norfolk 13 June for European operations with the 6th Fleet. *Independence* was involved with unit and NATO exercises from July into December. She then continued her 6th Fleet deployment into 1967.

India

A former name retained.

(Ship: t. 366; a. none)

India was purchased at New Bedford, Mass., 14 November 1861 for service as an obstruction in the second stone fleet which was sunk in the Maffitt's-Channel approach to Charleston 26 January 1862.

Indian

(M.B. 707: l. 60'9"; b. 11')

Indian, a wooden motor launch, was acquired from Joseph Van Vleck, at Norfolk in 1906. She served as a ferry launch at the Naval Proving Ground, Indian Head, Md., until she collided with the merchant vessel SS *Northland* and sank off Indian Head 31 May 1917.

Indian Island

An island on the Penobscot River in the State of Maine.

(AG-77: dp. 5,766; l. 4,416"; b. 56'11"; dr. 23'; s. 12 k.; epl. 908; a. 1 5", 4 40mm., 12 20mm., cl. *Basilan*; T. EC2-S-C1)

Indian Island (AG-77) was launched under Maritime Commission contract by the New England Shipbuilding Corp., South Portland, Maine, 19 December 1944; sponsored by Mrs. Mary H. Flaherty; acquired by the Navy 30 December 1944; converted to an AG by Bethlehem Steel Co., Brooklyn, N.Y.; and commissioned 27 July 1945, Lt. Comdr. J. M. O'Toole in command.

After shakedown in Chesapeake Bay, *Indian Island* sailed for the West Coast via the Canal Zone, arriving

San Diego 19 September 1945. She departed San Diego 27 September enroute Shanghai, China, and Sasebo, Japan, where she embarked veterans for return to the United States. Returning to San Francisco 4 December, *Indian Island* departed for Orange, Tex., 14 December where she arrived 2 January 1946. She decommissioned there 11 May 1947 and joined the Texas Group, Atlantic Reserve Fleet. Reclassified AKS-25, 18 August 1951, *Indian Island* remained in the Reserve Fleet until sold for scrapping in August 1960.

Indiana

Indiana, the 19th State, was admitted to the Union 11 December 1816, and was named because it had been the home of Indians.

I

(BB-1: dp. 10,288 n.; l. 350'11"; b. 69'3"; dr. 24'; s. 15 k.; cpl. 473; a. 4 13", 8 8", 4 6", 20 6-pdr., 6 1-pdr.)

The first *Indiana* (BB-1) was laid down 7 May 1891 by William Cramp & Sons, Philadelphia; launched 28 February 1893; sponsored by Miss Jessie Miller, daughter of the Attorney General of the United States; and commissioned 20 November 1895, Captain Robley D. Evans in command.

Following fitting out at Philadelphia Navy Yard, *Indiana* trained off the coast of New England. This duty

continued until the outbreak of the Spanish-American War in 1898, when *Indiana* formed part of Admiral Sampson's squadron. The 10 ships sailed south to intercept Cervera's Spanish squadron, known to be en route to the Caribbean. *Indiana* took part in bombardment of San Juan 12 May 1898, and returned to Key West with the squadron to guard Havana 18 May. After it was discovered that Cervera was at Santiago, Sampson joined Schley there 1 June and took up the blockade.

In late June, Army units arrived and were landed for an assault on Santiago. Cervera saw that his situation was desperate and began his gallant dash out of Santiago 3 July 1898, hoping to outrun the American blockaders. *Indiana* did not join in the initial chase because of her extreme eastern position on the blockade, but was near the harbor entrance when destroyers *Pluton* and *Furor* emerged. In a short time both ships were destroyed by *Indiana's* guns and those of the other ships. Meanwhile the remaining Spanish vessels were sunk or run ashore, in one of the two major naval engagements of the war.

Indiana returned to her previous pattern of training exercises and fleet maneuvers after the war, and made practice cruises for midshipmen of the Naval Academy before decommissioning 29 December 1903.

The battleship recommissioned at New York Navy Yard 9 January 1906. During this phase of her career, *Indiana*

these of routine patrols, CAP and ASP. Plans to conduct night heckler operations and night attacks on shipping failed to materialize due to complete lack of suitable targets. Opportunities to utilize this group of highly trained specialists in night operations were non-existent except for occasional pre-dawn take-offs and occasional landings after sunset by the CAP.

5. During the period 19 thru 24 September, the Fighting Squadron of the INDEPENDENCE took part in the highly successful attacks on Luzon and on Coron Bay. In these operations, the INDEPENDENCE group lost its identity as a night operating organization and performed all the functions of the normal CVI group in a highly creditable manner, this in spite of the fact that previous training had entirely overlooked training in fighting plane tactics and had concentrated upon the training required by the individual for night interceptions and for individual gunnery.

7. On the evening of 12 September, VF 41 had its one opportunity to demonstrate its proficiency in its specialty by successfully intercepting and splashing a *Dinah* after a chase of 69 miles which involved a rapid climb to 23,000 feet. The return to the ship after dark and subsequent landing of 4 VF was completed in an expeditious manner.

served with the Naval Academy Practice Squadron, sailing to Northern Europe and the Mediterranean. At Queens-town, Ireland, she fired a 21-gun salute 22 June 1911 in honor of the coronation of King George V. This important work in training the Navy's future leaders ended in 1914 and she decommissioned at Philadelphia 23 May 1914.

Indiana recommissioned a second time 24 May 1917, and served through World I as a training ship for gun crews off Tomkinsville, N.Y., and in the York River, Va. She decommissioned at Philadelphia 31 January 1919. The name *Indiana* was canceled 29 March 1919 and she was reclassified Coast Battleship Number 1 so that the name could be assigned to a newly authorized battleship. She was used as a target in an important series of tests designed to determine the effectiveness of aerial bombs and was sunk in November 1920. Her hulk was sold for scrap 19 March 1924.

Indiana (BB-50) was laid down by the New York Navy Yard 1 November 1920, but her construction was canceled 8 February 1922 in accordance with the terms of the Washington Treaty for naval limitation.

II

(BB-58: dp. 35,000; l. 680'; b. 108'2"; dr. 29'3"; s. 27 k.; cpl. 2,500; a. 9 16", 20 5", 24 40mm., 16 20mm., cl. *Indiana*)

Indiana (BB-58) was launched by Newport News Shipbuilding & Dry Dock Co., Newport News, Va., 21 November 1941; sponsored by Mrs. Lewis C. Robbins, daughter of Indiana governor Henry F. Schricker; and commissioned 30 April 1942, Captain A. S. Merrill in command.

Following shakedown in Casco Bay, Maine, the new battleship steamed through the Panama Canal to bolster U.S. fleet units in the Pacific during the critical early

USS *Independence* (CVA-62) on 30 July 1963

months of World War II. She joined Rear Admiral Lee's carrier screening force 28 November 1942. For the next 11 months, *Indiana* helped protect carriers *Enterprise* and *Saratoga*, then supporting American advances in the Solomons.

Indiana steamed to Pearl Harbor 21 October 1943, and departed 11 November with the support forces designated for the invasion of the Gilbert Islands. The battleship protected the carriers which supported the Marines during the bloody fight for Tarawa. Then late in January 1944 she bombarded Kwajalein for 8 days prior to the Marshall Island landings, 1 February. While maneuvering to refuel destroyers that night, *Indiana* collided with battleship *Washington*. Temporary repairs to her starboard side were made at Majuro, and she arrived Pearl Harbor 13 February for additional work.

Indiana joined famed Task Force 58 for the Truk raid 29-30 April and bombarded Ponape Island 1 May. In June the battlewagon proceeded to the Marianas with a giant American fleet for the invasion of that strategic group. She bombarded Saipan 13-14 June and brought down several enemy aircraft while fighting off concentrated air attacks June 15. As the Japanese fleet closed the Marianas for a decisive naval battle, *Indiana* steamed out to meet them as part of Rear Admiral Lee's battle line. The great fleets approached each other 19 June for the biggest carrier engagement of the war, and as four large air raids hit the American formations, *Indiana*, aided by other ships in the screens and carrier planes, downed hundreds of the attackers. With able assistance from submarines, Mitscher sank two Japanese carriers in addition to inflicting fatal losses on the enemy naval air arm during "The Great Marianas Turkey Shoot."

Indiana shot down several planes, and sustained only two near torpedo misses. The issue decided, the battleship resumed her screening duties around the carriers, and stayed at sea 64 days in daily support of the Marianas invasion.

In August the battleship began operations as a unit of Task Group 38.3, bombarding the Palaus, and later the Philippines. She screened strikes on enemy shore installations 12-30 September 1944, helping to prepare for the coming invasion of Leyte. *Indiana* departed for Bremerton, Wash., arriving 23 October.

Reaching Pearl Harbor 12 December, the battleship immediately began underway training preparedness. She sailed 10 January 1945 and with a fleet of battleships and cruisers bombarded Iwo Jima 24 January. *Indiana* then joined Task Force 58 at Ulithi and sortied 10 February for the invasion of that strategic island, next step on the island road to Japan. She supported the carriers during a raid on Tokyo 17 February and again on 25 February, screening strikes on Iwo Jima in the interval. *Indiana* arrived Ulithi for replenishment 5 March 1945, having just supported a strike on the next target—Okinawa.

Indiana steamed out of Ulithi 14 March for the massive Okinawa invasion, and until June 1945 steamed in support of carrier operations against Japan and Okinawa. These devastating strikes did much to aid the ground campaign and lower Japanese morale at home. During this period she often repelled enemy suicide plane attacks as the Japanese tried desperately but vainly to stem the mounting tide of defeat. In early June she rode out a terrific typhoon, and sailed to San Pedro Bay, Philippines, 13 June.

Forward main deck of USS *Indiana* (BB-1)

As a member of Task Group 38.1 *Indiana* operated from 1 July to 15 August supporting air strikes against Japan and bombarded coastal targets with her big guns. The veteran battleship arrived Tokyo Bay 5 September and 9 days later sailed for San Francisco, where she arrived 29 September 1945. She was placed in reserve in commission at Bremerton 11 September 1946. She decommissioned 11 September 1947, and entered the Pacific Reserve Fleet. She was stricken from the Navy List 1 June 1962 and sold for scrap. *Indiana's* mast is erected at the University of Indiana at Bloomington; her anchor rests at Fort Wayne; and other relics are on display in various museums and schools throughout the State.

Indiana received nine battle stars for World War II service.

Indiana, see YM-18

Indianapolis

The capital of Indiana.

I

(Str: dp. 16,900; l. 439'6"; b. 60'; dr. 28'½"; s. 11 k.; cpl. 70)

Indianapolis was launched 4 July 1918 by Pusey & Jones, Gloucester, N.J., for USSB; delivered to the Navy Department 12 December 1918; and commissioned the same day at the Philadelphia Navy Yard, Lt. Comdr. J. M. Masury, USNRF, in command.

Attached to NOTS, *Indianapolis* carried cargo to Europe—Philadelphia to England and Holland—returning to Norfolk (28 December 1918–23 February 1919); and Norfolk to France and back (31 March–22 June 1919). She decommissioned 9 July 1919, and was returned to USSB at Norfolk the same day.

II

(CA-35: dp. 9,800; l. 610'; b. 66'; dr. 17'4"; s. 32 k.; cpl. 1,269; a. 9 8", 8 5"; cl. *Portland*)

Indianapolis was laid down 31 March 1930 by the New York Shipbuilding Corp., Camden, N.J.; launched 7 November 1931; sponsored by Miss Lucy Taggart, daughter of the late Senator Thomas Taggart, a former mayor of Indianapolis; and commissioned at the Philadelphia Navy Yard 15 November 1932, Captain John M. Smeallie in command.

Following shakedown in the Atlantic and Guantanamo Bay until 23 February 1932, *Indianapolis* trained in the Canal Zone and in Pacific off the Chilean coast. After overhaul at the Philadelphia Navy Yard, the heavy cruiser

Fleet Admiral Nimitz received his "At Sea Training" in USS *Indiana* during his plebe year at the Naval Academy in 1901.

USS *Indiana* (BB-58) on 8 September 1942

sailed to Maine to embark President Roosevelt at Campobello Island 1 July 1933. Getting underway the same day, *Indianapolis* arrived Annapolis 2 days later where she entertained six members of the cabinet. After disembarking the President, she departed Annapolis 4 July, and returned to the Philadelphia Navy Yard.

On 6 September, Secretary of the Navy Claude A. Swanson broke his flag in *Indianapolis* for an inspection tour of the Pacific, visiting the Canal Zone, Hawaii, and the fleet in the San Pedro-San Diego area. He debarked at San Diego 27 October, and *Indianapolis* became flagship of the Scouting Force 1 November 1933. Following maneuvers off the West Coast, she departed Long Beach, Calif., 9 April 1934 and arrived New York City 29 May. There she again embarked the President and his party for a review of the Fleet. She arrived Long Beach 9 November 1934 for tactical war problems with the Scouting Fleet.

Indianapolis acted as flagship for the remainder of her peacetime career, and again welcomed President Roosevelt at Charleston, S.C., 18 November 1936 for a "Good-Neighbor" cruise to South America. After carrying President Roosevelt to Rio de Janeiro, Buenos Aires, and Montevideo for state visits, she returned to Charleston 15 December where the presidential party left the ship.

As international tension built up during ensuing years and the United States girded to meet aggression, the heavy cruiser's intensified training program fused ship and crew into a fighting machine of high efficiency ready to defend the Nation from any enemy who might attack.

When Japanese bombs struck Pearl Harbor, *Indianapolis*, then making a simulated bombardment of Johnston Island, immediately joined Task Force 12 and searched for Japanese carriers reportedly still in the vicinity. She arrived Pearl Harbor 13 December and entered Task Force 11 for operations against the enemy.

Her first action came in the South Pacific deep in enemy-dominated waters about 350 miles south of Rabaul, New Britain. Late in the afternoon of 20 February 1942, the American ships were attacked by 18 twin-engined bombers, flying in 2 waves. In the battle that followed, 16 of the planes were shot down by accurate antiaircraft fire of the ships and fighter planes from *Lexington*. All ships escaped damage and they splashed two trailing Japanese seaplanes.

On 10 March the Task Force, reinforced by carrier *Yorktown*, attacked enemy ports at Lae and Salamaua, New Guinea, where the enemy was marshalling amphibious forces. Carrier-based planes achieved complete surprise by flying in from the south, crossing the high Owen Stanley mountain range, and swooping in to strike Japanese harbor shipping. As they inflicted heavy damage on Japanese warships and transports, the American flyers knocked down many of the enemy planes which rose to protect the ports. American losses were exceptionally light.

Indianapolis then returned to the United States for overhaul and alterations in the Mare Island Navy Yard. Reinigorated, *Indianapolis* escorted a convoy to Australia, then headed for the North Pacific where Japanese landings in the Aleutians had created a precarious situation. The weather along this barren chain of islands is noted for continuous coldness; persistent and unpredictable fogs; constant rain, snow, and sleet; and sudden storms with violent winds and heavy seas.

By 7 August, the task force to which *Indianapolis* was attached finally found an opening in the thick fog which hid the Japanese stronghold at Kiska Island, and imperiled ships in the treacherous and partially uncharted nearby coasts. *Indianapolis*' 8-inch guns opened up along with those of the other ships. Although fog hindered observation, scout planes flown from the cruisers reported seeing ships sinking in the harbor and fires burning among shore installations. So complete was the tactical surprise that it was 15 minutes before shore batteries began to answer; and some of them fired into the air, believing they were being bombed. Most of them were silenced by accurate gunnery from the ships.

Japanese submarines then appeared but were promptly depth-charged by American destroyers. Japanese seaplanes also made an ineffective bombing attack. The operation was considered a success despite the scanty information on its results. It also demonstrated the necessity of obtaining bases nearer the Japanese-held islands. Consequently, U.S. forces occupied the island of Adak later in the month, providing a base suitable for surface craft and planes further along the island chain from Dutch Harbor.

In January 1943, *Indianapolis* supported the U.S. occupation of Amchitka, which gave us another base in the Aleutians.

On the night of 19 February 1943, while *Indianapolis* and two destroyers patrolled southwest of Attu, hoping to intercept enemy ships running reinforcements and supplies into Kiska and Attu, she contacted a Japanese cargo ship, *Akagane Maru*. When challenged, the enemy tried to feign a reply but was shelled by *Indianapolis*' 8-inch guns. Since the maru exploded with great force and left no survivors, she was presumably laden with ammunition.

Throughout the spring and summer of 1943, *Indianapolis* operated in Aleutian waters escorting American convoys and covering amphibious assaults. In May the Navy took Attu, the first territory stolen by the Japanese to be reconquered by the United States. After Attu was proclaimed secure, the U.S. forces focused their attention on Kiska, the last enemy stronghold in the Aleutians. However, the Japanese managed to evacuate their entire garrison under cover of persistent, thick fog before our landings there 15 August.

After refitting at Mare Island, the ship next moved to Hawaii where she became flagship of Vice Admiral Spruance commanding the 5th Fleet. She sortied from Pearl Harbor 10 November with the main body of the Southern Attack Force of the Assault Force for Operation "Galvanic," the invasion of the Gilbert Islands. On 19 November 1943, *Indianapolis*, in a force of cruisers bombarded Tarawa and next day pounded Makin. The ship then returned to Tarawa and acted as a fire-support ship for the landings. That day her guns splashed an enemy plane and shelled enemy strong points as valiant landing parties struggled against fanatical Japanese defenders in an extremely bloody and costly battle. She continued this role until the leveled island was declared secure 3 days later.

The conquest of the Marshall Islands followed hard on victory in the Gilberts. *Indianapolis* was again 5th Fleet Flagship. She rendezvoused with other ships of her task force at Tarawa, and on D-Day minus 1, 31 January 1944, she was a unit of the cruiser group which bombarded the islands of Kwajalein Atoll. The shelling continued on D-Day with *Indianapolis* silencing two enemy shore batteries. Next day she obliterated a blockhouse and other shore installations and supported advancing troops with a creeping barrage. The ship entered Kwajalein Lagoon 4 February and remained until all resistance disappeared.

During March and April of 1944, *Indianapolis*, still flagship of the 5th Fleet, attacked the Western Carolines. Carrier planes struck at the Palau Islands 30-31 March with shipping as their primary target. They sank 3 destroyers, 17 freighters, 5 oilers and damaged 17 other ships. In addition, airfields were bombed and surrounding waters mined to immobilize enemy ships. Yap and Ulithi were struck on the 31st and Woleai on 1 April. During these 3 days, enemy planes attacked the U.S. fleet but were driven off without damaging the American ships. *Indianapolis* shot down her second plane, a torpedo bomber, and the enemy lost 160 planes in all, including 46 destroyed on the ground. These attacks successfully prevented enemy forces from the Carolines from interfering with the U.S. landings on New Guinea.

During June, the 5th Fleet was busy with the Marianas assault, raids on Saipan which began with carrier-based planes on the 11th followed by surface bombardment, in which *Indianapolis* had a major role, from 13 June. On D-Day, 15 June, Admiral Spruance received reports that

a large fleet of battleships, carriers, cruisers, and destroyers was headed south to relieve their threatened garrisons in the Marianas. Since amphibious operations at Saipan had to be protected at all costs, Admiral Spruance could not draw his powerful surface units too far from the scene. Consequently, a fast carrier force was sent to meet this threat while another force attacked Japanese air bases on Iwo Jima and Chichi Jima in the Bonin and Volcano Islands—bases for dangerous potential enemy air attacks.

A combined fleet met the enemy on 19 June in the Battle of the Philippine Sea. Enemy carrier planes, which hoped to use the airfields of Guam and Tinian to refuel and rearm and attack our off-shore shipping, were met by carrier planes and the guns of the escorting ships. That day the Navy destroyed 402 enemy planes while losing only 17 of her own. *Indianapolis*, which had operated with the force which struck Iwo Jima and Chichi Jima, shot down one torpedo plane. This famous day's work became known throughout the fleet as the "Marianas Turkey Shoot." With enemy air opposition wiped out, the U.S. carrier planes pursued and sank two enemy carriers, two destroyers, and one tanker and inflicted severe damage on other ships. *Indianapolis* returned to Saipan on 23 June to resume fire support there and 6 days later moved to Tinian to smash shore installations. Meanwhile, Guam had been taken; and *Indianapolis* was the first ship to enter Apra Harbor since that American base had fallen early in the war. The ship operated in the Marianas area for the next few weeks, then moved to the Western Carolines where further landings were planned. From 12 to 29 September she bombarded the Island of Peleliu in the Palau Group, both before and after the landings. She then sailed to Manus in the Admiralty Islands where she operated for 10 days before returning to the Mare Island Navy Yard.

Overhauled, *Indianapolis* joined Vice Adm. Marc A. Mitscher's fast carrier task force on 14 February 1945 2 days before it made the first attack on Tokyo since General Doolittle's famous raid in April 1942. The operation covered American landings on Iwo Jima, scheduled for 19 February 1945, by destroying Japanese air facilities and other installations in the "Home Islands". Complete tactical surprise was achieved by approaching the Japanese coast under cover of bad weather, and attacks were pressed home for 2 days. On 16 and 17 February, the American Navy lost 49 carrier planes while shooting down or destroying on the ground 499 enemy planes. Besides this 10-to-1 edge in aircraft victories, Mitscher's Force sank a carrier, 9 coastal ships, a destroyer, 2 destroyer escorts, and a cargo ship. Moreover, they wrecked hangars, shops, aircraft installations, factories, and other industrial targets. Throughout the action, *Indianapolis* played her vital role of support ship.

Immediately after the strikes, the Task Force raced to the Bonins to support the landings on Iwo Jima. The ship remained there until 1 March, aiding in the bloody struggle for that little island by protecting the invasion ships and training her guns on any targets spotted on the beach. The ship returned to Admiral Mitscher's Task Force in time to strike Tokyo again on 25 February and Hachijo off the southern coast of Honshu the following day. Although weather was extremely bad, the Americans destroyed 158 planes and sank 5 small ships while pounding ground installations and demolishing trains.

A large base close to the home islands was needed to press the attack, and Okinawa in the Ryukyus seemed ideal for the part. To capture it with minimum losses, airfields in southern Japan had to be pounded until they were incapable of launching effective airborne opposition to the impending invasion.

Indianapolis, with the fast carrier force, departed Ulithi 14 March 1945, and proceeded toward the Japanese coast. On 18 March, from a position 100 miles southeast of Kyushu, the flat-tops launched strikes against airfields on the island, ships of the Japanese fleet in the harbors of Kobe and Kure on southern Honshu. After locating the American Task Force 21 March, Japan sent 48 planes

to attack the ships, but 24 planes from the carriers intercepted the enemy aircraft some 60 miles away. At the end of the battle, every one of the enemy planes was in the sea.

Preinvasion bombardment of Okinawa began 24 March and for 7 days *Indianapolis* poured 8-inch shells into the beach defenses. Meanwhile, enemy aircraft repeatedly attacked the ships; and *Indianapolis* shot down six planes and assisted in splashing two others. On 31 March, the day before the invasion, the ship's sky lookouts spotted a Japanese single-engined fighter plane as it emerged from the morning twilight and roared at the bridge in a vertical dive. The ship's 20-millimeter guns opened fire, but less than 15 seconds after it was spotted the plane was over the ship. Tracer shells crashed into the plane, causing it to swerve; but the enemy pilot managed to release his bomb from a height of 25 feet and crash his plane on the port side of the after main deck. The plane toppled into the sea, causing little damage; but the bomb plummeted through the deck armor, the crew's mess hall, the berthing compartment below, and the fuel tanks still lower before crashing through the bottom of the ship and exploding in the water under the ship. The concussion blew two gaping holes in the ship bottom and flooded compartments in the area, killing nine crewmen. Although *Indianapolis* settled slightly by the stern and listed to port, there was no progressive flooding; and the plucky cruiser steamed to a salvage ship for emergency repairs. Here, inspection revealed that her propeller shafts were damaged, her fuel tanks ruptured, her water-distilling equipment ruined; nevertheless, the battle-proud cruiser made the long trip across the Pacific to the Mare Island Navy Yard under her own power.

After repairs and overhaul, *Indianapolis* received orders to proceed at high speed to Tinian, carrying parts and nuclear material to be used in the atomic bombs which were soon to be dropped on Hiroshima and Nagasaki. Due to the urgency of her mission, *Indianapolis* departed San Francisco on 16 July, foregoing her postrepair shakedown period. Touching at Pearl Harbor 19 July, she raced on unescorted and arrived Tinian 26 July, having set a record in covering some 5000 miles from San Francisco in only 10 days.

After delivering her top-secret cargo at Tinian, *Indianapolis* was dispatched to Guam where she disembarked men and reported for onward routine to Leyte. From there she was to report to Vice Adm. Jesse B. Oldendorf for further duty off Okinawa. Departing Guam 28 July, *Indianapolis* proceeded by a direct route, unescorted. Early in the morning, 12:15 a.m., 30 July 1945, 2 heavy explosions occurred against her starboard side forward, and she capsized and sank in 12 minutes, at 12°02' N., 134°48' E. *Indianapolis* had been hit by two torpedoes from Japanese submarine I-58, Commander Machitsura Hashimoto in command. The seas had been moderate; the visibility, good; *Indianapolis* had been steaming at 17 knots. When the ship did not reach Leyte on the 31st, as scheduled, no report was made that she was overdue. This omission was due to a misunderstanding of the Movement Report System. Thus it was not until 1025 on 2 August that the survivors were sighted, mostly held afloat by life jackets, although there were a few rafts which had been cut loose before the ship went down. They were sighted by a plane on routine patrol; the pilot immediately dropped a life raft and a radio transmitter. All air and surface units capable of rescue operations were dispatched to the scene at once, and the surrounding waters were thoroughly searched for survivors.

Upon completion of rescue operations, 8 August, a radius of 100 miles had been combed by day and by night, saving 316 of the crew of 1,199 men.

Captain Charles B. McVay, III, USN, commanding officer of *Indianapolis* at the time of her sinking, was vindicated from any blame concerned with the loss of his ship. All personnel involved in the failure to report the ship's absence from Leyte were also exonerated, after all the evidence had been carefully weighed.

Traditionally the flagship of the powerful 5th Fleet,

she had served with honor from Pearl Harbor through the last campaign of the war and had gone down in action a scant two weeks before the war's end.

Indianapolis earned 10 battle stars for World War II service.

Indianola

(SwScStr: t. 511; l. 174'; b. 50'; dr. 5'; s. 9 k.; a. 2 11" D.sb., 2 9" D.sb.)

Indianola, an ironclad gunboat propelled by both side wheels and screw propellers, was built at Cincinnati by Joseph Brown. The danger that Confederate Gen. Kirby Smith, whose troops had reached Covington, Ky., just across the Ohio River, would capture Cincinnati, prompted Brig. Gen. Lew Wallace to take *Indianola* from the contractor before completion 2 September 1862 and have her launched 2 days later. Acting Master Edward Shaw was placed in command of the ship 18 September, and she was reported in commission 9 days later.

Indianola was "armed and ready to defend Cincinnati" 23 October but was not completed. When ready for general service several weeks later, the water level in the Ohio had fallen too much for her to get over the falls at Louisville. She finally arrived at Cairo, Ill. and joined the Mississippi Squadron 23 January 1863. She served briefly in the Mississippi and the Yazoo Rivers before running past the Confederate batteries at Vicksburg to join *Queen of the West* in an effort to stop the Confederate flow of supplies from the Red River.

She left her anchorage in the Yazoo at 10:15 p.m. 13 February and moved slowly down stream until the first gun was fired at her from the Vicksburg cliffs slightly more than an hour later. She then raced ahead at full speed until out of range of the Confederate cannon which thundered at her from above. She anchored for the night 4 miles below Warrenton, Miss., and early the next morning got underway down river.

Two days later, 16 February, *Indianola* met prize steamer *Era No. 5* manned by the survivors of *Queen of the West* which had run aground while under heavy fire from Confederate shore batteries at Gordon's Landing in the Red River. Late that afternoon lookouts in *Indianola* spotted Confederate steamer *Webb* abreast Ellis Cliffs. She promptly cleared for action and steamed ahead full speed firing at the Southern ship which proved to be barely out of range. *Webb* turned about and dashed down stream and out of sight around a bend in the river. A heavy

fog set in compelling *Indianola* to give up the chase and anchor for the night. Early the next afternoon the fog cleared enabling *Indianola* to proceed to the mouth of the Red River where she maintained a strict blockade until 21 February when she began steaming upstream. Her progress was slowed by two coal barges which she towed so that she might furnish fuel to any ships sent to reinforce her from above Vicksburg. On the evening of 24 February *Webb* and *Queen of the West*, now Confederate-manned, overtook *Indianola* and attacked from each side ramming her seven times before the game ironclad, "in an almost powerless condition" ran her bow on the west bank of the river and surrendered.

The loss of *Indianola* was deeply distressing to the Union. It ended Admiral Porter's efforts to blockade the Red River by detached vessels while keeping the body of his fleet above Vicksburg, and it prompted Farragut's costly run by the South's forts at Port Hudson 14 March 1863. On the brighter side, it set the stage for one of the most successful hoaxes of the war. A dummy monitor was made by building paddle boxes on an old coal barge to simulate a turret which in turn was adorned with logs painted black to resemble guns. Pork-barrel funnels containing burning smudge pots were the final touch added just before the strange craft was cast adrift to float past Vicksburg on the night of *Indianola's* surrender. Word of this "river Monitor" panicked the salvage crew working on *Indianola* causing them to set off the ships magazines to prevent her recapture.

After Vicksburg fell, and following long and difficult struggle, *Indianola* was refloated 5 January 1865 and towed to Mound City 17 January where she was sold.

Indicative

Giving intimation or knowledge.

(AM-250: dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.; cpl. 104; a. 1 3"; 4 40mm.; cl. *Admirable*)

Indicative (AM-250), a steel-hulled minesweeper, was laid down 29 September 1943 by Savannah Machine & Foundry Co., Savannah, Ga.; launched 12 September 1943; sponsored by Mrs. E. L. Smith; and commissioned 26 June 1944, Lt. E. A. Comee in command.

Following shakedown and a training period at Little Creek, Va., *Indicative* sailed 19 August 1944 for anti-submarine exercises off Bermuda. She then took up regu-

USS *Indianapolis* (CA-35) and line of battleships in fleet review at New York 31 May 1934

Western Gun-boat Ram "Indianold."

1863

lar duties as a convoy escort vessel between U.S. ports and Bermuda, helping to counter the German submarine menace in the western Atlantic.

The minesweeper departed New York 5 February 1945 and steamed by way of the Canal Zone and West Coast ports to Cold Bay, Alaska, arriving 4 April 1945. With other minecraft, she was transferred to Russia under Lend-Lease the next day. She was not returned after the war and was probably lost between 1948 and 1950.

Indien

(Fr: t. 1,430; l. 170'; b. 43'3"; dph. 16'6"; cpl. 550)

L'Indien, a frigate built for the U.S. Commissioners in France, Benjamin Franklin, Silas Dean, and Arthur Lee, was laid down early in 1777 by a private shipyard in Amsterdam, Holland. Late in the year John Paul Jones sailed for France, hoping to assume command of *L'Indien*; but, before his arrival, financial difficulties and opposition from the still-neutral Dutch government, under pressure from Great Britain, had forced the Commissioners to sell the new frigate to the King of France.

For over 2 years the ship remained idle while several American and European agents schemed to obtain her. Finally, on 30 May 1780 the King granted her to the Duke of Luxembourg, who simultaneously chartered her to South Carolina, represented by Commodore Alexander Gillon of the South Carolina Navy. Gillon renamed the frigate *South Carolina* (see *South Carolina* in "States Navy Appendix," Vol. V, *DANFS*).

Subsequently, she took several prizes and led the combined United States-Spanish expedition which captured the Bahamas. British man-of-war *Astrea*, *Diomedé*, and *Quebec* captured *South Carolina* as she attempted to dash out of Philadelphia through the British blockade 20 December 1782.

Perhaps her greatest significance comes from the fact the marine architect Joshua Humphreys studied her sleek hull and used her lines in designing the U.S. Navy's first frigates, especially *Constitution* and *Constellation*.

Indolence, see YP-143

Indra

In Vedic mythology, the great national God of the Indo-Aryans.

(ARL-37: dp. 2,125; l. 328'; b. 50'; dr. 14'; s. 12 k.; cpl. 253; a. 1 3", 8 40mm.; cl. *Achelous*)

Indra (ARL-37) was laid down as LST-1147 on 12 February 1945; reclassified while building and launched as ARL-37 by Chicago Bridge & Iron Co., Seneca, Ill., 21 May 1945; sponsored by Mrs. Regina K. Hlubek; placed in reduced commission and brought to Bethlehem-Key Highway Shipyard, Baltimore, for conversion, and commissioned 2 October 1945, Lt. Comdr. R. J. Siegelman in command.

After shakedown *Indra* sailed to Green Cove Springs, Fla., where she remained from 30 November 1945 until 8 May 1946. She then steamed through the Panama Canal to San Diego, arriving 4 June. The ship remained in California until departing 7 January 1947 for the Far East. *Indra* arrived Tsingtao 19 February to support American marines there attempting to stabilize the volatile Chinese situation and protect American lives and property. She performed repair and general services there and at Shanghai until 30 August, when she sailed for San Diego. Upon her arrival 25 September 1947, *Indra* decommissioned 6 October and entered the Pacific Reserve Fleet, San Diego group, where she remains.

Indus

The Indian, a southern constellation between Grus and Pavo.

(AKN-1: dp. 4,023 lt.; l. 441'6"; b. 56'11"; dr. 28'4"; s. 11 k.; cpl. 228; a. 1 5", 4 40mm.; cl. *Indus*; T. EC2-S-C1)

Indus (AKN-1) was launched as liberty ship *Theodore Roosevelt* by Bethlehem-Fairfield Shipyard, Inc., Baltimore, Md., 29 October 1943 under Maritime Commission contract; sponsored by Mrs. William MacMillan, granddaughter of President Theodore Roosevelt; acquired by the Navy 5 November 1943; converted at Maryland Dry

Dock Co.; and renamed *Indus*. She commissioned 15 February 1944, Comdr. A. S. Einmo in command.

After the installation of additional equipment at Norfolk, the net cargo ship conducted shakedown in Chesapeake Bay until 14 March 1944. She sailed from Norfolk 1 April for the Pacific theater, via the Canal Zone, and arrived *Espiritu Santo* 12 May 1944. Her first assignment was the installation of nets in Seeadler Harbor, and she arrived there 1 June 1944 to direct and support the work of net-laying ships. With these important anti-torpedo nets completed, the ship departed 29 July to load gear at Milne Bay, New Guinea, arriving Mios Woendi to install nets 30 August. *Indus* then returned to Milne Bay 27 September, and soon afterward became flagship for Commander 7th Fleet Service Forces during the Leyte operation. She sailed 12 October for Hollandia and arrived Leyte Gulf 24 October to support that vital operation. The versatile ship issued stores and did repair work during this period, and during the numerous air raids shot down at least two Japanese aircraft. She departed 6 December for Hollandia where she loaded additional gear and provisions.

As the next major assault in the Philippines, the Lingayen Gulf operation, began to take shape at staging bases, *Indus* joined the service group and departed 28 December for the landing. Although the Japanese made desperate air attacks on the convoy, sinking some ships but suffering heavy losses themselves, the fleet resolutely drove through to its objective. *Indus* arrived safely at the assault area 9 January 1945 and performed service duties during the initial landing stages. Departing 23 February, the ship sailed to the recaptured base at Subic Bay and on 28 February began to establish net defenses. She continued this vital work until departing 11 May for Hollandia, where she arrived two days later.

Indus returned to the Manila Bay area 24 May to unload supplies, then sailed 1 June for Pearl Harbor. She remained there until 30 June, when she sailed with net gear for Eniwetok Atoll, for work on the net defenses there. The veteran ship returned to Pearl Harbor in August, and was in port when the surrender of Japan was announced. She subsequently carried cargo and did net work at Eniwetok, Saipan, and Kwajalein until the end of 1945. She returned to Norfolk 14 March 1946, via the Panama Canal, decommissioned at Norfolk 20 May 1946, and was returned to the Maritime Commission 3 days later. Placed in the National Defense Reserve Fleet under her old name, she is berthed at Wilmington, N.C.

Indus received one battle star for World War II service.

Industry

Habitual diligence in any employment or pursuit.

(AMc-86: dp. 195; l. 97'; b. 21'; dr. 9'1"; s. 10 k.; cpl. 16; a. 2.50 cal. mg.; cl. *Accentor*)

Industry (AMc-86) was laid down 11 May 1941 by F. L. Fulton Shipyard, Antioch, Calif.; launched 6 September 1941; sponsored by Miss June Marken; and placed in service 19 December 1941.

Following shakedown training, the wooden-hulled minesweeper sailed for Hawaii, arriving Pearl Harbor 11 March 1942. For more than 2 years the ship swept the channels of Pearl Harbor and Honolulu Harbor. As the Pacific war neared its climax in late 1944, the need for mine locator vessels became acute, and *Industry's* sweeping equipment was replaced by sound gear and diving equipment for underwater locator work. She commissioned 15 December 1944 and began training in company with *Medrick* (AMc-203).

Industry and two other converted minesweepers departed Pearl Harbor 1 May 1945 and, after stops at Eniwetok, Guam and Saipan, arrived off Okinawa 4 July. There she located and raised mines and sunken Japanese midget submarines during the months that followed. The ship fought off enemy air raids in July and August, and

in September endured a major typhoon. The ship was scheduled to depart for Japan in early October, but her departure was delayed by another typhoon, this one ranking with the most powerful in the recent history of Okinawa. In the violent storm in Buckner Bay 9 October, *Industry* drove ashore on a reef. Her crew kept her afloat until rescue came next morning. The battered minesweeper was finally stripped and decommissioned 22 December 1945. The remaining hulk was sunk.

Inflict

Cause to suffer; impose.

I

(AM-251: dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.; cpl. 104; a. 1 3", 4 40 mm., 6 20mm., 2 dcl., 3 dep.; cl. *Admirable*)

The first *Inflict* (AM-251), was laid down 26 October 1943 by Savannah Machine & Foundry Co., Savannah, Ga.; launched 16 January 1944; and commissioned 28 August 1944, Lt. Comdr. Sherman B. Wetmore in command.

After shakedown and minesweeping exercises off the Virginia coast, *Inflict* arrived Casco Bay, Maine, 30 October for antisubmarine warfare exercises. Following upkeep at Norfolk, she arrived Miami 1 December for duty as training school ship. *Inflict* trained student officers until 1 April 1945 when she sailed for the West Coast, arriving San Diego 5 May. Two days later she sailed for the Far East, and engaged in convoy escort duty and minesweeping off Okinawa while American units ashore fought doggedly against fierce and determined opposition. After Americans finally snuffed out the last resistance and declared the island secured 21 June, *Inflict* operated out of it as a base. From 13 to 23 August she swept minefields off Kyushu clearing the way for vessels bringing American occupation forces. She then returned to Okinawa to prepare for occupation duty.

As the greatest sea war in history ended in Allied victory, *Inflict* departed Okinawa 30 August for operations in Korea, Formosa, and Japan, remaining there until January 1946.

The minesweeper returned to San Pedro, Calif., 17 February for training and readiness operations. After a summer cruise to Guam and Pearl Harbor, she arrived Bremerton, Wash., in mid-October, decommissioning there 6 November 1946. *Inflict* was transferred to the Maritime Commission 8 October 1948 and released to her purchaser, Ricardo Granja, the same day.

Inflict received three battle stars for World War II service.

II

(AM-456: dp. 630; l. 172'; b. 36'; dr. 10'; s. 16 k.; cpl. 72; a. 1 40mm.; cl. *Agile*)

The second *Inflict* (AM-456) was launched 16 October 1953 by Wilmington Boat Works, Inc., Wilmington, Calif.; sponsored by Mrs. Robert E. Carlson; and commissioned 11 May 1954, Lt. G. T. Ragon in command.

After shakedown along the West Coast, *Inflict* engaged in sonar and minesweeping exercises until she departed Long Beach 1 July for the western Pacific. Arriving Yokosuka, Japan 5 August she began operations with the navies of South Korea, Nationalist China, and Japan. In February 1955 she was reclassified MSO-456. *Inflict* returned to Long Beach 17 February 1956 and spent the remainder of the year on training operations.

During 1957 *Inflict* continued operations off California and Mexico, helping to maintain one of America's mighty antisubmarine warfare forces. The minesweeper sailed 3 January 1958 for duty in the Far East. She arrived there as a crisis loomed in Indonesia. The strength of this mighty armada made itself felt as the crisis diminished quickly without incident.

During her tour *Inflit* participated in joint exercises with the Philippine, Thailand, and Chinese Nationalist navies before returning to Long Beach 15 July.

For the next 20 months she remained in California waters constantly training to keep at peak readiness. *Inflit* sailed 3 May 1960 for joint operations with our Asian allies, remaining there for the next 6 months as a symbol of joint naval cooperation for security of the Free World. She returned to Long Beach 16 November. During 1961, *Inflit* was engaged in minesweeping operations and mid-shipman training out of Long Beach. She sailed 7 April 1962 for exercises in Hawaiian waters, returning to Long Beach 17 August. In 1963, in addition to her training in California waters, *Inflit* sailed 28 October for joint countermeasure exercises with Canada. Returning to Long Beach 3 December she resumed operations out of Long Beach until 22 May 1964 when she sailed for duty in the Far East. *Inflit* again operated with the friendly navies of Asia, and during the summer was deployed for service along South Vietnam, as our support of that embattled republic was increased to assist its struggle against aggression. *Inflit* returned to Long Beach 7 December.

She sailed for the Far East 7 February 1966. Arriving Subic Bay 28 March, she headed for her "Market Time" station 5 April and remained on patrol preventing the infiltration of arms and men from North Vietnam to the south. Except for brief interludes, she continued this important duty until she left the war zone 1 November and returned to Long Beach 13 December.

Inflit operated on the West Coast through mid-1967.

Ingersoll

Ingersoll (DD-652) was named for two naval men.

Royal Rodney Ingersoll was born in Niles, Mich., 4 December 1847, and graduated from the Naval Academy in 1868. He served in various ships of the fleet on the European and Asiatic Squadrons until 1876 when he was assigned to the Naval Academy. Ingersoll taught and wrote about Ordnance subjects during several tours at the Academy, and in the early years of the 20th century commanded such ships as *Bennington*, *New Orleans*, and *Maryland*. He was Chief of Staff of the Atlantic Fleet during the first part of its famous cruise around the world, and a member of the General Board in 1908. Rear Admiral Ingersoll retired in 1909, but was called back to duty during World War I as President of the Naval Ordnance Board. In 1919 he returned to his home in Laporte, Ind., where he was active in public affairs until his death 21 April 1931.

Royal Rodney Ingersoll, III, the grandson of Admiral Ingersoll, was born at Manila, P.I., 17 December 1913. After graduating from the Naval Academy in 1934, he served in *California*, *Cassin*, and other ships during the thirties, and reported on board carrier *Hornet* during her fitting out period in 1941. Lieutenant Ingersoll served in *Hornet* during the critical early months of the Pacific war. In the great Battle of Midway 4 to 6 June 1942, in which the U.S. fleet decisively turned back the Japanese threat to the Hawaiian Islands, he was killed at his battle station by machine gun fire from Japanese aircraft.

(DD-652: dp. 2,050; l. 376'6"; b. 39'7"; dr. 17'9"; s. 37 k.; cpl. 319; a. 5 5", 10 40mm., 7 20mm., 10 21" tt., 6 dep., 2 dct., cl. *Fletcher*)

Ingersoll (DD-652) was launched by Bath Iron Works Corp., Bath, Maine, 28 June 1942; cosponsored by Miss Alice Jean Ingersoll, granddaughter of Admiral Ingersoll, and Mrs. R. R. Ingersoll, II, widow of Lieutenant Ingersoll; and commissioned at Boston Navy Yard 31 August 1943, Comdr. A. C. Veasy in command.

Ingersoll conducted shakedown training off Bermuda during September and October 1943, and returned to Boston to embark Adm. R. E. Ingersoll, Commander in Chief of the Atlantic Fleet, who was son of the first namesake and father of the second, for a fleet review, 10 November 1943. The ship sailed 29 November to join the Pacific

Fleet; and, after stops at the Panama Canal and San Diego, arrived Pearl Harbor 21 December. There she joined Task Force 58 for the invasion of the Marshall Islands.

The destroyer departed 16 January with the Southern Bombardment Group, and began preinvasion firing on Kwajalein 30 January. The landings began next day with *Ingersoll* lying offshore in her vital support role. With the victory won, she retired to Majuro 5 February, but was underway again 16 February to screen the fast carrier forces in their devastating raid on Truk 17 to 18 February. After this attack, "The Gibraltar of the Pacific" was untenable as a major base for the Japanese. After air strikes in the Marianas, *Ingersoll* returned with the carriers to Majuro 26 February.

Then on 7 March the versatile destroyer sailed for Espiritu Santo, New Hebrides, but soon returned to Task Force 58 for carrier strikes against the Palaus and Hollandia. In the months that followed, the ships hit Ponape twice with shore bombardments and screened carrier strikes in the Palaus in connection with the advance of American combined forces. *Ingersoll* and the other ships remained at sea for long periods during these support operations, refueling and replenishing underway when necessary.

Ingersoll took part in preinvasion bombardments of Peleliu 7 September, and early in October joined in the sortie of Task Force 38 for one of the most important operations of the war. The giant fleet rendezvoused 7 October west of the Marianas, and launched air strikes on Okinawa and the Philippines. The ships then moved to their real objective—Japanese air strength on Formosa. In 3 days of attacks Formosa's value as a base was severely reduced, while air strikes on the American fleet were repulsed by Combat Air Patrol and the gunfire of *Ingersoll* and her sister ships. The carrier groups turned southward from Formosa to launch strikes against targets in the Philippines.

In late October the Japanese moved in a three-pronged attack to repel the invasion of the Philippines and force a decisive naval battle. The ensuing battle was the four-part Battle for Leyte Gulf, in which *Ingersoll* and her task group played an important role.

Her carrier planes struck Admiral Kurita's fleet a devastating blow in the Sibuyan Sea 24 October. That evening Admiral Halsey turned Task Force 38 northward in search of Admiral Ozawa's carrier group. Carrier strikes the next morning dealt crippling blows to the Japanese in the Battle off Cape Engano. When Admiral Halsey detached part of his fleet southward to intercept Kurita, who had slipped through San Bernadino Strait, *Ingersoll* joined Admiral Dubose's group in pursuit of the fleeing remnants of the Japanese fleet. During the long stern chase *Ingersoll* fired one torpedo at long range, but the group did not engage the remaining Japanese heavy ships.

After the great victory *Ingersoll* returned to Ulithi for a well-earned rest and overhaul. She got underway again in January 1945 with fast carrier forces for strikes on Formosa, the Philippines, and the coast of China. From 3 to 9 January these operations supported the Lingayen landings directly. Then Halsey took his ships on a daring foray into the South China Sea, striking Indo China, Hainan, and the China coast in a graphic demonstration of the power and mobility of American carrier groups when supported by destroyers and heavy units. This pivotal operation was completed 20 January; *Ingersoll* was detached 1 February to sail to Pearl Harbor. She arrived 7 February, and after training exercises steamed to San Pedro 15 February 1945.

Following battle repairs and crew rotation *Ingersoll* got underway for Pearl Harbor 18 April 1945 and after training exercises sailed for Ulithi 2 May. From that staging base she steamed toward Okinawa, serving as a patrol vessel and screening flight operations. While off Okinawa 24 May the ship engaged a small suicide boat, and next day she shot down two Japanese aircraft during one of many air raids. Two more planes were

splashed 28 May, and *Ingersoll* continued the hectic patrol and picket duty through June.

With Okinawa won, the ship rejoined Task Force 38 on 1 July 1945. Again acting as a screening and support ship, she took part in the final devastating raids on Japan and other Japanese-held islands. She also bombarded the iron works at Kamaishi 15 July as part of a battleship, cruiser, and destroyer group in one of the first operations against the home islands by surface ships.

After the surrender of Japan 15 August, *Ingersoll* assisted with the occupation; she was anchored in Tokyo Bay for the surrender ceremonies on board *Missouri* 2 September 1945. The veteran destroyer remained in Japan to help demilitarize Japanese bases, departing 5 December for the United States. After a long voyage via San Diego and the Canal Zone, she arrived Boston 17 January 1946. *Ingersoll* arrived Charleston, S.C., 4 April 1946; decommissioned 19 July; and joined the Atlantic Reserve Fleet.

The destroyer recommissioned at Charleston 4 May 1951 in response to the U.N. Forces' growing need for naval support during the Korean conflict. The veteran fighting ship operated along the Atlantic Coast and in the Caribbean until departing for the Mediterranean 26 August 1952 to join the 6th Fleet. She operated in that crucial region, helping to prevent a spread of the conflict to Europe, until returning to Newport 10 February 1953.

Training operations occupied *Ingersoll* until she departed Newport for the Far East 10 August. Sailing via the Panama Canal, San Diego, and Pearl Harbor, she arrived Yokosuka, Japan, 14 September to begin operations with Task Force 77 off Korea. The ships sailed off Korea in support of the armistice, before moving to the Formosa area to help stabilize the volatile strait in November–December. *Ingersoll* then sailed to Singapore and steamed westward to transit the Suez Canal 13 February 1954. After stopping at various Mediterranean ports she completed her circuit of the globe upon arrival Fall River, Mass., 18 March 1954.

Following repairs and training, the veteran ship got underway again 30 November 1954 for the Pacific, arriving San Diego 15 December and departing 4 January 1955. She rejoined the 7th Fleet in time to take part in the evacuation of the Tachen Islands, which threatened to bring war between Chinese Nationalists and Communists. After fleet maneuvers the ship spent March and April at Formosa helping to train Nationalist sailors. *Ingersoll* returned to San Diego 19 June 1955 ending another highly successful cruise in the Far East.

The destroyer returned to 7th Fleet duty January to April 1956; and, after her return to San Diego 26 April, engaged in training operations until August. From 27 August to 8 December *Ingersoll* underwent a yard period in San Francisco in which a new underwater fire control system was installed. After additional evaluation and antisubmarine training the ship sailed again 16 April 1957 for the western Pacific. On this cruise *Ingersoll* stopped at Melbourne, Australia, and the Fiji Islands, participating in fleet exercises off Guam and the Philippines. In August the destroyer steamed to Taiwan for the now-familiar Formosa Patrol, helping to maintain peace and stability in those troubled waters. After carrier exercises she sailed for home, arriving San Diego 14 October 1957.

Ingersoll returned to the Far East with the 7th Fleet 25 June to 18 December 1958; and, in the early part of 1959, took part in type training and readiness operations off California. The veteran ship sailed westward once more 15 August 1959 and operated with a submarine hunter-killer group during most of her deployment. She returned 1 February 1960, as trouble began to mount in Southeast Asia.

The destroyer got underway with a hunter-killer group for the Far East 1 October 1960, and after spending October and November training in Hawaiian waters steamed to the South China Sea to support American efforts to stabilize the threatened kingdom of Laos. In December

she screened transports during the landing of a battalion landing team in Laos to enforce the Geneva solution. She remained off Laos until April, returning to her home port 2 May 1961.

Ingersoll spent the remainder of 1961 on the West Coast, then sailed 6 January 1962 for duty with the 7th Fleet that included cruising with carrier *Hancock* off South Vietnam when trouble flared again in Laos. She also patrolled Taiwan Straits in response to the reports of Communist troops on the mainland opposite the Nationalist island. She returned to San Diego 18 July 1962 for western seaboard operations until October 1962 when the Cuban missile crisis broke. *Ingersoll* responded quickly, sailing with an amphibious group to the Canal Zone in case additional troops were needed in the emergency. When the sea blockade coupled with strenuous American diplomacy resulted in the removal of the missile threat, she resumed training out of San Diego. She returned to the Far East in October 1963 to support carrier operations in the East and South China Seas and resumed operations out of San Diego in the spring of 1964.

Ingersoll completed a yard overhaul 5 February 1965, conducted readiness operations along the seaboard, then sailed from San Diego 9 June 1965 for the coast of South Vietnam. Her "Market Time Patrols" to intercept Viet Cong men and supplies, were punctuated with 24 gunfire missions against 116 targets, contributing to the success in all 4 Vietnamese Corps Areas of the South China Sea coastline, and 3 missions fired 7 miles up the Saigon River in support of the IV Corps. She also took time out for plane guard and screen duties with fast carriers, including *Independence* and *Midway* as they launched hard-hitting air strikes to inland and coastal targets in North Vietnam. She returned to San Diego 23 November 1965 for a much deserved leave and upkeep period extending through 31 December.

Ingersoll completed yard overhaul 5 February 1965 and immediately began training for a WestPac deployment. She sailed for the Far East 9 June and on 5 July began coastal surveillance patrols to help to stem the flow of men and munitions from North Vietnam. On the 20th she joined the naval gunfire support group off the coast of Quang Ngai. Her guns delivered powerful aid to friendly troops throughout the summer and well into the fall. On 10 October she was assigned to plane guard duty in the South China Sea. On 4 November she headed home and arrived San Diego on the 23d.

Ingersoll operated along the West Coast until departing San Diego 5 November 1966 for the Far East. Upon reaching the war zone she participated in Operation "Sea Dragon," anti-shipping and interdiction operations, and plane guard duty for *Kitty Hawk* (CVA-63). On 5 December a North Vietnamese coastal battery fired on the destroyer whose prompt counter fire silenced the enemy guns. *Ingersoll* continued to operate in the war zone and other Oriental waters until returning home in the spring of 1967 to prepare for future assignments.

Ingersoll received nine battle stars for World War II service.

Inglis

A British name.

(DE-125: dp. 1,140; l. 289'5"; b. 35'1"; dr. 8'3"; s. 21 k.; cpl. 156; a. 3 3", 4 1.1", 9 20mm., 2 dct., 8 dcp., 1 dcp. (h.h.); cl. *Evarts*)

Inglis (DE-525) was launched 2 November 1943 by Boston Navy Yard. Boston, Mass., accepted and transferred to Great Britain under Lend-Lease 12 January 1944. This and other *Evarts*-class DE's formed the *Captain* class in the Royal Navy and played a vital part in Allied antisubmarine operations in the Atlantic. *Inglis* was returned to the Navy 20 March 1946. She was sold to C. B. Baldrige, Bay, Ohio, in September 1947 and subsequently scrapped.

Ingraham

Captain Duncan Nathaniel Ingraham was born in Charleston, S.C., 6 December 1802. He was appointed Midshipman 18 June 1812 at the age of 10 and, after distinguished service, was commissioned Captain 14 September 1855. While in command of the sloop-of-war *St. Louis* in the Mediterranean, in July 1853, he interfered at Smyrna with the detention by the Austrian consul of Martin Koszta, a Hungarian who had declared in New York his intention of becoming an America citizen, and, who had been seized and confined in the Austrian ship *Hussar*. For his conduct in this matter he was voted thanks and a medal by Congress. Captain Ingraham served as Chief of the Bureau of Ordnance and Hydrographer of the Navy from 1856 until 1860. He resigned from the Navy 4 February 1861 to enter the Confederate States Navy with the rank of captain. He was commandant of the Charleston station 1862 to 1865. He died at Charleston 16 October 1891.

I

(DD-111: dp. 1,060; l. 314'5"; b. 31'9"; dr. 8'6"; s. 35 k.; cpl. 113; a. 4 4", 2 3", 12 21" tt.; cl. *Wickes*)

The first *Ingraham* (DD-111) was launched 4 July 1918 by the Union Iron Works, San Francisco, Calif.; sponsored by Mrs. Alfred S. Gann; and commissioned 15 May 1919, Comdr. D. L. Le Breton in command.

Ingraham departed 20 May for her shakedown cruise, transiting the Panama Canal and arriving Newport 6 June. After repairs in New York, she sailed for a European tour of duty. While visiting Ostend, Belgium 22 September, she carried the King and Queen of Belgium to Calais, France. The destroyer returned to San Diego 8 January 1920 via New York and the Canal Zone to begin conversion to a minelayer.

Reclassified DM-9, *Ingraham* began minelaying exercises January 1921 along the California coast before departing Mare Island 7 June. She arrived Pearl Harbor 18 June and engaged in operations there until she decommissioned at Pearl Harbor 29 June 1922. Her name was struck from the Navy List 1 December 1936 and she was sold for scrapping.

II

(DD-444: dp. 1,630; l. 347'9"; b. 36'1"; dr. 11'10"; s. 33 k.; cpl. 208; a. 5 5", 12 .50 cal. mg., 1 Y gun, 10 21" tt., 2 dct.; cl. *Glavces*)

The second *Ingraham* (DD-444) was launched 15 February 1941 by the Charleston Navy Yard; sponsored by Mrs. George Ingraham Hutchinson, granddaughter of Captain Ingraham; and commissioned 17 July 1941, Lt. Comdr. W. M. Haynsworth, Jr., in command.

After shakedown and local operations along the East Coast, *Ingraham* commenced duties as convoy escort December 1941 as the Japanese surprise attack drew America into the fight for freedom. During 1942 she escorted convoys between the United States, Iceland, and the United Kingdom, bringing supplies desperately needed by the Allies to stem Hitler's advance and to take the offensive. Under constant threat from German U-boats, *Ingraham* continued her escort duty to Europe and as far south as the Panama Canal.

On the night of 22 August as she was investigating a collision between U.S. destroyer *Buck* and a merchant vessel, *Ingraham* collided with tanker *Chemung* in heavy fog off the coast of Nova Scotia and *Ingraham* sank almost immediately. Depth charges on her stern exploded. Only 11 men survived the collision. She was struck from the Navy Register 11 September 1942.

III

(DD-694: dp. 2,200; l. 376'6"; b. 40'; dr. 15'8"; s. 34 k.; cpl. 336; a. 3 5", 12 40mm., 11 20mm., 2 dcp., 6 dcp., 10 21" tt.; cl. *Allen M. Sumner*)

The third *Ingraham* (DD-694) was launched 16 January 1944 by Federal Shipbuilding & Drydock Co., Kearny, N.J.;

sponsored by Mrs. George Ingraham Hutchinson; and commissioned 10 March 1944, Comdr. H. W. Gordon in command.

After shakedown in Bermuda and training out of Norfolk, *Ingraham* sailed for duty with the Pacific Fleet, arriving Eniwetok 31 October in time to begin the final push of the enemy to its home islands. In mid-November she commenced screening carriers during strikes on Luzon in which considerable damage was done to the dwindling Japanese navy and air force. The destroyer continued patrol and antisubmarine duty until 12 December when she sailed for the assault and landings on Mindoro. Three days later in company with *Barton*, she sank a Japanese cargo ship off the southwest tip of Mindoro.

After a brief stay, she departed San Pedro 2 January 1945, for the operations in the Lingayen Gulf. Arriving off the Gulf on the sixth, she added her powerful anti-aircraft fire to that of the invasion fleet, and bombarded shore targets behind the beaches.

At the end of January, *Ingraham* joined a fast carrier task force for strikes on the Japanese homeland. Following repair at Saipan 20 February, she joined the invasion fleet off Iwo Jima 23 February, and provided accurate call fire for the Marines ashore.

On 21 March the ship took up radar picket station in support of the Okinawa-Gunto operation. On 5 May, she came under concerted air attack, and shot down four of the enemy planes before a fifth crashed the ship above the waterline on the port side, its bomb exploding in the generator room. With only 1 gun operative, and with 51 casualties aboard, *Ingraham* retired to Hunter's Point, Calif., for repairs.

After repairs she operated along the East Coast until 7 May 1946 when she departed for the atomic bomb tests at Bikini (another example of the Navy's participation in technological development to strengthen America). After the tests and overhaul *Ingraham* departed San Diego 24 February 1947 for the Far East. The destroyer engaged in various exercises and in late June arrived Manila to act as official U.S. representative at the Philippine Independence anniversary. She returned to San Diego 8 October 1947.

Ingraham operated along California until 4 April 1949 when she departed San Diego for Norfolk, arriving 20 April. She participated in training exercises in the Atlantic until 24 November 1950 when she departed Norfolk for four months duty with the 6th fleet. Communist aggression in Korea once again threatened the peace of the world; and the U.S. Navy stood out as a symbol of strength to defeat this threat. She commenced exercises in the Atlantic during the summer of 1951, then made another cruise to the Mediterranean during the fall of 1951 and summer of 1952.

Ingraham departed Norfolk 24 April 1953 to escort carrier *Lake Champlain* to Japan via the Mediterranean and Suez Canal. She arrived Yokosuka 9 June and later that month joined the carrier task force providing air support to our forces in Korea. Her accuracy was excellent as she destroyed gun emplacements and supply areas. Following the truce, she operated on security patrol before returning to Norfolk 27 October. During 1954 the destroyer operated on hunter-killer operations, a cruise to South America, and NATO exercises out of Northern Ireland. She resumed training operations following overhaul in June 1955 and sailed on a summer training cruise to the Scandinavian countries, returning to Norfolk 6 September.

Ingraham departed Norfolk 28 July for duty with the 6th Fleet as trouble flared over the Suez Canal. The presence of the fleet was felt and the crisis was resolved without a major conflict. She returned to Norfolk 4 December to begin a series of training cruises climaxed by a NATO exercise in September and October 1957.

The destroyer returned to 6th Fleet duty in February 1958 and operated on patrol and exercises in the Mediterranean and the Red Sea. She returned to Norfolk, Va., 2 July prior to the Lebanon crisis in which the 6th

Fleet played a major role in preserving the freedom of a small nation. *Ingraham* operated on the East Coast until 13 February 1959, when she departed for another tour with the 6th Fleet, and a crisis over Berlin was averted through our strong naval force. Departing the Mediterranean on 30 August, she returned to Portsmouth, Va., 7 September and began overhaul.

During 1960 she engaged in operations out of Mayport, Fla., before embarking on another cruise with the 6th Fleet, beginning late September. She resumed readiness training out of Mayport in March 1961, before undergoing an extensive 8-month overhaul at Portsmouth. *Ingraham* arrived at her new homeport, Newport, R.I., 23 February 1962, then engaged in fleet operations in the Atlantic and in the Caribbean. In September and October she was assigned to the recovery area for the Project Mercury flight of "Sigma 7" and under more somber conditions took part in the Cuban blockade which ended in the removal of Russian missiles from that island. Once again this courageous ship helped participate in a series of crises resolved peacefully because of America's overwhelming naval power.

She continued operations along the East Coast until 1 October 1963, when she sailed for another deployment to the Mediterranean to strengthen our peace-keeping force in Europe.

Regular deployment with the Atlantic Fleet occupied *Ingraham's* time until 29 September 1965, when she departed Newport for the western Pacific, arriving 31 October at Yokosuka, Japan, for resupply before operations in

the South China Sea. Though acting as a part of the screen for the carrier *Ticonderoga* (CVA-14), she also fired support missions for ground troops ashore.

On 12 November, *Ingraham* steamed 10 miles up the Saigon River to bombard an enemy supply base, and, by the 13th, shelled a guerrilla assembly area some 300 miles from the site of her action the previous day.

In early December, the ship kept regular surveillance on a Russian submarine off Hainan Island, bordering the Gulf of Tonkin. *Ingraham's* presence with the fleet of Vietnam underscores the determination of Americans to preserve the freedom of a small nation. From 1 January 1966 to 24 January, *Ingraham* operated with TF-77 in the South China Sea. She left for Newport 4 February by way of the Suez Canal.

Arriving 8 April off the East Coast, *Ingraham* began a repair and training period. From 14 June to 21 June she participated in Operation "Beachtime," an amphibious landing in the Caribbean. *Ingraham* spent 28 October to 28 November preparing for service in the Mediterranean. On 8 December she arrived at Gibraltar.

Ingraham received the Navy Unit Commendation for her action off Okinawa and four battle stars for service in World War II. She earned a fifth battle star for service in Korea.

Ingram, Osmond, see *Osmond Ingram* (DD-255)

USS *Ingraham* (DD-694)

Inman

A British name.

(DE-526: dp. 1,140; l. 280'5"; b. 35'1"; dr. 8'3"; s. 21 k.; Cpl. 156; a. 3 3', 4 1.1', 9 20mm., 2 dct., 8 dep., 1 dep. (h.h.); cl. *Evarts*)

Inman (DE-526) was launched 2 November 1943 by Boston Navy Yard, Boston, Mass., accepted and transferred to Great Britain 13 January 1944 under Lend-Lease. This and other *Evarts*-class DE's formed the *Captain* class in the Royal Navy and played a vital part in allied antisubmarine operations in the Atlantic. *Inman* was returned to the Navy 1 March 1946. She was sold to G. H. Nutman, Inc., Brooklyn, N.Y., in November 1946 and subsequently scrapped.

Innisfail, see YP-354

Ino

A merchant name retained.

(Ship: t. 895; l. 160'6"; b. 34'11"; dph. 17'5"; s. 14 k.; cpl. 144; a. 8 32-pdr.)

Ino was a clipper ship, purchased at Boston 30 August 1861 and commissioned at the Boston Navy Yard 23 September, Lt. J. P. Cressy in command. Unusual speed and large storage space suited her ideally for long-range cruising against Confederate commerce raiders. Her first duty began 27 September when she departed Boston in search of "rebel pirates." When word came that the South's famed cruiser *Sumter*, under the brilliant master of seamanship, Captain Raphael Semmes, was in European waters, *Ino* sailed from Boston 5 February 1862 and reached Cadiz only 13 days and 16 hours later. She assisted *Kearsarge* and *Tuscarora* to blockade Semmes at Gibraltar where he vainly sought repairs. Semmes finally abandoned *Sumter* there in order to get back into action. An interesting side light to this operation occurred at Tangier, Morocco 26 February when *Ino* took two crewmen of *Sumter* from a threatening mob and turned the prisoners over to Boston-bound *Harvest Moon*.

Back in Boston, *Ino* was ordered to Port Royal, S.C., for duty in the South Atlantic Blockading Squadron 4 August 1862. On her voyage south she captured the French bark *La Manche* attempting to run the Charleston blockade 23 August. Six days later she arrived at St. George, Bermuda, to obtain from the American consul the latest information on blockade running activity in that quarter. She got underway the next day at the behest of the neutrality-conscious governor of Bermuda and made Port Royal 7 September. Only 4 days later she set sail for New York to be prepared for a cruise in search of her old adversary, Semmes, who was now attacking northern merchantmen with his new raider, *Alabama*. *Ino* departed New York 5 November and cruised in the lanes frequented by American merchantmen and whalers, arriving at St. Helena 5 January 1863. She remained in waters off St. Helena until setting course for the United States 1 March. She arrived New York 15 April for repairs.

Ino departed New York 29 May 1863 escorting California-bound clipper *Aquila* carrying the disassembled parts of monitor *Comanche*. After successfully shepherding her charge to safe waters well below the equator, she searched for *Alabama* and *Florida* in waters ranging to the island of Fernando de Noronha, thence to New York, arriving 7 September 1863.

After repairs at New York, *Ino* joined the North Atlantic Blockading Squadron. Disguised as a merchantman to lure *Florida* into action, she cruised in the North Atlantic 24 October when she arrived Portland, Maine.

Ino was transferred to the East Gulf Blockading Squadron 22 November where she served until after the end of the war. She returned to New York 1 August 1865 and remained there under repairs until 16 October when she

sailed to serve in the Mediterranean and off the coast of Portugal.

Ino set course for the United States 13 December 1866 and arrived Boston 25 January 1867. She decommissioned there 13 February and was sold at public auction 19 March 1867 to Samuel G. Reed.

Instill

To impart gradually.

(AM-252: dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.; cpl. 104; a. 1 3', 2 40mm., 6 20 mm., 2 dct., 3 dct.; cl. *Admirable*)

Instill (AM-252) was launched 5 March 1944 by the Savannah Machine & Foundry Co., Savannah, Ga.; sponsored by Mrs. Lydia G. Mehoffey; and commissioned 22 May 1944, Lt. Charles A. Hardy, USNR, in command.

After shakedown out of Little Creek, Va., and a few weeks of escort duty in that area, *Instill* was assigned to Service Force, Atlantic Fleet, as a training ship. This duty continued until 11 August when she reported to Guantanamo Bay, Cuba to operate with shakedown ships as a radar countermeasure ship. Returning to Norfolk 22 October, *Instill* remained there until 21 January 1946 when she sailed to Orange, Tex. The minesweeper decommissioned there 26 February 1947, joining the Reserve Fleet.

When Communist aggression in South Korea required strengthening of American seapower, *Instill* recommissioned 16 March 1951 and began an intensive period of training and patrol duty between Charleston and Norfolk. She continued her important minesweeping operations and patrol duty along the East Coast until she returned to Orange, Tex., 3 January 1954. *Instill* decommissioned there 1 March and once again joined the Reserve Fleet. Reclassified MSF-252, 7 February 1955, she remained in the Texas Group, Atlantic Reserve Fleet until struck from the Navy List 1 May 1962, and sold in October 1966 to Mexico, serving at present as *DM-10*.

Insurgent

One who is engaged in an uprising against an existing government.

(Fr: l. 148'; b. 37'5"; dr. 11'9"; a. 24 12-pdrs., 2 18-pdrs., 8 long 6-pdrs., 4 36-pdrs., 2 24-pdrs.; cpl. 340)

Insurgent, formerly the French frigate *L'Insurgente*, was captured by *Constellation*, Captain Thomas Truxtun in command, after a chase and battle of an hour and a quarter off the island of Nevis in the West Indies 9 February 1799. The battle was exceptionally well-fought under Truxtun's able leadership and remains one of the most famous in naval history. Considered a prize in the quasi-war with France, the frigate was refitted for service in the West Indies and cruised under Lt. John Rodgers in company with *Constellation* until May 1799.

Ordered back to the United States, *Insurgent* was purchased by the Navy for \$84,500. Commissioned with Captain Alexander Murray in command, *Insurgent* sailed from Hampton Roads for Europe 14 August 1799. Cruising in European waters during the winter of 1799-1800, the frigate captured French ship *Vendemaire* and recaptured the American ships *Margaret*, *Augora*, *Commerce*, and *William and Mary*. *Insurgent* returned to the United States in March 1800 via the West Indies.

Patrick Fletcher assumed command of *Insurgent* 29 April 1800 and was ordered to cruise between the West Indies and the American coast to see that United States shipping rights were observed and to capture any enemy vessels he encountered. *Insurgent* departed Baltimore 22 July and after a brief stop at Hampton Roads sailed for her station 8 August 1800. Never heard from again, the frigate and her crew were presumed lost as a result of the severe storm which struck the West Indies 20 September 1800.

Integrity

A British name.

(BAT-4: dp. 521 lt.; l. 143'; b. 33'; dr. 14'; s. 14 k.; cpl. 34; a. 1 3', 2 20mm.)

Integrity (BAT-4) was launched 28 March 1942 by Levingston Shipbuilding Co., Orange, Tex., under contract from General Motors. She was completed and delivered to Great Britain under Lend-Lease 15 July 1942. After serving as an ocean rescue tug with the Royal Navy she was returned to the Navy at Subic Bay, Philippine Islands, 19 February 1946. Stricken from the Navy List 12 April 1946, she was turned over to the State Department Foreign Liquidation Commission and subsequently sold to T. Y. Fong.

Intelligent Whale

(Sub: t. 4,000; l. 28'8"; b. 7'; dph. 9'; s. 4 k.; cpl. 6 to 13)

Intelligent Whale, an experimental hand-cranked submarine, was built on the design of Scovel S. Meriam in 1863 by Augustus Price and Cornelius S. Bushnell. In 1864 the American Submarine Co. was formed, taking over the interests of Bushnell and Price and there followed years of litigation over the ownership of the craft. When title was established by a court the submarine was sold 29 October 1869 to the Navy Department, with most of the price to be paid after successful trials. In September 1872 the first trial was held and was unsuccessful, whereupon the Department refused further payments and abandoned the project.

Intelligent Whale submerged by filling water compartments, and expelled the water by pumps and compressed air. It was estimated that it could stay submerged for about 10 hours. Thirteen crewmen could be accommodated, but only 6 were needed to make her operational. The only known trial, reported by submarine pioneer John Holland, was made by a certain General Sweeney and two others. They submerged the boat in 16 feet of water and Sweeney, clad in a diver's suit, emerged through a hole in the bottom, placed a charge under a scow, and reentered the submarine. The charge was exploded by a lanyard and a friction primer attached to the charge sinking the scow.

Intelligent Whale, an early experiment in a field now of central importance, is on exhibit at the Navy Museum, Washington Navy Yard, Washington, D.C.

Intensity

Degree or amount of strength.

(PG-93: dp. 900; l. 205'; b. 33'; dr. 14'7"; s. 16 k.; cpl. 90; a. 2 3"; cl. *Action*)

Intensity (PG-93) was one of a group of Canadian corvettes turned over to the Navy and manned by the Coast Guard. She was launched as *Milfoil* (CN-311) by Morton Engineering & Dry Dock Co., Quebec, Canada, 22 August 1942; taken over by the Navy, renamed, and commissioned at Quebec 31 March 1943, Lt. H. F. Morrison, USCG, in command.

Intensity sailed to Bermuda for her shakedown, returned to New York 5 August 1943, and took up regular escort duties from that port. Small patrol ships such as *Intensity* did much to lessen the effect of U-boat patrols on Allied commerce during this critical period of the war. The ship steamed between New York and Guantanamo Bay until November 1944, completing over 15 convoy passages. She returned to New York 5 November for patrol duty but in mid-December returned to the Caribbean shipping lanes as an escort.

After the end of the war in Europe, *Intensity* sailed to Charleston, arriving 29 June 1945. She decommissioned there 3 October 1945 and was returned to the Maritime Commission. In 1950 she was sold to Balleneros Ltd.,

S.A., Panama, R. P., renamed *Olympic Promoter*, and converted to a whale catcher.

Interceptor

One who intercepts.

(YAGR-8: dp. 10,760 fl.; l. 441'6"; b. 56'11"; dr. 24'; s. 11 k.; cpl. 151; cl. *Guardian*; T. Z-EC2-S-C5)

Interceptor (YAGR-8) was launched as Liberty Ship *Edward W. Burton* by J. A. Jones Construction Co., Inc., Panama City, Fla., 12 September 1945; sponsored by Miss Juanita M. Kaylor; and delivered to T. J. Stevenson & Co. 8 November 1945. She served several lines as a cargo ship until being placed in the National Defense Reserve Fleet at Wilmington 20 June 1948. Acquired by the Navy 28 June 1955, the ship was converted to Navy use at Charleston Naval Shipyard and commissioned *Interceptor* 15 February 1956, Lt. Comdr. B. L. Hall in command.

Interceptor was designed to carry the latest in long-range radar and communications equipment and to act as an ocean radar station ship. Following shakedown training she sailed from Charleston 17 March en route to her new home port, San Francisco. Arriving via the Panama Canal 11 April, the ship began a regular cycle of 3- to 4-week at-sea periods as a picket ship under the Continental Air Defense Command. Operating with search aircraft, *Interceptor* could detect, track, and report aircraft at great distances as well as control interceptor aircraft in the event of an air attack on the United States. Patrolling off the coast of Canada she formed an integral part of North America's air early warning system. Reclassified AGR-8, radar picket ship, 28 September 1958, *Interceptor* for the next 7 years operated with NORAD in forming an important link in the nation's defenses. *Interceptor* was struck from the Navy List 1 September 1965 and placed in the National Defense Reserve Fleet at Suisun Bay, Calif., where she remains.

Interdictor

One who prohibits.

(YAGR-13: dp. 10,760 (f.); l. 441'6"; 56'11"; dr. 24'; s. 11 k.; cpl. 149; cl. *Guardian*; T. Z-EC2-S-C5)

Interdictor (YAGR-13) was launched as Liberty Ship *Edwin H. Duff* by J. A. Jones Construction Company, Inc., Panama City, Fla., 29 June 1945; sponsored by Mrs. Edwin H. Duff; and delivered to McCormack Steamship Co. 27 July 1945. She carried aircraft until entering the National Defense Reserve Fleet, James River, Va., 17 October 1945, and except for brief cargo service remained there until being acquired by the Navy 10 May 1957. Renamed *Interdictor* and converted to Navy use at Charleston Naval Shipyard, she commissioned 7 April 1958, Lt. Comdr. J. P. Dordahl in command.

Fitted with the latest and best electronic search and tracking equipment, *Interdictor* sailed 2 May 1958 for shakedown training in the Caribbean. She departed Charleston 18 July and sailed to her new home port, San Francisco. Arriving 13 August, the ship assumed her role as an ocean radar station ship, part of America's vast early warning defense system. Operating with search aircraft, *Interdictor* could detect, track, and report enemy aircraft at great distances, supplementing land-based radar stations, and controls high-speed interceptor aircraft in case of attack. She also carried out weather reporting duties during her three to four week cruises in the Pacific.

Interdictor's hull classification was changed 28 September 1958 to AGR-13. She continued on radar picket patrols for the Continental Air Defense Command out of San Francisco until decommissioned 5 August 1965. Her name was struck from the Navy List 1 September 1965 when she transferred to the Maritime Administration for

lay-up in the Suisun Bay River Defense Reserve Fleet, San Francisco, Calif., where she remains.

Interpreter

One who explains, translates, or tells the meaning of.

(AGR-14: dp. 10,760(f.); l. 441'6"; b. 56'11"; dr. 24'; s. 11 k.; cpl. 151; cl. *Guardian*; T. Z-EC2-S-C5)

Interpreter (AGR-14) was launched as Liberty Ship *Dudley H. Thomas* by J. A. Jones Construction Co., Inc., Panama City, Fla., 8 February 1945; sponsored by Miss Carrie Corbitt; and delivered 21 February 1945 to Merchants and Miners Transportation Co., Boston. The ship served as an aircraft freighter during the war and later as a cargo ship for various companies. She was in the National Defense Reserve Fleet 1947-1951 and from 25 August 1953 until acquired by the Navy 5 June 1957. Renamed *Interpreter*, the ship was converted to Navy use at Philadelphia Naval Shipyard and commissioned there 29 September 1958, Comdr. J. S. Craft in command.

One of a class of sixteen radar picket ships, *Interpreter* conducted shakedown exercises in the Caribbean before departing Guantanamo Bay 1 February 1959 for her new home port, San Francisco. Equipped with the most advanced long range radar and communications gear, *Interpreter* joined the Continental Air Defense Command as part of America's vital early warning system. Operating with search aircraft for periods of 3 to 4 weeks at sea, the ship reported and tracked aircraft at great distances and controlled interceptors in the event of enemy air attack.

Interpreter continued regular patrols in the Contiguous Radar Barrier, for 6 years, providing a vital link in the air defense of her country.

Struck 1 July 1965, *Interpreter* was turned over to the Maritime Reserve Fleet, Suisun Bay, Calif., where she remains.

Interrupter

One who breaks in upon some action, hinders, or obstructs.

Interrupter (AGR-15) was renamed *Tracer* (q.v.) 4 September 1959.

Interstate 2, see YD-144

Intrepid

Fearless, brave.

I

(Ketch: t. 64; l. 60'; b. 12'; cpl. 70; a. 4 guns)

The first *Intrepid* was built in France in 1798 for Napoleon's Egyptian expedition. She was subsequently sold to Tripoli, whom she served as *Mastico*. The bomb ketch was one of several Tripolitan vessels capturing *Philadelphia* 31 October 1803 after the American frigate had run fast aground on uncharted Kaliusa reef some 5 miles east of Tripoli.

Enterprise, Lt. Stephen Decatur in command, captured *Mastico* 23 December 1803 as she was sailing from Tripoli to Constantinople under Turkish colors and without passports. After a time-consuming search for a translator, the ketch's papers and the testimony of an English ship master who had been in Tripoli to witness her role in operations against *Philadelphia* convinced the commander of the American squadron, Commodore Edward Preble, that *Mastico* was a legitimate prize. He took her into the U.S. Navy and renamed her *Intrepid*.

Meanwhile, *Philadelphia* lay in Tripoli Harbor threatening to become Tripoli's largest and most powerful corsair. Preble decided that he must destroy the frigate before the enemy could fit her out for action against his squadron. In order to take the Tripolitans by surprise, he assigned the task to the only ship which could be sure

of passing as a North African vessel, *Intrepid*. He appointed Lieutenant Stephen Decatur captain of the ketch 31 January 1804 and ordered him to prepare her for a month's cruise to Tripoli in company with *Siren*. Preble's orders directed Decatur to slip into harbor at night, to board and burn the frigate, and make good his retreat in *Intrepid*, unless it then seemed feasible to use her as a fire ship against other shipping in the harbor. In the latter case, he was to escape in boats to *Siren* which would await just outside the harbor.

Intrepid and *Siren* set sail 2 February and arrived off Tripoli 5 days later. However, bad weather delayed the operation until 16 February. That evening *Siren* took station outside the harbor and launched her boats to stand by for rescue work. At 7 o'clock *Intrepid* entered the harbor and 2½ hours later was alongside *Philadelphia*. Leaving a small force commanded by Surgeon Lewis Heermann on board *Intrepid*, Decatur led 60 of his men to the deck of the frigate. A brief struggle, conducted without firing a gun, gave the Americans control of the vessel enabling them to set her ablaze. Decatur, the last man to leave the burning frigate, remained on board *Philadelphia* until flames blazed from the hatchways and ports of her spar deck. When he finally left the ship, her rigging and tops were afire. Shore batteries opened up on *Intrepid* as she escaped only to be answered from abandoned *Philadelphia* when her guns discharged by the heat of the conflagration.

When Lord Nelson, then blockading Toulon, heard of *Intrepid's* feat, he is said to have called it "the most bold and daring act of the age."

Intrepid returned to Syracuse 19 February, and the next day her crew returned to their original ships. The ketch remained in Syracuse with only a midshipman and a few men on board while the squadron was at sea during the next few months. She became a hospital ship 1 June and continued this duty through July. She departed Syracuse 12 August for Malta, where she took on board fresh supplies for the squadron and departed 17 August. She rejoined the squadron off Tripoli 22 August. A week later she began to be fitted out as a "floating volcano" to be sent into the harbor and blown up in the midst of the corsair fleet close under the walls of Tripoli. Carpenters of every ship were pressed into service and she was ready 1 September. However, unfavorable weather delayed the operation until 4 September. That day Lt. Richard Somers assumed command of the fire ship. His crew of Lt. Henry Wadsworth and 10 men, all volunteers, was completed shortly after *Intrepid* got underway when Midshipman Joseph Israel arrived with last-minute orders from Commodore Preble and insisted on accompanying the expedition. The anxious fleet heard two signal guns as *Intrepid* entered the harbor; and at 9:30, sometime before she was expected to reach her destination, the American squadron was shaken by the concussion of a violent explosion.

Commodore Preble later concluded that Tripoline defenders must have boarded *Intrepid* prompting her valiant men to blow her up giving their lives to prevent the ship's valuable cargo of powder from falling into the hands of the enemy. All on board were lost.

II

(ScStr: t. 438; l. 170'3"; b. 35'; dr. 12'0"; s. 11 k.; a. 4 24-pdr. how.)

The second *Intrepid* was launched by the Boston Navy Yard 5 March 1874; sponsored by Miss H. Evelyn Frothingham Poole and commissioned 31 July, Comdr. Augustus P. Cooke in command.

The experimental steam torpedo ram departed Boston 3 August and arrived Newport, R.I. the next day. She departed Newport 31 August and arrived New York Navy Yard 1 September. The following 2 months were devoted to torpedo trails along the North Atlantic Coast. *Intrepid* arrived New York Navy Yard 24 October and decommissioned 30 October.

The steamer recommissioned New York Navy Yard 28

August but, with the exception of brief visits to New England ports in 1875 and 1876, she remained at the Navy Yard. She decommissioned 22 August 1882 for conversion to a light-draft gunboat. Work was suspended in 1889 and a survey in 1892 found *Intrepid* unseaworthy. She was sold 9 May 1892 to Mathew Gill, Jr., of Philadelphia.

III

(Bark: t. 1,800; l. 176'5" b.p.; b. 45'8"; dr. 16'5"; cpl. 136; a. 6'4", 4 6-pdrs., 2 1-pdrs.)

The third *Intrepid* was launched by Mare Island Navy Yard 8 October 1904; sponsored by Miss Helen de Young and commissioned 16 August 1907, Comdr. Edward E. Capehart in command.

The steel bark was assigned to the Yerba Buena Training Station, San Francisco for duty until 28 February 1912 when she became the receiving ship at the same station. The latter assignment lasted until 25 January 1914 when *Intrepid* became receiving ship at Mare Island Navy Yard, where she decommissioned 15 October.

Intrepid commissioned in ordinary at Mare Island Navy Yard 11 November 1915 for use as a barracks for the men of submarines *F-1* through *F-4* of the Pacific Fleet. In 1920 she again became receiving ship at Mare Island Navy Yard. *Intrepid* decommissioned 30 August 1921 and was sold 20 December.

IV

(CV-11: dp. 27,100; l. 872'; b. 147'6"; dr. 28'7"; s. 33 k; cpl. 3,448; a. 12 5", 68 40mm., over 80 ac.; cl. *Essex*)

The fourth *Intrepid* was launched 26 April 1943 by Newport News Shipbuilding & Dry Dock Co., Newport News, Va.; sponsored by Mrs. John Howard Hoover; and com-

missioned 16 August, Captain Thomas L. Sprague in command.

After training in the Caribbean *Intrepid* departed Norfolk 3 December 1943 for San Francisco, then to Hawaii. She arrived Pearl Harbor 10 January and prepared for the invasion of the Marshall Islands, the next objective in the Navy's mighty island-hopping campaign. She sortied from Pearl Harbor with carriers *Cabot* and *Essex* 16 January to raid islands at the northeastern corner of Kwajalein Atoll 29 January 1944 and pressed the attack until the last opposition had vanished 2 February. The raids destroyed all of the 83 Japanese planes based on Roi and Namur before the first landings were made on adjacent islets 31 January. That morning *Intrepid's* planes strafed Ennuebing Island until 10 minutes before the first marines reached the beaches. Half an hour later that islet, which protected Roi's southwestern flank and controlled the North Pass into Kwajalein Lagoon, was secured, enabling marines to set up artillery to support their assault on Roi.

Her work in the capture of the Marshalls finished, *Intrepid* headed for Truk, the tough Japanese base in the center of Micronesia. Three fast carrier groups arrived undetected daybreak the 17th, sinking two destroyers and 200,000 tons of merchant shipping in 2 days of almost continuous attacks. Moreover, the carrier raid demonstrated Truk's vulnerability and thereby greatly curtailed its usefulness to the Japanese as a base.

The night of 17 February 1944 an aerial torpedo struck *Intrepid's* starboard quarter, 15 feet below her waterline, flooding several compartments and jamming her rudder hard to port. By racing her port screw and idling her starboard engine, Captain Sprague kept her on course until 2 days later strong winds swung her back and forth and tended to weathercock her with her bow pointed

Bark-rigged Training Ship USS *Intrepid* at San Francisco in 1912

toward Tokyo. Sprague later confessed: "Right then I wasn't interested in going in that direction." At this point the crew fashioned a jury-rig sail of hatch covers and scrap canvas which swung *Intrepid* about and held her on course. Decorated by her crazy-quilt sail, *Intrepid* stood into Pearl Harbor 24 February 1944.

After temporary repairs, *Intrepid* sailed for the West Coast 16 March and arrived Hunter's Point, Calif., the 22d. She was back in fighting trim 9 June and departed for 2 months of operations out of Pearl Harbor, then to the Marshalls.

Intrepid's planes struck Japanese positions in the Palaus 6 and 7 September concentrating on airfields and artillery emplacements on Peleliu. The next day her fast carrier task force steamed west toward the southern Philippines to strike airfields on Mindanao 9 and 10 September. Then, after raids on bases in the Visayan Sea 12 through 14 September, she returned to the Palaus 17 September to support marines in overcoming fanatical opposition from hillside caves and mangrove swamps on Peleliu.

When the struggle on that deadly island settled down to rooting Japanese defenders out of the ground on a man to man basis, *Intrepid* steamed back to the Philippines to prepare the way for liberation.

She struck throughout the Philippines, also pounding Okinawa and Formosa to neutralize Japanese air threats to Leyte.

As *Intrepid's* planes flew missions in support of the Leyte landings 20 October 1944, Japan's Navy, desperately striving to hold the Philippines, was converging on Leyte Gulf from three directions. Ships of the U.S. Navy parried thrusts in four major actions collectively known as the Battle for Leyte Gulf.

The morning of 24 October, an *Intrepid* plane spotted Admiral Kurita's flagship, *Yamato*. Two hours later, planes from *Intrepid* and *Cabot* braved intense anti-aircraft fire to begin a day-long attack on Center Force. Wave after wave followed until by sunset American carrier-based planes had sunk mighty battleship *Musashi* with her mammoth 18-inch guns and had damaged her sister ship *Yamato* along with battleships *Nagato* and *Haruna* and heavy cruiser *Myoko* forcing the latter to withdraw.

That night Admiral Halsey's 3d Fleet raced north to intercept Japan's Northern Force which had been spotted off the northeastern tip of Luzon. At daybreak the tireless fliers went aloft to attack the Japanese ships then off Cape Engaño. One of *Intrepid's* planes got a bomb into light carrier *Zuiko* to begin the harvest. Then American bombers sank her sister ship *Chitose*, and a plane from either *Intrepid* or *San Jacinto* scored with a torpedo in large carrier *Zuikaku* knocking out her communications and hampering her steering. Destroyer *Ayitsuki* went to the bottom and at least 9 of *Ozawa's* 15 planes were shot down.

On through the day the attack continued and, after five more strikes, Japan had lost four carriers and a destroyer.

The still potent Center Force, after pushing through San Bernardino Strait, had steamed south along the coast of Samar where it was held at bay by a little escort carrier group of six "baby flattops", three destroyers, and four destroyer escorts until help arrived to send it fleeing in defeat back towards Japan.

As *Intrepid's* planes hit Clark Field 30 October a burning kamikaze crashed into one of the carrier's port gun tubs killing 10 men and wounding 6. Soon skillful damage control work enabled the flattop to resume flight operations.

Intrepid's planes continued to hit airfields and shipping in the Philippines.

Shortly after noon 25 November a heavy force of Japanese planes struck back at the carriers. Within 5 minutes 2 kamikazes crashed into the carrier killing 6 officers and 59 bluejackets. *Intrepid* never lost propulsion nor left her station in the task group; and, in less than 2 hours, had extinguished the last blaze. The next day, *Intrepid*

headed for San Francisco, arriving 20 December for repairs.

Back in fighting trim in mid-February 1945, the carrier steamed for Ulithi, arriving 13 March. The next day she pushed on eastward for powerful strikes against airfields on Kyushu, Japan, 18 March. That morning a twin engine "Betty" broke through a curtain of defensive fire, turned toward *Intrepid* and exploded only 50 feet off *Intrepid's* forward boat crane. A shower of flaming gasoline and plane parts started fires on the hangar deck, but damage control experts quickly snuffed them out.

Intrepid's planes joined attacks on remnants of the Japanese fleet anchored at Kure damaging 16 enemy naval vessels including super battleship *Yamato* and carrier *Anagi*. Then the carriers turned to Okinawa as D-Day of the most ambitious amphibious assault of the Pacific war approached. Their planes lashed the Ryukyus 26 and 27 March, softening up enemy defensive works. Then, as the invasion began 1 April, they flew support missions against targets on Okinawa and made neutralizing raids against Japanese airfields in range of the embattled island.

During an air raid 16 April, a Japanese plane dove into *Intrepid's* flight deck forcing the engine and part of her fuselage right on through, killing 8 men and wounding 21. In less than an hour the flaming gasoline had been extinguished, and only 3 hours after the crash, planes were again landing on the carrier.

The following day, *Intrepid* retired homeward via Ulithi and Pearl Harbor arriving San Francisco 19 May for repairs.

Intrepid stood out of San Francisco 29 June and enlivened her westward voyage 6 August as her planes smashed Japanese on by-passed Wake Island. The next day she arrived Eniwetok where she received word 15 August to "cease offensive operations."

The veteran carrier got under way 21 August to support the occupation of Japan. She departed Yokosuka 2 December and arrived San Pedro, Calif., 15 December 1945.

Intrepid shifted to San Francisco Bay 4 February 1946. Her status was reduced to "in commission in reserve" 15 August before decommissioning 22 March 1947 and joining the Pacific Reserve Fleet.

Intrepid recommissioned at San Francisco 9 February 1952 and got underway 12 March for Norfolk. She decommissioned in the Norfolk Naval Shipyard 9 April 1952 for conversion to a modern attack aircraft carrier. Reclassified CVA-11 1 October, she recommissioned in reserve 18 June 1954. She became the first carrier in history to launch aircraft with American-built steam catapults 13 October 1954. Two days later she went into full commission as a unit of the Atlantic Fleet.

After shakedown out of Guantanamo Bay 1955, *Intrepid* departed Mayport, Fla., 28 May 1955 for the first of two deployments in the Mediterranean with the 6th Fleet, mainstay in preventing Communist aggression in Europe and the Middle East. She returned to Norfolk from the second of these cruises 5 September 1956. The carrier got under way 29 September for a 7-month modernization overhaul in the New York Navy Yard, followed by refresher training out of Guantanamo Bay.

Boasting a reinforced angle flight deck and a mirror landing system, *Intrepid* departed the United States in September 1957 for NATO's Operation "Strikeback", the largest peacetime naval exercise up to that time in history. Operating out of Norfolk in December she conducted Operation "Crosswind", a study of the effects of wind on carrier launches. *Intrepid* proved that carriers can safely conduct flight operations without turning into the wind and even launch planes while steaming downwind.

During the next 4 years *Intrepid* alternated Mediterranean deployments with operations along the Atlantic coast of the United States and exercises in the Caribbean. On 8 December 1961 she was reclassified to an anti-submarine warfare support carrier, CVS-11. She entered

the Norfolk Navy Yard 10 March 1962 to be overhauled and refitted for her new antisubmarine warfare role. She left the shipyard 2 April carrying Air Antisubmarine Group 56.

After training exercises, *Intrepid* was selected as the principal ship in the recovery team for Astronaut Scott Carpenter and his Project Mercury space capsule. Shortly before noon of 24 May 1962, Carpenter splashed down in *Aurora 7* several hundred miles from *Intrepid*. Minutes after he was located by land-based search aircraft, two helicopters from *Intrepid*, carrying NASA officials, medical experts, Navy frogmen, and photographers, were airborne and headed to the rescue. One of the choppers picked him up over an hour later and flew him to the carrier which safely returned him to the United States.

After training midshipmen at sea in the summer and a thorough overhaul at Norfolk in the fall, the carrier departed Hampton Roads 23 January 1963 for warfare exercises in the Caribbean. Late in February she interrupted these operations to join a sea hunt for Venezuelan freighter, *Anzoátegui* whose mutinous second mate had led a group of pro-Castro terrorists in hijacking the vessel. After the Communist pirates had surrendered at Rio de Janeiro, the carrier returned to Norfolk 23 March 1963.

Intrepid operated along the Atlantic Coast for the next year from Nova Scotia to the Caribbean perfecting her antisubmarine techniques. She departed Norfolk 11 June 1964 carrying midshipmen to the Mediterranean for a hunter-killer at sea training with the 6th Fleet. While in the Mediterranean, *Intrepid* aided in the surveillance of a Soviet task group. En route home her crew learned that she had won the coveted Battle Efficiency "E" for antisubmarine warfare during the previous fiscal year.

Intrepid operated along the East Coast during the fall. Early in September she entertained 22 NATO statesmen as part of their tour of U.S. military installations. She was at Yorktown 18 to 19 October 1964 for ceremonies commemorating Lord Cornwallis's surrender 183 years before.

During a brief deployment off North Carolina, swift and efficient rescue procedures on the night of 21 November 1964 saved the life of an airman who had plunged overboard while driving an aircraft towing tractor.

Early the next year *Intrepid* began preparations for a vital role in NASA's first manned Gemini flight. On 23 March 1965 Lt. Comdr. John W. Young and Maj. Virgil

I. Grissom in *Molly Brown* splashed down some 50 miles from *Intrepid* after history's first controlled re-entry into the earth's atmosphere ended the pair's nearly perfect three-orbit flight. A Navy helicopter lifted the astronauts from the spacecraft and flew them to *Intrepid* for medical examination and debriefing. Later *Intrepid* retrieved *Molly Brown* and returned the spaceship and astronauts to Cape Kennedy.

After this mission *Intrepid* entered the Brooklyn Navy Yard in April for a major overhaul to bring her back to peak combat readiness.

This was the final Fleet Rehabilitation and Modernization (FRAM) job performed by the New York Naval Shipyard, Brooklyn, N.Y., slated to close after more than a century and a half of service to the nation. In September, *Intrepid*, with her work approximately 75 percent completed, eased down the East River to moor at the Naval Supply Depot at Bayonne, N.J., for the completion of her multi-million dollar overhaul. After builder's sea trials and fitting out at Norfolk she sailed to Guantanamo on shakedown.

Mid-1966 found *Intrepid* with the Pacific Fleet off Vietnam. Here her gallant pilots delivered powerful blows for freedom and scored what is believed to be one of the fastest aircraft launching times recorded by an American carrier. Nine A-4 Skyhawks and six A-1 Skyraiders, loaded with bombs and rockets, were catapulted in 7 minutes, with only a 28-second interval between launches. A few days later planes were launched at 26-second intervals. After 7 months of outstanding service with the 7th Fleet off Vietnam, *Intrepid* returned to Norfolk having earned her Commanding Officer, Captain John W. Fair, the Legion of Merit for combat operations in Southeast Asia.

In June 1967, *Intrepid* returned to the Western Pacific by way of the Suez Canal just prior to its closing during the Israeli-Arab crisis. There she began another tour with the 7th Fleet to safeguard the peace and freedom of the world, for, as Daniel Webster said in 1834, "God grants liberty only to those who love it, and are always ready to guard and defend it."

Intrigue

A plot or plotting to gain a desired end.

(AM-253; dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.;
cpl. 104; a. 1 3", 4 40mm.; cl. *Admirable*)

Intrigue (AM-253) was laid down 17 December 1943 by Savannah Machine & Foundry Co., Savannah, Ga.; launched 8 April 1944; sponsored by Mrs. Henry R. Keller; and commissioned 31 July 1944, Lt. P. F. McLaughlin in command.

Following exhaustive shakedown in Chesapeake Bay, *Intrigue* departed Norfolk 28 September 1944 for coastal convoy duty. She sailed with cargo ships from American ports to the Canal Zone and as far north as Argentia, Newfoundland, before returning to Norfolk 5 December 1944. In January 1945 she served as a target-towing vessel off the coast, and in June *Intrigue* sailed to Miami to train student officers on the Florida coast. She arrived 23 September at Yorktown, Va., to act as training ship at the Mine Warfare School, and decommissioned 31 May 1946. *Intrigue* subsequently joined the Atlantic Reserve

Fleet at Orange, Tex., and reclassified MSF-253 on 7 February 1955. She was sold to Mexico 30 August 1962 and now serves as *DM-17* (E-7).

Invade

To enter for conquest or plunder.

(AM-254; dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k., cpl. 104; a. 1 3", 4 40mm.; cl. *Admirable*)

Invade (AM-254) was laid down 19 January 1944 by Savannah Machine & Foundry Co., Savannah, Ga.; launched 6 February 1944; sponsored by Miss Thayer C. Allen; and commissioned 18 September 1944, Lt. H. H. Silliman in command.

After shakedown in Chesapeake Bay, *Invade* steamed to Casco Bay, Maine, for training 24 November 1944. Following these operations and additional drills out of Norfolk, the mincraft assumed duties there as towing ship for aircraft targets and as an experimental minesweeper. She remained on this important duty through the end of

USS *Intrepid* (CVA-11)—Gemini 3 spacecraft being hoisted on board 23 March 1965 after a three-orbit mission by Astronauts Grissom and Young

the war and reported 21 September 1945 to the Mine Warfare School at Yorktown, Va., as a training ship. *Invade* decommissioned 7 August 1946 and joined the Atlantic Reserve Fleet at Orange, Tex. She was reclassified MSF-254 on 7 February 1955, struck from the Navy List 1 May 1962, and sold to Mexico 30 August 1962.

Inver

British river.

Gunboat *PG-107* was laid down under U.S. Navy contract 14 September 1942 by Canadian Vickers, Ltd., Montreal, P.Q., Canada; launched 5 December 1942; and transferred to England under lend lease 19 July 1943. She served the British Navy as *Inver*, operating in the North Atlantic until the end of World War II. She was returned to the U.S. Navy and sold 15 December 1946.

Investigator

One who makes an inquiry or examination.

(YAGR-9: dp. 10,760 (f.); l. 441'6"; b. 56'11"; dr. 24'; s. 11 k.; cpl. 150; cl. *Guardian*; T. Z-EC2-S-C5)

Investigator (YAGR-9) was launched by J. A. Jones Co., Inc., Panama City, Fla., as Liberty Ship *Charles A. Draper* 9 January 1945; sponsored by Mrs. E. L. Cills; and delivered 24 January 1945 to Polarus Steamship Co., Inc. The ship carried replacement aircraft and cargo until the end of the war and entered the James River National Defense Reserve Fleet 26 October 1945. After a brief period of service in 1947, she entered the Reserve Fleet at Mobile, and was acquired by the Navy 2 July 1956. Renamed *Investigator*, she was converted to Navy use at Charleston Naval Shipyard and commissioned there 16 January 1957, Lt. Comdr. J. H. Mehus in command.

Equipped with the latest in air search and tracking systems, the ship conducted her shakedown training in the Caribbean and departed Guantanamo Bay for her new home port, Davisville, R.I. *Investigator* began her operational pattern of 3- to 4-week cruise in the North Atlantic as the seaward extension of the Continental Air Defense Command's air early warning system. Operating in conjunction with search aircraft, she could detect, track, and report aircraft at long ranges, and in the event of enemy attack could control high speed U.S. interceptor aircraft and direct them to target. The ship was reclassified AGR-9 effective 28 September 1958. She continued radar picket station duties for the Continental Air Defense Command, detecting and tracking inbound airborne objects and controlling jet interceptor aircraft until decommissioned 29 March 1965. Her name was struck from the Navy List 1 April 1965. She was transferred the same day to the Maritime Commission and entered the Maritime Hudson River Defense Reserve Fleet, N.Y., where she remains.

Invincible

Merchant name retained.

(Str: dp. 15,942 n.; l. 440'2"; b. 36'; dr. 28'7"; s. 11 k.; cpl. 70)

Invincible, a cargo ship, was launched in 1918 by Bethlehem Shipbuilding Corp., San Francisco, Calif.; transferred to the Navy from USSB 17 October 1918 and commissioned the same day, Lt. Comdr. George H. Zeh in command.

Assigned to NOTS, *Invincible* took on cargo at Port Costa and sailed for New York 31 October via the Panama Canal. She arrived New York 25 November and departed for London with supplies for the Allies 11 December, arriving there 27 December.

Invincible left London 18 January 1919 and arrived New York 1 February. She made one more voyage to London before decommissioning 15 April 1919, and being returned to USSB the same day. The ship continued to sail for the Shipping Board and later for National Bulk Carriers, Inc., until the late 1930's.

Iolanda

A minor planet, No. 509.

(AKS-14: dp. 5,244; l. 441'6"; b. 56'11"; dr. 28'4"; s. 12 k.; cpl. 193; a. 1 5", 4 3"; cl. *Acubens*; T. EC2-S-C1)

Iolanda (AKS-14), originally a "liberty ship", was launched by New England Shipbuilding Corp., South Portland, Maine, 21 October 1944; sponsored by Mrs. J. Cary Jones; acquired and commissioned with a skeleton crew 31 October for transfer to Bethlehem Steel's Simpson Yard, East Boston, Mass. The ship decommissioned 2 November 1944 for conversion to Navy use, and commissioned in full 14 June 1945, Lt. Comdr. E. G. Kelly in command.

Following shakedown in the Chesapeake Bay area, *Iolanda* arrived Bayonne, N.J., 21 July 1945 to load almost 3,000 tons of general stores consisting of the almost 8,000 different items needed by the operating ships of the fleet. She departed 3 August for duty in the western Pacific and sailing via the Canal Zone and Pearl Harbor arrived Ulithi, America's bustling advance base in the western Carolines. *Iolanda* steamed into Ulithi 24 September to help supply America's victorious fleet. She steamed from Ulithi 30 September, to provision ships at Okinawa, Shanghai, and Hong Kong. The first day of 1946 saw her at Manus loading additional stores, and she departed 1 February to replenish vessels at Guam, Hong Kong, and Shanghai. *Iolanda* supplied both ships and shore stations in support of the occupation until departing Shanghai 10 April 1946. After a stopover at Guam she proceeded to Pearl Harbor, where she decommissioned 11 July 1946. Later towed to San Francisco, *Iolanda* was returned to the Maritime Commission 24 April 1947 and was placed in the National Defense Reserve Fleet, Suisun Bay, Calif., where she remains.

Iolite

A gem found in various shades of blue, with glassy luster and strong dichroism.

Iolite (PYc-24), a yacht, was reclassified YP-454 (q.v.) when her name was cancelled 23 June 1942.

I

(PYc-41: t. 200; l. 154'; b. 20; 7'6"; s. 10 k.)

Iolite (PYc-41), a yacht, was built in 1914 as *Florence D* by Geo. Lawley & Son, Neponset, Mass. She was purchased by the Navy 4 September 1942 from Julian F. Detmer, of Tarrytown, N.Y., converted to Navy use and commissioned 9 November 1942, Ens. C. J. Symington in command.

Iolite sailed from New York via Norfolk and Miami 15 December 1942 and arrived Key West 22 January 1943 for duty at the Sound school. The converted yacht carried out training operations in the Straits of Florida, testing underwater sound equipment and monitoring techniques vital to submarine and antisubmarine warfare. She was detached from this duty in May 1944 and sailed for New York 28 May. Arriving Tomkinsville, N.Y., 14 June, the ship was placed in service 17 June for use as a training ship for reserve officers. She was badly damaged by explosion 26 August 1944 and placed out of service 2 October 1944. Stricken from the Navy List 14 October *Iolite* was transferred to the Maritime Commission in 1945 and sold.

Iona

The first *Iona* retained her Spanish name. The second was named after the first.

I

(YT-107: l. 56'; b. 10'3"; dr. 5'8")

The first *Iona* (YT-107), a wooden tug, was captured from the Spanish at Cavite Navy Yard, Philippines, in 1898. She was taken over by the Navy and utilized as a yard tug at Cavite for many years. The old tug was lost 2 January 1942 in a Japanese raid on the Navy Yard.

II

(YTB-220: dp. 415; l. 110'; b. 28'; dr. 13'; s. 12 k.)

The second *Iona* (YTB-220), a wooden tug originally classified YT-220, was launched by Greenport Basin & Construction Co., Greenport, N.Y., 26 August 1944; sponsored by Mrs. Martina E. Swanson; and placed in service 2 February 1945.

The new tug was assigned harbor duty in the 14th Naval District, based at Pearl Harbor, and she remained there until transferred to the Philippine Islands in 1955. At Subic Bay *Iona* performed harbor duties so necessary for the smooth functioning of a great naval base and was reclassified YTM-220 in February 1962. In June, 1963, following accidental sinking in May, she was disposed of by burning.

Ionie

Iriquois (q.v.) was renamed *Ionie* 30 November 1904.

Ionita

A former name retained.

(SP-388; t. 1; l. 55'; b. 8'; dr. 2'2"; s. 19 k.; cpl. 5)

Ionita (SP-388), a motor yacht, was built by Church Boat Works, Trenton, Mich., in 1914; acquired by the Navy from her owner, R. A. Newman of Detroit 16 August 1917; and commissioned 23 September 1917, William W. Ford, USNRF, in command.

Ionita was assigned to the 9th Naval District as a section patrol craft and spent the war on patrol in the Detroit River. After the Armistice, she was transferred to the Naval Training Camp, Detroit, and was later sold to William Thewes, Cleveland, Ohio, 20 November 1919.

Iosco

(SwStr.: t. 974; l. 205'; b. 35'; dph. 11'6"; s. 9 k.; cpl. 173; a. 2 100-pdr. Pr., 4 9" D. sb., 2 24-pdr. how., 1 heavy 12-pdr., 1 12 pdr.)

Iosco, a wooden, double-ended, side-wheel gunboat, was launched by Larrabee & Allen, Bath, Maine, 20 March 1863; and commissioned at the Boston Navy Yard 26 April 1864, Comdr. A. J. Drake in command.

She was at New London, Conn., 9 June when ordered to New York to complete her crew.

Iosco sailed for the Gulf of St. Lawrence 28 August to protect American fishing vessels in that vicinity. Off Nova Scotia and Prince Edward Island, she assisted several ships endangered by fierce storms. She towed *General Burnside* off a reef 15 September and aided battered

U. S. S. *Iosco*, 1862.

Type of the *Sassacus* class; length, 240 feet; beam, 35 feet; disp., 1,173 tons.

In general appearance, without regard to dimensions, this vessel well represents the *Octorora* class of 1861 and the *Mohongo* class of 1863, as well as its own class of double-enders.

Colonel Ellsworth and the English bark *Empress* 2 days later.

Ordered to Hampton Roads 2 October to join the 1st Division of the North Atlantic Blockading Squadron, *Iosco* was stationed off Wilmington, where she captured British schooner *Sybil* attempting to escape to sea with 307 bales of cotton 21 November.

On Christmas Eve 1864, *Iosco* participated in the first amphibious attack on Fort Fisher, N.C. which protected Wilmington, one of the South's most active centers of blockade running and her last port of entry for European aid. Her guns engaged the batteries at Mound Fort and succeeded in shooting down the Confederate flag which flew above the works. During the firing a Confederate shot carried away the head of *Iosco's* foremast. The next day, she led nine other ships in an attack on the fortress, closing the shore as near as her draft would permit. Meanwhile her boats dragged the channel for torpedoes. Throughout the operation she protected the right flank of the Union troops ashore until they reembarked under orders from the Army commander, Major General B. F. Butler 27 December 1864.

A fortnight later *Iosco* was again in the thick of the fighting during the second attack on Fort Fisher. She assisted the landing of troops and covered the right flank of the Army as it fought on shore 13 January 1865. Forty-four of her own men fought beside the soldiers on the beaches while her cannon fired at the mound until the Confederates surrendered 15 January.

The remainder of *Iosco's* wartime service was in the North Carolina Sounds carrying out operations as Confederate resistance ceased. She sailed north 15 July and decommissioned 28 July 1865. Her engines were removed and her hull turned over to the Bureau of Construction

and Repair for service as a coal hulk at the New York Navy Yard in February 1868.

Iosco (AT-29) was renamed *Tatnuck* (q.v.) 24 February 1919.

Iowa

Iowa, the 29th state, was admitted to the Union, 28 December 1846, and was named for a Sioux Indian tribe that originally inhabited the Missouri Territory.

I

Ammonoosuc (q.v.) was renamed *Iowa* 15 May 1869.

II

(BB-4: dp. 11,346; l. 360'; b. 72'2"; dr. 24'; s. 17 k.; cpl. 727; a. 4 12", 8 8", 6 4", 20 6-pdrs., 4 1-pdrs., 24 14" tt.)

The second *Iowa* (BB-4) was laid down by William Cramp & Sons, Philadelphia, 5 August 1893; launched 28 March 1896; sponsored by Miss M. L. Drake, daughter of the governor of Iowa; and commissioned 16 June 1897, Captain W. T. Sampson in command.

After shakedown off the Atlantic Coast, *Iowa* was assigned to the Atlantic Fleet and was ordered to blockade duty, 28 May 1898, off Santiago de Cuba. On 3 July 1898, she was the first to sight the Spanish ships approaching and fired the first shot in the Battle of Santiago de Cuba. In a 20-minute battle with Spanish cruisers *Maria Teresa* (flagship) and *Oquendo*, her effective fire set both ships afire and drove them on the beach. *Iowa*

USS *Iowa* (BB-4)—Admiral Spruance served in her in 1906 and 1907.

continuing the battle in company with converted yacht *Gloucester*, sank the Spanish destroyer *Pluton* and so damaged destroyer *Furor* that she ran upon the rocks. *Iowa* then turned her attention to the Spanish cruiser *Viscaya* which she pursued until *Viscaya* ran aground. Upon the conclusion of the battle, *Iowa* received on board Spanish Admiral Cervera and the officers and crews of the *Viscaya*, *Furor* and *Pluton*.

After the Battle of Santiago, *Iowa* left Cuban waters for New York, arriving 20 August 1898. On 12 October 1898, she departed for duty in the Pacific, sailed around Cape Horn, and arrived San Francisco 7 February 1899. The battleship then steamed to Bremerton, Wash., where she entered drydock 11 June 1899. After refit, *Iowa* served in the Pacific Squadron for 2½ years, conducting training cruises, drills, and target practice. *Iowa* left the Pacific early in February 1902 to become flagship of the South Atlantic Squadron. She sailed for New York 12 February 1903 where she decommissioned 30 June 1903.

Iowa recommissioned 23 December 1903 and joined the North Atlantic Squadron. She participated in the John Paul Jones Commemoration ceremonies, 30 June 1905. *Iowa* remained in the North Atlantic until she was placed in reserve 6 July 1907. She decommissioned at Philadelphia 23 July 1908.

Iowa recommissioned 2 May 1910 and served as an at sea training ship and as a component of the Atlantic Reserve Fleet. During the next 4 years she made a number of training cruises to Northern Europe and participated in the Naval Review at Philadelphia, 10 to 15 October 1912. She decommissioned at Philadelphia Navy Yard 27 May 1914. At the outbreak of the first World War, *Iowa* was placed in limited commission 23 April 1917. After serving as Receiving Ship at Philadelphia for 6 months, she was sent to Hampton Roads, Va., and remained there for the duration of the war, training men for other ships of the Fleet, and doing guard duty at the entrance to Chesapeake Bay. She decommissioned for the final time 31 March 1919.

On 30 April 1919, *Iowa* was renamed *Coast Battleship No. 4*, and was the first radio controlled target ship to be used in a fleet exercise. She was sunk 23 March 1923 in Panama Bay by a salvo of 14-inch shells.

BB-53 was laid down as *Iowa* at Newport News Shipbuilding & Drydock Co., 17 May 1920, but on 8 February 1922, work was suspended when the ship was 31.8 percent complete. Construction was cancelled 17 August 1923 in accordance with the terms of the Washington Treaty limiting Naval armaments. She was sold for scrap 8 November 1923.

III

(BB-61: dp. 45,000 t.; l. 887'3"; b. 108'2"; dr. 37'9"; s. 33 k.; cpl. 2,800; a. 9 16", 20 5"; cl. *Iowa*)

The third *Iowa* (BB-61) was laid down at New York Navy Yard, 27 June 1940; launched 27 August 1942; sponsored by Mrs. Henry A. Wallace, wife of Vice President Wallace, and commissioned 22 February 1943, Capt. John L. McCrea in command.

On 24 February, *Iowa* put to sea for shakedown in Chesapeake Bay and along the Atlantic coast. She got underway, 27 August for Argentinia, Newfoundland to neutralize the threat of German Battleship *Tirpitz* which was reportedly operating in Norwegian waters.

In the fall, *Iowa* carried President Franklin D. Roosevelt to Casablanca, French Morocco on the first leg of his journey to the Teheran Conference in November. After the conference she returned the President to the United States.

As Flagship of Battleship Division 7, *Iowa* departed the United States 2 January 1944 for the Pacific Theatre and her combat debut in the campaign for the Marshalls. From 29 January to 3 February, she supported carrier air strikes made by Rear Admiral Frederick C. Sherman's task group against Kwajalein and Eniwetok Atolls in the Marshall Islands. Her next assignment was to support

air strikes against the Japanese Naval base at Truk, Caroline Islands. *Iowa*, in company with other ships was detached from the support group 16 February, 1944 to conduct an anti-shipping sweep around Truk to destroy enemy naval vessels escaping to the north. On 21 February, she was underway with Fast Carrier Task Force 58 while it conducted the first strikes against Saipan, Tinian, Rota, and Guam in the Marianas.

On 18 March, *Iowa*, flying the flag of Vice Admiral Willis A. Lee, Commander Battleships, Pacific, joined in the bombardment of Mili Atoll in the Marshall Islands. Although struck by two Japanese 4.7" projectiles during the action, *Iowa* suffered negligible damage. She then rejoined Task Force 58, 30 March, and supported air strikes against the Palau Islands and Woleai of the Carolines which continued for several days.

From 22 to 28 April 1944, *Iowa* supported air raids on Hollandia, Aitape, and Wakde Islands to support Army forces on Aitape, Tanahmerah Bay, and Humboldt Bay in New Guinea. She then joined the Task Force's second strike on Truk, 29-30 April, and bombarded Japanese facilities on Ponape in the Carolines, 1 May.

In the opening phases of the Marianas campaign, *Iowa* protected the flattops during air strikes on the islands of Saipan, Tinian, Guam, Rota, and Pagan, 12 June. *Iowa* was then detached to bombard enemy installations on Saipan and Tinian, 13-14 June. On 19 June, in an engagement known as the Battle of the Philippine Sea, *Iowa*, as part of the battle line of Fast Carrier Task Force 58, helped repel four massive air raids launched by the Japanese Middle Fleet. This resulted in the almost complete destruction of Japanese carrier-based aircraft. *Iowa* then joined in the pursuit of the fleeing enemy Fleet, shooting down one torpedo plane and assisting in splashing another.

Throughout July, *Iowa* remained off the Marianas supporting air strikes on the Palaus and landings on Guam. After a month's rest, *Iowa* sortied from Eniwetok as part of the 3d Fleet, and helped support the landings on Peleliu, 17 September. She then protected the carriers during air strikes against the Central Philippines to neutralize enemy air power for the long awaited invasion of the Philippines. On 10 October, *Iowa* arrived off Okinawa for a series of air strikes on the Ryukyus and Formosa. She then supported air strikes against Luzon, 18 October and continued this vital duty during General MacArthur's landing on Leyte 20 October.

In a last ditch attempt to halt the United States campaign to recapture the Philippines, the Japanese Navy struck back with a three-pronged attack aimed at the destruction of American amphibious forces in Leyte Gulf. *Iowa* accompanied TF-38 during attacks against the Japanese Central Force as it steamed through the Sibuyan Sea toward San Bernardino Strait. The reported results of these attacks and the apparent retreat of the Japanese Central Force led Admiral Halsey to believe that this force had been ruined as an effective fighting group. *Iowa*, with Task Force 38, steamed after the Japanese Northern Force off Cape Engano, Luzon. On 25 October 1944, when the ships of the Northern Force were almost within range of *Iowa*'s guns, word arrived that the Japanese Central Force was attacking a group of American escort carriers off Samar. This threat to the American beachheads forced her to reverse course and steam to support the vulnerable "baby carriers." However, the valiant fight put up by the escort carriers and their screen had already caused the Japanese to retire and *Iowa* was denied a surface action. Following the Battle for Leyte Gulf, *Iowa* remained in the waters off the Philippines screening carriers during strikes against Luzon and Formosa. She sailed for the West Coast late in December 1944.

Iowa arrived San Francisco, 15 January 1945, for overhaul. She sailed 19 March 1945 for Okinawa, arriving 15 April 1945. Commencing 24 April 1945, *Iowa* supported carrier operations which assured American troops vital air superiority during their struggle for that bitterly contested island. She then supported air strikes off

southern Kyushu from 25 May to 13 June 1945. *Iowa* participated in strikes on the Japanese homeland 14-15 July and bombarded Muroran, Hokkaido, destroying steel mills and other targets. The city of Hitachi on Honshu was given the same treatment on the night of 17-18 July 1945. *Iowa* continued to support fast carrier strikes until the cessation of hostilities, 15 August 1945.

Iowa entered Tokyo Bay with the occupation forces, 29 August 1945. After serving as Admiral William F. Halsey's flagship for the surrender ceremony, 2 September 1945, *Iowa* departed Tokyo Bay 20 September 1945 for the United States.

Arriving Seattle, Wash., 15 October 1945, *Iowa* returned to Japanese waters in January 1946 and became flagship of the 5th Fleet. She continued this role until she sailed for the United States 25 March 1946. From that time on, until September 1948, *Iowa* operated from West Coast ports, on Naval Reserve and at sea training and drills and maneuvers with the Fleet. *Iowa* decommissioned 24 March 1949. After Communist aggression in Korea necessitated an expansion of the active fleet, *Iowa* recommissioned 25 August 1951, Captain William R. Smedberg III in command. She operated off the West Coast until March 1952, when she sailed for the Far East. On 1 April 1952, *Iowa* became the flagship of Vice Admiral Robert T. Briscoe, Commander, 7th Fleet, and departed Yokosuka, Japan to support United Nations Forces in Korea. From 8 April to 16 October 1952, *Iowa* was involved in combat operations off the East Coast of Korea. Her primary mission was to aid ground troops, by bombarding enemy targets at Songjin, Hungnam, and Kojo, North Korea. During this time, Admiral Briscoe was relieved as Commander, 7th Fleet. Vice Admiral J. J.

Clark, the new commander, continued to use *Iowa* as his flagship until 17 October 1952. *Iowa* departed Yokosuka, Japan 19 October 1952 for overhaul at Norfolk and training operations in the Caribbean Sea.

Iowa embarked midshipmen for at sea training to Northern Europe, July 1953, and immediately after took part in Operation "Mariner," a major NATO exercise, serving as flagship of Vice Admiral E. T. Woolfidge, commanding the 2d Fleet. Upon completion of this exercise, until the fall of 1954, *Iowa* operated in the Virginia Capes area. In September 1954, she became the flagship of Rear Admiral R. E. Libby, Commander, Battleship-Cruiser Force, U.S. Atlantic Fleet.

From January to April 1955, *Iowa* made an extended cruise to the Mediterranean as the first battleship regularly assigned to Commander, 6th Fleet. *Iowa* departed on a midshipman training cruise 1 June 1955 and upon her return, she entered Norfolk for a 4-month overhaul. Following refit, *Iowa* continued intermittent training cruises and operational exercises, until 4 January 1957 when she departed Norfolk for duty with the 6th Fleet in the Mediterranean. Upon completion of this deployment, *Iowa* embarked midshipmen for a South American training cruise and joined in the International Naval Review off Hampton Roads, Va., 13 June 1957.

On 3 September 1957, *Iowa* sailed for Scotland for NATO Operation "Strikeback." She returned to Norfolk, 28 September 1957 and departed Hampton Roads for the Philadelphia Naval Shipyard, 22 October 1957. She decommissioned 24 February 1958 and entered the Atlantic Reserve Fleet at Philadelphia, where she remains.

Iowa earned nine battle stars for World War II service and two for Korean service.

USS *Iowa* (BB-61) in Korean Action 1952

Iowan

Former name retained.

(Str: dp. 14,375 n.; l. 428'9"; b. 53'6"; dr. 28'; s. 14 k.; cpl. 96; a. 1 4", 1 6-pdr.)

Iowan (#3002) was launched in 1911 by the Maryland Steel Co., Sparrows Point, Md.; acquired by the Navy from American-Hawaiian Steamship Co., New York; and commissioned 23 December 1917, Lt. Comdr. Frank L. Dow, USNRF, in command.

Iowan loaded cargo at Newport News, Va., and sailed 9 February 1918 for New York to rendezvous with her convoy. The convoy departed from New York 11 February for France, where she arrived on the 28th with a cargo of flour, iron, and machinery for the Allied Forces. For the next 16 months *Iowan* continued transporting food-stuffs and livestock, making nine round-trip voyages between the United States and France.

After the signing of the Treaty of Versailles in June 1919, *Iowan* engaged in transporting troops back to the United States. She made two cruises for that purpose during July and August, before decommissioning 22 September 1919. She was then returned to the American-Hawaiian Steamship Co.

Ipswich

A city in Massachusetts.

(PC-1186: dp. 295; l. 174'; b. 23'; dr. 8'; s. 19 k.; cpl. 65; a. 1 3", 1 40mm., 2 20mm., 2 rkt., 4 dep., 2 dct.)

PC-1186 was laid down by the Gibbs Gas Engine Co., Jacksonville, Fla., 20 April 1943; launched 27 September; sponsored by Mrs. George Wharton; and commissioned 9 June 1944, Lt. (j.g.) Paul L. Adams in command.

After shakedown and ASW training off Miami, Fla., *PC-1186* was assigned to convoy escort duty in the Atlantic. From August to December she performed escort, patrol, and reconnaissance duties from the coast of New England to Guantanamo, Cuba. Late in December 1944 she arrived Coco Solo, C.Z., for patrol and escort operations between the Panama Canal and Cuba.

PC-1186 continued these services for the remainder of World War II. After the war, she patrolled off the Canal Zone and performed training exercises with submarines until 7 May 1946 when she sailed for Charleston, S.C. The sub chaser decommissioned at New York 22 July 1946, and joined the Atlantic Reserve Fleet. While berthed at Boston, *PC-1186* was named *Ipswich* 15 February 1956. *Ipswich* was struck from the Navy List 1 April 1959 and sold to Hughes Brothers, Inc., 16 September 1959.

Ira Jeffery

Ira Weil Jeffery was born Minneapolis, Minn., 8 March 1918, and enlisted in the Navy 23 August 1940. He was appointed Midshipman in 1941 and, after undergoing officer training at the Naval Reserve Midshipman's School, Northwestern University, was commissioned Ensign 12 June 1941. He reported to battleship *California* 25 July 1941. During the Japanese sneak attack on Pearl Harbor 7 December 1941, Ensign Jeffery organized an ammunition passing party at great risk to his own life in an attempt to maintain a supply of ammunition for the stricken ship's anti-aircraft guns. Ensign Jeffery was killed in the attack, and received a letter of commendation from the Secretary of the Navy for his valor.

(DE-63; dp. 1,400; l. 306'; b. 37'; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3", 4 1.1", 8 20mm., 2 dct., 8 dep., 1 dep. (h.h.), 3 21" tt.; cl. *Buckley*)

Ira Jeffery (DE-63) was laid down as *Jeffery* 13 February 1943 by Bethlehem-Hingham Shipyard, Inc., Hingham, Mass.; launched 15 May 1943; sponsored by Mrs.

D. C. Jeffery, mother of Ensign Jeffery; renamed *Ira Jeffery* 29 July 1943; and commissioned 15 August 1943, Lt. Comdr. R. A. Fitch in command.

Ira Jeffery conducted shakedown training off Bermuda and in Casco Bay, Maine, before returning to Naval Torpedo Station, Quonset, R.I., for experiments with noise-makers designed to counter the German acoustic torpedo. She then moved to New York and departed 5 November 1943 with her first Atlantic convoy. During the next year she sailed with seven Atlantic troop convoys, seeing each safely to staging points in Northern Ireland or Great Britain. After her return to Charleston 22 October 1944, *Ira Jeffery* joined a large convoy of cranes, powerplants, and tugs bound for the invasion ports of Europe. On the return crossing 20 December 1944 the escort's convoy was attacked by a German submarine. After sinking an LST and damaging *Fogg*, the submarine was driven off. *Ira Jeffery* assisted the damaged ship and eventually escorted her through rough seas to the Azores.

Returning to the United States 1 February 1945, the ship spent two weeks working with experimental mines in Chesapeake Bay. She entered the New York Naval Shipyard 15 February for conversion to a high-speed transport. After the installation of troop quarters and extensive alterations she emerged in May 1945 as APD-44 (officially reclassified 23 February 1945) and departed 12 May for shakedown in Chesapeake Bay. *Ira Jeffery* then sailed 25 May with carrier *Antietam* for the Panama Canal and Pearl Harbor, where she arrived 18 June 1945.

After training in Hawaiian waters, the ship returned to San Diego 23 July and began training with underwater demolition teams. She sailed 16 August, 1 day after the war's end for the forward areas, stopping at Eniwetok, Ulithi, and Manila. After demolition exercises in Lingayen Gulf, she sailed to Wakayama, Japan, where underwater demolition teams reconnoitered beaches prior to American occupation landings. After the successful operation *Ira Jeffery* sailed for the United States, arriving San Diego 20 November 1945.

The ship sailed via the Panama Canal for the East Coast and after her arrival Philadelphia 8 December underwent repairs. *Ira Jeffery* then sailed to Jacksonville, Fla., and decommissioned at Green Cove Springs 18 June 1946. She entered the Atlantic Reserve Fleet and remained there until struck from the Navy List 1 June 1960. She was sunk during tests in July 1962.

Iredell

A county in North Carolina.

Iredell (APA-242), a *Haskell*-class victory transport, was under construction by Oregon Shipbuilding Co., Portland, Oreg., under Maritime Commission contract, but was cancelled 27 August 1945.

Iredell County

A county in North Carolina.

(LST-839: dp. 1,625; l. 328'; b. 50'; dr. 14'1"; s. 12 k.; cpl. 226; a. 8 40mm., 12 20mm.; cl. *LST-542*)

LST-839 was laid down by American Bridge Co., Ambridge, Pa., 25 September 1944; launched 12 November 1944; sponsored by Mrs. Arthur Lehner; and commissioned at New Orleans, La., 6 December 1944, Lt. Waldo F. McNeir in command.

After shakedown off the coast of Florida, *LST-839* loaded Army troops and cargo and departed New Orleans for the Pacific 9 January 1945. Steaming via the Panama Canal, Pearl Harbor, and Eniwetok, she reached Saipan 10 March. There she prepared to support the invasion of Okinawa; and, after embarking Seabees and loading construction equipment, she sailed 12 April for that

strategic island, which lay at the gateway to the heart of the Japanese Empire.

The campaign was well underway when *LST-839* reached Kinmu Wan, Okinawa, 17 April. Despite heavy enemy air raids, she debarked troops and discharged cargo, then returned to Saipan 21 April to transport additional troops. During the 4 remaining months of the war, she shuttled troops and equipment among the Marianas, Philippine, and Okinawa staging areas for the possible invasion of Japan. The enemy's acceptance of Allied peace terms precluded an invasion, and the landing ship then operated between the Philippines and Japan, transporting occupation forces until mid-November.

Arriving Guam 12 November, *LST-839* embarked 500 veterans of the Pacific fighting and sailed 17 November for the United States. Steaming via Pearl Harbor, she reached San Francisco 28 December. She sailed for Astoria, Oreg., 25 January 1946; decommissioned at Vancouver, Wash., 24 July; and entered the Pacific Reserve Fleet. While berthed in the Columbia River, she was named *Iredell County* 1 July 1955.

Iredell County recommissioned at San Diego, Calif., 18 June 1966. Completing training, *Iredell County* sailed to join the 7th Fleet 3 September 1966. En route to Japan with her first cargo since 1945, she called at Pearl Harbor and her new homeport of Guam. Exchanging cargo at Iwakuni, Japan, on 12 October *Iredell County* departed for Danang, Vietnam, arriving 21 October. She shuttled petroleum, building materials, rations, troops, and equipment between Danang and Chu Lai, 65 miles to the south. *Iredell County* transported more than 7,360 tons of cargo and made 12 landings. She sailed to Guam 15 December 1966. In response to the American effort to protect and defend the independence and integrity of South Vietnam from external Communist aggression, she continues to serve the Pacific Fleet and participate in the vital peace-keeping operations currently underway in the turbulent and troubled Southeast Asia.

LST-839 received one battle star for World War II service.

Irene Forsythe

(IX-93: l. 144'; b. 27'7"; s. 13 k.; a. 1'4", 1 40mm., 2 20mm., 1 ASW rocket)

Irene Forsythe (IX-93), a schooner, was built in 1920 as *Irene Myrtle* by MacLean Construction Co., Mahone Bay, Nova Scotia, and was purchased by the Navy 16 November 1942 from Thomas Antle of Parrsboro, Nova Scotia. Renamed *Irene Forsythe*, she was converted for Navy use at Thames Shipyard, New London, Conn., and commissioned 26 August 1943, Lt. Comdr. R. Parmenter in command.

Irene Forsythe was one of five "Q ships" used by the Navy in World War II. Based on the experience of World War I, it was hoped that these ships, with their relatively heavy armament concealed, could act as decoys to lure submarines into close quarters on the surface and then sink them. The schooner sailed 29 September 1943 with a volunteer crew. Off Nantucket Island she changed her name and flag to that of a Portuguese fishing schooner and stood southeast in hopes of encountering submarines. Caught in a hurricane near Bermuda, *Irene Forsythe* was severely damaged and averted sinking only by anchoring in Hamilton Sound, Bermuda. She was recommissioned and prepared to resume her cruise; but, when it was decided that the project held little promise of sinking enemy submarines, she was ordered back to the United States.

The schooner arrived New York 8 November 1943 and decommissioned 16 December 1943 for return to the Maritime Commission. She was used for a time on a loan basis by the Merchant Marine Cadet Corps as a training ship and returned to the Navy for disposal in November 1944. *Irene Forsythe* was sold at public auction 18 October 1945.

Irene W. Allen, see Y0-141

Irex

One of the oceanic fishes belonging to the family *carangidae*.

(SS-482: dp. 1,570; l. 311'8"; b. 27'4"; dr. 15'5"; s. 20 k.; cpl. 81; a. 1 5", 2 40mm., 4 .50 cal. mg., 4 .30 cal. mg., 10 21" tt.; cl. *Tench*)

Irex (SS-482) was launched 26 January 1945 by Portsmouth Navy Yard, Portsmouth, N.H.; sponsored by Mrs. Allen J. Ellender, wife of Senator Ellender of Louisiana; and commissioned 14 May 1945, Comdr. J. D. Crowley in command.

After shakedown in the New London area, *Irex* sailed for the Pacific via the Panama Canal. While she was in the Canal Zone, the war ended. *Irex* was ordered to Key West, where she joined Submarine Squadron 4. She spent the remainder of the year there and at Guantanamo Bay conducting exercises. By December 1946 the Navy had completed plans for the modern telescopic snorkel (a device to enable diesel-powered submarines to run submerged for long periods of time), and *Irex* was ordered to Portsmouth for installation and test of this equipment. She spent July 1947 to February 1948 evaluating her new apparatus and then joined Submarine Squadron 8 at New London as the U.S. Navy's first operational snorkel submarine.

For the next 3 years *Irex* trained out of New London and off the Virginia Capes. In May 1951 she was assigned patrol duty in the North Atlantic and in August commenced operations out of Key West and Cuba. Returning to New London in the fall, *Irex* continued her important training out of New England and in the Caribbean until 26 October 1953 when she sailed for the Mediterranean to join the 6th Fleet. Returning to New London 3 February 1954 *Irex* resumed her operations along the East Coast and in the Caribbean for the next 2 years.

Irex again deployed in 1956 to the Mediterranean with units of the powerful 6th Fleet. In the developing Middle East crisis that culminated in the nationalization of the Suez Canal (July 1956) and armed conflict between Egypt and the forces of France, Israel, and the United Kingdom, U.S. Naval forces acted early to support America's policy. In February, patrols in the Red Sea and along the Israeli-Egyptian border were established as a means of expressing our interest in the peaceful outcome of the crisis. Returning to New London, she resumed her operations and also served as training ship for submarine students.

During early 1957 *Irex* participated in fleet exercises and again served as training ship. In July she entered Philadelphia Naval Shipyard where she was fitted out with a new type plastic sail. The plastic sail, which replaced the World War II conning tower, is lighter in weight, higher, and acts as a stabilizer. With the exception of one tour to the Mediterranean (13 September-20 December 1958) and training cruises to Bermuda and Halifax, *Irex* continued her operations out of New London for the next year and a half. In early 1960 she took part in fleet exercises in the North Atlantic before returning home 3 March. After operations out of New London, and a training cruise to Halifax, *Irex* deployed 1 August 1961 for submarine warfare training with the 6th Fleet in the Mediterranean. She returned to New London in November, ranging south to Bermuda and north to New York and Boston as she trained reservists and men of the New London Submarine School. She based winter operations January to March 1963 from Puerto Rico and the Virgin Islands, then was overhauled in the Philadelphia Naval Shipyard before resuming training at New London. In October 1963 she again sailed for the Mediterranean, taking time out during this 6th Fleet tour to transit Suez Canal for CENTO exercises in the Red and Arabian Seas. She returned home mid-January 1965 to aid in the development of antisubmarine warfare tactics, joined U.S.-Canadian warfare exercises reaching northward to Nova Scotia, then returned home to New London in November 1965 and continued local training duties into 1967.

Iris

In Greek mythology, the goddess of the rainbow.

I

(Str: t. 388; l. 145' d.; b. 27'; dr. 9'9"; cpl. 70;
a. 1 32-pdr.)

The first *Iris* was a wooden steamer propelled by radial paddle wheels built at New York in 1847 and purchased there by the Navy in the same year. She commissioned at New York Navy Yard 25 October 1847, Comdr. Stephen B. Wilson in command.

The next day *Iris* departed New York Harbor for Vera Cruz, Mexico, where she arrived 11 December. With the exception of a brief visit to Mobile, Ala., in February 1848 and a voyage to Pensacola, Fla., in September, *Iris* remained on duty in the vicinity of Vera Cruz for the next year. During the closing months of the Mexican War, she assisted in maintaining the blockade of the coast of Mexico and protected the Army's water communications. Thereafter she vigilantly protected United States interests in that volatile area lest trouble break out anew.

Iris departed Vera Cruz 8 November and arrived Norfolk 16 December. She decommissioned there 16 December and was sold soon thereafter. She redocumented as *Osprey* 9 March 1849, being destroyed by fire at Kingston, Jamaica, 18 April 1856.

II

(SwStr: t. 159; l. 87'; b. 19'; dr. 9'; s. 10 k.; cpl. 34;
a. 2 20-pdr. P. r.)

The second *Iris* was built as *Willet Rowe* at Brooklyn, N.Y., in 1863 and was purchased by the Navy in New York City from C. W. Copeland 16 October of that year. She was outfitted as an armed tug and sailed from New York 2 November to join the South Atlantic Blockading Squadron off Charleston 6 November. She took station inside the bar at Charleston where she served faithfully during most of the remainder of the war.

Iris steamed with *Nipsic* to the North Edisto River 8 February 1864 to support a reconnaissance in force undertaken by the Army as a diversion to prevent Southern troops in the Charleston area from moving to Florida for action against Brigadier General Truman Seymour. A week later she was back at her old station inside the bar.

On 12 December *Iris* moved to the Savannah River to be on hand to support General W. T. Sherman at the end of his march through Georgia to the sea where he was assured of supplies and a secure operating base behind the big guns of the Navy. From Savannah she sailed to Port Royal for repairs, arriving 1 January 1865.

Iris returned to service early in February in time to participate in the expedition to Bull's Bay which diverted Confederate troops from General Sherman's path as he marched north close to the sea ever ready to retire to the coast under Naval protection if necessary. The combined forces departed Charleston Roads on the night of 11 February and entered Bull's Bay before daybreak the next morning. The Union ships engaged enemy forts at Andersonville 13 February but found the Confederate positions too strong to carry. The next 2 days were spent exploring the marshlands in the area seeking a route which would enable the Northern vessels to approach Andersonville from the rear. A passage was found on the night of 15 February enabling *Iris* and other ships to land troops behind the fortress which soon fell. This diversionary movement was one of the factors which compelled the Confederacy to evacuate Charleston where the war had begun four long years earlier, with the firing on Fort Sumter.

Iris remained in Charleston until 28 April when she sailed with eight other ships to the coast of Florida to intercept Jefferson Davis and his cabinet in their flight toward political asylum in Cuba. Upon learning of Davis' capture at Irwinville, Ga., she returned to Charles-

ton where she remained until sailing north with Rear Admiral Dahlgren in *Pawnee* 17 June.

She decommissioned at Washington Navy Yard 15 July 1865 and was transferred to the Treasury Department for the Lighthouse Service 18 October 1865.

III

The third *Iris* was a light-draft monitor built as *Shiloh* (*q.v.*) by George C. Bestor at St. Louis in 1865. She had no service before being laid up at Mound City, Ill. in 1866. She was renamed *Iris* 15 June 1869 and was laid up at New Orleans until 17 September 1874 when she commissioned briefly. After decommissioning 5 October 1874, *Iris* was sold at New Orleans.

IV

(ScStr: 1,923; l. 321'0"; b. 39'0"; dr. 24'0"; s. 10 k.;
cpl. 124; a. none)

The fourth *Iris* was built in 1885 by A. Leslie & Co., Newcastle, England, and was purchased by the Navy from Miami Steamship Co. 25 May 1898 for service in the Spanish American War. However, reconditioning and conversion to a distilling ship was not completed until after the end of active operations against Spain. *Iris* commissioned at Norfolk Navy Yard 1 August 1898, Lt. Arthur B. Connor in command.

The distilling ship departed Norfolk 31 August and arrived Montauk Point, N.Y., 5 September. She departed New York Harbor 14 October for the Philippine Islands arriving Manila 18 March 1899. She acted as a general utility ship for the Asiatic Squadron in the Philippines during the occupation of the islands and during the subsequent insurrection. She decommissioned for repairs at Hong Kong 31 January 1900 and resumed duty in May.

Iris sailed for home in the fall of 1903 arriving San Francisco 13 November and decommissioning at Mare Island Navy Yard 18 December. She was overhauled there and placed in service as a collier for the Asiatic Squadron. For the next 5 years, she fueled United States vessels in the Orient.

She departed Manila 20 May 1909 for San Francisco where she was converted to a torpedo boat tender. She was placed out of service 15 October and recommissioned the same day. During the following years she served as parent ship for the Pacific Torpedo Fleet operating off the West Coast of the United States.

In the fall of 1915 disorder in Mexico threatened American citizens and interests. *Iris* arrived Topolobampo, Mexico 9 December to begin patrol duty on the Mexican coast. She remained in the area ready to act in the event of any emergency until departing La Paz, Mexico, 30 January 1916. She arrived San Diego, Calif., 4 February and began duty towing targets off southern California.

Two months later *Iris* was ordered to San Francisco. After arriving 16 April, she decommissioned at Mare Island 2 May 1916. *Iris* was transferred to the USSB 3 May 1917.

V

(ScStr: t. 428; l. 153'0"; b. 30'0"; dr. 8'7"; cpl. 23; a.
2 3-pdrs., 2 mg.)

The fifth *Iris* was a lighthouse tender built for the United States Lighthouse Service at Philadelphia in 1897. She was transferred to the Navy with the entire Lighthouse Service by Executive order 11 April 1917. She was returned to the custody of the Department of Commerce 1 July 1919.

Irish, W. M., see *Nausett* (IX-190)

Iro

(Str: t. 1,271; l. 256'; b. 37'7"; dr. 9'; s. 10 k.)

Iro, a wooden steamer, was launched in 1889 by the Bath Iron Works, Bath, Maine. The Navy acquired her

8 August 1918 from the Hudson Navigation Co., New York City. *Iro* served as a patrol and freight boat in the 5th Naval District, operating out of Norfolk, until she was returned to her owner 30 April 1919.

Iron Age

(ScStr: t. 424; l. 144'; b. 25'; dph. 12'6"; a. 3 30-pdr. D.R., 6 8' D.)

Iron Age was built at Kennebunk, Maine, in 1862; then purchased by the Navy at Boston 28 April 1863 and commissioned 25 June 1863, Lt. Comdr. E. E. Stone in command. That day she sailed from Boston in search of Confederate commerce raider, *Tacony*, which was taking a heavy toll of New England shipping. After learning that the enemy cruiser had been burned and her crew captured, *Iron Age* returned to Boston 7 July. She spent the rest of the summer in New England waters protecting Union commerce, fisheries, and coasts.

Iron Age was transferred to the North Atlantic Blockading Squadron 3 September and sailed for Wilmington, N.C., 2 days later, arriving off New Inlet 11 September. On her fifth day of blockade duty she discovered a runner attempting to escape, drove her back, and forced her to run ashore just abreast of Fort Fisher. On 21 October she assisted *Nanscomod* and *Niphon* in destroying blockade runner *Venus*. Christmas Eve that year was the occasion for a raid on salt works at Bear Inlet. A large stockpile of salt desperately needed by the South was destroyed. This blow was doubly effective since the raiders also prevented the manufacture of a new supply by smashing the irreplaceable equipment in the plants.

Iron Age and *Daylight* were ordered to Lockwood's Folly Inlet, near Wilmington, to try to float grounded blockade runner *Bendigo* 9 January 1864. The following morning at 0900 *Iron Age* ran hard aground. After untiring efforts to lighten her failed to refloat the ship, she was put to the torch at 0400 11 January 1864 and was destroyed 1 hour and 40 minutes later when her magazine exploded.

Iron County

Counties in Michigan, Mississippi, Utah, and Wisconsin.

(LST-840: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 266; a. 8 40mm., 12 20mm.; cl. LST-542)

LST-840 was laid down by American Bridge Co., Ambridge, Pa., 28 September 1944; launched 15 November; sponsored by Mrs. C. W. Doerr; and commissioned 11 December, Lt. David McC. Bon in command.

Following shakedown off Florida, LST-840 loaded cargo at Gulfport, Miss.; then sailed 14 January 1945 for the Pacific. Additional cargo stops were made at San Francisco and Seattle before departing for the Marshall Islands. She arrived Eniwetok 24 March.

After preparations in the Marshall and Caroline Islands, the landing ship departed Ulithi 12 April for Okinawa. The battle for this strategic island, which lay at the gateway to the Japanese homeland, was well underway when LST-840 arrived on the 18th. She unloaded combat engineers and equipment, then returned Ulithi 5 May.

For the remainder of World War II, she shuttled troops and cargo throughout the American staging areas in the Pacific. After V-J Day, LST-840 operated with U.S. occupation forces in Japan and Okinawa for the next 3 months. Embarking 500 marines at Guam, she departed 11 November en route to Pearl Harbor and the United States. Arriving San Diego 15 December, she remained on the West Coast until she decommissioned at Vancouver, Wash., 1 June 1946, joining the Columbia River Group, Pacific Reserve Fleet.

In the effort to stop Communist aggression in South Korea, veteran ships were called out of reserve to provide support for the U.N. forces in Asia. LST-840 recommis-

sioned 3 November 1950, Lt. Merle A. Coe in command. Following training off the West Coast and Hawaii, she loaded trucks and equipment, then departed Honolulu 1 May 1951 for the Pacific staging areas. From June to November, the loading ship operated between Korea and Japan, shuttling cargo and prisoners of war along the war-torn peninsula.

She returned to the United States 27 November and, following overhaul, she departed Oakland, Calif., 16 May 1952 for duty in Alaska. LST-840 performed cargo operations there for 6 months before returning to San Diego. On 13 March 1953, she sailed on her second Korean tour, arriving Yokosuka 1 May. For the duration of the conflict, she remained in the Inchon vicinity and after the July truce continued peacekeeping operations in the Far East until late November.

After a stay in the United States, LST-840 was back in the Far East, arriving Henrietta Pass, French Indochina, 28 October 1954. In the aftermath of the Indochinese War, she loaded French troops and equipment and shuttled them along the coast of southeast Asia. Arriving Subic Bay 22 November, she operated in the Far East until April 1955, then steamed for San Diego.

LST-840 was named *Iron County* 1 July 1955 and on 10 January 1956 she was en route to Pearl Harbor, her new home port. From January 1956 to November 1957, she performed amphibious exercises out of Hawaii, returning to the West Coast 23 November. *Iron County* remained at San Francisco until 1 July 1958 when she was transferred to the Republic of China under the Military Assistance Program. She now serves the Chinese Nationalist Navy as *Chung Fu*.

Ironsides Jr.

Ironsides Jr., occasionally called simply *Ironsides*, was a bark chartered by the Navy at Port Royal, S.C., in August 1863. She was used as a storeship at Port Royal until 1 June 1864, the date of the last reference to her in the *Official Records of the Union and Confederate Navies in the War of the Rebellion*.

Ironwood

Any one of many trees or shrubs of several species with unusually strong, hard, or heavy wood.

Ironwood (YN-67) was renamed *Lanccwood* (q.v.) 3 April 1943 prior to launching.

Iroquois

A powerful and warlike Indian confederacy formerly inhabiting central New York.

I

(StSlp: t. 1,016; l. 198'11"; b. 33'10"; dr. 13'; s. 11 k.; a. 1 50-pdr., 4 32-pdrs., 1 12-pdr. how.)

The first *Iroquois*, a steam sloop of war, was launched by the New York Navy Yard 12 April 1859 and commissioned 24 November 1859, Comdr. J. S. Palmer in command.

Iroquois got underway from New York 19 January 1860 for duty in the Mediterranean. Her service came at a time of political unrest in Europe, with the movement for Italian unification in its beginning stages. *Iroquois* sailed for Palermo, Sicily, to protect American lives and property as Garibaldi began his campaign to drive French troops from the island. The Italian patriot came on board *Iroquois* 20 June 1860 and conferred with Comdr. Palmer.

The ship operated in the Mediterranean into 1861, but the impending Civil War brought greater demands on

the Navy and she was recalled. Arriving 15 June 1861 at New York, she was immediately sent to the Caribbean to search out and destroy southern commerce raiders. At Martinique she found *Sumter* anchored in the harbor. But the Confederate ship, under command of Semmes, with the assistance of French authorities slipped out 23 November to resume attacks on Union shipping. *Iroquois* continued her patrol in the Caribbean. On 14 January 1862 she stopped British sloop *Rinaldo*. On board were Confederate ministers Mason and Slidell, captured earlier by Union ships but released; Comdr. Palmer allowed them to proceed under surveillance.

Iroquois was sent later in 1862 to join Flag Officer Farragut at the mouth of the Mississippi, in preparation for his attack on New Orleans. Arriving off Ship Island 28 March, the ship moved to a position below Forts Jackson and St. Philip, guarding New Orleans, 16 April. Comdr. D. D. Porter's mortar boats then began a devastating bombardment, and by 24 April the ships were ready to attack. *Iroquois* moved abreast the forts as part of the 3d Division under Captain H. H. Bell and, after a spirited engagement, passed them and pressed on for the capture of New Orleans, the South's largest and wealthiest city, and key to the Mississippi Valley.

After the great victory *Iroquois* advanced up the river with Farragut, with the aim of eventually joining Flag Officer Foote, who was driving southward. A landing party was sent ashore at Baton Rouge 8 May 1862 and Comdr. Palmer received the surrender of the Louisiana capital that day. *Iroquois*, along with *Oncida*, also took possession of Natchez 13 May as the fleet moved steadily toward the Southern stronghold at Vicksburg. Within a week they were below the city and preparing to pass the formidable batteries.

After periodic shelling Flag Officer Farragut, supported by the mortar boats, passed the Vicksburg batteries 28 June after a heavy exchange of gunfire. *Iroquois* survived the action virtually unscathed. With the rest of the fleet she met Flag Officer Davis and his Western Flotilla above Vicksburg. This was but the first step of Lincoln's order to "clear the river." *Iroquois* remained in the Vicksburg area until late July, helping in the bombardments and preparations for expeditions into the surrounding marshlands. In early September she again entered the Gulf of Mexico to take part in the strangling blockade of Southern commerce, but boiler trouble sent

her north 21 September. She arrived New York 2 October and decommissioned 6 October 1862 for repairs.

Iroquois recommissioned 8 January 1863, Comdr. Henry Roland in command, and got underway later that month to convoy monitor *Weehawken* to Newport News. Joining the North Atlantic Blockading Squadron off North Carolina, she captured blockade runner *Merrimac* 24 July and helped in the capture of *Kate* 12 days earlier. After several more months on arduous blockade, she steamed to Baltimore for repairs, decommissioning 8 October 1863.

The ship recommissioned 31 March 1864, Comdr. C. R. P. Rodgers in command. After serving briefly in the North Atlantic, *Iroquois* steamed to the Mediterranean to protect American commerce and interests. She also took part in the giant search for the Confederate raider *Shenandoah*, finally arriving Singapore in May 1865 after a long voyage around South America and across the Pacific. With the war over, she sailed in July for the United States, arriving New York 1 October 1865. She decommissioned there 6 October 1865.

Upon recommissioning 7 January 1867, Comdr. Earl English in command, the veteran ship sailed 3 February for duty with the Asiatic Squadron. She was present at Osaka, Japan, when that port and neighboring Hiogo were opened to foreign commerce 1 January 1868; and she took part in the rescue operations following the overturning of Rear Admiral Henry H. Bell's boat in the harbor 11 January. Despite the best efforts of the ships present, the squadron commander and 11 others were drowned. During the local conflicts which engulfed the ports during January, *Iroquois* stood by to protect American interests, and carried the foreign ministers to Hiogo 1 February when they were expelled from Osaka. She remained on this critical duty with the Asiatic Squadron until returning to the United States in February 1870. She decommissioned at League Island, Pa., 23 April 1870.

Iroquois recommissioned 23 August 1871 under Comdr. H. A. Adams. She operated on the East Coast until 18 March 1872. She then sailed for another cruise with the Asiatic Fleet, making the long voyage via the Mediterranean, the Suez Canal, and the Indian Ocean. The ship remained off China and Japan until returning to San Francisco 1 July 1874. She again decommissioned for repairs 23 July 1874.

Following a long period of inactivity, *Iroquois* recommissioned 12 April 1882, Comdr. J. H. Sands in command.

USS *Iroquois*, Screw Sloop-of-War served from 1859 to 1910.

On Pacific station, she patrolled to South America, Hawaii, Australia, and Pacific islands protecting American interests and commerce. She took part in naval action in Panama in the spring of 1885, helping to land Marines to protect American commerce during the revolution. After 10 years of service on the Pacific Station, *Iroquois* arrived Mare Island 24 April 1892 and decommissioned there 12 May 1892.

The ship was transferred to the Marine Hospital Service and served until she recommissioned 13 December 1898, Lt. Charles Pond in command. She cruised in the Pacific for 6 months before decommissioning at Honolulu 30 June 1899. *Iroquois* was then transferred again to the Marine Hospital Service. Her name was changed to *Ionie* 30 November 1904. Her name was struck from the Navy List 26 August 1910.

II

(AT-46: dp. 702; l. 152'; b. 26'; dr. 13'6"; s. 13 k.; cpl. 39; a. 4 3", 1 G.g.)

The second *Iroquois* (AT-46), a steam tug, was built as *Fearless* by Union Iron Works, San Francisco, in 1892; purchased by the Navy from J. D. Spreckles Bros. & Co. 18 April 1898; and commissioned *Iroquois* 6 July 1898, Lt. L. H. Turner in command.

Iroquois served as a station tug at Mare Island until 19 January 1899, when she sailed for duty in the Hawaiian Islands. Upon arriving Honolulu 28 January she acted as a station tug, mail boat, and even surveying ship between the main islands and Midway. She returned to Mare Island 15 February 1910, and for the next 10 years operated between that base and San Diego as a collier and supply ship. *Iroquois* also performed patrol and salvage duties during this period.

After America's entry into World War I the tug steamed to New York early in 1918, and for the next few months served as a tug and convoy escort along the East Coast. Following this service, she departed New York 31 June 1919 for Charleston, then left for San Diego arriving 27 October. She served 13th Naval District as a harbor craft out of San Diego until decommissioned 7 March 1925. She was sold 15 May 1928 to Benjamin L. Jones, Bellingham, Wash.

Iroquois, see YP-539

Irwin

Noble Edward Irwin was born 29 September 1869 at Greenfield, Ohio, graduated from the Naval Academy in June 1891, and was wounded in action 1 May 1898 while in command of *Manila* in the Battle of Manila Bay. He was awarded the Navy Cross for meritorious service as Director of Naval Aviation in World War I. Thereafter he was in command of battleship *Oklahoma*, and Destroyer Squadrons of the Scouting Fleet, and was Chief of the Naval Mission to Brazil (1927-31). Rear Admiral Irwin became Commandant of the 15th Naval District in March 1931 and was transferred to the Retired List 1 October 1933. He died 10 August 1937 at Warner Springs, Calif.

(DD-794: dp. 2,050; l. 376'6"; b. 39'8"; dr. 17'9"; s. 35 k.; cpl. 320; a. 5 5", 10 40mm., 7 20mm.; 2 ct., 6 dcp., 10 21" tt.; cl. *Fletcher*)

Irwin was launched 31 October 1943 by the Bethlehem Steel Co., San Pedro, Calif.; sponsored by Mrs. Charles A. Lockwood, Jr., daughter of Admiral Irwin and wife of Vice Admiral Lockwood; and commissioned 14 February 1944, Comdr. Daniel B. Miller in command.

Following shakedown, *Irwin* departed San Diego 26 April 1944 for Hawaii, thence to Eniwetok to stage for the invasion of the Marianas. She sailed 11 June in the screen of escort carriers providing air cover for the invasion of Saipan 15 June 1944. As the Japanese Mobile Fleet was turned back in defeat from the Marianas 19 to

21 June, *Irwin* shot down an enemy torpedo bomber while repelling air attacks on the escort carriers.

Irwin bombarded the enemy on Saipan 21 to 29 June, guarded escort carriers covering the invasion of Tinian 23 July, then gave bombardment support to troops fighting on Guam. She next joined the screen of fast attack carriers hitting hard at enemy bases in the Palau Islands, along the coast of Luzon, Okinawa and Formosa. Off the latter enemy-held shore 14 October 1944, she shot down a torpedo bomber. She assisted in the escort of the bomb-damaged cruisers *Houston* and *Camberra* to safety, then again joined the screen of fast attack carriers giving direct air support to the liberation landings at Leyte, 20 October 1944.

As the Japanese fleet made a three-pronged approach to the Philippines 24 October 1944, planes from *Irwin's* carrier task group made destructive bombing runs on the Japanese Center Force of battleships and cruisers. But land-based Japanese bombers retaliated with heavy air strokes, scoring a lucky bomb hit on light carrier *Princeton*. In a heroic saga that brought *Irwin* the award of the Navy Unit Commendation, she braved raging flames, violent explosions, falling debris, and exploding shells as she went alongside *Princeton*. Fighting dense black smoke in a choppy sea, she rigged hoses and fought fires in the forward part of *Princeton's* hangar deck. Later, when an awesome explosion blew off the major portion of *Princeton's* stern, *Irwin* immediately dispatched boats and her men dived into icy seas to rescue survivors. Though damaged herself, the destroyer stood at close quarters until she had rescued 646 men from the sea and from the decks of *Princeton*.

Irwin headed for Ulithi with *Princeton* survivors as the Japanese Southern Force was largely destroyed in the Battle of Surigao Straits, their carriers destroyed off Cape Engano, and their powerful battleship-cruiser-destroyer bombardment force turned back in the Battle of Samar. From Ulithi she sailed for overhaul in the San Francisco Navy Yard (17 November 1944-23 January 1945). She then steamed for Hawaii, thence to the Marshalls and finally to Saipan, arriving 14 February 1945.

Irwin helped screen attack carriers giving direct air support to the invasion of Iwo Jima, 19-23 February 1945, then pounded Okinawa. She joined in the preinvasion bombardment of Okinawa 27-31 March, fighting off repeated attacks from planes, torpedo boats, and suicide craft. On 30 March *Irwin* repelled three Japanese torpedo boats, sinking one, damaging another, and forcing the other to flee. As Marines stormed the shores of Okinawa 1 April 1945, she shot down a twin-engined bomber and rescued one enemy survivor from this victim. For 2 months, *Irwin* bombarded enemy artillery positions, machine gun emplacements, troop concentrations, caves and suicide boat hiding places. She shot down a suicide torpedo bomber 12 April 1945, and scored another kill the 16th as she covered the landings on Ie Shima. Another enemy suicide plane was shot down 21 May. *Irwin* figured in another mercy mission the night of 16 June 1945 when she assisted in the rescue of survivors from destroyer *Twiggs*, sunk by combined air, torpedo, and suicide attacks.

Irwin remained off Okinawa until hostilities ceased with Japan 15 August 1945. She entered Tokyo Bay 31 August and escorted occupation troops between Okinawa and Japan until 26 October when she stood out of Yokosuka for return to San Diego, arriving 15 November 1945. Following inactivation overhaul, she decommissioned there 31 May 1946 and joined the Pacific Reserve Fleet.

Irwin recommissioned 26 February 1951 at Long Beach, Calif. She sailed 12 May for overhaul in the Philadelphia Navy Yard, then shifted to base at Newport, R.I., 16 December 1952. She bolstered 6th Fleet strength and readiness in the Mediterranean, January to June 1952, trained along the eastern seaboard, then sailed from Fall River, Mass., 1 April 1953.

Steaming through the Panama Canal, *Irwin* called at San Diego and Hawaii en route to join the 7th Fleet in waters off embattled Korea. She guarded the fast attack carriers as they blasted communist targets far inland, and herself joined in the destruction of enemy coastal supply routes and depots by making repeated coastal gunstrikes in support of United Nations troops ashore. Following the uneasy truce, she transited the Suez Canal and called at Mediterranean ports en route to Boston, arriving 2 October 1953.

Irwin engaged in coastwise operations out of Newport until 5 January 1955 when she sailed for NATO maneuvers in the North Atlantic, thence into the Mediterranean. She returned to Newport 26 May 1955, engaging in Atlantic seaboard operations until departure 29 March 1956 to base at Long Beach, Calif.

Irwin arrived in Long Beach 15 April but soon deployed to spend the summer with the roving 7th Fleet in waters ranging from Japan to Okinawa, the Philippines and Taiwan. She returned to Long Beach 11 August for tactics ranging as far west as Hawaii, again sailing 12 March 1957 to join the 7th Fleet in the Far East. Following patrol of the Taiwan straits, combined fleet maneuvers with SEATO nations, and goodwill visits to ports of the Philippines and Japan, she returned to Long Beach 24 August 1957 for inactivation. She decommissioned 10 January 1958 and remains in the Pacific Reserve Fleet berthed at Mare Island, Calif.

Irwin received the Navy Unit Commendation and six battle stars for service in World War II and one battle star for Korean service.

Isaac N. Seymour

A former name retained.

(SwStr: t. 133; l. 100'; b. 19'8"; dr. 6'0"; s. 11 k.; cpl. 30; a. 1 30-pdr. P.r., 1 20-pdr. P.r.)

Isaac N. Seymour (also called *Seymour*, *I. N. Seymour*, and *J. N. Seymour*) was built at Keyport, N.J., in 1860 and was purchased by the Navy at New York from Mr. Schultz 26 October 1861. She was assigned to the North Atlantic Blockading Squadron 20 November and 3 days later was stationed in Hampton Roads. While there she joined three other ships in engaging Confederate steamer *Patrick Henry* and drove her back up stream.

A month later Flag Officer Goldsborough ordered *Isaac N. Seymour* to Hatteras Inlet for impending operations in the sounds of North Carolina. She participated in the combined operations which took Roanoke Island 8 February, and at the end of the action she was commended for being "conspicuously in the foreground throughout the bombardment." One of her powdermen was killed and her chief engineer was seriously wounded in the fight.

The next day *Isaac N. Seymour* steamed up Piankatank River to Elizabeth City, N.C., with Comdr. Rowan's expedition to destroy enemy gunboats and to break up communications between Albemarle Sound and Norfolk, Va. She continued mop-up operations in the sounds until she struck an abandoned anchor in Hatteras Inlet 20 February and sank before she could be run aground.

She was raised, repaired, and returned to service in May. She resumed her former duty and continued to give a good account of herself in the sounds until 24 August when she struck a bank and sank in the Neuse River some 3 miles above New Bern while steaming upstream to cover a landing of troops. A month later she was reported raised and on the ways being readied for service.

Back in fighting trim 23 October, she was ordered to tow schooner *Minnehaha* to Plymouth, N.C., to deliver provisions. Five days later she made the return passage towing damaged steamer *Whitehead* to New Bern for repairs. Similar duty maintaining communications and lines of supply between Navy units in the sounds continued until 12 December when *Isaac N. Seymour* ascended the Neuse River with four other ships to support an Army expedition to destroy railroad bridges and track near Golds-

boro, N.C., but the mission was aborted by low water which prevented their advancing more than 15 miles beyond New Bern.

Confederate troops attacked the Union garrison at Washington, N.C., 31 March 1863 establishing a siege which threatened to starve the Northern troops into surrender. *Isaac N. Seymour* departed Plymouth 2 April to play an active role in the naval operations which, despite well-served batteries ashore, brought the beleaguered soldiers food and ammunition. The Southern troops were finally forced to lift the blockade 16 April. Once again the daring and versatility of the Navy had been decisive in holding a hard-pressed position for the North.

Isaac N. Seymour was a part of the task force which started up the James River 11 July to demonstrate against Richmond. The high point of the expedition came 14 July when Rear Admiral S. P. Lee, flying his flag in *Isaac N. Seymour*, occupied Fort Powhatan, the last Confederate defense on the river below Chaffin's and Drewry's Bluff.

Isaac N. Seymour continued to serve in the North Atlantic Blockading Squadron—maintaining Union control of North Carolina's inland waters and supporting Army operations from the James and York Rivers as General Grant supplied and supported by water, relentlessly pressed toward Richmond and victory.

Isaac N. Seymour was detached in March 1865 and decommissioned at Washington 16 May. She was transferred to the Light House Board 20 June which she served as *Tulip* until sold and redocumented *Magnolia* 7 June 1882. *Magnolia* was sold to a foreign owner in 1888.

Isaac Smith

(ScStr: t. 453; l. 171'6"; b. 31'4"; dph. 9'; cpl. 56; a. 1 30-pdr. P.r., 8 8-inch D.sb.)

Isaac Smith, built in 1851 at Nyack, N.J., as *Isaac P. Smith*, was purchased at New York from E. J. Hamilton 9 September 1861. On 16 October she was assigned to the South Atlantic Blockading Squadron in time to join Flag Officer S. F. Du Pont's assault against Port Royal, S.C. An intense hurricane occurred during the voyage south compelling the ship to jettison her guns. Nevertheless, she gallantly ignored her own distress and attempted to assist Marine Corps transport, *Governor*, which foundered off Cape Hatteras.

During a reconnaissance in force on 4 and 5 November, she engaged and repelled three attacking Confederate steamers and silenced batteries at Hilton Head and Bay Point, S.C. Two days later she towed sailing sloop *Vandalia* into action during the landings which wrested Port Royal from Confederate hands providing the Union a splendid base for the fleet and combined operations that steadily destroyed the Confederacy.

Isaac Smith participated in operations against the coast of South Carolina until 21 January 1862 when she sailed to join the expedition to Savannah, Ga., led by Captain C. H. Davis, USN, and Brig. Gen. H. G. Wright of the Army. This operation was primarily a diversionary effort to cover up a projected attack on Fernandina, Fla.; but it also provided valuable information about Confederate defenses of the water approaches to Savannah, and it interrupted communications between Fort Pulaski and Savannah.

During the latter half of March and all of April, *Isaac Smith* was active in the vicinity of St. Augustine, Fla. She took possession of the post office there 18 March and two days later mounted a gun upon the ramparts of Fort Marion in a position to command the main road to the city. Her boats captured blockade runner *British Empire* 3 April.

Isaac Smith stood out of St. Augustine and entered St. John's River 4 May to begin a period of 3 months' service in the vicinity of Jacksonville, Fla. Her presence there helped tighten the blockade, provided sanctuary for refugees, drew Southern troops away from more active fronts, and facilitated Union intelligence activity.

In need of repair, *Isaac Smith* sailed for New York 10 August for "beaching, breeming, and improvements" which kept her away from her squadron until 11 October. Then Rear Admiral Du Pont ordered her to the Stono River where she served until 30 January 1863. That day she was caught in a cross fire from masked shore batteries. Disabled by accurate fire and with her deck covered with wounded men, her captain surrendered the ship rather than risk their lives. Eight men were dead and 17 were wounded.

Isaac Smith served the Confederate Navy in Charleston waters under the name *Stono* until she was wrecked on the breakwater near Fort Moultrie, S.C., while attempting to run the blockade with a load of cotton 5 June 1863. (q.v. "Confederate Appendix", *DANFS* II, 569.) No data on salvage operations for *Stono* has been found, but the *Official Records of the Union and Confederate Navies in the War of the Rebellion* state that she was "burned by the Confederates at the evacuation of Charleston in 1865."

Isabel

A former name retained.

(PY-10; t. 710; l. 245'3"; b. 27'9"; dr. 8'6"; s. 26 k.; a. 4 3")

Isabel, a yacht, built in 1917 by Bath Iron Works, Bath Maine, was acquired before completion by the Navy from her owner, automobile manufacturer John North Willys of Toledo, Ohio; converted to Navy use as a destroyer; and commissioned 28 December 1917, Lt. Comdr. Harry E. Shoemaker in command.

Isabel sailed 28 January 1918 for France via Bermuda and the Azores. While performing coastal convoy duty, she fought German submarines on four occasions. On 18 March she joined *Reid* in an attack on a submarine, and the two ships were credited with sinking her. However, evidence later gathered indicated that the submarine probably escaped.

Lt. Comdr. Harry E. Shoemaker received the Navy Cross "for distinguished service . . . as commanding officer of . . . *Isabel*, engaged in the important, exacting and hazardous duty of transporting and escorting troops and supplies through waters infested with enemy submarines and mines." He was relieved by Lt. Lewis W. Comstock 24 July.

Isabel continued protecting convoys carrying troops and supplies to France until the end of the war. Arriving Boston 2 January 1919, *Isabel* was assigned to recruiting duty for the Navy, sailing up the Mississippi River 14 May 1919 and stopping at various cities along the way to St. Louis. Returning to New Orleans 20 August, she was soon underway for Rockaway Beach, Long Island, for duty as a tender for the famous flying boats of the NC-4 Flotilla. Reporting 18 September, she cruised the Atlantic Coast with the aircraft from Maine to Florida before returning to Rockaway Beach 4 January 1920. *Isabel* decommissioned at Philadelphia 30 April 1920.

Recommissioning at Philadelphia 18 July 1921, *Isabel* sailed for the Far East 21 August 1921 to join the famous Yangtze Patrol. Transiting the Panama Canal she arrived Hong Kong 7 November. During the tumultuous years that followed in China, *Isabel* served as a member of the patrol and as its flagship, charged with protecting American commerce from pirates and American nationals from the dangers of constant civil war. Based at Shanghai, *Isabel* spent the low water period on the river at Hankow, returning to the coast in the summer. She and the other small gunboats of the Navy in China performed the arduous task of protecting American interests during numerous incidents and threats to American nationals. On many occasions the ship came under fire, as in October 1926 when she was caught between the rifle fire of opposing Chinese armies on the Yangtze. *Isabel* also took part in the Nanking affair, when shelling and threats of force procured the release of a large group of American and British prisoners held by the nationalists in the city. She

patrolled the 1,700 miles of dangerous river until 1928, when she joined the Asiatic Fleet.

Isabel spent the 1930's with the Asiatic Fleet in the Philippines and China, much of the time as flagship at Manila. In December 1941, as the threat of war grew ever larger, the small ship was readied for action and sent out on orders from President Roosevelt to make a reconnaissance of the coast of Indo China. She was ordered to return to Manila 5 December, and was nearing that port when the Japanese attacked Pearl Harbor two days later.

Admiral Hart sent this ominous message early on 8 December to the far-flung units of the Asiatic Fleet: "Japan started hostilities. Govern yourselves accordingly." Japanese planes raided Clark Field that day and Manila 10 December. At Cavite Navy Yard eight bombs, all duds, ringed *Isabel's* fantail; she brought down one of the attackers.

For the next month *Isabel* operated as an antisubmarine escort for convoys in the East Indies, as the Allies tried desperately to stem the tide of Japanese conquest. She underwent air raids at Batavia, Palembang, and Tjilatap, escaping from several ports only days ahead of the invasion forces. On the way back from convoy assignment 7 February 1942, *Isabel* was sent to rescue survivors from Dutch merchantman *Van Cloon* near Surabaya. As she picked up survivors from the torpedoed vessel, the enemy submarine surfaced nearby. *Isabel* quickly drove the sub down with gunfire, and assisted a patrolling Catalina in dropping depth charges to drive it from the area.

The Battle of the Java Sea in late February saw outnumbered Allied naval units fail in their gallant actions to stop the invasion of Java which resulted in Japanese control of the Malay barrier.

Isabel arrived in Australia 7 March 1942 after seeing *Asheville* sunk in numerous air raids south of Java. Based at Fremantle, she took up new duties as escort and training ship for the submarines which now made that Australian port their base. She helped keep allied submarines in top tactical shape, and thus contributed to the mighty toll taken by them on Japanese shipping and warships. *Isabel* remained on this duty until 27 August 1945, when she sailed eastward, stopping at various Pacific islands and arriving San Francisco 26 October 1945. The gallant ship, her long career in two wars ended, decommissioned 11 February 1946 and was sold for scrapping 25 March 1946.

Isabel received one battle star for World War II service.

Isabela

Merchant name retained.

(Str. dp. 7,050 (n.); l. 347'8"; b. 46'9"; dr. 20'6"; s. 10 k.; cpl. 62; s. 1 5', 1 3')

Isabela was a freighter launched in 1911 by Newport News Shipbuilding & Drydock Co., Newport News, Va.; transferred to the Navy from USSB 9 April 1918; and commissioned 12 April 1918, Lt. Comdr. A. H. Strumm, USNRF, in command.

Assigned to NOTS, *Isabela* loaded cargo at New York and Halifax and sailed for France 27 April 1918. She arrived at Brest 13 May with supplies which were vitally needed for the final Allied offensive. *Isabela* made a total of three voyages to France prior to the signing of the Armistice 11 November 1918.

After an overhaul at Brooklyn Navy Yard, *Isabela* departed for her final cruise to Europe 23 November. She arrived at LeHavre, France 8 December, and visited Plymouth, England, in early January 1919. Upon her return passage from Plymouth, which began 7 January, she picked up a crew from an unseaworthy schooner and transported them to safety. *Isabela* arrived Baltimore 27 January, decommissioned 14 February 1919, and was returned to USSB for return to her owner the New York and Porto Rico S.S. Co.

USS *Isabel* (PY-10), Flagship of the Yangtze River Patrol, China, in 1921

Isanti

A former name retained.

(Str: dp. 12,000; l. 423'9"; b. 54'; dr. 24'2"; s. 11 k.;
cpl. 70)

Isanti (No. 3423) was launched by Western Pipe & Steel Co., San Francisco, Calif., 2 June 1918. She was transferred to the Navy from New York & Puerto Rico S.S. Co., and commissioned 30 September 1918 at San Francisco, Lt. Comdr. J. K. Koughan, USNRF, in command.

Assigned to NOTS, *Isanti* immediately began loading cargo for transport to Europe. She departed San Pedro 10 October and arrived New York via Panama Canal 3 November. After loading more supplies, she sailed for France 22 November, arriving Cherbourg early in December to discharge the vital cargo. Her supply activity took her to various French ports. She returned to the United States 15 February 1919 and decommissioned 24 February. *Isanti* was transferred to USSB the same day for return to her owner. She operated under USSB until abandoned in 1930.

Isbell, Arnold J., see *Arnold J. Isbell* (DD-869)

Isherwood

Benjamin F. Isherwood was born in New York City 6 October 1822, and was appointed First Assistant Engineer in the Navy 23 May 1844. During the Mexican War, he served in *Princeton* and later was senior engineer of the steam frigate *San Jacinto*. Shortly after the outbreak of the Civil War, he was appointed Engineer-in-Chief of the Navy, and so important were his services considered that the Bureau of Steam Engineering was created under his direction. He was a pioneer in the production of fast

cruisers, producing this class against strong opposition. Following a tour of European dockyards, he became president of the Experimental Board under the Bureau of Steam Engineering until his retirement 6 October 1884. He died in New York City 19 June 1915.

I

(DD-284: dp. 1,190; l. 314'5"; b. 31'8"; dr. 9'3"; s. 35 k.;
cpl. 120; a. 4 4", 2 3", 12 21" tt., cl. *Clemson*)

Isherwood (DD-284) was launched 10 September 1919 by the Bethlehem Shipbuilding Corp., Squantum, Mass.; sponsored by Mrs. R. C. Walling; and commissioned 4 December 1919 at the Boston Navy Yard, Lt. Comdr. W. D. Brereton in command.

As a unit of the 43d Division, 1st Squadron, Destroyer Force, Atlantic Fleet, *Isherwood* conducted shakedown out of Boston until 26 January 1920 when she sailed for Cuba via Newport. Arriving Guantanamo Bay 3 February she remained there engaging in target practice and drills until departing 26 April, escorting *Pennsylvania* to receive the Secretary of the Navy at Lynnhaven Roads, Va. Following this assignment, *Isherwood* proceeded to Mexico for patrol duty on the Mexican coast until 21 June when she arrived Boston for repairs. She sailed 21 October for Charleston to join the Destroyers in Reserve.

Isherwood stayed in reserve status until 10 May 1921 when, with 50 percent complement, she sailed to the Boston Navy Yard, where she joined the Destroyer Force. Operating with reduced complement, she transported Naval Reservists between Boston and Newport and engaged in target practice until 4 August. Following repairs at the Boston Navy Yard (13 March-8 May 1922), *Isherwood* joined Destroyer Squadron 9 at Philadelphia and proceeded to Yorktown, Va., for exercises with the Fleet. She maneuvered in the area until 3 January 1923 when she rendezvoused with the Scouting Fleet Destroyers for training in the Caribbean; at Beaufort, N.C.; and at Baltimore, Md. She continued her readiness operations in the Caribbean until 28 March 1925.

On 7 May 1925, *Isherwood* arrived Boston for a Naval Reserve cruise from Maine to the District of Columbia. She rejoined her squadron at Newport 31 August, and arrived Guantanamo 24 September for maneuvers in the Caribbean. Having completed exercises with the Fleet, *Isherwood* arrived Portsmouth, Va., 13 April, and departed 12 June for France via Newport and the Azores. *Isherwood* arrived St. Nazaire 29 June; she then conducted a good will cruise to various British and Mediterranean ports.

After her arrival in Boston 15 July 1927, *Isherwood* resumed her schedule of reservist training cruises and fleet maneuvers in the Caribbean until June 1929.

From Jacksonville, Fla., she received Naval Reservists for a summer cruise (Maine to Massachusetts) 29 June, and following their disembarkation 20 July, she underwent repairs at Newport and overhaul at Norfolk. *Kalmia* towed her from Norfolk to the Philadelphia Navy Yard 26 August, and she decommissioned there 1 May 1930. She was sold 17 January 1931, and scrapped in 1934 by her purchasers.

II

(DD-520: dp. 2,050; l. 376'6"; b. 39'8"; dr. 17'9"; s. 37 k.; cpl. 273; a. 5 5", 10 40mm., 7 20mm., 10 21" tt., 6 dp., 2 dct.; cl. *Fletcher*)

The second *Isherwood* (DD-520) was launched by Bethlehem Shipbuilding Co., Staten Island, N.Y., 24 November 1942; sponsored by Mrs. A. J. Kerwin, granddaughter of Rear Admiral *Isherwood*; and commissioned 12 April 1943 at New York Navy Yard, Comdr. R. E. Gadrow in command.

The new destroyer conducted her shakedown training in Casco Bay, Maine, and off Guantanamo Bay, Cuba, through April and May. During the next 2 months she operated with a patrol and escort group out of Argentia, Newfoundland, and on 5 August 1943 departed for England with troop ship *Queen Mary*. *Isherwood* arrived Scapa Flow 19 August to carry out combined operations with the British Home Fleet, including a search toward Spitzbergen for German battleship *Tirpitz*. Sailing 14 September, the destroyer returned to Boston with a convoy 29 September 1943.

Isherwood was subsequently reassigned to the Pacific, sailing from Boston 14 November for San Francisco. From there she steamed to Pearl Harbor and sailed 11 December to join Task Force 94 in the Aleutians. For the next eight months, *Isherwood* carried out antisubmarine sweeps of the cold Alaskan waters. In June she took part in bombardments of the Kurile Islands, finally arriving San Francisco for repairs 15 August 1944.

Isherwood sailed for Pearl Harbor 26 August 1944 to take part in the long-awaited invasion of the Philippines, scheduled for October. She arrived Manus 4 October and steamed into Leyte Gulf with the assault force 20 October, carrying out escort and patrol duties during the first days of the operation. She also provided gunfire support and night illumination fire. *Isherwood* remained in the assault area during the giant four-part Battle for Leyte Gulf 23-26 October, in which the Japanese surface fleet was all but annihilated. During November the ship escorted convoys from advance bases to the Philippines in support of the buildup there.

The next major invasion of the Philippines campaign was to be at Lingayen Gulf. *Isherwood* joined Vice Admiral Wilkinson's Lingayen Attack Force at Manus, sailing 27 December. During the voyage through the islands from Leyte to Lingayen, the transport groups and carrier task groups were attacked incessantly by kamikazes, but even these desperate attacks could not stop the invasion. *Isherwood* shot down at least one suicide plane and assisted in splashing others before arriving the assault area 9 January 1945. She screened a landing craft group during the landing, sailing for Leyte with a returning group 11 January. During the last days of the month, specifically 29 and 30 January, the ship returned to Luzon to support the unopposed landings at San Antonio and Subic

Bay, as ground units moved on Manila. *Isherwood* remained in the Philippines providing antisubmarine protection and patrolling until mid-March.

The veteran ship sailed for the Okinawa operation 21 March 1945; and, after her arrival 5 days later, took part in the landings on Kerama Retto preparatory to the main Okinawa assault. Troops from the main task force stormed ashore 1 April in the biggest amphibious operation of the Pacific war, and 2 days later *Isherwood* moved to a position off the beaches for fire support missions. This continued until 16 April, when the ship was sent to aid stricken destroyers *Pringle* and *Laffey* off Ie Shima. That afternoon she took over *Laffey's* duties as fighter director ship on picket station.

The days that followed found *Isherwood* in numerous heavy air raids, as the Japanese made a desperate attempt to drive off the invasion fleet with suicide planes. While on station 22 April a kamikaze made a dusk attack on the destroyer and crashed No. 3 gun mount. Many fires were started, but all were quickly extinguished except the one in the depth charge rack aft. After 25 minutes of dangerous fire-fighting, the charge exploded, causing great damage in the after engine room. The gallant ship arrived Kerama Retto with over 80 men killed, wounded, or missing.

Isherwood arrived Ulithi for repairs 9 May 1945 and steamed into San Francisco Bay 3 June. She finished her overhaul just as the Pacific war ended; and, after training exercises, sailed 3 October for New York. After taking part in the Navy Day Presidential Review, the ship steamed to Charleston, where she decommissioned 1 February 1946 and was placed in the Atlantic Reserve Fleet.

Isherwood recommissioned at Charleston 5 April 1951, and after shakedown and training in the Caribbean steamed into Newport, her new home port, 6 August. Plane guard duty off Jacksonville and operations in Narragansett Bay occupied her through the end of 1951. She then sailed for a cruise with the 6th Fleet in the Mediterranean, departing 22 April 1952, and, for the next 6 months, visited various ports supporting the important peace-keeping operations of the fleet. She returned to her home port 17 October 1952.

Isherwood made another 6th Fleet cruise 22 April-26 October 1953, after which she took part in maneuvers and plane guard duty off the East Coast. In June 1954 the ship underwent refresher training out of Guantanamo Bay, and sailed from Newport 30 November 1954 to join the Pacific Fleet.

The veteran ship arrived San Diego via the Panama Canal 15 December 1954, and got underway for the Far East 4 January 1955. During this cruise she operated mainly in the Philippines, with a period on Taiwan Patrol in April and May 1955. Her part in these important 7th Fleet operations ended in June and she arrived San Diego the 19th for additional training and readiness steaming. 1956, however, brought *Isherwood* back to these troubled waters, as she spent the period January-July on operations off Taiwan, Malaya, and Japan.

The destroyer returned to the Far East in 1957 and again in 1958. During the latter cruise she steamed off Taiwan during the tense Quemoy-Matsu crisis, when American forces afloat helped prevent a flareup between Nationalist and Communist Chinese. The ship returned to her home port 7 December 1958, and spent the first 6 months of 1959 on maneuvers and training exercises. *Isherwood* then sailed for her fifth 7th Fleet cruise 1 August 1959. During the next months she operated with carrier *Lexington* in the South China Sea, helping to limit the fighting in Laos and lending strength to United Nations efforts to find a solution. After additional flight operations and fleet exercises, the ship sailed for San Diego 29 November 1959.

In 1960 *Isherwood* took part in training operations, including a summer NROTC midshipmen training cruise, until sailing again for 7th Fleet duty 18 October. She served on Taiwan Patrol and took part in an amphibious

exercise on Okinawa before arriving San Diego 27 March 1961.

Isherwood engaged in training off California until decommissioning 11 September 1961. She was loaned to Peru 8 October 1961, where she serves the Peruvian Navy as *Guise* (DD-72).

Isherwood received five battle stars for World War II service.

Isilda

(Sch: dr. 8'; a. 1 24-pdr.)

Isilda, sometimes spelled *Ezilda*, was a Confederate blockade running schooner, claiming to be English, which sailed from Havana 26 September 1861, cleared for Matamoros, Mexico. She was captured and claimed as a prize by *South Carolina* 4 or 5 miles off Timbalier Light, La., 30 September. *Isilda* was fitted out as a tender and joined the Gulf Blockading Squadron to be assigned to *South Carolina* 1 November. For a short time she was on duty off the Mississippi Delta, but her most distinguished service was performed off the west coast of Florida.

Isilda fired a shot across the bow of an unidentified ship standing in for shore off Cedar Keys, Fla., 24 April 1862. When the vessel refused to heave to, *Isilda* gave chase until the runner slipped into shoal water and ran hard aground. Two days later as an armed launch from *Isilda* was pulling toward the schooner, a column of black smoke rose from the stern of the blockade runner and she blew up with a loud report. The plucky little tender scored again 10 June when she surprised steamer *Havana* in Deadman's Bay, Fla., and forced her crew to put her to the torch to prevent capture. On 24 March 1863, with *Wanderer*, she chased *Ranger*, enabling *Ft. Henry* to take the sloop off Crystal River, Fla., with her cargo—so badly needed by the South—of salt, dry-goods, and gunpowder. This steady toll taken on Confederate shipping by *Isilda* and her fellow blockaders slowly but surely strangled the Southern economy and sapped the Confederacy's ability to wage war.

But her faithful service in the blockade was costly to the diligent little ship. In April 1863, after participating in an expedition which scoured the west coast of Florida from the mouth of the Suwanee River to the Anclote Keys, *Isilda* showed signs of serious wear and tear. She remained on station off Cedar Keys until 11 June when she finally sailed to Key West for repairs. There, when a survey found her too badly battered for economical repair, she was condemned, stripped, and sold at public auction.

Isis

A former name retained. *Isis* was an Egyptian goddess who originated the arts and agriculture and symbolized fertility.

(ScStr: dp. 555; l. 199'; b. 24'9"; dr. 11'8"; s. 15 k.; cpl. 71)

Isis, a coastal survey ship, was launched 1902 at Newburgh, taken over by the Navy 24 September 1917 from the Coast and Geodetic Survey; commissioned 4 October 1917, Lt. Gilbert T. Rude in command.

After a minor overhaul, *Isis* commenced duty as flagship for Commander of Squadron 2 Cruiser Force, 13 November 1917, at Staten Island, N.Y. She served in that capacity until 14 June 1918, and remained in the New York area until December when she arrived at Norfolk. Following operations at Norfolk, she decommissioned there 30 April 1919 and was returned to the Coast and Geodetic Survey.

Isla de Cuba

Former name retained.

(Gbt: dp. 950; l. 197'; b. 30'; dr. 10'7"; s. 13 k.; cpl. 137; a. 4 4", 3 tt.)

Isla de Cuba was built in 1886 for the Spanish Navy by Sir W. G. Armstrong, Newcastle upon Tyne, England; captured in the Philippines by the U.S. Navy in 1898 during the Spanish War; and commissioned 11 April 1900 at Hong Kong, China, Lt. J. N. Jordan in command.

Following extensive repairs and shakedown out of Hong Kong, *Isla de Cuba* was assigned to the Asiatic Station where she served in several capacities during the revolutionary unrest in the Philippines following the war. As a supply ship and patrol boat she cruised the Philippine Islands. At Ormoc, Leyte, 17 November to 8 December 1900, she sent a battalion ashore to hold the town while the army garrison leader was away on an expedition against the insurgents. In 1901 she made a survey of Ormoc anchorage and Parasan Harbor; and in March and April as a unit of the Southern Squadron, she rendered distinguished service in cutting off the enemy's supplies in Samar; in helping to capture Lukban, the insurgent leader in Samar; in contributing to the general defeat of the insurgents; and in maintaining the close blockade of the island—all of which contributed to the final declaration of an armistice.

Isla de Cuba ended her service with the Asiatic Station when she departed Cebu for the United States on 4 March 1904. Decommissioning 9 June at Portsmouth, N.H., she remained there undergoing repairs until 21 March 1907 when she was loaned to the Naval Militia of Maryland for use as a school ship. She was sold at Charleston, S.C., to the Republic of Venezuela 2 April 1912. Renamed *Mari-seal Suere*, she served Venezuela until she was scrapped in 1940.

Isla de Luzon

Former name retained.

(Gbt: dp. 1,020; l. 195'; b. 30'; dr. 11'4³/₄"; cpl. 137; a. 4 4", 3 tt.)

Isla de Luzon was launched in 1887 by Sir W. G. Armstrong, Newcastle-on-Tyne, England, for the Spanish Navy. A captured prize of the Spanish-American War she commissioned in the United States Navy 31 January 1900, Comdr. J. V. B. Bleecker in command.

Operating out of Zamboanga, Philippine Islands, *Isla de Luzon* supported naval and land operations against Philippine insurgents. She was a unit of the Southern Squadron that cut off the enemy supplies on Samar; assisted in the capture of Lukban, the insurgent leader in Samar, and the close blockade of the island, all of which contributed to final declaration of Armistice.

Isla de Luzon was detached from the Asiatic Station 15 August 1902 when she departed Cavite for home. Following long custom, when she visited Muscat's picturesque harbor, members of her crew painted "Isla de Luzon" on the steep entrance cliff. In recent years this has been periodically refurbished by visiting ships of the U.S. Middle East Force Command. After transiting the Suez Canal and touching ports of the Mediterranean, she returned to Pensacola, Fla., 16 March 1903. She was attached to the Pensacola Navy Yard until 6 December when she was assigned duty with the Louisiana Navy Militia, and, subsequently, with the Illinois Naval Militia on the Great Lakes.

At the beginning of World War I, *Isla de Luzon* was stationed at Chicago, as a training ship on the Great Lakes. She remained until 30 September 1918 when she arrived at Narragansett Bay for assignment to the Naval Torpedo Station for duty with the Seamen Gunner's Class. Following the installation of torpedo tubes, she was on range in the Bay from 13 November 1918 until 13 December 1918.

Isla de Luzon decommissioned 15 February 1919 and was designated as yard craft of the Naval Torpedo Station, Newport, R.I., until her name was struck from the Navy List 23 July 1919. She was sold 10 March 1920 to the Bahama & West Indies Trading Co., New York, N.Y., and renamed *Reviver*.

USS *Isla de Cuba*, Gunboat from 1900 to 1912

Island Belle

(SwStr: t. 123; l. 100'; b. 20'4"; dph. 6'7"; a. 1 32-pdr., 1 12-pdr. rifle)

Island Belle was purchased at New York from Luther Adams 4 September 1861. She fitted out at Washington Navy Yard and sailed 17 September to join the Potomac Flotilla. She served in the Potomac as a tug and a dispatch boat occasionally exchanging fire with batteries and riflemen on the Virginia shore. She sailed to Hampton Roads, Va., 19 March 1862 escorting transports carrying troops to Fort Monroe in preparation for the Peninsular campaign against Richmond. She returned to Washington as soon as the soldiers were disembarked and again got underway for Hampton Roads escorting a second division of transports 23 March.

Island Belle devoted most of April and May to reconnaissance work, searching the Virginia rivers between Washington and Richmond for information valuable to either the Army or the Navy.

Island Belle was transferred to the North Atlantic Blockading Squadron 22 May. Two days later Flag Officer Goldborough assigned her to duty in the James River where the Navy was valiantly supporting the left flank of General McClellan's mighty force as it advanced up the peninsula toward Richmond. She steamed up the James 25 May, carefully observing the river banks to detect any signs of Confederate military activity. When she joined Commander William Smith, the senior Naval officer on the James, he used *Island Belle* in a wide variety of ways. He sent her on reconnaissance missions to learn about enemy defenses in the Chickahominy River and other

tributaries of the James; he entrusted her with his messages to General McClellan and to the other ships of his command; he used her to carry coal to the hungry furnaces of his steamships; and he kept her on call to help refloat ships which often ran aground in the tricky and everchanging currents of the river.

On 26 June *Island Belle* steamed up the shallow Appomattox River in an attempt to destroy the railroad bridge at Petersburg. The next day she ran hard aground. After strenuous efforts failed to refloat her, *Island Belle* was burned 28 June 1862 to prevent her falling into Confederate hands.

Islander, see YP-327

Isle of Surry

A former name retained.

(SP-1860: t. 38; l. 60'; b. 17'6"; dr. 6'; s. 10 k.)

Isle of Surry (SP-1860), a wooden freight boat, was built in 1911 at Crittenden, Va.; acquired by the Navy 18 September 1917 from C. W. Warren of Smithfield, Va. Her first commanding officer was Boatswain Hoffman.

Isle of Surry was ideally suited for small freight service in the Hampton Roads area, and carried out this service all during her career. In addition to carrying supplies to varied activities around Norfolk, the motor boat operated on the upper Chesapeake Bay as far north as Baltimore. She decommissioned 31 January 1919 at Norfolk and was returned to her owner.

Isle Royale

A National Park in Michigan.

(AD-29: dp. 8,165 lt.; l. 492'; b. 69'6"; dr. 27'3"; s. 19 k.; cpl. 977; a. 1 5", 4 3"; cl. *Shenandoah*)

Isle Royale (AD-29) was launched by Todd Pacific Shipyards, Inc., Seattle, Wash., 19 September 1945; sponsored by Mrs. Greer A. Duncan; and delivered to the Navy 2 July 1946 for layup in the San Diego Reserve Fleet.

During her period of inactivation, *Isle Royale* served as headquarters ship for the San Diego Subgroup, Pacific Reserve Fleet. She was designated to replace *Hamul* in the active fleet, and commissioned at Long Beach 9 June 1962, taking *Hamul's* officers and men as that ship decommissioned. After shakedown *Isle Royale* moved to Long Beach to begin her services to Pacific Fleet destroyers, supplying them with parts and vital repair facilities.

The tender sailed for Pearl Harbor 8 February 1963 and for the next seven months served the destroyers roaming the Pacific on their vital peace-keeping mission. She returned to Long Beach from this deployment 11 September 1963, and conducted training operations in California waters until June 1964. The ship then got underway again for Pearl Harbor, where she operated until 30 October. She returned to Long Beach 5 November where she operated until departing 3 August 1965 for a scheduled 6-month mid-Pacific cruise. However, upon arriving Pearl Harbor, she received orders to proceed on to the Philippines where she tended ships of the 7th Fleet fighting in Vietnam.

Isle Royale returned to Long Beach 5 March 1966 and operated along the West Coast until sailing again for the Far East 16 September. She remained in the Orient operating primarily out of Subic Bay tending the destroyers of the 7th Fleet until her return to Long Beach 12 April 1967. Thereafter *Isle Royale* operated in waters off southern California preparing for future action.

Isom, *William*, see *William Isom*

Isonomia

(SwStr: t. 593; l. 212'; b. 30'; dph. 9'; s. 12 k.; a. 1 3-pdr. P.r., 2 24-pdr. how.)

Isonomia, formerly *Shamrock*, was purchased at New York from Charles S. Leary 16 July 1864. She commissioned at New York Navy Yard 16 August, Lt. Comdr. E. Simpson in command. *Isonomia* sailed for Beaufort, N.C., 19 August and arrived there 23 August to join the North Atlantic Blockading Squadron. She served off New Inlet, N.C., until ordered to Key West 18 September with special instructions to cruise in the vicinity of Nassau and the Bahama Banks. But at Key West she was found unready for sea service and stationed at West Pass, Fla., where she operated until 15 November when she returned to Key West to prepare for cruising in Bahama waters. At the end of January 1865 *Isonomia* was returned to coastal blockade duty off western Florida and continued this duty until the end of the war. She captured British bark *George Douthwaite* attempting to slip into the Warrior River with a cargo of sugar, rum, wool, ginger, and mahogany from Jamaica. Towing *Somerset*, she sailed for New York 9 June 1865 where she decommissioned 28 June 1865 and was sold at public auction to Tabor & Co., 12 July 1865.

Israel

Joseph Israel entered the Navy as Midshipman 15 January 1801. He served in *Maryland* during the quasi-war with France and in *Chesapeake*, *New York*, and *Constitution* during operation in the Mediterranean against the Barbary pirates. Midshipman Israel was killed 4 September 1804 when ketch *Intrepid* exploded in the harbor of Tripoli during the valiant night effort to destroy the enemy shipping led by Lt. Somers. A monument to the memory of Israel and his fellow officers and men stands on the grounds of the Naval Academy at Annapolis.

(DD-98: dp. 1,060; l. 314'5"; b. 21'9"; dr. 8'6"; s. 35 k.; cpl. 113; a. 4 4", 2 1-pdrs., 12 21" tt.)

Israel was launched 22 June 1918 by the Fore River Shipbuilding Corp., Quincy, Mass.; sponsored by Miss Dorothy Brown; and commissioned 13 September 1918, Lt. Comdr. George N. Barker in command.

Following shakedown out of Boston, *Israel* rendezvoused with *South Carolina* at Newport 24 September 1918, and performed escort duty on the East Coast as a unit of the Destroyer Force, Atlantic Fleet. She departed New York 13 October with a convoy, and arrived at

USS *Isle Royale* (AD-29) at Pearl Harbor 10 May 1963

Gibraltar 6 November, via the Azores and Port Leixoes, Portugal. Having escorted the Brazilian Detachment to Gibraltar Harbor 9 November, *Isracl* arrived Venice 18 November and joined the Eastern Mediterranean Forces. She operated out of Venice and Spalato as a station ship transporting supplies and personnel until 12 July 1919 when she departed Villefranche, France, via Gibraltar and the Azores, arriving Boston 24 July.

While undergoing overhaul at the Portsmouth Navy Yard, *Isracl* was fitted out as a light minelayer and her classification changed 17 July 1920 to DM-3.

Sailing from Portsmouth, N.H., 4 March 1921, *Isracl* cruised along the East Coast until 5 July when she joined Mine Squadron 1, Atlantic Fleet, at Gloucester, Mass. During the remainder of the year she engaged in mining practice and exercises on the East Coast; and from January to April 1922, participated in important fleet exercises based at Guantanamo Bay and Culebra, Puerto Rico.

Isracl arrived Philadelphia 15 May 1922 and decommissioned there 7 July. Remaining inactive during the following years, she was reduced to a hulk in 1936 in accordance with the London Treaty. Her name was struck from the Navy List 25 January 1937, and she was sold to the Union Shipbuilding Co., Baltimore, Md., 18 April 1939.

Itara

An old Indian village in northern Florida.

(YTB-391: dp. 237; l. 100'; b. 25'; dr. 9'7"; s. 12 k.)

Itara (YTB-391), originally classified YT-391, was launched by Consolidated Shipbuilding Co., Morris Heights, N.Y., as YTB-391, 9 September 1944; and placed in service 30 December 1944.

Assigned to the 5th Naval District at Norfolk, *Itara* served as a harbor tug at the Navy's giant Hampton Roads base throughout the war. After 1945 she continued on duty at Norfolk, one of the hundreds of yard craft necessary to the smooth functioning of the Navy in the cold war. She was reclassified YTM-391 on 1 February 1962. *Itara* continued to serve at Norfolk through 1966 into 1967.

Itasca

Former names retained.

I

(ScStr: t. 507; l. 158'; b. 28'; dph. 12'; cpl. 70; a. 2 32-pdrs., 1 10" D. sb., 1 20-pdr. P.r.)

The first *Itasca* was a wooden screw steamer launched by Hillman & Streaker at Philadelphia 1 October 1861; and commissioned there 28 November 1861, Lt. C. H. B. Caldwell in command.

Assigned to the Gulf Blockading Squadron, *Itasca* promptly began to establish a distinguished record. She captured schooner *Lizzie Weston* loaded with cotton bound for Jamaica 19 January 1862. A month later she assisted *Brooklyn* in capturing Confederate steamer *Magnolia* loaded with cotton and carrying several secret letters containing valuable intelligence concerning Confederate plans to import arms and to assist side-wheel, blockade runner *Tennessee* to escape through the blockade.

When the Gulf Blockading Squadron was split 20 January 1862, *Itasca* was assigned to the Western Squadron under Flag Officer Farragut, who stationed her briefly at Mobile and then called her to the mouth of the Mississippi River 4 March 1862 for service in the impending operations against New Orleans and the Mississippi Valley. This formed one prong of the gigantic pincer movement that was destined to cut the Confederacy in two, assuring its defeat. *Itasca* joined the fleet below Forts St. Philip and Jackson 19 April and promptly added her guns to the bombardment. The next day, accompanied by *Kinco* and *Pinola*, she boldly steamed up close to the forts to break the boom which prevented Farragut's ships from sailing

up the river to attack New Orleans. Four days later the Union Squadron dashed through the passage to take the South's largest and most highly industrialized city. *Itasca*, in the dangerous rear of the movement, was caught in "a storm of iron hail . . . over and around us from both forts" and disabled by a 42-pound shot which made a large hole in her boiler. Before she could drift down the river out of range, the gallant gunboat received fourteen hits.

After the fall of New Orleans, *Itasca* served in the Mississippi River for the remainder of the year successfully fulfilling a wide variety of duties. On one occasion she saved Admiral Farragut from grave danger when *Hartford* ran hard aground below Vicksburg 14 May 1862. *Itasca*, deep in hostile territory, worked hastily, refloating her 3 days later.

Early in 1863, *Itasca* was ordered to blockade duty off Galveston, Tex., where she arrived 31 January. While in Texas waters, *Itasca* took two prizes: *Miriam*, loaded with cotton, 17 June; and *Sea Drift*, containing a cargo of war materiel and drugs, 22 June. On 30 June urgent need for repairs caused her to be dispatched to New Orleans, and she sailed from that port for the North 15 August, arriving Philadelphia for overhaul 26 August.

Itasca departed Philadelphia 26 December and arrived at New Orleans on the last day of 1863. Five days later she was ordered to blockade duty off Mobile Bay, where she was stationed until Admiral Farragut closed the last great gulf port opened to the South 5 August 1864. During historic battle of Mobile Bay, after dashing past the forts as part of Farragut's formation, *Itasca* engaged and captured Confederate gunboat *Selma*.

After returning to the Texas coast, she took English schooner *Carrier Mair* off Pass Cavallo, Tex., 30 November; and she chased on shore and destroyed sloop *Mary Ann*.

Itasca remained on duty in the Gulf of Mexico until sailing from Pensacola for Philadelphia 5 August 1865. She decommissioned 22 August and was sold at New York 30 November 1865. She was documented as *Aurora* 23 August 1866 and sold abroad the following year.

II

(SP-810: t. 42; l. 75'; b. 15'; dr. 4'6"; s. 12½ k.; cpl. 11; a. 2 1-pdrs., 1 mg.)

The second *Itasca*, a wooden motor boat built in 1908 by Stamford Motor Construction Co., Stamford, Conn., was taken over by the Navy from Mr. Henry Henke at Norfolk, Va., 10 August 1917; and commissioned 8 days later, Chief Machinist Mate R. P. Comstock in command.

Itasca served as a hospital boat in waters near Norfolk until 26 February 1919 when she was returned to her owner.

Itasca II

A former name retained.

(SP-803; t. 58; l. 99'9"; b. 16'7"; dr. 4'9"; s. 10 k.; cpl. 10; a. 1 6-pdr., 1 1-pdr., 2 mg.)

Itasca II (SP-803), a motor boat, was built by Hudson Yacht & Boat Building Co., Nyack, N.Y., in 1911; acquired by the Navy 29 May 1918 under free lease agreement; and commissioned 13 July.

Assigned to the 3d Naval District, *Itasca II* operated out of New York on section and harbor patrol for the next 8 months. The motor boat decommissioned 6 February 1919 and was returned to her owner, E. B. Hawkius, Duluth, Minn.

Itty E.

A former name retained.

(SP-952: l. 25'; b. 6'; dr. 20"; s. 35 k.)

Itty E. (SP-952), a fast open motor boat, was built in 1916 by Murray and Tregurtha, South Boston, Mass.;

acquired July 1917 from her owner, F. H. Rawson of Chicago.

Assigned to the 1st Naval District, *Itty E.* did yeoman service during the months before the war as a fast rescue boat at the Boston Naval Air Station. She was transferred to Norfolk 20 October 1917, but saw little service because of the need for extensive engine repairs. After her engine was burned in a fire ashore in July 1918, *Itty E.* was taken to the Washington Navy Yard in October 1918, and scrapped in 1920.

Iuka

A village in northeastern Mississippi, where Union troops under General Rosecrans engaged Confederate forces under General Price in an indecisive battle 19 September 1862.

I

(SwStr: dp. 944; l. 200'; b. 31'6"; dr. 20'; s. 12 k.; cpl. 116; a. 1 20-pdr. Parrott rifle, 1 heavy and 1 light 12-pdr., 1 24-pdr.)

The first *Iuka* was purchased as *Commodore* 8 March 1864 from George Griswold of New York. She prepared for service at the New York Navy Yard and commissioned 23 May 1864, Acting Volunteer Lt. W. C. Rogers in command.

Departing New York 7 June, *Iuka* joined the East Gulf Blockading Squadron at Key West. For the remainder of the war she performed blockade duty cruising in the Gulf of Mexico. This service was briefly interrupted in October 1864 when *Iuka* escorted a prize steamer from Key West to Boston and then returned to the Gulf. On 31 March 1865 she captured the English schooner *Comus* sailing from Saint Mark's, Fla., to Havana with a cargo of contraband cotton. After the war *Iuka* departed Key West 2 June 1865 and reached Boston 12 June. She decommissioned there 22 June and was sold at public auction to Arthur Leary 1 August 1865.

II

(AT-37: dp. 795; l. 156'8"; b. 30'2"; dr. 14'7"; s. 13 k.; cpl. 44; a. 1 mg.)

The second *Iuka* (AT-37) was launched 12 January 1920 by the Staten Island Shipbuilding Co., Port Richmond, N.Y.; commissioned 29 October 1920, Lt. Harry F. Quandt in command.

Attached to the Train Squadron, Atlantic Fleet, *Iuka* sailed for Guantanamo 2 January 1921. After towing and delivering duties there and at the Canal Zone, the tug returned to Norfolk 28 April. *Iuka* completed a year's service with the Train Squadron, operating along the East Coast in the summer and at Guantanamo in the winter. On 29 April 1922 she reported to the 3d Naval District, at New York, where she served well for the next decade. From 27 April to 7 July 1926, *Iuka* operated out of Newport, R.I., to salvage the submarine *S-51*, sunk by collision with *SS City of Rome*. When the hulk of *S-51* was raised 5 July as a result of skillful salvage work, *Iuka* and *Sagamore* towed it to New York. *Iuka* decommissioned at New York 20 July 1932.

She recommissioned at Philadelphia 23 November 1940 and rejoined the Train Squadron, Atlantic Fleet, for operations along the East Coast and out of Guantanamo. After 3 years of harbor duties and towing target ra us, mainly operating from Portland, Maine, *Iuka* was transferred to the Western Sea Frontier, reporting for duty 4 February 1945. She had been reclassified ATO-37, 15 May 1944. Harbor duties at San Diego formed *Iuka's* basic work for the following year. She decommissioned but remained in service 15 August 1946 and was placed out of service at San Francisco 15 April 1947. *Iuka* was delivered to her purchasers, Pan American Steamship Corp. of Panama, at Los Angeles 8 July 1948.

III

(ATR-45: dp. 835; l. 143'; b. 33'10"; dr. 13'2"; s. 13 k.; cpl. 45; a. 1 3")

ATR-45 was laid down by Levingston Shipbuilding Co., Orange, Tex., 21 November 1942; launched 20 December; and commissioned 30 June 1943, Lt. (j.g.) J. L. Hostinsky in command.

After a brief period of duties out of Norfolk, *ATR-45* sailed for the Pacific, reaching Espiritu Santo, New Hebrides, via the Panama Canal and Bora Bora, Society Islands, late in October. For the duration of war the fleet tug remained in the South Pacific islands, operating primarily at Espiritu Santo, to tow targets and barges as well as handle other harbor duties. *ATR-45* was reclassified *ATA-123* 15 May 1944.

The ocean tug returned Pearl Harbor 7 September 1945 and from there set course for San Francisco. She performed harbor duties along the California coast until she decommissioned at San Pedro and went into reserve 26 November 1947. While berthed with the Columbia River Group, Pacific Reserve Fleet, *ATA-123* was named *Iuka* 16 July 1948. She remained in the Pacific Reserve until September 1960 when she was transferred to the Maritime Administration. In September 1962 *Iuka* entered the National Defense Reserve Fleet at Olympia, Wash., where she remains.

Ivy

A European evergreen shrub of the climbing variety, or one of various other climbing plants.

I

(Tug: t. 50; dr. 10'; s. 10 k.)

Ivy, a screw tug, was built as *Terror* by the Army at St. Louis in 1862; transferred to the Navy 30 September 1862 and renamed *Ivy*.

Assigned to the Mississippi Squadron, *Ivy* took part as tug and dispatch boat in the winter operations around Vicksburg 1862-63. In the important attack on Fort Hindman 9-11 January 1863, she served as Rear Admiral D. D. Porter's flagship. As the more powerful gunboats pounded the fort in support of General Sherman's attack, *Ivy* came alongside both *Cincinnati* and *Louisville* to help quench fires started by shore fire. A memorandum in the office of Secretary Welles noted: "The officers and crew behaved with great coolness, though under a brisk fire of musketry." The naval attack, directed from *Ivy*, resulted in Sherman's capture of the fort, a severe blow to the Confederate cause in the West.

Ivy was also present for the passage of the Vicksburg batteries by Admiral Porter's ships 16-17 April 1863. Lashed to the side of the powerful *Benton*, *Ivy* steamed boldly past Vicksburg, opening operations south of the city to Porter and contributing importantly to the fall of Grand Gulf and eventually to the capture of Vicksburg. In May the tug accompanied the gunboats up the Red River. The ships reached abandoned Fort De Russy 5 May and 2 days later took Alexandria, only to be forced back downstream by low water. The fort was partially destroyed and Porter returned to Grand Gulf to continue the assault on Vicksburg.

The tug remained near Vicksburg, often as Porter's flagship, until after its fall 4 July 1863, and subsequently acted as a dispatch boat and tug on the river and as a receiving ship for prisoners of war. *Ivy* entered the Red River again in 1864 when the major part of Admiral Porter's fleet was caught by low water above the rapids at Alexandria. She assisted gunboat *Ozark* over the rapids 13 May 1864 and returned to the Mississippi with the fleet amid frequent Confederate attacks from shore.

For the remainder of the war *Ivy* was used to tend and pump coal barges at Donaldsonville. She was sold at Mound City, Ill., 17 August 1865 to W. G. Priest.

Ivy, a steam tug, was purchased as *Monitor* by the Navy in 1863 and renamed *Monterey* (q.v.). Her name was changed to *Ivy* 3 January 1891 and she was sold 7 October 1892.

II

(LHT: t. 550; l. 173'; b. 30'; dr. 8'5")

Ivy, a steel-hulled tender, was built in Baltimore in 1904 and transferred to the Navy Department via the War Department by a letter of 25 May 1917. She was returned to the Lighthouse Service 1 July 1919 after performing general patrol duties during the preceding two years.

Iwana

An Indian name.

I

(YT-2: dp. 192; l. 92'6"; b. 21'; dr. 8'; s. 11.5 k.; cpl. 9; a. 2 1-pdrs., 1 mg.)

Iwana (YT-2) was laid down in April 1891 by City Point Iron Works, Boston, Mass.; launched 12 March 1892; and was assigned to the 1st Naval District for harbor duties.

Iwana performed towing operations and miscellaneous services out of Boston from 1892 until early 1946.

Her name was dropped 5 October 1942, and she operated as YT-2 until reclassified YTM-2 on 15 May 1944. She was transferred to WSA, 20 March 1946.

II

(YT-272: dp. 244; l. 100'; b. 26'; dr. 10'; s. 11 k.; cpl. 12; a. 2 .50 cal. AA mg.)

Iwana (YT-272) was laid down 24 August 1942 by Ira S. Bushey & Sons, Inc., Brooklyn, N.Y.; launched 23 December; and placed in service 27 April 1943.

After shakedown *Iwana* was assigned to the 1st Naval District as a supply handler and tug in Casco Bay. From 1943 to 1946 she performed towing duties and miscellaneous harbor operations in the New England area. During this time *Iwana* was reclassified YTB-272 15 May 1944.

From 1946 into 1967 she has operated in the 1st Naval District at Boston, Mass. *Iwana* was again reclassified YTM-272 in February 1962.

Iwo Jima

A small volcanic island in the Bonin Group. *Iwo Jima* was the site of one of the most important and most bitterly fought amphibious operations of the Pacific War. The strategic island, needed as an air base for the assault on Japan itself, was invaded 19 February 1945 and declared secure almost a month later. Fleet Admiral Chester W. Nimitz spoke eloquently of the sailors and marines who fought there: "Among the Americans who served on *Iwo Island* uncommon valor was a common virtue." The famous photograph of the flag-raising on Mount Suribachi has become a symbol of valor and strength in the years since 1945.

I

(LPH-2: dp. 11,000 (lt.); l. 592'; b. 84'; ew. 105'; dr. 27'; s. 22 k.; cl. *Iwo Jima*)

Iwo Jima (LPH-2) was launched by Puget Sound Naval Shipyard, Bremerton, Wash., 17 September 1960; spon-

sored by Mrs. Harry Schmidt; and commissioned 26 August 1961, Captain T. D. Harris in command.

The first ship to be designed and built from the keel up as an amphibious assault ship, *Iwo Jima* carries helicopters and a detachment of embarked Marines for use in the Navy's newest "vertical envelopment" concept of amphibious operations. Following shakedown training, she spent the rest of 1961 off the California coast in amphibious exercises. In April 1962 the ship joined Joint Task Force 8 in the Johnston Island-Hawaii area for an important series of nuclear tests. *Iwo Jima* evacuated several islands and took part in the test evaluation. She sailed for Pearl Harbor 26 July from the test area, and continued to San Diego, where she arrived 10 August 1962.

In September the ship took part in full-scale amphibious exercises in California, departing 17 October from San Diego for her first deployment to the western Pacific. As a crisis flared 19 October over the introduction of offensive missiles into Cuba, however, *Iwo Jima* returned to San Diego, embarked Marines 22 to 27 October, and departed quickly for the Caribbean. As part of America's powerful and mobile force afloat, she cruised in a "ready" status until December brought an easing of the Cuban situation. She arrived San Diego 13 December, having played a major role in preserving American and Latin American security.

Iwo Jima operated out of her home port during the first half of 1963, carrying out amphibious exercises and training. She departed 30 August on her long-delayed cruise to the western Pacific. Joining the 7th Fleet, mobile bulwark of American security in the area, she ranged from Hawaii to the Philippines and Taiwan.

On 31 October 1963 *Iwo Jima* departed Philippine waters for special operations along the coast of South Vietnam, standing by to protect American nationals during a period of increased strife. She returned to Subic Bay 12 November. The following months she sailed with Special Landing Forces of Marines for rigorous amphibious assault and landing raids practice off the coasts of Taiwan and Okinawa. After unloading ammunition at Sasebo, Japan, she departed 13 April 1965 for return to San Diego, arriving 28 April. Following amphibious training with Marines along the California seaboard, she overhauled in the Long Beach Naval Shipyard. This work was completed by 7 December 1965 when *Iwo Jima* began amphibious refresher training ranging to the Hawaiian Islands. On 13 March 1966 she departed Pearl Harbor for San Diego, arriving 6 days later.

Iwo Jima received tons of supplies and scores of Army helicopters, tanker trucks, and vehicles in her hangar and flight deck spaces. Nearly a thousand troops were embarked for her western transit that began 12 April. She touched Pearl Harbor a few hours the 17th to off-load 50 Marines and their equipment, then steamed off St. Jacques, Republic of Vietnam, 1 to 2 May, flying off 77 Army helicopters, loaded with troops and combat cargo. From there she proceeded to Subic Bay in the Philippines, where troops and equipment were received for amphibious landing at Chu Lai, Vietnam, 11 May 1965.

Iwo Jima remained off Chu Lai for a month, protecting Marines and Seabees establishing an air field on the sandy shore. Besides helicopter support ashore, including defense perimeter patrol, she was a support center for laundry, showers, fresh provisions, store and mail service. She also supervised the continual off-load of ships over the beach for the entire month, then on 7 June 1965, landed squadron personnel and helicopters ashore at Hue-Phu Bai, some 30 miles north of Da Nang. After a few days rest in Subic Bay she was routed to Sasebo, thence to Buckner Bay, Okinawa, where she embarked Marines and equipment. This was completed 26 June 1965 when she sailed for Quinohn, Republic of Vietnam, in company with *Talladega* (APA-208) and *Point Defiance* (LSD-31). These ships were designated Task Group 76.5, that part of the 7th Fleet that carries the Marine Special Landing Force. On the 30th she arrived at Quinohn, about 100 miles south of Chu Lai. The following day Marines landed ashore to take up defensive positions for

the protection of Army engineers and communications units.

Iwo Jima remained off Quinohn for defensive support until 20 July 1965, then steamed for Pratas Reef about 240 miles southwest of Taiwan. Arriving the morning of the 22d her helicopters were immediately pressed into service to aid the salvage of destroyer *Frank Knox*. The close approach of typhoon "Gilda" pounded the grounded destroyer so badly that it was impossible for small boats to get alongside her. Extra men were heli-lifted off the destroyer while surf rose 12 feet high to break completely over the stern of *Frank Knox*. Support given by *Iwo Jima* included such items as hot food, clothes, water, pumps, hose, gasoline, air compressors, welding machines, damage control equipment and technicians. Feed water was heli-lifted in special tanks constructed by destroyer tender *Prairie* (AD-15) who had faint hope of keeping the destroyer's boiler alive. Detached from this duty 1 August 1965, *Iwo Jima* made a brief call at Hong Kong, then proceeded to the Philippines.

On 17 August 1965 *Iwo Jima* steamed out of Subic Bay for Vung Tau, Republic of Vietnam, to join in Operation "Starlight," a 5-day search-and-destroy operation that eradicated some 600 Viet Cong. The successful Navy-Marine Corps amphibious operation backed by gunfire support from cruiser *Galveston* and two destroyers, came to a close late on 24 August. *Iwo Jima's* evacuation and surgical teams kept the American casualties down to a very low percentage. During transit back to Subic Bay she learned *Frank Knox* had been refloated, good news for *Iwo Jima's* crew who had put in so many hard and long hours at Pratas Reef. She landed her Marine Special Landing Force at Chu Lai 1 to 2 September, embarked 800 Marines of a rotation draft, and sailed for Buckner Bay.

Iwo Jima landed the rotation troops at Okinawa, then came off Quinohn, 10 September 1965, to cover the landing of the Army's 1st Air Cavalry Division. She had supported three amphibious assault search-and-destroy raids along the coast by 1 October when she steamed to southern waters, remaining in stand-by status for possible evacuation of U.S. nationals in revolt-torn Indonesia. Eight days later she sailed for Danang for a helicopter squadron exchange, thence to Subic Bay where she was relieved by *Valley Forge* (LPH-8). Following a visit to Yokosuka, she departed 1 November for return to San Diego, arriving 17 November 1965. Several months later she again joined the 7th Fleet Amphibious Ready Group, a fast moving assault force which had completed more than 20 search-and-destroy operations along the South Vietnamese coast between March 1965 and September

1966. One of these missions hit only 3 miles south of the demilitarized zone to search out and decimate a regiment of the North Vietnam Army's 342B Division which had infiltrated South Vietnam through the neutral zone.

During the first 3 months of 1966, *Iwo Jima* was at San Diego for upkeep and improvement changes. From April through June extensive refresher training occupied all hands as *Iwo Jima* prepared for her forthcoming Western Pacific deployment. On 24 July, steaming with a task group, she passed the volcanic island whose costly conquest by stouthearted sailors and marines had inspired her name. On board was one of the marine groups that had landed on Iwo Jima over two decades earlier. After operations in the Vietnam area, she sailed for Japan. December 30th once again found *Iwo Jima* on the line and underway for special operations in the Mekong Delta region of South Vietnam in a Navy-ready group with a two pronged punch. Early in January 1967 the Commanding Officer, Captain Nils W. Boe, was relieved by Captain F. X. Timmes. Upon his departure Captain Boe said of his crew in a family-gram to mothers and wives, "I want to thank each of you for letting me borrow these magnificent young men for a little while. They have made me feel ten feet tall." On 1 July 1967 *Iwo Jima* was reassigned to Amphibious Squadron 3 from vice Amphibious Squadron 1, with which she continued to sail with the Pacific Fleet.

Iwo Jima continues her support of simultaneous sea and air assaults as the nerve-center of an Amphibious Ready Group that can strike anywhere along the Vietnamese coast within 48 hours.

Izard

Ralph Izard, born 26 February 1785 at Charleston, S.C., was appointed Midshipman 2 October 1799 and promoted to Lieutenant 27 January 1807. Lt. Izard volunteered and took part in the expedition under Stephen Decatur, commanding U.S. ketch *Intrepid*, which entered the harbor of Tripoli 16 February 1804 and destroyed the former U.S. frigate *Philadelphia* in what Lord Nelson called the most daring act of the age. He was assigned duty under Lt. Decatur, with Midshipman John Rowe and 15 men, to hold the spar deck. He also took part in the attacks on Tripoli during August and September 1804 as part of Commodore Edward Preble's squadron. Lt. Izard died 21 January 1822 at Charleston, S.C.

(DD-589: dp. 2,050; l. 376'6"; b. 39'8"; dr. 17'9"; cpl. 273; a. 5 5", 14 40mm., 12 20mm., 10 21" tt., 4 dct., 6 dep.; cl. *Fletcher*)

USS *Iwo Jima* (LPH-2) near Panama 30 October 1962

Izard (DD-589) was launched 8 August 1942 by the Charleston Navy Yard; sponsored by Mrs. Robert E. Lee III, great-granddaughter of Lt. Ralph Izard; and commissioned 15 May 1943, Comdr. Earl K. Van Swearingen in command.

After shakedown interrupted by a search for a German U-boat off the coast of Carolina, *Izard* departed Norfolk 14 September 1943 and sailed for Pearl Harbor via the Canal Zone and San Diego. Arriving Pearl Harbor 4 October she spent the next 6 weeks training and standing plane guard duty.

As the Pacific Fleet started its mighty sweep across Micronesia *Izard* sortied 10 November 1943 from Pearl Harbor with Rear Admiral Pownall's Carrier Force (TF-50) for the Gilbert Islands operations, and for the next month provided air, surface and antisubmarine protection for Makin Island.

After taking part in the bombardment of Nauru Island 8 December 1943 *Izard* retired to Havannah Harbor, Efate. Here she trained and rehearsed for the fleet's next target—the Marshall Islands. *Izard* sortied from Funafuti Harbor, Ellice Island, 23 January 1944 with Rear Admiral Forrest Sherman's Carrier Task Group to provide air cover for the assault and capture of Kwajalein. At 0440 29 January the carriers launched their first strikes toward Kwajalein. By that afternoon the fleet had delivered many devastating blows on the enemy. By 4 February *Izard* had entered Majuro Atoll, recently captured from the Japanese, and dropped anchor. Here she joined Admiral Spruance's Truk Striking Force and Admiral Mitscher's Fast Carrier Task Force 58 for strikes on Truk (17–18 February 1944). The first strike was launched at 0642 17 February and after 2 days the carrier planes had destroyed auxiliary cruisers *Aikoku Maru* and *Kiyosumi Maru*; destroyer *Fumizuki*; submarine tenders *Rio de Janeiro Maru* and *Heian Maru*; aircraft ferry *Fujikawa Maru*, 6 tankers and 17 more marus; total tonnage about 200,000. Planes from *Enterprise* also sunk destroyers *Oite* and *Agano*. On the first day of the strikes while Admiral Mitscher's planes were at work, Admiral Spruance's group, including *Izard*, conducted a round-the-atoll search to catch escaping vessels. They sunk light cruiser *Katori*, destroyer *Maikaze*, and sub chaser *SC-24*. After 18 February Truk lost its usefulness as a fleet anchorage or advanced naval base for the Japanese. In addition, the 250 to 275 planes destroyed or damaged was a severe blow to the Japanese air force.

Izard screened the carriers launching strikes in the Tinian-Saipan area 22 February, retiring to Majuro the 26th. From March through August she operated in support of the 5th Fleet operations in New Guinea and the Marianas. *Izard* was part of the screen for Admiral "Jocko" Clark's Carrier Task Group during the Battle of the Philippine Sea (19–20 June 1944) which broke the enemy's once mighty naval air arm.

Izard continued in support of fast carriers launching strike after strike against the enemy. During the first part of October she joined Admiral McCain's task group for strikes on Okinawa and Formosa. During the following months she continued to support the Leyte operation and in February 1945 was assigned duty off Iwo Jima rendering fire support, screening, and radar picket duty until 27 March.

Izard steamed for Eniwetok 28 March arriving 2 April. Joining a convoy she steamed via the Hawaiian Islands, reaching Seattle 20 April. *Izard* sailed for Pearl Harbor 30 June and in August joined the Northern Pacific Force at Adak, Alaska. The last of August *Izard* sailed for Honshu, Japan, and after the war continued to operate in northern Japan, liberating prisoners-of-war and demobilizing Japanese army and navy units until 15 November.

Izard returned to Seattle the last of November and 2 April 1946 steamed to San Diego. *Izard* decommissioned there 31 May 1946 and joined the Reserve Fleet where she remains.

Izard received 10 battle stars for World War II service.

J. A. Palmer

A former name retained.

(SP-319: t. 276; l. 155'; b. 22'; dr. 12'; s. 12 k.; a. 2 1-pdrs.)

J. A. Palmer (SP-319), or *Palmer*, a wooden fishing vessel, was built in 1912 by Jackson and Sharpe, Wilmington, Del.; purchased by the Navy from her owners, C. E. Davis Packing Co., Reedville, Va.; and commissioned 7 April 1917, Boatswain W. A. Hudgins in command.

J. A. Palmer, assigned to the 5th Naval District, operated on patrol off Cape Henry until February 1918 when she received special cable equipment at Berkeley, Va. The ship was then loaned to the Coast Guard for use as a cable ship and steamed along the Atlantic coast laying and repairing cable. To avoid confusion with destroyer *Palmer*, her name was dropped 17 January 1919. *SP-319* was subsequently turned over permanently to the Coast Guard 10 September 1919 for continued use as a cable ship, and was renamed *Pequot* by the Treasury Department.

J. A. Martinolich, see *Hornbill* (AMC-13)

J. Alvah Clark

A former name retained.

(SP-1248: t. 130; l. 90'; b. 19'; dr. 11'6"; s. 10 k.)

J. Alvah Clark (SP-1248), a steam tug, was built in 1891 by Newport News Shipbuilding & Dry Dock Co., Newport News, Va.; and acquired in October 1917 from her owner, the Joseph M. Clark Co. of Norfolk.

J. Alvah Clark, assigned to the 5th Naval District, performed towing and tug duties in Hampton Roads, served on net patrol, and transported armed guards to merchant vessels in the harbor during World War I. She was returned to her owner 29 July 1919.

J. B. Walker

Former name retained.

(Bar: 2 t., 1,984; l. 247'; b. 42'2"; dr. 26'9"; cpl. 6)

J. B. Walker was launched in 1879 by E. O'Brien of Thomaston, Maine; purchased by the Navy from Luckenbach S.S. Co.; and commissioned 8 August 1918. She immediately began collier operations between Norfolk and New England. *J. B. Walker* continued this duty until 27 March 1919, when she was detached and assigned to the 5th Naval District for operations. She was sold 11 September 1919.

J. C. Breckenridge, *General*, see *General J. C. Breckenridge* (AP-176)

J. C. Donnell, see *Pasig* (AO-89)

J. C. Fitzsimmons, see *Marmora* (IX-189)

J. C. Kuhn

(Bark: t. 888; l. 153'; b. 35'; dr. 13'5"; s. 10 k.;
cpl. 61; a. 4 32-pdrs.)

J. C. Kuhn was a wooden bark of two decks and three masts built at Portland, Conn., in 1859. She was purchased by the Navy at New York City from J. H. Brower & Co., 6 July 1861; and commissioned at New York Navy Yard 23 August, Acting Master Robert G. Lee in command.

The supply and coal vessel reported to the Gulf Blockading Squadron at Key West, Fla., 11 September bringing a cargo of coal, lumber, and whaleboats. Six days later she delivered coal and provisions to Union vessels off Fort Pickens, Fla., to begin her record of dependable service carrying fuel, food, lumber, and water to Union ships in the Gulf of Mexico and the lower Mississippi.

She arrived below Vicksburg 27 June 1862 loaded with coal for Flag Officer Farragut's ships the day before they daringly steamed under the Southern batteries there to join forces with Flag Officer Davis's Mississippi Flotilla, which had been fighting its way South along the river. She remained below Vicksburg supporting Comdr. Porter's Mortar Flotilla while Farragut operated above the Confederate stronghold until his ships had again run the gauntlet to rejoin Porter 15 July.

She then sailed down river with Farragut and resumed her duty of transporting supplies from Pensacola to ships stationed along the Gulf Coast. In the spring of 1864, *J. C. Kuhn* was ordered to Pensacola for service as ordnance and store ship, and she continued this duty until sailing for New York 20 January 1866. After arriving New York 14 February and discharging her stores, the veteran bark received badly needed repairs.

Restored and refurbished, *J. C. Kuhn* stood down to the Battery 7 April, and 3 days later was renamed *Purveyor*. As *Purveyor*, she supplied the European and South Atlantic Squadrons and served as a store ship before being sold at New York to P. H. Fay 7 July 1869.

J. Douglas Blackwood

James Douglas Blackwood was born in Philadelphia 12 November 1881, and enrolled in the Naval Coast Defense Reserve as an Assistant Surgeon 14 April 1917. The doctor served on transports in the Atlantic during World War I, earning the Navy Cross for attending the sick and wounded when troop transport *President Lincoln* was torpedoed 31 May 1918. He entered the Regular Navy in 1919, and served in various ships and at Naval Hospitals here and abroad in the years that followed. Blackwood served the people of Haiti 1927 to 1930 when assigned to a Public Health unit on that island. He was appointed Medical Inspector with the rank of Commander in 1938, reported to *Vincennes* (CA-44) 30 September 1940, and was on board during the critical early months of America's participation in World War II. During the Battle of Savo Island 9 August 1942, one of the many sea fights during the Solomons Campaign, a cruiser-destroyer force was surprised at night by Japanese cruisers and dealt a crushing blow. Blackwood was killed when the gallant *Vincennes* was sunk along with two other cruisers and a destroyer.

(DE-219: dp. 1,400; l. 306'; b. 36'10"; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3", 4 1.1", 8 20mm., 2 dct., 8 dcp., 1 dcp. (h.h.), 3 21" tt.; cl. *Buckley*)

J. Douglas Blackwood (DE-219) was launched 29 May 1943, by Philadelphia Navy Yard; sponsored by Mrs. J. Douglas Blackwood, widow of Comdr. Blackwood; and commissioned 15 December 1943, Comdr. R. V. Randolph in command.

After shakedown off Bermuda, *J. Douglas Blackwood* rendezvoused with carrier *Hornet* (CV-12) off Hampton Roads 14 February 1944, to escort her to the Panama Canal. The escort ship then returned to the East Coast for duty as training ship and coastal escort until departing Norfolk 18 March for the Pacific. Sailing via the Panama Canal and Pearl Harbor, *J. Douglas Blackwood* arrived Majuro 18 April 1944, to begin vital convoy screening work between America's far-flung island bases. The ship operated mainly in the Solomons and Admiralties, returning to Pearl Harbor in October 1944 for antisubmarine training.

J. Douglas Blackwood steamed to Eniwetok 2 November, and resumed convoy escort work, this time between the Solomons and the Philippines. As that great archipelago was liberated, island by island, the escort ship helped bring supplies and men from advance bases. She remained on this duty until arriving Pearl Harbor 12 April 1945, and for the remainder of the war operated in Hawaiian waters training with newly commissioned carriers and Pacific Fleet submarines.

The war over, *J. Douglas Blackwood* steamed into Mare Island Navy Yard 4 September 1945, and after repairs made the long voyage through the Canal to the East Coast. She arrived New London 9 January 1946, decommissioned 20 April 1946, and entered the Atlantic Reserve Fleet.

With the outbreak of fighting in Korea in 1950, the Navy's need of fighting ships once again increased. *J. Douglas Blackwood* recommissioned 5 February 1951, Lt. Comdr. J. R. McKee in command. Based at Norfolk, the ship alternated between duty there and the Fleet Sonar School at Key West, Fla. She also engaged in at sea training for midshipmen, cruising to the Caribbean and Brazil in the summer of 1953. She remained on this important training duty, not only keeping herself at peak readiness but also contributing to the development of new antisubmarine tactics, until arriving at Philadelphia 15 November 1957. There she began her new assignment as Reserve Training Ship.

J. Douglas Blackwood decommissioned 1 August 1958, and was placed "in service." For the next 3 years, she acted as training ship for naval reservists in the Philadelphia area. However, when America's will was tested once again in the 1961 Berlin crisis, the ship was again recalled to active service, commissioning 2 October 1961, Comdr. J. J. Grebis in command. After refresher training in the Caribbean, she served on escort and patrol duty in the Atlantic through the summer of 1962. She decommissioned 1 August 1962, reverted to her "in-service" status, and resumed reserve training duty at Philadelphia. *J. Douglas Blackwood* remained on this important duty into 1967, always ready to serve the Navy in time of need.

J. Douglas Blackwood received three battle stars for World War II service.

J. Floyd Massey, Jr., see *Monomoy* (AG-40)

J. Franklin Bell

An Army name retained. James Franklin Bell was born at Shelbyville, Ky., and graduated from the Military Academy in 1878. Frontier duty filled most of his years as a junior officer. During the Philippine Insurrection near Porac, Luzon, 11 December 1899, he "charged seven insurgents with his pistol and compelled the surrender of the captain and two privates under a close fire from the remaining insurgents concealed in a bamboo thicket." His heroism on this occasion won him the Medal of Honor.

Promoted to major general in 1907, Bell served as Chief of Staff of the U.S. Army from 1906 to 1910. He died in New York City 8 January 1919.

(AP-34: dp. 13,529; l. 535'2"; b. 72'; dr. 31'6"; s. 17 k.; cpl. 683; a. 4 3", 8 20mm.)

J. Franklin Bell (AP-34) was laid down in 1918 as an Army transport by the New York Shipbuilding Corp. of

Camden, N.J.; completed 1 March 1921 as a passenger and cargo ship named *Keystone State*; turned over to Pacific Steamship Co. 28 May and renamed *President McKinley* 9 June 1922; and transferred to Admiral Oriental Line 21 December to operate in the Pacific until laid up in Seattle in 1938.

The Army purchased her 26 October 1940, renamed her *J. Franklin Bell*, and converted her into a military transport. She was transferred to the Navy 26 December 1941; and commissioned in ordinary before commissioning in full at San Francisco 2 April 1942, Captain H. J. Grassie in command.

After shakedown, a round-trip voyage to Pearl Harbor, and over 2 months of amphibious training along the California coast, *J. Franklin Bell*, carrying some 1,500 troops and a full load of cargo, sailed from San Francisco 13 August and headed via Kodiak, Alaska, for Adak to strengthen American defenses in the Aleutians, then threatened with invasion.

Upon returning San Diego 29 September, *J. Franklin Bell* resumed coastal operations and amphibious training in preparation for taking the offensive in the Aleutians by recapturing Attu Island. Reclassified APA-16 1 February 1943, she continued rehearsals until sailing to San Francisco 16 April to embark troops and their war gear. She got under way 24 April for Cold Bay, Alaska. Though hampered by heavy seas, her task force arrived off Attu 11 May in a dense fog. *J. Franklin Bell*, now under Comdr. J. B. McGovern, began landing operations. Submerged rocks, pea soup weather, and narrow, rocky beaches permitted only two or three boats to be unloaded at a time. Two days later she started unloading around the clock, enabling her to finish the task, embark casualties, and head for home by 16 May.

After training throughout June, she embarked some 1,750 soldiers and, following 2 weeks of landing rehearsals, departed San Diego 29 July for Adak. At the end of a week of weather and terrain conditioning there, she steamed for Kiska 13 August. She sent her landing boats ashore through rough surf only to find the enemy had fled. Unloading operations completed in 2 days, she embarked 600 troops and sailed for San Francisco the 20th.

At San Francisco she discharged the troops and embarked naval passengers for Wellington, New Zealand, where she arrived 30 September. During the ensuing month of amphibious assault training, Captain O. H. Ritchie took command 22 October. After embarking 1,800 marines, she sailed 1 November for final landing rehearsals before departing 13 November to invade Tarawa.

The first step in a mighty amphibious offensive through Micronesia, the conquest of the Gilbert Islands was a major milestone on the watery road to Japan. During midwatch 20 November, *J. Franklin Bell* took her assigned place off Betio, the most formidable Japanese garrison on Tarawa Atoll. Heavy naval bombardment began at 0515; and the enemy responded with scattered fire at the transports. Straddled, *J. Franklin Bell* retired out of range and, while the deadly battle raged on ashore, awaited orders to land her troops. The next day she sailed to Bairiki Island and landed her marines. Finding dead enemies only, they boarded landing boats and moved from island to island along the atoll. Meanwhile, after the Bairiki landings, *J. Franklin Bell* began sending cargo ashore. The marines secured Betio on the 23d and the entire atoll on 27 November, and *J. Franklin Bell* departed with marines embarked for Pearl Harbor.

After a month of training in Hawaii, the transport embarked more than 1,500 soldiers and sailed for Kwajalein Atoll. Upon arriving 31 January, she found fire support ships pounding enemy shore installations in preparation for landings the following day. *J. Franklin Bell* entered the lagoon 2 February to unload supplies and to receive casualties. On the 5th, her landing boats assaulted Gugegwe Island. Two days later the atoll was secured; and the transport departed 8 February for Pearl Harbor carrying over 2,000 soldiers.

Putting into Pearl 15 February, she made two round trips to the United States mainland before embarking

soldiers and setting course for the Marianas. *J. Franklin Bell* arrived off Saipan 16 June, the day after the initial landings; and debarked her troops on the 17th. After unloading needed supplies, she retired some 100 miles north-east of Saipan to await the outcome of the Battle of the Philippine Sea 19 to 21 June. Upon learning of the great American naval victory, she returned to Saipan 25 June; completed unloading; embarked casualties; sailed for Eniwetok to load more cargo; and then headed, via Saipan to embark marines, for the assault on nearby Tinian.

Departing 24 July, *J. Franklin Bell* joined in a diversionary demonstration at the southern end of Tinian. Under cover of a fierce bombardment, the transport feigned two landings to divert enemy attention while the real landings were made at the northern end of the island. Following this successful subterfuge, she sailed to the actual beachheads; landed her troops; embarked casualties the next afternoon; and returned to Saipan the 27th. The next day, carrying 438 Japanese prisoners, she sailed for Pearl Harbor and arrived 10 August.

J. Franklin Bell returned to the Western Pacific, putting into Manus, Admiralties, 3 October to embark 1,600 assault troops for the invasion of the Philippines. She headed for Leyte Gulf 14 October and arrived off Dulag, Leyte, 20 October. After quickly debarking her troops, she began unloading supplies and receiving casualties. Defying repeated air attacks, she unloaded supplies into LCTs throughout the day and night completing the task shortly after noon the next day. Then she got under way for Manus, Admiral of the Fleet, Lord Roger Keyes, RN, on board, and arrived the 27th.

Following a voyage to New Guinea, *J. Franklin Bell* departed Manus for San Francisco and arrived 27 November. Heading back to the war zone 28 February 1945, the veteran transport arrived Noumea, New Caledonia, 18 April. After landing exercises and embarking Seabees and their equipment, she headed for Okinawa via Eniwetok and Ulithi. She dropped anchor at Hagushi 17 June to debark her Seabees. Subjected to frequent air alerts, she completed her unloading under cover of a smoke screen late the following afternoon.

The transport then departed on the 22d, carrying 862 casualties to Saipan before proceeding to Espiritu Santo and Noumea to embark homebound casualties. Departing Noumea 11 July with over 1,700 passengers, she steamed for San Francisco and arrived the 27th.

The war ended, *J. Franklin Bell* sailed 21 September for the Western Pacific, carrying troops to Eniwetok, Okinawa, and Leyte. After boarding homebound passengers at Leyte, she sailed 27 October and reached Seattle 12 November. She began coastal operations on the 22d shuttling between Washington and California ports. She arrived Suisun Bay, Calif., 20 March 1946; and decommissioned the same day.

Transferred to the WSA for disposal, *J. Franklin Bell* was sold for scrap 3 April 1948, to Boston Metals Co., Baltimore, Md.

J. Franklin Bell received six battle stars for World War II service.

J. Fred Essary, see Sagittarius (AKN-2)

J. Fred Talbott

Joshua Frederick Cockey Talbott was born near Luther-ville, Md., 29 July 1843. He began to study law in 1862 but joined the Confederate Army in 1864 to serve in the 2d Maryland Cavalry. Following the war, Talbott was admitted to the bar and began to practice law in Towson, Md. In 1878, after several years of activity in Democratic politics and local civic affairs, he was elected to Congress. Except for the periods 1885 to 1893, during which he served for a time as Insurance Commissioner for Maryland, and 1894 to 1902, he served in Congress until his death. Talbott was a member of the Naval Affairs Committee for 25 years and worked unceasingly for a strong and modern

Navy. He died in Lutherville 5 October 1918 after a long life of distinguished public service.

(DD-156: dp. 1,090; l. 314'5"; b. 30'6"; dr. 8'8"; s. 35 k.; cpl. 101; a. 4 4", 2 3"; 2 .30 cal., 12 21" tt.; cl. *Wickes*)

J. Fred Talbott (DD-156) was launched 14 December 1918 by William Cramp & Sons, Philadelphia; sponsored by Mrs. Robert L. Bates, niece of Representative Talbott; and commissioned 30 June 1919, Comdr. T. G. Ellyson in command.

The new destroyer departed Newport 10 July for the Mediterranean, where she acted as a station ship at various ports providing an element of stability in Europe during the first troubled months of postwar adjustment and reconstruction. Upon her return to the United States 21 June 1920, the ship took part in patrol duty on the East Coast and engaged in fleet exercises before decommissioning at Philadelphia 18 January 1923.

J. Fred Talbott recommissioned 1 May 1930, Lt. C. H. Cobb in command, and immediately began shakedown training in Delaware Bay. For the 10 years that followed, the ship operated along the Atlantic coast and in the Caribbean engaging in antisubmarine training; fleet operations; and carrying out the many far-ranging duties of the United States fleet in preservation of peace, missions of mercy, maintaining freedom of the seas, and otherwise protecting the United States' interests. She also helped to train reserves and midshipmen, thus developing not only the equipment and tactics, but the men of the Navy as well.

With the outbreak of the war in Europe and America's initial effort to protect its shipping while remaining neutral, *J. Fred Talbott* was assigned patrol duties in the waters off the Atlantic entrance to the Panama Canal. Following America's entry into the war with the surprise attack on Pearl Harbor, the ship took up convoy escort duties between New Orleans, Cuba, and the Canal, helping to protect the sea lanes and to move the vast amounts of men and materiel needed for victory.

Following an overhaul in Boston in January 1944, *J. Fred Talbott* sailed 13 February with her first transatlantic convoy, and, after her safe return from Casablanca, took up escort duties with convoys from Iceland southward into the Caribbean. Later in the year, after arrival 15 September, she was converted at New York and reclassified AG-81 25 September 1944. The ship arrived Port Everglades, Fla., 1 November to act as a target ship for torpedo bombers, continuing this important training service until the war's end.

J. Fred Talbott arrived Boston 22 April 1946, and decommissioned 21 May 1946. She was sold to Boston Metals Corp., Baltimore, Md., in November 1946 and was subsequently scrapped.

J. M. Guffey

A former name retained.

(TKr: dp. 5,500; l. 292'2"; b. 40'2"; dr. 22'; s. 11 k.)

J. M. Guffey, a tanker, was launched in 1902 by the New York Shipbuilding Co., Camden, N.J.; taken over by the Navy on a bare boat basis; and commissioned 14 October 1918 at Invergorden, Scotland, Lt. Comdr. O. T. Nelson in command.

J. M. Guffey operated out of Invergorden replenishing the oil supplies until 24 January 1919 when she sailed for the United States. She remained in St. Johns, Newfoundland, for 6 weeks before arriving Philadelphia 14 April. She decommissioned there 17 June 1919, and was returned to her owner, the Gulf Refining Co., Pittsburgh, Pa.

J. M. Woodworth

Former name retained.

(YT-137: dp. 135; l. 84'; b. 20'; dr. 6'9")

J. M. Woodworth was built in 1903 by Neafie and Levy, Philadelphia, Pa., and taken over by the Navy from the Public Health Service 2 November 1937. She was assigned to the Washington Navy Yard for duty as a service craft. After limited service in late 1937 and early 1938, she was declared unfit for naval purposes and struck from the Navy List 28 December 1938. *J. M. Woodworth* was sold 17 April 1939 to Gallagher Bros. Sand & Gravel Corp.

J. R. Brooke, General, see *General J. R. Brooke* (AP-132)

J. R. Y. Blakely

John Russell Young Blakely was born 17 July 1872 in Philadelphia and graduated from the Naval Academy in 1892. After serving in various Navy ships and at many shore stations, he took his first command, *Des Moines*, in 1914. As captain of this ship, and later *Seattle*, Blakely rendered important service in transporting and escorting troops and supplies to Europe during the First World War. For his outstanding contribution he was awarded the Navy Cross. Following the war Blakely served with the Chief of Naval Operations, at the Naval War College, and with the rank of captain he commanded *Arizona* (BB-39). After a tour as Assistant to the Chief of the Bureau of Navigation in 1925, he was promoted to Rear Admiral and given command of a cruiser division. He also commanded the 15th Naval District and served on the important General Board before poor health forced him to retire 1 June 1932. Rear Admiral Blakely died 28 March 1942 in Denver, Colo.

(DE-140: dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; cpl. 136; a. 3 3", 2 40mm., 8 20mm., 2 dct., 8 dcp., 1 dcp. (h.h.), 3 21" tt.; cl. *Edsall*)

J. R. Y. Blakely (DE-140) was launched by Consolidated Steel Corp., Ltd., Orange, Tex., 7 March 1943; sponsored by Miss Mary Young Blakely, niece of Rear Admiral Blakely; and commissioned 16 August 1943, Comdr. J. H. Forshev in command.

J. R. Y. Blakely conducted her shakedown training out of Bermuda during September 1943, returning to Charleston 22 September to prepare for convoy duty in the Atlantic. She sailed 4 October from Norfolk with a convoy for the Mediterranean; and, after transporting precious supplies safely to Casablanca, returned to New York 16 November. *J. R. Y. Blakely* made another round trip voyage to Casablanca December 1943 through January 1944, and a third during February through March 1944, as American ships began the great buildup in Europe.

After voyage repairs the escort vessel was assigned to a hunter-killer group built around an escort carrier. She sailed from New York 30 March 1944 and rendezvoused with *Core* (CVE-13) and her escorts in the Atlantic to search for German submarines. After a vigilant search and stops at Newfoundland and Casablanca the ship reached New York 30 May 1944. *J. R. Y. Blakely* was soon at sea again, joining the *Wake Island* (CVE-65) group at Norfolk 15 June. During June and July the ships intensified the hunt for U-boats, and covered the all-important supply convoys in the Atlantic. After a short stay in Casablanca harbor, the group was sent by Admiral Ingersoll to search for German weather picket submarines, and by 2 August the escorts had found U-boat *U-804*. In the engagement which followed, *Fiske* (DE-143) was torpedoed and sunk. *J. R. Y. Blakely* made several depth charge attacks before retiring to protect *Wake Island*. She returned to New York 16 August 1944.

The veteran ship conducted training operations in Casco Bay, Maine, for several weeks, but departed Norfolk 8 September with another hunter-killer group, led by *Mission Bay* (CVE-59). On this cruise the escort vessel took part in her first successful attack, as the *Mission Bay* group was sent to break up a suspected meeting between cargo submarine *U-1062* and another submarine. *Tripoli's* (CVE-64) group helped maintain an around the clock search, and on 30 September *Fessenden*, *Howard* and *J. R. Y. Blakely* began to search out a contact. *Fessenden's* depth charge attack sank the submarine, *U-1062*, which was carrying valuable cargo for Germany. Following this success the group moved into the South Atlantic, where because of the great success of allied antisubmarine tactics, contacts were scarce. After visiting Bahia and Capetown, *J. R. Y. Blakely* arrived New York 27 November 1944.

During December the ship conducted additional training in the Caribbean, after which she sailed 16 January 1945 to participate in tactics out of Mayport, Fla. After screening carriers and acting as rescue ship, the ship carried out training and escort duties in the Caribbean, arriving New York 9 March 1945.

As German submarines were known to be moving westward for a final effort against the United States, *J. R. Y. Blakely* again joined an escort carrier group, and with *Mission Bay* and destroyer escorts set up barrier patrol north of the Azores. The ships departed 27 March, and in the cruise which followed sank one of the U-boats, combining with other hunter-killer groups to foil the German plans. *J. R. Y. Blakely* returned to New York 14 May, her important work in the Atlantic completed.

Following carrier training operations, the ship sailed for the Panama Canal, arriving 19 July 1945, and joined the Pacific Fleet. She reached San Diego 29 July for onward routing to Pearl Harbor, where the ship celebrated the end of organized hostilities 15 August 1945. *J. R. Y. Blakely* departed 27 August, however, to perform escort duties among the island bases of the western Pacific. The ship also aided in the occupation of many small islands before arriving San Diego 23 January 1946.

J. R. Y. Blakely steamed via the Panama Canal to New York 15 February, and after pre-inactivation overhaul arrived Green Cove Springs, Fla., 13 March 1946. She decommissioned 14 June 1946 and was placed in reserve, later moving to the Texas Group, where she remains.

J. Reynor & Son

A former name retained.

(SP-869: t. 29; l. 64'; b. 14'; dr. 4'; s. 14 k.)

J. Reynor & Son (SP-869), a motor boat, was built in 1916 by W. F. Dunn, Norfolk, Va., and purchased by the Navy from her owner, J. Reynor & Son, in January 1918. She commissioned 11 January 1918, Chief Machinist's Mate M. L. Wilson in command.

J. Reynor & Son was assigned to the 5th Naval District, and turned over to the Treasury Department for use by

the Collector of Customs, Norfolk. On this duty she cruised Hampton Roads and surrounding waters. The boat was returned to the Navy and loaned to the American Red Cross 19 August 1919 for use at the National Soldiers' Home. Returned once more 16 March 1920, *J. Reynor & Son* was turned over to the War Department, Corps of Engineers, 20 April 1920.

J. Richard Ward

James Richard Ward was born in Springfield, Ohio, 10 September 1921, and enlisted in the Navy at Cincinnati 25 November 1940. After basic training, he reported on board *Oklahoma* (BB-37) to lose his life in her during the attack on Pearl Harbor 7 December 1941. The gallant ship was one of the first to be hit, taking three torpedoes soon after the attack began. She listed dangerously; and it was soon apparent that she would capsize. The order was given to abandon ship, but Seaman First Class Ward "remained in a turret holding a flashlight so the remainder of the turret crew could see to escape, thereby sacrificing his own life." For his valor in that dark hour, Ward was posthumously awarded the Medal of Honor.

(DE-243: dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; cpl. 186; a. 3 3", 2 40mm., 8 20mm., 2 dct., 8dcp. (h.h.); 3 21" tt.; cl. *Edsall*)

J. Richard Ward (DE-243) was launched by Brown Shipbuilding Co., Houston, Tex., 6 January 1943; sponsored by Miss Marjorie Ward, sister of Seaman First Class Ward; and commissioned 5 July 1943, Lt. T. S. Dunstan in command.

Following shakedown training in waters off Bermuda, *J. Richard Ward* reached Charleston 1 September 1943 where she joined Atlantic convoy escort forces. Steaming between Norfolk and Gibraltar in the months that followed, the ship made three complete convoy voyages in support of the Allied effort in Europe. After training in March 1944, the ship was assigned to a hunter-killer group built around *Tripoli* (CVE-64). Departing New York 15 March, the ships patrolled the Atlantic between the Brazilian coast and the Cape Verde Islands. No German submarines were encountered; and they returned to New York 18 June 1944.

J. Richard Ward was assigned school ship duties at Norfolk during July 1944, and in August was assigned to another hunter-killer group. This unit, headed by *Core* (CVE-13), a veteran of the Battle of the Atlantic, sailed 8 August. After a short training period off Bermuda, the ships began scouring the Atlantic for submarines, making attacks on several sound contacts during August. After replenishing at Argentia, the task group continued operations against German submarines, now greatly reduced in numbers, before returning to New York 9 October. American antisubmarine tactics and skill had once again made the sea-lanes safe.

From October 1944 to January 1945, *J. Richard Ward* performed her tactical mission during pilot qualifications. She sailed again 24 January for antisubmarine patrol in the heavy weather of the north Atlantic, returning 28 March. She was at sea on her final Atlantic cruise when the German surrender came, and returned to New York 11 May 1945.

J. Richard Ward underwent modernization at Boston Navy Yard preparatory to transfer to the Pacific Fleet. She sailed 28 June 1945, for refresher training in the Caribbean, then sailed via the Panama Canal for Hawaii. En route, she received word of the Japanese surrender. After her arrival Pearl Harbor 1 September, the ship screened flight operations with *Tripoli*.

The veteran destroyer escort returned to San Diego 17 October 1945. After transiting the Canal and stopping at Norfolk, she arrived Green Cove Springs, Fla., 13 December 1945. There she decommissioned 13 June 1946, and entered the Reserve Fleet. She is at present berthed in Texas.

J. Vaud

A former name retained.

(SP-3361: t. 63; l. 101'; 19'8"; dr. 4'6"; s. 10 k.)

J. Vaud (SP-3361), a motor boat, was built in 1907 by Thomas Johnson, Wildwood, N.J., and acquired by the Navy by purchase from her owner, A. L. Dunn of Govans, Md., 27 September 1918.

J. Vaud was not commissioned, but towed to Indian Head Proving Ground, Md., and used for range construction work. She was sold 30 June 1919, to Chesapeake Water Supply Co., Norfolk, Va.

J. W. Wilder

A former name retained.

(Sch)

J. W. Wilder was a British schooner captured about 15 miles east of Mobile Bay entrance 20 January 1862 by Union screw steamer *R. R. Cuyler*. She was condemned and sold to the Navy by the New York prize court 19 May 1863, and used as a tender to ordnance ship *Sportsman* by the West Gulf Blockading Squadron.

J. William Ditter

J. William Ditter was born in Philadelphia 5 September 1888. He received a law degree from Temple University Law School in 1913, following which he taught in the Philadelphia public schools and practiced law. Ditter was selected to Congress from the 17th District of Pennsylvania in 1932, and during his years in Washington served on the House Committee on Appropriations. He also was a member of the subcommittee on Navy Department appropriation bills, and at the time of his death was ranking minority member. Congressman Ditter was a supporter of a strong Navy and vitally interested in its welfare. He was killed in an airplane crash near Lancaster, Pa., 21 November 1943.

(DM-31: dp. 2,200; l. 376'5"; b. 14'; dr. 15'8"; s. 34 k.; cpl. 336; a. 6 5", 8 20mm., 4 dep., 2 dct.; cl. *Robert H. Smith*)

J. William Ditter (DM-31) was launched as DD-751 by Bethlehem Shipbuilding Co., Staten Island, N.Y., 4 July 1944; sponsored by Mrs. J. William Ditter, widow of Congressman Ditter; reclassified DM-31 19 July 1944; and commissioned at New York Navy Yard 28 October 1944, Comdr. R. R. Sampson in command.

J. William Ditter completed her shakedown off Bermuda in December. She sailed from Norfolk 13 January 1945, and after transiting the Panama Canal and touching at San Diego arrived Pearl Harbor 10 February.

As the Navy's island-hopping thrust toward Japan reached its climax, *J. William Ditter* sailed 2 March for Eniwetok and Ulithi, departing the latter base 19 March for Okinawa. She arrived 25 March off the critical island, soon to be the scene of the largest amphibious assault of the Pacific war, and began hazardous minesweeping operations. The next day she skillfully dodged a torpedo during an encounter with a Japanese submarine. On 29 March she discovered two suicide boats off Okinawa, and sank one of them with gunfire. By the day of the invasion, 1 April, *J. William Ditter* and her sister minecraft had swept the channels and laid marker buoys, contributing importantly to the success of the initial landing. Next day her duties shifted to convoy escort, as the versatile ship protected transports on night retirement away from Okinawa. On the night of 2 April the ship shot down two bombers, and she continued to come under air attack in the days that followed as the Japanese made a

desperate but futile effort to stop the invasion with kamikaze tactics.

J. William Ditter was assigned radar picket duty 12 April, and, subsequently, became the target of heavy air attack. She shot down several planes and assisted with several more until retiring to Kerama Retto 30 April. The ship was soon back on picket duty, however, and engaged in numerous battles with Japanese aircraft. While patrolling with *Harry F. Bauer* and *Ellyson* 6 June, *J. William Ditter* was attacked by a large group of kamikazes. The ship's gun crews downed five of the planes; but a sixth glanced off her No. 2 stack; and another crashed her on the port side near the main deck.

The ship lost all power and suffered many casualties; but valiant damage control kept her afloat until she could be towed by tug *Ute* to Kerama Retto next day. Eventually she was repaired enough to steam to Saipan 10 July and begin the long voyage home. She touched at San Diego and the Canal Zone before arriving New York 12 July 1945. *J. William Ditter* decommissioned there 28 September 1945 and was scrapped in July 1946.

J. William Ditter received one battle star for World War II service.

Jacamar

Any of many species of birds of the subfamily *Galbulinae*, found in tropical forests from Mexico to Brazil.

I

(AMc-47: dp. 185; l. 97'1"; b. 22'; dr. 8'6"; s. 10 k.; cpl. 16; a. 2 .50 cal. mg.; cl. *Accentor*)

The first *Jacamar* (AMc-47), a wooden-hulled coastal minesweeper, was launched by Greenport Basin & Construction Co., Greenport, Long Island, N.Y., 10 March 1941; sponsored by Mrs. Dorothy Scrimshaw; and commissioned 25 June 1941, Lt. (j.g.) S. Yeager in command.

The new minesweeper departed for training at Mine Warfare School, Yorktown, Va., 30 June 1941; and reported for coastal duty with the Atlantic Fleet in July. America's entry into the war in December necessitated an increase in mine protection for vital Atlantic bases, and *Jacamar* steamed from Boston 9 December for duty at Bermuda. She subsequently performed these vital mine warfare functions at Bermuda and in the Caribbean until returning to Norfolk for alterations and new sweeping gear 3 February 1943.

Jacamar returned to Bermuda in March 1943, remaining there during the next crucial year in the Battle of the Atlantic. She sailed for Norfolk 20 April 1944, and upon arrival took up duty as a towing ship for aircraft target practice offshore. *Jacamar* remained on this duty, stationed at Hampton Roads, until arriving New London, Conn., 10 February 1945. *Jacamar* was at New London when the Germans surrendered in May, and arrived New York 6 June 1945. She subsequently engaged in clearing mines in Florida waters before decommissioning at Charleston 6 December 1945. After being briefly laid up in the Wando River, she was turned over to the Maritime Commission and sold in 1947 to O. R. Murphy, Charleston, S.C.

II

The second *Jacamar* (AMCU-25) was originally *LSIL-370* (q.v.). She was reclassified and named in 1952; converted and commissioned 12 January 1954.

Jacana

Any of certain wading birds of the family *Jacaniidae* common to the Western Hemisphere.

(MSC-193: dp. 290, l. 44', b. 28', dr. 9', s. 13 k.; cpl. 39, a. 2 20mm.; cl. *Bluebird*)

Jacana (MSC-193) was launched as AMS-193 25 February 1954 by Quincy Adams Yacht Yard, Quincy, Mass.;

sponsored by Mrs. Dorothy M. Deehan; reclassified MSC-193 on 7 February 1955; and commissioned 10 March 1955, Lt. (j.g.) W. W. Jordan in command.

After shakedown, *Jacana* arrived Charleston, S.C., her home port, 28 May 1955; and, during the year, engaged in tactical training and experimental exercises part of the Navy's ceaseless activity to maintain a superior readiness capability that incorporates every modern technological advance. The motor mine sweeper arrived at her new home port, Yorktown, Va., 18 January 1957, and commenced mine warfare exercises in the Chesapeake Bay.

In addition to participating in mine warfare operations, *Jacana* performed important search and rescue missions for downed aircraft and engaged in amphibious exercises off Onslow Beach. She continued in this series of operations until 28 April 1962, when she proceeded to Port Everglades, Fla., for duty with the Naval Ordnance Laboratory Test Facility. After her mine evaluating mission and Caribbean exercises were completed, *Jacana* sailed for Halifax late September to participate in joint American-Canadian maneuvers. The combined exercises are proof of the free world's determination to thwart any Communist thrust toward world conquest. Soon after this exercise, the Cuban crisis brought a showdown

with communism. *Jacana* remained on alert through November.

From 1963 into 1967 *Jacana* has operated along the Atlantic coast, engaging in mine exercises, amphibious training, search and rescue operations, and duty with the Naval Mine Defense Laboratory in Florida.

Jaccard

Richard Alonzo Jaccard was born 1 July 1918, in Troy, Mo., and enlisted in the Naval Reserve 29 October 1940. He later underwent flight training and upon graduation was commissioned Ensign 27 September 1941. Reporting to famed carrier *Enterprise* (CV-6) in April 1942, Ens. Jaccard took part 4 June 1942 in one of the most important battles in all naval history, the Battle of Midway. As American carrier groups moved to meet the Japanese thrust at Midway, Jaccard, as part of Scouting Squadron 6, attacked enemy carriers during the morning, knocking out *Akagi* and *Kaga*. That afternoon the squadron carried out another devastating attack, sinking carrier *Hiryu*. For his part in a great victory, Jaccard was awarded the Navy Cross. Following further missions with Scouting Squadron 6, Jaccard was transferred to

USS *Jacana* (MS-193) at Hampton Roads, Va., 23 July 1964

Bombing Squadron 6 in *Wasp* (CV-7). While supporting the Guadalcanal campaign from the carrier, Ens. Jaccard was killed when *Wasp* was torpedoed and sunk 15 September 1942.

(DE-355: dp. 1,350; l. 306'; b. 36'8"; dr. 9'5"; s. 24 k.; cpl. 186; a. 2 5", 4 40 mm., 10 20mm., 2 dct., 8 dep., 1 dep. (h.h.); cl. *John C. Butler*)

Jaccard (DE-355) was launched by Consolidated Steel Corp., Ltd., Orange, Tex., 18 March 1944; sponsored by Mrs. C. R. Jaccard, mother of Ensign Jaccard; and commissioned 26 July 1944, Lt. Comdr. C. R. Hamilton in command.

Following shakedown training out of Bermuda, the new destroyer escort sailed to Boston for the installation of new electronic equipment. She departed 29 September for Norfolk to join her escort division and after a battle problem off the Virginia Capes escorted a convoy back into Hampton Roads. *Jaccard* then sailed 21 October, transited the Panama Canal, and touched at many of the Navy's south Pacific bases before arriving Hollandia 28 November 1944. After several days of antisubmarine training, she steamed to Leyte, arriving 21 December, and there underwent her first air attack. In the months that followed the destroyer escort operated as a convoy escort from Hollandia, Manus, and the Palaus to Leyte as Allied forces pressed forward in the conquest of the Philippines. *Jaccard* remained on this duty, escorting a total of eleven convoys of vitally needed supplies, until joining a hunter-killer group 18 March 1945, west of the Philippines. During the next 2 months she also escorted American submarines to and from Subic Bay.

In May *Jaccard* returned to escort duty out of Leyte Gulf, but steamed back to the waters off Manila 22 June to patrol and escort submarines. She remained on this duty until after the end of organized fighting, and then began escort duty between Manila and Okinawa 30 August 1945. Early in 1946 the veteran ship began operating as escort and mail ship between the Philippines and ports in China and Korea in support of American troops remaining in these strategic countries to preserve stability. She sailed 26 April 1946 for the United States, and arrived 16 June. After a period of training operations off the West Coast, *Jaccard* decommissioned at Puget Sound Navy Yard 30 September 1946, and joined the Pacific Reserve Fleet, Bremerton, Wash., where she remains.

Jaccard received one battle star for World War II service.

Jack

Any of various fishes—young pike, green pike or pickrel, or large California rockfish.

I

(SS-259: dp. 1,526; l. 311'9"; b. 27'3"; dr. 15'3"; s. 20 k.; cpl. 60; a. 10 21" tt., 1 3", 2 .50 cal., 2 .30 cal.; cl. *Gato*)

The first *Jack* (SS-259) was launched by Electric Boat Co., Groton, Conn., 16 October 1942; sponsored by Mrs. Frances Seely; and commissioned at New London, Conn., 6 January 1943, Comdr. T. M. Dykers in command.

Jack underwent shakedown training along the New England coast, sailing from New London 26 April 1943 for service in the Pacific. Reaching Pearl Harbor 21 May, the submarine took on supplies and departed on her first offensive war patrol 5 June 1943. Taking part in a submarine offensive against Japan, she patrolled off Honshu. *Jack* came upon a five-ship convoy 26 June and in a series of five well-executed attacks sank 4,000-ton passenger-cargo ship *Toyo Maru* and 6,000-ton cargo ship *Shozan Maru*. In attempting to torpedo a third ship, the submarine was shaken by an aerial torpedo; but the alert crew corrected her dangerous diving angle and effected repairs. On Independence Day 1943, *Jack* began to track smoke on the horizon and soon detected *Nikkyo Maru* with an escort. The submarine sent the cargo ship under with

three torpedoes and returned to Pearl Harbor for repairs 19 July 1943.

Jack's second war patrol (5 September–10 October) brought no opportunities for attack as engineering difficulties forced her to return prematurely to Pearl Harbor.

On her third war patrol the submarine proceeded westward from Pearl Harbor to the South China Sea 16 January 1944. Prowling the pivotal Singapore-Japan shipping lanes, she encountered five large oil tankers with three escorts early 19 February. *Jack* reached attack position at about 0440 and fired three torpedoes, scoring one hit. She then began a long circling maneuver designed to bring her in front of the remaining four tankers; and late in the afternoon of 19 February she was again ready to attack. Two torpedoes sank two more of the frantically zigzagging ships; and *Jack* moved in on the trailing tanker. Her first spread of torpedoes missed and the tanker replied with a 5" salvo; but *Jack* returned 3 hours later to sink her with four well-placed torpedoes. In this remarkable series of attacks the submarine sank four tankers, all over 5,000 tons—*Kokuie Maru*, *Nanei Maru*, *Nichirin Maru*, and *Ichiyo Maru*. After several more attacks *Jack* set course for Fremantle, Australia, her new base, where she arrived 13 March 1944.

Departing Australia 6 April 1944, *Jack* returned to the South China Sea for her fourth war patrol. She chased a long convoy through the afternoon of 25 April, and shortly after midnight next day attacked, sinking *Yoshido Maru* and damaging two others. She also sank a radio-equipped trawler, *Daisun*, 27 April with gunfire before returning to Fremantle 10 May 1944.

Jack steamed out of Fremantle for her fifth war patrol 4 June 1944, again returning to Japan's important lifelines in the South China Sea. Early 24 June she made an approach on a large convoy and fired three torpedoes, sinking a large tanker, *San Pedro Maru*, before being forced to retire by escorting aircraft. Five days later she came upon another large convoy, and by early 30 June was in a position to attack. Three successive attacks sent cargo ships *Matsukawa Maru* and *Tsukushima Maru* to the bottom. *Jack* returned to Fremantle 14 July 1944. For her highly successful and aggressive first, third, and fifth war patrols, the submarine was awarded the coveted Presidential Unit Citation.

The submarine turned to the Celebes Sea for her sixth war patrol, and sailed 6 August 1944. Attacking a convoy 28 August, she sank a small minesweeper and started in pursuit of a cargo ship. After her torpedo missed and she was raked with gunfire by her adversary, *Jack* deftly evaded the attacker and returned later to sink the Japanese ship, *Mexico Maru*. She arrived Fremantle following this patrol 24 September 1944.

Jack sailed from Fremantle once more 27 October 1944, bound for the South China Sea. She attacked a coastal convoy 14 to 15 November, sinking cargo ships *Nichiei Maru* and *Yuzan Maru* before shallow water forced her to break off the fight. The attrition of Japanese shipping was beginning to tell; and the ship found no more opportunities before ending her patrol at Pearl Harbor 24 December 1944. From there she returned to San Francisco for a major overhaul.

The veteran submarine returned to Pearl Harbor 1 April 1945, and departed on her eighth war patrol 26 April. With most Japanese shipping sunk or reluctant to venture into the sea lanes, her major job was to act as lifeguard for the massive carrier strikes and bomber missions on the Japanese mainland. The submarine returned to Guam for refit 18 June and set out again 12 July for her ninth and last war patrol. Stationed between Luzon and Okinawa, she again performed lifeguard duty until the Japanese surrender 15 August 1945. Her ninth patrol ended at Midway 29 August.

Jack sailed for the United States 5 September 1945, steaming via Pearl Harbor and the Canal Zone to New York 3 October 1945. She decommissioned at New London 8 June 1946, and was placed in the Atlantic Reserve Fleet. She recommissioned briefly 20 December 1957, to prepare for transfer to the government of Greece and

after training operations was loaned to the Royal Hellenic Navy 21 April 1958. She serves as HHMS *Amfitriti* (S-09).

In addition to her Presidential Unit Citation, *Jack* received seven battle stars for World War II service. All patrols, except for her second and ninth, were designated successful.

II

(SS(N)-605: dp. 3,968 (surf.); l. 278'; b. 31'7"; dr. 25'4"; s. classified; cpl. 95; a. 4 tt.; cl. *Thresher*)

The second *Jack* (SSN-605) was laid down 16 September 1960 by Naval Shipyard, Portsmouth, N.H.; launched 24 April 1963; sponsored by Mrs. Leslie R. Groves, wife of Lieutenant General Groves, head of the Manhattan Project; and commissioned 31 March 1967, Comdr. L. T. Urbanczyk in command.

She then joined the Atlantic Fleet and operates out of New London, Conn., as one of the Navy's fast and versatile nuclear submarines, a mighty weapon helping to assure the United States control of the seas.

Jack C. Robinson

Jack C. Robinson was born in Blue Ridge, Ga., 22 September 1922, and enlisted in the Marine Corps 12 December 1941. After basic training, he was assigned to a unit scheduled to take part in the Guadalcanal campaign, America's first amphibious operation of the war. During the bitter fighting 23 October 1942 in the Matanikau River area, Pfc. Robinson risked his life to repair damaged communications lines vital to the survival of his unit, earning the Silver Star for his gallantry. Robinson was wounded in the action, however, and died 25 October 1942.

(APD-72: dp. 1,390; l. 306'; b. 37'; dr. 12'7"; s. 24 k.; cpl. 204; a. 1 5", 6 40mm., 6 20mm., 2 dct.; cl. *Crosley*)

Jack C. Robinson (APD-72) was launched by Dravo Corp., Pittsburgh, Pa., 8 January 1944 as DE-671; sponsored by Mrs. Clem F. Robinson, mother of Pfc. Robinson; reclassified APD-72 on 27 June 1944; converted to a high-speed transport, and commissioned 2 February 1945, at Orange, Tex., Lt. Comdr. W. W. Bowie in command.

After shakedown in the Caribbean, *Jack C. Robinson* departed Norfolk 31 March to join the Pacific Fleet, arriving San Diego 14 April 1945. Ten days later she arrived Pearl Harbor to begin a month of intensive training. Arriving Ulithi 21 May, the ship took up duty as an escort vessel for the massive supply convoys between staging bases and the forward areas. In June she moved to Okinawa for antisubmarine patrol offshore, departing 17 July to take up similar duty in the Philippines.

After the end of the Pacific War, *Jack C. Robinson* engaged in convoy duties supporting the Allied occupation of Japan and her former empire before returning via the Panama Canal to Norfolk early in 1946. After exercises in the Caribbean the ship returned to Brooklyn 24 May 1946 for extensive repairs. She was towed to Green Cove Springs, Fla., arriving 30 October 1946, and decommissioned 13 December. *Jack C. Robinson* entered the Reserve Fleet at Orange, Tex. *Jack C. Robinson* was struck from the Navy List 1 December 1966 and sold to Chile under the Military Assistance Program.

Jack C. Robinson received one battle star for World War II service.

Jack Miller

Jack Miller, born in Dallas, Tex., 2 April 1920, served in the Marine Corps Reserve as a Second Lieutenant from 19 May to 31 October 1941. Commissioned First Lieutenant, USMC, at Quantico, Va., 1 November 1941, he volunteered for "Carlson's Raiders" and went to the Pacific. On 3 December 1942, as commanding officer of a platoon which had the point at Guadalcanal, he daringly led a flank attack on a strong enemy combat patrol engaged by his battalion at the summit of the hill. Realiz-

ing the advance of his platoon was being held up by hostile machine gun fire, he dauntlessly led the assault on the Japanese gun position, acquiring wounds from which he died the following day. Lt. Miller was posthumously awarded the Navy Cross.

(DE-410: dp. 1,350; l. 306'; b. 36'8"; dr. 13'4"; s. 24 k.; cpl. 222; a. 2 5", 4 40mm., 10 20mm., 2 dct., 8 dcp., 1 dcp. (h.h.), 3 21" tt.; cl. *John C. Butler*)

Jack Miller (DE-410) was launched 10 January 1944, by Brown Shipbuilding Co., Houston, Tex.; sponsored by Mrs. Henry S. Miller, mother of Lt. Miller; and commissioned 13 April 1944, Lt. Comdr. J. W. Whaley in command.

After shakedown along the East Coast and in the Gulf of Mexico, *Jack Miller* sailed from Norfolk 13 June, arriving Pearl Harbor 12 July via the Canal Zone and San Diego. After more intensive training out of Pearl Harbor, she departed 24 July screening a convoy to Eniwetok, where she arrived 2 August. The remainder of the month was spent on patrol and convoy duty. *Jack Miller* sailed from Eniwetok 2 September and, after escorting a convoy to Saipan, took up harbor patrol duty there. Antisubmarine patrols, convoy screening, and escort duty kept *Jack Miller* busy for the next 9 months. During this period she sank five mines.

In June and July, *Jack Miller* screened fueling groups in support of the Okinawa operation. After the war, she operated out of Japan before returning to San Diego 5 November 1945. *Jack Miller* remained at San Diego until decommissioning there 1 June 1946, and joining the Stockton Group, Pacific Reserve Fleet, where she remains.

Jack Miller received two battle stars for World War II service.

Jack W. Wilke

Jack Winton Wilke was born in Covina, Calif., 13 June 1919, and enlisted in the Naval Reserve 13 January 1941. After undergoing flight training, he was commissioned Ensign 1 November 1941. Wilke was first assigned to a patrol squadron, but later reported to Torpedo Squadron 8 on board *Hornet* in the Pacific. In the pivotal Battle of Midway, 4 and 5 June 1942, he joined his squadron in attacking the Japanese invasion force without air cover, and "pressed home his attack in the face of withering fire from enemy Japanese fighters and antiaircraft batteries." All the planes and all the flyers but one, Ens. George H. Gay, of this gallant squadron were lost; but their attack had diverted Japanese fighters from dive bombing attacks which might have prevented the eventual U.S. Navy victory. Ens. Wilk received the Navy Cross posthumously for his heroism.

(DE-800: dp. 1,400; l. 306'; b. 36'10"; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3", 4 1.1", 10 20mm., 2 dct., 8 dcp., 1 dcp. (h.h.), 3 21" tt.; cl. *Buckley*)

Jack W. Wilke (DE-800) was launched by Consolidated Steel Corp., Orange, Tex., 18 December 1943; sponsored by Mrs. Joe H. Wilke, mother of Ens. Wilke; and commissioned 7 March 1944, Lt. Comdr. R. D. Lowther in command.

After shakedown, *Jack W. Wilke* spent several months on vital convoy escort duty from American ports to Britain, the Mediterranean, and finally to northern France. In this capacity she helped bring about the enormous buildup which eventually sealed the fate of the Axis. From 5 December 1944 to May 1945, the ship operated with a hunter-killer group in the Newfoundland-Nova Scotia area; and, upon the surrender of Germany, she moved to Norfolk to serve as a weather reporting and air-sea rescue vessel.

Jack W. Wilke sailed 4 June 1945 for Miami and operated as a sonar training ship there until 18 July. In September she underwent overhaul at New York Navy Yard in preparation for her new role as an experimental anti-submarine ship. Sailing 7 January 1946, *Jack W. Wilke* commenced operations out of Key West. During the years that followed, she carried out experiments in both

tactics and sound equipment off Key West and on occasional cruises to the Caribbean, contributing importantly to the Navy's scientifically advanced, antisubmarine-warfare capability.

The ship's schedule of experimental operations was interrupted on New Year's Day 1959 by the triumph of Castro's forces in Cuba; and *Jack W. Wilke* steamed to Havana with other ships to help stabilize the situation and to protect American lives and property. During the remainder of the year, she operated off Key West and Norfolk on training operations, and took part in a special good-will cruise to Panama in October during a Caribbean training period. Returning to Key West, the ship decommissioned 24 May 1960, and entered the Atlantic Reserve Fleet. At present she is berthed at Philadelphia.

Jackal

A wild dog of the Old World, resembling a wolf.

(Sch : t. 47; cpl. 31; a. 3 guns)

Jackal, sometimes spelled *Jackall*, was one of eight schooners which Commodore David Porter purchased at Baltimore in January 1823 for service in the "Mosquito Fleet" being established for action against pirates in the West Indies. *Jackal*, commanded by Lt. T. H. Stevens,

sailed from Norfolk with sloop of war *Peacock*, steam galliot *Sea Gull*, and other schooners 14 February and arrived St. Thomas 3 March. Porter's efforts to secure the cooperation of the Governor of Puerto Rico were thwarted when a Spanish battery at San Juan fired on *Fox*, killing her commander, as she entered the harbor carrying a message.

Porter then divided his fleet to scour the coasts of Hispaniola, Cuba, and part of Yucatan for buccaneers. In this operation *Jackal*, *Fox*, *Gallinipper*, and *Mosquito* were assigned to the northwestern coast of Cuba, where they searched each bay, inlet, and key and escorted merchantmen through the dangerous waters. The flotilla captured *Pilot*, a fast sailing schooner, off Norfolk, which the pirates had taken only 8 days before. About the same time they destroyed three pirate schooners and several of their bases.

In August operations were interrupted by an epidemic of yellow fever in the fleet which forced Porter to take most of his vessels north where more healthful conditions prevailed. When the epidemic had passed, *Jackal* returned to the West Indies to resume her vigilant patrolling of waters previously infested by pirates but now comparatively safe and peaceful. The freebooters had suffered so severely at the hands of Porter's flotilla that they had all but abandoned operations at sea for less dangerous raids upon settlements ashore.

Fleet Admiral Chester W. Nimitz in USS *Jack W. Wilke* (DE-800) 5 November 1946

When yellow fever broke out again in the summer of 1824, *Jackal* once more sailed north. Back in the West Indies on patrol off Cuba, *Jackal* rescued survivors of *Ferret* after her sister schooner had capsized in a gale 4 February 1825. Shortly thereafter *Jackal*, seriously in need of repair, was sold.

Jackdaw

A common crow-like bird, easy to tame, that is noted for pilfering small articles.

YMS-373, commissioned 29 April 1944 (q.v.), was reclassified AMS-21 and given the name *Jackdaw* 17 February 1947.

Jackdaw (AM-368), an *Admirable*-class minesweeper, was under construction by Puget Sound & Dredging Co., Seattle, Wash., but was cancelled 6 June 1944.

Jackdaw (AM-402), an *Admirable*-class minesweeper, was under construction at Defoe Shipbuilding Co., Bay City, Mich., but was cancelled 12 August 1945.

Jacob Bell

(SwStr: t. 229; l. 141'3"; b. 21'; dph. 8'1"; a. 1 8-inch D. sb., cpl. 49; 1 32-pdr.)

Jacob Bell, a sidewheel steamer built at New York City in 1842, was purchased at New York from O. T. Glover and F. R. Anthony 22 August 1861; and commissioned the same day, Lt. Edward P. McCrea in command.

Jacob Bell immediately sailed for the Potomac, where the following day she joined steamer *Ice Boat* in shelling a Confederate battery at the mouth of Potomac Creek. She remained in the Potomac enforcing the blockade of the Virginia coast, reconnoitering along the shore of the Potomac and in its tributaries for Confederate fortifications and shelling any batteries found.

In April 1862 *Jacob Bell* accompanied five other Union ships to the Rappahannock River to gather information for Major General George B. McClellan, who was then launching his Peninsular Campaign and pondering over potential advantages of a second beachhead. The Union ships ascended the Rappahannock to Tappahannock (Urbana), Va., 50 miles by land from Richmond.

Jacob Bell became even more closely involved in the affairs of General McClellan's Army of the Potomac when she was transferred to the North Atlantic Blockading Squadron for duty on the James River. She arrived Hampton Roads 28 May and the following day proceeded with *Mahaska* to Fort Powhatan. A party which went ashore 30 May found no evidence that the forts had been occupied. The next day *Aroostook* joined the two ships in ascending the James to a point 3 miles below Drewry's

Bluff, finding no obstructions or batteries on the passage but suffering some annoyance from riflemen on the left bank. The three ships promptly returned to their anchorage off Turkey Island.

A message from General McClellan, who was then fighting the Battle of Seven Pines, arrived a few minutes past midnight 2 June, requesting support from the Navy. *Jacob Bell*, accompanied by five other ships stood up stream at dawn but was prevented from reaching Richmond by carefully-prepared obstructions at Drewry's Bluff. Nevertheless, the Navy wisely remained in the upper James, where its support a month later saved the Army of the Potomac from destruction at the end of Lee's masterful Seven Days Campaign.

Meanwhile, *Jacob Bell* labored tirelessly in support of the Union cause, engaging batteries and pickets ashore, reconnoitering tributaries in hostile territory, and maintaining communications along the river. She continued this valuable service until transferred back to the Potomac Flotilla, departing Fort Monroe for Washington 2 September.

For the remainder of the war, *Jacob Bell* was primarily concerned with the defense of Washington—alternately serving in the Potomac and the Rappahannock according to the ebb and flow of the titanic struggle between General Lee and the Army of the Potomac. All the while, her duties as a blockader were discharged with skill and devotion. She captured *C. F. Ward*, a metal lifeboat with a contraband cargo 17 October and destroyed two schooners 4 November while on a reconnaissance mission up Nomini Creek, Va. On 23 August 1863, she caught schooner *Golden Leaf* trying to slip into Rosier's Creek, Va., with a cargo of sugar. Two more ships were taken in 1864.

In between prizes, blockade duty was varied by shelling batteries along the shore and landing boat parties to destroy Confederate property. Always busy until the South's defeat, *Jacob Bell* decommissioned at Washington Navy Yard 13 May 1865, and was lost at sea 6 November while being towed by *Banshee* toward New York.

Jacob Jones

Jacob Jones was born near Smyrna, Del., in March 1768. Appointed Midshipman 10 April 1799, he served in *United States* during the quasi-war with France. In 1803 he sailed in frigate *Philadelphia* to the Barbary coast. On 31 October, when *Philadelphia* ran aground near Tripoli harbor, Jones was captured by the Tripolitans and held prisoner for 20 months. Upon his return to the United States, he served in *Adams* and *Argus* and on 4 June 1810 took command of sloop *Wasp*.

After the outbreak of war with England, *Wasp* captured brig *Dolphin* 13 October 1812; and defeated British ship-of-war *Frolic* in a bitter struggle off the Delaware capes on the 18th. Commissioned Captain 3 March 1813, Jones then commanded *Macedonian* and later in the war rendered valuable service to Commodore Chauncey on Lake Ontario.

Upon the return of peace with England, he again commanded *Macedonian*, joined the Mediterranean Squadron under Commodore Decatur, and took part in securing lasting peace with the Barbary powers. Captain Jones assumed command of the Mediterranean Squadron in 1821; and in 1824 he was appointed to the Board of Navy Commissioners. Two years later he became commander of the U.S. Naval Forces in the Pacific. At the time of his death, 3 August 1850, Commodore Jones was the commandant of the Naval Asylum in Philadelphia.

I

(DD-61: dp. 1,150; l. 315'3"; b. 30'7"; dr. 9'9"; s. 30 k.; cpl. 99; a. 4 4", 8 21" tt.; cl. *Tucker*)

The first *Jacob Jones* (DD-61) was laid down 3 August 1914 by New York Shipbuilding Corp., Camden, N.J.; launched 29 May 1915; sponsored by Mrs. Jerome Parker Crittendon, great-granddaughter of Jacob Jones; and

commissioned 10 February 1916, Lt. Comdr. W. S. Pye in command.

After shakedown, *Jacob Jones* began training exercises off the New England coast until entering the Philadelphia Navy Yard for repairs. Upon the outbreak of war between the United States and Germany 6 April 1917, *Jacob Jones* patrolled off the Virginia coast before departing Boston for Europe 7 May.

Arriving Queenstown, Ireland, 17 May, she immediately began patrol and convoy escort duty in waters off the United Kingdom. On 8 July she picked up 44 survivors of the British steamship *Valetta*, the victim of a German U-boat. Two weeks later, while escorting British steamship *Dafila*, *Jacob Jones* sighted a periscope; but the steamship was torpedoed before an attack on the submarine could be launched. Once again a rescue ship, *Jacob Jones* took on board 25 survivors of the stricken *Dafila*.

Throughout the summer the destroyer escorted supply-laden convoys and continued rescue operations in submarine-infested waters. On 19 October she picked up 305 survivors of torpedoed British cruiser *Orama*. After special escort duty between Ireland and France, she departed Brest, France, 6 December on her return run to Queenstown. At 1621, as she steamed independently in the vicinity of the Isles of Scilly, her watch sighted a torpedo wake about a thousand yards distant. Although the destroyer maneuvered to escape, the high-speed torpedo struck her starboard side, rupturing her fuel oil tank. The crew worked courageously to save the ship; but as the stern sank, her depth charges exploded. Realizing the situation hopeless, Comdr. Bagley reluctantly ordered the ship abandoned. Eight minutes after being torpedoed, *Jacob Jones* sank with 64 men still on board.

The 38 survivors huddled together on rafts and boats in frigid Atlantic waters off the southwest coast of England. Two of her crew were taken prisoner by attacking submarine *U-53* commanded by Kapitän Hans Rose. In a humanitarian gesture rare in modern war, Rose radioed the American base at Queenstown the approximate location and drift of the survivors. Throughout the night of 6 to 7 December British sloop-of-war *Camellia* and British liner *Catalina* conducted rescue operations. By 0830 the following morning HMS *Insolent* picked up the last survivors of *Jacob Jones*.

II

(DD-130: dp. 1,090; l. 314'5"; 31'8"; dr. 8'8"; s. 35 k.; cpl. 113; a. 4 4", 2 3" cal. mg., 12 21" tt.; cl. *Wickes*)

The second *Jacob Jones* (DD-130) was laid down 21 February 1918 by the New York Shipbuilding Corp., Camden, N.J., 20 November 1918; sponsored by Mrs. Cazenove Doughton, great-granddaughter of Commodore Jacob Jones; and commissioned 20 October 1919 at the Philadelphia Navy Yard, Lt. Comdr. P. H. Bastedo in command.

After fitting out at Philadelphia, *Jacob Jones* sailed 4 December for shakedown in the Atlantic. She arrived Pensacola, Fla., 22 December to continue her training and departed 3 January 1920 for the Pacific. Arriving San Diego 26 January, she operated along the California coast on anti-aircraft and firing exercises. She entered Mare Island Navy Yard 17 August for repairs and overhaul and assumed a reserve status. Returning to duty with Destroyer Force, Pacific Fleet, 18 June 1921, she operated out of San Diego until decommissioning 24 June 1922.

Recommissioned 1 May 1930, *Jacob Jones* trained in coastal waters from Alaska to Mexico as a plane guard for the Navy's budding aircraft carriers. Following Battle Fleet maneuvers during August, she entered Mare Island in November for repairs. The destroyer sailed 4 February 1931 for Panama, where she resumed plane guard duty for *Langley* (CV-1). *Jacob Jones* transited the Panama Canal 22 March and sailed for maneuvers in the Caribbean. She sailed for the United States 1 May and took part in joint Army-Navy maneuvers in the Chesapeake Bay 26 to 29 May. During the remainder of the summer, she operated with Destroyer Division 7 along the New

England coast before retiring to the Boston Navy Yard 2 October for overhaul.

Jacob Jones steamed from Boston 1 December for maneuvers off Haiti. On 13 February 1932 she departed the Caribbean to begin 13 months of plane guard duty and torpedo practice along California. She returned to Guantanamo, Cuba, 1 May 1933 for general drill and battle problem exercises, and on the 26th she sailed for Norfolk to undergo self-upkeep on rotating reserve.

Following 2 months of overhaul at Charleston, *Jacob Jones* returned to Guantanamo 29 November for scouting and firing exercises. She interrupted her maneuvers 29 June 1934 and sailed for Port au Prince, Haiti, where she served as an escort during President Roosevelt's "Good Neighbor" visit to Haiti. She resumed Caribbean operations in July and participated in landing force exercises at Guantanamo during September. She retired from the Caribbean late in November and entered Norfolk Navy Yard 3 December 1934 for several months of upkeep.

In May 1935 *Jacob Jones* embarked midshipmen from the Naval Academy for an Atlantic training cruise. She returned to Norfolk 7 June for 3 months of coastal patrols and maneuvers. She steamed to New York in September to participate in destroyer maneuvers and operated out of New York until entering Brooklyn Navy Yard January 1936 for upkeep and inspection.

On 15 June 1936, *Jacob Jones* departed New York with reserve officers on board for training cruises in the Caribbean which continued through September. In October she participated in joint Army-Navy coastal maneuvers; and, following her annual inspection at Norfolk, she participated in minesweeping training during February 1937. In March she trained officers of the 5th Fleet Reserve and in June she resumed training cruises for midshipmen. She continued to operate as a practice ship for reserve officers until 15 January 1938 when she departed Norfolk for fleet landing exercises and battle maneuvers in waters off Puerto Rico and the Virgin Islands. *Jacob Jones* returned to Norfolk 13 March for overhaul. In June she resumed operations out of Norfolk, serving as a carrier plane guard and conducting torpedo and gunnery practice.

After attending the Presidential Regatta in September, *Jacob Jones* prepared to sail for Europe to join Squadron 40-T in the Mediterranean. Organized in September 1936 to protect and evacuate Americans from Spain during the civil war, the squadron remained in the western Mediterranean cultivating friendly relations with European nations while protecting American interests. Departing Norfolk 26 October, *Jacob Jones* reached Gibraltar 6 November, and arrived Villefranche 17 November. She operated out of that French Mediterranean port on patrol until 20 March 1939. She visited Algiers 24 to 25 March 1939 and, during the next 7 months, steamed to various Atlantic European ports from Rotterdam to Lisbon. Departing Lisbon 4 October, she sailed for the United States and anchored at Norfolk the 14th.

Resuming her coastal operations, *Jacob Jones* conducted plane screening patrols from Norfolk to Newport, and in December she escorted *Seadragon* (SS-194) during the new submarine's Caribbean shakedown.

After 2 months of upkeep and inspection at Norfolk, *Jacob Jones* sailed for Charleston 4 April 1940 to join the Neutrality Patrol. Organized in September 1939 as a response to the war in Europe, the Neutrality Patrol was ordered to track and report the movements of any warlike operations of belligerents in the waters of the Western Hemisphere. The basic purpose of the patrol "was to emphasize the readiness of the United States Navy to defend the Western Hemisphere." In June, after 2 months of duty with the Neutrality Patrol, *Jacob Jones* returned to training midshipmen.

In September, *Jacob Jones* departed Norfolk for New London, Conn., where her crew underwent intensive ASW sound school training. Returning briefly to Norfolk 6 December, she sailed to Key West for further ASW training. She resumed her operations with the Neutrality Patrol in March 1941, patrolling the waters from Key

West to Yucatan Channel. In May she joined the ships which guarded the waters of Vichy-controlled islands, Martinique and Guadeloupe in the Lesser Antilles. *Jacob Jones* maintained her Caribbean operations throughout the summer.

On 30 September 1941 she departed Guantanamo with Destroyer Division 54 to prepare for escort duty in the North Atlantic. *Jacob Jones* received 2 months of upkeep and inspection at Norfolk and on 1 December 1941 departed for convoy escort training along the New England coast. Clearing Boston Harbor 12 December, she sailed to Argentina, Newfoundland, to begin her escort duty. On 16 December she escorted *Mackerel* (SS-204) and *S-33* (SS-138) through heavy seas to Boston and returned to Argentina the 24th. *Jacob Jones* once again departed Argentina 4 January 1942 escorting *Albatross* (AM-71) and *Linnct* (AM-76). While steaming to join Convoy SC-63, bound for the British Isles, *Jacob Jones* made an underwater contact and commenced a depth charge attack. Losing contact with the submarine, she escorted her ships to the convoy and returned to Argentina 5 January.

Sailing from Argentina 14 January 1942, *Jacob Jones* joined Convoy HX-169, which was headed for Iceland. The convoy encountered a violent storm; heavy seas and winds of force 9 scattered its ships' convoy. Separated from the convoy, *Jacob Jones* steamed independently for Hvalfjordur, Iceland. Though hampered by a shortage of fuel, an inoperable gyro compass, an erratic magnetic compass, and the continuous pounding of the storm, *Jacob Jones* arrived on the 19th. Five days later, she escorted three merchant ships to Argentina. Once again heavy seas and fierce winds separated the ships; and *Jacob Jones* continued toward Argentina with one Norwegian merchantman. She detected and attacked another submarine 2 February 1942, but her depth charges yielded no visible results.

Arriving Argentina the 3d, she departed the following day and rejoined Convoy ON-59, bound for Boston. Reaching Boston 8 February, *Jacob Jones* received a week of repairs. She sailed on the 15th for Norfolk and 3 days later steamed from Norfolk to New York.

In an effort to stem the losses to Allied merchant shipping along the Atlantic coast, Vice Admiral Adolphus Andrews, Commander of the Eastern Sea Frontier, established a roving ASW patrol. *Jacob Jones*, Lt. Comdr. Hugh P. Black in command, departed New York 22 February for this duty. While passing the swept channel off Ambrose Light Ship, *Jacob Jones* made a possible submarine contact and attacked immediately. For 5 hours *Jacob Jones* ran 12 attack patterns, dropping some 57 depth charges. Oil slicks appeared during the last six attacks but no other debris was detected. Having expended all her charges, *Jacob Jones* returned to New York to rearm. Subsequent investigation failed to reveal any conclusive evidence of a sunken submarine.

On the morning of 27 February, *Jacob Jones* departed New York harbor and steamed southward along the New Jersey coast to patrol and search the area between Barnegate Light and Five Fathom Bank. Shortly after her departure, she received orders to concentrate her patrol activity in waters off Cape May and the Delaware Capes. At 1530 she spotted the burning wreckage of tanker *R. P. Resor*, torpedoed the previous day east of Barnegat Light; *Jacob Jones* circled the ship for 2 hours searching for survivors before resuming her southward course. Cruising at a steady 15 knots through calm seas, she last reported her position at 2000 and then commenced radio silence. A full moon lit the night sky and visibility was good; throughout the night the ship, completely darkened without running or navigation lights showing, kept her southward course.

At the first light of dawn 28 February 1942, undetected German submarine *U-578* fired a spread of torpedoes at the unsuspecting destroyer. The deadly "fish" sped unsighted and two "or possibly three" struck the destroyer's port side in rapid succession.

According to her survivors, the first torpedo struck just

aft of the bridge and caused almost unbelievable damage. Apparently, it exploded the ship's magazine; the resulting blast sheered off everything forward of the point of impact, destroying completely the bridge, the chart room, and the officers' and petty officers' quarters. As she stopped dead in the water, unable to signal a distress message, a second torpedo struck about 40 feet forward of the fantail and carried away the after part of the ship above the keel plates and shafts and destroyed the after crew's quarters. Only the midships section was left intact.

All but 25 or 30 officers and men, including Lt. Comdr. Black, were killed by the explosions. The survivors, including a badly wounded, "practically incoherent" signal officer, went for the lifeboats. Oily decks, fouled lines and rigging, and the clutter of the ship's strewn twisted wreckage hampered their efforts to launch the boats. *Jacob Jones* remained afloat for about 45 minutes, allowing her survivors to clear the stricken ship in four or five rafts. Within an hour of the initial explosion *Jacob Jones* plunged bow first into the cold Atlantic; as her shattered stern disappeared, her depth charges exploded, killing several survivors on a nearby raft.

At 0810 an Army observation plane sighted the life rafts and reported their position to *Eagle 56* of the Inshore Patrol. By 1100, when strong winds and rising seas forced her to abandon her search, she had rescued 12 survivors, one of whom died en route to Cape May. The search for the other survivors of *Jacob Jones* continued by plane and ship for the next 2 days; but none were ever found.

III

(DE-130; dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; cpl. 186; a. 3 3", 6 40mm. AA, 10 20mm. AA, 3 21" tt, 2 dct., 9 dep.; cl. *Edsall*)

The third *Jacob Jones* (DE-130) was laid down 26 June 1942 by the Consolidated Steel Corp., Ltd., Orange, Tex.; launched 1 November 1942; sponsored by Mrs. L. W. Hesselman; and commissioned 29 April 1943, Lt. Comdr. Walton B. Hinds, in command.

After fitting out, *Jacob Jones* sailed 13 May for shake-down in Bermuda waters and arrived Charleston 7 July. On the 18th she steamed to Newport to prepare for convoy duty. A week later she sailed with a convoy of Coast Guard cutters and Navy ships, which steamed to North Africa to support Allied operations in the Mediterranean. While escorting this convoy, *Jacob Jones* made her first antisubmarine attack 7 August firing 13 depth charges in two attacks. She arrived Casablanca, French Morocco, 13 August; a week later she departed with Task Force 64 escorting a convoy bound back to the United States.

Arriving New York 5 September, *Jacob Jones* underwent inspection and on the 16th departed for ASW convoy training with *Hammann* (DE-131) and *Robert E. Peary* (DE-132) at Casco, Maine. She sailed for Norfolk 21 September and on the 25th joined Convoy UGS-19 headed for North African waters off Casablanca. Arriving 12 October, *Jacob Jones* conducted ASW patrols before departing for Gibraltar to join a westbound convoy the 19th. She arrived Norfolk 6 November with the southern section of the convoy, then departed for 10 days of repairs at Brooklyn Navy Yard. On the 23d she joined a 64-ship Norfolk-to-Casablanca convoy. Upon her arrival 10 December, she patrolled waters off the coast of Africa for a week before returning to the United States with Convoy GUS-24.

Following repairs at New York and refresher training at Casco, *Jacob Jones* joined *Card* (CVE-11) off Cape Henry 24 January 1944. At that time the escort carrier was busy carrying troops and aircraft to Europe as part of the mighty Allied buildup for the forthcoming invasion of Normandy. Returning to Norfolk 1 March, she resumed duty escorting convoys to England.

Jacob Jones departed New York 28 March 1944 and joined five other DEs escorting a convoy bound for Moiville, Northern Ireland. Arriving 7 April, she departed Londonderry, Northern Ireland, 6 days later as one of

several escorts for a 28-ship, westbound convoy that reached New York 23 April. After repairs and training, she made rendezvous 13 May with 44 merchant ships and 17 escorts for the 10-day passage to Northern Ireland and returned to New York 8 June with a westbound convoy.

For the next 12 months, *Jacob Jones* continued her escort duty for North Atlantic Convoys. Departing from either New York or Boston, she sailed as convoy escort to such ports as Londonderry and Moville, North Ireland; Liverpool, Southampton and Plymouth, England; and Le Havre and Cherbourg, France. When in the United States awaiting her next convoy, she maintained her operational readiness by training exercises in waters off Maine or Long Island. When in Europe, she operated on coastal and harbor ASW patrols. In all *Jacob Jones* crossed the Atlantic 20 times, providing protection for merchant and troop convoys in the North Atlantic.

Three weeks and a day after Germany's unconditional surrender, *Jacob Jones* departed Southampton, England, and steamed in convoy for the United States. She put into New York 8 June 1945 and entered the Brooklyn Navy Yard for overdue repairs and overhaul. On the 30th she departed for Guantanamo, Cuba, for 2 weeks of ASW and shore bombardment exercises. Steaming independently from Guantanamo 19 July, she transited the Panama Canal 3 days later, and sailed into San Diego harbor the 31st.

As the Japanese Empire prepared to surrender, *Jacob Jones* departed the Destroyer Base, San Diego, 9 August 1945 for Pearl Harbor. She reached Pearl 16 August and commenced ASW exercises before embarking 108 passengers 4 September, they sailed for the West Coast. She arrived San Pedro, Calif., and discharged her passengers 10 September. Departing for the Canal Zone 2 days later, she transited the Canal on the 20th and arrived Charleston 25 September. She steamed from Charleston 24 October and 2 days later sailed up the St. John's River, Fla., to Green Cove Springs. *Jacob Jones* decommissioned 26 July 1946 and entered the Atlantic Reserve Fleet. At present she is berthed at Orange, Tex.

Jacona

A former name retained.

(YFP-1 : t. 4,843 ; l. 379'4'' ; b. 53'1'' ; b. 23'8'')

Jacona (YFP-1) was built in 1919 for the USSB by Todd Drydock & Construction Corp., Tacoma, Wash. She operated as a freighter until 1930 when she was converted to a non-self-propelled power barge by Newport News Shipbuilding & Drydock Co., Newport News, Va. Subsequently, the ship was owned by the New England Public Service Co., at Augusta, Maine, and the Public Service Co. of New Hampshire, and moored at Manchester. She

USS *Jacob Jones* (DD-130) transiting the Panama Canal 1934

was transferred to the Maritime Commission 17 March 1945, at Portsmouth, N.H., for use by the Army.

Jacona came under Navy jurisdiction in 1947 and was classified VFP-1, 31 December 1947. The craft was towed to the Pacific, and used at various advance bases and at Korean ports as an auxiliary power supply. She is capable of producing 20,000 kilowatts of power. *Jacona* has been on loan to the Army in the Pacific since 1947, continuing this service into 1967.

Jacques Phillipe Villere, see *Basilan* (ARG-12)

Jade

A tough, compact, green gem cut from jadeite or nephrite.

(PY-17: t. 582; l. 171'; b. 27'6"; dr. 13'; s. 14 k.; cpl. 26; a. 1 3', 4.30 cal. mg., 2 dct.)

Jade (PY-17), a diesel powered yacht, was built as *Athero II* in 1926 by Geo. Lawley & Son, Neponset, Mass.; later named *Caroline*, and purchased by the Navy as *Doctor Brinkley* in December 1940 from Dr. J. R. Brinkley, of Del Rio, Tex. Overhauled and converted for Navy use at Charleston Navy Yard, she was renamed *Jade* and commissioned at Jacksonville, Fla., 16 March 1941, Lt. Comdr. George L. Hoffman in command.

Assigned to the 6th Naval District, *Jade* performed inshore patrol work until departing Charleston for the Canal Zone 5 May 1941. There she performed patrol duties for Panama Sea Frontier until 11 February 1943 when she arrived Salinas, Ecuador, for transfer to that country under lend lease. After a training period for her new crew, *Jade* was turned over to Ecuador 24 May 1943.

The ship was returned to U.S. custody in exchange for *Turquoise* (PY-18) 29 January 1944. Arriving San Francisco, she decommissioned and was placed in service 6 April 1944 for use as a hulk at the Dry Dock Training Center, Tiburon. She was eventually placed out of service 30 December 1944, and returned to the Maritime Commission 12 January 1946.

Jadnan, see *Crow* (AMC-20)

Jaguar

A large leopard-like mammal of wooded regions, typically yellowish brown marked with dark spots.

(IX-120: dp. 3,665; l. 441'6"; b. 56'11"; dr. 28'4"; s. 11 k.; cpl. 79; a. 1 5', 1 3', 8 20mm.; T. 2-ET1-S-C3)

Jaguar (IX-120) was launched as *Charles T. Yerkes* under Maritime Commission contract by the California Shipbuilding Corp., San Pedro, Calif., 20 November 1943; renamed *Jaguar* 27 October; acquired by the Navy 15 December 1943; and commissioned that day, Lt. Comdr. T. E. Hammond in command.

After shakedown out of San Pedro, *Jaguar* departed 19 January 1944 for duty as a floating storage ship in the Pacific islands. She arrived New Caledonia 21 February via Wellington, New Zealand, and from there she transported vital diesel oil, aviation gasoline, and minesweeping gear to the New Hebrides and Solomons Islands. *Jaguar* remained on station in the Pacific, sometimes servicing islands remote but important in our push for Japan. *Jaguar* returned to the West Coast early in 1946 and arrived Norfolk via the Panama Canal 20 April. She decommissioned there 10 June 1946, and was turned over to the Maritime Commission. After serving as a tanker with various American lines under the name of *Harry Peer* in 1948 and *Tini* in 1949, the ship was transferred to Panamanian flag in February 1951.

Jallao

A pearl-white haemulonid food fish of the Gulf of Mexico.

(SS-368: dp. 1,526; l. 311'9"; b. 27'3"; dr. 15'3"; s. 20 k.; cpl. 66; a. 1 5', 1 40mm., 1 20mm., 2 .50 cal., 10 21" tt.; c1. *Perch*)

Jallao (SS-368) was launched by Manitowoc Shipbuilding Co., Manitowoc, Wis., 12 March 1944; sponsored by Mrs. Oliver G. Kirk; and commissioned 8 July 1944, Lt. Comdr. J. B. Icenhower in command.

After spending most of July in training operations, *Jallao* departed Manitowoc 26 July for Chicago, where she was loaded into a floating dry dock for the long trip down the Mississippi to New Orleans. She subsequently departed New Orleans 6 August 1944, and steamed through the Panama Canal to the Pacific and arrived Pearl Harbor 22 September 1944.

Following additional training the submarine sailed 9 October for her first war patrol, operating with *Pintado* and *Atule* in a coordinated attack group known as "Clarey's Crushers." At first the submarines proceeded toward Luzon Strait; but, during the Battle for Leyte Gulf late in October, they were directed to take up scouting positions between the Philippines and Japan to cut off Japanese cripples struggling home after their devastating defeat at the Battle of Cape Engaño. On the evening of 25 October *Jallao* contacted damaged light cruiser *Tama* and moved to attack. She fired seven torpedoes; three hit and sent the Japanese warship to the bottom. After this notable success on her maiden patrol, *Jallao* continued her search until 28 November, returning to Majuro 10 December.

Jallao sailed for the Yellow Sea for her second war patrol 6 January 1945. The decimated Japanese merchant marine offered few targets. However, she flushed a convoy 5 March. During the attack she had a close call when an enemy escort trying to ram her damaged her periscope. Two days later she sailed for Midway, arriving 26 March.

After repairs, the submarine departed Midway 20 April 1945 for her third war patrol, and was assigned aircraft lifeguard duty off Marcus Island. Responding to reports of flyers in the water north of the island 9 May, *Jallao* braved shore batteries to move in and pick up five men in a raft, delivering them safely to Saipan 12 May 1945. She then departed for the coast of Japan and more lifeguard duty as American heavy bombers stepped up their attacks on the home islands. She arrived Pearl Harbor 13 June 1945.

After advanced training in the Marianas, *Jallao* departed Guam 31 July to patrol the Sea of Japan. On this, her fourth and final patrol, the submarine sank 6,000-ton freighter *Timoko Maru* 11 August 1945. Four days later hostilities ended; and the ship sailed via Guam to San Francisco, where she arrived 28 September 1945. She decommissioned at Mare Island 30 September 1946, and entered the Pacific Reserve Fleet.

Jallao's home port was changed to New London in July conversion in which she was streamlined and equipped with snorkeling gear and new electric equipment. She recommissioned 4 December 1953, Lt. Comdr. J. W. Mercer in command. After shakedown in the San Diego area, the submarine departed 12 April for the East Coast, steaming via the Panama Canal to Norfolk. Joining Submarine Squadron 6, *Jallao* operated out of Halifax during 1954 training with Canadian and American antisubmarine units. In January and February 1955, she took part in fleet exercises in the Caribbean, returning to Norfolk 4 March.

Jallao's home port was changed to New London in July 1955 and she got underway with British submarine HMS *Alderney* 7 August to take part in Joint Exercise "New Broom IV." Following this operation, *Jallao* was deployed to the 6th Fleet and departed for the Mediterranean 9 November 1955. In the months that followed, she helped train Italian Navy ships and took part in fleet exercises,

beginning the long voyage home in mid-January 1956. The ship steamed through the Suez Canal, visited several countries of eastern and southern Africa, and crossed the South Atlantic to take part in exercises with Uruguayan and Brazilian destroyers. The veteran submarine returned to New London 16 April.

After having installed the latest in electronic gear, *Jallao* resumed operations in January 1957. Combined fleet exercises in the Caribbean occupied her through February; and, after coastal antisubmarine operations, she arrived Boston late in July for a short midshipman training cruise. September and October were spent in the North Atlantic on a NATO exercise as the submarine helped strengthen the armed forces of the Atlantic Allies. She returned to New London 24 October 1957.

Jallao spent most of 1958 on training exercises off the Atlantic Coast, taking part in a combined antisubmarine exercise in the North Atlantic in September. The year 1959 was spent largely in equipment development work and training with the Submarine School at New London. The ship got underway 20 January 1960 for exercises in the Caribbean, returning 19 February. The latter part of the year was spent in training out of Bermuda. From 9 January to 24 March 1961, the veteran submarine carried out special training operations off Scotland, and operated with Canadian ships off Halifax during that summer. The remainder of the year was spent in the New London area.

Jallao began 1962 with her second Mediterranean cruise, sailing 2 January and exercising with the vital 6th Fleet in the troubled area until 7 May. The last 4 months of the year were spent in extensive modernization and repairs at Philadelphia Naval Shipyard. Through 1963 and 1964, the ship took part in training cruises to the Caribbean, served in submarine school training, and participated in equipment evaluation work. On 3 January 1965, she departed for a 4-month 6th Fleet deployment. She returned 1 May for submarine warfare tactics and submarine school operations out of New London. *Jallao* operated along the Atlantic coast and in the Caribbean into 1967.

Jallao received four battle stars for World War II service.

Jamaica

A bay on the southwestern coast of Long Island, N.Y.

(CVE-43: dp. 7,800; l. 495'8"; b. 69'6"; ew. 111'6"; dr. 26'; s. 18 k.; cpl. 890; a. 2 5", 20 40mm.; cl. *Bogue*)

Jamaica (CVE-43), originally ACV-43, was launched under Maritime Commission contract by Seattle-Tacoma Shipbuilding Corp. (later Todd-Pacific), Tacoma, Wash., 21 April 1943; sponsored by Mrs. C. T. Simard; reclassified CVE-43 on 15 July 1943; acquired by the Navy, and transferred to Great Britain under lend-lease 27 September 1943.

One of a large group of escort carriers transferred to the Royal Navy for antisubmarine work in the Atlantic, *Jamaica* was renamed *Shah*. She took an active part in the war, heading the hunter-killer group which sank *U-198* in the Indian Ocean 12 August 1944, and taking part in the Burma campaign in 1945. She was returned to the United States 6 December 1945, and sold 20 June 1947.

James Adger

A former name retained.

(ScStr: t. 1,152; l. 215'; b. 33'6"; dph. 21'3"; s. 11 k.; cpl. 120; a. 8 32-pdrs., 1 20-pdr. P.r.)

James Adger, a side wheel steamer built at New York City in 1851, was purchased at New York from Spofford,

USS *Jallao* (SS-368)

Tileston & Co., 26 July 1861; and commissioned at New York Navy Yard 20 September 1861, Comdr. John B. Marchand in command.

James Adger departed New York 16 October 1861 in pursuit of *Nashville*, a Confederate cruiser reported to have escaped from Charleston with the South's ministers to England and France, James M. Mason and John Slidell. She arrived Queenstown, Ireland, after an extremely stormy passage 30 October and spent November cruising in quest of her elusive quarry.

James Adger arrived Hampton Roads, Va., 2 December and 3 days later was ordered to Port Royal for duty in the South Atlantic Blockading Squadron. Rear Admiral DuPont ordered Comdr. Marchand to sail in *James Adger* to Georgetown, S.C., and assume command of the blockade there. She arrived off Georgetown, S.C., 24 December and served with such efficiency that on 7 March 1862, Comdr. Marchand was ordered to Charleston to command the blockade at that critical port.

At Charleston smooth teamwork was the key to success; and *James Adger* was unusually adept in cooperating with other ships in the area to assure the effectiveness of the blockade. As senior ship, she usually remained on station while others chased blockade runners; but, from time to time, she took part in a capture herself. On 18 March 1862 she joined four other Union ships in capturing *Emily St. Pierre* attempting to slip into Charleston with a cargo of 2,173 bales of gunny cloth sorely needed for baling cotton, the South's main export and source of foreign credit. She helped *Keystone State* 29 May 1862 in capturing *Elizabeth*, a 250-ton steamer trying to enter Charleston with a cargo of munitions. She assisted *Keystone State* and *Flag* in driving off and pursuing her old adversary *Nashville*, now a blockade runner named *Thomas L. Wragg* trying to slip into Charleston.

James Adger sailed for Baltimore 19 September for repairs and departed for the South 31 December touching at Hampton Roads 2 January 1863 to take monitor *Montauk* in tow before proceeding to Beaufort and Port Royal in preparation for an attack on Charleston. Arriving Port Royal 19 January, the ships learned that *Nashville*, now a privateer called *Rattlesnake*, was in the Ogeechee River. *James Adger* stood out of Port Royal, monitor *Montauk* in tow, 22 January and steamed to Ossabaw Sound, where she arrived two days later. *Montauk* ascended the Ogeechee independently to begin operations which resulted in the destruction of *Rattlesnake* 28 February. Meanwhile *James Adger*, her vital towing service completed, returned to Port Royal 29 January.

On 2 April the veteran ship became flagship for Rear Admiral DuPont while he supervised final preparations for his powerful monitor attack upon Charleston. After the tough ironclads were driven back by incredibly intense fire from Confederate batteries, *James Adger* towed crippled monitors to Port Royal and on 29 April sailed from Port Royal towing *Passaic* north for repairs, arriving New York 4 May.

Back in Port Royal 16 May, *James Adger* was assigned blockade duty off Charleston. A month later she was recalled to Port Royal to embark prisoners captured with *Atlanta* for passage to Fort Monroe, whence she steamed to Philadelphia for repairs. She arrived Philadelphia 25 June but immediately after coaling sailed in pursuit of Confederate commerce raider *Tacony*, then operating against Union merchantmen far up the East Coast. She arrived New York 3 July.

Four days later *James Adger*, not yet repaired, received orders to Wilmington for duty with the North Atlantic Blockading Squadron. Arriving Wilmington 27 July, she was stationed off New Inlet, where 5 days later she assisted *Iroquois* and *Mount Vernon* in taking Confederate steamer *Kate*. On 8 November with the assistance of *Nippon* she captured *Cornubia*, an iron side wheeler bringing in a valuable cargo of arms, ammunition, and chemicals. Moreover, a package of documents thrown overboard before the capture, when plucked out of the sea, divulged information so important to the South

that *Cornubia's* captain lamented, "though the *Cornubia* is a small vessel the Confederate Government could better have afforded to lose almost any other . . ." The next morning *James Adger* took Confederate steamer *Robert E. Lee* coming into Wilmington from Bermuda with a cargo of arms and Army clothing sorely needed by Lee's soldiers. Schooner *Ella*, approaching Wilmington with a cargo of salt and yard goods from Nassau, was *James Adger's* next victim, surrendering 26 November.

Without the normal overhaul periods due ships and men, service was taking a daily toll in wear and tear. When the ship's long postponed repairs could be delayed no longer, *James Adger* sailed north and decommissioned at Philadelphia 28 December for the necessary yard work.

After recommissioning 17 June 1864, *James Adger* served in the South Atlantic Blockading Squadron until the end of the war. On 21 April 1865, Secretary Welles ordered her to Mariguana Passage (now Mayaguana Passage) in the Bahamas to escort a convoy of California-bound ships. Following a visit to New York, she cruised in the Caribbean off Panama and Colombia from August 1865 to February 1866. Back in New York, she assisted British steamer *European* after she exploded in New York Harbor 3 April 1866.

James Adger decommissioned at New York Navy Yard 2 May and was sold at New York to James B. Campbell 9 October 1866.

James Baines, see *Algol* (AK-54)

James C. Owens

James C. Owens, Jr., born 5 December 1910 in Batavia, N.Y., was appointed Naval Aviation Cadet, USNR, 3 September 1935. Following flight training at Pensacola, Fla., he served on board *Lexington* (CV-2); and on 1 September 1941, he joined Torpedo Squadron 8 on board *Hornet* (CV-8). Appointed Lieutenant 6 January 1942, Owens was with this squadron when it pressed home a courageous and determined attack against Japanese carriers 4 June during the Battle of Midway. Without the protection of fighters or accompanying dive bombers, the gallant pilots exposed themselves to overwhelming firepower; and every plane of the squadron was shot down. By forcing the enemy ships to maneuver radically and eliminating Japanese air cover, the "stark courage and relentless drive" of the torpedo pilots, such as Lieutenant Owens, made possible the American victory that followed. For extraordinary heroism in the face of overwhelming danger, Lt. Owens received the Navy Cross and the Presidential Unit Citation posthumously.

(DD-776: dp. 2,220; l. 376'6"; b. 41'2"; dr. 15'8"; s. 34 k. epl. 336; a. 6 5", 12 40mm., 11 20mm., 10 21" tt., 6 dep., 2 dct.; cl. *Allen M. Sumner*)

James C. Owens (DD-776) was laid down 9 April 1944, by the Bethlehem Steel Co., San Pedro, Calif.; launched 1 October 1944; sponsored by Mrs. James C. Owens, Jr., widow of Lt. Owens; and commissioned 17 February 1945, Comdr. R. H. Blair in command.

After shakedown off southern California, *James C. Owens* departed San Pedro 10 May escorting *California* (BB-44) to Pearl Harbor, arriving 16 May. She cleared Pearl Harbor 24 May and sailed as convoy escort via Eniwetok and Ulithi to Okinawa. Arriving 17 June, she continued to Kerama Retto to join DesRon 24, which steamed 24 June for Leyte, where it joined a cruiser-destroyer striking force. Sailing 13 July via Okinawa, the force entered the East China Sea 22 July to conduct antishipping sweeps. *James C. Owens* operated with the striking force for a month and then operated out of Okinawa until departing 20 September for Japan as part of the Wakayama Occupation Group. Arriving 22 September, she supported occupation landings, patrolled off southern Japanese islands, and served as courier and escort ship. Steaming from Japan 5 December, she

reached San Diego the 22d, departed for the East Coast 3 January 1946, and arrived New York 15 January.

For more than 16 months, *James C. Owens* operated along the Atlantic Coast from New England to Texas. She conducted ASW training out of Newport, R.I.; participated in destroyer maneuvers off the Florida coast; and served as escort and plane guard for *Saipan* (CVL-48) in the Gulf of Mexico. Following operations out of Norfolk, Va., she departed Quonset Point, R.I., 30 July 1947, with DesRon 2 for deployment with the 6th Fleet. She cruised the Mediterranean from Algeria to Italy and supported U.S. efforts to settle the unstable situation in Trieste before returning to the United States 21 December. She returned to the Mediterranean in June 1948 and supported U.N. efforts to establish peace between Israeli and Arab forces. During this deployment, she patrolled the coast of Palestine, supported the evacuation of the U.N. Mediation Team in July, and helped to prevent the spread of conflict in the Middle East. Returning home early in October, she operated along the Atlantic coast until she decommissioned at Charleston, S.C., 3 April 1950.

With Communist aggression in Korea and increased tension in Europe and the Middle East, *James C. Owens* recommissioned 20 September 1950, Comdr. R. B. Erly in command; and commenced readiness and antisubmarine training operations. Departing for the Far East 22 January 1952, she arrived in the Western Pacific 27 February for blockade and interdiction patrols along the Korean coast. While operating off Songjin 7 May, she engaged enemy shore batteries and silenced several of them, but sustained six direct hits. Departing Korea 22 June, she steamed via the Indian Ocean and Mediterranean to Norfolk, Va., arriving 19 August. She returned to Korean waters 10 November 1953, and patrolled coastal waters to prevent violations of the armistice signed 27 July. She remained on this important peace-keeping duty in the Far East until she departed Yokosuka, Japan, 11 March 1954. Steaming via Midway, the West Coast and the Panama Canal, she arrived Norfolk 14 May.

For almost 2 years *James C. Owens* operated out of Norfolk and Guantanamo Bay on ASW and destroyer division maneuvers. While in the Caribbean during September 1955, she provided search and rescue assistance to the citizens of Puerto Rico after a destructive hurricane. In April 1956 she sailed with DesDiv 221 via Northern Europe for the Middle East to operate in the Mediterranean, Red Sea, and Persian Gulf. During the Suez crisis she transited the Canal to demonstrate American interest in a peaceful solution of the crisis. Returning to Norfolk in October, she again deployed to the Mediterranean 28 February 1957 to support the 6th Fleet as guardian of peace in the Middle East; then she returned to Norfolk 7 May. On 3 September she sailed to the North Atlantic for the NATO Operation "Strikeback"; after coastal operations for 8 months, she deployed 6 June 1958, on a midshipman cruise to northern Europe. Following fleet and NATO operations, she returned to Norfolk 4 August.

James C. Owens deployed on her fifth cruise to the Mediterranean and Middle East 7 August 1959. She ranged the Mediterranean from Italy to Lebanon and transited Suez 14 October for 2 months of patrol and convoy escort exercises in the Red Sea and Persian Gulf. Returning to the Mediterranean 15 December, she operated with the 6th Fleet for 2 months; then sailed for Norfolk, arriving 3 March 1960. During September she joined NATO forces in the North Atlantic for Operation "Swordthrust," which stressed both offensive and defensive naval tactics of atomic warfare. In November she steamed to the Caribbean and patrolled the coasts of Nicaragua and Guatemala to intercept Cuban arms bound for Castro-oriented rebels. Retiring to Norfolk 20 December, she departed for the Mediterranean 2 February 1961. Before returning to Norfolk 20 August, she operated with the 6th Fleet from Spain to Greece.

After joining the ASW Defense Force 25 September, *James C. Owens* steamed to Charleston 11 January 1962, for an 8-month FRAM II overhaul that readied her for a new and vital role in the modern Navy. She resumed

operations on 19 December with surveillance patrols off the Cuban coast, then returned to Charleston 4 January 1963, for fleet exercises. Departing 6 August with DesDiv 42 for the Mediterranean again she conducted ASW operations with the 6th Fleet from France to Cyprus. Returning to the United States 23 December, she received DASH facilities at Norfolk during February 1964. She continued her ASW operations during a midshipman cruise to the Mediterranean 11 June-3 September. During the remainder of 1964, *James C. Owens* maintained her peak efficiency and readiness in coastal operations with nuclear submarines.

The ship departed Charleston, S.C., 17 February 1965 for a Mediterranean cruise, and carried out advanced antisubmarine operations during her deployment.

After her returning to Charleston 12 July, she was designated a recovery ship for the Gemini V orbital space mission. With the mission successfully completed, the ship returned to her home port 13 September. On 2 November she entered the Charleston Naval Shipyard for extended overhaul.

In March 1966 *James C. Owens* was back on the line at Guantanamo Bay. While there she rendered assistance to burning cruise ship, *Viking Princess*. After returning to Charleston for a brief visit, *James C. Owens* embarked midshipmen for their annual at-sea training. In late August she was assigned as the close-in recovery ship for the second in a series of Apollo unmanned space launches. In September the destroyer was deployed with the 6th Fleet; and, while operating in the Aegean Sea, she was ordered to the scene of sinking Greek ferry *Heraklion*, where she helped rescue the crew. *James C. Owens* returned to Charleston 31 January 1967. She remains a very active part of the Atlantic Fleet.

James C. Owens received two battle stars for World War II service and two for the Korean conflict.

James D. Blackwood, see *J. Douglas Blackwood* (DE-219)

James E. Craig

James Edwin Craig, born Jacksonville, Fla., 29 October 1901, was appointed to the Naval Academy 3 July 1918. After graduation in 1922, he saw almost continuous sea duty until early 1929 when he received aviation training at the Pensacola Naval Air Station. As an aviator, he served at Coco Solo, C.Z., and on board *Wright*, *Arizona*, and *Yorktown*. He attained the rank of Lieutenant Commander in 1937 and commanded Torpedo Squadron 5 in 1938. In March 1939 he assumed command of *Conyngham*. Two years later he became Damage Control Officer and First Lieutenant aboard *Pennsylvania*. Lieutenant Commander Craig was killed in action during the Japanese surprise attack on Pearl Harbor 7 December 1941.

(DE-201; dp. 1,400; l. 306'; b. 36'10"; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3", 4 1.1", 8 20mm., 3 21" tt., 8 dep., 1 dep. (h.h.), 2 dct.; cl. *Buckley*)

James E. Craig (DE-201) was launched 22 July 1943, by Charleston Navy Yard; sponsored by Mrs. J. E. Craig, widow of Lieutenant Commander Craig; and commissioned 1 November 1943, Lt. Comdr. Hampton M. Ericson in command.

The new destroyer escort departed Charleston 23 November for shakedown off Bermuda and returned to Charleston 25 December for alterations. She sailed 4 January 1944 for Panama via the Windward Passage. In the Caribbean she joined *Lovetace* (DE-198) and *Samuel S. Miles* (DE-183) 7 January to escort two troop transports. She transited the Panama Canal 8 January.

In company with other DE's, *James E. Craig* steamed from Balboa, C.Z., 14 January escorting SS *Azalea City* to Noumea, New Caledonia. Stopping at Bora Bora 27 January, *James E. Craig* and *Azalea City* departed the 28th and 2 days later encountered a typhoon which pounded the ships with 50-foot waves. They passed

through a second typhoon 4 February with winds of 80 knots. On 5 February they were ordered to Espiritu Santo, and arrived the following day.

James E. Craig departed Espiritu Santo 13 February with three other escorts and seven merchant ships bound for Guadalcanal. Upon arrival the 16th, she began anti-submarine patrol off Lunga Point. She departed for Espiritu Santo 23 February escorting two merchant ships and continued her escort duty between Guadalcanal and Espiritu Santo for several weeks. On 15 March she escorted *Cacapon* (AO-52) from Espiritu Santo to a fueling rendezvous with Task Force 36, which was engaged in operations against Kavieng, New Ireland, and Emirau Island, "the last link in the ring around Rabaul." Refueling completed on the 25th, *James E. Craig* and *Cacapon* joined other escorts and tankers and returned to Espiritu Santo.

On 31 March *James E. Craig* departed Espiritu Santo in company with Escort Division 37, including *Lovelace* (DE-198), *Manning* (DE-199), *Neuendorf* (DD-200) and *Eichenberger* (DD-202). Stopping at Tulagi in the Solomons 2 to 4 April, they sailed the 5th for New Guinea, where *James E. Craig* was to see action for 5 months.

On 26 April *James E. Craig* joined a convoy of escorts and transports bound from Cape Sudest to Humboldt Bay to support the invasion of Hollandia, underway since the 22d. The convoy arrived 3 May; and after discharging the transports, the escorts returned to Cape Sudest the 5th. *James E. Craig*, now under command of Lt. Comdr. Edward F. Andrews, steamed 13 May on escort duty to Humboldt Bay via Aitape Roads, arrived the 17th, and immediately joined an attack convoy bound for Wakde-Sarmi, west of Hollandia. She returned the same day to Humboldt Bay, where she continued her patrols and escort duty. She bombarded enemy troop concentrations at Wakde-Sarmi on the 27th and returned to Cape Cretin via Humboldt Bay on the 31st.

James E. Craig returned to Humboldt Bay 6 June to prepare for the bitter conquest of Biak Island. With six other escorts she accompanied the convoy and supported the landing operations 12 June. Departing the same day, the convoy returned to Humboldt Bay the 14th; and *James E. Craig* continued as escort to Cape Cretin, where she arrived 3 days later.

During the remainder of June and through July *James E. Craig* continued escort and anti-submarine duties along the northern coast of New Guinea. While on ASW operations off Wakde, she conducted prolonged, successful bombardments of enemy supply depots at Sawar 11-12 July, expending some 3,300 rounds of 3" and 1.1" shell-fire. A week later she arrived at Noemfoor Island, southwest of Biak, and escorted convoys 18 to 23 July on a triangular route from Noemfoor to Humboldt Bay via Biak. Arriving Madang Harbor, Astrolabe Bay, 23 July for overhaul, *James E. Craig* returned to Humboldt Bay to resume her escort and ASW operations.

During August she plied the coastal waters off New Guinea from Cape Cretin to Wakde; then devoted the next 6 weeks to escort and anti-submarine patrols between Cape Cretin, Manus Island, and Humboldt Bay. On 11 October she joined a convoy at Ulithi, then sailed for the Palaus on the 18th and arrived Peleliu 2 days later for ASW operations. She returned to Manus the 25th for repairs.

Back at Humboldt Bay on 14 November, she joined a large convoy of transports, amphibious craft, and escorts underway on the 17th for the Philippine Islands to support the vital, Allied foothold on Leyte, established some 4 weeks earlier. The convoy of 75 ships and 9 escorts steamed northwestward and by dusk of the 23d approached Leyte Gulf.

James E. Craig, returning from radar picket patrol to her assigned ASW station, made radar contact with six low-flying unidentified planes approaching from the south at approximately 190 knots. Soon her spotters observed "Jill" torpedo planes 7 miles out, closing at high speed. As the enemy planes broke into three groups in an attempt to "box the target," *James E. Craig* turned left full rudder to meet the attackers; and all guns which could

bear commenced firing at the planes, still more than 2 miles out. Four of the attackers began a run and launched their torpedoes at a range of 1,000-1,500 yards to port; as the ship turned, three torpedoes passed "close aboard to port" and almost parallel to her. Meanwhile, two planes commenced a run from the starboard side. Approaching almost directly from out of the sunset, one plane dropped a torpedo within a thousand yards which broached once before settling down on its run. As *James E. Craig* turned hard to starboard, the torpedo passed within 5 yards astern. One of the attackers passed within 200 yards of the ship, was hit by starboard 20mm. gun-fire, and splashed after passing over *El Paso* (PF-41).

The convoy stood into San Pedro Bay, Leyte, the following day, and remained at battle stations a greater part of the day to repel enemy aircraft which attempted to bomb the convoy. That night the convoy and escorts reformed and departed for Humboldt Bay via the Palaus.

Upon arrival, *James E. Craig* received general maintenance and overhaul from *Dobbin* (AL-3) through 10 December. She spent the remainder of the month escorting fleet tankers and practicing anti-aircraft and night torpedo firing drills at Padaido, Dutch East Indies, and Humboldt Bay. On 28 December Escort Division 37 departed Humboldt Bay with a convoy of tankers and merchant ships bound for Leyte, where they arrived 1 January 1945.

The following day, *James E. Craig* stood out for Mindoro Island to join Task Group 77.2, ordered to support landing operations on northern Luzon. Enemy reconnaissance planes maintained close surveillance; and late afternoon 4 January an enemy suicide plane penetrated defenses and struck *Ommaney Bay* (CVE-79), causing her to burst into flame. After the conflagration got out of hand, the escort carrier's commander ordered abandon ship. *James E. Craig* assisted in rescue operations and later that evening proceeded with other escorts and tankers to Mindoro.

Standing into Mangarin Bay the following morning, *James E. Craig* commenced picket and ASW operations, which continued through the day and into the night, as the convoy departed Mangarin to maneuver off Mindoro during darkness. Designed to prevent enemy attack at night, the night maneuvers continued until the 10th, when the convoy remained at Mangarin Bay through the night.

James E. Craig resumed ASW operations at the harbor entrance for several days until troublesome submarine detection equipment forced her to retire to Mangarin Harbor 14 January. She commenced anti-aircraft patrol for ships in anchorage and on 5 February returned to San Pedro Bay, Leyte, for repairs, thence to Humboldt Bay, New Guinea, arriving 2 March.

Getting underway the following day, she returned to San Pedro Bay via Kossol Roads, Palaus. Upon arriving Leyte 10 March, *James E. Craig* prepared for continued escort duties between San Pedro Bay and Manila, Manus Humboldt Bay, and Kossol Roads. From 14 March to 21 May, she operated almost continuously on escort duty, and on the 21st she departed Leyte for Lingayen Gulf. Standing into San Fernando Harbor 4 days later, she commenced anti-submarine and escort patrols along the coast of Luzon that continued to 13 August when she departed for Manila. Once at Manila she resumed ASW operations to the 27th; then, as escort in company with *Eichenberger* (DE-202), she convoyed tugs and tows en route Okinawa. An impending typhoon disrupted the convoy 1 September; high seas and 70-knot winds scattered the ships and separated tugs from their tows. As the storm abated 2 September, *James E. Craig* began search and rescue operations which continued to the 9th. Further typhoon warnings caused the ships to return to Subic Bay, Luzon, where the convoy anchored the following day.

James E. Craig remained at Subic Bay until 1 October, when she steamed for the United States via Eniwetok and Pearl Harbor. She arrived San Diego 5 November and decommissioned there 2 July 1946. As a unit of the Pacific Reserve Fleet, she presently is berthed at San Diego, Calif.

James E. Craig received four battle stars for World War II service.

James E. Kyes

James Ellsworth Kyes, born in Everett, Wash., 16 April 1906, graduated from the Naval Academy in 1930. As commanding officer of *Leary* (DD-158), Comdr. Kyes was awarded the Navy Cross posthumously for "extraordinary heroism" during action against enemy submarines in the North Atlantic 23 December 1943. After his ship had received three torpedo hits and was sinking, he gave the order to abandon ship. As he prepared to leave *Leary*, he checked to see that none of his men remained on board and spied one whose life jacket was torn and useless. Comdr. Kyes removed his own and handed it to the sailor. He then calmly climbed over the side and was swallowed up by the waters of the cold Atlantic, gallantly sacrificing his own life to protect a member of his crew.

(DD-787: dp. 2,425; l. 390'6"; b. 40'11"; dr. 18'6"; s. 35 k.; cpl. 336; a. 6 5", 12 40mm., 8 20mm., 5 21" tt., 6 dcp., 2 dct.; cl. *Gearing*)

James E. Kyes (DD-787) was laid down 27 December 1945 by Todd Pacific Shipyards, Inc., Seattle, Wash.; launched 4 August 1945; sponsored by Mrs. James E. Kyes; and commissioned 8 February 1946, Comdr. K. E. Shook in command.

After shakedown along the West Coast, *James E. Kyes* steamed from Seattle 12 June for Pearl Harbor to embark troops for transportation to the United States. Arriving San Diego 12 July, she operated along the California coast until departing 9 November for the western Pacific. Joining the 7th Fleet at Shanghai 30 November, she operated along the Chinese Coast supporting Chiang Kai-shek's struggle with the Chinese Communists for control of the mainland.

Departing Tsingtao, China, 28 January 1947, she steamed to Japan for 4 months of operations off southeastern Japan, in the Tsushima Strait, and along the Korean coast. She cleared Yokosuka 8 June for home and arrived San Diego 22 June.

Following operations out of San Diego and San Francisco, Calif., and Bremerton, Wash., she departed San Pedro, Calif., 2 September 1948 for duty in the Far East. Arriving Yokosuka, Japan, 30 September, she conducted surveillance patrols in the East China Sea and the Tsushima Strait. She steamed to Inchon, Korea, 20 January 1949 as tensions mounted on that peninsula. Returning to Japan 28 January, she resumed sea patrols until departing Yokosuka 3 April for San Diego.

After arrival 24 April, *James E. Kyes* operated out of San Diego until sailing for the western Pacific 23 June 1950, 2 days before Communist North Korean troops crossed the 38th parallel to sweep down through South Korea. Ordered by President Truman to give South Korean troops "cover and support," the Navy placed the 7th Fleet on alert from Formosa to Japan. Standing off Pohang-dong, Korea, 18 July, *James E. Kyes* provided valuable fire support during landing operations which reinforced U.N. positions at the southern end of the peninsula. She joined *Doyle* (DMS-34) on 2 August escorting *Sicily* (CVE-118) while that carrier's planes struck enemy troop and supply concentrations along Korea's southern and western coasts. Sailing into the Sea of Japan 11 August, she screened *Badoeng Strait* (CVE-116), *Valley Forge* (CV-45), and *Philippine Sea* (CV-47); and then steamed to Sasebo 27 August to prepare for Operation "Chromite."

As a flanking counterstroke to halt the North Korean advance, General MacArthur ordered an amphibious assault against Inchon, the "strategic solar plexus of Korea," to be carried out 15 September. *James E. Kyes* arrived off Inchon the 15th to guard *Boxer* (CV-21) as her planes conducted preinvasion strikes. Remaining off Inchon to 3 October, the versatile destroyer sailed via Sasebo to Korea's east coast for patrol duty.

Late in November she sailed for the United States; but, ordered to reverse course on the 29th, she steamed back to the fight. Hundreds of thousands of Chinese Communist troops had crossed the Yalu River into North Korea to attack advancing U.N. forces. Hordes of Chinese cut off and surrounded the 5th and 7th Marine Regiments with a human wall at Chosin Reservoir 27 November. The breaching of this wall and releasing of our troops depended upon air cover and fire power from planes of carriers stationed off the eastern coast. *James E. Kyes* joined the task force 1 December and provided ASW support while planes made hundreds of sorties supporting the embattled marines. Under a protective canopy of naval air cover, the leathernecks broke through 10 December at Chinhung-ni and moved to Hungnam for evacuation. *James E. Kyes* remained on guard as the Navy completed the Hungnam withdrawal of 24 December after embarking 105,000 troops, 91,000 refugees and vast quantities of military cargo. She remained along the eastern coast, supporting the southward movement of American forces. Sailing for home 19 January 1951, she arrived San Diego 8 February.

James E. Kyes departed San Diego 27 August and joined *Boxer* (CV-21) and *Bon Homme Richard* (CV-31) on 20 September in patrolling the Sea of Japan. Sailing to Formosa 17 December, she joined the Formosa Strait surveillance patrols before resuming carrier guard duty off Korea 22 January 1952. *James E. Kyes* joined the U.N. Blockading and Escort Force 19 February and sailed to the Wonsan area to conduct "harassing and interdiction fire at predesignated targets and targets of opportunity." Designed to prevent or hinder enemy troop and supply movements, her patrol concentrated on enemy shore batteries, coastal roads, and railroad installations before sailing for home 25 March.

Departing San Francisco 12 November, *James E. Kyes* resumed Korean blockade and bombardment duty 5 December and joined the Formosa Patrol during February 1953. She returned to Korea 14 March to engage the enemy at every opportunity. Blockade and bombardment patrols were often unspectacular, but therein lay the effectiveness of the naval blockade. As Rear Admiral Sir W. G. Andrewes, RN, observed, "The absence of the spectacular is a measure of the complete success achieved." Patrolling Korea's eastern coast for almost 3 months, *James E. Kyes* engaged enemy batteries, covered amphibious landings, and supported carrier air strikes. Ordered home 9 June via Yokosuka and Midway, she arrived Long Beach 29 June.

From 9 February 1954 to 12 March 1962, *James E. Kyes* deployed to the Far East on seven occasions. While operating with the mighty 7th Fleet, the sea sentinel of peace-through-strength in the Pacific, she ranged the Orient from Japan and Korea to Southeast Asia and Australia and engaged in a variety of activities.

She patrolled the coasts of Korea, where an uneasy truce had brought an end to hostilities in July 1953. On several occasions she joined the Formosa Patrol to insure freedom and protect the Chinese Nationalists from Communist invasions. In 1955 she sailed to Southeast Asia while the Navy carried thousands of refugees from North to South Vietnam during Operation "Passage to Freedom." Cruising the Indochinese coast from Vietnam to Thailand, she served as a symbol of America's determination to safeguard Southeast Asia from the spread of communism.

While serving in the Pacific, *James E. Kyes* conducted several air-sea rescue missions. During the Marshall Islands' nuclear tests of 1956, she acted as a life guard ship; and, in May 1959, she steamed from duty in the Formosa Strait to assist and guard SS *President Hayes*, grounded in the Paracel Islands off Vietnam. She also served as plane guard during carrier flight operations, and on four occasions during 1960 and 1961 she effected or assisted in successful rescues of downed pilots and flight crews.

The ability of the 7th Fleet to serve as an instrument

of peace and to maintain a constant vigil depends in large part upon repeated training and continued readiness. While deployed with the Fleet, *James E. Kyes* engaged in numerous operations designed to test and improve her performance as a fighting ship. In December 1961, during her longest deployment to the Far East, she participated in a combined ASW readiness exercise with units of the Japanese Maritime Self-Defense Force, which "greatly advanced the mutual understanding between the two forces."

After returning to the West Coast 12 March 1962, *James E. Kyes* assumed an "in-commission-in-reserve" status 16 April and underwent FRAM I conversion at Bremerton, Wash., to prepare for her role in the new Navy. Returning to full commission 18 December, she participated in fleet exercises held off the California coast 27 to 28 May 1963 in honor of President Kennedy.

James E. Kyes deployed to the Far East 10 October. Following readiness evaluation exercises off the Hawaiian Islands, she arrived Yokosuka Japan 22 November and commenced Fleet operations that continued to the end of the year. In the spring of 1964 she participated in Operation "Back Packs," a combined Chinese Nationalist and U.S. amphibious exercise on Taiwan. She was in the hunter-killer group which provided ASW protection for the operation. During the deployment, she supplied water to Hong Kong helping to relieve suffering caused by a severe drought which afflicted the city.

The destroyer returned to Long Beach 2 April 1964 and operated out of homeport for the rest of the year. She celebrated Columbus Day by saving a wayward DASH helicopter from hitting *Eversole* (DD-789). She sailed for the Far East 24 March 1965 and reached Yokosuka 30 April. In May she participated in SEATO Exercise "Seahorse" with ships of Thailand, the United Kingdom, and Australia. At the end of this exercise in the South China sea, she visited Bangkok, Thailand. After upkeep in Subic Bay and a run to Hong Kong, *James E. Kyes* got underway for Exercise "Cross Tee II" in the Sea of Japan with ships of the Japanese Maritime Self-Defense Force.

Following a visit to Otaru, Hokkaido, Japan, and ASW exercises with nuclear-powered submarine *Snook* (SSN-592), *James E. Kyes* departed Yokosuka 20 July, crossed the South China Sea to the coast of South Vietnam for surveillance duty. She screened *Bennington* (CVS-20) took ASW and surface surveillance picket station at the southern end of the Gulf of Tonkin; and assisted a South Vietnamese construction battalion stranded on Drummond Island in the Paracel Group. From 30 August to 5 September she bombarded targets ashore in the Quang Ngai area. She departed the war zone 10 September; arrived in Long Beach 7 October; and entered the Long Beach Naval Shipyard 10 December for overhaul to return her to top fighting trim for future operation in behalf of peace and freedom. Completing overhaul and post-repair shakedown in 1966, *James E. Kyes* returned to the Far East. There her gunfire again pounded the Viet Cong, and her dedicated men safeguard the peace and freedom of the world and the future of the American way of life.

James E. Kyes received six battle stars for Korean service.

James Guthrie

A Revenue Cutter Service name.

(RC)

James Guthrie, a cutter built in 1881 by H. A. Ramsey of Baltimore, Md., and used by the Revenue Cutter Service in the Baltimore area, was ordered to cooperate with the Navy during the Spanish-American War. Not needed by the Navy, she operated under military authorities guarding Baltimore Harbor from 9 May to 20 July when she resumed her former duty.

She was transferred to the Navy when the United States entered World War I and guarded Philadelphia,

Pa., until returned to the Treasury Department 28 August 1919.

James H. Clark

A former name retained.

(SP-759: t. 45; l. 60'8"; b. 17'3"; dr. 8"; s. 9 k.; a. 1 3-pdr.)

James H. Clark (SP-759), a steam tug built at Buffalo, N.Y., in 1900 was taken over by the Navy from Tampa Towing & Lighterage Co., Tampa, Fla., in July 1917; and commissioned 21 August 1917, Chief Boatswain's Mate O. Hind in command.

James H. Clark was assigned to the 7th Naval District and based at Key West, Fla. She performed towing and other miscellaneous duties in the harbor and at Naval Station, Key West, during World War I and after. She decommissioned in April 1920 and was sold to A. C. Tuxbury Lumber Co., Charleston, S.C., 16 May 1921.

James H. McClintock, see *Kenmore* (AP-162)

James K. Paulding

James Kirke Paulding, son of a Revolutionary War patriot, was born 27 August 1718 in Nine Partners, Dutchess County, N.Y. As a young man he became widely known as a man of letters and as an intimate friend of Washington Irving. He served as Secretary of the first Board of Navy Commissioners consisting of Commodores Hull, Porter, and Rodgers. After filling the office of Navy Agent at the port of New York for 12 years, Paulding entered President Martin Van Buren's cabinet as Secretary of the Navy 1 July 1838. While in office he opposed the introduction of steam propelled warships declaring that he would "never consent to let our old ships perish, and transform our Navy into a fleet of (steam) sea monsters." Upon his retirement from office he purchased an estate at Hyde Park, where he remained until his death 5 April 1860.

(DD-238: dp. 1,190; l. 314'5"; b. 31'8"; dr. 9'3"; s. 35 k.; cpl. 101; a. 4 4", 1 3", 2 .30 cal., 12 21" tt.; cl. *Clemson*)

James K. Paulding (DD-238) was laid down 31 July 1918 by New York Shipbuilding Corp., Camden, N.J.; launched 20 April 1920; sponsored by Miss Mary Hubbard Paulding, great granddaughter of James K. Paulding; and commissioned 29 November 1920, Lt. H. W. Jackson in command.

After shakedown *James K. Paulding* was assigned to the Atlantic Fleet, and commenced tactical exercises with destroyer squadrons along the coast. She arrived Newport, R.I., 31 May 1921 for summer maneuvers and reserve training. Later that year she cruised to Charleston, S.C., for squadron exercises, and continued operations there until late winter 1922.

James K. Paulding joined the scouting fleet January 1923 and throughout the year engaged in tactical war problems designed to maintain the fleet in superior fighting condition. She continued these operations in addition to reserve training until she sailed in February 1925 to San Diego for war problems in the Pacific. Upon her return to Newport 31 August, she resumed her duties with the scouting fleet. While engaging in gunnery exercises in Caribbean waters November 1926, *James K. Paulding* sailed to Nicaragua to protect American interests in the wake of political turmoil in that country. During March and April 1927 she remained off Nicaragua to prevent any smuggling of arms to rebel forces.

For the remainder of her career *James K. Paulding* continued reserve training and tactical exercises in the Atlantic and Caribbean. Her service with the Navy was distinguished and her versatility in peacekeeping, reserve training, and fleet problems all helped to maintain the

position of the United States as a great seapower. Even more important, however, the service of *James K. Paulding* and her sister ships was a base upon which an even more powerful naval force was built. The destroyer arrived Philadelphia Navy Yard 31 October 1930, and decommissioned there 10 February 1931. She was reduced to a hulk 28 December 1936 in accordance with the provisions of the London treaty for the limitation and reduction of naval armament, scrapped, and struck from the Navy List 25 January 1937.

James K. Polk

James K. Polk, 11th President of the United States, was born 2 November 1795, in Meeklenburg County, N.C. A leading Jacksonian Democrat in the Tennessee State Legislature, he was not yet 50 years old when inaugurated President of the United States 4 March 1845. He ably conducted the Mexican War following the annexation of Texas. The "Four Great Measures" he announced for his administration were all achieved: the reduction of tariff; the reestablishment of the Independent Treasury System; the settlement of the Oregon dispute with Great Britain; and the acquisition of California. More territory was added to the United States under Polk than any other President except Jefferson. Few presidents worked harder. His arduous and conscientious labor during his term so undermined his health that he died 15 June 1844, some 3 months after he left the White House.

(SSB(N)-645; dp. 7,250 (surf.); 8,250 (subm.); l. 425'; b. 33'; dr. 31'5"; s. over 20 k.; cpl. 140; a. 16 Pol. mis.; cl. *Lafayette*)

James K. Polk (SSB(N)-645) was launched 22 May 1965 by the Electric Boat Div., General Dynamics Corp., Groton, Conn.; sponsored by Mrs. Horacio Rivero, Jr., wife of Admiral Rivero, the Vice Chief of Naval Operations; and commissioned 16 April 1966, Comdr. R. M. Douglass (blue crew) and Comdr. F. D. McMullen, Jr. (gold crew), in command.

Assigned to the Atlantic Fleet, she roams the seas, a silent and unseen deterrent against aggression.

James L. Davis

A former name retained.

(Bark: t. 461; l. 133'; b. 30'7"; dr. 12'; cpl. 75; a. 4 8")

James L. Davis (also called *J. L. Davis*), a wooden sailing vessel, was purchased at Philadelphia 29 September 1861; and commissioned 30 December, Acting Volunteer Lieutenant Joseph Winn in command.

James L. Davis departed Philadelphia 2 January 1862 for the Gulf of Mexico. She joined Flag Officer Farragut's West Gulf Blockading Squadron off Pass a l'Outre 5 February but was soon transferred to the East Gulf Blockading Squadron in exchange for *Preble*.

James L. Davis arrived Cedar Keys, Fla., 2 March and 8 days later captured schooner *Florida* attempting to slip in through the blockade with a cargo of coffee, soda ash, and other supplies already in short supply in the South. After 6 months of blockade duty on the Atlantic and Gulf coasts of Florida, the bark took English schooner *Isabel* attempting to dash out of St. Mark's, Fla., with a cargo of cotton in late September.

On 2 October *James L. Davis* interrupted her blockade duty to serve as a supply ship, carrying stores and provisions to other vessels of the squadron. The bark continued this essential work until ordered to relieve *Ethan Allen* at St. Joseph's Bay, Fla., in March 1863. She remained at this station until ordered to Key West for repairs 15 November.

At the beginning of 1864 *James L. Davis* was ordered to Tampa Bay where she served until fall. On 4 May 1864 she joined *Sunflower* and *Honduras* in landing Army troops at Tampa and in providing men for a naval landing

party which helped to capture the town 6 May. During the operation the three ships cooperated in capturing blockade-running sloop *Neptune* with a cargo of cotton. In July and August, *James L. Davis* participated in a series of successful boat expeditions which destroyed salt works, a large saw and grist mill, and a sugar mill belonging to Jefferson Davis.

James L. Davis was ordered to St. Joseph's Bay 1 September and served there until ordered to Key West for repairs 1 April 1865. The war ended while the bark was at Key West. She was ordered to Philadelphia 21 April where she was sold at public auction 20 June 1865.

James M. Gilliss

James Melville Gilliss, born 6 September 1811 in Georgetown, D.C., entered the Navy as Midshipman at the age of 15. From the beginning of his service, he was active in scientific work and in improving the quality of navigation in the Navy. He was placed in charge of the Depot of Charts and Instruments at Washington, D.C., in 1837, and in the 1840's was instrumental in establishing the famed Naval Observatory there. In 1846 he published *Astronomical Observations*, a pioneer work in the field; and, from 1849 to 1852, he led an astronomical observation expedition to South America where he established an observatory at Santiago, Chile. Continuing his important astronomical and meteorological work, Captain Gilliss replaced Matthew Fontaine Maury as head of the Naval Observatory at the beginning of the Civil War. During the war he equipped Naval vessels with charts and instruments and directed important scientific work at the observatory. Captain Gilliss died 8 February 1865.

I

(YMS-262; dp. 265; l. 136'; b. 23'4"; dr. 8'7"; s. 14.1 k.; cpl. 60; a. 1 3", 2 20mm., 2 dep., 2 dct.; cl. *YMS-1*)

YMS-262 was laid down by the South Coast Co., Newport Beach, Calif., 6 September 1942; launched 24 December 1942; and commissioned 15 September 1943, Lt. Thomas W. Burns in command.

After shakedown off the coast of California, *YMS-262* conducted minesweeping exercises out of San Pedro, Calif., during the remainder of the year. Departing San Diego 5 January 1944, she reached Nawiliwili Harbor, Hawaii, 17 January and there joined units of Rear Admiral R. L. Conolly's Northern Attack Force staging for the invasion of Kwajalein, Marshalls. She sailed the 19th and closed the enemy-held atoll 31 January. Prior to initial landings off Roi-Namur, she swept a path for amphibious ships into the lagoon; then she screened LST's during afternoon landings. From 1 to 9 February she operated off Roi-Namur, sweeping for mines, and carrying out hydrographic and pilotage duties.

Steaming to Kwajalein Island 12 February, *YMS-262* joined Rear Admiral H. W. Hill's Eniwetok Expeditionary Group and sortied from Kwajalein Lagoon 15 February for the invasion of that strategic atoll. The assault force approached Eniwetok 17 February, and *YMS-262* swept the Wide Passage and lagoon for mines as the force prepared for initial landings on the northern islets off Engebi. During the remainder of the month she performed minesweeping, screening, and control duties as powerful American naval and ground forces wiped out Japanese resistance on Engebi, Eniwetok, and Parry Islands.

YMS-262 served at Eniwetok during mop-up operations in the Marshalls; and she remained in the Marshalls until December when she returned to the United States. From January to April 1945 she was converted to a surveying ship at California Shipbuilding Corp., Wilmington, Calif. On 23 March she was named *James M. Gilliss* and reclassified AGS-13. She steamed to Pearl Harbor in April and sailed for the Marianas the following month. Arriving Guam early in June, she underwent survey training before sailing for Okinawa late in July. She

steamed via Saipan and reached Okinawa as Japanese forces in the Pacific surrendered.

James M. Gilliss served at Okinawa until November; and, following destructive typhoons in September and October, she provided important survey work off the battered island. She sailed for Japan 1 November and for the next month supported occupation operations out of Nagoya. Departing Nagoya 4 December, she reached Pearl Harbor 6 January 1946. After overhaul, she sailed for the Marshalls in March to support Operation "Crossroads," the atomic bomb tests. Arriving Bikini Atoll 16 March, for the next 5 months she operated between Bikini and Eniwetok while conducting hydrographic, oceanographic, and other scientific surveys.

Reclassified AGSC-13 on 29 July, *James M. Gilliss* departed Bikini 19 August. Steaming via Pearl Harbor, she reached San Francisco 30 September. Assigned to duty with the Atlantic Fleet, she departed San Francisco 23 November and arrived Norfolk, Va., 23 December. From March 1947 to May 1950 she operated from the North Atlantic to the Caribbean, and she participated in coastal surveys off Newfoundland, Mexico, Cuba, and Trinidad. Arriving New York 12 May 1950, she decommissioned 22 September and entered the Atlantic Reserve Fleet.

Converted to a minehunter, *James M. Gilliss* reclassified AMCU-13 on 18 August 1951 and recommissioned 5 September 1951, Lt. (j.g.) Kenneth E. Carter in command. Assigned to the Atlantic Mine Fleet 18 February 1952, she operated out of New York until 20 March 1953 when she was assigned to the Mine Hunting Unit at Little Creek, Va. From 1953 to 1958 she operated primarily in Chesapeake Bay, conducting training exercises and testing and evaluating precise navigation equipment. In addition she operated along the Atlantic Coast from Massachusetts to North Carolina, and during November and December 1956 she trained in the Caribbean out of Guantanamo Bay, Cuba. Reclassified MHC-13 on 1 February 1955, she operated out of Little Creek until June 1958 when she steamed to Green Cove Springs, Fla. She decommissioned there 6 August 1958 and entered the Atlantic Reserve Fleet. She was struck from the Navy List 1 January 1960, and sold to Marlene Blouse Corp. by 17 June.

YMS-262 received one battle star for World War II service.

II

(T-AGOR-4 : dp. 1,200 (lt.) ; l. 209' ; b. 40' ; dr. 16' ; s. 13 k. ; cpl. 26 ; cl. *Robert D. Conrad*)

The second *James M. Gilliss* (T-AGOR-4) was laid down by Christy Corp., Sturgeon Bay, Wis., 31 May 1961; launched 19 May 1962; sponsored by Mrs. Hubert H. Humphrey, wife of the Senator from Minnesota; delivered to the Navy 5 October 1962; and turned over to MSTs 5 November 1962, Captain Torston Johnson in command.

Manned by a civilian crew and carrying 15 scientists from the Naval Oceanographic Office, *James M. Gilliss* was the first of a new class of oceanographic ships to be operated by MSTs. In addition to the latest in oceanographic and meteorological equipment, she also possesses unusual design features, including special antiroll tanks for stability and a retractable bow propulsion propeller. As a mobile, floating research laboratory, she is capable of carrying out experiments in sound transmission, underwater life, and ocean floor characteristics, thus enabling her to help continue the Navy's lead in the exploration and understanding of "inner space."

Departing Sturgeon Bay 8 November, she arrived New York 19 November for sea trials and shakedown. On 12 April 1963 she departed New York to take part in the massive search for sunken submarine *Thresher* (SSN-593). Operating out of Boston, she lent her "know-how" to this vital and difficult operation for 5 months before arriving Washington, D.C., 22 September. After returning to New London, Conn., for additional equipment tests, she departed 1 November for oceanographic research operations off Bermuda.

During the next 4 months she operated in the Atlantic from the Bahamas to the New England coast. In March 1964 she steamed to the Caribbean for surveying and scientific work out of San Juan, P.R. Arriving Key West, Fla., 28 March, she operated from the Strait of Florida to the Bahamas and Bermuda for more than a year. Departing Key West 23 May 1965, she arrived New York 27 May and prepared for deployment to waters off the British Isles. She sailed 14 June; arrived Belfast, Northern Ireland, 27 June; and began 3 months of research and survey operations from the British Isles and France to Newfoundland. Departing Belfast 15 September, she returned to New London 6 October and resumed research operations off the East Coast, which have continued into 1967. At present she operates in the Atlantic from New England to the Bahamas while supporting important surveys and scientific experiments of the Naval Oceanographic Office.

USNS *James M. Gilliss* (AGOR-4) on 14 December 1962

James Madison

James Madison was born at Port Conway, Va., 16 March 1751, and graduated from the College of New Jersey (now Princeton) in 1771. He was a member of the Virginia Council of State, and in 1780 became a member of the Continental Congress. An early advocate of increased Federal power under the Articles of Confederation, Madison served in the Virginia House of Delegates 1784-86 and was instrumental in securing passage of Jefferson's religious freedom bill. He played an influential role in the movement which led to the Constitutional Convention, drafted the "Virginia Plan" which became the core of that document, and worked tirelessly for its adoption. A first-rate thinker and writer on political theory and practice, he was the author of 29 of the famous *Federalist Papers*.

Madison served in the House 1789-97 and proposed the first 10 amendments to the Constitution which became the Bill of Rights. Later, as leader of the Jeffersonian Republicans, he drew up the Virginia Resolves and condemned the Alien and Sedition Acts.

After being Secretary of State under Jefferson 1801-09, he was elected President. His first term was marred by the unpopular War of 1812 and his administration was marked by a trend toward nationalism. President James Madison, died 28 June 1836, but continues in fame as one of the Nation's most important thinkers and statesmen.

I

(RC)

The first *James Madison*, a Revenue Cutter built at Baltimore, Md., in 1807 to enforce Jefferson's embargo, was placed under Navy orders 18 June 1812 for service at Savannah, Ga., during the War of 1812. In July the cutter, commanded by Captain George Brooks, USRCs, captured British *Shamrock*, a six-gun brig laden with small arms and ammunition. Later that month she brought into Amelia Island, Fla., Bahamian schooner *Wade* carrying \$20,000 in gold.

James Madison was captured by the British Navy 24 November 1812, and her officers and crew were imprisoned in New York.

II

(SSB(N)-627: dp. 7,250; l. 425'; b. 33'; dr. 31'5"; s. over 20 k.; cpl. 140; a. 16 Pol. mis.; cl. *Lafayette*)

The second *James Madison* (SSB(N)-627) was launched 15 March 1963 by the Newport News Shipbuilding & Dry Dock Co., Newport News, Va.; sponsored by Mrs. A. S. "Mike" Monrone, wife of U.S. Senator Monrone of Oklahoma; and commissioned 24 July 1964, Comdr. Joseph L. Skoog, Jr. (blue crew), and Comdr. John C. Lewis (gold crew), in command.

The two crews, in turn, conducted shakedown operations at sea. Completely successful launches of A-3 missiles climaxed the cruise of each team. After post-shakedown repairs and modification in November and December of 1964, *James Madison* sailed for her first patrol 17 January 1965.

Reliability, accuracy, undetected mobility, and instant readiness are the words which characterize Polaris ships and their crews. By the end of 1966, *James Madison* had completed her 10th patrol and she continued to serve in the European area helping to prevent war. Her men may be proud that *James Madison*—by providing a seagoing platform for weapons, the traditional function of a warship—is an instrument of diplomacy and a keeper of the peace.

James Monroe

Born in Westmoreland County, Va., 28 April 1758, James Monroe interrupted his education at William and Mary College in 1776 to join the Continental Army. He saw extensive action during the Revolutionary War re-

ceiving a wound at the battle of Trenton. In 1780 he began the study of law under Thomas Jefferson, then governor of Virginia, and 2 years later was elected to the Virginia House of Delegates to begin a legislative career which took him to the Confederation Congress and the United States Senate.

He served the executive branch as Minister to France, Spain, and Great Britain. He joined Robert R. Livingston in negotiations with the French government leading to the Louisiana Purchase. President Madison appointed him Secretary of State in 1811 and added the War-Department portfolio to his duties during the closing months of the War of 1812.

Elected fifth President of the United States in 1816, Monroe led the country during a period remembered as "The Era of Good Feeling." His administration witnessed the settlement of several long standing disputes with Great Britain, the acquisition of Florida, the Missouri Compromise, and the promulgation of the Monroe Doctrine.

At the end of his second term Monroe retired to his estate, "Oak Hill" and died 4 July 1831 while on a visit to New York.

(SSB(N)-622: dp. 7,250 (surf.), 8,250 (subm.); l. 425'; b. 33'; dr. 31'5"; s. over 20 k.; cpl. 140; a. 16 Pol. mis., 4 21' tt.; cl. *Lafayette*)

James Monroe (SSB(N)-622) was launched 4 August 1962 by Newport News Shipbuilding & Drydock Co., Newport News, Va.; sponsored by Mrs. Roswell L. Gilpatric, wife of the deputy secretary of defense; and commissioned 7 December 1963, Comdr. William H. Sandford in command.

Following shakedown off Cape Kennedy, Fla., *James Monroe* spent the early months of 1964 in ballistic missile tests. She departed for her first patrol in June 1964, emphasizing the expanded peacekeeping role of Polaris submarines.

It is fitting that a submarine named for President Monroe belong to a modern United States peacekeeping force since his famous Monroe Doctrine is one of the cornerstones of American freedom. "The American continents . . ." he warned, "are henceforth not to be considered as subjects for future colonization by any European power."

During the subsequent years *James Monroe* continued her patrols and stands ready as a powerful deterrent against Communist aggression.

On 17 January 1967 *James Monroe* completed her 12th deterrent patrol. She has operated from both of the European Polaris replenishment anchorages, maintaining her creed and motto of "Watchful Waiting." Her ability to remain on patrol station is limited only by the amount of food carried and the mental and physical endurance of her crew.

James O'Hara

James O'Hara, born in Ireland in 1752, came to Philadelphia, Pa., from England in 1772. The following year he moved to Pittsburgh and served as a frontier trader and government agent with the Indians in western Pennsylvania and western Virginia. After the start of the Revolutionary War, he enlisted as a private in a company of volunteers and was later elected captain. He journeyed west with a force under George Rogers Clark and participated in the struggle for control of the West. From 1781 to 1783 he served as assistant quartermaster for General Nathaniel Greene. After the war, he returned to Pittsburgh and became a successful businessman. President Washington appointed him Quartermaster General of the Army 19 April 1792. O'Hara resigned his appointment 1 May 1796. From 1796 to 1802 he filled many important government contracts as a businessman. Later he became a prominent manufacturer of glass, and he helped pioneer the cotton trade between the United States and England. In addition, he became a successful banker and an enterprising land speculator. O'Hara died 16 December 1819 in Pittsburgh.

USS *James Madison* (SSBN-627) ready for launch with Secretary of the Navy Paul H. Nitze at the podium flanked by Admirals Galantin (left) and Grenfell (right) on 15 March 1963.

 T. C3-S-A1)

James O'Hara (APA-90) was laid down for the Army under Maritime Commission contract by Seattle-Tacoma Shipbuilding Corp., Tacoma, Wash., 16 June 1941; launched 30 December 1941; sponsored by Miss Anne B. Denny; and delivered to the Army 30 November 1942. During the next 4 months she served as an Army transport, steaming from the West Coast to Australia, thence via the Panama Canal to New York. Arriving New York early in April 1943, she was acquired by the Navy 15 April and commissioned 26 April, Comdr. Charles Allen in command.

After shakedown, *James O'Hara* departed Norfolk early in June for duty with the 8th Fleet in the Mediterranean. Arriving Oran, Algeria, 22 June, she prepared for the

forthcoming invasion of Sicily. Carrying troops of the 45th Infantry Division, she departed 5 July for Operation "Husky"; and, as part of CENT Force under Rear Admiral A. G. Kirk, she closed the Sicilian shore off Scoglitti 10 July. Despite heavy seas and an enemy air attack, she debarked her troops as Allied forces sought to wrestle the strategic island from Axis control.

During almost the next 2 months *James O'Hara* shuttled troops from North Africa to Sicily; then she prepared to take part in the invasion of Italy. Assigned to Rear Admiral J. L. Hall's Southern Attack Force, she departed Oran 5 September and approached the Gulf of Salerno late 8 September as the Allies announced the armistice with Italy. During mid-watch, 9 September, she debarked assault troops in landing boats, and later began unloading cargo. Her boats assisted HMS *Abercrombie*, damaged by a German mine. Undaunted by German air

nation is devoted. We) one it therefore to Canada, and to the amicable relations existing between the United States and those powers, to declare that we should consider any attempt on their parts to extend their system to any portion of this Hemisphere, as dangerous to our peace and safety. With the existing Colonies or dependencies of any European power, we have not interfered, and shall not interfere. But with the Governments who have declared their Independence, and maintained it, and whose Independence we have, on great consideration, and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling in any other manner, their destiny, by any European power, in any other light, than as the manifestation of an unfriendly disposition towards the United States. In the war between those new Governments

President James Monroe—message to Congress 2 December 1823, later becoming the "Monroe Doctrine"

attacks, the veteran transport discharged cargo at the Paestrum beaches before departing for Oran 11 September. As Allied forces secured Salerno, entered Naples, and began the hard-fought drive up the boot of Italy, she continued to transport reinforcements and cargo from North Africa to Italy. On 30 November she departed Oran in convoy for the United Kingdom; and, with almost 2,000 troops embarked, she arrived Belfast, Northern Ireland, 9 December. Departing for the United States 20 December, she reached New York 31 December.

Sailing for Norfolk 15 February 1944, *James O'Hara* embarked marines and loaded cargo before departing for the Pacific 26 February. She arrived Pearl Harbor

16 March and during the next 2 months practiced for the forthcoming invasion of the Marianas. As part of Vice Admiral R. K. Turner's Northern Attack Force, she departed Pearl Harbor 29 May; touched at Eniwetok; and, carrying troops of the 4th Marine Division, arrived off Saipan in the early hours of 15 June. She debarked her troops in the initial assault waves, then discharged cargo as bitter fighting raged on shore. After embarking casualties and enemy prisoners, she departed 17 June and cruised northeast of Saipan while Vice Admiral Marc Mitscher's Fast Carrier Task Force defeated Admiral Ozawa's Mobile Fleet in the Battle of the Philippine Sea, the greatest carrier battle of the war. Following the re-

sounding American victory, *James O'Hara* returned to Saipan 23 June; completed unloading cargo; and departed 24 June for Eniwetok and Pearl Harbor.

Following additional amphibious training, *James O'Hara* departed in convoy 12 August and reached Guadalcanal the 24th. On 8 September she sailed for the Palau invasion, aimed at securing air bases prior to the scheduled invasion of the Philippines. She closed the Palaus 15 September, and 2 days later, debarked troops during the amphibious assault against Anguar Island. She remained off the Palaus until 23 September when she sailed for the Admiralties, arriving Manus 27 September.

There, *James O'Hara* embarked troops of the 1st Cavalry Division and departed in convoy 12 October for the invasion of Leyte. Assigned to the Northern Attack Force, she entered Leyte Gulf 20 October; closed about 7 miles off San Ricardo; and debarked five waves of assault troops. After unloading 476 tons of combat cargo, she sailed that evening for the Palaus and arrived Kossol Passage the 23d. She embarked survivors of escort carriers *Gambier Bay* and *St. Lo*, sunk while gallantly defending the Leyte beachhead in the Battle off Samar, and from 28 to 31 October carried them to Guam. After returning to Manus 15 November, between 17 and 29 November she transported reinforcements to Leyte and sailed to Hollandia, New Guinea, to prepare for the invasion of Luzon.

As part of Vice Admiral D. E. Barbey's San Fabian Attack Force, *James O'Hara* departed Sansapor, New Guinea, 30 December with troops of the 6th Infantry Division embarked. Steaming via Leyte Gulf and Surigao and Mindoro Straits, she entered Lingayen Gulf 9 January 1945 and boated assault troops and cargo during amphibious landings which spearheaded the liberation of Luzon. Departing the same day, she steamed via Leyte and Ulithi to Guam where she arrived 6 February to stage for the amphibious invasion of Iwo Jima.

Carrying men of the 3d Marine Division, the attack transport departed Guam 17 February and arrived off Iwo Jima the 19th. Until 27 February she operated in the retirement area; then during the next week she debarked reinforcements, unloaded cargo, and embarked casualties. On 5 March she sailed for Guam where she arrived 8 March to debark more than 400 casualties of the bitter fighting on Iwo Jima.

From 9 to 27 March, *James O'Hara* sailed via the Solomons and the New Hebrides to New Caledonia where, during the next month, she practiced amphibious attacks. Between 3 May and 15 July she transported men and supplies from New Caledonia and New Guinea to the Philippines. After loading cargo at Guian, Samar, she sailed for the United States 18 July and reached San Francisco 4 August.

After the cessation of hostilities, the veteran transport departed 25 August and carried troops via Eniwetok to the Philippines. Arriving Manila Bay, Luzon, 17 September, she operated along the Luzon coast until 1 October when she departed Lingayen Gulf for Japan. Steaming in convoy, she reached Wakayama, Honshu, 7 October and debarked occupation troops. She departed Nagoya, Honshu, 28 October; embarked returning veterans at Tinian 3 November; and sailed for San Francisco 5 November. After arriving 17 November, between 22 December and 4 February 1946 she made another "Magic-Carpet" run to Saipan and back to the West Coast.

James O'Hara decommissioned at San Francisco 5 April 1946 and was transferred to the Army the same day. During the next 4 years she served out of Seattle, Wash., as a transport under the Army Transportation Corps. Reacquired by the Navy 1 March 1950, she was reclassified T-AP-179 on 28 April and assigned to MSTs.

During the struggle to repulse Communist aggression in South Korea, *James O'Hara* transported troops and supplies from the West Coast to the Far East. Operating primarily out of Seattle, between October 1950 and July 1954 she made 18 deployments to ports in Japan and South Korea. In addition she supplied American bases in the Marshalls and the Marianas, and she made

numerous troop training and rotation runs to bases in Alaska. She continued this pattern of deployment and readiness operations until 30 November 1959 when she arrived Seattle for inactivation. She entered the National Defense Reserve Fleet in Puget Sound 14 January 1960. Transferred to the Maritime Administration in November, her name was struck from the Navy List 1 July 1961. At present she is berthed at Olympia, Wash.

James O'Hara received seven battle stars for World War II service and one battle star for Korean service.

James R. Ward, see *J. Richard Ward* (DE-243)

James River

A river in Virginia.

(SP-861: l. 58'; b. 11'6" dr. 2'9"; s. 10 k.; cpl. 5; a. 2 1-pdrs.)

James River (SP-861), a motor boat built by C. Crockett of Pocomoke City, Md., was acquired by the Navy in May 1917 from the Virginia State Fish and Oyster Commission. Her first commanding officer was B. W. Parker, Chief Master-at-Arms.

James River served as a patrol boat in the 5th Naval District, and was assigned to Pocomoke Sound, the James and Elizabeth Rivers, and other parts of Chesapeake Bay. She was returned to her owners 22 October 1918.

II

(LSMR-510: dp. 790; l. 206'3"; b. 34'6"; dr. 7'2"; s. 13 k.; cpl. 138; a. 1 5", 4 40mm., 8 20mm., 4 4.2" m., 10 rkt.; cl. *LSMR-401*)

LSMR-510 was laid down by Brown Shipbuilding Co., Houston, Tex., 7 April 1945; launched 5 May 1945; and commissioned 1 July 1945, Lt. Werner E. Cederberg in command.

Departing Galveston, Tex., 10 July, *LSMR-510* steamed to Charleston, S.C., where she arrived 15 July. From 3 to 5 August she sailed to Little Creek, Va., for training in Chesapeake Bay and along the Virginia coast. Assigned to LSMR Squadron 4, she departed Little Creek 4 October for the Great Lakes. Steaming via the St. Lawrence River, she arrived Rochester, N.Y., 16 October, and for the next few weeks cruised to Detroit, Mich., and Milwaukee, Wis. She departed Milwaukee 29 October and returned to Little Creek 15 November.

During the next 2 months, *LSMR-510* continued training and readiness operations out of Little Creek. She departed 29 January 1946 for squadron exercises in the Caribbean; and, after reaching San Juan, P.R., 3 February, she operated off Culebra Island. Between 12 and 14 February she sailed to Guantanamo Bay, Cuba, where she participated in tactical exercises. Departing 15 March for the United States, she touched at Bermuda 19 March and reached Little Creek the 24th.

Following duty out of Norfolk and Baltimore, *LSMR-510* departed Little Creek for the West Coast 18 October. Steaming via Corpus Christi, Tex., and the Panama Canal, she arrived San Diego 20 November. Assigned to LSMR Squadron 3, she operated out of San Diego; decommissioned there 5 February 1947; and entered the Pacific Reserve Fleet. While berthed at San Diego, she was named *James River* 1 October 1955. Her name was struck from the Navy List 1 February 1960, and she was sold to Miami Terminal Transport Co. of New York City 12 April 1961.

James Rowan, see *Allioth* (AK-109)

James S. Chambers

(Sch.: t. 401; l. 124'6"; b. 29'3"; dph. 12'2"; cpl. 62; a. 4 32-pdrs.)

James S. Chambers was a three-masted schooner purchased by the Navy at Philadelphia 4 September 1861; and commissioned at Philadelphia Navy Yard 16 December, Lt. Dennis Condry in command.

The schooner sailed from Philadelphia 6 days later and joined the Gulf Blockading Squadron at Ship Island, Miss., 23 January 1862. Her diligent service in the Gulf of Mexico and off the Florida coast was first rewarded on 23 August when she captured blockade-running schooner *Corelia* with a cargo of supplies badly needed by the South. Two days later she took Confederate steamer *Union* attempting to escape with a cargo of 350 bales of cotton.

James S. Chambers scored again on 4 March 1863—the second anniversary of President Lincoln's inauguration—when men from her whaleboats boarded and took Spanish sloop *Relampago* with a cargo of coffee, liquors, and soldiers shoes. The triumph was capped late that afternoon when a sail was sighted to the south standing in for land. The unidentified ship ignored a shot across her bow and continued to race for the beach without showing any colors. The Union schooner continued the chase firing at her quarry until she ran aground. The following morning men from *James S. Chambers* boarded the wreck, a schooner of pilot boat-build, and identified her as *Ida*. They removed several boatloads of cargo before setting her afire. A final prize came on 18 June 1863 when the vigilant blockader captured schooner *Rebekah*.

A period of almost a year's blockading duty stationed at West Pass, St. George's Sound, Fla., ensued. On 12 May 1864 boats from *James S. Chambers* and *Somerset* drove off a body of Confederate sailors embarking on a boat expedition ordered to capture the Union's side-wheel steamer *Adela*.

In August 1864 *James S. Chambers* encountered a new enemy—yellow fever. The epidemic forced her to return to Philadelphia after taking the lives of 13 bluejackets and 3 officers. Only two or three members of her crew escaped the disease.

On New Year's Day 1865 the indomitable ship was back in action with the South Atlantic Blockading Squadron stationed at Bull's Bay, S.C. She was in the joint expeditionary force which attacked the rear of Charleston 12 February. A fortnight later her boat crews raided and destroyed extensive Confederate salt works and stockpiles at Palmetto Point, S.C.

Toward the end of the war *James S. Chambers* served as a quarantine vessel at Port Royal, S.C. She sailed for the North 27 July and decommissioned 31 August. *James S. Chambers* was sold at public auction in New York City to Mr. Rhinehart 27 September 1865.

James Wilson, see *Sterope* (AK-96)

James Wooley

Former name retained.

(YT-45: l. 80°9''; b. 21'; dr. 8'7''; cpl. 10)

James Wooley was built in 1899 by Lockwood Manufacturing Co., East Boston, Mass. She was purchased in 1918 from Commercial Towboat Co., and assigned to the 1st Naval District as a service craft. *James Wooley* operated in this area for the duration of her service. She decommissioned 11 April 1932, and was struck from the Navy Register 22 July 1936.

Jamestown

Jamestown, Va., is the earliest permanent settlement established by Englishmen in North America.

I

(Slp: t. 1,150; l. 163'6''; b. 32'2''; dph. 17'3''; cpl. 186; a. 4 8'', 18 32-pdrs.)

The first *Jamestown* was launched in 1844 by the Navy Yard, Gosport, Va.; and commissioned there 12 December, Comdr. Robert B. Cunningham in command.

She departed Hampton Roads 25 June 1845 as flagship of Commodore Charles W. Skinner in command of United States naval vessels operating off the western coast of Africa to suppress the slave trade. At the end of her first deployment the sloop arrived Boston 6 August 1846.

While she was moored at the Boston Navy Yard word reached the United States that for the second consecutive year blight had ruined the potato crop of Ireland, depriving the people of that country of their chief means of subsistence. A joint resolution of Congress approved 3 March 1847 authorized the Secretary of the Navy to place *Jamestown* and *Macedonian* at the disposal of Captains Robert B. Forbes and George C. DeKay to carry food to the starving poor of Ireland. *Jamestown* sailed from Boston 28 March and arrived Cork, Ireland, 12 April. After unloading her life-saving cargo, the sloop returned to Boston 17 May.

As flagship of Commodore W. C. Bolton, *Jamestown* again stood out of Boston 22 July to operate on the west coast of Africa. A year later she was transferred to the Mediterranean Squadron to assist in protecting American citizens and interests during the epidemic of revolutions which convulsed Europe in 1848. After political conditions became more stable, *Jamestown* returned to Norfolk 4 May 1850.

After a year at home, she was assigned to the Brazil Squadron departing Norfolk 1 June 1851 to begin operations off South America lasting until her return to Philadelphia Navy Yard 2 May 1854. She decommissioned there 9 days later.

Recommissioning 22 February 1855, *Jamestown* sailed as flagship of the African Squadron under Commodore Crabbe, departing Key West 9 June and returning to Philadelphia 2 June 1857 and decommissioning. She recommissioned 16 December and cruised the West Indies with the Home Squadron until decommissioning at Philadelphia 14 February 1860.

After the outbreak of the Civil War, *Jamestown* recommissioned 5 June 1861 and was assigned to the Atlantic Blockading Squadron, where she compiled a record of outstanding efficiency. The sloop chased bark *Alvorado* ashore off Fernandina, Fla. and set her on fire 5 August and captured schooner *Aigburth* off the coast of Florida 31 August 1861. Four days later she captured, dismantled, and scuttled schooner *Col. Long*. Next she captured schooner *Havlock* 15 December. Her final prize was brig *Intended*, taken off Wilmington 1 May 1862.

Jamestown departed for the Pacific 12 October to protect American commerce from Confederate privateers; and she remained on that duty until after the end of the war, decommissioning at Mare Island 17 September 1865.

Having been converted to a transport and store ship, she recommissioned 3 September 1866 to serve at Panama as a store and hospital ship. Because of fever on board, *Jamestown* was ordered north 2 April 1867 and was disinfected at San Francisco. Joining the North Pacific Squadron, she served as guard and storeship at Sitka,

Alaska, from 11 September 1867 until 30 May 1868. *Jamestown* was present at the hoisting of the U.S. Flag at Sitka 18 October 1867 after Alaska was purchased from Russia—one of the significant steps in the growth of the United States to world leadership.

Jamestown arrived at Mare Island 23 July 1868; decommissioned there 13 August; and recommissioned 25 January 1869, following repairs. For almost 3 years, *Jamestown* cruised the Pacific on the west coasts of North and South America, and as far west as Tahiti and the Fiji and Hawaiian Islands.

Decommissioning 7 October 1871, *Jamestown* was placed in ordinary at Mare Island until 16 March 1876 when she was recommissioned for use as a State Public Marine School. She operated at the Hawaiian Islands in this capacity until she was returned to the Navy Department and decommissioned 3 March 1879.

She was recommissioned 8 May and sailed for Sitka, Alaska, where she surveyed the harbor and protected American interests. In 1881, she sailed the Pacific until decommissioning at San Francisco 21 September.

Having been fitted out as an apprentice training ship, *Jamestown* was recommissioned 14 February 1882 and proceeded to the Atlantic coast via Cape Horn. In her new capacity, she sailed the Atlantic Ocean, voyaging to the West Indies, Spain, and as far north as the State of Maine. On 31 August 1888, she was decommissioned at Norfolk.

Recommissioning 13 April 1889, *Jamestown* cruised to

France and to the West Indies with apprentices, and decommissioned again 6 September 1892 at Norfolk.

On 9 September she was transferred to the Treasury Department for Marine Hospital Service for quarantine purposes in Hampton Roads. She was destroyed by fire at the Norfolk Navy Yard, 3 January 1913, after being returned to the Navy Department.

II

(PG-55: dp. 1,780; l. 294'; b. 38'2"; dr. 16'; s. 15 k.; cpl. 259; a. 2 3")

The second *Jamestown* was built as *Savarona* in 1928 by Pusey & Jones Corp., Wilmington, Del., for Mrs. Thomas S. Cadwallader of Philadelphia. While Mrs. Cadwallader operated her, *Savarona* was said to be the largest and most luxurious yacht in the world. Colonel William Boyce Thompson purchased the palatial vessel in 1929 and renamed her *Alder*.

Alder was acquired by the Navy at New York 6 December 1940; converted into a gunboat in the Fletcher Division Shipyard of Bethlehem Shipbuilding Co., Hoboken, N.J.; renamed *Jamestown* and designated PG-55; and commissioned at New York Navy Yard 26 May 1941, Comdr. A. P. Lawton in command.

Jamestown's first summer in the Navy was devoted to training Naval Academy midshipmen. She sailed to Annapolis 1 June to embark her first detachment of 100 third-

USS *Jamestown*, a Sloop of War built in 1844

class men and 3 instructors for a 2-week training cruise to Norfolk.

At the end of the summer, after completing a number of similar cruises, *Jamestown* steamed to New York to be fitted out as a motor-torpedo-boat tender. When final conversion was completed, she sailed to Melville, R.I., to assist in establishing the Motor Torpedo Boat Training Center and to serve as training ship and tender for the boats of Squadron 4 while she readied herself for combat.

In June she returned to New York to receive new equipment before departing for the South Pacific. Eager for action, the tender stood out of New York Harbor 1 August. While she steamed toward the New Hebrides Islands via the Panama Canal and Pearl Harbor, the Navy daringly launched its first offensive thrust against Japan by landing the 1st Marine Division on Guadalcanal and Tulagi.

The Navy's resources available for Operation "Watchtower," meager at the outset of the fighting 7 August, were dangerously weakened by combat losses in ensuing weeks of desperate fighting against heavy odds. In September, when *Jamestown* arrived in Espiritu Santo, the marines on Guadalcanal were suffering from a critical shortage of supplies. While awaiting the arrival of the PT boats of Squadron 3, the tender busied herself escorting resupply convoys between the New Hebrides and Tulagi towing a barge carrying 2,000 barrels of gasoline and 500 quarter-ton bombs.

Jamestown was at Noumea, New Caledonia, 19 September when boats of the 1st Division of Squadron 3 arrived. Cargo ship *Bellatrix* assisted her in towing them to Espiritu Santo, where *Jamestown* entrusted them to two fast minesweepers for the final passage to Tulagi and resumed her efforts to keep vital supplies flowing through the enemy infested waters to the Marines on Guadalcanal. Finally she reported to Tulagi 22 October and there, in the center of the bitter struggle subject to constant air attack, began servicing the PT boats of Squadron 3. For the next 4 months these fearless little ships patrolled "Iron-bottom Sound" nightly, frequently challenging Japanese destroyers, cruisers, and even battleships of "the Tokyo Express". During the day *Jamestown* worked feverishly to ready the worn and battered boats for the next patrol. Besides ministering to the PT boats, the tender assisted with preliminary repairs to battle-damaged American cruisers and sent parties ashore to construct pipelines to water holes.

Jamestown and the PT boats of Squadron 3 were explicitly included in the Presidential Unit Citation awarded the 1st Marine Division for taking and holding strongly defended Japanese positions on Tulagi, Gavutu, Tanambogo, Florida, and Guadalcanal.

The tender was redesignated AGP-3 on 13 January 1943, and commenced operating under Commander Motor Torpedo Boat Squadron, Pacific Fleet. She departed Tulagi 18 February 1943 on one of countless trips made during the following year from that port to the New Hebrides or Rendova for supplies for the PT boats or acting as escort between island groups. After 12 months of this valuable service, *Jamestown* departed Tulagi 9 February 1944 for a well-earned and badly-needed overhaul at San Pedro, Calif.

Back in tip-top shape she sailed from San Pedro 17 July and arrived Espiritu Santo 5 August. By this time the Solomons and the Bismarck Archipelago were secure; and the PT boats were needed in the Southwest Pacific, where General MacArthur was fighting for New Guinea. *Jamestown* found herself shuttling supplies, equipment, and supporting troops from the Solomons to bases in New Guinea. Her former role as a tender was now filled by larger ships designed specifically for the task. *Jamestown* proudly proved her worth as a utility ship maintaining communications between PT boat bases. For example, she departed Treasury Island 6 September 1944 to rendezvous at Bougainville with a troop transport which she escorted to Milne Bay, Dutch New Guinea, returning to Treasury Island a week later ready for a similar voyage escorting merchantmen to Finschhafen, Dutch New Guinea.

Ordered to the Philippines 5 February 1945, *Jamestown* arrived Leyte 12 February to mess and berth men of Motor Torpedo Squadron 24 until 18 March. Convoy duty between Samar and Woendi, Schouten Islands was followed by voyages to Borneo and various ports in the Philippines occupying the tender until after Japan surrendered.

Jamestown departed Samar for the United States 20 October 1945 and arrived San Francisco 24 November. She decommissioned there 6 March 1946 ending her busy and useful service and was transferred to the Maritime Commission for disposal 4 September 1946. She was sold to Balfour Gutrie and Co., Ltd., 16 December 1946.

III

(AG-166: dp. 11,375 (t.); l. 441'6"; b. 56'11"; dr. 22'; s. 11 k.; cpl. 313; cl. *Oxford*; T. Z-EC2-S-C5)

The third *Jamestown* (AG-166), a converted Liberty ship, was launched as *J. Howland Gardner* under Maritime Commission contract by New England Shipbuilding Corp., South Portland, Maine, 10 July 1945; and sponsored by Mrs. George W. Elkins of Newport, R.I.

The liberty ship was completed 14 August and chartered under general agency agreement by Waterman Steamship Co., until 17 June 1946 when she went into the Maritime Reserve Fleet. She was chartered by U.S. Navigation Co., 3 February 1947, and by South Atlantic Steamship Lines, 20 October 1948.

J. Howland Gardner returned to Maritime Reserve Fleet at Beaumont, Tex. She was acquired there by the Navy 10 August 1962; renamed *Jamestown* and designated AG-166 on 6 March 1963; and commissioned 13 December at Norfolk Navy Yard, Comdr. Alan J. Kaplan in command.

The research ship was assigned to Service Squadron 8, Service Force, Atlantic Fleet, with Norfolk her home port. Her mission is "to conduct technical research operations in support of U.S. Navy electronic research projects, which include electromagnetic propagation studies and advanced communications systems such as satellite communications."

After fitting out at Norfolk, *Jamestown* departed 20 January 1964 for Guantanamo Bay, Cuba, where she underwent 2 weeks of intensive shakedown training. She was there when Cuban Fidel Castro shut off all fresh water to that base, and stood by ready to evacuate American families. Upon completion of shakedown training, she made brief visits to Kingston, Jamaica, and Key West before returning to Norfolk 27 February.

Jamestown was redesignated AGTR-3 on 1 April and 8 days later departed on her first deployment visiting Gibraltar; Valletta, Malta; Aden; Capetown; and Freetown, Sierra Leone, before returning Norfolk 17 August. The ensuing weeks were devoted to preparation for deployment off the African coast. She stood out of Norfolk 2 November for Dakar, Senegal, Capetown, South Africa, and further service acquiring new knowledge in the vital field of electronic communications. *Jamestown* then returned to Norfolk 6 February 1965. After operation in the Caribbean in the spring, she transited the Panama Canal for a cruise along the Pacific Coast of South America reaching Valparaiso, Chile, 9 June. She celebrated the Fourth of July at Callao, Peru, and then transited the Panama Canal, returning to Norfolk 23 July.

Exactly 3 months later *Jamestown* got underway for the Far East and reached Subic Bay in the Philippines 29 December. She operated in the South China Sea gathering valuable information for the Navy's ships fighting to protect the independence of South Vietnam while adding to the long Navy tradition of serving the field of scientific research. She continued operating in the Far East, often operating in the Vietnam war zone, through mid-1967.

Jamestown, see *Mariveles* (IX-197)

Jan, see *YTM-461*

Jan Van Nassau

A former name retained.

(Str: dp. 7,560; l. 361'6"; b. 44'3"; dr. 32'11"; s. 12 k.; a. none)

Jan Van Nassau, a depot collier, was built in 1913 by W. Hamilton Company, Ltd., of Point Glasgow, Scotland, and operated as a freighter under Dutch registry. Seized by Presidential Proclamation and taken over by the Navy 20 March 1918, she commissioned the same day, Lt. (j.g.) Joseph Anson in command.

She sailed from San Juan, P.R., 3 April bound for the Canal Zone and arrived Cristobal, C.Z., 8 April, where she discharged her cargo of coal. On the 10th she sailed for Iquiqu, Chile, arriving 13 April to load 4,500 tons of nitrate vitally needed for the manufacture of Allied explosives. She returned to Balboa, C.Z., 3 May and the next day steamed for New York, arriving the 13th.

Jan Van Nassau decommissioned and was turned over to USSB 17 May for return to her former owner.

Jane II

A former name retained.

(SP-1188: t. 5; l. 35'; b. 5'6"; dr. 3'; s. 15 k.; a. 1 mg.)

Jane II (SP-1188), a wooden motor boat, was built in 1914 by A. Appel, of Trenton, N.J., and acquired by the Navy from her owner, George Gumphert of Philadelphia, in August 1917. She commissioned soon afterward, and was first commanded by A. Aspling, Coxwain, USNRF.

Assigned to the 4th Naval District, *Jane II* operated as a dispatch boat and patrol craft at the section base, Cape May, N.J. She was returned to her owner 25 November 1918.

Janirve, see YP-231

Janssen

Ralph Wille Janssen was born in Chicago Heights, Ill., 28 January 1915, and enlisted in the Naval Reserve 12 October 1940. He was later appointed Midshipman, undergoing training on board *Arkansas* and at the Naval Reserve Midshipman's School 1940-41. Upon commissioning, Janssen reported to destroyer *Porter* 2 August 1941, and served on her during the critical first months of the Pacific war. Promoted to Lieutenant (j.g.) 15 June 1942, he was killed 26 October 1942 when *Porter* was torpedoed by an enemy submarine during the Battle of the Santa Cruz Islands.

(DE-396: dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; cpl. 186; a. 3 3", 3 21" tt., 2 40mm., 8 20mm., 2 dct., 8 dep., 1 dep. (h.h.); cl. *Edsall*)

Janssen (DE-396) was laid down by Brown Shipbuilding Co., Houston, Tex., 4 August 1943; launched 10 October 1943; sponsored by Mrs. Alfred Janssen, stepmother of Lieutenant (j.g.) Janssen; and commissioned 18 December 1943, Lt. Comdr. H. E. Cross in command.

Janssen departed 11 January 1944 from Galveston to conduct shakedown training out of Bermuda. Upon completion she rendezvoused 27 February with escort carrier *Bogue* and her escorts to form a submarine hunter-killer group. In the months that followed, *Janssen* and her sister ships attacked numerous submarine contacts while cruising between the United States and the Azores; and, after a brief rest in North African ports, they returned to Norfolk 2 May.

Janssen and the *Bogue* group were soon underway again cruising the convoy routes of the North Atlantic. Hunter-killer groups such as this one became a prime weapon against the U-boat and contributed importantly to the important work of keeping the supply lines to Europe and the Mediterranean open. *Janssen* arrived New York 24 September 1944 for training exercises, and in December

took part in an emergency patrol off the coast of Maine, where increased U-boat activity was anticipated.

Early 1945 found *Janssen* training antisubmarine teams in Casco Bay and the Bermuda area. She got underway on offensive operations once more 28 March and conducted 2 weeks of Atlantic barrier patrol. Joining the *Bogue* group again 16 April, the ship steamed into the North Atlantic for her last patrol. Several attacks were made on U-boats. *Frederick C. Davis* was torpedoed and sunk with great loss of life 24 April. Then upon making sonar contact, *Janssen*, aided by other escorts, closed in on the enemy firing over 40 depth charges, in three separate attacks. Finally, stricken *U-546* came to the surface where she was destroyed.

The veteran destroyer escort arrived New York 11 May, after the war against Germany had officially ended. She sailed to Norfolk for the installation of additional airtiaircraft mounts in preparation for more action, this time against Japan. *Janssen* conducted training in the Caribbean in June, and arrived Pearl Harbor via the Panama Canal and California 21 August. Too late to take active part in the war against Japan, the ship embarked 100 returning veterans at Pearl Harbor and brought them to San Pedro 9 September.

Janssen again transited the Panama Canal, arriving Charleston 25 September. Designated for deactivation, she departed 24 October for Green Cove Springs, Fla., where she decommissioned 12 April 1946. *Janssen* then joined the Atlantic Reserve Fleet and, at present, is berthed at Philadelphia, Pa.

Janssen received one battle star for World War II service and shared in the Presidential Unit Citation awarded to the various ships of the *Bogue* task groups for outstanding antisubmarine work in the Atlantic during 1943-44.

Jarvis

James C. Jarvis, born in 1787, was appointed midshipman from the state of New York in 1799. Midshipman Jarvis was killed at the age of 13 during the historic engagement between the famed frigate *Constellation* and the French frigate *La Vengeance* 2 February 1800. Sent aloft in command of the topmen to secure *Constellation's* unsupported mainmast, he refused to come down when warned that the mast might topple: "My post is here. I can't leave it until ordered." As the mast crashed, Jarvis was swept over the side with the falling rigging. Honoring Jarvis for his bravery and devotion to duty, the Sixth Congress by Joint Resolution 29 March 1800 deemed his conduct "deserving of the highest praise" and his loss "a subject of national regret."

I

(DD-38: dp. 787; l. 293'11"; b. 27'; dr. 8'4"; s. 30 k.; cpl. 83; a. 5 3", 6 18" tt.; cl. *Monaghan*)

The first *Jarvis* (DD-38) was laid down by the New York Shipbuilding Co., Camden, N.J., 1 July 1911; launched 4 April 1912; sponsored by Mrs. Jean King; and commissioned 22 October 1912, Lt. Comdr. D. P. Mannix in command.

Following shakedown off Cuba, *Jarvis* spent a year operating out of Norfolk in the Caribbean. She departed Pensacola, Fla. 20 April 1914 for patrols off Tampico and Vera Cruz, Mexico, during the Vera Cruz Occupation. Returning to Norfolk 16 June, she operated in the Atlantic until departing New York 26 May 1917 to join U.S. Naval Forces which operated in European waters under Vice Admiral W. S. Sims.

Arriving Queenstown, Ireland, via St. Nazaire, France, 11 June, she commenced patrol and escort duty along the Irish and English coasts. The operations of destroyers such as *Jarvis* were of immense value to the Allies in overcoming the German submarine menace. While not credited with sinking any U-boats, on two occasions *Jarvis* rescued crews of ships torpedoed by enemy submarines. On 19 June she rescued 41 survivors of SS *Batoum* off the

Irish coast, and she pulled 22 survivors of the British merchantman *Purley* from the North Sea 25 July. After recovering *Batoum's* survivors, she braved a possible torpedo attack and positioned herself between SS *Meckanician* and a U-boat to protect the merchant ship from enemy torpedoes.

Jarvis operated out of Queenstown until 15 February 1918 when she sailed to Brest, France, to guard Allied shipping along the French coast. She patrolled out of Brest until 28 December; then she sailed for the United States. Arriving Philadelphia 12 January 1919, she resumed operations along the Atlantic Coast. *Jarvis* returned to Philadelphia 21 July and decommissioned 26 November. Under the terms of the London Treaty of 1930, which limited naval armament, she was scrapped and her materials sold 23 April 1935.

II

(DD-393: dp. 1,850; l. 341'4"; b. 35'6"; dr. 10'4"; s. 35 k.; cpl. 158; a. 4 5", 4 .50 cal. mg., 16 21" tt., 2 dct.; cl. *Gridley*)

The second *Jarvis* (DD-393) was laid down by Puget Sound Navy Yard, Bremerton, Wash., 21 August 1935; launched 6 May 1937; sponsored by Mrs. Thomas T. Craven, wife of Vice Admiral Craven; and commissioned 27 October 1937, Lt. Comdr. R. R. Ferguson in command.

Clearing Puget Sound 4 January 1938, *Jarvis* operated along the California coast and in the Caribbean until 1 April 1940 when she departed San Diego for fleet exercises off the Hawaiian Islands. She arrived Pearl Harbor 26 April, cruised the Pacific to Midway and Johnston Islands, and steamed to San Francisco 8 February 1941 for overhaul. Returning to Pearl Harbor 17 April to commence more than seven months of intensive maneuvers, she put into Pearl Harbor 4 December following exercises off Maui Island.

Three days later the Japanese executed the carefully planned, devastating attack on Pearl Harbor. As the first wave of enemy bombers raked Battleship Row with torpedoes and bombs, Ens. W. F. Greene laconically appraised the situation with the following entry in *Jarvis'* Deck Log: "0758 Hostilities with Japan commenced with air raid on Pearl Harbor. Went to General Quarters." Moored next to *Mugford* (DD-389) at the Navy Yard, *Jarvis* opened fire with 5-inch guns and machine guns and made preparations to get underway within minutes of the initial attack. Her 5-inch guns were among the first to challenge the enemy raiders, and her gunners proudly claimed four planes.

Emerging from the attack with no loss of crew and only superficial damage, *Jarvis* sortied that morning with several cruisers and destroyers to conduct surveillance and ASW patrols. On the 16th she cleared Pearl Harbor with *Saratoga* (CV-3) and joined Task Force 14, steaming to relieve the beleaguered defenders on Wake Atoll. Recalled to Pearl Harbor 23 December, after the rescue mission aborted, *Jarvis* returned the 29th to resume ASW patrols. While operating with *Lexington* (CV-2) and her screening cruisers, *Jarvis* rescued 182 survivors of the stricken fleet oiler *Neches* (AO-5) 6 hours after she was torpedoed during mid-watch 23 January 1942.

Jarvis departed Pearl Harbor 5 February to escort a convoy to Brisbane, Australia. Following her return 27 March, she sailed 8 April for San Francisco to undergo alterations. She returned to Pearl 18 May escorting 13 ships and proceeded 5 days later via Fiji to Sydney, Australia. Arriving 18 June, she commenced convoy escort and ASW patrols from Australia to New Caledonia, continuing this duty until called to participate in the invasion of Guadalcanal.

Steaming from Sydney 14 July, *Jarvis* arrived Wellington, New Zealand, the 19th to join Task Force 62, which sailed 22 July for the Solomons. After conducting rehearsal landings in the Fiji Islands 28-30 July, the invasion force of 84 ships and 20,000 marines steamed for Guadalcanal 31 July. Protected from Japanese search planes by rain and heavy mists, the force arrived off the landing beaches at dawn 7 August.

Following naval and air bombardment of enemy defenses, the first amphibious operation of the war commenced at 0650. *Jarvis* patrolled watchfully as part of the protective screen while Marines established a beachhead. As landing operations progressed, Americans expected the Japanese to strike vigorously at the transports with land-based planes. However, during two attacks which occurred that afternoon the Americans sustained only minor damage on *Mugford* (DD-389) while splashing 14 enemy planes.

Following night patrol off the southern end of Savo Island, *Jarvis* returned to Lunga Point to screen the unloading transports. Warning of an impending air attack suspended these operations; and the transports and their protective screen of destroyers and cruisers deployed in the body of water between Guadalcanal and Florida Island, soon to be called "Ironbottom Sound." When enemy torpedo bombers appeared about noon 8 August, they met a lethal stream of antiaircraft fire. Only 9 of the 26 planes breached the deadly defense of flaming lead, but they set *George F. Elliot* (AP-13) ablaze and torpedoed *Jarvis*.

With 5-inch shells and machine gun fire pouring out at the attackers, *Jarvis* maneuvered between *Vincennes* (CA-64) and one of the planes during the thick of the fight. As antiaircraft fire consumed the plane, its torpedo exploded against *Jarvis'* starboard side near the forward fireroom, stopping her dead in the water. Her valiant crew jettisoned the port torpedoes and quickly brought under control the fires that followed the explosion. *Dewey* (DD-349) towed her to shallow anchorage off Lunga Point; and, after the attack, she crossed "Ironbottom Sound" to Tulagi, where she transferred her wounded and commenced emergency repairs.

Despite a 50-foot gash in her side, she was considered seaworthy and ordered to proceed under cover of darkness to Efate, New Hebrides. Apparently unaware of the order, her capable skipper, Lt. Comdr. W. W. Graham, decided to steam to Sidney, Australia, for immediate repairs from *Dobbin* (AD-3). Unnoticed by her own ships, *Jarvis* departed Tulagi at midnight 9 August and moved slowly westward through "Ironbottom Sound" and between Savo Island and Cape Esperance. At 0134 she passed 3,000 yards northward of Rear Admiral Mikawa's cruisers, steaming to meet the Americans at the costly Battle of Savo Island. Mistaking her for a cruiser of the New Zealand *Achilles*-class, they fired torpedoes, and destroyer *Yunagi* later engaged her briefly, all without effect.

The gallant destroyer, continuing to retire westward, had little speed, no radio communications, and few operative guns; but she refused aid from *Bluc* (DD-378) upon being sighted at 0325. After daybreak, a *Saratoga* scout plane sighted her 40 miles off Guadalcanal, trailing fuel oil and down by the bow. That was the last time Americans saw her.

The Japanese, however, still mistaking *Jarvis* for an escaping cruiser, dispatched 31 planes from Rabaul to search out and destroy her. Once discovered, the determined, but badly damaged, destroyer was no match for bombers raking the ship with bullets and torpedoes. According to Japanese records, *Jarvis* "split and sank" at 1300 on 9 August.

Although she went down with all hands, her sacrifice served a noble purpose. Had not the enemy planes located her, no doubt they would have maintained course for Guadalcanal and pounded the battle-weary American ships as they prepared to depart for Noumea, New Caledonia.

Jarvis received three battle stars for World War II service.

III

(DD-799: dp. 2,050; l. 376'6"; b. 39'8" dr. 17'9"; s. 35 k.; cpl. 320; a. 5 5", 10 40mm., 7 20mm., 10 21" tt., 6 dep., 2 dct.; cl. *Fletcher*)

The third *Jarvis* (DD-799) was laid down by the Seattle-Tacoma Shipbuilding Corp., Seattle, Wash.; 7 June 1943; launched 14 February 1944; sponsored by

USS *Jarvis* (DD-393) in Puget Sound 2 May 1938

Mrs. Harold Burkit, daughter of the Honorable R. C. Holman, U.S. Senator from Oregon; and commissioned 3 June 1944, Comdr. E. B. Ellsworth in command.

After shakedown off the California coast, *Jarvis* departed Seattle 25 August for Pearl Harbor as escort for *South Dakota* (BB-57). Arriving 31 August, she proceeded independently 3 September to Adak, Alaska, to join the North Pacific Force, engaged in operations against the Kurile Islands. Operating out of Adak and Attu, Alaska, *Jarvis* battled stormy seas and prolonged bad weather to conduct eight raids on shipping and shore installations from Paramushiru to Matsuwa. After returning to Adak 15 August 1945 from her last raid, she steamed to Aomori, Honshu, to support occupation operations. Arriving Aomori 8 September, she plied the Sea of Japan, assisting occupation landings and destroying military installations on Honshu and Hokkaido. *Jarvis* departed Yokosuka, Honshu, 19 November for the United States. Arriving Pearl Harbor 29 November, she joined the "Magic-Carpet" fleet and sailed 1 December for the East Coast via San Diego and the Panama Canal, returning veterans of the Pacific War. She reached Charleston, S.C., 22 December; deactivated as a unit of the Atlantic Reserve Fleet 11 April 1946; and decommissioned 29 June.

With the development and enlargement of the Korean crisis, *Jarvis* recommissioned 8 February 1951, Comdr. E. F. Rye in command. She operated in the Atlantic out of Charleston and Norfolk for more than a year before departing Norfolk 15 May 1952 for deployment to Korea. Steaming via Panama, the West Coast, and Japan, she arrived off Korea's eastern coast 23 June and began blockade and interdiction patrols. Under her skipper, Comdr. C. D. McCall, she ranged the coast from Songjin to Chongjin, conducting operations with the 7th Fleet until returning to Yokosuka, Japan, 18 August. Following operations in Japanese waters, she joined the Formosa Patrol from 26 September to 10 October. After completing this important duty, she proceeded to the Philippine Islands; and on the 18th she departed Subic Bay for the United States via Ceylon, Suez, and Gibraltar, arriving Norfolk 12 December.

Jarvis resumed operations with the Atlantic Fleet and on 4 May 1954 deployed to the Mediterranean, arriving Naples, Italy, 18 May. Before returning to Norfolk 9 July, she operated with the mighty 6th Fleet, America's deterrent to Communist aggression in the Middle East.

Clearing Norfolk 5 January 1955, *Jarvis* sailed to the West Coast, arriving Long Beach 26 January. After training off the California Coast, she departed 21 April on the first of five post-Korean war deployments to the

Far East. As a unit of the powerful and versatile 7th Fleet, she ranged the Western Pacific from Japan to the Philippines, ever alert to insure peace in the unsettled Far East. While on her 1955 deployment to the Far East, she supported the evacuation of thousands of refugees from North to South Vietnam during Operation "Passage to Freedom." During all her deployments she conducted patrols in the Formosa Strait to help stabilize the Nationalist-Communist struggle and prevent the invasion of Formosa from the mainland. In 1958 she provided valuable assistance for the Chinese Nationalists during the threatened Communist invasion of Quemoy and Matsu.

Jarvis returned to Long Beach from her fifth deployment 4 March 1960 and resumed coastal operations until 24 September when she sailed for the East Coast. Arriving Philadelphia 16 October, *Jarvis* decommissioned 24 October and entered the Atlantic Reserve Fleet. On 3 November she was turned over to Spain on a 5-year renewable loan under terms of the Military Assistance Program. She serves the Spanish Navy as *Alcala Galiano* (D-24).

Jarvis received one battle star for World War II service and one battle star for Korean service.

Jasmine

A genus of shrubs of the olive family noted for their fragrant blossoms; the State flower of South Carolina.

(ScStr: t. 120; l. 79'; b. 18'3"; dr. 7'6"; cpl. 19; a. 1 20-pdr. P.r., 1 12-pdr. how.)

Jasmine, a wooden tug, was purchased at New York under the name *Peter B. Van Houten* from Palmer, Crary, & John Reid, 29 May 1863; and commissioned at New York Navy Yard 17 June, Acting Master A. L. B. Zerega in command.

Jasmine was assigned to the West Gulf Blockading Squadron and sailed for the Gulf of Mexico 21 June. On 14 July she captured sloop *Relampago* with an assorted cargo, including supplies of critical copper boiler tubing, and towed her to Key West. For the remainder of the war the tireless tug served as a supply and dispatch vessel maintaining communications between the various ships of the squadron. The end of the war found her in Pensacola, where she remained providing varied services while the squadron demobilized and the Navy resumed peacetime operations.

Jasmine sailed north early in 1866 and decommissioned at New York 12 May. She was sold to the Treasury Department 13 June 1866.

Jason

In Greek mythology, the son of Aeson, King of Iolcus in Thessaly, who commanded ship *Argo* on the famous voyage in quest of the Golden Fleece.

Monitor *Sangamon* (q.v.) formerly *Conestoga*, was re-named *Jason* 15 June 1869.

I

(AC-12: dp. 19,250; l. 536'; b. 65'; dr. 27'8"; s. 14.32 k.; cpl. 82; a. 4 4")

The first *Jason* (AC-12) was laid down 26 March 1912; launched 16 November 1912 by Maryland Steel Co., Sparrows Point, Md.; and commissioned 26 June 1913, Captain A. M. Whitton in command.

During Woodrow Wilson's first administration, Mexico was torn by revolution and several factions struggled to attain undisputed control of the land. *Jason* sailed for the troubled area 4 September 1913 to fuel American ships stationed there. She returned to Norfolk 13 October to prepare for fueling operations in the Mediterranean.

Jason departed Norfolk 25 October, fueled ships off Italy and France, and returned to Hampton Roads, Va., 18 December. Following further fueling duties during winter maneuvers in the Caribbean and Mexican waters in early 1914, she embarked refugees from Tuxpan, Mexico, in April and transported them to Louisiana. Later that year, *Jason* was once again involved in a humanitarian gesture as she sailed from New York 14 November, bearing Christmas gifts for the Mediterranean fleet and the people of Europe. The "Christmas Ship," as she was called, returned to Norfolk 15 March 1915.

For the next 2 years *Jason* continued fueling operations, including one cruise to the West Coast March-June 1915. During the early months of the war she operated with the Atlantic Train, transporting coal, stores, and freight along the eastern United States. She continued these duties until 16 April 1918 when she arrived New York to load aviation materials for transportation to Inverness, Scotland. Upon her return to Hampton Roads 5 July, *Jason* was assigned to NOTS to transport coal along the East Coast.

After the war the fuel ship made two cruises to Europe with coal and general cargo before being detached from NOTS 22 July 1919. *Jason* sailed from Norfolk 31 July to join the Pacific Train. Six months later she returned to the East Coast and 21 September 1920 sailed with coal and stores for the ships in European waters. Upon returning to the United States, she loaded airplanes and artillery equipment and departed Philadelphia 24 January 1921 for Guam.

Jason operated in the Pacific for 2 years performing fueling operations along the coast. During 1923 she cruised to Nicaragua, embarked marines stationed there,

and returned them to Norfolk. She arrived San Diego 5 May and resumed transport and fueling services until 1925.

Jason departed Pearl Harbor 2 May 1925 for service with the air squadron in the Far East. After arriving in the Philippines 25 May, she carried marines to China to protect American interests. From 1925 to 1932 *Jason* operated in the Far East, engaging in transport duties supporting the air squadron. Peace in China was constantly jeopardized by warlike factions within and aggression from without. *Jason* and the other members of the Asiatic Fleet kept the situation in hand by making the presence of America's naval strength felt. *Jason* was reclassified AV-2 on 21 January 1930.

She returned to San Diego 13 May 1932, and decommissioned at Bremerton Navy Yard 30 June 1932. *Jason* was struck from the Navy List 19 May 1936 and sold 29 July of that year.

II

(ARH-1: dp. 16,200; l. 530'; b. 73'4"; dr. 23'4"; s. 19.2 k.; cpl. 1,158; a. 4 5", 8 40mm.)

The second *Jason* (ARH-1) was launched 3 April 1943 by Los Angeles Shipbuilding and Drydock Co., Los Angeles, Calif.; sponsored by Mrs. Aubrey W. Fitch; commissioned 19 June 1944, Captain A. O. R. Bergesen in command.

Jason was commissioned as the United States accelerated its drive to push the Japanese back to their home islands. After brief shakedown and fitting out, the repair ship arrived Pearl Harbor 6 July 1944 on the first leg of her journey to the Pacific battle area. She arrived Purvis Bay in the Solomon Islands 17 August to commence operations with Service Squadron 10. Two months later she arrived Ulithi, where she was to spend the greater part of the war, performing the vital task of keeping the Navy's ships at peak strength and operating efficiency.

For 7 months at Ulithi, as American forces captured island after island from the Japanese, *Jason*, many times under enemy attack, repaired broken hulls, buckled decks and twisted bulkheads of every type of ship in the Navy. This floating shipyard turned seemingly hopeless battle wrecks into rejuvenated fighting ships again able to stand out gallantly in the final victorious months. As the action crept closer to Japan, *Jason* sailed for Leyte arriving there 28 May 1945. She remained there for the duration of the war continuing to service ships of the Pacific Fleet.

After the Japanese surrender, she joined a convoy of units from the 7th Fleet and arrived Jinsen, Korea, 8 September with the first occupation troops. She operated out of Jinsen, Korea, and Tsingtao, China until mid-February 1946, performing repair services and assisting in the evacuation of Japanese nationals. *Jason* returned Terminal Island, Calif., 9 March for overhaul. Her rest was a brief one, however, as she sailed once again in May for the Far East. For the next 4 years she serviced the Pacific fleet, alternating between Japan and California.

As the Communist menace grew bolder, and their puppet

USS *Jason* (AC-12), later converted to AV-2

regime in North Korea staged an overt act of aggression on South Korea, the United States responded to the challenge. American forces were dispatched to the area, and naval power played an important role in the conflict. With an increased number of ships in the Far East, *Jason* departed Oakland, Calif., 22 July 1950 for Sasebo and immediately began service duties upon her arrival in August. Throughout the war she remained at Sasebo for extended periods performing the vital repair tasks at hand, with only brief overhaul periods in the United States.

Following the cessation of hostilities in Korea, *Jason* returned San Diego 6 November 1953. Six months later she sailed for another WestPac deployment which included a goodwill tour to Chin Hae, Korea. It was during this cruise, that the Chinese Communists began to harrass the Nationalist-held Tachen Island. The powerful 7th Fleet, which *Jason* helped maintain, sent units into the area to make certain the peace was not violated. She returned to San Diego 13 February 1955 and commenced repair services off the West Coast.

Her next Far Eastern tour began January 1956, and she operated in Japan, Okinawa, and Formosa before returning to San Diego late October. While on still another deployment to Sasebo she was redesignated AR-8 on 9 September 1957. As *Jason* was about to return home, a near crisis flared in Indonesia, and the 7th Fleet kept watch on the potential trouble spot. Following her return to San Diego 14 February 1958, she operated there throughout the year, giving valuable service to the Pacific Fleet.

Jason was dispatched to the Far East 6 January 1959 and operated there until returning to San Diego 18 August. Her departure occurred prior to the deployment of a carrier task group in the area of Laos, as Communist insurgency once again threatened the peace. During *Jason's* 1960 deployment, the Communists renewed their drive to undermine the neutral government of Laos, and the mighty 7th Fleet was again called to peace-keeping duties.

Following her return to San Diego 7 March 1961, *Jason* operated along the West Coast providing repair services through 1962. Another deployment with Westpac began 3 January 1963, as the Communists turned their attention on Vietnam. The 7th Fleet became a main cog in our determination to prevent Southeast Asia from falling into the hands of Communist-inspired despots. In the years since World War II, *Jason* was an important factor in keeping this force at maximum operating condition. She returned to San Diego 7 July 1963 and serviced the Pacific Fleet along the West Coast through 1964.

Jason departed San Diego 4 January 1965 and arrived Yokosuka on the 25th. After operations in Japan and at Okinawa, she reached Subic Bay 6 March and served ships of the 7th Fleet until heading home 31 August. The repair ship operated in ports of southern California until entering the Naval Shipyard at Bremerton, Wash., for overhaul 4 March 1966.

Back in top trim 6 June, *Jason* resumed West Coast operations until sailing for the Orient 9 January 1967. She served the ships of the 7th Fleet at Sasebo, Japan, and in Subic Bay until returning to San Diego 19 August.

Jason received a Korean Service Medal for Korean service.

Jason

An opaque and impure variety of quartz, usually red in color, used as a gem. PC-486 was named for towns in Alabama, Indiana, and Texas.

I

(PYc-13: t. 230; l. 135'; b. 22'8''; dr. 16'6''; s. 13 k.; a. none)

The first *Jasper* (PYc-13), a diesel-powered yacht, was built as *Stranger* by Lake Union Dry Dock Co., Seattle, Wash., in 1938; purchased 1 July 1941 from her owner,

Fred E. Lewis; renamed *Jasper*; and placed in service at San Diego 8 July 1941.

After the installation of experimental sound and electronic equipment, *Jasper* was assigned to the 11th Naval District to perform research work at the Naval Sound Laboratory, San Diego. She continued this important scientific work throughout the war taking part in experiments with radio and sound waves in cooperation with the University of California, Division of War Research. Echo-ranging equipment on board *Jasper* was used in 1946 to discover a deep 300-mile-wide oceanic layer off the coast of California.

The ship was placed out of service 14 August 1947 at San Diego and turned over to the Maritime Commission for disposal in June 1948.

II

(PC-486: dp. 295; l. 174'; b. 23'; dr. 8'; s. 20 k.; cpl. 58; a. 1 3'', 1 40mm.; 5 20mm., 2 rkt., 2 dep., 2 dct.; cl. PC-451)

PC-486 was laid down by Consolidated Shipbuilding Corp., Morris Heights, N.Y., 25 October 1941; launched 25 January 1942; sponsored by Mrs. A. B. Miller; and commissioned 14 May 1942, Lt. (j.g.) Drayton Cochran in command.

After shakedown PC-486 was assigned to the Northwestern Sea Frontier; operating out of Alaska and the Aleutians during the war, she patrolled the vital shipping lanes in the North Pacific and escorted convoys from San Francisco and Seattle to Alaska.

Following World War II, the subchaser was assigned to ASW duty in the Canal Zone. From 1946 to 1959 she operated out of the Canal Zone on ASW patrol and air-sea rescue missions. On 5 February 1952, PC-486 rescued 18 people adrift for 6 days on disabled Columbian schooner *Gloria*. Three years later she rescued 10 people from a sunken U.S. tuna boat *Toni B* in the Caribbean, 90 miles off the Panama coast.

PC-486 was named *Jasper* 15 February 1956, and continued services in the Canal Zone until she decommissioned 30 April 1959. *Jasper* was struck from the Navy List 1 May 1959 and sold in October 1960 to Venezuela, serving at present as *Mejillon* (P-1).

BAM-29, an *Auk*-class minesweeper, was launched by Associated Shipbuilders, Seattle, Wash., 20 June 1943; completed and turned over the United Kingdom under lend-lease 12 August 1944; and served in the Royal Navy as *Jasper*. She was returned to the U.S. Navy 24 December 1946 in England, and eventually sold to Greece, where she was apparently not used as a warship.

Java

Early in the War of 1812, *Constitution* captured British frigate *Java* in a bitter fight off the coast of Brazil 29 December 1812. However, *Java's* shattered condition and the long distance from home prompted Commodore Bainbridge to burn his prize. American frigate *Java* was named for this American victory, and, later in the Civil War, the screw sloop of war under construction at the New York Navy Yard.

(Fr: t. 1,511; l. 175' b.p.; b. 44'6'' dph. 13'8''; cpl. 400; a. 33 long 32-pdrs., 20 42-pdr. car.)

Java was a 44-gun frigate built at Baltimore in 1814 and 1815 by Flannigan & Parsons. Not completed until after the end of the War of 1812, *Java*, Captain Oliver Hazard Perry in command, got underway from Baltimore 5 August 1815, picked up spare rigging at Hampton Roads and New York, and sailed to Newport, R.I., to fill out her crew. Ordered to the Mediterranean, the new frigate stood out from Newport 22 January 1816 in the face of a bitter gale. At sea one of her masts snapped with 10 men upon the yards, killing 5.

Java was off Algiers in April where Perry went ashore under a flag of truce and persuaded the dey of Algiers to honor the treaty which he had signed the previous summer but had been ignoring. Next she visited Tripoli with *Constellation*, *Ontario*, and *Eric* to show the strength of the United States. Then, after a cruise in the Mediterranean stopping at Syracuse, Messina, Palermo, Tunis Gibraltar, and Naples, the frigate returned to Newport early in 1817. and was laid up at Boston.

Java returned to active service in 1827 under Captain William M. Crane for a second deployment in the Mediterranean. There she protected American citizens and commerce and performed diplomatic duties. Toward the end of the cruise she served as flagship of Commodore James Biddle.

After returning to the United States in 1831, *Java* became receiving ship at Norfolk, where she was broken up in 1842.

Java was the name assigned to a screw sloop begun by the New York Navy Yard in 1963 but never completed. Her hull was broken up in 1884.

Jawfish

SS-356, a *Perch*-class submarine, was named *Fanegal* 23 August 1942, and renamed *Jawfish* 24 September 1942. Construction by Electric Boat Co., Groton, Conn., was canceled 29 July 1944.

Jaydee III

Former name retained.

(SP-692: l. 45'; b. 10'; dr. 3'; s. 20 k.; cpl. 5; a. 1 1-pdr., 1 mg.)

Jaydee III (SP-692), was built by the Matthews Boat Co., in 1916, and acquired by the Navy from her owners, R. Talbot, J. C. Wright, Howard Wilson, and Irving Chapin, of Lincoln, Nebr., in June 1917. She commissioned soon thereafter, at Detroit, Mich., Ens. P. Springer in command.

The motor boat was assigned to the 9th, 10th, and 11th Naval Districts, based at Detroit. She served as a patrol craft and traffic regulator on the Detroit River until being returned to her owner 7 March 1919.

Jean

A former name retained.

(NOTS: t. 3,125; l. 328'; b. 42'6"; dr. 21'; s. 10 k.; cpl. 84; a. 2 3")

Jean, a depot collier, was built in 1909 by the Newport News Shipbuilding & Drydock Co., Newport News, Va., and taken over by the Army at Newport News, in September 1917 under charter from her owner, A. H. Bull Steamship Co., of New York. On 30 August 1918 the USSB assumed control under Army account. She was commissioned by the Navy the same day Lt. Comdr. Daniel A. Sullivan, in command.

Assigned to the 5th Naval District, *Jean* operated on bare boat charter. She took aboard 2,181 tons of general cargo at Norfolk and departed 30 September for Sydney, Nova Scotia, to join an Atlantic convey of American and British ships which departed 7 October for Bordeaux, France. Diverted to Brest, France, she arrived 21 October with precious supplies for war-ravaged Europe. Steaming from Brest the 22d, *Jean* visited the ports of La Pallice, Bordeaux, and Verdon. She sailed out of Verdon harbor 3 November and arrived Newport News the 24.

She refueled, loaded 3,164 tons of cargo, and sailed 30 December for Rio de Janeiro via Barbados. She arrived 27 January 1919, exchanged her cargo of coal for coffee beans, and departed for New York via Santos, Brazil.

She arrived New York 20 March and discharged her cargo. *Jean* decommissioned 15 April at Hoboken, N.J., and was returned to her original owner through the USSB.

Jean Sands

A former name retained.

(ScStr: t. 139; l. 102'; b. 22'8"; dph. 6'2"; a. none)

Jean Sands was built at Brooklyn, N.Y., in 1863 and was purchased by the Navy at New York from T. F. Rowland 18 October 1864. She was stationed at the Norfolk Navy Yard where she served as a tug and salvage vessel. She was sold 16 May 1892.

Jeannette

(StBark: l. 142'; b. 25'; dr. 13'; a. none)

Jeannette was originally a gunboat in the Royal Navy and was purchased by Sir Allan Young for his arctic voyages. The ship was purchased under the name *Pandora* in 1878 by James Gordon Bennett, owner of the *New York Herald*; and renamed *Jeannette*. Bennett was an arctic enthusiast, and he obtained the cooperation and assistance of the government in fitting out an expedition to the Pole through Bering Strait. In March Congress authorized the detailing of Naval officers on the voyage, and Lt. George W. DeLong, a veteran arctic explorer, accompanied Bennett to Europe to select a ship. When *Jeannette* was chosen and named, DeLong sailed her from Havre to San Francisco during the summer and fall of 1878.

At Mare Island Navy Yard *Jeannette* was fitted with the latest equipment and was considerably strengthened for northern service. She was to sail under the orders of the Navy and subject to naval laws and discipline, even though privately owned. The crew consisted of 28 officers and men and 3 civilians. The ship contained the latest in scientific equipment; and, in addition to reaching the Pole through Bering Strait, scientific observation ranked high among the expedition's list of goals.

Jeannette departed San Francisco 8 July 1879, the Secretary of the Navy having added to her original instructions the task of searching for another polar expedition long overdue in *Vega*. She pushed northward to Alaska's Norton Sound and sent her last communication to Washington before starting north from St. Lawrence Bay, Siberia, 27 August. The ship sighted Herald Island 4 September and soon afterward was caught fast in the ice pack. For the next 21 months the sturdy *Jeannette* drifted to the northwest, ever-closer to DeLong's goal, the North Pole itself. He described in his journal the important scientific records kept by the party: "A full meteorological record is kept, soundings are taken, astronomical observations made and positions computed, dip and declination of the needle observed and recorded . . . everything we can do is done as faithfully, as strictly, as mathematically as if we were at the Pole itself, or the lives of millions depended on our adherence to routine." In May 1881 two islands were discovered and named *Jeannette* and *Henrietta*. On the night of 12 June the pressure of the ice finally began to crush *Jeannette*. DeLong and his men unloaded provisions and equipment onto the ice pack and the ship sank the following morning.

The expedition now faced a long trek to the Siberian coast, with little hope even then of rescue. Nonetheless they started off for the Lena Delta hauling their boats and supplies. After reaching several small islands in the

Siberian group and gaining some food and rest, they took to their boats 12 September in hope of reaching the mainland. As a violent storm blew up, one of the boats capsized and sank. The other two, commanded by DeLong and Chief Engineer George W. Melville, survived the severe weather but landed at widely separated points on the delta.

The party headed by DeLong began the long march inland over the marshy, half-frozen delta to hoped-for native settlements, and one by one the men died from starvation and exposure. Finally DeLong sent the two strongest ahead for help; and, though they eventually found a settlement, DeLong and his companions died on the Siberian tundra.

In the meantime, the intrepid Melville and his party had found a native village on the other side of the delta and were rescued. Melville then started for Belun, a Russian outpost, where he found the two survivors of DeLong's boat and induced a group of natives to go with him in search of his commander. He succeeded in finding their landing place on the Lena and recovered *Jcannette's* log and other important records, but returned to Belun 27 November without locating DeLong. Keeping only two of his party, Melville then turned northward once more, and finally found the bodies of DeLong and his two companions 23 March 1882. He built a large cairn over the grave of his friends, a monument which has been reproduced in granite and marble at the United States Naval Academy.

Before leaving Siberia, Melville made an attempt to find the remains of *Jcannette's* third boat, even though the chance of survivors was slim. He returned disappointed to Irkutsk, the capital of Siberia, 5 July 1882, almost 3

years since his departure from San Francisco in *Jeanette*. The results of the expedition, both meteorological and geographic, were important. Melville was rightly honored for his courage and tenacity, and the name of George Washington DeLong is enshrined forever among the ranks of the Navy's explorer heroes.

II

(SP-149: t. 17; l. 49'; b. 13'; dr. 4'; s. 9 k.; a. 2 mg.)

Jeannette (SP-149), or *Jeanette*, was built by B. C. Huffstetler, Miami, Fla., in 1905; acquired by the Navy from her owner, R. A. Long, of Beaufort, S.C., and commissioned 14 May 1917.

Jeannette served as a patrol craft at Port Royal and Beaufort, S.C., with occasional duties at Pensacola and the Gulf of Mexico until decommissioned 7 February 1919. She was used for a time at the Marine Corps Base, Parris Island, S.C., and was sold 16 January 1920 to the E. O. Hall boat yard, Charleston.

Jeannette Skinner

Former name retained.

(Str: t. 4,384; l. 423'9"; b. 54'; dr. 24'2"; s. 10 k.; epl. 32; a. 1 6", 1 6-pdr.)

Jeannette Skinner, a cargo ship, was launched in 1917 by Skinner & Eddy Corp., Seattle, Wash.; taken over by the Navy from the USSB; and commissioned 12 April 1918. Lt. Comdr. C. A. Nickerson, USNRF, in command.

Steam Bark *Jeanette* at Havre, France, just prior to departure for San Francisco in 1878

Jeanette crew members dragging their boats over the ice after the loss of their ship

Jeannette Skinner was assigned to NOTS to transport cargo from the United States to France. After loading general supplies, she departed New York 3 May and arrived Brest, France 2 weeks later. After four round-trip cruises to replenish supplies in war-depleted Europe, *Jeannette Skinner* arrived Baltimore 2 June 1919. She decommissioned 10 June and was returned to the USSB for return to her owners.

Jeff Davis

A former name retained.

(Slp)

Jeff Davis was apparently a prize captured by Union vessels off the North Carolina Sounds when they took New Bern, N.C., 14 March 1862. She was purchased from Illinois Prize Court and used as a coal hulk.

Jeffers

William Nicholon Jeffers, born in Gloucester County, N.J., 6 October 1824, was appointed Midshipman 23 September 1840. His early service was in frigates *Congress* and *United States*, and during the Mexican War he took part in the attack on Alvarado, the capture of Tobasco, and the bombardment of Vera Cruz. In the 1850's he was engaged in numerous expeditions to Central America, and was responsible for a preliminary survey of the isthmus of Honduras. During the early months of the Civil War, Jeffers commanded *Philadelphia* in the Potomac and served in frigate *Roanoke* off Charleston and Hatteras Inlet. In December 1861 he took command of *Underwriter* and soon afterward took part in the capture of Roanoke Island and the destruction of the Confederate squadron at Elizabeth City. After the wounding of Captain Worden of *Monitor* during her historic engagement with *Virginia*, Jeffers commanded her, taking part mainly in shore bom-

bardment in the James River. For the remainder of the war he was on ordnance duty in Philadelphia and Washington. Jeffers commanded *Swatara* in the Mediterranean and in African waters, and in 1873 was made Chief of the Bureau of Ordnance. Commodore Jeffers served in this capacity for 8 years and contributed much to the science and literature of naval ordnance. He died at Washington 23 July 1883.

(DD-621: dp. 1,630; l. 348'4"; b. 36'1"; dr. 17'5"; s. 35 k.; cpl. 270; a. 4 5", 4 40mm., 5 20mm., 5 21" tt., 6 dep., 2 dct.; cl. *Gleaves*.)

Jeffers (DD-621) was laid down by Federal Shipbuilding & Drydock Co., Kearny, N.J., 25 March 1942; launched 26 August 1942; sponsored by Mrs. Lucie Jeffers Lyons, great-granddaughter of Commodore Jeffers; and commissioned 5 November 1942, Lt. Comdr. W. G. McGarry in command.

After shakedown and training in Casco Bay, Maine, *Jeffers* operated briefly on the East Coast until departing Norfolk 18 February 1943 on her first transatlantic voyage escorting a convoy to Casablanca and returning 14 April. The ship patrolled off Argentia, Newfoundland, for a week before steaming to Norfolk to prepare for the coming invasion of Sicily.

Jeffers sailed from Norfolk 8 June with Task Force 65 and arrived Oran, Algeria, 22 June. While preparing for the giant assault, she patrolled off other African ports, shooting down a German bomber during 6 July Luftwaffe raid on Bizerte. *Jeffers* sailed 2 days later with Rear Admiral Hall's force for Gela; and, upon arrival 9 June, she guarded the transports. Early next day the great assault began, with *Jeffers* assigned the task of shooting out shore searchlights and providing fire support. As the landing proceeded with great success in the following days, the ship fired support missions and served on antisubmarine patrol. She sailed to Bizerte 18 July, but was back at Palermo 31 July with cargo ships. *Jeffers* sailed to Oran the next day, and from that port continued to New York, arriving 22 August.

After repairs at New York, the destroyer was assigned to convoy duty between East Coast ports and Scotland. As the Allies began the great buildup of men and materiel in Britain for the landings in northern France, *Jeffers* made five voyages between 5 September 1943 and 22 April 1944. On her second convoy crossing to Scotland, 21 October the ship picked up survivors from *Murphy*, after that destroyer had been cut in two by a tanker. She also took part in salvage operations which saved the stern of the stricken vessel.

After training operations, *Jeffers* sailed from New York 5 May 1944 for the United Kingdom, where she prepared for the invasion of Normandy in June. She departed Belfast 3 June for Utah Beach, where she patrolled and provided fire support as troops stormed ashore on D-day. The veteran destroyer remained off the beach until 29 June, driving off several enemy planes and assisting damaged ships. For the next two weeks she convoyed transports from Belfast to Utah Beach as more troops and supplies were poured in to the beachhead, finally departing for the Mediterranean 16 July.

Next on the Allied timetable for the defeat of Germany was another invasion of France, this one in the south. Assigned to screen escort carriers covering the operation, *Jeffers* departed Malta 12 August to join her task group. Three days later, as troops landed between Cannes and Toulon, the ship remained with supporting carriers, continuing to cruise off shore until 28 September. She then sailed for New York, arriving 7 October to prepare for duty in the far Pacific.

Jeffers was converted to a destroyer-minesweeper at New York, and was reclassified DMS-27 on 15 November. She sailed 3 January 1945 for the Panama Canal and California, arriving San Diego for training 17 January. In February she moved on to Pearl Harbor and from there to the great advance base at Ulithi to prepare for the Okinawa invasion, last and largest amphibious operation of the war against Japan. As part of the preliminary minesweeping group, *Jeffers* arrived Okinawa 24 March, 1 week before the landings, and began clearing mines and marking boat lanes. During the assault 1 April the ship moved to antisubmarine screening and air defense. During the great Japanese air attack of 6 April she downed a twin-engine bomber. Six days later, while on radar picket station, she again was under heavy air attack. She downed at least one of the attackers and was nearly hit by one of the deadly Baka bombs as the attack was repulsed. *Jeffers* then assisted survivors of sunken *Manbert T. Abele*.

The veteran ship steamed into Kerama Retto to repair battle damage later that afternoon, emerging 16 April to join a carrier group operating off Okinawa in support of ground forces. She then sailed to Guam 3 May for further repairs. Departing again 26 June, *Jeffers* sailed via Siapan and Ulithi to Kerama Retto, and spent the next 6 weeks on minesweeping operations north of Okinawa. She was at anchor off Okinawa when the news of the Japanese acceptance of terms was received 15 August 1945.

Jeffers steamed into Tokyo Bay 29 August with occupation forces, and was present for the surrender ceremonies 2 September. She then joined a minesweeping group for vital sweeping operations around Japan, including hazardous operations in Tsushima Strait. Operating out of Sasebo, she continued to sweep in the Yellow Sea during November, getting underway 5 December for the United States.

Jeffers arrived San Diego 23 December and steamed via the Panama Canal to Norfolk, where she arrived 9 January 1946. The ship then began her peacetime duty, arriving Charleston 12 June. She remained there for the rest of 1946 except for a short training cruise to Casco Bay. 1947 was spent on maneuvers in the Caribbean during April and May, followed by exercises on the East Coast of the United States; and 1948 was spent entirely at various East Coast ports on training duty.

After making a short cruise to the Caribbean in early 1949, *Jeffers* sailed 6 September from Charleston for her first Mediterranean cruise. This was the period of unrest

in Greece and Israel, and the ship took part in maneuvers around Malta until October, as America showed her might in the cause of peace and stability. She returned to Charleston 13 October.

The next year was spent at Charleston, except for a training cruise to Guantanamo Bay in March. She got underway again, however, 9 January 1951 for another cruise to the troubled Mediterranean. She visited Oran, Palermo, Athens, and Naples during this deployment, again taking part in 6th Fleet's important peace-keeping operations. Arriving Charleston 17 May 1951, *Jeffers* engaged in minesweeping and antisubmarine exercises until her next scheduled Mediterranean cruise, 5 June 1952. She operated with 6th Fleet carriers and destroyers until returning to her home port 13 October.

Jeffers spent the first half of 1953 in training off the Virginia Capes, departing Norfolk 16 September for operations with carrier *Bennington* and units of the Royal Canadian Navy in the Mediterranean. She returned to Charleston 3 February 1954. Operations from New York to Key West and Havana occupied the veteran destroyer-minesweeper until she decommissioned at Charleston 23 May 1955. She entered the Charleston Group, Atlantic Reserve Fleet as DD-621, having been reclassified 15 January 1955. *Jeffers* is at present berthed at Orange, Tex.

Jeffers received seven battle stars for World War II service.

Jefferson

Thomas Jefferson was born at Shadwell, Albemarle County, Va., 13 April 1743 and graduated from William and Mary College in 1762. He was admitted to the bar 5 years later. In 1769 he was elected to the Virginia House of Burgesses where he soon became a leader of the patriot faction and helped form the Virginia Committee of Correspondence. He maintained that the colonies were not subject to Parliament but were bound to England only by allegiance to the Crown.

Jefferson was sent to the Continental Congress in June 1775, and a year later he was entrusted with writing the Declaration of Independence. He returned to the Virginia legislature in October 1776 where he labored to reform the new state on democratic principles. He succeeded Patrick Henry as governor in 1779 and held that office until 1781.

Jefferson succeeded Franklin as Minister to France in 1785 and, after his return in 1789, became the Nation's first Secretary of State. Growing differences with Alexander Hamilton prompted him to resign from Washington's cabinet 31 December 1793, and he subsequently led growing opposition to the Federalist party. From 1797 to 1801 he was Vice President and he defeated John Adams in the presidential election of 1800. Upon entering the White House, Jefferson introduced a more democratic tone to public life, and his two terms as Chief Executive were marked by careful administration and rare frugality. Highlights of his presidency included the Louisiana Purchase, the Lewis and Clark Expedition, and the Navy's victory over the Barbary pirates. Their valiant and skillful fighting in the struggle with the North African corsairs gave American seamen some of their most colorful and cherished memories while strengthening the new nation's position as a power worthy of respect.

In retirement Jefferson exerted great political and intellectual influence as he worked to establish the University of Virginia. His brilliant career was brought to a fitting close when he died 4 July 1826, the 50th anniversary of his immortal Declaration of Independence.

Perhaps Jefferson's place in American history was best measured by President Kennedy while entertaining the Nobel Prize winners of the Western Hemisphere. ". . . I think," the President told his distinguished guests, "this is the most extraordinary collection of talent, of human knowledge, that has ever been gathered together at the White House, with the possible exception of when Thomas Jefferson dined alone."

I

(Sch)

The first *Jefferson* was a schooner purchased in 1802 by the United States Revenue Cutter Service and stationed at Norfolk, Va., where at the beginning of the War of 1812, she was placed under Navy orders, Captain William Ham, USRCS, in command.

She captured a British brig bound for Halifax from the West Indies in June 1812 and later in the summer she took British schooner *Patriot*. She captured three English barges in the James River 11 April 1813 and freed the crew of American schooner *Flight*, seized only a few hours before by the barges.

In the summer of 1817, she captured Spanish brig *Providentia*, the unlawful prize of Buenos Aires privateer *Mangero*. Inconclusive evidence indicates that about this time *Jefferson* may have taken a second Spanish ship, also a prize of *Mangero*. Later in the year *Jefferson* was sold.

II

(Brig: t. 509; l. 117'11"; cpl. 160; a. 16 42-pdr. car., 4 long 24-pdrs.)

The second *Jefferson* was built at Sackett's Harbor, N.Y., for service in Commodore Isaac Chauncey's fleet on Lake Ontario and launched 7 April 1814. She was manned by a crew from sloop of war *Eric* which had been laid up at Baltimore because of the British blockade of Chesapeake Bay. Comdr. Charles G. Ridgely was her captain.

Most of the guns for the new American ships had not reached Sackett's Harbor by 19 May when the British fleet arrived off the American base and began a strict blockade. *Jefferson* finally sailed with Chauncey's fleet 31 July and arrived off Niagara 5 August. With *Sylph* and *Oncida* she blockaded several English vessels inside the river while Chauncey with the rest of the fleet sailed on to Kingston to challenge the main English squadron. After remaining on blockade duty off Niagara for over a month, *Jefferson* sailed for Kingston to rejoin Chauncey. During the passage a severe storm arose 12 September and, before abating 3 days later, almost swamped the brig. Ten of her guns were thrown overboard in the struggle to save the ship.

Jefferson rejoined her fleet 17 September and operated with it during the remainder of the navigation season attempting to draw Sir James Yeo's ships into a decisive contest. Toward the end of November she was laid up for the winter. Peace obviated *Jefferson's* planned return to commission in the spring. She apparently remained in ordinary until sold 30 April 1825.

III

The third *Jefferson*, a schooner built for the United States Revenue Cutter Service in 1833, was placed under orders of the Secretary of the Navy 6 January 1836 for service against the Seminole Indians in Florida, Captain John Jackson, USRCS in command. She sailed from Charleston 19 February and arrived Pensacola 30 April. From that time until 18 October 1837 she was active in the Gulf of Mexico visiting ports on the coast of Florida, Alabama, Mississippi, Texas, and Mexico. From time to time her duties took her to the West Indies. Returning to the Treasury Department 18 October, *Jefferson* resumed her duties as a revenue cutter at Mobile, Ala. Her name was changed to *Crawford* in April 1839. As *Crawford* she was lost at Gardiner's Point, Long Island Sound, 15 December 1847.

Jefferson, Thomas, see *Thomas Jefferson* (APA-30)

Jefferson County

Counties in 26 states.

(LST-845: dp. 1,625; l. 328'; b. 50'; dr. 14'1"; s. 12 k.; cpl. 226; a 8 40mm., 12 20mm.; cl. LST-542)

LST-845 was laid down by American Bridge Co., Ambridge, Pa., 23 October 1944; launched 7 December 1944; sponsored by Mrs. B. F. Fairless; and commissioned at New Orleans, La., 1 January 1945, Lt. C. E. Lowe in command.

After shakedown off the Florida coast, *LST-845* departed New Orleans for the West Coast 7 February. Steaming via the Panama Canal, she loaded cargo at San Diego and San Francisco, then sailed 15 March for the Hawaiian Islands. She touched at Maui 24 March to unload cargo; reached Pearl Harbor the 26th; and returned to Maui 4 April for amphibious training operations. While beached 6 April, she broached in heavy surf and sustained heavy damage to her hull. Towed out to sea 9 April, she underwent repairs at Pearl Harbor from 10 April to 27 July before resuming amphibious training.

Carrying troops and cargo, *LST-845* departed Pearl Harbor in convoy for Japan 29 August. She arrived Sasebo 22 September and supported occupation landings before sailing for the Philippines 3 days later. Steaming via Subic Bay, she reached Lingayen Gulf 7 October to embark more occupation troops for transportation to Japan. Between 12 and 19 October she sailed to Sasebo; and, during the next month, she supported occupation operations along the western coast of Kyushu Island. Departing Sasebo late in November, she steamed via the Marianas to Pearl Harbor where she arrived 20 January 1946.

LST-845 operated out of Pearl Harbor until 29 April when she sailed for the Far East. Sailing via Okinawa, she arrived off Shanghai, China, 30 May. During the next 2 months, she operated from Nanking to Hankow in the Yangtze River, carrying men and military cargo and supporting Chiang Kai-shek's Chinese Nationalist troops during their struggle with the Chinese Communist forces for control of the Chinese mainland. She departed Shanghai 24 July; and, after steaming on cargo runs to the Philippines and Okinawa, she returned to Tsingtao, China, 3 September, loaded with military cargo. Then, from 9 to 28 September, she sailed to Pearl Harbor. Departing 4 December for the West Coast, she touched at San Francisco the 15th and reached San Diego 20 December.

During the next 2 years she took part in amphibious training operations out of San Diego. Between 10 January and 4 March 1949 she transported cargo to Juneau and Kodiak, Alaska. Departing San Diego 16 May, *LST-845* made a cargo run to the mid-Pacific, carrying military supplies to bases in the Marshalls and the Marianas. After returning to San Diego 17 July, she operated off southern California during the next 12 months.

In response to the invasion of South Korea by North Korean troops 25 June 1950, *LST-845* departed San Diego 10 August and sailed to the Far East to bolster the American effort to repel this Communist aggression. Arriving Kobe, Japan, 6 September, she embarked combat troops and departed 10 September for amphibious landings at Inchon, Korea, which were designed to thwart the Communist advance through South Korea and spearhead an Allied offensive northward. Standing off Inchon, she boated troops for the assault; and, following the successful landings, she remained off Inchon during the next month to unload military cargo. She departed Inchon 15 October and steamed to the eastern coast of Korea to carry cargo from Pusan to Wonsan and Hungnam. Following the entrance of Communist China into the Korean conflict, *LST-845* supported the evacuation of Hungnam and made three runs south to Pusan. On 24 December she helped evacuate the remaining military forces before sailing via Pusan to Japan where she arrived Yokosuka 31 December. During the next few months *LST-845* continued to carry cargo between Japan and ports in South Korea. She departed Yokosuka 25 April 1951, sailed via Pearl Harbor, and reached San Diego 23 May.

LST-845 took part in amphibious training operations for the better part of a year; and, after overhaul, she de-

parted San Diego 26 May 1952 to again support U.N. forces in Korea. Arriving Sasebo, Japan, 10 July, she spent more than 6 months in Japanese and Korean waters bolstering the naval supply line to South Korea. She departed the Far East 4 February 1953, arrived San Diego 5 March, and operated off southern California during the remainder of 1953.

Departing San Diego 25 January 1954, *LST-845* steamed on her third deployment with the mighty 7th Fleet in the Far East. She reached Yokosuka 25 February; and during the next 5 months cargo runs and amphibious exercises sent her from Japan to Iwo Jima, Okinawa, and Inchon. On 14 August she departed Yokosuka for Haiphong, North Vietnam, to provide support for Operation "Passage to Freedom." She reached Haiphong 27 August and made four runs to Tourane, South Vietnam, during the several weeks. In addition to transporting military cargo, she carried civilian refugees seeking to escape from Communist domination in North Vietnam. After returning to Yokosuka 20 October, *LST-845* sailed for the United States 7 November and arrived San Diego 12 December.

While operating out of San Diego, *LST-845* was named *Jefferson County* 1 July 1955. She trained along the California coast until 13 August 1957 when she again departed for the western Pacific. She arrived Yokosuka 13 September and resumed cargo runs and amphibious exercises which carried her along the Japanese coast to Okinawa, Hong Kong, and the Philippines. Departing Dingalan Bay, Luzon, 1 March, she arrived San Diego 1 April.

Jefferson County sailed for the Marshall Islands 9 October; and, after arriving Kwajalein 2 November, she operated during the next 3 months supporting the establishment of Air Force stations in the Marshalls. She returned to San Diego 4 March 1959. Following amphibious training out of San Diego, she departed for the Far East 1 October. She reached Yokosuka 3 November and resumed training and readiness exercises along the coast of Japan. Sailing for the United States 12 April 1960, she arrived San Diego 5 May. She decommissioned there 28 November 1960 and entered the Pacific Reserve Fleet. Her name was struck from the Navy List 1 February 1961. She was sold to Zidell Explorations, Inc., 22 August 1961.

LST-845 received five battle stars for Korean service.

Jeka, see *YT-352*

Jekyl

An island off the coast of Georgia.

(AG-135: dp. 520; l. 177'; b. 33'; dr. 10'; s. 13 k.; cpl. 26; cl. *Camano*)

Jekyl (AG-135) was built in 1944 by Wheeler Shipbuilding Corp., Long Island, N.Y., for the Army and served as *FS-282* until being transferred to the Navy at Guam 22 February 1947. She was converted to Navy use and commissioned at Guam 2 May 1947, Lt. F. E. Richards in command.

One of a group of small Army cargo ships transferred to the Navy for use among the Pacific Islands, *Jekyl* carried ammunition, food, and supplies to various island bases and outposts. She operated mainly from Kwajalein Atoll, and steamed through the Marianas and Carolines to Pearl Harbor in support of occupation forces. The ship also transported officials of the civil governments and helped carry native products as America began to restore normal life to the ravaged Pacific. On 31 March 1949 she was reclassified AKL-6.

The ship was relieved of her duties in December 1949 and arrived Pearl Harbor on the 15th. From there she steamed to Seattle, where she decommissioned 12 April 1950, and was placed in reserve at Astoria, Oreg. *Jekyl* was sold 18 May 1960 and scrapped.

Thorton A. Jenkins was born at Orange Court House, Va., 11 December 1811. He entered the Navy as a midshipman 1 November 1828 and served first in the West Indies in an expedition against pirates and slavers. Examined for a commission as Lieutenant, he placed first among 82 candidates.

Prior to the Mexican War, Jenkins served with the Coast Survey and with the Brazilian and Mediterranean Squadrons. During the war with Mexico, as executive officer of *Germantown*, he led landing parties from his ship at Tuxpan and Tabasco. Later, he commanded hospital ship *Relief* and the Supply Station at Salmedena Island. In the interval between the wars, he served in the receiving ship at Baltimore, returned to the Coast Survey, and was Secretary of the Lighthouse Board.

His Civil War record was distinguished. Serving primarily in the West Gulf Blockading Squadron of David Farragut, he commanded *Oneida*. He served as chief of staff to Farragut, and was later wounded while commanding a convoy escort group. As Senior Officer Present, in command of *Richmond*, he received the surrender of Port Hudson 9 July 1863. He later commanded a division of the Squadron.

Jenkins was Chief of the Bureau of Navigation, from 1865 to 1869, and he commanded the Asiatic Station from 1870 until his retirement in 1873. Rear Admiral Jenkins was President of the Naval Institute from 1883 to 1885, and died 9 August 1893.

I

(DD-42: dp. 787; l. 293'11"; b. 27'; dr. 8'4"; s. 29 k.; cpl. 83; a. 5 3", 6 18" tt.; cl. *Monaghan*)

Jenkins (DD-42) was laid down 24 March 1911 by Bath Iron Works, Bath, Maine; launched 29 April 1912; sponsored by Miss Alice Jenkins, daughter of Rear Admiral Jenkins; and commissioned 15 June 1912, Lt. Comdr. E. H. Delany in command.

In the years that preceded World War I *Jenkins*, based at Newport, R.I., trained with the Atlantic Fleet, sailing to the Caribbean for winter maneuvers operating along the East Coast in summer. In addition, she sailed to Tampico, Mexico, in mid-April 1914 to support the American occupation of Vera Cruz.

As the war raged in Europe, *Jenkins* continued patrol operations along the North American coast in search of possible German U-boats. The patrols and maneuvers sharpened her war-readiness, so that, true to Navy tradition, she was ready for any eventuality when she sailed for Europe 26 May 1917.

Based at Queenstown, Ireland, *Jenkins* and her sister destroyers patrolled the eastern Atlantic, escorting convoys and rescuing survivors of sunken merchantmen. She continued escort and patrol duty for the duration of the War. Though she made several submarine contacts no results were determined. Following the signing of the Armistice 11 November 1918, *Jenkins* sailed for home, arriving Boston 3 January 1919.

The destroyer operated along the Atlantic coast until arriving at Philadelphia 20 July. She remained there until decommissioning 31 October 1919. *Jenkins* was scrapped in 1935 in accordance with the Treaty of London.

II

(DD-447: dp. 2,100; l. 376'4"; b. 39'5"; dr. 13'; s. 35.5 k.; cpl. 273; a. 5 5", 10 40mm., 7 20mm., 10 21" tt.; 2 dct., 6 dep.; cl. *Fletcher*)

Jenkins (DD-447) was laid down by Federal Shipbuilding & Drydock Co., Kearny, N.J., 27 November 1941; launched 21 June 1942; sponsored by Mrs. Marion Parker Embry; and commissioned 31 July 1942, Lt. Comdr. H. F. Miller in command.

After a training period during the summer of 1942, *Jenkins* departed Casco Bay, Maine, 24 October as escort to a convoy headed for the North African campaign. She screened heavy ships during the shore bombardment,

as the attack force arrived off Casablanca 8 November. Following the successful assault, the destroyer returned to New York 19 November to prepare for action in the Pacific.

Arriving at Noumea, New Caledonia 4 January 1943, she immediately began escort and patrol duty among the Solomon Islands and in the Coral Sea. Her first Pacific landing operation began 29 June, when she joined other units in supporting the invasion of New Georgia Island. *Jenkins* splashed several enemy planes, as the Japanese fought back with considerable air strength.

Assigned to Rear Adm. W. L. Ainsworth's Task Group 36.1, *Jenkins* departed Tulagi 5 July and steamed up the Slot to intercept a Japanese destroyer and transport force carrying reinforcements to Kolombangara. Radar detected the enemy during mid-watch; and during the Battle of Kula Gulf 6 July, American gunfire sank one destroyer and drove another ashore. Enemy torpedoes sank *Helena*.

Following this operation, *Jenkins* was dispatched 18 July to a position 100 miles south of Santa Cruz Island to assist damaged seaplane tender *Chincoteague*. Although under attack from enemy bombers, the destroyer escorted *Chincoteague* back to Espiritu Santo.

During the next 4 months *Jenkins* engaged in escort duty, training exercises, and preparations for the Gilbert Islands campaign. She joined the screen of Rear Adm. W. A. Radford's Northern Carrier Group which bombed Makin and Tarawa during the landings 15 November. Then the destroyer sailed with the carrier force to attack Kwajalein and Wotje in the Marshalls on 4 December. During these raids the carrier *Lexington* was hit by a torpedo, and *Jenkins* was assigned to escort her back to Pearl Harbor where she arrived 9 December.

Jenkins departed Hawaii 25 January 1944 with a tanker unit to fuel fast carriers and ships covering the Marshall Islands campaign. She operated with the refueling group through February, and conducted shore bombardment on Bougainville during March. She departed Seeadler Harbor 20 April to rendezvous with Task Force 77 for amphibious operations at Hollandia and Aitape. The landings took place 22 April, and their successful conclusion gave American Pacific forces another base from which to unleash further attacks on remaining enemy held islands. After escort duty and ASW patrols, *Jenkins* made a search in early June to thwart any attempt by the Japanese to reinforce their Biak garrison. She then covered and provided shore bombardment for the invasions of Noemfoor, Sansapor, and Morotai, as well as patrolling and escorting reinforcements for these operations throughout the summer.

Jenkins once again departed Manus, Admiralties, 12 October for the Leyte invasion scheduled 20 October. Upon arrival, the destroyer was assigned to radar picket duty, from which she performed fighter director duties. As other units of the fleet were decisively defeating the enemy fleet in the historic Battle for Leyte Gulf, *Jenkins* continued her services on the picket station until 27 November.

On 28 December *Jenkins* sortied from Aitape to provide close cover for the Luzon Attack Force. After receiving some damage from the enemy shore battery, the destroyer returned to Leyte 12 January 1945. Ten days later she departed to assist in hunter-killer operations in the Lingayen Gulf area. She remained on ASW patrol until proceeding to cover minesweeping and shore bombardment on Corregidor 13 February. She continued to support the landings in the islands, giving valuable fire support and ASW assistance until late April.

She departed Subic Bay 24 April to cover minesweeping and amphibious operations in the Celebes Sea off Borneo. *Jenkins* struck a mine off Takaran Island 30 April and sailed into Subic Bay for repairs. On 18 June she sailed for the United States to complete repairs, arriving San Pedro 8 July. She remained on the West Coast through the duration of the war. The battle-scarred destroyer decommissioned at San Diego 1 May 1946.

The outbreak of the Korean conflict necessitated addi-

tional naval strength to maintain America's worldwide commitments. *Jenkins* recommissioned as DDE-447 on 2 November 1951 under the command of Comdr. C. F. McGivern. She departed San Diego 25 February 1952 for a training period at Pearl Harbor. Upon completion of training, she arrived Japan 12 June; and during the summer she operated with Task Force 77 which furnished air support for the ground forces in Korea. She also engaged in patrol duties off Korea and Formosa before returning to her home port Pearl Harbor 5 December.

She operated out of Pearl until 10 November 1953 when she sailed for another Far Eastern tour. This cruise was highlighted by Korean and Formosan patrols before returning to Pearl Harbor 15 June. From 1954 through 1963, *Jenkins* sailed annually to the Far East for peace-keeping operations with the 7th Fleet. In her 1958 deployment the 7th Fleet was on ready alert, as the Chinese Communists commenced harassment of the Chinese Nationalist islands of Quemoy and Matsu.

During the sixties the 7th Fleet deployments were of greater importance because of the Communist insurgency in Laos and Vietnam. For the greater part of 1964 and 1965, *Jenkins* operated out of Pearl Harbor.

Jenkins sailed for the Far East 9 February 1966 and on the 21st was assigned to gunfire support duty and effectively shelled enemy troop concentrations to assist Marine fighting in Vietnam. But for breathers in the Philippines and Japan, she continued this duty until returning to Pearl Harbor 22 July.

Jenkins operated in Hawaiian waters until entering U.S. Naval Shipyard at Pearl Harbor 11 September for a major overhaul which was completed early in 1967. The destroyer then prepared for another deployment in the war zone.

Jenkins received 14 battle stars for World War II service and 1 star for Korean War service.

Jenks

Henry Pease Jenks was born in Chicago, Ill., 31 May 1914 and enlisted in the Navy 8 October 1940. After undergoing Reserve Officer training, he was appointed Ensign 6 June 1941 and reported to cruiser *Atlanta*, soon to be commissioned. In June 1942, Jenks served in *Atlanta* during the epochal Battle of Midway and later during the landings on Guadalcanal, first American amphibious operation of the war. In the great Naval Battle of Guadalcanal, 13 November 1942, in which the Japanese move on the island was frustrated, *Atlanta* was torpedoed in the early stages of the action and damaged severely by enemy gunfire. She survived the night, but was scuttled next day off Lunga Point. Lieutenant (j.g.) Jenks was killed in the battle, for which his gallant ship received the Presidential Unit Citation.

(DE-665: dp. 1,400; l. 306', b. 36'10"; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3", 4 1.1", 3 21" tt., 8 20mm., 2 dct., 8 dep., 1 dep. (h.h.); cl. *Buckley*)

Jenks (DE-665) was laid down by Dravo Corp., Pittsburgh, Pa., 12 May 1943; launched 11 September 1943; sponsored by Mrs. M. L. Jenks, mother of Lieutenant (j.g.) Jenks; and commissioned at New Orleans 19 January 1944, Lt. Comdr. J. F. Way in Command.

Following shakedown training out of Bermuda in February, the ship moved to the all-important Atlantic convoy lanes to act as an escort ship during the great buildup of men and supplies in Europe. She arrived New York 21 April after one such voyage to the United Kingdom in April. Following training exercises, she steamed to Norfolk 10 May and joined escort carrier *Guadalcanal* and her hunter-killer group under Captain Daniel V. Gallery. The ships sortied 15 May bound for the Atlantic shipping lanes in quest of German submarines. After 2 weeks of searching, the group was headed toward Casablanca when on 4 June it detected *U-505* and closed for the attack. An accurate depth charge attack by *Chatelain* brought the submarine to the surface, where her crew abandoned

ship. Immediately, a well-planned boarding action commenced; and, despite the danger from damage and German booby traps, intrepid salvage parties succeeded in saving the submarine. *Jenks* picked up survivors from the U-boat, and her boat went alongside to take off valuable bridge publications. Through skillful damage control work the captured submarine, a major intelligence find, was gotten safely and secretly to Bermuda.

Jenks returned from this history-making cruise 16 June and arrived New London 28 June to serve as a training ship. She remained on this duty until late July, and departed Norfolk the 31st with another convoy to the Mediterranean. In the months that followed the ship made four escort voyages to African ports, helping to protect the vital flow of supplies and men. Between assignments she engaged in training out of Casco Bay, Maine.

Jenks reached Boston on her final convoy voyage 19 May 1945, the war against the European foe then over. The ship underwent much-needed voyage repairs at Boston Navy Yard and then sailed to Miami, arriving 8 June to serve as school ship for the Naval Training Center. In August she took part in training exercises in the Caribbean. *Jenks* continued peacetime operations out of Charlestown and Key West until arriving Green Cove Springs, Fla., 2 May 1946. She decommissioned 26 June 1946, entered the Atlantic Reserve Fleet, and was later moved to the Texas Group, where she remained until she was struck from the Navy List 1 February 1966 and scrapped.

Jenks received two battle stars for World War II service, in addition to the Presidential Unit Citation for taking part in the capture of *U-505*.

Jennings, Jonathan, see *Talita* (AKS-8)

Jennings, Walter, see *Vandalia* (IX-191)

Jennings County

A county in Indiana.

(LST-846: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 266; a. 8 40mm., 12 20mm.; cl. *LST-542*)

LST-846 was laid down by American Bridge Co., Ambridge, Pa., 27 October 1944; launched 12 December; sponsored by Mrs. L. P. Quill; and commissioned 9 January 1945.

After shakedown off Florida, *LST-846* loaded cargo at New Orleans, then sailed for the Pacific in mid-February. Steaming via the Panama Canal and San Francisco, she reached Pearl Harbor 27 March. For the next 6 weeks, the landing ship operated in the Hawaiian Islands before departing for Seattle 12 May.

Following repairs, *LST-846* received oil, gasoline, and mechanized equipment for transport to the western Pacific. On 9 June she was underway, arriving Guam 11 July. For the rest of the war she supported American forces in the Marshalls and Okinawa. After the Japanese acceptance of Allied peace terms, *LST-846* transported occupation forces and equipment between Japan and the Marianas. She sailed for the United States 3 November, arriving Seattle in early December.

Returning to the Far East 5 months later, she arrived Shanghai, China 28 May 1946 and commenced cargo runs among Chinese ports. From 1946 to 1949, *LST-846* continued these operations and in addition shuttled cargo between China and the Marianas. After the Communist takeover of Mainland China, the veteran landing ship returned to the United States, arriving San Diego 17 June 1949. *LST-846* decommissioned at Astoria, Oregon 14 October 1949.

When Communist aggression in Korea shattered the stability and peace of Asia, the United States acted to halt the advance. To aid in the movement of men and equipment, *LST-846* recommissioned 3 November 1950, Lt.

Marion V. Reeder in command. After amphibious training along the West Coast she departed San Diego, 16 April 1951 for duty in the Western Pacific. Arriving Yokosuka early June, the landing ship operated out of Japan performing cargo runs and amphibious training until 6 September when she sailed for the east coast of Korea. After two cruises from Japan to Korea, *LST-846* sailed 5 November for a stateside overhaul.

She was back in the Far East 5 June 1952, then resumed cargo operations in Japan for the remainder of the year. Returning San Diego 29 March 1953, *LST-846* served off the West Coast until 27 January 1954 when she sailed for another Westpac tour. During the late summer *LST-846* transported French troops and vehicles along the Indochina coast, following the end of the Indochinese War. She also performed station ship duties during the "Passage to Freedom" Operation, as naval units transported thousands of Vietnamese who chose a free form of government during the partition of their country.

Departing Yokosuka 12 October, the veteran landing ship arriving San Diego 4 weeks later. Following amphibious exercises along the West Coast, she steamed to Astoria, Ore., arriving 9 April 1955 for overhaul. *LST-846* was named *Jennings County* 1 July and decommissioned at San Diego 7 December 1955.

After 10 years with the Pacific Reserve Fleet, *Jennings County* recommissioned 11 June 1966, to support U.S. forces giving assistance to South Vietnam in their struggle against Communist aggression.

Jennings County departed San Diego 11 September, arriving Chu Lai, Vietnam 11 November. For the remainder of 1966 she conducted river patrols and in 1967 she continued her patrols supporting "Game Warden" operations.

LST-846 received one battle star for the Korean conflict.

Jerauld

A country in south-central South Dakota.

(APA-174: dp. 6,873; l. 455'; b. 62'; dr. 24'; s. 17 k.; cpl. 536; a. 1 5", 12 40mm., 10 20mm.; cl. *Haskell*; T. VC2-S-AP5)

Jerauld (APA-174) was launched under Maritime Commission contract by Oregon Shipbuilding Co., Portland, Ore., 3 November 1944; sponsored by Mrs. Gloria Dahlberg; acquired and commissioned at Astoria, Ore., 28 November 1944, Comdr R. E. Perry in command.

After undergoing shakedown off California, *Jerauld* sailed from Seattle 5 February 1945 carrying Army flyers and civilian workers to Pearl Harbor. She arrived 16 February and began 4 weeks of amphibious exercises in the Hawaiian Islands.

The new attack transport sailed from Pearl Harbor 15 March with marines destined for Okinawa. En route she touched at the great American bases at Eniwetok and Ulithi, arriving Okinawa 17 April. She remained off the bitterly-contested island for 5 days debarking a Marine antiaircraft battalion and undergoing frequent air attacks before sailing for Saipan 22 April.

Jerauld next steamed to Guadalcanal; and, after her arrival 10 May, she embarked troop units for redeployment to Guam and Saipan. The ship departed Saipan 23 June for her second voyage to Okinawa, this time with Army Engineers needed for the construction of all-important airfields on the island. She remained off Okinawa from 27 June until 6 July when she sailed with more than 250 battle casualties destined for hospitals on Saipan. *Jerauld* then proceeded to San Francisco, where she arrived 26 July.

The battle-ried transport remained in the United States until after Japan's surrender. Sailing 16 August for the Philippines, she arrived Manila 6 September and embarked occupation troops. After stopping at Lingayen Gulf for additional units she steamed to Wakayama 7 October to land occupation soldiers. The ship visited

several Japanese ports in support of the operation and made another voyage to the Philippines for troops. She sailed from Nagoya 26 October, embarked returnees in the Philippines, and steamed by way of Pearl Harbor for San Diego.

Jerault made one additional voyage to the Philippines as part of Operation "Magic-Carpet", bringing many combat troops back to the United States. She then sailed from San Francisco 20 February 1946 via the Canal Zone for Norfolk. Arriving 11 March, she decommissioned 6 May, was returned to the Maritime Commission, and was placed in the Maritime Commission's National Defense Reserve Fleet in the James River, where she remains.

Jerault received one battle star for World War II service.

Jericho Victory, see *Pvt. Joseph F. Merrell* (AKV-4)

Jerome County

A county in Idaho.

(LST-848: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 266; a. 8 40mm.; 12 20mm.; cl. LST-542)

LST-848 was laid down by the American Bridge Co., Ambridge, Pa. 6 November 1944; launched 21 December sponsored by Mrs. F. D. Porter; and commissioned 20 January 1945, Lt. R. P. Bentley in command.

Following shakedown off Florida, LST-848 departed New Orleans 24 February for the Pacific. After touching Balboa, C.Z., and West Coast ports, she proceeded to Hawaii, arriving Kalua Harbor 9 April. For the next 6 weeks, she engaged in amphibious exercises in the Hawaiian Islands before sailing to the Marianas.

Arriving Guam 11 June, LST-848 shuttled troops and equipment from the Marianas to Okinawa for the duration of World War II. When Japan accepted Allied peace terms, thereby ending the war, the landing ship was assigned to transport occupation forces in the Far East. Operating between the Philippines and Japan, LST-848 carried troops, vehicles, and cargo to support American forces in the Pacific.

She departed Japan in early December and, after stays at Saipan and Pearl Harbor, arrived San Francisco 11 February 1946. Following operations along the West Coast, she sailed to Astoria, Oreg., early in April and decommissioned at Vancouver, Wash., 10 August 1946. While berthed with the Columbia River group, Pacific Reserve Fleet, LST-848 was named *Jerome County* 1 July 1955.

Jerome County recommissioned 7 December 1959, Lt. Kenneth H. Ruecker in command; then completed a shakedown along the Pacific coast. On 14 May 1960 she departed San Pedro for mid-Pacific missile operations out of Midway Island. After 5 months in support of the U.S. missile program, she returned San Diego late October.

During 1961, *Jerome County* participated in amphibious training exercises along the California coast; then on 12 January 1962 she sailed for the mid-Pacific. Assigned to Operation "Dominic," she performed weather studies, charting, and communications during the U.S. nuclear tests of that year. The veteran LST returned San Diego 18 August to resume amphibious training exercises.

From August 1962 until August 1965, *Jerome County* usually operated along the West Coast in addition to two mid-Pacific deployments. Following the increased American commitment to assist the South Vietnamese government in their struggle against Communist aggression, *Jerome County* sailed for Southeast Asia 10 August 1965. Arriving Chu Lai, South Vietnam, 11 September, she supported U.S. operations in Asia for the next 3 months. The landing ship returned San Diego 22 December.

Jerome County sailed again for the Far East 3 March 1966 and arrived Da Nang, South Vietnam, 8 April. She unloaded her cargo and continued shuttling supplies,

ammunition, and equipment in and out of the war zone until departing Subic Bay 1 September for home. She arrived San Diego 13 October and operated along the West Coast for the remainder of the year and into 1967 preparing for future action.

Jerry Briggs

A former name retained.

(t. 2; l. 25'; b. 7'; cpl. 2)

Jerry Briggs, formerly *Rosalinda*, was a motor launch free-leased to the Navy and commissioned 17 August 1918. She operated out of St. Helena oil station in the South Atlantic until 3 April 1919 when she decommissioned and was returned to her owner, Mrs. Myra Briggs.

Jersey

Abridgement of New Jersey, one of the 13 Original States.

(Gon: l. 53'4"; b. 15'6"; dph. 3'10"; cpl. 45; a. 1 12-pdr., 2 6-pdrs.)

Jersey, a gondola, was built at Skenesborough, N.Y., in the summer of 1776 for service with the Continental Army on Lake Champlain. Commanded by Captain Grimes, she joined Brigadier General Benedict Arnold's fleet 6 September and fought in the Battle of Valcour Island 11 through 13 October. During the battle she was abandoned at Schuyler's Island, recovered by the British, and taken into their fleet.

This fleet action delayed the British advance from Canada and gained for the United States invaluable time to strengthen their forces before the Battle of Saratoga a year later. The momentous American victory at Saratoga has been called the turning point of the war since it prompted France to enter the contest bringing her powerful fleet which made possible Washington's ultimate triumph at Yorktown.

Jessamine

Former name retained.

I

(Tender: dp. 257; l. 156'; b. 24'; dr. 7'3"; cpl. 22)

The first *Jessamine*, an iron lighthouse tender, entered the service 24 September 1881 and came under Naval jurisdiction with the entire Lighthouse Service 11 April 1917, R. A. Brooks, Master. Throughout the war she continued her regular duties servicing lighthouses and navigational aids of other types out of her home port of Baltimore. She was returned to the Commerce Department 1 July 1919.

II

(Sp-438: t. 57; l. 90'3"; b. 14'; dr. 5'; s. 13 k.)

The second *Jessamine* (Sp-438), a yacht, was built in 1907 by J. M. Bayles & Son, Port Jefferson, N.Y., and purchased by the Navy from her owner, S. O. Richardson, of Toledo, Ohio, in June 1917. She commissioned 19 June 1917, Ens. C. H. Hull, USNRF, in command.

Jessamine was based at Detroit during her naval service. She patrolled the St. Clair River, Lake St. Clair, and Detroit harbor, guarding channels and regulating traffic. She was transferred to the Coast Guard 2 December 1919.

Jesse Rutherford

Jesse Rutherford, Jr., was born 12 January 1922 in Salmon, Idaho, and enlisted in the Marine Corps 14 July 1941. After undergoing basic training at San Diego, he

reported to carrier *Lexington* 8 November 1941. Private Rutherford was on board during the pivotal Battle of the Coral Sea, in which the Navy turned back the Japanese thrust toward Port Moresby and Australia. In this first great carrier action, during which neither force cited the other, American planes sank one Japanese carrier and damaged another; but, near the end of the battle, 8 May, *Lexington* was hit by two bombs and two torpedoes. Rutherford, a fuse setter in a gun mount, was seriously injured in the attack; but he remained at his post. In the language of his citation, "although mortally wounded by the fragments of a bursting bomb, he displayed outstanding courage and a loyal determination to keep his gun in action despite his injured condition, and valiantly remained at his station setting fuses until he collapsed on the deck." The stricken "Lady Lex" was finally sunk by friendly ships, and Private Rutherford was posthumously awarded the Navy Cross for his heroism.

(DE-347: dp. 1,350; l. 306'; b. 36'8"; dr. 9'5"; s. 24 k.; cpl. 186; a. 2 5", 4 40mm., 10 20mm., 32 11" tt., 2 dct., 8 dep., 1 dep. (h.h.), 3 21" tt.; cl. *John C. Butler*)

Jesse Rutherford (DE-347) was laid down by Consolidated Steel Corp., Orange, Tex., 22 November 1943; launched 29 January 1944; sponsored by Mrs. Mary Rutherford, mother of Private Rutherford; and commissioned 31 May 1944, Lt. Comdr. B. M. Henry in command.

Jesse Rutherford departed Galveston 7 July for shake-down training in waters off Bermuda, after which she arrived Boston 13 August to prepare for arduous Atlantic convoy duty. She engaged in more underway training off the East Coast, however, before sailing from Norfolk 20 September with her first convoy. The transports arrived Naples 4 October, and *Jesse Rutherford* returned to New York 24 October.

At New York the destroyer escort received the newest in equipment and armament in preparation for the Pacific war, then about to enter its final stages. She sailed 10 November with Escort Division 76, bound for the Panama Canal, the Galapagos Islands, and eventually the Society Islands. *Jesse Rutherford* arrived Bora Bora 5 December and departed the next day for the great American staging base on Manus Island. From there the ship was assigned to escort convoys from Hollandia to Leyte Gulf in support of the Allied campaign to recapture the Philippines. In the months that followed *Jesse Rutherford* made nine voyages to Leyte, and in March 1945 she steamed to Lingayen Gulf as well. Arriving Biak after another escort voyage 30 May, she formed a group of LST's into a convoy and departed for Manila. Off Mindoro, however, the destroyer escort encountered a merchantman in distress and drifting onto the beach. Displaying skillful seamanship, *Jesse Rutherford* took the freighter in tow and held her off the beach until a tug could relieve her next day. She arrived Subic Bay 8 June.

Additional convoy duty in the Philippines occupied *Jesse Rutherford* until July. She departed Morotai 12 July with amphibious craft to reinforce the allied landing at Balikpapan, Borneo, remaining there until 22 July. The ship then sailed back to Leyte in convoy, and patrolled San Bernadino Strait until war's end. *Jesse Rutherford* escorted a group of LCT's to Okinawa, arriving 15 September, after which she returned to the Philippines for patrol duty.

The veteran destroyer escort embarked returning veterans at Samar 28 November and sailed that afternoon for San Diego, where she decommissioned 21 June 1946. *Jesse Rutherford* was placed in the Pacific Reserve Fleet at Bremerton, Washington, where she remains.

Jesse Rutherford received one battle star for World War II service.

Jet

That which spurts out; a gushing flow.

(PYc-20: dp. 386; l. 160'; b. 24'6"; s. 15 k.; a. 1 3")

Jet (PYc-20), formerly *Thalia*, was launched in 1930 by the Defoe Boat & Motor Works, Bay City, Mich.; acquired by the Navy 27 January 1942 and converted to a coastal patrol yacht; and commissioned 4 April 1942, Lt. D. C. Paul in command.

After fitting out, *Jet* departed Miami 17 April for duty with the Pacific Fleet, arriving San Diego 9 May. After repairs at San Diego, she arrived Pearl Harbor 29 June for patrol duty. *Jet* continued her patrol duties until 3 June 1943 when she began a series of escort voyages between Hawaii and Midway Island. During January 1944 she served as a weather station ship before resuming patrol and escort duties. She arrived Midway Island 6 January 1945 and remained on station until 7 May when she returned to Pearl Harbor. *Jet* participated with *Thresher* (SS-200) in a submarine exercise in late May and then commenced local operations out of Hawaii. She departed Pearl Harbor 11 July, arriving San Francisco the 25th, and decommissioned there 27 August 1945. She was returned to the Maritime Commission 20 September 1947.

Jewell

An island in Casco Bay, Maine.

(YFB-22: l. 65'; b. 13'; dr. 4')

Jewell (YFB-22), a steel ferry-launch, was launched 11 May 1942 by Shain Manufacturing Co., Seattle, Wash., and delivered to the Navy at Puget Sound Shipyard 18 August 1942. Assigned to the 13th Naval District, she was taken to Section Base, Kodiak, Alaska, and placed in service there 4 September 1942.

Jewell served as a ferry at Kodiak until sometime in 1943, when she returned to Puget Sound and was converted to an ammunition carrier. In 1946 the craft was assigned to the 13th Naval District in an "Out-of-Service, in Reserve" status, and was finally sold to a private purchaser 5 May 1950.

Jicarilla

A group of the Apache tribe found in the southwestern United States.

(ATF-104: dp. 1,240; l. 205'; b. 38'6"; dr. 15'4"; s. 16 k.; cpl. 85; a. 1 3", 2 40mm.; cl. *Cherokee*)

Jicarilla (ATF-104) was laid down as AF-104 by Charleston Shipbuilding & Dry Dock Co., Charleston, S.C., 25 August 1943; launched 25 February 1944; sponsored by Mrs. R. L. Harley; reclassified ATF-104 on 15 May 1944; and commissioned at Charleston Navy Yard 26 June 1944, Lt. Comdr. W. B. Coats in command.

Following shakedown training in Chesapeake Bay, *Jicarilla* departed New York towing barges 9 August 1944, bound for San Francisco via the Panama Canal. She arrived 22 September, but sailed again seven days later towing ARD-27 to Pearl Harbor. The tug remained in Hawaiian waters until November doing salvage and towing work, including the difficult task of pulling SS *Antigua* off a reef 14-21 October. Departing Pearl Harbor 7 November, she towed barges of supplies to advance bases at Eniwetok and Ulithi, arriving the latter island 3 December.

With the campaign to recapture the Philippines well underway, *Jicarilla* sailed 10 December as part of the refueling group for Task Force 38, the fast carrier group then supporting the Philippines operation. Refueling began early 17 December but had to be broken off as weather worsened. Anxious to top off his destroyers and support the Mindoro operation, Admiral Halsey continued attempts to refuel until the next morning, when *Jicarilla* and the rest of the fueling group turned south. The fleet tug rode out the typhoon and returned to Ulithi 22 December, but the great storm sank three gallant destroyers, two of them from *Jicarilla's* group. Undaunted, the fast carrier force resumed its punishing attacks on the Philippines.

Jicarilla arrived Leyte 7 January to support the next amphibious operation at Lingayen Gulf. She sailed 9 January with a convoy of LCI's and LST's; despite numerous air attacks by the Japanese, she arrived Mangarin Bay 2 days later. The tug remained there until 22 January performing salvage and firefighting duties on the many damaged and beached landing craft. She arrived Ulithi 27 January. After towing voyages between Ulithi and the Marianas, *Jicarilla* sailed from Ulithi 9 April pulling a much-needed floating drydock to Okinawa.

The veteran tug arrived Kerama Retto, repair base for the Okinawa operation, 16 April, and remained there to perform salvage work on ships damaged in the desperate kamikaze attacks. She sailed 20 April with *Idaho*, arrived Guam 25 April, and from there returned to Ulithi 30 April. After towing work at the advance base, she sailed for Leyte 19 May and arrived Okinawa again 13 June. As the struggle for the island continued, she worked directly off the Hagushi beaches, towing landing craft and performing salvage work. Thus, she contributed importantly to the eventual victory by helping to keep the massive fleet afloat and operating.

Jicarilla remained at Okinawa until departing for Wakayama, Japan, 21 September. Four days later she arrived, and performed towing duties in connection with the occupation operations until returning to Okinawa 14 October. After a voyage to Guam, the ship steamed to Iwo Jima 4 December to salvage *ARL-32*. In the months that followed, she was engaged in towing and salvage in the Marshalls and Carolines, arriving Pearl Harbor 24 April 1946.

Jicarilla spent the summer of 1946 in the Marshall Islands in support of Operation Crossroads, the history-making atomic test series in the Pacific. Returning to the United States 14 September, she performed towing duties on the West Coast and at the Canal Zone until 23 January 1947, when she sailed again for the Far East from Bremerton, Wash. The ship operated out of Pearl Harbor until May, sailing on the 14th to Guam. *Jicarilla* arrived Tsingtao, China, 17 June for towing and salvage work in connection with the American marines ashore. In the months that followed, she continued to steam between American Pacific bases and China. After a month at Pearl Harbor, she returned to Long Beach 18 February 1948.

The ocean tug conducted operations on the Pacific coast and out of Pearl Harbor until arriving Yokosuka 25 January 1949. She again supported the American effort to bring peace and security to China and the Far East, before returning to Long Beach 19 August 1949. After additional towing on the West Coast, she decommissioned at San Diego 14 June 1950 and entered the Pacific Reserve Fleet. In August 1962 she was transferred to the Maritime Administration, and at present is berthed with the National Defense Reserve Fleet, Suisun Bay, Calif.

Jicarilla received two battle stars for World War II service.

Jimetta

A former name retained.

(SP-878: t. 32; l. 65'; b. 14'; dr. 4'; s. 10 k.; a. 1 3-pdr.; 1 1-pdr.)

Jimetta (SP-878), formerly *Frances II*, a motor yacht, was built in 1915 by New York Yacht, Launch, & Engine Co., and acquired by the Navy 16 July 1917 from her owner, Clement Studebaker, Jr., of South Bend, Ind. She commissioned at the New York Navy Yard 11 September 1917, Chief Boatswain's Mate H. A. Holland, USNRF, in command.

Jimetta was assigned to the 3d Naval District, and performed patrol and dispatch work in Long Island Sound during her naval service. She decommissioned and was returned to her owner 11 December 1918.

Jinia III, see YP-541

Joanna

A former name retained.

(SP-1963: dp. 5; l. 40'; b. 8'6"; dr. 3'; s. 30 k.)

Joanna (SP-1963), a motor boat, was built in 1917 by Albany Boat Corp., Watervliet, N.Y., and purchased by the Navy from her owner, Martin A. Metzner. Taken over 9 December 1917, the boat served in the 3d Naval District during World War I and was stricken from the Navy List in 1920.

Jobb

Richard Patrick Jobb, born in McCormick, Wash., 17 March 1920, enlisted in the Navy 28 February 1942. He was at Guadalcanal for America's first amphibious operation of the Pacific War. Hearing a call of a patrol subjected to enemy fire near the Namara River 26 January 1943, Pharmacist's Mate Third Class Jobb rushed forward 150 yards through intense enemy fire to aid the wounded. He continued to dress casualties under fire until he was himself hit and killed. For his courageous devotion to duty Jobb was posthumously awarded the Silver Star.

(DE-707: dp. 1,450; l. 306'; b. 36'10"; dr. 9'8"; s. 24 k.; cpl. 186; a. 2 5", 4 40mm., 10 20mm., 3 21" tt., 2 det., 8 dcp., 1 dcp. (h.h.); cl. *Rudderow*)

Jobb (DE-707) was laid down by Defoe Shipbuilding Co., Bay City, Mich., 20 December 1943; launched 4 March 1944; sponsored by Mrs. S. L. Jobb, mother of Pharmacist's Mate Third Class Jobb; and commissioned at New Orleans 4 July 1944, Lt. Comdr. Herbert M. Jones in command.

Following her shakedown training off Bermuda, *Jobb* was assigned to a hunter-killer patrol group in the Atlantic. A hurricane forced her back to Norfolk 13-15 September, after which she steamed to New York to prepare for Pacific service. *Jobb* sailed 23 October and proceeded via the Panama Canal and Bora Bora to Humboldt Bay, New Guinea 21 November. With the invasion of the Philippines then underway, *Jobb* escorted a convoy to Leyte Gulf 28 November. She remained at Leyte until 12 December, when she screened a slow tow convoy for Mindoro. Next day Japanese snoopers appeared, followed by bombers. In the raids of the next few days, *Jobb's* gunners shot down at least two of the attackers. After seeing the tows safely to Mindoro, she next sailed via Leyte to New Guinea, where she arrived Hollandia 28 December.

The ship joined a convoy for newly assaulted Lingayen Gulf 8 January 1945; but, after striking a reef in the Philippines 16 January, she returned to Leyte Gulf for repairs. Following further work on her propellers at Manus, *Jobb* returned to the Philippines in February to escort convoys carrying troops and supplies. During these critical months, she protected support convoys to Palawan, Mindoro, and Mindanao as the conquest of the Philippines proceeded apace.

Jobb departed Morotai 4 June to take part in the landings at Brunei Bay, Borneo. She patrolled as troops went ashore 10 June and captured the strategic Bay without opposition. Later in the month, she screened a resupply convoy from Morotai. She arrived Leyte 8 July for repairs before conducting antisubmarine patrol between the Philippines and Ulithi until the close of hostilities.

The veteran ship steamed to Okinawa 23 August and in the months that followed operated between the various island bases in support of the occupation and reorganization of the Pacific area. *Jobb* arrived Pearl Harbor 31 December and reached San Francisco 9 January 1946. She later moved to San Diego, decommissioned 13 May

1946, and entered the Pacific Reserve Fleet. At present she is berthed at Stockton, Calif.

Jobb received three battle stars for World War II service.

Jodaro, see YP-611

John A. Bole

John Archibald Bole, Jr., was born in Elmhurst, N.Y., 28 March 1906 and graduated from the Naval Academy in 1928. After serving in *Tennessee*, he underwent submarine training. Bole subsequently served in a succession of submarines, taking command of *S-21* in June 1940. Appointed Lieutenant Commander 2 January 1942, he became the commanding officer of *Amberjack* (SS-219) upon her commissioning in July 1942. After two offensive patrols in the Solomons, the submarine departed Brisbane 26 January 1943 to prowl the shipping lanes around Rabaul. She sank a freighter 4 February and was last heard from 10 days later. Japanese records indicate *Amberjack* was probably sunk in an attack 16 February 1943. Lt. Comdr. Bole was awarded the Navy Cross for his outstanding performance as her commander.

John A. Bole (DD-783) was renamed *Gurke* (q.v.) 15 June 1944 prior to being launched 15 February 1945.

I

(DD-755: dp. 2,200; l. 376'5"; b. 41'1"; dr. 15'8"; s. 34 k.; cpl. 336; a. 6 5", 11 20mm., 10 21" tt., 6 dep. 2 dct.; cl. *Allen M. Sumner*)

John A. Bole (DD-755), a name originally assigned to DD-783, was laid down 20 May 1944 by Bethlehem Steel Co., Staten Island, N.Y.; launched 1 November 1944; sponsored by Mrs. John A. Bole, Jr., widow of Lt. Comdr. Bole; and commissioned 3 March 1945, Comdr. E. B. Billingsley in command.

Following shakedown training out of Guantanamo Bay, Cuba, *John A. Bole* escorted damaged carrier *Franklin* (CV-13) north to New York, arriving 24 April 1945. After moving to Boston to join *Saint Paul* (CA-73), she sailed 15 May for the Pacific during the final push in the war against Japan. Steaming via the Panama Canal, she arrived Pearl Harbor 7 June 1945. The ship joined a carrier group in Hawaiian waters; took part in the air strike on Wake Island 20 June; and escorted a carrier to Eniwetok, arriving 21 June.

John A. Bole arrived Okinawa 29 June for picket and patrol duty; and, although ground fighting had virtually ceased, weeks of intermittent air raids and dangerous picket duty were still in store for the fleet. The ship remained off Okinawa until the Japanese acceptance of surrender terms 15 August, then departed for the East China and Yellow Seas to support the occupation and to take part in minesweeping operations. *John A. Bole* joined a cruiser-destroyer force 8 September off Jinsen, Korea, to cover the landings of troops at that important port. She remained until 25 September, and arrived 3 days later at Saishu To, south of the Korean Peninsula, to accept the surrender of the island and demilitarize it.

The veteran destroyer remained in the Far East after the end of the war to carry mail and passengers between Japan, Korea, and Chinese ports, supporting the efforts of American marines to protect Allied lives and stabilize the Chinese situation. While at Tsingtao 20 February 1946, upon receiving a distress signal from a sinking merchantmen, she succeeded in rescuing 13 survivors. *John A. Bole* departed 5 March for San Francisco and, after stopping at Guam and Pearl Harbor, arrived 27 March 1946.

Following a long repair period to prepare her for peacetime service, the destroyer arrived San Diego 10 April 1947 to begin a regular schedule of training maneuvers and cruises for Naval Reservists. She continued to operate on the West Coast, with occasional visits to Hawaii, through 1949.

With the outbreak of the Korean War in June 1950, *John A. Bole* began intensive preparations for combat service. Sailing from San Diego 30 September, she steamed via Japan to join Task Force 77 off the Korean coast. With the brilliant amphibious assault on Inchon 15 September, an end run made possible by control of the sea, the tide of the ground war rapidly reversed. The nearly victorious enemy armies far to the south collapsed. *John A. Bole*, exemplifying the flexibility of seapower promptly shifted from amphibious attack to fire support of our advancing troops. She then screened carriers during the vital air operations, helping to support both battle-line air strikes and interdiction of northern supply lines. *John A. Bole* also steamed with support convoys into Inchon before returning to San Diego in mid-June 1951.

The veteran ship was underway again for Korea 3 January 1952. Upon arrival she helped maintain the pressure on Communist troops in the stalemated land war by screening carriers during air attacks. *John A. Bole* also took part in shore bombardment along both the east and west coasts of North Korea, operating with British and Dutch ships. The ship moved to the Formosa Straits for patrol duty designed to deter Chinese Communist aggression there, finally returning to San Diego 11 July 1952.

Following a yard period in which she added 3-inch rapid fire guns to her armament, *John A. Bole* departed 21 February 1953 for her third Korean tour. During March she operated off the coast with cruiser *Saint Paul*, and sailed 10 April for the Formosa Straits to resume patrol duty. Then after returning to Korean waters, the destroyer sailed 1 June to Wonsan harbor for 6 days dueling with shore batteries while protecting the Allied-held offshore islands. She then screened battleship *New Jersey* (BB-62) before the Korean armistice 27 July 1953, after which she returned to Japan. Escort duty with *Princeton* (CV-23) closed her cruise, and *John A. Bole* arrived San Diego 22 September 1953.

The veteran ship returned to the Far East again in 1954, taking part in the continuing Formosa Patrol and in amphibious training exercises. She sailed from San Diego 20 April and returned 17 October, adding carrier operations in the South China Sea and antisubmarine warfare exercises off Okinawa to her busy schedule. In 1955 and again in 1956 she spent 6 month periods in these familiar waters, training and showing graphically the value of seapower to the security of the United States and her allies.

John A. Bole sailed 29 July 1957 for the Western Pacific, this time visiting Pago Pago; Auckland, New Zealand; and Manus en route to Japan. She took part in carrier operations with *Bon Homme Richard* (CV-31) and in December again steamed Formosa Strait. The ship returned to San Diego 8 January 1958 and took part in exercises off California until July. *John A. Bole* again sailed westward 23 August 1958, this time amid mounting chaos from revolt in Indonesia and growing trouble in southeast Asia. She operated in the Philippines and on Formosa Patrol, helping to stabilize affairs in this strategic region, returning to San Diego 16 February 1959.

The destroyer made still another cruise to the Far East 1959-60, sailing 30 October. She operated with the 7th Fleet's hunter-killer force off Okinawa during November and December, arriving Formosa 4 January 1960 for patrol duty. She returned to San Diego 12 March 1960. In June *John A. Bole* served as a air-sea rescue station ship for President Eisenhower's flight across the Pacific, and during the summer she embarked NROTC Midshipman for training. In October she was assigned to a hunter-killer group built around veteran carrier *Kearsarge* (CV-33); and, after training, departed 4 March 1961 for the Far East. The ships carried out further training, this time with Canadian ships out of Pearl Harbor, but, with a worsening of the Laos situation, steamed to Subic Bay to bolster Navy strength and deter more serious trouble. Hunter-killer operations continued until September, and *John A. Bole* returned to California via the north-

ern great-circle route to help gather hydrographic data, arriving her home port 18 September.

John A. Bole entered San Francisco Naval Shipyard in late 1961 to undergo a major Fleet-Rehabilitation-and-Modernization overhaul, designed to equip her with the latest equipment and lengthen her active service life several years. Emerging in July 1962, she took part in training operations for the remainder of the year, interrupted by several weeks of alert at sea during the Cuban Missile Crisis in October. During the first few months of 1963, she operated out of San Diego, sailing 1 April 1963 for Pearl Harbor and the Western Pacific. This cruise helped to maintain the vital American presence in the Far East, and she returned to San Diego 3 December 1963. In the first half of 1964 she was engaged in antisubmarine operations, including tests of her new DASIL. *John A. Bole* sailed 23 October 1964 for the Western Pacific with a group composed of *Yorktown* (CV-10) and other destroyers. After maneuvers in Hawaiian waters, she reported to Commander 7th Fleet 2 January 1965 to resume peace-keeping operations in the troubled region. During the deployment *John A. Bole* operated with a carrier task group and an ASW hunter-killer group, then patrolled Taiwan Straits. From 9 to 25 February she operated off Vietnam.

Returning to San Diego 24 May, the destroyer entered Hunter's Point Naval Shipyard late in June for overhaul and stayed there through the remaining summer. She operated out of San Diego until sailing 22 March 1966 for the Far East. On 18 April she began naval gunfire support duties off Vietnam which continued until she began plane guard patrol at Yankee Station 4 May. On the 8th the destroyer sailed to Japan for repairs but was back at Yankee Station on the 25th. But for brief runs to Hong Kong and Subic, *John A. Bole* remained in the war zone until 27 July when she headed for Taiwan. She visited Malasia before heading home via Subic Bay, Guam, and Pearl Harbor, arriving San Diego 24 September. She operated out of home port for the remainder of the year and in 1967 prepared for future action.

John A. Bole received one battle star for World War II service and seven for Korean service.

John A. Logan, see *Abnitha* (AK-127)

John Adams

John Adams, born in Braintree, Mass., 19 October 1735, graduated from Harvard in 1755. He studied law while teaching school for the next 3 years and was admitted to the bar in 1758. His opposition to the Stamp Act in 1765 established Adams as a political leader. After moving to Boston he served in the Massachusetts House of Representatives and later in the Provincial Congress.

In 1774 Adams was selected as one of the delegates from Massachusetts to the first Continental Congress where he became a champion of American rights and liberties and later a leader in the independence movement. He seconded Richard Henry Lee's motion for a resolution of independence 7 June 1776, and he served on the committee which drafted the Declaration of Independence which was adopted 4 July.

On 5 October 1775, Congress created the first of a series of committees to study naval matters. From that time onward throughout his career Adams championed the establishment and strengthening of an American Navy. He was so active and effective in forwarding the nation's naval interests that he is often called the father of the Navy.

Adams succeeded Silas Deane as commissioner to France in 1777 to begin a decade of diplomatic service in Europe only briefly interrupted in 1779 when he returned to Massachusetts to play a leading role in the state constitutional convention.

John Adams was the first Vice President of the United States serving under Washington from 1789 to 1797 when

he became the second President. Difficulties with France during his administration prompted him to push vigorously for construction of the Navy which had been neglected after the treaty of Paris.

Defeated for reelection in 1800, John Adams retired from public life to Quincy, Mass., where he died 4 July 1826, coincidentally both the 50th anniversary of the adoption of the Declaration of Independence and the day of Thomas Jefferson's death.

John Quincy Adams, the eldest son of President John Adams, was born 1 July 1767 at Quincy, Mass. His travel in Europe accompanying his father on diplomatic missions gave him a broad knowledge of diplomacy. Washington appointed him Minister to the Netherlands in 1794, and his father sent him to Prussia, where he represented the United States from 1797 to 1801. He served in the U.S. Senate from 1803 to 1808, and the following year he became Minister to Russia. In 1814 he was one of the American diplomats whose negotiations with the English led to the Treaty of Ghent, which settled the War of 1812. Service after the war as Minister to England rounded out his diplomatic training.

James Monroe appointed him Secretary of State, and he won enduring fame in the post. The Monroe Doctrine was the crowning achievement of the 8 years of skillful service in the office establishing the position of the United States as a power capable of dealing with other nations as equals.

In 1824, after an inconclusive general election, the House of Representatives elected him sixth President of the United States. After serving one term, his try for reelection was defeated by Andrew Jackson. Two years after his return to Quincy, he was elected to Congress, where he enjoyed widespread respect for his great knowledge and his high-minded opposition to any extension of slavery. While on the floor of the House, he was seized by a stroke 21 February 1848 and died shortly afterwards.

The first *John Adams* was named for the second President of the United States while the second *John Adams* (SSB(N)-625) was named for both him and his son, John Quincy Adams.

I

(Fr: t. 544; l. 139' (b.p.); b. 32'; dph. 16'4''; cpl. 220; a. 24 12-pdrs., 6 24-pdrs.)

The first *John Adams* was built for the United States by the people of Charleston, S.C., under contract to Paul Prichard and launched in the latter's shipyard some 3 miles from Charleston 5 June 1799. The new frigate, Captain George Cross in command, sailed on or about 1 October for Cayenne, French Guiana, to operate against French privateers based at that port. Before she arrived Cayenne, the British had captured Surinam making the French base in Guiana unsafe for privateers and prompting Captain Cross to sail on to Guadeloupe to join her squadron.

Early in January 1800, she began her effective operations against the French taking an unidentified lugger off San Juan, P.R., and recapturing brig *Dolphin*. She retook brigs *Hannibal* 22 March and *Atlantic* the next day, both prizes of French privateer *Le President Tout*. French privateer schooner *La Jason* surrendered to her 3 April, and in May she retook schooners *Dispatch* and *William*. Sometime in the late spring or summer she recaptured American brig *Olive*, and on 13 June she took French schooner *Decade*.

These victories punctuated and highlighted the invaluable, but less glamorous, day-to-day duty of patrolling the West Indies and protecting American shipping continued through the late summer and fall.

John Adams was dispatched to the United States 5 December escorting a convoy. She was placed in ordinary in Charleston in mid-January 1801, and in late June she sailed to Washington where she was laid up. The remarkable success of the frigate was representative of the new Navy which her namesake, President John Adams, had called into being to protect the growing and vital commerce of the young nation.

As the "quasi-war" with France drew to a close, President Adams could report on the Navy to Congress with pride: "The present Navy of the United States, called suddenly into existence by a great national emergency, has raised us in our own esteem; and by the protection afforded to our commerce has effected to the extent of our expectations the objects for which it was created."

Peace with France freed the Navy for operations against Barbary corsairs who had been preying on American shipping in the Mediterranean. A small squadron under Commodore Dale, sent out in 1801 for operations against Tripoli, was followed in 1802 by a much stronger force under Commodore Richard V. Morris. *John Adams* commanded by Captain John Rodgers, sailed from Hampton Roads 22 October to join Commodore Morris. After escort duty from Gibraltar to Malaga and Minorca, she finally caught up with Commodore Morris at Malta 5 January 1803. She operated with the squadron until 3 May when she received orders to cruise independently off Tripoli. Upon arriving off Tripoli, *John Adams* boldly attacked the forts and the gunboats anchored under their protection. Several days later she captured 20-gun Tripolitan cruiser *Meshouda*. Reinforced by *New York*, and *Enterprise*, she engaged a flotilla of enemy gunboats off Tripoli 22 May sending them scurrying back into the harbor to safety. Five days later—with the added support of *Adams*, a sister frigate also named for President John Adams—the squadron again bested a group of pirate gunboats.

One of the most important victories of the war came 21 June when *John Adams* and *Enterprise* captured a 22-gun vessel belonging to Tripoli thus weakening that state sufficiently to allow the squadron to turn its attention to Tunis, Algiers, and Morocco, which were threatening U.S. commerce in the Western Mediterranean. Throughout the summer and early fall *John Adams* operated in that quarter before returning home with *New York*.

Meanwhile, Commodore Edward Preble, who had led a powerful fleet to the Mediterranean, vigorously pressed the fight. In August and September 1804 he made a series of major attacks on Tripoli. As the second of these blows was being delivered 7 August, *John Adams*, now under Captain Isaac Chauncey, arrived on the scene deeply laden with stores. Her boats participated in a reconnaissance patrol on the night of 18 August, and 6 days later she slipped in close to the city for an intensive 4-hour bombardment. Two nights later during a similar attack, an enemy shot sank one of *John Adams*' boats, killing three men and wounding a fourth, as the American Squadron severely punished Tripoli with over 700 well-directed rounds which took effect within the city. After a fifth attack had been successfully completed 3 September, bad weather interrupted operations and *John Adams* sailed to Syracuse with other ships of the squadron.

Three months later she sailed for New York with Commodore Preble, arriving 26 February 1805. After a third Mediterranean cruise from May to November, she was laid up in ordinary.

The outbreak of the War of 1812 found her undergoing repairs at Boston whence she was hurried to New York to have the work completed. There the British blockade and a critical shortage of seamen kept her in a laid-up status until early 1814. She finally sailed under a flag of truce carrying peace commissioners Henry Clay and Jonathan Russell to Europe and arrived Wargo Island, Norway, 14 April. She returned to the United States 5 September bringing dispatches from the American commissioners at Ghent.

Meanwhile, the Barbary pirates, taking advantage of the American Navy's preoccupation with the British fleet during the War of 1812, had resumed operations against American merchantmen in the Mediterranean. Fortunately the treaty of peace signed on Christmas Eve 1814 freed United States men-of-war for renewed attention to this chronic trouble spot. In the autumn of 1815 *John Adams* arrived in the Mediterranean to assist frigates *United States* and *Constellation* and sloops *Eric* and *Ontario* in maintaining peace and order in the area after

strong squadrons under Commodores Decatur and Bainbridge had induced the Barbary princes to honor their treaty commitments. Early in 1816 she returned home with dispatches.

Pirates were also active in the West Indies at this time. Taking advantage of the chaos attendant upon the dissolution of Spain's American empire, lawless vessels from many nations preyed on neutral as well as Spanish commerce in the Caribbean, the Gulf of Mexico, and along the storied Spanish Main. For the next few years *John Adams* was busy fighting buccaneers. On 22 December 1817 she demanded and received the surrender of Amelia Island, off the east coast of Florida, the base from which corsairs of Commodore Aury pounced upon merchantmen of all nations.

Diplomacy also had an important role in this struggle to make the sea safe for American shipping. In the spring of 1819 Secretary of the Navy Smith Thompson selected Commodore Oliver Hazard Perry for the delicate mission of establishing friendly relations with the government of newly independent Venezuela and negotiating to obtain restitution for United States vessels which had been illegally captured during the revolution under the guise of patriotism. Perry boarded his flagship *John Adams* at Annapolis and sailed in company with schooner *Nonsuch* 7 June. A month later he reached the mouth of the Orinoco, which he ascended to Angostura in *Nonsuch* while *John Adams* sailed on to Trinidad to await his return at Port-of-Spain. After protracted negotiation, the government of Venezuela granted all the demands of the United States 11 August; but, during the passage down the river, Perry was stricken with yellow fever and died before he returned to his flagship. Commodore Charles Morris succeeded Perry in command of the squadron, and *John Adams* accompanied his flagship *Constellation* on a voyage to the Plata River to continue the negotiations inaugurated by Perry to establish friendly relations with the new Latin American republics and to protect American commerce from South American privateers. After visiting Montevideo and Buenos Aires, both ships returned to the United States, arriving Hampton Roads 24 April 1820.

In spite of these successes, piracy remained rampant in the West Indies, and *John Adams* was part of a strong West India Squadron created in 1822 to cope with the problem. Biddle's ships labored with indefatigable zeal; but the task, entailing careful searches by small-boat expeditions of innumerable bays, lagoons, and inlets, seemed endless. Yellow fever took a much heavier toll than the enemy necessitating reinforcements which arrived 3 March 1823 when Commodore Porter's "Mosquito Fleet" anchored off Saint Thomas. Porter, the squadron's new commander, selected *John Adams* as his flagship. When Porter was recalled, his successor, Commodore Lewis Warrington retained *John Adams* as his flagship until 1826. From time to time, thereafter, the proud frigate returned to the West Indies for operations against pirates until 1829 when she was laid up and almost entirely rebuilt at the Navy Yard, Gosport, Va.

Completely rejuvenated, she joined the Mediterranean Squadron in 1831. One of her first duties was to take her former commander, ex-Commodore Porter, to Constantinople where he became the U.S.'s first charge d'affaires. The ship was granted the rare privilege of passing through the Dardanelles with guns mounted. Thereafter, *John Adams* convoyed ships in the Mediterranean and in 1833 visited Liberia, being colonized with American Negroes.

After extensive repairs in the United States, she sailed from Hampton Roads 6 May 1838 on a cruise around the world accompanied by *Columbia*. Particular stress was placed upon showing the flag in the East Indies where the United States enjoyed a prosperous and growing trade. Both ships arrived Rio de Janeiro 10 July but departed separately, *John Adams* sailing 25 July. She stopped at Zanzibar en route to Bombay, where she rejoined *Columbia* before pushing on to Goa and Colombo, Ceylon.

At the latter port the ships learned that natives at Soo-Soo, Sumatra, had attacked American ship *Eclipse*. The squadron immediately sailed to the scene of the incident, and bombarded the forts at Quallah Battoo to induce the Rajahs of Sumatra to agree to offer assistance and protection to American vessels. Before returning to Rio de Janeiro 23 April 1840, the squadron called at Singapore, Macao, Honolulu, Valparaiso, and Cape Horn.

John Adams finally arrived Boston about the middle of June where she was laid up until 1842. After duty on the Brazil station, she went into ordinary where she remained until recommissioned at the beginning of the Mexican War. She was anchored off the bar at Santiago 8 May 1846 during the Battle of Palo Alto and she maintained a blockading station off the east coast of Mexico for the remainder of the war.

John Adams returned to Boston in September 1848 and received extensive repairs before joining the Africa station for action with the English Navy against the slave trade. She returned from this difficult duty in July 1853. Thereafter, with the exception of periods at home for repairs, *John Adams* operated in the Pacific and the Far East until after the outbreak of the Civil War. She sailed for home from Siam 6 July 1861 and reached New York 11 January 1862, bringing a box containing two royal letters from the King of Siam to the President along with a sword and a pair of elephant tusks.

John Adams was sent to Newport, R.I., the wartime location of the Naval Academy, to act as training ship for midshipmen. In the summer of 1863 she joined the South Atlantic Blockading Squadron and took station off Morris Island inside Charleston Bar, where she served as flagship of the inner blockade until she sailed into the harbor after the evacuation of Charleston in February 1865.

Late that summer she sailed to Boston where she decommissioned in September and was sold 5 October 1867.

II

(SSB(N)-625: dp. 7,250; l. 425'; b. 33'; dr. 31'5"; s. over 20 k.; cpl. 136; a. 16 Pol. mis.; cl. *Lafayette*)

The second *John Adams* (SSB(N)-625) was laid down by the Portsmouth Naval Shipyard, Portsmouth, N.H., 19 May 1961; launched 12 January 1963; sponsored by Mrs. Abigail Adams Manny, great, great, great granddaughter of John Quincy Adams; and commissioned 12 May 1964, Comdr. Paul Lando W. Zech, Jr. (blue crew) and Comdr. Paul J. Early (gold crew) in command.

After shakedown and training on the Atlantic Missile Range, *John Adams* departed Charleston, S.C., 3 November 1964 for duty with Submarine Squadron 14. Based at Holy Loch, Scotland, she began Polaris missile patrols. At present she continues classified patrols and serves as a unit of the mighty undersea deterrent force. Capable of unleashing a lethal attack against any potential enemy, she also serves the continuing task of "keeping the peace."

John Alexander

A former name retained.

(Sch: a. None)

John Alexander, a wooden schooner was purchased at Baltimore 13 August 1861 for use in the "Stone Fleet". She was later sunk to obstruct Southern ports.

John B., see YP-268

John B. Caddell, see YO-140

John B. Hinton

A former name retained.

(SP-485: t. 309; l. 160'; b. 23'9"; dr. 14'; s. 12 k.; a. 2 3'', 2 mg.)

John B. Hinton (SP-485), a steam fishing vessel, was built in 1912 by E. J. Tull, Pocomoke City, Md.; acquired from her owners, Seaboard Oil & Guano Co., Reedsville, Va., and commissioned 10 August 1917.

John B. Hinton sailed to France soon after commissioning and served as a minesweeper during and after World War I. She decommissioned 8 September 1919 at Brest, France, and was sold to the Union d'Entreprises Marocaine, Casablanca, French Morocco.

John Blish

John Blish was born in Seymour, Ind., 8 September 1860 and was appointed Cadet Midshipman 18 September 1875. From 1879 to 1901 he served the Navy both on the high seas and on various shore duty. On 5 October 1901 he was commissioned Lieutenant Commander; then served until he retired 6 July 1905.

John Blish was appointed Commander on the retired list 13 April 1911. During World War I he served in the 1st Naval District as assistant to the Commandant, and commanded the Naval Air Station at Squantum, Mass. Comdr. Blish was detached 29 October 1919. In addition to his exemplary naval career, he invented the "Blish sounding tube" and the Thompson submachine gun. John Blish died 22 December 1921.

(PCS-1457: dp. 245; l. 136'; b. 23'4"; dr. 8'7"; s. 14 k.; cpl. 58; a. 1 3'', 1 40mm., 4 20mm., 2 dcp., 2 dct.; cl. *PCS-1376*.)

PCS-1457 was laid down by Ballard Marine Railway Co., Seattle, Wash., 23 May 1943; launched 6 September; sponsored by Miss Patricia McQuire; and commissioned 26 February 1944.

After shakedown and training *PCS-1457* sailed to the war zone during the spring of 1944. Throughout the summer she provided support for U.S. operations in the Marianas, assisting in the major offensives on the strategic bases of Guam and Tinian. During November the subchaser performed hydrographic duties in the Pacific.

Her next major operation occurred in February 1945 when U.S. forces landed on Iwo Jima. *PCS-1457* provided hydrographic information for the massive fleet which appeared off this tiny volcanic island 19 February. She played an important role in the capture of this important air strip, then prepared for the assault on Okinawa.

PCS-1457 was reclassified AGS-10 on 20 March and 3 days later was named *John Blish*. Throughout the remaining months of World War II, *John Blish* supported Allied efforts in the Pacific and actively participated in the invasion of Okinawa. After the war she operated as a coastal survey ship and was reclassified AGSc-10 on 27 July 1946. For the next 2 years she remained off the West Coast performing hydrographic services. Sailing to New York during 1948, *John Blish* decommissioned there 26 August 1949. She was sold for scrapping to Boston Metals Co., Baltimore, Md., 10 February 1950.

PCS-1457 received four battle stars for World War II service.

John C. Butler

John Clarence Butler was born at Liberty, Ariz., 2 February 1921, and enlisted in the Naval Reserve 19 February 1941. He was appointed Aviation Cadet 3 April; and, after flight training, he reported to Bombing Squadron 3 on board carrier *Yorktown*. In the epochal Battle of Midway 4 June 1942, Butler and his squadron attacked a Japanese carrier group and despite heavy opposition succeeded in sinking three of the vital enemy flattops. His plane, however, did not return. For his part in this gallant attack, which did much to turn the tide of the Pacific war, Ens. Butler was awarded the Navy Cross posthumously. In part the citation noted: "His gallant intrepidity and loyal devotion to the accomplish-

ment of a vastly important objective contributed in large measure to the success achieved by our forces and were in keeping with the highest traditions of the United States Naval Service."

(DE-339: dp. 1,350; l. 306'; b. 36'8"; dr. 9'5"; s. 24 k.; cpl. 186; a. 2 5", 4 40mm., 10 20mm., 3 21" tt., 2 dct., 8 dep., 1 dep. (h.h.); cl. *John C. Butler*)

John C. Butler (DE-339) was laid down by Consolidated Steel Corp., Ltd., Orange, Tex., 5 October 1943; launched 12 November 1943; sponsored by Mrs. Walter C. Butler, mother of Ensign Butler; and commissioned 31 March 1944, Lt. Comdr. J. E. Pace, in command.

The new destroyer escort conducted shakedown training off Bermuda before departing Hampton Roads 5 June 1944 for the Pacific. Sailing via the Panama Canal, she arrived Pearl Harbor 26 June and engaged in convoy and training operations during July. *John C. Butler* then departed Pearl Harbor 9 August screening transports bound for the invasion of the Palaus. After seeing them safely to Tulagi, the ship operated with escort carriers out of Manus on preinvasion strikes. Two islands wanted as advance bases for the long-awaited move into the Philippines, Morotai and Peliliu, were stormed 15 September; and *John C. Butler* provided antisubmarine and anti-aircraft protection for the supporting carriers. Returning to Manus 30 September, she replenished in preparation for the Leyte operation in October.

The escort vessel sailed with Rear Admiral Oftsie's escort carrier group 12 October to provide air cover for the massive movement of transports into Leyte Gulf. After the initial landings, the three carrier groups, soon to become famous by their radio code names, "Taffy 1," "Taffy 2," and "Taffy 3," took station east of the Philippines to lend close air support.

The Japanese fleet was closing the Philippines in a last attempt to annihilate the invasion force, with heavy ships designated to break into Leyte Gulf from north and south, and a diversionary fleet of carriers to draw Halsey off to the North. In the first two actions of the massive Battle for Leyte Gulf which ensued, the Battles of Sibuyan Sea and Surigao Strait, the Japanese were badly mauled. But Admiral Kurita's Center Force still transited San Bernardino Strait the night of 24-25 October and just after sunrise bore down on the relatively unprotected "Taffy 3," including *John C. Butler*.

The 2-hour battle off Samar which followed has taken a rightful place among the most memorable actions in naval history. The slow escort carriers launched all planes to attack the Japanese cruisers and battleships, and *John C. Butler* and her sisters laid heavy smoke to confuse enemy batteries. A rain squall provided cover for a turn to the south, and just after 0730 the destroyers began their gallant torpedo attacks against great odds. *Johnston*, *Hoel*, *Heermann*, and escort *Samuel B. Roberts* made close-in attacks on cruisers and battleships, forcing them to zig-zag, while aircraft made continuous attacks. Soon after this first attack, *John C. Butler* turned from the carriers to launch her remaining torpedoes, then exchanged gunfire with a heavy cruiser. The destroyer escort continued to fire and dodge heavy-caliber fire until dangerously low on ammunition, then returned to the carrier formation to provide smoke coverage. Admiral C. A. F. Sprague, commander of Taffy 3, later described the next surprising development: "At 0925 my mind was occupied with dodging torpedoes when near the bridge I heard one of the signalmen yell, '... dammit, boys, they're getting away!' I could not believe my eyes, but it looked as if the whole Japanese fleet was indeed retiring. . . . At best, I had expected to be swimming by this time." The Japanese, damaged and fearing heavier air attack, had indeed reversed course. Though the escort carriers lost two of their number and three escorts, their valiant fight had stopped the Japanese from attacking the transports in Leyte Gulf.

After rescuing survivors from *St. Lo*, *John C. Butler* escorted the surviving carriers of "Taffy 3" via Manus

to Pearl Harbor, then returned to Manus 17 December. Departing with escort carriers 31 December, she protected amphibious transports steaming to the invasion of Luzon. During the voyage through the South China Sea, the ships encountered and drove off determined kamikaze attacks. On the evening of 8 January 1945, *John C. Butler* and other escorts splashed several kamikazes. She operated off Lingayen Gulf from 9 to 17 January and screened carriers during massive strikes in support of ground operations. Departing the Luzon coast, she arrived Ulithi 23 January to prepare for the next important amphibious landing—Iwo Jima.

The veteran destroyer escort took part in rehearsals in the Marianas, and arrived off Iwo 19 February with an escort carrier group. She again fought off a severe air attack 21 February. She remained on duty off Iwo Jima until 9 March 1945, when she sailed for Ulithi, having helped to win another important island air base for the eventual attack on Japan.

Okinawa was to be the site of the last and largest of the Pacific amphibious assaults. *John C. Butler* sailed 26 March with transports; and, as the troops stormed ashore 1 April, she resumed her now-familiar screening duties with carrier groups. As the Japanese launched fruitless suicide attacks, the ship escorted carriers into Kerama Retto, rescued downed pilots, and ferried men and material. Transferred to dangerous outer picket duty north of Ie Shima 20 May, she was attacked by six kamikazes just before sunset. Skillful gunnery accounted for five of the attackers, and *John C. Butler* sustained damage only to her mast and antennas. She sailed 27 May for repairs in the Philippines.

The ship returned to Okinawa with a convoy 4 July and spent the last month of the long war on convoy duty between that island and the Pacific advance bases. She returned to San Pedro 23 November and decommissioned 26 June 1946, joining the Pacific Reserve Fleet at San Diego.

With the outbreak of the Korean conflict in June 1950, *John C. Butler* recommissioned 27 December 1950. Following shakedown, she was assigned to 11th Naval District for the important job of training naval reservists on short sea cruises. Thus, she helped maintain highly trained officers and men to meet the Navy's cold war commitments. In addition to reserve cruises, she took part in the training program of Fleet Sonar School, San Diego. She decommissioned 18 December 1957 and reentered the Reserve Fleet, San Diego, where she remains.

John C. Butler received five battle stars for World War II service, and was awarded the Presidential Unit Citation for her part in the Battle off Samar.

John C. Calhoun

John Caldwell Calhoun was born 18 March 1782 in Abbeville District, S.C., educated at Yale, and admitted to the South Carolina Bar in 1807. Following a term in the state legislature from 1808 to 1809 Calhoun entered the House in 1811, where he quickly became a leader of the "War Hawks" and supported nationalistic legislation after the War of 1812. He served as Secretary of War under Monroe; was a candidate for President in 1824; but was elected Vice-President, serving under Adams and Jackson between 1825 and 1832. Breaking with Jackson largely over nullification, Calhoun served in the Senate from 1832 until 1844 and became a leading exponent of state's rights and philosopher of nullification. After a year as Tyler's Secretary of State, in which he secured the annexation of Texas, he returned to the Senate. A brilliant thinker and dynamic statesman, Calhoun was too ill to deliver his last speech, on the Compromise of 1850; and it was read instead by Senator Mason, of Virginia, 4 March 1850. Calhoun died in Washington 30 March 1850, to stand as America's greatest state's rights theoretician and one of its most distinguished legislators.

(SSB(N)-630: dp. 7,250; l. 425'; b. 33'; dr. 31'5"; s. over 20 k.; cpl. 136; a. 16 Pol. mis.; cl. *Lafayette*)

John C. Calhoun (SSB(N)-630) was laid down by Newport News Shipbuilding & Dry Dock Co., Newport News, Va., 4 June 1962; launched 22 June 1963; sponsored by Miss Rosalie J. Calhoun, great great granddaughter of John C. Calhoun; and commissioned 15 September 1964, Comdr. Dean L. Axene (blue crew) and Comdr. Frank Thurtell (gold crew) in command.

After shakedown and training along the Atlantic coast, *John C. Calhoun* began operational patrols 22 March 1965. Assigned to Submarine Squadron 18, she deployed on classified undersea patrols to bolster the continuing "keeping the peace" efforts of the Navy. Armed with deadly, far-ranging Polaris missiles, this nuclear-powered submarine helps maintain the freedom of the seas by guarding them from beneath the waves. Moreover, the lethal might of her ballistic weapons makes her a powerful deterrent against any potential aggressor; no matter how far from global waters the threat to world peace might be, *John C. Calhoun* stands ready to meet the challenge. At present she continues her patrols as part of the mighty undersea deterrent force.

John Clay

Former name retained.

(Tr: dp. 443; l. 127'; b. 21'6"; dr. 14'4"; s. 9.5 k.)

John Clay, a British civilian trawler, was leased by the Navy and commissioned 15 May 1919 for minesweeping operations in the North Atlantic. She assisted many ships in United Kingdom waters engaged in the difficult task of destroying the countless mines remaining after the war. *John Clay* decommissioned 12 August 1919 and was returned to her owners.

John Collins

Former name retained.

(Tr: dp. 500; l. 135'; b. 22'; dr. 14'6"; s. 9 k.)

John Collins, a British civilian trawler, was leased by the Navy and commissioned 28 May 1919. She immediately commenced minesweeping operations out of Kirkwall, Scotland, clearing the western half of the Northern Mine Barrage which had been laid down during World War I to protect the harbors of the United Kingdom. *John Collins* continued this task until she decommissioned 6 August and was returned to her owners.

John D. Edwards

John D. Edwards, born in Isle of Wight County, Va. 2 August 1885, was appointed Machinist in the U.S. Navy 31 December 1908. During World War I Lt. Edwards was assigned to destroyer *Shaw* in British waters. While escorting troopship *HMS Aquitania* into Southampton, England, *Shaw* collided with *Aquitania*. Lt. Edwards, as one of 12 men who lost their lives, was posthumously awarded the Navy Cross.

(DD-216: dp. 1,215; l. 314'4"; b. 31'; dr. 9'4"; s. 35 k.; cpl. 124; a. 4 4", 1 3", 12 21" tt.; cl. *Clemson*)

John D. Edwards (DD-216) was laid down 21 May 1919 by William Cramp & Sons, Philadelphia, Pa.; launched 18 October 1919; sponsored by Mrs. May Marshall Edwards, widow of Lt. Edwards; and commissioned 6 April 1920, Comdr. Alexander Sharp in command.

After shakedown, *John D. Edwards* departed Philadelphia 14 May 1920 to protect American lives and interests in Turkish waters. With the Near East in turmoil, the destroyer evacuated refugees and furnished communication facilities for that area. She remained in Turkish waters until she sailed 2 May 1921 for duty with the Asiatic Squadron.

Upon arrival at Cavite, P.I., 29 June, *John D. Edwards* immediately began patrols to protect American interests in the Far East. She was to remain there for 4 years operating out of the Philippines in the winter and China during the summer. Continuing the Navy's long and distinguished record of missions of mercy, she gave vital aid to victims of the Japanese earthquake in 1923 and carried food and rescue workers to Yokohama. As the Chinese Civil War flared in 1924, the destroyer was on station to protect the rights of the foreigners in China. She departed the Far East 18 May 1925, arriving New York 13 July.

For the next 3 years she operated out of Norfolk making periodic training cruises along the coast and in the Caribbean. Following a Mediterranean cruise in late 1927, *John D. Edwards* transited the Panama Canal and arrived San Pedro, Calif., for service in the Pacific. She operated along the West Coast until 1 August 1929 when she sailed for the Far East, arriving Yokohama 26 August.

Subsequent to 1929, *John D. Edwards* became a permanent and important unit of the Asiatic Fleet. Operating out of the Philippines along the Chinese Coast and off Japan, she maintained American strength and prestige in that key area of the world and guarded our interests during the Sino-Japanese War in the late 1930's. She constantly trained in maneuvers and battle practice and, in addition, operated with the Yangtze, South China Sea, and Neutrality Patrols.

As Japan became more aggressive in the Far East, *John D. Edwards* increased operations with submarines in various training exercises. Upon the commencement of hostilities with Japan 7 December 1941, she departed Balikpapan, Borneo, to search for survivors of *HMS Prince of Wales*. For the next 2 months she engaged in patrol, escort, and ASW operations in an attempt to halt the southward advance of powerful Japanese forces from the Philippines into the Netherlands East Indies. Assigned to Destroyer Squadron 29, she departed Bunda Roads, Madura Island, 4 February 1942. As part of a cruiser-destroyer striking force, she sailed for Makassar Strait to intercept a reinforced Japanese convoy heading for the Java Sea. That morning enemy bombers attacked the ships as the striking force steamed north of Bali. Despite antiaircraft fire, the Japanese planes carried out several attacks which heavily damaged *Marblehead* (CL-12) and *Houston* (CA-30). Following the attack, *John D. Edwards* escorted the damaged cruisers via Lombok Strait to Tjilatjap on the southern coast of Java.

Despite the heroic defense by the combined Allied forces, the Japanese continued their push southward during the month of February. In mid-February *John D. Edwards* took part in the unsuccessful attempt to intercept a Japanese invasion convoy off Banka Strait in Palembang, Sumatra. Following this action, she steamed to the eastern coast of Bali to attack an enemy destroyer-transport force in Badoeng Strait. During the early hours of 20 February, *John D. Edwards*, accompanied by three other destroyers, engaged Japanese destroyers in a spirited torpedo and gunfire battle that severely damaged the enemy destroyer *Michishio*. The American destroyers returned to Surabaya, Java, later that day.

As part of the Combined Striking Force under Rear Admiral Doorman, RN, *John D. Edwards* engaged the Japanese Java Invasion Force 27 February in the Battle of the Java Sea. The gallant Allied ships courageously attempted to thwart the invasion of Java, and for 7 hours they fought the enemy against great odds. Japanese might prevailed and five Allied ships were lost. After expending all torpedoes during the battle, *John D. Edwards* returned to Surabaya to refuel. Accompanied by three other four-pipers, she departed for Australia after dark 28 February. While transiting Bali Strait during midwatch 1 March, the destroyers fought a brief duel with patrolling enemy ships. Lacking torpedoes and low on ammunition, the American ships opened range and steamed southward for Fremantle where they arrived early in March.

For the next 2 months *John D. Edwards* escorted convoys out of Australia before arriving Pearl Harbor 1 June.

She escorted convoys from Pearl Harbor to San Francisco until 15 June 1943 when she arrived at Brooklyn to commence escort duty in the Atlantic. The destroyer cruised along the coast and to North Africa escorting supply ships during the next 9 months.

For the duration of the war, *John D. Edwards* escorted convoys in the Atlantic and trained submarines off the Canal Zone. Following the end of the conflict in Europe the destroyer arrived Philadelphia 15 June 1945 and decommissioned there 28 July 1945. *John D. Edwards* was sold to Boston Metal Co., Baltimore, Md., January 1946.

John D. Edwards received three battle stars for World War II service.

John D. Ford

John Donaldson Ford, born 19 May 1840 in Baltimore, Md., entered the Navy as third assistant engineer 30 July 1862. Assigned to the West Gulf Blockading Squadron 1862-65, he participated in engagements on the Mississippi River and the Battle of Mobile Bay. He was attached to the sloop-of-war *Sacramento* when she was wrecked off the coast of India in June 1867. During the next three decades he held various sea and shore assignments; and, while attached to the Maryland Agricultural and Mechanical College 1894-96, he started a course in mechanical engineering. As fleet engineer of the Pacific Station in 1898, he served in *Baltimore* (C-3) during the Battle of Manila Bay 1 May. For his "eminent and conspicuous conduct in battle" in operations at Cavite, Sangley Point, and Corregidor, he was advanced three numbers. Promoted to Rear Admiral upon retirement 19 May 1902, Ford remained on active duty as Inspector of Machinery and Ordnance at Sparrow's Point, Baltimore, until December 1908. Rear Admiral Ford died in Baltimore 17 April 1918.

(DD-228: dp. 1,190; l. 314'5"; b. 31'9"; dr. 9'3"; s. 35 k.; cpl. 101; a. 4 4', 1 3', 2 .30 cal. mg., 12 21" tt.; cl. *Clemson*)

John D. Ford (DD-228) was laid down by William Cramp & Sons Ship & Engine Building Co., Philadelphia, Pa., 11 November 1919; launched 2 September 1920; sponsored by Miss F. Faith Ford, daughter of Rear Admiral Ford; and commissioned as *Ford* 30 December 1920, Lt. (j.g.) L. T. Forbes in temporary command.

After acceptance trials off New England, *Ford* received Lt. Comdr. C. A. Pownall as commanding officer 16 July 1921. On 17 November, while operating along the eastern seaboard, her name was changed to *John D. Ford*. After training in the Caribbean, she departed Newport, R.I., 20 June 1922 for permanent duty with the Asiatic Fleet. Sailing via the Mediterranean Sea, the Suez Canal, and the Indian Ocean, she arrived Cavite, Manila Bay, 21 August to begin almost two decades of service in the Far East.

Prior to the outbreak of World War II, *John D. Ford* operated out of Manila, cruising Asiatic waters from southern China to northern Japan. During April and May 1924, she helped establish temporary air bases on the Japanese Kurile and Hokaido Islands in support of the pioneer, global flight between 9 April and 28 September by the U.S. Air Service. On 6 June she deployed to Shanghai, China, to protect American lives and interests, which were threatened by Chinese civil strife. After renewal of the Chinese Civil War in May 1926, she patrolled the Chinese coast to protect convoys from roving bands of bandits. On 24 March 1927 she supported the evacuation of American and foreign nationals, who were fleeing from mob violence at Nanking.

The ascendancy of the reformed Nationalist government under Chiang Kai-Shek in 1928 quieted civil strife. However, Sino-Japanese relations deteriorated, requiring *John D. Ford* to remain in China. Following Japanese aggression in northern China during July 1937, she evacuated Americans from Peiping as Japanese ships prepared to blockade the Chinese coast. Steaming to Manila 21 November, she operated between the Philippines and southern China on fleet maneuvers. And after war broke

out in Europe in September 1939, she increased training off the Philippines and commenced neutrality patrols in the Philippine and South China Seas.

After the Japanese attack on Pearl Harbor 7 December 1941, *John D. Ford* readied for action at Cavite as a unit of DesDiv 59. Undamaged by the destructive Japanese air raid on Manila Bay 10 December, she sailed southward the same day to patrol the Sulu Sea and Makassar Strait with Task Force 6. She remained in Makassar Strait until 23 December, then she steamed from Balikpapan, Borneo, to Surabaya, Java, arriving the 24th.

As the Japanese pressed southward through the Philippines and into Indonesia, the Allies could hardly hope to contain the enemy's offensive in the East Indies. With too few ships and practically no air support they strove to harass the enemy, to delay his advance, and to prevent the invasion of Australia. Anxious to strike back at the Japanese, *John D. Ford* departed Surabaya 11 January 1942 for Kupang, Timor, where she arrived the 18th to join a destroyer striking force. Two days later the force sailed for Balikpapan to conduct a surprise torpedo attack on Japanese shipping. Arriving off Balikpapan during mid watch 24 January, the four destroyers launched a sweeping raid through the Japanese transports while Japanese destroyers steamed about Makassar Strait in search of reported American submarines. For over an hour the four-stackers fired torpedoes and shells at the astonished enemy. Before retiring from the first surface action in the Pacific war, they sank four enemy ships, one a victim of *John D. Ford's* torpedoes. The victorious striking force arrived Surabaya 25 January.

The Japanese pincer offensive through the Dutch East Indies continued despite Allied harassment. On 3 February the enemy began air raids on Surabaya, and *John D. Ford* retired in convoy to Tjilatjap on the southern coast of Java. During mid-February the Japanese tightened their control of islands east and west of Java, and on 18 February they landed troops on Bali, adjacent to the eastern end of the Java. In response *John D. Ford*, *Pope* (DD-225), and other American and Dutch ships steamed to Badoeng Strait in two waves to engage an enemy destroyer-transport force during the night of 19-20 February. A unit of the first wave, *John D. Ford* conducted a running engagement with two Japanese destroyers without results; while the Japanese retired northward after the second wave, their landings on Bali were successful. Moreover, they sank the Dutch destroyer *Piet Hein* while suffering extensive damage to only one ship.

Returning to Tjilatjap 21 February for fuel, *John D. Ford* and *Pope* immediately sailed to Christmas Island to pick up the last reserve of 17 to 18 torpedoes from *Black Hawk* (AD-9). Then they steamed to Surabaya, arriving the 24th to join the dwindling ABDC Striking Force. Hampered by shortages of fuel, ammunition, and torpedoes and reduced in strength by sinkings, battle damage, and repair needs, the Allies indeed faced a "critical situation." Only four U.S. destroyers remained operational in the Striking Force.

Late on the 25th, *John D. Ford* sortied with the Striking Force from Surabaya in search of a large enemy amphibious force in the Java Sea. Returning to port the following day, the force was joined by five British ships; once more the Striking Force steamed to intercept the enemy. Following an unsuccessful strike by enemy planes the morning of the 27th, the Allied force steamed for Surabaya. While steaming through the mine field, the ships reversed course and deployed to meet the enemy off the northern coast of Java.

The Battle of Java Sea commenced at 1616 and continued for over 7 hours. The Allied ships, 5 cruisers and 9 destroyers, engaged the enemy force, 4 cruisers and 13 destroyers, in a furious running battle marked by intermittent gun and torpedo duels. *John D. Ford* emerged from the battle undamaged; but in the valiant attempt to prevent the invasion of Java, five Allied ships were sunk.

Retiring to Surabaya, *John D. Ford* and three other destroyers of DesDiv 58 departed after dark 28 February for Australia. Steaming undetected through the nar-

rows of Bali Strait during midwatch 1 March, the gallant old four-pipers encountered three enemy destroyers guarding the southern end of the strait. Out of torpedoes and low on ammunition, the destroyers outdistanced the Japanese patrol and steamed for Freemantle. Lt. Comdr. J. E. Cooper, who had skippered *John D. Ford* since before the outbreak of the war, brought her safely to Australia 4 March.

After 2 months of convoy escort duty along the Australian coast, *John D. Ford* departed Brisbane 9 May for Pearl Harbor. Arriving 2 June, she sailed in convoy 3 days later for San Francisco and arrived 12 June. She cleared San Francisco for Pearl Harbor 23 June, and during the next 11 months escorted nine convoys between San Francisco and Pearl. Returning to the West Coast 20 May 1943, she departed San Francisco 24 May for convoy and ASW patrols in the Atlantic.

Assigned to the 10th Fleet, *John D. Ford* transited the Canal 4 June and joined a Trinidad-bound convoy the 6th. For the next 6 months she ranged the North and South Atlantic from New York and Charleston, S.C., to Casablanca, French Morocco, and Recife, Brazil, protecting supply convoys from German U-boats. After ASW training late in December, she joined *Guadalcanal* (CVE-60) out of Norfolk 5 January 1944 for hunter-killer ASW operations in the Atlantic. The versatile destroyer supported the destruction of German submarine *U-554*, surprised and depth charged while refueling west of the Azores 16 January.

After returning to the East Coast 16 February, *John D. Ford* cleared Norfolk 14 March for a convoy run to the Mediterranean. While at Gibraltar 29 March, she was damaged in a collision with a British tanker. Following repairs, she returned to Norfolk, arriving 1 May. Departing Norfolk 24 May for convoy duty to the Canal Zone, *John D. Ford* continued convoy patrols for almost a year from eastern seaboard ports to Recife, Reykjavik, and Casablanca.

From 24 May 1945 to 27 June she acted as escort and plane guard for *Boxer* (CV-21) during the carrier's shakedown in the Caribbean, then she returned to Norfolk. She sailed 8 July for Boston Navy Yard where she arrived 9 July for conversion to miscellaneous auxiliary AG-119. After conversion, she returned to Norfolk 9 September and decommissioned 2 November. Subsequently, she was sold for scrap 5 October 1947 to Northern Metal Co., Philadelphia, Pa.

John D. Ford received four battle stars for World War II service.

John D. Henley

John Dandridge Henley was born 25 February 1781 at Williamsburg, Va., and was commissioned Midshipman 14 October 1799. During offensive operations against Tripoli in 1804, he served in *Gunboat No. 6*, commanded by Lt. John Trippe. In a stirring attack 3 August against a larger enemy warship, the two officers with only nine other men boarded and took the enemy ship in hand-to-hand fighting, although out-numbered three to one. Midshipman Henley also took part in several other attacks in the months that followed as Commodore Preble's squadron carried out aggressive and successful operations against the Tripolitan pirates that made them ready to end their aggression. Later in his career, during the war of 1812, Henley commanded schooner *Carolina* during the Battle of New Orleans. After the gallant delaying action by Lt. Jones at Lake Borgne, *Carolina* and other ships harassed the British with naval gunfire while protecting Jackson's flank on the Mississippi. Henley contributed importantly to the large role the small squadron played in this last great victory of the war. Rising to the rank of Captain 5 March 1817, John D. Henley continued to serve with distinction until 23 May 1835 when he died on board *Vandalia* at Havana, Cuba.

(DD-553; dp. 2,050; l. 376'6"; b. 39'8"; dr. 17'9"; s. 35 k.; cpl. 273; a. 5 5", 10 40mm., 7 20mm., 10 21" tt., 6 dcp. 2 dct.; cl. *Fletcher*)

John D. Henley (DD-553) was laid down 21 July 1941 by Gulf Shipbuilding Co., Chackasaw, Ala., launched 15 November 1942; sponsored by Miss Shelah Keith Kane, great-great-granddaughter of Captain Henley; and commissioned 2 February 1944, Comdr. C. H. Smith in command.

Following exhaustive shakedown training out of Bermuda, the new destroyer arrived Norfolk 28 March 1944. Sailing for the Pacific via the Panama Canal, she arrived Pearl Harbor 23 April 1944. After operational training, *John D. Henley* escorted fleet oilers to Majuro and returned 17 May. She departed 27 May for Majuro once more and there became flagship of a refueling task group. Departing 6 June 1944, the ships moved to the Marianas to refuel the fleet during the capture and occupation of Saipan and Tinian. During this long at-sea period the ships came under air attack 17 and 18 June. They returned to Eniwetok 14 August.

As the Navy's mobile amphibious forces prepared to move into the Palaus, *John D. Henley* joined Task Group 30.8 and departed Manus 1 September as flagship of the refueling group during strikes on Peleliu and its eventual capture. The oilers and their escorts continued to operate out of Ulithi well into November, supporting the vast carrier task forces striking the Philippines. This unit, headed by Captain J. T. Acuff, had much to do with the great success of the wide-ranging carrier forces.

In December the destroyer moved to Guam for independent operation as an escort and patrol ship in the Marshalls and Marianas. She then steamed to Ulithi, where she arrived 31 January 1945 to undergo operational training in covering Underwater Demolition Teams. She sailed 14 February for the next major landing on the island road to Japan, Iwo Jima. Arriving 2 days later, she took part in the pre-invasion bombardment and, after the assault 19 February, performed yeoman fire support, screening, and radar picket duties during the bitter fighting ashore. She returned to Ulithi 5 March to prepare for the Okinawa invasion.

John D. Henley got underway 21 March for the last and largest of the Pacific amphibious operations, Okinawa. Her assignment consisted of screening the light carriers as their planes provided vital air support to ground troops. Undergoing periodic air attacks, she continued to screen her carrier group, with occasional logistics stops at Kerama Retto until 24 June. She arrived Leyte Gulf 27 June 1945.

The veteran ship returned to waters north of Okinawa 1 July to cover minesweeping operations. *John D. Henley* returned to Buckner Bay 7 August and was there at war's end 15 August. She took air-sea rescue station off Japan 24 August; then departed 2 September, the day of Japan's formal surrender, for the long voyage to California, arriving in San Francisco 24 September. She was overhauled and decommissioned at San Diego 30 April 1946, entered the Pacific Reserve Fleet, and is at present berthed at Bremerton, Wash.

John D. Henley received six battle stars for World War II service.

John D. Whidden, see *Aquarius* (AK-263)

John Day River

A river in northern Oregon which is tributary of the Columbia River.

(LSMR-511; dp. 790; l. 206'3"; b. 34'6"; dr. 7'2"; s. 13 k.; cpl. 138; a. 1 5", 4 40mm., 8 20mm., 4 4.2", 10 rkt.; cl. *LSMR-401*)

LSMR-511 was laid down by Brown Shipbuilding Co., Houston, Tex., 7 April 1945; launched 5 May 1945; and commissioned 3 July 1945, Lt. Ralph L. Clifford in command.

After shakedown along the Texas coast, *LSMR-511* departed Galveston 10 July and arrived Charleston, S.C.,

15 July. From 5 to 7 August she sailed to Little Creek, Va., for training in Chesapeake Bay and along the Virginia coast. Assigned to LSMR Squadron 4, she departed Little Creek for New Orleans, La., 20 September and arrived on the 27th. She departed Algiers, La., 2 October and for the next few weeks cruised the Mississippi River to St. Louis, Mo., and St. Paul, Minn. Departing St. Paul 30 October, she reached New Orleans 13 November and Little Creek 15 December.

After additional training and readiness operations out of Little Creek, *LSMR-511* sailed 30 January 1946 for squadron exercises in the Caribbean. She reached San Juan, P.R., 5 February and operated off Culebra Island until sailing for Guantanamo Bay 12 February. She arrived 14 February and during the next month participated in tactical exercises off the southern coast of Cuba. Sailing for the United States 15 March, she touched at Bermuda 19 March and reached Little Creek the 25th.

During the remainder of the year *LSMR-511* operated in Chesapeake Bay out of Norfolk and Baltimore. Between 22 and 24 January 1947 she sailed from Little Creek to Charleston and entered Charleston Naval Shipyard. Departing Charleston 12 May, she arrived Green Cove Springs, Fla., 13 May; decommissioned there 21 May 1947; and entered the Atlantic Reserve Fleet. While berthed at Green Cove Springs, she was named *John Day River* 1 October 1955. Her name was struck from the Navy List 1 February 1960. She was sold to Atlas Iron & Metal Corp., 5 July 1960.

John Dunkin

Former name retained.

(Tr: dp. 443; l. 127'; b. 21'6"; dr. 14'4"; s. 10 k.; cl. *Strath*)

John Dunkin, a British trawler, was leased by the Navy and commissioned 30 May 1919, Lt. (j.g.) J. G. Doersburg in command. She operated out of Kirkwall, Orkney Islands, Scotland, with the mine-sweeping detail in the North Sea. Ships stationed at Kirkwall cleared the western half of the mine barrage laid down during World War I to protect British Harbors. After completing this task, *John Dunkin* decommissioned 12 August 1919 and was returned to her owners.

John F. Hartley

(RC)

John F. Hartley, a cutter built at San Francisco by the Risdon Iron Works in 1874, was used on the West Coast by the Revenue Cutter Service until transferred to the Navy 6 April 1917. After the end of World War I, she was sold 1 August 1919 to W. T. Cleverdon of San Francisco.

John F. Kennedy

John Fitzgerald Kennedy, the 35th President of the United States, was born 29 May 1917 in Brookline, Mass. He graduated from Harvard with honors to be commissioned Ensign in the Naval Reserve in 1942; then promoted to Lieutenant (j.g.) 10 October 1942 and Lieutenant 1 October 1943. On the night of 1 August 1942, Kennedy won the Navy and Marine Corps Medal while commanding *PT 109*. When his motor torpedo boat was rammed in two during patrol by a Japanese destroyer, his "out-

standing courage, endurance, and leadership contributed to the saving of several lives." He towed the injured men of his crew to safety and, after succeeding in getting his crew ashore, swam many hours to secure aid and food. Nine days later he brought them through Japanese lines to safety despite injuries received in action.

Before and immediately following World War II, he was a correspondent for the Chicago Herald American and the International News Service. Elected to Congress in 1946, he represented the 11th Congressional District of Massachusetts in the House until he entered the Senate in 1953. He was reelected in 1958 with an overwhelming majority.

John F. Kennedy was elected President of the United States 8 November 1960. In his inaugural address of 20 January 1961, he advocated that "the word go forth from this time and place to friend and foe alike, that the torch has passed to a new generation of Americans—born in this century, tempered by war, disciplined by a hard and bitter peace, proud of our ancient heritage." As President he prepared legislation and mobilized the strength of the Federal Government to insure minorities the benefits of American society. He also sought sweeping reforms in fields of economic welfare, health, and education: ". . . every American has the right to a decent life for himself and a better life for his children."

In the interest of peace, he wisely used seapower to meet global crises, including a quarantine of Cuba in 1962 which choked off the flow of military supplies to that island and persuaded the Soviet Union to remove its offensive missiles. Speaking from the flight deck of *Kitty Hawk* (CVA-63) 6 June 1963, he recalled the role of American sea power during that confrontation: "Events of October 1962 indicated, as they had all through history, that control of the sea means security. Control of the seas can mean peace. The United States must control the seas if it is to protect your security and those countries which stretch thousands of miles away that look to you on this ship and the sister ships of the United States Navy."

He was dedicated to his belief "that all the world—in Eastern Europe as well as Western, in Southern Africa as well as Northern, in old nations as well as new—that people must be free to choose their own future, without discrimination or dictation, without coercion or subversion."

As Soviet threats to Berlin flared anew in the summer of 1963, he visited West Berlin to declare: "Freedom is indivisible, and when one man is enslaved, all are not free."

One of his achievements was the 1963 treaty outlawing nuclear tests in the atmosphere of outer space or underwater as "the first concrete limitation on the nuclear arms race since the bomb was invented."

On 22 November 1963, as his motorcade traveled through downtown Dallas, Tex., President Kennedy was shot by an assassin. He was pronounced dead at the Parkland Hospital in Dallas a short time later and interred 25 November 1963 in the Arlington National Cemetery.

(CVA-67: dp. 75,000; l. 1,046'; b. 129'4"; ew. 249'; dr. 35'7"; s. 30 k.; cpl. 3,297; cl. *Kitty Hawk*)

John F. Kennedy (CVA-67) was laid down 22 October 1964 by the Newport News Shipbuilding & Dry Dock Co., Newport News, Va.; launched 27 May 1967; and sponsored by Miss Caroline Kennedy, daughter of the late president. Commissioning of the carrier is scheduled for the fall of 1968.

John Fitzgerald

A former name retained.

(Tr: dp. 443; l. 127'; b. 21'6"; dr. 14'4"; s. 10 k.)

John Fitzgerald, a British trawler, was leased by the Navy and commissioned 30 May 1919. She immediately commenced minesweeping operations off Kirkwall Bay, Orkney Islands, Scotland. The Kirkwall minesweepers

225 Remarks Aboard the U.S.S. *Kitty Hawk*.

June 6, 1963

Admiral and gentlemen:

On behalf of all of us who visited with you today I want to express our warm appreciation. I think all of us have been impressed by how vigorously and successfully the United States Navy has applied all of the modern advances in science and technology to this age-old struggle of maintenance and control of the seas.

Just as Admiral Mahan said more than 50 years ago, any country which wishes to protect its security and the security of those allied with it must maintain its position on the sea. And if there is any lesson of the 20th century, and especially of the past few years, it is that in spite of the advances in space and in the air, strategic air, this country must still move easily and safely across the seas of the world.

Events of October 1962 indicated, as they had all through history, that control of the sea means security. Control of the seas can

mean peace. Control of the seas can mean victory. The United States must control the seas if it is to protect your security and those countries which stretch thousands of miles away that look to you on this ship and the sister ships of the United States Navy.

I want to express our appreciation to all of you. The sea is a friend and an enemy. Those of you who sail it, know it; those of you who sail it carry with you our warmest appreciation and our best hopes for the future.

Thank you, gentlemen.

NOTE: The President spoke from the flight deck of the carrier *Kitty Hawk*, after inspecting a new computer system aboard the carrier *Oriskany* during a comprehensive demonstration of weapons and tactics by ships and aircraft of Task Force 10 of the Pacific Fleet. His opening word "Admiral" referred to Adm. George W. Anderson, Chief of Naval Operations.

President John F. Kennedy

were responsible for clearing the western half of the Northern Mine Barrage, laid down in the north during the World War I to protect the harbors of the United Kingdom. After sighting and sinking numerous mines, *John Fitzgerald* decommissioned 12 August 1919 and was returned to her owners.

John Francis Burnes

John Francis Burnes, born 1883 in Binghamton, N.Y., joined the U.S. Marine Corps 1904. Shortly before the war, he was appointed machine gunner, and commissioned June 1917. He was sent to France, where his gallant service in battle won him the Distinguished Service Cross. "In the attack on the Bois de Belleau 12 June 1918 he was badly wounded but completed disposition of his platoon under violent fire. The injuries which he sustained in the performance of this self-sacrificing duty later caused his death."

(DD-299: dp. 1,100; l. 314'5"; b. 31'8"; dr. 9'3"; s. 35 k.; epl. 95; a. 4 4", 1 3", 12 21" tt.; cl. *Clemson*)

John Francis Burnes (DD-299), formerly *Swasey*, was laid down 4 July 1918 by the Bethlehem Shipbuilding Corp., San Francisco, Calif.; launched 10 November 1918; sponsored by Mrs. Julius Kahn; and commissioned 1 May 1920, Comdr. Frank N. Eklund in command.

Following shakedown and training exercises during the summer of 1920, *John Francis Burnes* engaged in fleet maneuvers during October. These exercises were designed to maintain the superior navy demanded by America's position as a world power. For the next 2 years she continued tactical exercises along the California coast, oper-

ating out of San Diego, her home port. She sailed 6 February 1923 for exercises off Mexico and the Canal Zone.

Following her return in April, *John Francis Burnes* operated out of California for 2 years with the exception of fleet maneuvers in the Caribbean in early 1924. One year later she participated in joint Army-Navy maneuvers out of San Francisco before joining fleet operations in Hawaii 27 April 1925. The destroyer then cruised with a large force in the Pacific, visiting Samoa, Australia, and New Zealand before returning to San Diego in September.

For the next 3 years she engaged in training operations and fleet maneuvers along the West Coast, developing the techniques of modern naval warfare which the Navy used so effectively in World War II. During the summers of 1928 and 1929, *John Francis Burnes* again helped to shape the Navy's future as she engaged in reserve training cruises to develop skilled reserves against the unknown day of need ahead. *John Francis Burnes* arrived San Diego 28 August 1929 and remained there until she decommissioned 25 February 1930. She was sold as scrap metal 10 June 1931 in accordance with the London Treaty for the limitation of naval armaments.

John G. Nicolay, see *Albirco* (AK-90)

John G. Olsen

A former name retained.

(SP-2377: t. 61; l. 76'; b. 19'; dr. 8'; s. 10 k.)

John G. Olsen (SP-2377), a steam tug, was built in 1916 by Hawley Miller, New Baltimore, N.Y., and acquired

Caroline Kennedy christens USS *John F. Kennedy* (CVA-67). In the background, from left to right—President Lyndon B. Johnson; John F. Kennedy, Jr., Mrs. John F. Kennedy; and Mr. D. A. Holden, President of Newport News Shipbuilding and Drydock Co. World Wide Photos

from her owners, Olsen Water & Towing Co., of New York, 16 April 1918. Her first commanding officer was Ens. G. Montague, USNRF.

Assigned duty in the 5th Naval District, *John G. Olsen* steamed from New York to Norfolk, arriving 23 April via the inland route. There she took up duty as a tug and general purpose harbor ship in Hampton Roads for Naval Overseas Transportation Service, a vital organization in the transport of men and material to France. After the Armistice, she served at Indian Head, Md., before being returned to her owners 28 August 1919.

John Gehm (USCG), see *Menemsha* (AG-39)

John Graham

A former name retained.

(Tr: dp. 500; l. 135; b. 22'; dr. 14'5"; s. 10 k.; epl. 15; a. none; cl. *Castle*)

John Graham, a British trawler, was leased by the Navy and commissioned 30 May 1919 at Grimsby, England, Lt. L. H. Ackerman, USNRF, in command. The following day she departed for Kirkwall, Orkney Island, Scotland, to join the minesweeping force responsible for clearing the

Northern Mine Barrage, which had been laid down in the North Sea to protect Allied shipping. *John Graham* sailed from Kirkwall 8 June and commenced minesweeping operations with *William Darnold* throughout the western half of the mine fields. She was responsible for destroying and sinking scores of mines; on 9 July, alone, she exploded 32 mines. *John Graham* departed Kirkwall 9 August and steamed to Brightingsea, England, where she decommissioned 12 August and was returned to her owners.

John Griffith

A former name retained.

(Sch: t. 240; l. 113'8"; dph. 8'4"; epl. 39; a. 1 13" M., 2 32-pdrs., 2 12-pdr. how.)

John Griffith was purchased by the Navy at New York from B. F. Woolsey 16 September 1861; and commissioned at New York Navy Yard 20 January 1862, Lt. K. Randolph Breese in command.

The schooner was ordered to Key West, Fla., to join the Mortar Flotilla being organized by Comdr. David D. Porter for the decisive attack up the Mississippi River. The flotilla sailed from Key West 6 March and on 11 March anchored at Ship Island, Miss., the staging area for Flag Officer Farragut's New Orleans campaign. A week

later *John Griffith* was towed across the bar at Pass a l'Outre with Porter's other mortar schooners. For the next month, while Farragut labored to move his deep-draft, sea-going ships across the bar and into the Mississippi, Porter's vessels drilled and prepared for the fight awaiting them.

The mortar boats moved into terminal position 18 April and opened fire on Forts Jackson and St. Philip. *John Griffith*, now under Acting Master Henry Brown, was in the 3rd Division commanded by her old skipper, Lt. Breese, who placed his schooners along the western bank of the river just below the lower limit of Fort Jackson's fire. *John Griffith* pressed the attack with great vigor, leading the ships of her division on 4 days of the weeklong bombardment which continued until Farragut had succeeded in fighting his mighty fleet past the forts to capture New Orleans in one of the war's most daring and strategically significant operations. This bold stroke deprived the South of her largest and wealthiest city, tightened the Union blockade, and gave promise of restoring the entire Mississippi Valley to the Union. When he was barely beyond the forts, Farragut paused to bury his dead, repair his ships, and dash off a note of thanks to Porter for the help of the mortars: "You supported us most nobly."

John Griffith's next major operation came on Farragut's second passage up the Mississippi. The mortars rained their 8-inch shells on the Confederate batteries at Vicksburg while the heavy ships steamed by the forts to meet Flag Officer Davis and his Mississippi Flotilla. The schooners then waited for Farragut below Vicksburg, occasionally enlivening their vigil by hurling a few shells at the forts. On 15 July they resumed the bombardment in earnest when the sound of heavy firing announced Farragut's approach.

John Griffith continued to serve the West Gulf Blockading Squadron until ordered north 18 May 1864. The schooner decommissioned for repairs 1 June and she recommissioned 23 August 1864. The following day she received orders to sail to Port Royal for service in the South Atlantic Blockading Squadron. She arrived Port Royal 8 September and served on blockade duty and at the mouth of the Altamaha River, Ga., until ordered 12 December to the Savannah River, where General Sherman had just emerged at the end of his famous march to the sea. Five days later *John Griffith* shelled Fort Beaulieu, the Confederate fortress defending the mouths of the Vernon and Burnside Rivers. With *Sonoma* she maintained her steady and deliberate fire until the defenders finally evacuated 21 December.

Thereafter *John Griffith* remained on blockade duty until after the end of the war. She decommissioned 21 August 1865 and was sold at public auction at Boston Navy Yard to C. Foster 8 September 1865.

John Hancock

John Hancock, born Braintree, Mass., 12 January 1737, graduated from Harvard in 1754. Ten years later he became Boston's wealthiest merchant through inheriting his uncle's flourishing business. His outspoken criticism of the Stamp Act in 1765 incurred the displeasure of sympathizers of the Crown but enabled him to be elected to the General Court and to win several terms as selectman from Boston.

His sloop *Liberty*, seized for allegedly smuggling wine 10 June 1768, was condemned and converted into a coast guard. A band of patriots burned the ship at Newport, R.I., in an act of direct defiance of Royal authority.

Hancock was president of the Massachusetts Provincial Congress and was elected to the First and Second Continental Congresses. He presided over the latter body from 24 May 1775 through 29 October 1777, thereby becoming the first signer of the Declaration of Independence.

He remained in Congress until he became Governor of Massachusetts after presiding over the State's Constitutional Convention in 1780. With the exception of a term in the Confederation Congress, 1785 to 1786, he served as

Governor continuously until his death 8 October 1793. His last great service was rendered in 1788 when he presided over the Massachusetts convention which ratified the Constitution of the United States.

(ScStr: t. 230; l. 113'; b. 22'; dr. 10'6"; s. 7 k.; cpl. 20; a. 1 6-pdr.)

John Hancock was launched by Boston Navy Yard 26 October 1850 for service as a steam tug and water tank in that yard. However, she was soon manned by a temporary crew and dispatched to New Bedford, Mass., to aid in quelling riots. When order had been restored, she returned to Boston, where she served until summer 1851 when she steamed to Annapolis, Md., for duty as a practice ship at the Naval Academy. At the end of the summer's midshipmen cruises, she sailed to New York, where she was commissioned 6 September, Lt. J. W. Livingston in command.

Three days later, *John Hancock* departed New York for Havana, Cuba, to assist in suppressing the last filibustering expedition led by Narciso Lopez which had been launched from the United States in violation of American neutrality laws. She arrived Havana 29 September, but her duty there terminated 4 days later when extremely stormy weather damaged the vessel causing her to return to Boston via Charleston and New York.

She was placed in ordinary at the Boston Navy Yard and rebuilt almost entirely. The vessel received a new bow and stern increasing her length to 165'6" and her weight to 382 tons but not affecting her beam or draft. *John Hancock* was relaunched 24 February 1853 and commissioned 19 March 1853, Lt. John Rodgers in command.

She stood out of New York Harbor 3 May and joined Comdr. Cadwalader Ringgold's Northern Pacific Survey Expedition at Hampton Roads 3 days later. Secretary of the Navy James C. Dobbin visited the ship at Norfolk 2 June, 9 days before the squadron sailed for the Pacific. After stopping at Funchal, Madeira Islands; Porto Praya; and Simonstown, False Bay; the expedition arrived Batavia, Java, 12 December.

Five months were now devoted to surveying the waters surrounding the large islands off the coast of Southeast Asia. Early in May 1854, *John Hancock* departed for Hong Kong, where she arrived 24 May. The squadron operated from that port as its base throughout the summer, surveying nearby coast, islands, and rivers. At this time China was plagued by rebellion and pirates endangering foreigners and threatening their property. The American ships were a source of stability and order protecting American citizens and interests. While steaming up the Canton River, two armed boats from *John Hancock* were fired upon by rebel batteries which their own cannon promptly silenced.

Serious illness compelled Comdr. Ringgold to relinquish command of the expedition leaving Lt. Rodgers in charge 11 August. Lt. Henry K. Stevens then took command of *John Hancock*. She departed Hong Kong 9 September sailing north along the coast of China surveying as she went. She arrived Shanghai 27 November and remained there under repair until 28 January when she resumed surveying operations which took her north along the eastern coast of Asia to the Bering Sea before turning south along the western coast of North America. Besides greatly increasing knowledge of the western and northern Pacific, stimulating commerce, and easing navigation in previously unknown seas, the operations helped to establish friendly relations between the United States and several nations of the Orient.

John Hancock arrived San Francisco 19 October. After repairs at Mare Island Navy Yard, she stood out of San Francisco Bay 20 March 1856 for Puget Sound to help suppress Indian uprisings which threatened to wipe out white settlements and Army outposts established in the early 1850's. She arrived Seattle 28 March and operated from that port as a base until 4 August when she stood down the sound. She arrived San Francisco 17 August.

John Hancock decommissioned at Mare Island Navy

Yard 23 August and remained there in ordinary until sold at auction 17 August 1865.

John Hancock, see *Hancock*

John Hood

John Hood was born in Florence, Ala., 3 December 1859. He was appointed to the Naval Academy in 1875, and graduated from the Naval Academy, second in his class. His first cruise after graduation took him to the South Atlantic in *Shenandoah*, and he later sailed in *Wachusett*, *Brooklyn*, *Vandalia*, *Mohician*, *Jamestown*, *Constellation*, *Bancroft* and *Kearsarge*. Hood was wrecked with *Kearsarge* 21 February 1894 on Roncador Reef off Central America in the Pacific, and was a lieutenant in *Maine* when she was blown up at Havana 15 February 1898.

Hood commanded *Hawk* during the Spanish American War, carried information of the arrival of the Spanish Squadron off Santiago to the commander of the Flying Squadron at Cienfuegos, and delivered orders for him to proceed to Santiago 23 May 1898. He also served in *Nero* during the Spanish War. Hood surveyed the Pacific in 1899-1900 to prepare data and charts by which the Pacific cable was laid.

He commanded *Elcano* in Chinese waters during the Russo-Japanese War from 1903 to 1905 and *Tacoma* from 1907 to 1909, during Haitian and Central American revolutions and elections. He was in charge of the ships at the Naval Academy in 1909 and 1910. He commanded *Rhode Island* of the Atlantic Fleet in 1910-11. Under him in 1911-12, *Delaware* won the battle efficiency pennant. From 1912 to 1915 he was a member of the General Board of the Navy. In 1915-16 he commanded *Texas* which won the "Red E" for excellence in engineering efficiency.

He was promoted to Rear Admiral August 29, 1916 and retired 18 March 1918. Admiral Hood died at the Naval Hospital, Annapolis, Md., February 11, 1919.

(DD-665: dp. 2,050; l. 376'6"; b. 39'8"; dr. 17'9"; s. 37 k.; cpl. 319; a. 5 5", 10 40mm., 7 20mm., 6 dcp., 10 21" tt.; cl. *Fletcher*)

John Hood (DD-665) was laid down 12 October 1942 by Gulf Shipbuilding Corp., Chickasaw, Ala.; launched 25 October 1943; sponsored by Miss Amelia O'Neal; and commissioned 7 June 1944, Comdr. Thomas J. Thronhill in command.

After shakedown in the Caribbean, the new destroyer departed for the Pacific 21 August 1944, arriving Mare Island 6 September. She sailed on to the Aleutian Islands for duty with the North Pacific Forces, arriving Adak 18 September. *John Hood* joined Destroyer Squadron 57 of Rear Admiral J. L. McCrea's Task Force 92 and served her entire war career in the stormy waters of the North Pacific guarding our vital northern "back door." The principal offensive missions were to harass and threaten the enemy outposts in the Kurile Islands, more than 600 miles westward of Attu. In carrying out this mission, the Task Force made nine sorties against the Kuriles and five offensive sweeps in the Sea of Okhotsk, hampered by bad weather, and well beyond the range of friendly air cover. *John Hood* was the only ship of the task force which participated in every sortie from reporting through the end of the war.

In November she engaged in the bombardment of the Japanese base on Matsuwa, causing considerable damage to the installation. She continued sorties and patrol operations in the Kuriles through the winter and spring of 1945. While patrolling in the Sea of Okhotsk 25 June 1945, *John Hood* encountered an enemy convoy attempting last minute reinforcements to the badly battered Japanese garrisons. The destroyer assisted in sinking one cargo ship and probable sinking of another. On 11

August her task group conducted one of the final naval operations of the war by destroying another enemy convoy.

Following the cessation of hostilities, she steamed to Adak to prepare for occupation duties. *John Hood* departed Adak 31 August with a large force headed for Northern Japan. The battle tested destroyer remained in Northern Japanese waters with the occupation forces until she turned homeward 18 November. She arrived Charleston, S.C., 22 December and remained there until she decommissioned 3 July 1946 and entered the Atlantic Reserve Fleet.

John Hood recommissioned 3 August 1951, Comdr. S. P. Gantz in command. Following commissioning she received major modifications to enable her to assume a place in the modern fleet.

John Hood departed Norfolk 29 June for an around-world cruise, including peace-keeping patrols with the 7th Fleet off the coast of Korea. She returned to Norfolk 6 February 1954 for repairs and coastal training operations before sailing 5 November 1955 for Mediterranean duty with the 6th Fleet. Upon returning to Norfolk 26 February 1956, the destroyer received repairs to her storm damaged mast and then trained midshipmen in the summer. During the tense Suez crisis in the fall she sailed with Task Force 26 to Lisbon to be ready for action if needed and returned to the Virginia Capes in December.

Following training exercises along the Atlantic coast, and another 6th Fleet cruise 1957 in the still turbulent Mideastern waters, *John Hood* commenced training cruises in early 1958. She operated with Fleet Sonar School and engaged in ASW exercises before being transferred to the Reserve Destroyer Squadron at New York 1 October 1959. She continued training reservists until 1 August 1961, when President Kennedy ordered a callup of reservists to bolster the nation's military strength during the Berlin crisis. The American answer to the communist challenge prevented a major conflict; and, as the crisis subsided, *John Hood* resumed duties as a reserve training destroyer at New York in August 1962. She continued this service into 1967.

John Hood received one battle star for World War II service.

John J. Murley, see *Canary* (AMC-25)

John J. Powers

John James Powers, born in New York City 3 July 1912, graduated from the Naval Academy in 1935. After serving at sea for 5 years, he underwent flight training, reporting 21 January 1941 to Bombing Squadron 5, attached to famed *Yorktown* (CV-5). As the fleet moved to prevent further Japanese expansion in the Solomons on 1942, Powers took part in the important raid on Tulagi 4 May, flying without fighter cover to score two hits on Japanese ships. As the main Battle of the Coral Sea developed 7 May, Lt. Powers and his companions discovered carrier *Shoho* and, bombing at extremely low altitudes, sank her in 10 minutes. Next morning while the great carrier battle continued, he joined the attack on *Shokaku*, scoring an important bomb hit. His intrepid, low-bombing run, however, brought Powers into heavy antiaircraft fire; and his plane plunged into the sea. Lt. Powers was declared dead; but, for his indomitable spirit in this series of attacks, was awarded the Medal of Honor posthumously. According to the citation: "... completely disregarding the safety altitude and without fear or concern for his own safety, he courageously pressed home his attack, almost to the very deck of an enemy carrier and did not release his bomb until he was sure of a direct hit."

(DE-258: dp. 1,140; l. 289'5"; b. 35'1"; dr. 8'3"; s. 21 k.; cpl. 186; a. 3 3", 4 1.1"; 9 20mm., 2 dcp., 8 dcp., 1 dcp. (h.h.) cl. *Evarts*)

John J. Powers (DE-528) was laid down 25 September 1943 by Boston Navy Yard; launched 2 November 1943; sponsored by Mrs. John J. Powers, mother of Lt. Pow-

ers; and commissioned 29 February 1944, Lt. Comdr. E. W. Loew in command.

After shakedown training off Bermuda, *John J. Powers* returned to Boston 19 April for antisubmarine exercises. She then steamed to New York to join a convoy for northern Europe, departing 2 May. The ship returned with another convoy 28 May 1944. With American troops and equipment building up in England for the cross-channel invasion, *John J. Powers* made a second convoy voyage, arriving Boston 2 August 1944. She then engaged in training followed by a coastal run from New York to Halifax and back.

The escort vessel got underway for Atlantic convoy duty again 19 September 1944, escorting a convoy of tankers and barges to England. Seven days later the alert ship rescued four crewmen from capsized Army tug *ST-719*. *John J. Powers* returned to New York 20 November and in December conducted special depth charge tests for the Bureau of Ordnance off New York and in Chesapeake Bay. In the months that followed, the ship made three more escort voyages to Casablanca, departing Mers-el-Kebir 7 May 1945, the day of the German surrender.

John J. Powers returned to New York 23 May 1945 and, after maneuvers in Casco Bay, Maine, arrived Miami 21 July for duty as a training ship. During August she provided tactical training for student officers in the Straits of Florida. The war over, *John J. Powers* sailed 8 September 1945 for Charleston, where she decommissioned 16 October 1945.

The ship was scrapped by Charleston Navy Yard in February 1946.

John J. Van Buren

John James Van Buren, born in Mukwonago, Wis., 20 July 1915, enlisted in the Navy 24 March 1938 and was appointed Aviation Cadet in the Naval Reserve 3 August 1938. Upon completion of fleet training, he was commissioned Ensign 1 September 1939 and assigned to Bombing Squadron 6 on board *Enterprise* (CV-6). He was awarded the Distinguished Flying Cross 11 March 1942 for heroic conduct in aerial combat during the operations against the Marshall Islands when the formation he was flying in was attacked by enemy fighters. Through skillful handling of his plane and excellent marksmanship, he shot down one of the attacking planes. Upon again being attacked by an enemy fighter, he maneuvered his plane to permit his rear seat gunner to shoot down this attacker before landing his bullet-riddled plane on *Enterprise*. During the Battle of Midway 4 June 1942, Van Buren defied extreme danger from concentrated antiaircraft fire and fierce fighter opposition to take part in the initial dive-bombing assault against Japanese naval units. Van Buren's plane did not return from this action. He was presumed dead. Lt. (j.g.) Van Buren received the Navy Cross for his bravery upon this occasion.

John J. Van Buren (DE-753) was laid down by Western Pipe & Steel Co., San Pedro, Calif., 31 August 1943; launched 16 January 1944; and sponsored by Mrs. J. J. Van Buren, widow of Lt. (j.g.) Van Buren. Construction of the uncompleted destroyer escort was cancelled 1 September 1944.

John James Audubon, see *Crater* (AK-70)

John King

John King, born in Ireland 7 February 1865, enlisted in the Navy as a coal passer in *Vermont* 20 July 1893. He served on board *Massachusetts* in the Caribbean during the Spanish-American War, and in 1900 was transferred to *Vicksburg* for service during the Philippine Insurrection. King received the Medal of Honor while in *Vicksburg* "for extraordinary heroism in the line of his pro-

fession at the time of the accident to the boilers . . . 29 May 1901." Eight years later, while a water tender in *Salem*, King received a second Medal of Honor during another boiler explosion 13 September 1909. Advanced to Chief Water Tender 1 October 1909, he continued to serve at sea until discharged in 1916. The beginning of World War I, however, brought Chief King back on active duty; he served at New York until 20 August 1919. He lived in retirement until his death 20 May 1938.

(DDG-3; dp. 3,370; l. 437'; b. 47'; dr. 22'; s. over 30 k.; cpl. 354; a. Tartar missiles, 2 5'', ASROC, 2 21'' tt.; cl. *Charles F. Adams*)

John King (DDG-3) was laid down by Bath Iron Works Corp., Bath, Maine, 25 August 1958; launched 30 January 1960; sponsored by Mrs. Paul J. Kilday, wife of Representative Kilday of Texas; and commissioned 4 February 1961 at Boston, Comdr. A. M. Sackett in command.

Following shakedown training out of Guantanamo Bay, Cuba, *John King* carried out weapons tests on the East Coast before arriving Norfolk 7 September 1961 for regular duty. One of a new class of guided missile destroyers, she featured latest hull design with all-aluminum superstructure and mounted the very latest in modern armament and electronic equipment. Departing 27 November 1961, the ship cruised to England and Northern Europe until 1 January 1962, when she sailed from Dublin for the Mediterranean. There, *John King* joined the 6th Fleet in its constant role of peacekeeping in this troubled region. After her return to Norfolk in April, the ship conducted missile firing exercises and training in the Caribbean. She arrived Washington 10 July 1962 for a 4 day stay, entertaining a group of Senators and Congressmen as well as Secretary of the Navy Korth.

Following additional exercises, *John King* entered Norfolk Navy Yard 11 October. Soon afterward, the introduction of offensive missiles into Cuba precipitated a crisis; and, as Navy ships placed a quarantine around the island, the ship quickly finished her repairs and joined the blockade 6 November. After the crisis eased, the ship remained in the Caribbean operating with the Navy's newest and biggest carrier, the nuclear-powered *Enterprise*. She returned to Norfolk 8 December.

John King departed for her second Mediterranean cruise 6 February 1963. After visiting various ports on 6th Fleet maneuvers, she steamed to Kiel, Germany, 23 June, then returned to Norfolk 17 July. The next twelve months were spent on training and readiness exercises off the Virginia Capes and in the Caribbean, including a week at the Antisubmarine Warfare School, Key West, in April.

The destroyer sailed for the Mediterranean once more 3 August and joined the 6th Fleet 16 August near the strife-torn island of Cyprus. She remained in the Mediterranean until the end of 1964.

John King returned to Norfolk 29 January and operated along the East Coast until sailing for the "Med" 14 October. Following 4 months of operations with the 6th Fleet, she returned to Norfolk 7 March 1966. In the summer she visited the Mediterranean and recrossed the Atlantic on NATO Exercise "Straight Laced." Back at homeport in the fall she operated out of Norfolk until sailing for another 6th Fleet deployment 10 January 1967. Her movements were concentrated in the Western Mediterranean until she sailed for home 11 May. Arriving Norfolk on the 19th, *John King* entered the Norfolk Naval Shipyard 27 June for an overhaul to prepare for future service.

John L. Lawrence

A former name retained.

(SP-838; t. 150; l. 157'8''; b. 21'2''; dr. 10'; s. 10 k.; cpl. 23; a. 2 1-pdrs.)

John L. Lawrence, built in 1877 at New London, Conn., was taken over by the Navy from Medhaden Products

prior to 8 June 1917. She commissioned 29 June 1917 for duty as a section minesweeper, operated with the mine force of the 2d Naval District, and engaged in coastal patrol duties. *John L. Lawrence* remained in the 2d Naval District until 16 March 1919 when she arrived for duty at Key West, Fla. She was assigned to the 3d Submarine Division where she engaged in exercises and torpedo drills with growing submarine force.

During 1920 her classification was changed to YT-38, and she arrived Philadelphia 10 August of that year to commence operations with the submarine repair division. *John L. Lawrence* remained in Philadelphia for ten months before she decommissioned 22 June 1921, and was sold 3 October of that year.

John L. Lockwood

A former name retained.

(SwStr: t. 180; l. 114'; b. 24'; dr. 6'6"; s. 11 k.; cpl. 30; a. 1 80-pdr. rifle, 1 12-pdr. rifle; 1 12-pdr.sb)

John L. Lockwood built at Athens, N.Y., in 1854; was purchased at New York City 1 September 1861; and commissioned at Washington 21 September, Acting Master William F. North in command.

John L. Lockwood was assigned to the North Atlantic Blockading Squadron 25 September with whom she steadfastly served throughout the war. She took station off the New York River 30 September and remained there on blockade duty until ordered to Hampton Roads to guard *Congress* and *Cumberland*. With *Shawshcen* she shelled Virginia infantry on Yorktown Road a few miles above Camp Butler 23 November.

The following day *John L. Lockwood* departed Hampton Roads for repairs at Baltimore, and she decommissioned upon arrival 25 November. Back in fighting trim, she recommissioned 6 December and returned to Hampton Roads. Assisted by *Morse*, she engaged three Confederate batteries on Sewell's Point 29 December.

John L. Lockwood was ordered to Hatteras Inlet 2 February 1862 to take part in combined operations which struck the Confederacy with heavy and costly blows wherever water reached within the North Carolina Sounds. She was with Flag Officer Goldsborough during operations against Roanoke Island 7 February bombarding Confederate positions with deadly effective fire. The next day with eight other ships she cut the chain connecting two vessels which obstructed the channel, thus clearing a passage for the Union ships into Albemarle Sound. This victory and the follow-up operations in the sounds severed Norfolk's main supply lines, secured the North Carolina coast, diverted important strength from the main Confederate Armies, and weakened the South's ability to resist at sea. At the end of the fighting, Captain Alex Murray who commanded Goldsborough's second column praised *John L. Lockwood* for being "conspicuously in the foreground throughout the bombardment."

With Roanoke Island secure, the fleet moved on to Elizabeth City, N.C., to destroy Confederate gunboats and interrupt the South's canal communications to the north of Albemarle Sound. The next major amphibious operation, the attack on Confederate batteries on the Neuse River 13 March, resulted in Union occupation of New Bern, N.C., on the 14th. On 23 April, with *Whitehead* and *Putnam*, *John L. Lockwood* blocked the mouth of the Chesapeake and Albemarle Canal near Elizabeth City, N.C., sinking a schooner and other obstructions inside the waterway.

She remained in North Carolina's inland waters patrolling the innumerable inlets and streams and assisting Army units ashore until sailing from Hatteras Inlet for repairs at Hampton Roads 3 September 1863. Refitting completed, *John L. Lockwood* departed Norfolk Navy Yard 8 January 1864 and arrived New Bern 14 January to resume duty in the sounds. She captured sloop *Twilight* at Elizabeth City, N.C. During most of her further service she was stationed at New Bern where after the war she

decommissioned 23 May 1865. She was towed to Baltimore late in May and thence taken to Washington 27 July. *John L. Lockwood* was sold at Washington to Mr. Crosset of New York 15 September 1865 and redocumented *Henry Smith* 3 April 1866. The Army purchased and renamed her *Chester A. Arthur* 30 June 1876.

John L. Manson, see BAK-3

John L. Sullivan, see YAG-37

John L. Williamson

John Leon Williamson was born 5 November 1921 in Ash, N.C., and enlisted in the Navy at Raleigh 11 July 1940. After recruit training, he was assigned to cruiser *San Francisco*. Williamson was on board the fighting cruiser during the attack on Pearl Harbor 7 December 1941 and the initial American amphibious assault of the war on Guadalcanal. He also took part in the American victory at the night Battle of Cape Esperance in October. On 12 November 1942 one of the many Japanese attempts to bombard American positions in the Solomons and to reinforce their own garrisons there resulted another great battle, the Naval Battle of Guadalcanal. Before the main engagement, *San Francisco* (CA-38) and other ships were attacked by torpedo bombers off Guadalcanal. Williamson, an antiaircraft gunner fired at an approaching torpedo plane, remaining at his station with cool determination as the enemy aircraft crashed directly at his gun mount. For his great courage in the face of this attack, Seaman First Class Williamson was awarded the Navy cross posthumously.

(DE-370: dp. 1,350; l. 306'; b. 36'8"; dr. 9'5"; s. 24 k.; cpl. 186; a. 2 5", 4 40mm., 10 20mm., 2 dct., 8 dcp., 1 dep., (h.h.), 3 21" tt; cl. *John C. Butler*)

John L. Williamson (DE-370) was laid down 22 May 1944 by Consolidated Steel Corp., Orange, Tex.; launched 29 August 1944; sponsored by Mrs. Sherman Register, sister of Seaman First Class Williamson; and commissioned 31 October 1944, Lt. Comdr. J. E. Allen in command.

Following shakedown training in waters off Bermuda, the new escort vessel arrived Boston 21 December 1945. Early in 1945 she received orders to join the Pacific Fleet, and got underway 3 January to steam via the Panama Canal to San Diego. There she arrived 19 January, and moved on to Pearl Harbor 28 January for training exercises. As Allied amphibious assaults struck ever-closer to Japan, *John L. Williamson* sailed 2 March with a convoy for Iwo Jima, arriving 20 March after a stop at Eniwetok. She took up antisubmarine patrol around the island for 4 days and anchored again at Eniwetok 28 March 1945.

After serving on a brief antisubmarine patrol off Eniwetok, the ship steamed to Majuro 5 April and for the next 3 weeks operated in the Marshall Islands. Air strikes and shore bombardments combined with surrender demands over loudspeakers were used to induce Japanese holdouts to give themselves up. *John L. Williamson* fired at shore batteries and emplacements at Mili, Alu, and other islands, taking off scores of prisoners and natives from these bypassed islands. She sailed from Majuro 24 April, and arrived Ulithi 5 days later for picket duty.

John L. Williamson remained on patrol duty around Ulithi with an occasional escort voyage to Eniwetok with troop transports until departing 15 July with a large convoy for Okinawa. She arrived Okinawa 21 July during the final stages of this, the last great island fight of the war, and after 2 days patrolling off the transport area returned to Ulithi 27 July. The ship made one more escort voyage to Okinawa in August, and was at anchor at Ulithi when the Japanese accepted surrender terms 15 August.

The destroyer escort sailed 22 August for Okinawa and Japan, arriving Wakayama 14 September to escort ships

through the swept channel and aid in occupation operations. After screening flight operations off Japan, she carried out courier duties between Wakayama and Yokosuka until she sailed for the United States 2 January 1946.

John L. Williamson arrived San Francisco 22 January 1946 and decommissioned 14 June 1946 at San Diego. She entered the Pacific Reserve Fleet there and in January 1947 was transferred to Stockton, Calif., where she remains.

John Land

A Maritime Commission name retained.

(AP-167: dp. 6,556; l. 459'2"; b. 63'; dr. 23'; s. 17 k.; cpl. 276; a. 1 5'; 4 3' 12 20mm.; cl. *La Salle*; T. C2-S-B1)

John Land (AP-167) was launched under Maritime Commission contract by Moore Dry Dock Co., Oakland, Calif., 22 January 1943; sponsored by Miss Mary K. Tyler; delivered in August 1943 for conversion at United Engineering Co., San Francisco; accepted by the Navy and simultaneously commissioned at San Francisco 8 April 1944, Captain F. A. Graf in command.

One of the many Maritime Commission ships used by the Navy under Bareboat Charter in World War II, *John Land* departed San Francisco 25 April with marines and sailors for the Pacific campaigns, arriving 2 May at Pearl Harbor for rehearsals preliminary to the invasion of the Marianas. She sailed for Eniwetok, the staging base, with Admiral Turner's Northern Force, arriving 8 June 1944. *John Land* was off Saipan early on D-day, 15 June, and conducted a feint landing off Garapan. Then, as the main landing progressed, the ship remained in the transport area, ready to land her troops as reinforcements. After debarking 16 and 17 June, *John Land* steamed off the island until returning to unload supplies 23 June. In the next 2 days, she received many casualties and departed for Eniwetok 26 June. The ship arrived 30 June, transferred the wounded to hospitals, and returned to Saipan 19 July to embark troops for the Tinian invasion, the next objective of Kelly Turner's amphibious team. *John Land* brought troops to Tinian from nearby Saipan 24 June to take part in another diversionary landing, this time off the town of Tinian; then, after re-embarking her landing units, *John Land* moved to the main landing area, after which she spent 2 days at Saipan embarking casualties.

John Land returned to Eniwetok 1 August, but 2 days later was underway for the Solomons and rehearsals leading up to the Palau landings. Her task group sortied from Guadalcanal 8 September, arriving off Peleliu 15 September and discharging troops. For the next week, the ship spent days in the transport area and nights in retirement off the island, as marines struggled to capture the strategic airfield needed for the coming assault on the Philippines. After loading casualties 22 September, *John Land* steamed to Humboldt Bay 25 September to prepare for the next giant step en route to Japan.

For the Leyte landings the transport was assigned to Admiral Barbey's Palo Attack Group; and, after practice landings in early October, *John Land* sailed 13 October. She was honored to carry President Osmena of the Philippines and his Cabinet, returning them to their homeland after almost 3 years of exile during the Japanese occupation. The transport entered Leyte Gulf 20 October, anchored in the transport area, and smoothly debarked her troops. At 1320, General MacArthur's boat came alongside for President Osmena and his party, carrying them to the beaches for their historic radio broadcast to the Philippine people. That afternoon *John Land* transferred her distinguished guests to *Blue Ridge* and departed for Hollandia, where she arrived 25 October. As she was anchoring, the guns of ships and planes were blazing in the final phase of the giant Battle for Leyte Gulf, spelling a virtual end to Japanese sea power.

After helping to repel an air attack 13 November, *John Land* returned on the 14th bringing reinforcements. The ship then sailed to Manus in preparation for the Luzon

landings. Again assigned to Admiral Barbey's assault force, the ship took part in rehearsals in New Guinea before departing for Leyte 28 December. Rendezvousing with other units of the massive task force, she proceeded through the Philippines under almost constant air attack and arrived off the San Fabian beaches 9 January 1945. There, while fighting off further air attacks, she debarked her soldiers and returned next day to Leyte. Through the rest of January and early February, *John Land* brought troops from New Guinea to Leyte and Mindoro, as the Philippines campaign pressed onward. She departed for Ulithi 15 February, arriving 3 days later for sorely needed rest and replenishment.

The veteran transport sailed 5 March for Iwo Jima, then nearly secured; and, after her arrival 9 March, she loaded troops and cargo. Departing 27 March, she proceeded via Eniwetok to Pearl Harbor, where she debarked troops, and thence to San Francisco, where she arrived 22 April. After repairs, she took on troops and sailed again for the western Pacific, touching at various Pacific bases before arriving Manila 26 July to unload cargo and debark troops. *John Land* was en route back to Pearl Harbor when word came of the end of the war 15 August. She arrived 2 days later to take on occupation troops and sailed 7 September via Saipan for Wakayama, Japan. These troops were disembarked 27 September, and the ship was assigned new duties with Operation "Magic Carpet," the giant task of returning the thousands of Pacific veterans to the United States. She arrived San Pedro with returnees 21 October, then sailed again 7 days later with Seabees and logistics personnel for the rebuilding of the Pacific Islands. Arriving Guam 12 November, she took on more veterans and arrived San Francisco 29 November.

John Land made three more "Magic-Carpet" voyages before arriving Seattle 5 July 1946. She decommissioned 5 August and was returned to the Maritime Commission next day. Originally sold to Waterman Steamship Co., the ship underwent various changes of name and ownership before being sold 23 May 1963 to Liberty Navigation & Trading Co., Inc., and renamed *Norberto Capay*.

John Land received five battle stars for World War II service.

John M. Bermingham

John Michael Bermingham was born in New York City 5 July 1905 and graduated from the Naval Academy in 1929. During the 1930's he served in many ships, including *Wyoming*, *Utah*, and *Augusta*, and at various shore stations. In 1940 he was assigned as Executive Officer of destroyer *Stewart* and at the outbreak of the war in the Pacific was second in command of the four-piper *Peary*. During the first Japanese attack on Cavite 10 December, *Peary's* commanding officer was wounded and Lt. Comdr. Bermingham took command. The ship was assigned to offshore patrol and came under heavy air attack many times in the days to come. Only brilliant seamanship during bombing and torpedo attacks 26 and 27 December saved her from destruction. Despite the Japanese air superiority, Bermingham succeeded in bringing his ship to Darwin, Australia, to operate with allied forces attempting to hold Malay Barrier. *Peary* operated with cruiser *Houston* in February, and was anchored at Darwin when the Japanese attacked with bombers 19 February 1942. Bermingham got his ship underway and attempted to maneuver in the restricted waters; but, despite valiant antiaircraft fire, his ship was hit with five bombs. Lt. Comdr. Bermingham and about 80 of his crew went down with the ship. He was posthumously awarded the Navy Cross for his courage and leadership while commanding *Peary* during this crucial early period of the war.

(DE-530: dp. 1,140; l. 289'5"; b. 35'1"; dr. 8'3"; s. 21 k.; a. 3 3", 4 1.1", 9 20mm., 2 dct., 8 dep., 1 dep. (h.h.); cl. *Everts*)

John M. Bermingham (DE-530) was laid down by Boston Navy Yard 14 October 1943; launched 17 Novem-

ber 1943; sponsored by Mrs. J. M. Bermingham, widow of Lt. Comdr. Bermingham; and commissioned 8 April 1944, Lt. M. Beerman in command.

The new destroyed escort conducted shakedown off Bermuda and arrived Charleston 9 June to begin her vital convoy escort duty. Departing 14 June, she escorted the ships to the English Channel; and, after steaming to Belfast 23 July, she returned to Boston 2 August 1944. She then underwent further training in Casco Bay before arriving New York 28 August to join an unusual convoy.

Bermingham sailed 19 September with other escort vessels to convoy a large group of Army tugs and barges for use in the important captured ports of northern France. During the arduous crossing, rough weather claimed several tugs and many of the vitally-needed harbor barges. Only a heroic effort on the part of escorting ships brought the remainder of the convoy to safety at Plymouth 20 October. After a week of searching for straggling barges, the ship joined a return convoy and arrived New York 21 November.

After training, *John M. Bermingham* was assigned to regular convoy runs between American ports and Oran, Algeria, in support of the giant land offensive underway in Europe. She made three voyages to Oran in the months that followed, arriving New York 29 May 1945. Her mission in Europe completed with the fall of the Axis, the ship arrived Miami, Fla., 20 July for duty as a school ship at the Naval Training Center.

John M. Bermingham sailed to Charleston after V-J Day, arrived 9 September, and decommissioned 12 October. She was scrapped in March 1946.

John M. Clayton, see *Harcourt* (IX-225)

John M. Connelly

Former name retained.

(AK: dp. 10,150; l. 380'; b. 50'9"; dr. 24'5"; s. 11 k.; a. 1 6', 1 6-pdr.)

John M. Connelly was launched 9 November 1917 by Pennsylvania Shipbuilding Co., Gloucester, N.J.; delivered to the Navy 5 May 1918; and commissioned 9 May 1918, Lt. Comdr. E. W. Sundstrom, USNRF, in command.

John M. Connelly departed Philadelphia 14 May in a convoy steaming toward Gibraltar, to replenish depleted supplies in the Mediterranean. After returning to Philadelphia in mid-July, the tanker made three additional cruises to English ports, transporting much-needed gasoline and oil. She returned to Philadelphia from her final passage 27 December, and decommissioned there 18 January 1919. *John M. Connelly* was returned to the USSB the same day.

John M. Howard

John Martin Howard was born 20 August 1917 in Chester, Pa., and enlisted in the Naval Reserve 22 June 1935. After training duty 1940-41 at the Naval Reserve Midshipman's School, Howard was appointed Ensign 28 February 1941. After serving at Washington Navy Yard and at the Bureau of Ordnance, Howard was assigned temporary duty at the American Embassy, London. He was killed 11 June 1942 as a result of an accidental mine explosion.

(IX-75: dp. 94; l. 87'; b. 20'; s. 9 k.)

John M. Howard (IX-75) was built in Camden, N.J., in 1934 as *Elsie Fenimore*, and purchased from her owner, E. R. Fenimore Johnson, 2 July 1942. She was placed in service at Philadelphia 29 July. Taken to Washington, D.C., and renamed *John M. Howard* 17 August 1942, she commissioned there 1 September 1942.

During the war the ship was used for ordnance experiments, operating out of Naval Ordnance Laboratory, Washington, D.C., to Chesapeake Bay and various Atlantic

coast ports. She decommissioned 9 May 1945 at the Washington Navy Yard and was placed in service until 16 November 1945. She was returned to the Maritime Commission for disposal 24 January 1946.

John Marshall

John Marshall, Chief Justice of the United States and principal founder of American constitutional law, was born 24 September 1775 at Germantown (now Midland) in Fauquier County, Va. A member of the Culpeper minutemen early in the Revolution, he entered the 3d Virginia Continental Regiment 30 July 1776 and served ably in a number of important campaigns, rising to Captain. He became a lawyer after the war, serving his state as a leader in the Assembly and in the new Federalist Party. He attracted attention from national leaders, and was offered several diplomatic posts, but preferred to remain in Virginia. In 1797, however, he accepted an appointment on a three man commission to negotiate with France. After French leaders demanded personal bribes in return for engaging in the negotiations, Marshall answered for his colleagues in a brilliant memorial which rejected this extortion and upheld the honor and dignity of the new country.

Elected to Congress in 1799, Marshall became Secretary of State 6 June 1800. Here he strongly opposed violations of American rights on the high seas and adopted a policy which necessitated a strong navy to give force to our diplomatic protests.

Appointed Chief Justice 20 January 1801, Marshall continued to serve as Secretary of State until the end of Adams' administration 4 March 1801. In the Supreme Court, Marshall made his greatest contributions to the development of American government. In a series of historic decisions, he established the judiciary as an independent and influential branch of the government equal to Congress and the Presidency. Perhaps the most significant of these cases was that of *Marbury v. Madison*, in which the principle of judicial review was simply stated by Marshall: "A legislative act contrary to the Constitution is not law." Then, as the young nation was endangered by regional and local interests which often threatened to tear it to shreds, Marshall again and again interpreted the Constitution broadly so that the Federal Government had the power to become a respected and creative force guiding and encouraging the nation's growth. For practical purposes, the Constitution in its most important aspects today is the Constitution as John Marshall interpreted it. As Chief Justice he embodied the majesty of the Judicial Branch of the government as fully as the President stood for the power of the Executive Branch. He died 6 July 1835, having served as Chief Justice for nearly 35 years.

(SSB(N)-611: dp. 6,900 (surf.), 7,900 (subm.); l. 410'5"; b. 33'; dr. 30'9"; s. over 20 k.; cpl. 112; a. 16 A-2 Pol. mis.; cl. *Ethan Allen*)

John Marshall (SSB(N)-611) was laid down 4 April 1960 by Newport News Shipbuilding & Dry Dock Co., Newport News, Va.; launched 15 July 1961; sponsored by Mrs. Robert F. Kennedy, wife of the Attorney General of the United States; and commissioned 21 May 1962, Comdr. Robert W. Stecher (blue crew) and Comdr. Robert D. Donovan (gold crew) in command.

John Marshall sailed 31 May 1962 for shakedown cruise off the East Coast. Following post-shakedown alterations in her builder's yard, she proceeded to her homeport, Charleston, S.C., arriving 15 December 1962. The ninth operational Fleet Ballistic Missile Submarine, she departed Charleston 31 December 1962 for her first Polaris

patrol in the Atlantic which terminated upon her arrival at her base at Holy Loch, Scotland, 8 March 1963. Based there, she completed her ninth patrol 15 January 1965 and immediately began preparations to sail again to defend her nation and the free world.

In the following years *John Marshall* made 17 successful Polaris patrols before beginning her first major overhaul at Newport News Shipbuilding and Drydock Co., 13 December 1966 to prepare for resuming her vigils late the following year.

John McHale

A former name retained.

(CIBt: t. 122; a. none)

John McHale, a wooden canal boat, was purchased at Philadelphia 19 July 1864 and sent to Commodore T. L. Dornin at Baltimore. There a group of vessels, including *John McHale*, was collected for sinking on the bar at Trent's Reach in the James River to secure General Grant's army against attack by water.

John Mitchell

A former name retained.

(CIBt: t. 114, a. none)

John Mitchell, a wooden canal boat, was purchased at Philadelphia 19 July 1864 to be sunk as an obstruction at

Trent's Reach in the James River to secure General Grant's army against attack by water. She was apparently sunk with seven similar boats 26 July.

John P. Gray

John Porter Gray was born in Kansas City, Mo., 22 December 1914, and enlisted in the Naval Reserve 12 October 1939. He was appointed Aviation Cadet in 1940 and underwent flight training. After commissioning, Gray served at several air stations, reporting to Torpedo Squadron 2 in October 1940. Later transferred for temporary duty to Torpedo Squadron 8 in *Hornet*, he took part in the pivotal Battle of Midway 4-6 June 1942. Gray and his companions gallantly attacked the Japanese ships without fighter cover and in the face of withering anti-aircraft fire. Though all were shot down, they succeeded in diverting enemy air cover and preventing further launches, thus contributing mightily to America's victory in the battle. Lt. (j.g.) Gray was killed 4 June during the attack. He was awarded the Navy Cross posthumously for his heroism, and shared in the Presidential Unit Citation awarded to Torpedo Squadron Eight for the Battle of Midway.

(APD-74: dp. 1,390; l. 306'; b. 37'; dr. 12'7"; s. 24 k.; cpl. 204; a. 1 5", 6 40mm., 2 dct.; cl. *Crosley*)

John P. Gray (APD-74) was laid down as DE-673 by Dravo Corp., Pittsburgh, Pa., 18 December 1943; launched 18 March 1944; sponsored by Mrs. Roy C. Gray, mother of

USS *John Marshall* (SSB(N)-611) departing Newport News

Lt. (j.g.) Gray; towed down the Ohio and Mississippi Rivers to be completed at Consolidated Shipbuilding Co., Orange, Tex.; and reclassified APD-74 on 27 June 1944. She commissioned there 15 March 1945, Lt. Comdr. W. E. Sims in command.

Following shakedown cruise to Guantanamo Bay, Cuba, during April and May, the ship arrived New London, Conn., 1 June, to escort Italian submarine *Ris Mameli* to Guantanamo Bay. From there *John P. Gray* proceeded via the Canal Zone to San Diego, arriving 19 June. She steamed to Pearl Harbor 2 days later, and spent July training underwater demolition teams on the island of Maui. In August she returned briefly to California to embark a UDT unit for duty; and, after a stopover in Hawaii, she arrived Eniwetok 30 August.

The war over, *John P. Gray* arrived Jinsen, Korea, 8 September to take part in occupation operations. Departing 14 September, the ship steamed via Guam and Eniwetok to Pearl Harbor, and was attached to "Magic Carpet," the giant operation undertaken to return to the United States the thousands of Pacific veterans. She made two voyages between Hawaii and San Diego, then departed 30 November for Norfolk. *John P. Gray* arrived Hampton Roads 13 December, and moved to Green Cove Springs, Fla., 25 January 1946. She decommissioned 29 April 1946 and entered the Atlantic Reserve Fleet. The ship berthed with the Texas group until struck from the Navy List 1 March 1967.

John P. Jackson

A former name retained.

(SwStr: t. 750; l. 192; b. 36'6"; dph. 12'; cpl. 99; a. 4 32-pdrs., 1 9" D.sb., 1 6" S.r.)

John P. Jackson was built at Brooklyn, N.Y., in 1860 and purchased by the Navy at Newark, N.J., from Jersey City Ferry Co. 6 November 1861. She commissioned at New York Navy Yard 14 February 1862, Lt. Selim E. Woodworth in command.

John P. Jackson was ordered to Key West 10 February to serve as one of the steamers in Comdr. David D. Porter's mother flotilla. On 30 March she arrived Ship Island from Key West as Flag Officer Farragut assembled vessels for his campaign against New Orleans. While Farragut labored to move his deep-draft, sea-going ships across the bar into the Mississippi, *John P. Jackson* was part of the task force which secured Pass Christian, Miss., 4 April. During the operation she joined *New London* and *Hatteras* in driving off Confederate steamers *Carondelet*, *Pamlico*, and *Oregon* as they attempted to prevent the Union landing which wrested the area around Biloxi, Miss., from the South. The same day *John P. Jackson* captured steamer *P. C. Wallis* with a cargo of naval stores.

She next escorted General Butler's occupation troop ships to the Mississippi passes while towing Army transport *Great Republic*. Leaving the Army vessels at the mouth of the Mississippi to await the outcome of the impending naval effort against New Orleans, *John P. Jackson* joined the mortar boats for the intense bombardment of Forts Philip and Jackson. The canonade began 18 April and lasted until Farragut's ships had safely passed the Confederate batteries 6 days later dooming the Southern riverside strongholds and the metropolis which they had fought to protect.

John P. Jackson again supported Farragut when he ran the gauntlet at Vicksburg almost 2 months later to meet Flag Officer Davis, who had battled south along the Mississippi valley. Braving the fire of skillfully used Vicksburg cannons, Porter's flotilla peppered the Southern emplacements with shell, grape, and shrapnel throughout the daring dash. During the fray *John P. Jackson* was hit twice by 7-inch rifle projectiles, leaving her without power and causing other serious damage. Moments later *Clifton*, coming to her aid with a towline, was struck in her starboard boiler; seven men were killed by scalding steam. *John P. Jackson* quickly lowered her

boats to save a number of other men who had been forced overboard by the steam.

After repairs at New Orleans, *John P. Jackson* was ordered to Mississippi Sound 30 September for reconnaissance work; and she served there throughout the remainder of the war. Fire broke out in her engineering spaces 8 October, but efficient and courageous damage control action extinguished the blaze and saved the ship. She captured sloop *Young Gustave* in Mississippi Sound 21 October, and diligently performed blockade duty in the months that followed. On 12 September 1863 she co-operated with *Genesses* and *Calhoun* in chasing steamer *Fanny* ashore where she was burned to prevent her falling into Union hands. The next day the same team engaged Confederate steamer *Jeff Davis*, forcing her to withdraw to the shelter of batteries at Grant's Pass. The Union vessels then silenced the Grant's Pass guns. *John P. Jackson* overhauled and took schooner *Syrena* bound from Biloxi to Pascagoula 21 October.

Admiral Farragut's next major objective was Mobile Bay. *John P. Jackson* was on hand at the outset of the campaign 16 February 1864 when she towed three schooners into position for the bombardment of Fort Powell and then joined in the cannonade. For the next 6 months she operated from New Orleans supporting the operations which culminated 5 August in Admiral Farragut's stirring victory.

John P. Jackson captured schooner *Medora* in Mississippi Sound 8 December 1864, and continued to serve in the West Gulf Blockading Squadron until after the end of the war. She departed Pensacola Navy Yard 26 July 1865 and 2 days later arrived New Orleans, where she decommissioned 5 September. She was sold at public auction in New Orleans to Marcy, Maury & Co. 27 September 1865. She was redocumented *J. P. Jackson* 3 October 1865 and was later abandoned in 1871.

John P. Kennedy

John Pendleton Kennedy, born in Baltimore 25 October 1795, graduated from Baltimore College in 1812 and fought in the Battles of Bladensburg and North Point in the War of 1812. Although admitted to the bar in 1816, he was much more interested in literature and politics than law. He published "Swallow Barn" in 1832 and "Horseshoe Robinson" in 1835 to win a permanent place of respect in the history of American fiction. He was an active Whig winning a seat in the Maryland House of Delegates in 1820. In 1838 he succeeded Isaac McKim in the House of Representatives but was defeated in his bid for reelection in November of that year. He was re-elected to Congress in 1840 and 1842; but, because of his strong opposition to the annexation of Texas, he was defeated in 1844. His influence in Congress was largely responsible for the appropriation of \$30,000 to test Samuel Morse's telegraph.

President Fillmore appointed Kennedy Secretary of the Navy in July 1852. While he held the office, four important naval expeditions were organized including that which sent Commodore Matthew C. Perry to Japan.

Kennedy retired from public life in March 1853 when President Fillmore left office, but he retained an active interest in politics and forcefully supported the Union. At the end of the Civil War he advocated amnesty for the South. He died at Newport, R.I., 18 August 1870.

(Sail: t. 350; cpl. 45; a. 1 24-pdr. how., 2 12-pdr. how.)

John P. Kennedy, the former wooden sailing ship *Sea Nymph*, was purchased at New York in 1853 to participate in an expedition to the North Pacific Ocean to explore for commercial and naval purposes waters in the area of the Bering Straits and the China Seas, which were "frequented by American whaleships and trading vessels in their routes between the United States and China." The expedition, under Comdr. Cadwalader Ringgold, besides supply ship *John P. Kennedy*, consisted of sloop-of-war

Vincennes (flagship), brig *Porpoise*, schooner *Fenimore Cooper*, and bark *John Hancock*.

John P. Kennedy departed New York 21 June 1853 and arrived Cape of Good Hope 10 September. She departed Cape of Good Hope 9 November with the expedition and arrived Batavia, Java, the day after Christmas. She took active part in surveying operations in Indonesian waters until putting in at Singapore 4 April 1854 en route to Hong Kong where she arrived 25 May for repairs. In August the high cost of placing her in good condition prompted Lt. John Rodgers, who had succeeded Commander Ringgold in command, to turn *John P. Kennedy* over to the East Indies Squadron to become a guard ship at the American Factory, Canton, China. The ship stood out of Hong Kong 20 August and arrived at her new station 2 days later.

After a violent storm 23 July 1855, *John P. Kennedy* assisted American ship *Isabella Catana* in getting afloat; and she aided survivors of a Chinese man-of-war after the ship caught fire and blew up 6 September. She departed Canton 20 October in tow of *Powhatan*, arriving Hong Kong the next day. She decommissioned there 31 October and was sold in November 1855.

John Paul Jones

John Paul was born at Arbigland, Kirkbean, Kirkcudbright, Scotland, 6 July 1747. Apprenticed to a merchant at age 13, the lad went to sea in brig *Friendship* to learn the art of seamanship. At 21 he received his first command, brig *John*. After several successful years as a merchant skipper in the West Indies trade, John Paul emigrated to the Continental British colonies and there added Jones to his name. In the summer of 1775, the Continental Congress commissioned him Lieutenant in the first American Navy. As First Lieutenant of *Alfred*, John Paul Jones was the first man to hoist the Grand Union flag on a continental warship, 3 December 1775. During the early part of 1776, he participated in the attack on New Providence, Nassau. Later that year, as Captain of *Providence* and *Alfred*, he made daring cruises between Bermuda and Nova Scotia, inflicting much damage on British shipping.

On 1 November 1777, he sailed for France in *Ranger*, carrying dispatches for the American commissioner and word of Burgoyne's surrender at Saratoga. Admiral La Motte Piquet returned Jones' salute at Quiberon Bay, France, 14 February 1778—the first time the new "stars and stripes" were recognized by a foreign power. *Ranger* subsequently raided the British coast and, in a notable engagement off Belfast, Ireland captured British sloop-of-war *Drake*.

Early in 1779, the French King gave Jones the ancient East Indiaman *Duc de Duras*, which he refitted and re-named *Bon Homme Richard*, as a compliment to Benjamin Franklin. Commanding four other ships and two French privateers he sailed 14 August 1779 to raid English shipping.

On 23 September 1779, his ship accompanied by *Pallas* engaged British *Scrapis* and *Countess of Scarborough* off Famborough Head, Yorkshire. During this bloody and desperate battle, Captain Pearson of the *Scrapis*, seeing the shambles on the deck of the *Bon Homme Richard*, asked if the American ship had surrendered. Jones's immortal reply "I have not yet begun to fight," served as a rallying cry to the crew of the badly-shattered *Richard*; and they went on to capture *Scrapis*. Jones was forced to transfer to *Scrapis* when his gallant *Bon Homme Richard* sank the next day. For this extraordinary victory, not only did Congress pass a resolution thanking him, but Louis XVI presented him with a sword.

After the war, Commodore Jones was active in Paris negotiating prize money claims. In 1788, he entered the service of Empress Catherine of Russia with the rank of Rear Admiral, but still retained his American citizenship. Although he successfully commanded the Black Sea Squadron, court intrigues forced Jones to leave Russia.

He returned to Paris in 1790 where he died 18 July 1792. The site of his burial was long forgotten; but American Ambassador Horace Porter began a systematic search for it in 1899. His body was eventually discovered, and in 1905 a special squadron of U.S. Navy ships brought it to America to be interred at the Chapel of the Navy Academy. Brilliant seaman, leader, and man of great courage, John Paul Jones was one of the true founders of the Navy's great traditions.

(DD-932: dp. 3907 fl.; l. 418' 5"; b. 45' 2"; dr. 14'; s. over 30 k.; cpl. 324; a. 3 5", 4 3", 4 21" tt., 1 dct.; cl. *Forrest Sherman*)

John Paul Jones (DD-932) was laid down 18 January 1954 by Bath Iron Works Corp., Bath, Maine; launched 7 May 1955; sponsored by Mrs. Robert B. Carney, wife of Admiral Carney; and commissioned at Boston 5 April 1956, Comdr. R. W. Hayler, Jr., in command.

John Paul Jones, second of the initial class destroyers of post-war design, conducted exhaustive shakedown training out of Guantanamo Bay, Cuba, after which she departed for a cruise to Northern Europe and the British Isles. During this voyage Commander Hayler and members of the crew visited the birthplace of John Paul and presented the ship's emblem to the people of Kirkcudbright. She returned to her home port, Newport, 8 October 1956.

The new destroyer departed for her first cruise with Sixth Fleet 25 March 1957. In May she took part in a graphic illustration of the power of that naval force, swiftly projected where needed, as leftist attempts to overthrow King Hussein of Jordan were foiled by American warships offshore. After helping to avert this crisis, *John Paul Jones* sailed for Newport once more, arriving 6 June 1957. NATO maneuvers in the North Atlantic followed in October. After another brief cruise to the Mediterranean, she arrived Fall River 27 November, and in January 1958 she took part in fleet exercises in the Caribbean.

In the spring of 1958 *John Paul Jones* operated with Canadian ships on training maneuvers in the Atlantic. After further training off the East Coast and in the Caribbean, she sailed again for the Mediterranean 17 March 1959. This tour with the vital 6th Fleet on its peace-keeping mission ended 24 July when the ship arrived Boston.

The year 1960 began with 2d Fleet operations out of Newport, and in June the destroyer embarked midshipmen for a training cruise. She then departed 22 August for a cruise to South America. As part of Operation "Unitas," she circumnavigated the continent, visiting many of America's southern allies and taking part in joint exercises with their navies. After transiting the Straits of Magellan and the Panama Canal, *John Paul Jones* returned to Newport 13 December 1960. During 1961 and 1962 the ship carried out antisubmarine exercises in the Caribbean and out of Newport. In April 1962 she took part in a fleet review and weapons demonstration for President Kennedy, and in July she again embarked midshipmen for training. In October 1962 the ship was on station with the Atlantic Recovery Forces during the orbital flight of Commander Schirra, and soon afterward moved off the coast of Cuba during the Cuban Crisis. As American naval power in the form of a quarantine forced the removal of offensive missiles from the island, the decisive role of the country's modern navy was again emphasized.

The following year saw the veteran ship embark on another Mediterranean cruise 6 February to 1 July; the remainder of 1963 was spent on antisubmarine exercises in the Atlantic.

Operations along the Atlantic Coast continued until *John Paul Jones* began another 6th Fleet deployment 20 June 1964. She operated primarily in the western Mediterranean, on ASW assignments until returning home 3 September 1964. Early in 1965 she participated in Operation "Spring board" in the Caribbean. In March the destroyer received a Gemini-recovery crane and on the 19th sailed for her recovery station some 200 miles south of Bermuda. She was to pick up astronauts Major Virgil Grissom and Lt. Cmdr. John Young and their space craft in the event that they ended their flight after two

Great Nov. 23. 1778.

I would my dear Sir have acknowledged the receipt of your favor of the 13th in time after its appearance on the 16th. Had I not been in expectation that by delaying it for a short time I should have been able to give you a satisfactory account both of my own affairs and of the situation of the Prizes in this Port.

The largest of these ships is a Philadelphia built about the size of the *Alfred*, and like that banded with a super abundance of Metal, being pierced for 20 guns in one Deck - looks well and would I think make a good *Slave* *Merchant* ship. - There are besides three other *Merchant* ships, and one *War* *Ship* now; - the ships are from one hundred to one hundred and fifty tons but the *War* *Ship* is more than the first mentioned. There now may be an hundred *Merchant* *Ships* there is also a new *White* *Ship* ^{built} now mounted with *Officers* on one Deck - but the *Officers* have not yet determined any thing respecting the time

136

or time of sale - nor are there any *Merchant* *Ships* made yet. If I can obtain for you any further information while I remain here you may depend on my attention to it. There is also here a *Merchant* *Ship* of about 50 or 60 tons that was an *East* *India* *Ship*. I have yet heard of no *Merchant* *Ship* for my Purpose. - And *India* *Ships* at present the nearest of any to the Dimensions is sold a few days ago. - I hear of one *Ship* there on the Rocks - there is however another *India* *Ship* of the same Dimensions with that lately sold - but this last, in opinion will be found too old having already made three Voyages to the Port. - I have not yet received any particular Accounts of the *Ship* building at Grandville or of those at Bourdeaux when convinced that it will be impossible for me to obtain one of the best *Ships* from the King's Yard. - I have already drawn the Thread as fine as it can well bear and I must not endanger its breaking. - No Man I believe ever ventured before to tell them such unvarnished Truths as I have lately done; I have done so with apparent temper, but they urge that to detach *Ships* from the Royal Marine in the present situation of affairs would be contrary to established Rules. If my end is answered it is but fair that they should choose the means and if you can find what is suitable to buy I have proposed to build. - I am glad to hear that Congress hath at last found leisure to inspect into the Conduct of Men in whom they have undeservedly bestowed power - may those injuries be general and trace effects in all up to their remotest Causes - that Public Virtue may be the ruling passion of every Man who has the Honor of serving his Country and that every Wretch who wants it may be held up to deserved Contempt. -

John Paul Jones -

I am affectionately yours &c

P.S. The Prizes are all sold up so that it is impossible to examine their stores

John Paul Jones writes to John Ross, a Scotsman sympathetic to the American cause.

IN CONGRESS

The DELEGATES of the UNITED STATES of New Hampshire, Massachusetts, Rhode-Island, Connecticut, New-York, New-Jersey, Pennsylvania, Delaware, Maryland, North-Carolina, South-Carolina, and Georgia, TO

John Paul Jones, Esq.,

WE, reposing especial Trust and Confidence in your Patriotism, Valour, Conduct, and Fidelity, DO, by these Presents, constitute and appoint you to be

~~of the name~~ ~~called the~~ ^{Captain} in the ~~Service~~ ^{of the Navy} of the United

States of North-America, fitted out for the Defence of American Liberty, and for repelling every hostile Invasion thereof. You are therefore carefully and diligently to discharge the Duty of ^{Captain}

by doing and performing all manner of Things thereunto belonging. And we do strictly charge and require all Officers, Marines and Seamen under your Command, to be obedient to your Orders as ^{Captain}

And you are to observe and follow such Orders and Directions from Time to Time as you shall receive from this or a future Congress of the United States, or Committee of Congress for that Purpose appointed, or Commander in Chief for the Time being of the Navy of the United States, or any other your superior Officer, according to the Rules and Discipline of War, the Usage of the Sea, and the Instructions herewith given you, in Pursuance of the Trust reposed in you. This Commission to continue in Force until revoked by this or a future Congress.

DATED at Philadelphia October 10th 1776.

By Order of the CONGRESS,

John Hancock

PRESIDENT.

ATTEST *Cha. Thomson*

John Paul Jones' appointment to Captain

rather than the three scheduled orbits. However, all went well so she returned to Norfolk 27 March without headlines.

John Paul Jones headed back to the Mediterranean 18 June for NATO exercises with units of the French, Greek and British navies. She returned to Norfolk 6 November, sailed to Philadelphia 2 December, and entered the Naval Shipyard and decommissioned 20 December for conversion to a guided missile destroyer. Reclassified DDG-32, she recommissioned in the fall of 1967.

John Penn

John Penn was born in Virginia 6 May 1740. He was admitted to the bar in 1761; and, after practicing in Virginia, moved in 1774 to Granville County, N.C. There Penn became active in public affairs, served for a brief time in the Provincial Congress, and was elected to the Continental Congress in 1775. Serving in Congress until 1780, he voted for and signed the Declaration of Independence. Penn became a member of the North Carolina Board of War in 1780 and returned to the practice of law in 1781. He died 14 September 1788.

(AP-51: dp. 9,360; l. 475'4"; b. 62'; dr. 26'; s. 16 k.; a. 15", 43", 820mm.)

John Penn (AP-51), formerly *Excambion*, was launched in 1931 by the New York Shipbuilding Co., Camden, N.J., for American Export Lines; acquired by the Navy 8 Jan-

uary 1942; and commissioned 6 April 1942, Captain Harry W. Need in command.

After fitting out and training, *John Penn* began preparations for what was to be one of the largest overseas expeditions ever undertaken; the North African Invasion. From 4 to 16 October 1942, *John Penn* loaded Army equipment, cargo, and troops, then topped off with fuel. She sortied from Hampton Roads 23 October with Admiral Hewitt's Western Naval Task Force. As a unit of Rear Admiral Monroe Kelly's Northern Attack Group, she arrived 8 November in the transport area off Mehdia, Western Morocco, where she began landing troops and putting cargo ashore. Although hampered by heavy surf and fire from enemy shore batteries, she unloaded with efficiency and dispatch. At 1053 an enemy aircraft attacked *John Penn*, but her after batteries quickly splashed the intruder. On 15 November she departed for Casablanca, arrived that same day, and unloaded the remainder of her cargo. She sailed for Norfolk 17 November, arriving the 30th.

John Penn departed Norfolk 17 December for deployment to the Pacific, arriving New Caledonia via the Canal Zone 18 January 1943. She departed New Caledonia 24 January; and touching at Espiritu Santo 3 days later, got underway to pick up survivors from *Chicago*, sunk off Guadalcanal 29 January. In all, she received 1,003 men and 63 officers, including Captain R. C. Davis, the lost cruiser's commanding officer. After debarking her grateful passengers at Noumea, New Caledonia, she spent the next 6 months delivering supplies, equipment, and troops

USS John Paul Jones (DD-932)—“Give Me a Fast Ship for I Intend To Go In Harms Way.”

JOHN G. M. STONE
24 KING GEORGE STREET
ANNAPOLIS, MARYLAND

21 Jan, 1965.

In early April, 1905 while in Paris with my Grandmother, Maria Porter Stone, she received a note from the U.S. Ambassador, General Horace Porter, telling her that it might be of interest to Jack if she brought him to the School of Medicine, because they had the body of Paul Jones.

When we arrived, there were a great many men present perhaps a dozen, maybe twenty, who were examining the body just removed from a lead casket. They were taking measurements, comparing it with two busts and a painting for positive identification. There was a feeling of awe in the room. Here were the almost life like remains of a man who had died in July, 1792. Uncle Horace said I could feel his

hand, I think it was his right one, from which the lead foil had been removed. With some reluctance (really a great deal) I held the hand. It was soft and pliable. I did not hold it long!

There was no shadow of doubt but the the body was that of John Paul Jones. And, in the nature of things, there is no other person alive at this time, 60 years later, who has seen and touched John Paul Jones, nor has there been for a number of years.

John G. M. Stone

R/Adml Ernest M. Eller, USN.

P.S. when first seen J. P. J. seemed alive. No photograph was made until about 2 days later - by that time his face had changed, due to exposure - no less.

to Guadalcanal from the New Hebrides, the Fiji Islands, and New Zealand. Reclassified APA-23 on 1 February 1943, she continued to bring supplies and troops into this bitterly contested island.

On 13 August *John Penn* had just finished unloading a cargo of 155-mm. ammunition off Lunga Point, Guadalcanal. At 2120 she came under attack by enemy torpedo planes. Three minutes later, when the transport took one of the planes under fire, it burst into flames and crashed into her mainmast. About that same instant a torpedo hit from another plane hit the ship. Although vigorous efforts were made to save her, *John Penn* went down stern first at 2150.

In her naval service, the transport had played a key role in the assault and occupation of French Morocco and contributed greatly to the struggle for Guadalcanal. In war there are always losses, but *John Penn's* crew, reassigned to other ships, took part in later decisive naval victories.

John Penn received one battle star for World War II service.

John Pope, General, see *General John Pope* (AP-10)

John Q. Roberts

John Quincy Roberts was born in Boaz, Ala., 2 September 1914 and enlisted in the Naval Reserve 14 October 1940. After undergoing flight training, he was commissioned Ensign 27 September 1941 and reported to Scouting Squadron 6. Roberts was serving with the squadron on famed *Enterprise* (CV-6) during the pivotal Battle of Midway, 4 through 6 June 1942, in which the Japanese lost all four of their carriers in a crushing defeat. Roberts pressed home the attack on the carriers despite formidable opposition, contributing importantly to the success of the squadron and the entire task force. He was declared missing in action 5 June 1942, and presumed dead. For his heroism in this critical battle, Ens. Roberts was posthumously awarded the Navy Cross.

(APD-94: dp. 1,390; l. 306'; b. 37'; dr. 12'7"; s. 24 k.; cpl. 204; a. 1 5", 6 40mm.; cl. *Crosley*)

John Q. Roberts (APD-94) was laid down 15 November 1943 as DE-235 by Charleston Navy Yard, Charleston, S.C.; launched 11 February 1944; sponsored by Mrs. Deany Roberts Garner, mother of Ens. Roberts; reclassified APD-94 on 17 June 1944; and commissioned 8 March 1945, Lt. Comdr. R. N. Bavier, Jr., in command.

Following shakedown training in the Caribbean, *John Q. Roberts* underwent amphibious training in Hampton Roads during April. She then got underway from Norfolk to join the Pacific Fleet, sailing 7 May. The ship arrived Pearl Harbor 31 May and trained with underwater demolition team units until proceeding to Leyte Gulf 13 June.

In the weeks that followed, the ship escorted convoys and took part in fleet maneuvers in the Philippines preparatory to the anticipated invasion of the Japanese home-islands.

The war over, *John Q. Roberts* departed Leyte 20 August to escort a convoy to Okinawa. From there she was engaged in escort duties between that island and Japan. The ship was at Yokosuka during the historic surrender ceremonies in Tokyo Bay 2 September, and remained in Japan transporting troops and administrative personnel carrying out occupation duties. After embarking returnees, she departed Nagoya 17 December 1945 and steamed via Eniwetok and Pearl Harbor for San Pedro, where she arrived 6 January 1946.

John Q. Roberts sailed 25 January for Norfolk, and from there to Green Cove Springs, Florida, where she arrived 17 March 1946. She decommissioned 30 May 1946 and entered the Atlantic Reserve Fleet; she sold for scrap 29 December 1960 to B. F. Diamond Construction Co., Inc., Savannah, Ga.

John R. Craig

John Rich Craig, born 13 September 1906 in Jacksonville, Fla., graduated from the Naval Academy in 1930 and received flight training the following year. During 1935 and 1936 he underwent submarine training. Prior to the outbreak of World War II, he commanded *R-17* (SS-94). He took command of *Grampus* (SS-207) 16 September 1942, and during the next 6 months he led the submarine on daring attacks against Japanese shipping. She sank two enemy transports and a cargo ship and damaged three enemy destroyers. While on her sixth war patrol, *Grampus* was lost in the Southwest Pacific with all hands 22 March 1943. Lt. Comdr. Craig was awarded the Navy Cross posthumously for his extraordinary heroism.

((DD-885): dp. 2,425; l. 376'6"; h. 41'1"; dr. 18'6"; s. 34.5 k.; cpl. 367; a. 6 5', 16 40mm., 20 20mm., 5 21" tt.; 6 dep., 2 dct.; cl. *Gearing*)

John R. Craig (DD-885) was laid down by Consolidated Steel Corp., Orange, Tex., 17 November 1944; launched 14 April 1945; sponsored by Mrs. Lilian Hyde Craig, widow of Lt. Comdr. Craig; and commissioned 20 August 1945, Comdr. L. G. Cornwell in command.

After shakedown in Caribbean *John R. Craig*, departed Charleston 19 January 1946 for San Diego arriving 1 February. She departed 7 February to join the 7th Fleet and assist in repatriating Japanese soldiers from North China. The destroyer returned San Diego 31 January 1947. In the years prior to the Korean conflict *John P. Craig* alternated Far Eastern deployments with periods of intensive training off the California coast.

As the conflict in Korea intensified, *John R. Craig* arrived in the combat zone 19 February 1951. She immediately commenced operations with Task Force 77, screening carrier strikes on enemy shore positions. During the Chinese Communist spring offensive the destroyer performed shore bombardment in the Wonsan area, knocking out enemy installations and disrupting transportation.

But for two brief periods in San Diego, she continued operations off Korea during the remainder of the conflict.

Following the cessation of hostilities, *John R. Craig* continued patrol operations south of the 38th parallel to insure peace in Asia. From 1954 to 1962 the destroyer engaged in exercises off the West Coast with annual deployments to the Far East.

During her 1955 cruise she took an active part in the evacuation of Chinese nationalists from the Tachen Islands. Subsequent cruises consisted of exercises with the Japanese Self Defense Force in 1957, ASW exercises, Formosa Patrol and maneuvers with the Chinese Nationalist Navy during the 1961 cruise. She arrived San Diego 6 March 1962 for a FRAM overhaul and received helicopter facilities. *John R. Craig* completed the overhaul 15 March 1963 and once again joined the Pacific Fleet. Following training exercises, the destroyer sailed 17 October for duty with the 7th Fleet. She immediately commenced patrol duty in the Formosa Straits to deter Communist aggression. She patrolled the Formosa Straits and visited Hong Kong; Subic Bay; Sasebo; Taiwan; and Okinawa before returning to San Francisco 19 May 1964.

John R. Craig operated along the West Coast until heading back to the Far East 6 March 1965. She left Sasebo 8 April to screen *Midway* during strikes against enemy targets in South Vietnam. But for a brief run to Subic Bay, she remained on this duty until 2 July. After a visit to Hong Kong she was designated flagship for a new naval gunfire support group. During the next 20 days he guns were rarely silent as she pounded enemy targets ashore. On 11 August she headed home and arrived San Diego exactly a month later. Her service during the year won her the Battle Efficiency "E" for DesRon 1.

After operations off Southern California, she entered Hunters Point Naval Shipyard 1 December for overhaul. Ready for action at the end of March 1966, she trained out of San Diego until sailing for the Far East 28 July.

On 13 September she entered the Gulf of Tonkin for plane guard duty. Ten days later she provided naval gunfire support for Operation "Golden Fleece" in Quang Nga; Province. Next came Operations "Sea Dragon" and "Traffic Cop", interdiction of supply from the North to the Demilitarized Zone. During this duty she engaged enemy shore batteries and shelled North Vietnamese radar sites.

The destroyer departed the Gulf of Tonkin 4 December and returned home early in 1967 to prepare for future action.

John R. Craig received four battle stars for Korean war service.

John R. Pierce

John Reeves Pierce, born in Cristobal, Canal Zone, 3 November 1906, graduated from the Naval Academy in 1928. Following flight training and submarine instruction, he served in Submarine *S-29* and studied marine engineering at the University of California. After serving in *Nautilus* (SS-168) and *Narwhal* (SS-167), he assumed command of *S-23* (SS-128) 15 February 1941. Appointed Lieutenant Commander 2 January 1942, Pierce on 22 June took command of *Argonaut* (SM-1), a transport submarine, which participated with *Nautilus* in carrying out the famed, diversionary Makin Island Raid from 17 to 19 August. On her third war patrol in the Southwest Pacific, *Argonaut* sighted an enemy convoy protected by planes and destroyers. Built as our first large minelaying submarine, she lacked proper submerged maneuverability during combat operations. When detected, she came under a vicious enemy attack. The gallant *Argonaut* surfaced and pressed home an aggressive counter attack, severely damaging a Japanese destroyer before succumbing to heavy enemy fire 10 January 1943. For his demonstration of courageous leadership and unyielding devotion to duty Lt. Comdr. Pierce was posthumously awarded the Navy Cross.

(DD-753: dp. 2,200; l. 376'5"; b. 41'1"; dr. 15'8"; s. 34 k.; cpl. 336; a. 6 5", 12 40mm., 11 20mm., 10 21" tt., 6 dep., 2 dct.; cl. *Sumner*)

John R. Pierce (DD-753) was laid down by the Bethlehem Steel Co., Staten Island, N.Y., 24 March 1944; launched 1 September 1944; sponsored by Mrs. Mary Taylor Pierce, widow of Lt. Comdr. Pierce; and commissioned 30 December 1944 at Brooklyn Navy Yard, Comdr. C. R. Simmers in command.

Following shakedown off Bermuda, *John R. Pierce* operated out of Norfolk during the spring of 1945, training destroyer crews and conducting ASW patrols along the eastern seaboard. She sailed 17 June for duty in the Pacific, arrived Pearl Harbor 6 July. Departing 12 August as escort for a carrier-cruiser striking force sent to attack Wake Island, she was ordered to cease offensive operations on the 15th. She then proceeded via Eniwetok to Japan and arrived Wakayama, Honshu, 15 September as escort for a convoy of occupation troops.

For the next 3 months she operated in the Japanese Inland Sea, covering occupation landings and assisting in the liberation of Allied POWs. She sailed 21 December from Kure, Honshu, to Shanghai, China, to support the Chinese Nationalists in their struggle with the Communists for control of the mainland. She also conducted the "North China Omnibus Courier Run" between China and Korea until 6 March 1946, when she departed Tsingtao, China, for the United States.

Arriving San Francisco 27 March, she deactivated 16 September. *John R. Pierce* then sailed for San Diego 17 January 1947, decommissioned 24 January and entered the San Diego Group, Pacific Reserve Fleet, 1 May.

John R. Pierce recommissioned 11 April 1949, Comdr. O. W. Goepner in command. Assigned to the Atlantic Fleet, she departed 11 July for Norfolk. Arriving 5 August, she commenced 12 months of Atlantic operations that extended from Greenland to the Canal Zone. Under the command of Cmdr. J. R. Wadleigh she cleared Norfolk 8 August 1950 for duty with the 6th Fleet. Before

returning to the United States 23 January 1951, she operated in the Mediterranean from Gibraltar to Crete and along the western coast of Europe from England to Norway.

For more than 15 months *John R. Pierce* operated out of Norfolk along the Atlantic coast; then she departed 15 May 1952 for duty in the Far East. Sailing via the Panama Canal, San Diego and Pearl Harbor, she arrived Yokosuka, Japan, 18 June. With Comdr. O. C. Foote, Jr., in command she sailed on the 20th for blockade and bombardment operations against Communist forces along the east coast of Korea. From Chongjin to Songjin she conducted interdiction firing and "anti-mine, anti-junk and anti-fishing" patrols. While engaging enemy shore batteries at Songjin 6 August, she sustained three hits from enemy fire but continued interdiction patrols until 11 October. She then departed for the United States via the Indian Ocean, Suez and Gibraltar, arriving Norfolk 12 December.

From 5 January 1954 to 1 April 1962 *John R. Pierce* deployed to the Mediterranean on six cruises of varying duration. When not conducting operations with the 6th Fleet, she operated out of her home port on training exercises and readiness operations in the Atlantic and the Caribbean. When in the Mediterranean, fleet operations carried her the length and breadth of the sea, and deployments in 1954 and 1956 sent her, in addition, to the coast of Western Europe.

Engaged primarily in conducting ASW barrier patrols and screening carrier flight operations, *John R. Pierce* responded quickly to international crises that threatened world peace. When the Communist-controlled Syrian Army threatened King Hussein's pro-Western government of Jordan during August and September 1957, destroyers, including *John R. Pierce*, patrolled the ancient sea lanes of the Eastern Mediterranean and the Red Sea to guard against possible intervention by Nasser's Egypt. She returned to the same area in December 1958 to bolster the security of Lebanon, recently threatened by the Soviet-backed United Arab Republic. And following the assassination of General Trujillo 27 May 1961, this versatile destroyer patrolled off the Dominican Republic, thus helping to stabilize a potentially explosive situation.

Returning to Norfolk 1 April 1962 from her seventh Mediterranean cruise, she sailed 15 May to participate in Project Mercury Recovery Operations following Comdr. M. Scott Carpenter's scheduled three orbital flight in "Aurora 7." On the 24th she steamed 206 miles at flank speed from her designated position in the Atlantic Recovery Area east of Puerto Rico and recovered the floating space capsule. After delivering it safely at Roosevelt Roads, Puerto Rico, the next day, she returned to Norfolk 28 May before resuming duty in the Caribbean.

Navy pilots discovered Russian offensive missile bases in Cuba 14 October. Deeming this Soviet capability a threat to our national security, President Kennedy ordered on the 22d an immediate sea and air blockade to prevent all offensive weapons from entering the island. In response to the President's call for a "quarantine of Cuba," the Navy deployed 90 ships into waters off Cuba to prevent further military buildup and to enforce American demands that the Russians withdraw their missile threat.

Under the command of Comdr. J. W. Foust, *John R. Pierce* departed Norfolk 22 October; joined the quarantine force on the 24th; and, during the next 5 days, investigated 13 ships. On 28 October the Soviets agreed to the American demands, thus alleviating a tense and crucial crisis. *John R. Pierce* departed from her assigned position the following day, but she continued a Caribbean sea-vigil from Jamaica to the Canal Zone until returning to Norfolk 14 December.

She departed home port 29 March 1963 for the Mediterranean and the Middle East. After 2 weeks of maneuvers with the 6th Fleet, she transited the Suez Canal 30 April and commenced an 11-week cruise through the Red Sea, the Arabian Sea, and the Persian Gulf. Returning to the Mediterranean 16 July, she resumed fleet

operations. On 14 August she rescued three survivors of a plane that splashed off her starboard bow while attempting an emergency landing on *Enterprise* (CVAN-65). Departing Palma, Mallorca, 24 August, she arrived Norfolk 4 September.

John R. Pierce spent the next year operating out of Norfolk; and during off-shore surveillance patrols in January 1964 she escorted five Cuban boats, which were illegally fishing in U.S. territorial waters, to Key West for internment. Once again she departed Norfolk for the Mediterranean 8 October. Reaching Naples late in the month, she joined the 6th Fleet and through the remainder of the year operated along the western coast of Italy.

John R. Pierce returned to Norfolk 27 February 1965. She reported to Commandant of the 3d Naval District in Brooklyn, N.Y., for duty as a reserve training ship and began a schedule of 2-week training cruises for naval reservists. She continued this duty into 1967.

John R. Pierce received one battle star for service during the Korean War.

John R. Perry

John R. Perry was born 24 May 1899 in Waco, Tex. He enlisted in the Navy for service in World War I, then entered the Naval Academy and was commissioned Ensign 8 June 1923. After serving in *Mareus* (DD-321), he earned a master's degree in civil engineering at Rensselaer Polytechnic Institute. He then served in the Bureau of Yards and Docks; in Cuba, the Great Lakes region, Florida, and the Philippines. He returned to the Bureau of Yards and Docks in 1938 and in 1941 became Director of Administration and Personnel. In this post he performed with such proficiency that he was awarded the Legion of Merit for remarkable initiative and excellent judgment in recruiting, organizing, training, equipping and distributing to outlying bases, the Navy's construction battalions. In the course of 1 year he made available for service in the field some 70,000 men who formed a vital component part of our military organization in World War II.

In 1944 Perry became Officer in Charge of the 2d Naval Construction Brigade with additional duty on the staff of Commander Service Force, U.S. Pacific Fleet. The following year, he additionally became Commander, Construction Troops of the 7th Fleet. He was awarded a second Legion of Merit for the development of the Leyte-Samar area into a large naval base and assisting in the planning and construction of an air station, air strips, a fleet hospital, the Navy Receiving Station at Tubabao, a Navy Supply Depot, an ammunition depot and a ship repair base at Manicani. Through his engineering ingenuity, he greatly improved transportation facilities, sanitary installations and water supply lines, lines of communication, housing accommodations, storehouses and dumps, docking facilities and dredging operations.

At the close of World War II, Perry became Public Works Officer at the Naval Academy until 1948. He then was designated Assistant Chief for Operations in the Bureau of Yards and Docks. In July 1951 he assumed command of the Naval Construction Battalion Center, Port Hueneme, Calif. From June to October 1953, he served as Director of the Pacific and Alaskan Division, Bureau of Yards and Docks, with headquarters at San Francisco. He then became Chief of Civil Engineers of the Navy and Chief of the Bureau of Yards and Docks, Navy Department, serving until he died of a heart attack 25 September 1955. Rear Admiral John R. Perry is buried in the Naval Academy Cemetery, Annapolis, Md.

(DE-1034; dp. 1,750; l. 310'; b. 37'; dr. 18'; s. class.; cpl. 167; a. 2 3''; 6 21'' tt.; 1 dct.; cl. *Claud Jones*)

John R. Perry (DE-1034) was laid down 4 January 1956 by Avondale Marine Ways, Avondale, La.; launched 29 July 1958; sponsored by Mrs. John R. Perry, widow of Rear Admiral Perry; and commissioned 5 May 1959, Lt. Comdr. W. L. Atkinson in command.

John R. Perry made a shakedown cruise to Northern Europe and Scandinavian countries, thence sailed to Guantanamo Bay, Cuba. She then became a school ship for the Fleet Sonar School, basing at Key West, Fla., for antisubmarine warfare operations that took her to principal Caribbean and Gulf ports, sailing as far east as the Azores, and up the eastern seaboard to Norfolk. She was one of the Atlantic Fleet's warships responding to the President's call for a quarantine of Cuba (24 October-20 November 1962), which was being developed as a Soviet offensive base. She patrolled off the island to help choke off the flow of military supplies to Cuba and enforce American demands for the withdrawal of Soviet missiles. After American demands were substantially complied with, the persuasive tentacles of force were withdrawn.

John R. Perry resumed sonar schoolship duties out of Key West which continued through 1965. This principal service was interrupted by overhauls in the Charleston Navy Yard, special antisubmarine warfare tactics in the Caribbean and along the eastern seaboard with Task Force *Alpha*, and joint operations with units of the Venezuelan Navy (2-8 February 1964). During these years *John R. Perry* has helped train the men of the Navy in the latest ASW techniques and has steadily perfected her own ability to defend the Nation against the threat of a growing Soviet submarine force.

John R. Perry was transferred to the Pacific Fleet 1 May 1966. She departed Key West on the 16th, transited the Panama Canal 3 days later, and arrived Pearl Harbor 4 June to operate in the Hawaiian area through mid-1967.

John Rodgers

John Rodgers, born near present Havre de Grace, Md., 11 July 1772, entered the Navy as Second Lieutenant 8 March 1798 and was assigned to *Constellation*. He helped capture French frigate *L'Insurgente* 9 February 1799 and took command of her as prize master. He was promoted to Captain 5 March 1799 and 3 months later took command of *Maryland*. In March 1801 he transported the ratified French-American Peace Treaty to France.

Placed in command of *John Adams* the following year, he sailed for the Mediterranean to attack Barbary forts and gunboats at Tripoli. His brilliant record fighting the corsairs won him appointment as Commodore of the Mediterranean Squadron in May 1805.

A year later he returned to the United States to take command of the New York Flotilla. After the Embargo Act was passed at the close of 1807, Rodgers commanded operations along the Atlantic coast enforcing its provisions.

In the spring of 1811, upon word that a British ship was impressing American seaman off Sandy Hook, N.J., Commodore Rodgers, in *President*, was ordered to investigate. On 16 May he defeated British corvette *Little Belt* in a spirited engagement which foreshadowed his brilliant success in the forecoming war with England.

On the sixth day of the War of 1812, still in *President*, Rodgers drove off British frigate *Belvidera* and chased her for 8 hours before she escaped. During the remainder of the war he captured 23 prizes and on land rendered valuable service defending Baltimore during the attack on Fort Henry.

Following the war, Rodgers headed the Board of Navy Commissioners until retiring in May 1837. Commodore Rodgers died in Philadelphia 1 August 1838.

John Rodgers, son of Commodore John Rodgers, was born near Havre de Grace, Md., 8 August 1812. He entered the Navy as a midshipman 18 April 1828. Service in the Mediterranean on board *Constellation* and *Concord* opened his long career of distinguished service. In the mid-1850's he succeeded Comdr. Ringgold in command of the North Pacific Exploring and Surveying Expedition, which added greatly to our knowledge of far eastern and northern waters.

In the early months of the Civil War, Rodgers organized the Mississippi Flotilla and supervised construction of

the first ironclad gunboats on the western rivers. He took command of ironclad *Galena* in April 1862 and operated with distinction in the James River while supporting General McClellan's Peninsular Campaign. He was promoted to Captain 16 July 1862 and transferred to monitor *Weehawken*. In her he distinguished himself during the attack on Fort Sumter and in capturing Confederate ram *Atlanta*. The latter service won him the thanks of Congress and promotion to Commodore.

After the war, Rodgers commanded the Boston Naval Station until 1869. He was elevated to Rear Admiral in December 1869 and given command of the Asiatic Squadron. In this post he ably handled diplomatic duties in addition to his naval responsibilities. Back in the United States he commanded Mare Island Naval Station and the Naval Observatory. He died in Washington 5 May 1882.

John Rodgers, great grandson of Commodore Rodgers, was born in Washington 15 January 1881 and graduated from the Naval Academy in 1903. His early naval career included service on ships of various types before studying flying in 1911 and becoming the second American naval officer to receive a pilot's license.

He commanded Division 1, Submarine Force, Atlantic Fleet in 1916; and, after the United States entered World War I, he commanded the Submarine Base at New London, Conn.

Following the war, he served in European waters and received the Distinguished Service Medal for outstanding work on minesweeping operations in the North Sea. After several important assignments during the next 5 years, he commanded Aircraft Squadrons, Battle Fleet, in *Langley* in 1925. That year he made the first attempt at a non-stop flight from California to Hawaii. In command of seaplane PN-9, he departed San Pedro 31 August, but a fuel shortage forced his plane to land short of her destination 1 September. While ships searched for the plane, Comdr. Rodgers led his crew in improvising sails from the plane's wing material to continue the trip afloat. Finally, 9 days later, after sailing the plane to within 15 miles of Nawiliwili Bay, Kauai, Rodgers hailed Submarine *R-4* and was towed into port.

After this experience, he served as Assistant Chief of the Bureau of Aeronautics until killed in an airplane crash 27 August 1926.

The first *John Rodgers*, a lighthouse tender, was built in Newburgh, N.Y., and taken over by the Navy at the beginning of World War I under Executive Order of 11 April 1917 which placed the Lighthouse Service under Navy control. She was assigned to the 3rd Naval District and operated there until the Lighthouse Service was returned to the Department of Commerce 1 July 1919.

II

(DD-574: dp. 2,050; l. 376'5"; b. 39'8"; dr. 13'; s. 35 k.; epl. 273; a. 5 5", 10 40mm., 7 20mm., 10 21" tt., 2 dct., 6 dcp.; cl. *Fletcher*)

The second *John Rodgers* (DD-574) was laid down by Consolidated Steel Corp., Orange, Tex., 25 July 1941; launched 7 May 1942; sponsored by Miss Helen Perry Rodgers, daughter, great grandniece, and great granddaughter of the ship's namesakes; and commissioned 9 February 1943, Comdr. H. O. Parrish in command.

After shakedown in the Caribbean, *John Rodgers* departed Norfolk 13 May escorting a convoy through the Panama Canal to Pearl Harbor. Following a short training period there, the destroyer joined the screen of a fast carrier task force in August during damaging raids on Marcus Island, Tarawa, and Wake Island which also gathered invaluable information for future landings.

Then, in a joint cruiser-destroyer force, she sailed for Empress-Augusta Bay to support landings on Bougain-

ville 1 November. While screening the transports there a week later, she assisted *Santa Fe* in splashing a Japanese torpedo plane.

From this action she joined the destroyer screen of the Southern Attack Force for the invasion of the Gilbert Islands. She protected the transports during the landings on Betio Island 20 November and remained in the area supporting the brave marines ashore until Tarawa Atoll was secure.

Late in December the destroyers sailed to Pearl Harbor to prepare for the next major offensive. *John Rodgers* departed Pearl Harbor 22 January 1944 headed for the Marshall Islands. Profiting from experience gained in previous engagements, the Navy launched a well-coordinated attack on Kwajalein Atoll 31 January. In addition to providing antiaircraft and antisubmarine protection, *John Rodgers* supported the landing forces with gunfire which knocked out enemy troop concentrations and pill boxes. After the last resistance disappeared 7 February, the destroyer patrolled the Marshall Island area until late March.

During April she acted as escort for ships bringing men and weapons as American forces surprised the enemy at Hollandia. Naval fire support helped ground troops to secure airfields giving the United States a closer base for future attacks on the remaining Japanese held islands.

In May *John Rodgers* operated out of Guadalcanal screening convoys and bombarding enemy positions. Early in June she sailed to the Marshall Islands to prepare for the Marianas Campaign and departed Eniwetok 17 July with the Guam invasion force. Beginning 21 July, *John Rodgers* fired more than 3,600 rounds at targets on Guam helping to knock out enemy troop concentrations and defensive works. The destroyer remained in the Marianas until 4 August and provided antisubmarine screen for transports bringing reinforcements.

In August *John Rodgers* began preparations for the Morotai Invasion and departed Humbolt Bay 14 September to support and screen the landings there. After this operation, which provided the only Allied base from which to stage short-range fighters and bombers to Leyte, she remained on patrol duty in the area.

John Rodgers returned to Hollandia 2 October to prepare for the long-awaited invasion of the Philippines. She got under way for Leyte 13 October and arrived to support landings 7 days later. Now commanded by Comdr. J. G. Franklin, she screened the ships carrying General MacArthur and his troops back to the Philippines. As American fighting men moved inland and took two important airfields, the destroyer provided fire support and patrolled the area.

Meanwhile, risking all to save the Philippines, Japan committed her entire remaining naval force to battle. The U.S. Navy met this challenge by routing the Japanese in the decisive Battle for Leyte Gulf, and reducing their once powerful navy to a mere shadow of its former strength.

Following this historic action, *John Rodgers* departed the Philippines 30 October for Mare Island, Calif., and a badly needed overhaul. Rejuvenated by early January 1945, the destroyer sailed west to join Admiral Spruance's Task Force 58 on 7 February for final offensive operations against the enemy. Carrier strikes on the Japanese homeland began 16 February and, in 2 days of relentless air attacks, destroyed nearly 800 enemy planes.

Then *John Rodgers* turned toward the Bonin Islands to screen a fast carrier task force covering the invasion of Iwo Jima 19 February. Although air raids and heavy guns knocked out many enemy defensive works, the island was well enough fortified to make the Navy pay a high price in lives and weapons for this vital stopover for B-29 bombers raiding Tokyo.

Following Iwo Jima, *John Rodgers* resumed duty with the fast carrier task force raiding Japan while awaiting the invasion of Okinawa, last and greatest amphibious operation of the Pacific war. *John Rodgers* operated with the carriers as they continued to bomb both Japan and Okinawa. She began screening operations as the first as-

sault wave hit the beach 1 April. She stood by protecting the carriers and splashed two kamikazes as they dived toward the flattops. She remained in the area supporting operations until Okinawa was finally secure 21 June.

As the war closed, *John Rodgers* screened the 3d Fleet during almost continuous raids on Japan. Late in July she operated with Destroyer Division 25 on the Suruga Wan antishipping sweep and penetrated to within 1½ miles of the Japanese shoreline, probably the closest approach made by surface ships during the entire war. Admiral Halsey congratulated the division commander who had led the sweep on board *John Rodgers*: "Loud applause to you and your boys for a well planned sweep conducted in the best destroyer tradition. You have been enrolled on the emperor's blacklist."

Following the atomic bombing of Hiroshima and Nagasaki and the subsequent collapse of Japan, the indefatigable destroyer screened transports carrying occupation troops into Tokyo Bay 6 September. The triumphant entry into Tokyo was a fitting and well-deserved climax for *John Rodgers* who had fought in almost every major offensive campaign of the Pacific war without losing a single man.

Her stay was brief, however, as she sailed for home and arrived Boston 17 October. She moved to Charleston, S.C., 3 November, decommissioned there 25 May 1946, and entered the Atlantic Reserve Fleet. Moved to Philadelphia in 1954, at present she is berthed in Texas where she remains ready to answer any future call to duty.

John Rodgers received 12 battle stars for World War II service.

John S. Darrel, see *Shabonee*

John S. McCain

John Sidney McCain was born in Teoc, Miss. 9 August 1884 and graduated from the Naval Academy in 1906. His first assignments were ships of the Asiatic Squadron. During the American occupation of Vera Cruz in the Mexican revolution he served in *San Diego*, and remained on the ship during 1918 while she performed Atlantic escort duty.

In the years between the World Wars, McCain served in many ships, including *Maryland*, *New Mexico*, and *Nitro*. His first command was *Sirius*. In 1936, at the age of 51, he was designated a Naval Aviator, and from 1937 to 1939 he commanded carrier *Ranger*, contributing much to the development of carrier tactics for the war to come. For the first year of World War II he served as Commander of Air Forces for Western Sea Frontier and the South Pacific Force. In October 1942 McCain became Chief of the Bureau of Aeronautics and in August 1943 rose to the rank of Vice Admiral as Deputy Chief of Naval Operations (Air).

In 1944 he returned to the Pacific Theatre to command a fast carrier task force which for over a year operated almost continuously in support of the great amphibious operations. His exceedingly skillful tactics protecting *Canberra* (CA-70) and *Houston* (CA-81) in October 1944 earned him the Navy Cross, and the daring forays of his mobile force had much to do with the eventual victory. Vice Admiral McCain died 6 September 1945, just after arriving back in the United States, and was later appointed Admiral effective that date. For his outstanding performance as an air planner and carrier task force commander he was awarded the Distinguished Service Medal

USS *John Rodgers* (DD-574) at Charleston, S.C., 29 April 1943

U. S. S. Galena off Harrison's Bay
July 4th 1862

Sir

Every thing is quiet and goes on finely - I send a sketch of the position of the Gun boats - The Army is in high spirits - They are entrenching their front and by noon will be thoroughly ready for all comers -

" I feel anxious about the navigation - I fear that the enemy may occupy the bluffs which command the Channel below us; this would be inconvenient at the least -

" The enemy are at Haxhalls above City point - they sent up a balloon this morning - but it remained up only a few moments - The Monitor and Maratanga will make a reconnaissance this evening in that direction -

" If Capt. Mc Kinstry and Jenkins are in charge of the river below this, I can bring more vessels here to guard our flanks -

" At present there are eight only - two up the river - four down and the Galena and Port Royal, as a reserve, to throw these force where needed - The Stepping Stones I shall use to carry orders -

" This is the present arrangement of the vessels - or was this morning - The Monitor and Maratanga have gone above City point on a reconnaissance -

At East end of base opposite Jordan Pt.	At East end of base opposite Windmill Pt.	Reserve to move to either end of base
Maratanga	Arrows Tooth	Galena
Yankee	Monitor	Port Royal

I have not seen the Dacotah nor the Wachusett. These powerful vessels, will, if they remain below, allow the Mohaska and Morse to move up here.

It is now too late I hope for the enemy to attack the army here with any chance of success - The troops are in good spirits and every one seems confident.

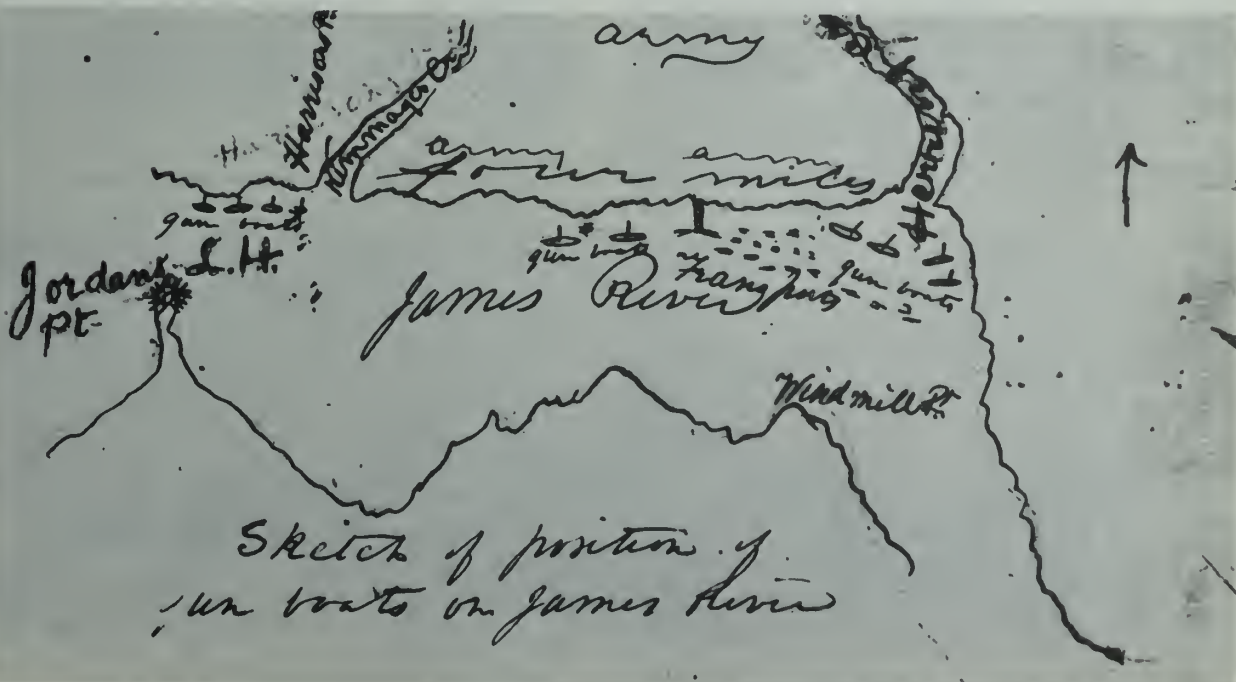

I have the honor to be
Very Respectfully
Your Obedt. Servant

To Flag Officer

L. M. Goldsborough

John Rodgers
Commander

with two Gold Stars, Secretary Forrestal commented: "He was a fighting man all the way through."

(DL-3: dp. 3,675; l. 493'; b. 50; dr. 13'10"; s. over 30 k; cpl. 403; a. 2 5", 4 3", 4 21" tt., 1 ASROC, 1 dct.; cl. *Mitscher*)

John S. McCain (DL-3), originally designated DD-928 but reclassified in 1951, was launched by Bath Iron Works Corp., Bath, Maine, 12 July 1952; sponsored by Mrs. John S. McCain, Jr., daughter-in-law of Admiral McCain; and commissioned 12 October 1953 at Boston Naval Shipyard, Comdr. E. R. King in command.

John S. McCain spent the first year of her commissioned service undergoing sea trials and shakedown training in the Atlantic and Caribbean. One of the new *Mitscher* class of large and fast destroyer leaders, she carried the latest in armament and embodied new ideas in hull design and construction. The ship arrived Norfolk 19 May 1955 to begin service with the Operational Development Force in testing new equipment and tactics. She operated out of Norfolk until 5 November 1956, when she steamed from Hampton Roads bound for the Panama Canal and San Diego. After her arrival 4 December 1956 she spent 5 months on maneuvers in California waters.

The frigate sailed for her first Far East cruise 11 April 1957, and after a visit to Australia joined the Formosa Patrol, helping to prevent a military clash between Nationalist and Communist Chinese forces. She returned from this important duty to San Diego 29 September 1957.

John S. McCain steamed to a new homeport, Pearl Harbor, in early 1958, and took part in fleet maneuvers and antisubmarine training for the next 8 months. In early September the ship deployed to the Formosa-South China Sea area to help the 7th Fleet deter a possible Communist invasion of Quemoy and Matsu Islands. She remained in this critical region until returning to Pearl Harbor 1 March 1959, having again demonstrated the power of the 7th Fleet to defend United States and her allies.

The veteran ship made her third deployment to the Far East in the fall of 1959, departing 8 September and moving directly to the coast of troubled Laos. Here again the presence of American ships helped to stabilize the situation. During October she was off Calcutta, India, carrying antibiotics and donating food and money to flood victims. In January 1960 the versatile ship rescued the entire 41-man crew of Japanese freighter *Shinwa Maru* during a storm in the South China Sea. Returning to Pearl Harbor 25 February, she began a well-earned period of overhaul and shipboard training.

John S. McCain departed 7 March 1961 for another deployment with 7th Fleet, spending 6 months off Laos and Vietnam helping to thwart Communist designs on the strategic area. She resumed operations in Hawaiian

waters after her return to Pearl Harbor 25 September 1961. With the resumption of atmospheric nuclear testing by Russia some months later, the United States went ahead with plans for her own series of Pacific tests, and *John S. McCain* steamed to Johnston Island 27 April 1962 to take part in the experiments. For the next 6 months she operated between Hawaii and Johnston Island, departing for her next cruise to the Far East 28 November 1962. There she returned to patrol duties in the South China Sea and Gulf of Tonkin, buttressing the South Vietnamese government in its fight against the Viet Cong. She also took part in Formosa Patrol in the Straits before returning to Pearl Harbor 16 June 1963. Antisubmarine warfare exercises followed, and the ship got underway again 23 March 1964 for operations with a hunter-killer group in Japanese and Philippine waters. During this cruise she took part in exercises with ships from other SEATO nations as well as units of the 7th Fleet. *John S. McCain* returned to Pearl Harbor 11 August. She operated in Hawaiian waters until the spring of 1965. She was reclassified DDG-36, 15 April and returned to the West Coast. In August the frigate returned to Pearl Harbor, and then sailed on a 6-month deployment in the western Pacific. In the fall, *John S. McCain* steamed off South Vietnam. On 24 November she shelled Viet Cong positions. Two days later she sailed to Hong Kong and ended the year in Japan preparing for further action in the cause of peace and freedom.

After further operations in the Orient early in 1966, *John S. McCain* returned to the East Coast and in June decommissioned for conversion into a guided missile destroyer, DDG-36, at the Philadelphia Naval Shipyard, Philadelphia, where she remained into 1967.

John Sealey

(StTug: t. 113; l. 88'10"; b. 20'6"; dr. 9'9"; s. 10 k.; a. 2 1-pdrs.)

John Sealey, a steam tug built in 1910 at West Lake, La., was acquired from D. M. Picton 25 April 1917; used briefly as a mine sweeper; and returned to her owner early in 1918.

John W. Crittenden

(SlvBar: dp. 726; l. 128'2"; b. 27'; dr. 10'6"; a. none)

John W. Crittenden (No. 3224) was a wooden-hulled sailing salvage barge built in 1900 by A. C. Brown, Tottenville, N.Y.; purchased 11 September 1918 from Meritt & Chapman Dredge & Wrecking Co., N.Y., for service to the 3d Naval District. She was sold to her previous owner 15 May 1919.

John W. Matton (YN-52), see *Tamaque* (YNT-20)

John W. Thomason

John William Thomason, Jr., was born 28 February 1893 in Huntsville, Tex. He studied art and was a writer in the editorial department of the *Houston Chronicle* at the beginning of World War I. Appointed Second Lieutenant in the Marine Corps in April 1917, he sailed to France with the AEF in 1918. When a German machine gun nest held up a Marine advance at Soissons 18 July 1918, Thomason and one of his men fearlessly advanced on the position and killed 13 of the enemy. For his heroism he received the Navy Cross and the Silver Star. He likewise became noted for his stirring self-illustrated accounts of marines in battle. Following the First World War he served at many posts of the Corps ashore and afloat and in 1941 made an extensive air survey of South and Central America, for which he received the Air Medal. He served briefly on the staff of Admiral Nimitz in the Pacific and as an instructor in amphibious technique. Promoted to Colonel 30 May 1942, he died at San Diego Naval Hospital 12 March 1944. During his entire career, John William Thomason, Jr., continued to be active as a writer and illustrator, publishing numerous books about marines and on western subjects.

(DD-760: dp. 2,200; l. 376'5"; b. 41'; dr. 15'8"; s. 34 k.; cpl. 336; a. 6 5", 16 40mm., 20 20 mm., 2 det., 6 dep., 5 21" tt.; cl. *Allen M. Sumner*)

John W. Thomason (DD-760) was launched by Bethlehem Steel Co., San Francisco, Calif., 30 September 1944; sponsored by Mrs. John W. Thomason, widow of Colonel Thomason; and commissioned 11 October 1945, Comdr. W. L. Tagg in command.

The new destroyer conducted shakedown training out of San Diego, followed by a series of Naval Reserve training cruises from Seattle and San Francisco. From November 1947 to December 1948 the ship carried out training maneuvers. She sailed 5 December 1948 for her first deployment to the Far East, arriving Tsingtao 1 January 1949 for operations supporting the marines ashore in China. Departing 24 May 1949, *John W. Thompson* returned via Okinawa to San Diego 23 June 1949 and spent the remainder of the year training.

The ship returned to the Far East in early 1950, arriving Yokosuka 29 January. During this critical post-war period, she operated with British ships on training maneuvers off the coast of Indochina and Korea, returning to San Diego 25 April 1950. Two months later, North Korean aggression plunged the United States and the United Nations into the Korean conflict. *John W. Thomason* sailed 30 September to join the 7th Fleet, operating in the screen of carrier task groups pounding Communist positions and supply lines. She arrived Wonsan 9 November to patrol and bombard during the campaign against that port. Antisubmarine exercises took her to Pearl Harbor January-March 1951, but *John W. Thomason* arrived off Korea again 26 March to operate with *Bower* (CV-21) and *Princeton* (CV-37) during air strikes. Two weeks in April were spent on the important Formosa Patrol, after which she returned to the carrier task force. With battleship *New Jersey* and another destroyer, she moved close in 24 May 1951 for gun bombardment of Yang Yang. The veteran ship returned to San Diego from this deployment 2 July 1951.

John W. Thomason sailed again for Korea 4 January 1952 and resumed operations with Task Force 77 off the coast of North Korea. She fired at railway targets 21 February in the Songjin area. During this period of stalemate on land, Navy strikes made up the bulk of offensive operations. The destroyer returned to Formosa Patrol duty in April. Back at Songjin and Wonsan 26 April, the ship screened larger units, took part in shore bombardment, and patrolled offshore. She was relieved by a British destroyer 21 June and returned to San Diego 11 July 1952.

The destroyer operated off the California coast for the

remainder of 1952, then sailed once more for Korea 21 February 1953. Formosa Patrol duty alternated with carrier task force operations off North Korea. *John W. Thomason* arrived Wonsan harbor 2 July; while firing at shore targets five days later, she received numerous shrapnel hits in a duel with enemy batteries. Maneuvering in the restricted waters, Commander Ratliff skillfully returned the fire until three batteries had been silenced. She continued to operate off Wonsan until the armistice 27 July, and after a brief stay in Japan arrived San Diego 22 September 1953.

In 1954, 1955, and 1956 *John W. Thomason* returned to the now-familiar waters off Korea and in the explosive Formosa Strait, serving with 7th Fleet to keep the peace and protect American interest in the strategic area. The first half of 1957 was spent in readiness exercises off San Diego. *John W. Thomason* then sailed 29 July for a cruise which took her to Pago Pago, Auckland, and Manus. Upon arrival Yokosuka 7 September 1957 she resumed operations in the Formosa Straits and antisubmarine exercises with 7th Fleet ships. The ship returned to San Diego 8 January 1958, and conducted maneuvers off California and Hawaii.

In March 1959, *John W. Thomason* entered Long Beach Naval Shipyard as prototype ship for the new FRAM (Fleet Rehabilitation And Modernization) program. During this extensive repair and modernization period she received a helicopter deck and hanger aft, variable depth sonar, the latest electronic equipment, and many improvements in living and working spaces. The conversion was followed by extensive trials and local training operations. As new flagship of Destroyer Division 72, she sailed 8 March 1961 for 7th Fleet duty. She sailed to the coast of Laos 27 April to help stabilize that volatile Southwest Asian country, patrolling for 21 days in a graphic demonstration of America's determination to prevent a Communist take-over. After further operation *John W. Thomason* sailed to San Diego, arriving 18 September 1961.

Extensive conversion and installation of new sonar equipment at Long Beach occupied the ship until July 1962. In December she took part in a massive anti-aircraft exercise with units of the 1st Fleet off California. She sailed again for the Far East, a part of the ready-hunter-killer group. En route, however, she took part in recovery operations for Major Cooper's Mercury Space shot as part of a task unit built around veteran carrier *Kearsarge*. During the cruise which followed, the ship perfected her antisubmarine warfare tactics and became familiar with her new equipment in operations with 7th Fleet and the Japanese Maritime Self-Defense Force. *John W. Thomason* returned to San Diego 3 December 1963.

Most of 1964 was spent in ASW exercises in the Eastern Pacific. On 23 October, she sailed with Destroyer Division 213 for redeployment exercises in Hawaii. Exactly a month later, with four other destroyers, she got under way for the western Pacific screening *Yorktown* (CVS-10), arrived Yokosuka, Japan, 4 December and joined the 7th Fleet in its unrelenting effort to preserve freedom in the Far West. In the spring she earned her first battle star for operating in the troubled waters off the coast of Indochina from 21 March to 28 April 1965.

After returning to the West Coast, she departed San Diego for the Far East 22 March 1966 and reached Danang 19 April and the same day took station a few miles south of Chu Lai. At the end of April she supported Operation "Osage," and landed north of Danang. On 13 May she sailed for Sasebo and upkeep. Back in the war zone 6 June, she provided gunfire support and supported Operation "Deckhouse I" from 17 to 23 June. That day she retired toward Hong Kong. The destroyer returned to gunfire support duties off South Vietnam 16 August. From the 18th to the 23d she supported the amphibious Ready Group and Special Landing Force in Operation "Deckhouse III." After visiting Guam and Japan, *John W. Thomason* headed home 9 September, reached San Diego on the 24th and operated off the West Coast until the

end of the year and into 1967 preparing for further action in the defense of freedom.

John W. Thomason received seven battle stars for Korean service and three for Vietnam service.

John W. Weeks

John Wingate Weeks, born near Lancaster, N.H., 11 April 1860, was appointed to the Naval Academy 27 June 1877 and graduated 10 June 1881. After serving on *Powhatan* and *Richmond*, he returned to civilian life 30 June 1883 and distinguished himself as a civil engineer, financier, and political leader. From 1890 to 1900 he served in the Massachusetts Naval Brigade.

When War with Spain broke out, Weeks returned to the Navy as a Lieutenant, 23 April 1898. He was attached to *Minnesota* and served as Assistant to the Chief of Auxiliary Naval Force. After the end of the war, Weeks was discharged 28 October 1898. He was placed on the Massachusetts Volunteer Militia retired list as Rear Admiral 10 April 1900.

In 1904 Weeks was elected to the U.S. House of Representatives where he served until entering the Senate in 1913. In the 1916 Convention of the Republican Party Weeks received 105 votes for the presidential nomination. He became Secretary of War 4 March 1921 and held that post until illness forced him to resign 13 October 1925. He died at Lancaster, N.H., 12 July 1926.

(DD-701: dp. 2,200; l. 376'6"; b. 40'; dr. 15'8"; s. 34 k.; cpl. 336; a. 6 5", 12 40mm., 11 20mm., 2 dct., 6 dcp., 10 21" tt.; cl. *Allen M. Sumner*)

John W. Weeks (DD-701) was laid down 17 January 1944 by Federal Ship Building & Dry Dock Co., Kearny, N.J.; launched 21 May 1944; sponsored by Mrs. John W. Davidge, daughter of Secretary Weeks; and commissioned 21 July 1944, Comdr. Robert A. Theobald, Jr., in command.

After shakedown out of Bermuda and tests en route to Argentina, Newfoundland, the new destroyer departed New York 10 November 1944 escorting battleships *Missouri* (BB-63), *Texas* (BB-35), and *Arkansas* (BB-33) and escort carriers *Shamrock Bay* (CVE-84) and *Wake Island* (CVE-65) to the Pacific. She transited the Panama Canal and touched San Francisco, Pearl Harbor, and Eniwetok before joining the 3d fleet at Ulithi 27 December.

Early in January 1945, *John W. Weeks* sortied from that busy lagoon with Vice Admiral John S. McCain Fast Carrier Task Force TF 38 and headed toward the Philippines in the screen of Rear Admiral Gerald F. Bogan's task group. Meanwhile, the mighty Luzon Attack Force assembled in Leyte Gulf on New Year's Day, passed through Surigao Strait, and set course for Lingayen Gulf. On the 9th, as General MacArthur's troops stormed ashore on the beaches at Lingayen, planes from McCain's carriers hit Japanese airstrips on Formosa and the Pescadores to neutralize air opposition to the Luzon invasion. That night McCain's ships slipped through Luzon Strait into the South China Sea where they could be on call to support the Allied beachheads while striking strategic enemy positions along the southeastern coast of Asia and searching for the Imperial Fleet. In the next 10 days they lashed out at Hong Kong, Hainan, and the Indochinese coast causing much damage ashore and sinking 44 ships totaling 132,700 tons. At the end of this sweep into enemy waters Admiral Halsey reported, "the outer defenses of the Japanese Empire no longer include Burma and the Netherlands East Indies; those countries are now isolated outposts, and their products are no longer available to the Japanese war machine . . ." *John W. Weeks*, proud of her role in this daring incursion into the South China Sea, returned with her carriers to Ulithi on the 28th.

The destroyer again sailed with the carriers 11 February, and conducted strikes on Tokyo 16 and 17 February in preinvasion support of the Allied attack on Iwo Jima. After inflicting considerable damage to Japanese air power, *John W. Weeks* steamed toward Iwo Jima to give direct support to marines fighting for the island. Later

that month the carriers renewed their attacks on the enemy's home islands. Heavy raids during March continued to cripple the enemy's power and the destroyer received credit for two assists as five enemy planes were splashed while attempting a raid on the Task Force.

When D-day for the Okinawa invasion neared, *John W. Weeks* in company with other units shelled the shores in preinvasion bombardment. The assault forces landed in 1 April and the destroyer stood by to offer support. On 7 April a Japanese surface force was located, and strikes were launched to intercept the enemy, resulting in the sinking of the battleship *Yamato*. During these operations the carrier *Hancock* (CV-19) was hit by a kamikaze and the destroyer rescued 23 survivors in a heroic rescue mission.

For the remainder of the war, *John W. Weeks* participated in the final assault on the Empire Islands, engaging in radar picket duty, shore bombardment, rescue missions and the antishipping sweep off Tokyo Bay. Following the cessation of hostilities, she steamed into Tokyo Bay 8 September to begin escort operations with the occupation forces. She continued escort duty until 30 December when she sailed for home, arriving San Francisco 20 January 1946. The destroyer arrived Norfolk 19 February and following repairs she was inactivated 26 April.

One year later, 17 May 1947, she sailed once again and commenced Naval Reserve training cruises until mid 1949. On 6 September of that year she sailed for Europe returning 8 February 1950. *John W. Weeks* decommissioned 31 May 1950.

When the North Korean Communists invaded South Korea, President Truman ordered American forces into action to take up the challenge. *John W. Weeks* recommissioned 24 October 1950 and commenced training cruises in the Atlantic and Caribbean. During her European Cruise January 1952, she participated in the attempt to save ill-fated *Flying Enterprise* which foundered and sank in a 90-mile gale 10 January 1952. The destroyer returned to Norfolk 6 February to engage in coastal operations and a midshipmen European cruise.

John W. Weeks sailed on an around the world cruise 3 November 1953, and while in the Far East she operated with units of the 7th Fleet off the coast of Korea. She completed the cruise when she returned via the Mediterranean arriving Norfolk 4 June 1954. From 1954 to 1963 the destroyer operated with the Atlantic Fleet and during this period made five Mediterranean cruises and two NATO exercises.

John W. Weeks was operating with the 6th Fleet during 1956 when a crisis erupted in the Mid East over the Suez Canal. The destroyer remained on patrol—a concrete symbol of American interest in a peaceful outcome. One year later on another Near Eastern deployment, *John W. Weeks* and other units stood by to prevent subversion of Jordan. The Mediterranean cruise of 1958 included patrol duty and exercises with navies of Bagdad-Pact countries. The destroyer was also active in U.S. waters, busy with midshipmen at-sea training and antisubmarine exercises. During 1959 she participated in Operation "Inland Seas" during the opening of the St. Lawrence Seaway. *John W. Weeks* was the first Navy destroyer to enter each of the Great Lakes. During this cruise she escorted HMY *Britannia*, with the Queen of England aboard, from Chicago to Sault Ste. Marie, Mich.

On 9 March 1960, the destroyer, in company with *Ault* (DD-698), transited the Bosphorus; and the two became the first U.S. warships to enter the Black Sea since 1945. On the same cruise she rendezvoused with *Triton* at the end of the nuclear-powered submarine's cruise round the world.

After returning to Norfolk, the destroyer visited the Caribbean and the New England Coast on midshipman training at sea. In the fall she deployed to the Mediterranean and returned to Norfolk 3 March 1962. Midshipman training in the summer and exercise out of Norfolk kept the ship in fighting trim and ready for action.

In October the presence of Soviet offensive missiles in Cuba prompted President Kennedy to order a quaran-

tine of the island. *John W. Weeks* escorted replenishment ships to the quarantine area. When this display of national strength and determination forced the Kremlin to withdraw the missiles, *John W. Weeks* returned via San Juan, P.R., to Norfolk.

Early in 1963, while preparing for another Mediterranean deployment from February to April, the destroyer received the Battle Efficiency "E" for outstanding service. She headed for the Mediterranean 29 November. The end of the year found her patrolling off troubled Cyprus, standing by ready to evacuate, if necessary, Americans from that strife-torn island. On New Year's Day en route to the Red Sea to join that U.S. Middle East Force, she was the first ship to transit the Suez Canal during 1964. She visited Jidda, Saudi Arabia; Berbera, Somali Republic, Aden, Aden Protectorate; Djibouti, French Somaliland; Massawa, Ethiopia; and Karachi, Pakistan. She headed west from Karachi 6 February; refueled at Aden; then turned south for patrol along the Zanzibar coast during the revolution there, and off Kenya and Tanganyika during unrest in those countries. She departed Mombasa, Kenya, 24 February and transited the Suez Canal 6 March. After patrolling the Mediterranean, *John W. Weeks* departed Pollenca Bay, Majorca, for home 12 May and reached Norfolk on the 23d.

After overhaul in Norfolk Naval Shipyard, the destroyer departed Hampton Roads 9 November for Guantanamo Bay and refresher training. She returned to Norfolk early in January 1965 to prepare for another Mediterranean cruise. She got underway 18 February and arrived Valencia, Spain, 5 March. She stopped at Naples for a fortnight en route to the Suez Canal and 2 months of duty in the Red Sea. Back in the Mediterranean 2 June, the destroyer headed for home 30 June and returned to Norfolk 12 July.

Late in the summer, the destroyer was on the Gemini 5 recovery team. For the remainder of the year, she operated out of Norfolk in the Caribbean and along the Atlantic Coast. She continued ASW exercises in the Caribbean until returning to Norfolk 3 February 1966. After serving as sonar school ship at Key West during March and April, the veteran destroyer departed Norfolk 16 May for European waters.

Steaming with DesRon 2, *John W. Weeks* during the next 3 months cruised the western coast of Europe from Norway to France. She took part in ASW exercises, and during Operation "Straight Laced," a simulated invasion of the Norwegian coast, she operated with British and West German ships. While carrying out ASW duty during this exercise, she made the only simulated submarine kill in the operation 19 August. Departing Londonderry, Northern Ireland, 24 August, she returned to Norfolk 2 September. During the remainder of the year she served as school ship at Key West and joined in ASW exercises along the Atlantic Coast and in the Caribbean.

John W. Weeks continued this duty until early in July 1967 when she departed Norfolk for deployment in the South Atlantic and Indian Oceans. Steaming via San Juan, Puerto Rico, and Recife, Brazil, she touched at African ports on the east and west coasts of that continent and ranged Africa from the Gulf of Guinea to the Red Sea while cruising in the interest of peace and freedom.

John W. Weeks received four battle stars for World War II service.

John Willis

John Harlan Willis was born 10 June 1921 in Columbia, Tenn. Upon graduation from high school in 1940 he entered the Navy and received training as a hospital corpsman. He served at naval hospitals at Paris Island, S.C., Jacksonville, Fla., and Norfolk, Va. In 1943 he joined the Field Medical School Battalion and the following year reported for duty at the Fleet Marine Force, Oceanside, Calif. In December 1944 he departed with the invasion force bound for Iwo Jima as Platoon Corpsman for the 3d Battalion, 27th Regiment, 5th Marine Division. While administering first aid to wounded Marines, engaged in "furious close-in fighting" at Hill 362 on 28 February 1945, Willis was struck by shrapnel and ordered to retire to a battle aid station. Returning shortly to his company, he advanced to the "extreme front lines under mortar and sniper fire" during a "savagely hand-to-hand enemy counterattack." While administering blood plasma to a wounded Marine, Willis hurled back at the enemy eight grenades which landed near his patient. The ninth one exploded in his hand and killed him instantly. "By his great personal valor in saving others at the sacrifice of his own life, he inspired his companions, although terrifically outnumbered, to launch a fiercely determined attack and repulse the enemy force." "For conspicuous gallantry and intrepidity at the risk of his life above and beyond the call of duty," Pharmacist's Mate First Class John Harlan Willis was awarded the Medal of Honor posthumously.

(DE-1027: dp. 1,270; l. 314'6"; b. 36'9"; dr. 9'1"; s. 25 k.; cpl. 170; a. 6 3", 1 dct., 6 dep., 1 ASW rkt.; cl. *Dealey*)

John Willis (DE-1027) was launched by the New York Shipbuilding Co. of Camden, N.J., 4 February 1956; sponsored by Mrs. Winfrey M. Duke, widow of John Willis; and commissioned at Philadelphia Naval Yard 21 February 1957, Lt. Comdr. H. O. Anson, Jr., in command.

John Willis reported to Newport, R.I., 7 April for duty with the Atlantic Fleet. Following 2 months of shakedown along the Atlantic coast and in the Caribbean, she departed Guantanamo Bay, Cuba, 7 June for a 5-week cruise to Northern Europe that carried her to Dutch, German, and Danish ports on the North and Baltic Seas. Upon her return to Newport 14 July, she commenced 10 months of ASW exercises along the Atlantic coast in preparation for deployment with the 6th Fleet in the Mediterranean.

She steamed from Newport 12 May 1958 for the Mediterranean; and following her arrival at Gibraltar 21 May, she sailed with units of the 6th Fleet to participate in joint NATO antisubmarine exercises in the Eastern Mediterranean. The pro-Western government of Iraq fell to Arab nationalists 14 July, and on the 15th President Chamoun of Lebanon requested U.S. aid to thwart the possible overthrow of his government. In response President Eisenhower dispatched the 6th Fleet to Lebanon and ordered Marines to land at Beirut to protect "Lebanon's territorial integrity and independence." *John Willis* joined the Lebanon Patrol 18 July and for the next 2 months remained on intermittent patrol. As the Middle East crisis eased in September, *John Willis* departed the Eastern Mediterranean 14 September and sailed for the United States, putting into Newport 7 October.

On 29 November she entered the New York Shipyard to receive an experimental model of the Variable Depth Sonar (VDS) and thus became the first of the destroyer escorts to employ this latest development in ASW equipment. Resuming her operations 4 February 1959, she spent the remainder of 1959 and the early part of 1960 testing and evaluating the new equipment and conducting ASW exercises along the Atlantic coast from Newfoundland to Key West. Following a demonstration of the VDS for the Second Inter-American Naval Conference at Key West in late May, *John Willis* joined the Atlantic Fleet for 4 months of American and NATO Operations "Sea Spray" and "Sword Thrust," in the North Atlantic. She retired

Johnnie Hutchins

to Plymouth, England, 2 October but on the 10th rejoined the NATO forces for Exercise "Pipe Down."

John Willis returned to Newport 20 October and resumed coastal operations. On 8 May 1961 she sailed to Guantanamo Bay for patrol duty along the Windward Passage of the Caribbean. Following the assassination of Dominican Dictator Trujillo 27 May, she conducted patrols along the coast of the Dominican Republic. She departed the Caribbean 25 June and sailed via Key West for homeport. She returned to the Caribbean 2 December after participating in the recovery of the Project Mercury MA-5 spacecraft, which on 29 November twice orbited the earth with a chimpanzee, Enos, on board.

In response to a request for aid by President Balaguer, who feared that supporters of slain Dictator Trujillo would topple the democratic government in the Dominican Republic, President Kennedy ordered units of the Atlantic Fleet into the area to illustrate America's support for the established government. *John Willis* sailed to the Dominican Republic 2 December and commenced 7 days of patrol duty after which she returned to Newport to prepare for another cruise to Northern Europe.

She sailed for Portsmouth, England, 8 January 1962 and reached the English coast 19 January. While sailing the North Sea on the 23d enroute to Horton, Norway, she assisted units of the British Navy during search and rescue operations for stricken Norwegian ship, *Eystein*. *John Willis* put into Horton 24 January and for 3 weeks sailed to several Norwegian ports while officers and engineers of the Norwegian Navy studied the construction details and operational characteristics of this *Dealey* class DE, which had been selected as the prototype for five new Norwegian warships. Upon completion of her Norwegian cruise, she sailed 15 February for the United States and arrived Newport 3 March.

John Willis resumed ASW and convoy escort exercises out of Newport and during August received additional ASW equipment. Following 4 months of extensive overhaul, she steamed to the Caribbean 1 March 1963 for an operational readiness inspection. After returning to Newport 8 April, she commenced operations 15 April with a NATO force of 30 ships, engaged in ASW Exercise, "New Broom Eleven," in the North Atlantic. After her return to Newport 25 April, she began 6 months of intermittent training in preparation for an Atlantic Fleet amphibious Exercise, "Phibaswex," scheduled for December. During this training period she conducted convoy escort and ASW maneuvers from Narragansett Bay to Guantanamo Bay; she attended the ASW Tactical School at Norfolk; and she served as a training ship at the Fleet Sonar School at Key West. While engaging in maneuvers designed to detect and destroy nuclear submarines, *John Willis* provided search and rescue assistance 23 September for a MATS plane, which was lost in the North Atlantic on a flight from Dover, Del., to the Azores.

John Willis steamed from Newport 2 December with Escort Squadron 10 and joined Task Force 180 for amphibious exercise at Vieques in the West Indies. During this exercise she conducted barrier patrols and practiced the latest ASW techniques against nuclear and conventional submarines. On the 17th she was released from the completed exercise and she returned to Newport.

For the next 3 years *John Willis* continued to operate along the Atlantic Coast and in the Caribbean while taking part in squadron exercises and serving as school ship at Key West. During the latter half of 1964 and 1965 she participated in UNITAS V and UNITAS VI and made two cruises along the coasts of South America as part of the U.S. sponsored "People-to-People" Program. Between January and June 1966 she underwent extensive overhaul at Boston where she received DASH capabilities and communications alterations; thence she resumed refresher and readiness training out of Newport. Assigned to Escort Squadron 8, she deployed to European water 29 May 1967. After arriving off the Norwegian coast early in June, she operated along the coast of Western Europe during the next month before sailing to join the ever ready and powerful ships of the 6th Fleet in the Mediterranean.

Johnnie David Hutchins was born in Weimer, Tex., 4 August 1922 and enlisted in the Naval Reserve at Houston 17 November 1942. He underwent landing craft training and in April 1943 was assigned to *LST-473*. During the assault on Lae, New Guinea, 4 September 1943, the *LST's* were under heavy air attack. As the ship approached the beach, a torpedo was spotted heading directly for it. Just then a bomb struck the pilot house, dislodging the helmsman before he had a chance to turn away. In the words of his posthumous citation: "... Hutchins, although mortally wounded by the shattering explosion, quickly grasped the wheel and exhausted the last of his strength in maneuvering the vessel clear of the advancing torpedo. Still clinging to the helm, he eventually succumbed to his injuries, his final thoughts concerned only with the safety of his ship . . ." For his extraordinary gallantry Seaman First Class Hutchins was posthumously awarded the Medal of Honor.

(DE-360: dp. 1,350; l. 306'; b. 36'8"; dr. 9'5"; s. 24 k.; cpl. 186; a. 2 5", 4 40mm., 10 20mm., 2 dct., 8 dcp., 1 dep. (h.h.), 3 21" tt.; cl. *John C. Butler*)

Johnnie Hutchins (DE-360) was laid down 6 March 1944 by Consolidated Steel Corp., Ltd., Orange, Tex.; launched 2 May 1944; sponsored by Mrs. Johnnie M. Hutchins, mother of Seaman First Class Hutchins; and commissioned 28 August 1944, Comdr. H. M. Godsey in command.

The new escort vessel sailed for shakedown training out of Bermuda 11 September 1944, and 5 days later encountered the survivors of destroyer *Warrington*, sunk in a hurricane off the East Coast. *Johnnie Hutchins* rescued 34 officers and men and, after transporting them to Norfolk, continued to Bermuda. The ship completed exhaustive shakedown exercises and arrived Boston 25 October 1944 for brief coastal convoy duties between that port and Norfolk.

Johnnie Hutchins got underway for the Pacific 30 November from Norfolk, steaming by way of the Panama Canal, Bora Bora, and Manus, and arriving Hollandia 21 January 1945. Five days later she steamed from Humboldt Bay to Leyte on her first Pacific escort assignment, arriving Leyte Gulf 31 January. During the months that followed the ship acted as an escort for resupply and reinforcement convoys from advance bases to Lingayen and Leyte, thus contributing importantly to the imminent defeat of Japan.

The destroyer escort arrived Subic Bay, Philippines, 22 May 1945 to join a hunter-killer group. In June and July she trained with American and British submarines and carried out antisubmarine searches in preparation for the eventual invasion of Japan. While operating with a task group in the shipping lanes between Luzon and Okinawa 9 August 1945, *Johnnie Hutchins* encountered a surfaced midget submarine, and was taken under fire. As the ship's accurate gunnery succeeded in sinking the Japanese sub, another fired a torpedo at her. Captain Godsey skillfully avoided the "fish" and with a well-placed series of depth charges sank the second submarine. A third was probably damaged by depth charges the same day.

After the end of the war against Japan, *Johnnie Hutchins* spent 2 months escorting ships through swept channels and acting as air-sea rescue ship off Okinawa. She also steamed off Japan and Korea during the occupation. In early October the ship arrived Shanghai for duty with U.S. Marines attempting to stabilize the turbulent Chinese situation. She escorted vessels to and from various occupied ports until 22 November 1945 when she weighed anchor in the Yangtze River and headed eastward to Pearl Harbor. *Johnnie Hutchins* arrived San Pedro 15 December 1945.

Following decommissioning at San Diego 14 May 1946, *Johnnie Hutchins* made two month-long Naval Reserve training cruises to the Hawaiian Islands, one in the summer of 1948 and one in 1949. In early 1950 the ship

steamed through the Panama Canal to Boston, where she was assigned permanent duty as Naval Reserve Training Ship for the 1st Naval District. *Johnnie Hutchins* was placed in commission "in reserve" 23 June 1950, and in commission 22 November 1950, Lt. Comdr. B. H. Patek in command. With a skeleton crew supplemented by Naval Reservists, the destroyer escort made regular training cruises during the next few years, visiting Montreal, Quebec, and many Caribbean ports. With a task group of other training ships she made a voyage to Europe in June-July 1955. *Johnnie Hutchins* continued her vital task of keeping at a high level the skills and readiness of our reserve officers and men until decommissioning 25 February 1958 at Bayonne, N.J. She entered the Atlantic Reserve Fleet and at present is berthed at Philadelphia.

Johnnie Hutchins received the Navy Unit Commendation for her battle with midget submarines 9 August 1945.

(LST-849: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 266; a. 8 40mm., 12 20mm.; cl. *LST-542*)

LST-849 was laid down by the American Bridge Co., Ambridge, Pa., 10 November 1944; launched 20 December; sponsored by Mrs. William B. Hetzel; and commissioned at New Orleans 25 January 1945, Lt. Emil C. Hetzel in command.

Following shakedown off Florida, *LST-849* loaded construction material and departed New Orleans for the Pacific 2 March. After stops at the Canal Zone, Pearl Harbor, and Eniwetok, the landing ship reached Guam 6 May. There she unloaded her cargo before sailing to Saipan 17 May to prepare to support operations at Okinawa.

Joining a convoy of LST's, she proceeded to that strategic island which lay at the gateway to the Japanese homeland. Arriving 26 May, she engaged the enemy 3 days later when a "Nate" was sighted off starboard. As the Japanese plane went into her dive, *LST-849* opened fire, splashing the raider before he found his mark. Despite other air attacks, she remained at Okinawa, discharging cargo and shuttling supplies until the island was secured.

For the duration of the war, *LST-849* supported fleet operations between Okinawa and the Philippines. After Japan agreed to Allied peace terms, the battle-tested landing ship was assigned to transport occupation forces in the Far East. Sailing from the Philippines and Okinawa during September and October 1945, she shuttled cargo and troops to the Yokohama-Tokyo area.

LST-489 departed Tokyo 28 October; embarked U.S.-bound veterans at Guam; and on 7 November was en route to Pearl Harbor. After discharging her troops in Hawaii, she arrived San Diego 15 December. In mid-January 1946 she steamed to Astoria, Oreg.; decommissioned at Vancouver, Wash., 13 June; and entered the Pacific Reserve Fleet. While berthed in the Columbia River, she was named *Johnson County* 1 July 1955. She

was transferred to Korea in January 1959, and serves the Korean navy as *Wi Bong* (LST-812).

LST-849 received one battle star for World War II service.

Johnston

John Vincent Johnston of Cincinnati, Ohio, entered the Navy in September 1861 as First Master in gunboat *St. Louis*. He assisted in the Union gunboat attacks that captured strategic Fort Henry on the Tennessee River 6 February 1862. The night of 1 April 1862 he was the Navy commander of a combined Army-Navy boat expedition from *St. Louis* which landed and spiked the guns of Fort No. 1 above the Confederate stronghold, Island No. 10. He was promoted to Acting Volunteer Lieutenant for gallantry in this expedition. After joining in the bombardments of Vicksburg, he took command of *Forrest Rose* to patrol the Mississippi and its tributaries. On 15 February 1864 his gunboat repelled the attack of confederate raiders, saving the town of Waterproof, La., and its federal garrison. Lt. Johnston resigned from the naval service 23 June 1864 and died 23 April 1912 at St. Louis, Mo.

I

(DD-557: dp. 2,700 n.; l. 376'6"; b. 39'8"; dr. 17'9"; s. 35 k.; cpl. 273; a. 5.5", 10 40mm. 7 20mm., 10 21" tt; 6 dp., 2 dct.; cl. *Fletcher*)

The first *Johnston* (DD-557) was laid down 6 May 1942 by the Seattle Tacoma Shipbuilding Co., Seattle, Wash.; launched 25 March 1943; sponsored by Mrs. Marie S. Klinger, great-niece of Lt. John Johnston; and commissioned 27 October 1943, Comdr. Ernest E. Evans in command.

The day *Johnston* commissioned, Comdr. Evans made a speech to the crew: "This is going to be a fighting ship. I intend to go in harm's way, and anyone who doesn't want to go along had better get off right now." During the Marshall Islands campaign 3 months later, *Johnston* bombarded the beaches at Kwajalein 1 February 1944, and made a 5-day bombardment of Eniwetok 17 to 22 February. She gave direct support to invasion troops there, destroying several pillboxes and taking revetments along the beach under fire. En route to patrol duty in the Solomons 28 March 1944, she bombarded Kapingamarangi Atoll in the Carolines. An observation tower, several blockhouses, pillboxes and dugouts along the beach were shelled. Two days later she came into the mouth of the Maririca River, southeast of Empress Augusta Bay, Bougainville, Solomon Islands. After laying a heavy barrage into that area, she took up antisubmarine patrol off Bougainville. During this duty 15 May 1944, she depth charged and sank Japanese submarine *I-176*.

After 3 months of patrol in the Solomons, *Johnston* sailed to the Marshalls to prepare for the invasion and capture of Guam in the Marianas. On 21 July 1944 she teamed up with that Pearl Harbor "ghost", *Pennsylvania* (BB-38), to bombard Guam. The destroyer had sent in more than 4,000 rounds of shells by 29 July. Her accurate gunfire shattered the enemy 4-inch battery installations, numerous pillboxes and buildings. *Johnston* next helped protect escort aircraft carriers providing air support for the invasion and capture of the Palau Islands.

Now the time had come for General MacArthur's long awaited return to the Philippines. Following replenishment at Seeadler Harbor, Manus, Admiralty Islands, she sailed 12 October 1944 to help protect the escort carriers maintaining air supremacy over eastern Leyte and the Gulf, sweeping the enemy off local airfields, giving troops direct support on the landing beaches from 20 October, and even destroying vehicle transport and supply convoys on the roads of Leyte itself. *Johnston* was operating with "Taffy 3" (Escort Carrier Task Unit 77.4.3) comprising Rear Admiral Clifton A. F. Sprague's flagship *Fanshawe Bay* (CVE-70), five other escort carriers, three destroyers including herself, and four destroyer-escorts. "Taffy 3"

was one of the three units of Rear Admiral Thomas L. Sprague's Escort Carrier Task Group 77.4 known by their voice calls as "Taffy 1," "Taffy 2," and "Taffy 3."

The morning of 23 October 1944 American submarines detected and attacked units of the Japanese fleet coming in from the South China Sea toward the precarious Leyte Beachhead. The battleship-cruiser-destroyer Southern Force was decimated as it attempted to enter Leyte Gulf via Surigao Strait the night of 24-25 October 1944. The more powerful battleship-cruiser-destroyer Center Force had been pounded by Admiral Halsey's attack carrier planes and presumably turned back from San Bernardino Straits. Admiral Halsey then raced north with his attack carriers and heavy battleships to engage a Japanese carrier-battleship task force off Cape Engano. This left *Johnston* and her small escort carrier task unit lonely sentinels in north Leyte Gulf, east of Samar and off San Bernardino Strait.

As enemy ships fled the Battle of Surigao Strait at daybreak of 25 October 1944, the powerful Japanese Center Force slipped through San Bernardino Strait and into Leyte Gulf. It steamed along the coast of Samar directly for *Johnston's* little task unit and the American invasion beachhead at Leyte, hoping to destroy amphibious shipping and American troops on shore.

One of the pilots flying patrol after dawn alert of 25 October 1944 reported the approach of Japanese Center Force. Steaming straight for "Taffy 3" were 4 battleships, 7 cruisers, and at least 12 destroyers. *Johnston's* gunnery officer later reported "We felt like little David without a slingshot." In less than a minute *Johnston* was zig-zagging between the six little escort carriers and the Japanese fleet and putting out a smoke screen over a 2,500-yard front to conceal the carriers from the enemy gunners: "Even as we began laying smoke, the Japanese started lobbing shells at us and the *Johnston* had to zig-zag between the splashes. . . . We were the first destroyer to make smoke, the first to start firing, the first to launch a torpedo attack . . ."

For the first 20 minutes, *Johnston* was helpless as the enemy cruisers and battleships had her in range. But the destroyer's 5-inch guns could not yet reach them. She charged onward to close the enemy—first a line of seven destroyers; next, one light and three heavy cruisers, then the four battleships. To the east appeared three other cruisers and several destroyers.

As soon as range closed, *Johnston* opened her 5-inch battery on the nearest cruiser, scoring damaging hits. About this time an 8-inch shell landed right off her bow, its red dye splashing the face of *Johnston's* gunnery officer, Lt. Robert C. Hagen. He mopped the dye from his eyes while remarking: "Looks like somebody's mad at us!" In 5 furious minutes *Johnston* pumped 200 rounds at the enemy, then Comdr. Evans ordered, "Fire torpedoes!" The destroyer got off 10 torpedoes then whipped around to retire behind a heavy smoke screen. When she came out of the smoke a minute later, Japanese cruiser *Kumano* could be seen burning furiously from torpedo hits. *Kumano* later sank. But *Johnston* took three 14-inch shell hits from a battleship followed closely by three 6-inch shells from a light cruiser: "It was like a puppy being smacked by a truck. The hits resulted in the loss of all power to the steering engine, all power to the three 5-inch guns in the after part of the ship, and rendered our gyro compass useless." Through "sheer providence" a rainstorm came up; and *Johnston* "ducked into it" for a few minutes of rapid repairs and salvage work.

At 7:50 a.m., Admiral Sprague ordered destroyers to make a torpedo attack. But *Johnston* had already expended torpedoes. With one engine, she couldn't keep up with the others: "But that wasn't Comdr. Evans' way of fighting: 'We'll go in with the destroyers and provide fire support,' he boomed." *Johnston* went in, dodging salvos and blasting back. As she charged out of blinding smoke, pointed straight at the bridge of gallant *Heerman* (DD-532), "All engines back full!" bellowed Comdr. Evans. That meant one engine for *Johnston* who could hardly do more than slow down. But *Heerman's* two

engines backed her barely out of the collision course—*Johnston* missed her by less than 10 feet. Now there was so much smoke that Evans ordered no firing unless the gunnery officer could see the ship. "At 8:20, there suddenly appeared out of the smoke a 30,000-ton *Kongo*-class battleship, only 7,000 yards off our port beam. I took one look at the unmistakable pagoda mast, muttered, 'I sure as hell can see that!'" and opened fire. In 40 seconds we got off 30 rounds, at least 15 of which hit the pagoda superstructure. . . . The BB belched a few 14-inchers at us, but, thank God, registered only clean misses."

Johnston soon observed *Gambier Bay* (CVE-73) under fire from a cruiser: "Comdr. Evans then gave me the most courageous order I've ever heard: 'Commence firing on that cruiser, draw her fire on us and away from *Gambier Bay*.'" *Johnston* scored four hits in a deliberate slugging match with a heavy cruiser, then broke off the futile battle as the Japanese destroyer squadron was seen closing rapidly on the American escort carriers. *Johnston* outfought the entire Japanese destroyer squadron, concentrating on the lead ship until the enemy quit cold, then concentrated on the second destroyer until the remaining enemy units broke off to get out of effective gun range before launching torpedoes, all of which went wild.

Johnston took a hit which knocked out one forward gun, damaged another, and her bridge was rendered untenable by fires and explosions resulting from a hit in her 40mm. ready ammunition locker. Evans shifted his command to *Johnston's* fantail, yelling orders through an open hatch to men turning her rudder by hand. At one of her batteries a Texan kept calling "More shells! More shells!" Still the destroyer battled desperately to keep the Japanese destroyers and cruisers from reaching the five surviving American carriers: "We were now in a position where all the gallantry and guts in the world couldn't save us, but we figured that help for the carrier must be on the way, and every minute's delay might count. . . . By 9:30 we were going dead in the water; even the Japanese couldn't miss us. They made a sort of running semicircle around our ship, shooting at us like a bunch of Indians attacking a prairie schooner. Our lone engine and fire room was knocked out; we lost all power, and even the indomitable skipper knew we were finished. At 9:45 he gave the saddest order a captain can give: 'Abandon Ship.' . . . At 10:10 *Johnston* rolled over and began to sink. A Japanese destroyer came up to 1,000 yards and pumped a final shot into her to make sure she went down. A survivor saw the Japanese captain salute her as she went down. That was the end of *Johnston*."

From *Johnston's* complement of 327, only 141 were saved. Of 186 lost, about 50 were killed by enemy action, 45 died on rafts from battle injuries; and 92, including Comdr. Evans, were alive in the water after *Johnston* sank, but were never heard from again.

Hoel (DD-533) and *Samuel B. Roberts* (DE-113) also sacrificed themselves to save the escort carriers and to protect the landings at Leyte. Two of four Japanese heavy cruisers were sunk by combined surface and air attacks; and Rear Admiral Clifton A. F. Sprague was soon amazed by the sight of the retirement of Kurita's entire fleet. By this time planes of "Taffy 2" and Taffy 1" and every available unit of the Fleet were headed to assisting the fighting "Taffy 3." But *Johnston* and her little escort carrier task unit had stopped Admiral Kurita's powerful Center Force in the Battle off Samar, inflicting a greater loss than they suffered.

Johnston's supreme courage and daring in the Battle off Samar won her the Presidential Unit Citation as a unit of "Taffy 3" (Task Unit 77.4.3). Comdr. Ernest E. Evans was posthumously awarded the Congressional Medal of Honor: "The skipper was a fighting man from the soles of his broad feet to the ends of his straight black hair. He was an Oklahoman and proud of the Indian blood he had in him. We called him—though not to his face—the Chief. The *Johnston* was a fighting ship, but he was the heart and soul of her."

In addition to the Presidential Unit Citation, *Johnston* received six battle stars for service in World War II.

(DD-821: dp. 2,425; l. 390'6"; b. 41'1"; dr. 18'6"; s. 35 k.; cpl. 367; a. 6 5", 12 40mm., 8 20 mm., 5 21" tt., 6 dep., 2 dct; cl. *Gearing*)

The second *Johnston* (DD-821) was laid down 26 March 1945 by Consolidated Steel Corp., Orange, Tex.; launched 10 October 1945; sponsored by Mrs. Marie S. Klinger; grandniece of Lt. J. V. Johnston; and commissioned 23 August 1946, Comdr. E. C. Long in command.

After shakedown in the Caribbean, *Johnston* reported to Newport, R.I., 16 May 1947 for duty with the Atlantic Fleet. Operating out of Newport, her home port, she sailed 9 February 1948 for Northern Europe where she visited ports in Great Britain, France, and Scandinavia before returning to Newport 26 June. For 14 months she operated along the Atlantic coast, then sailed 23 August 1949 for the Mediterranean. From then until 4 October 1961 she deployed with the mighty 6th Fleet on eight occasions and supported peace-keeping efforts in the Middle East.

While on her first Mediterranean deployment, she helped to stabilize the Adriatic Sea during the Trieste crisis; and she patrolled the coast of Greece to bolster her freedom and national security against threatened Communist domination. *Johnston* returned to Newport 26 January 1950. She operated out of Newport from Canada to the Caribbean until 4 June 1951 when she departed with Midshipman at sea training off Northern Europe. Following her return to Newport 28 July, she cleared the East Coast for the Mediterranean 3 September and joined the 6th Fleet in operations that carried her from French Morocco to Turkey; she then returned to home port 4 February 1952.

Johnston departed Newport 7 January 1953 for NATO operations in the North Atlantic. Before sailing for duty in the Mediterranean 16 March *Johnston* aided the Dutch after storms in the North Sea had caused extensive flooding in the Netherlands; her crew donated bundles of warm clothing and more than \$1,200 for the storm victims. She operated in the Mediterranean until 8 May when she steamed for Newport, arriving 18 May.

After a 4-month deployment in the Mediterranean during early 1954, *Johnston* operated for more than 17 months along the Atlantic coast from New England to Cuba. On 5 November 1955 she steamed for maneuvers off Northern Europe, followed by another tour of duty in the Mediterranean. While operating in the eastern Mediterranean during February 1956, she patrolled off Israel and Egypt as the Middle East rumbled over the developing Suez Canal crisis. Returning to Newport 5 March, she embarked midshipmen 5 June for 2 months of at-sea training off Northern Europe, after which she resumed operations out of Newport.

Johnston sailed once again 6 May 1967 for peace-keeping operations with the 6th Fleet. Before returning to the United States 1 August she ranged the Mediterranean from Spain to Sicily on ASW barrier patrols. While at Marseilles, France, 3 July, she helped fight a destructive blaze on board *Lake Champlain* (CVS-39). Steaming from Newport 3 September, she joined the mighty Atlantic Fleet for the NATO Exercise "Strike Back" in the North Atlantic. She returned to Newport 22 October, then resumed operations that sent her into the Caribbean and the Gulf of Mexico.

Returning to the North Atlantic 6 June 1959 for further NATO maneuvers, *Johnston* steamed to Charleston, S.C., 25 July and joined DesRon 4 for deployment to the Mediterranean. Departing Charleston 21 September, she conducted Fleet operations in the western Mediterranean; on 18 December she joined naval units from France, Italy and Spain along the French coast for a review in honor of President Eisenhower. Following patrols along the Greek coast, she departed Athens for the United States 24 March 1960, arriving Charleston 10 April.

Before deploying again to the Mediterranean, *Johnston* joined in NATO Exercise "Sword Thrust" during the fall

of 1960; then she departed Charleston 8 March 1961 to bolster the 6th Fleet's continuing efforts to maintain peace in the Middle East. After returning to the United States 4 October, she steamed 19 November for patrol duty off the Dominican Republic. During this brief but important duty her presence did much to stabilize a situation "which had threatened to plunge the country into bitter fighting and a return of the Trujillo dictatorship."

Johnston returned to Charleston 26 November; and following coastal operations, she steamed to Boston where she underwent FRAM I overhaul from 4 January to 31 October 1962. During this time she received the latest equipment, including ASROC system and DASH facilities, to prepare her for new assignment in the modern Navy. Departing Boston 2 November, she arrived Guantanamo Bay, Cuba, via Charleston 10 December for Caribbean operations. While steaming near Mona Island 1 February 1963, she rescued sinking Honduran freighter *Kirco* and towed her to Mayaguez, P.R. Continuing her Atlantic operations, she supported Polaris missile firing tests. As *Thomas Jefferson* (SSB(N)-618) fired two underwater missiles off the Florida coast 14 March, *Johnston* became the first destroyer to serve as "primary support ship for an underwater firing of a Polaris missile."

After more than 4 months of ASW tactical operations, *Johnston* departed Charleston 6 August for her ninth deployment to the Mediterranean. While operating with the ever-vigilant 6th Fleet, she steamed the length and breadth of the Mediterranean and entered the Black Sea 27 September. During the cruise to Turkish Black Sea ports she served as a symbol of America's determination to safeguard peace on land through strength on the sea. Following 2 months of ASW operations, *Johnston* departed Cannes, France, for the United States 7 December and arrived Charleston 23 December for coastal operations through 1964.

The veteran destroyer departed Charleston 6 January 1965 for the Mediterranean to resume peace-keeping operations with forces of other NATO countries. She returned to Charleston 7 June, and devoted the rest of the year to operations with Polaris submarines, amphibious exercises, and overhaul to prepare for future service.

Johnston began New Year 1966 as sonar school training ship at Key West, Fla. During this period of training she visited Guantanamo Bay, Cuba, for refresher training; and in February while *Johnston's* crew was spending weekend liberty at Kingston, Jamaica, her sailors swiftly answered a call for help on the 27th. The famous Myrtle Bank Hotel had caught fire and threatened the whole water front. *Johnston* sailors rushed to the fire and averted disaster.

Johnston operated off the East Coast until departing Charleston 29 September for Mediterranean and Middle East deployment. After operating on the far side of the Suez Canal, she again transited the Suez Canal to rejoin the 6th Fleet in the Mediterranean. There her exercises with this powerful deterrent force helped to stabilize the area while bringing her to peak readiness for any emergency which might threaten the peace. She returned to Charleston 9 February 1967 and operated on the East Coast through mid-year.

Johnstown

Cities in Colorado, Nebraska, New York, North Dakota, Ohio, and Pennsylvania.

Johnstown (T-AGM-20) was renamed *Redstone* (q.v.), on 1 September 1965.

Johren, see *Kenwood* (IX-179)

Jolly Roger

A former name retained.

(SP-1031: l. 55'2"; b. 9'9"; dr. 3'; s. 26 k.; a. 1 1-pdr., 1 mg.)

Jolly Roger (SP-1031), a wooden motor boat, was built in 1917 by W. T. Ruddock, New York City, and was taken over at Newport from her owner, J. S. Van Allen, New York City, on 16 December 1917.

Jolly Roger was assigned to the Torpedo Station, Newport, and performed valuable work ranging torpedoes, as well as aiding in experimental work on mines and depth charges. The boat also engaged in general dispatch and supply work in the harbor area. While being loaded on board *Kanawha* 6 November 1918, *Jolly Roger* was damaged beyond repair and was struck from the Navy List 4 April 1919.

Jonas Ingram

Jonas Howard Ingram, born in Jeffersonville, Ind., 15 October 1886, graduated from the Naval Academy in 1907. Before World War I he served in several cruisers, destroyers, and battleships. As turret officer of *Arkansas* (BB-33), he established a world's record for firing 12-inch guns. On 22 April 1914 he landed at Vera Cruz, Mexico with the *Arkansas* battalion and was awarded the Medal of Honor for "skillful and efficient handling of the artillery and machine guns and for distinguished conduct in battle."

Ingram served at the Naval Academy from 1915 to 1917. During World War I he was on the staff of the Commander, Division 9, Atlantic Fleet, and received the Navy Cross for distinguished service.

Between the wars outstanding performance in a variety of important assignments won him promotion to Rear Admiral 10 January 1941. In February 1942 he received a third star upon assuming command of Cruiser Division 2. Seven months later he took command of the 4th Fleet and was responsible for protecting vital Allied shipping in the U-boat infested South Atlantic. He received the Distinguished Service Medal for excellent work in this post and on 15 November 1944 became Commander in Chief, U.S. Atlantic Fleet with the rank of Admiral. This post won him a gold star in lieu of a second Distinguished Service Medal for taking "a major part in the flow of United States troops across the Atlantic . . . and in the successful combating of the German submarine menace." Retiring from active duty 1 April 1947, Admiral Ingram died 9 September 1952 at San Diego.

(DD-938: dp. 3,807; l. 418'5"; b. 45'11"; dr. 14'6"; s. over 30 k.; cpl. 311; a. 3 5", 5 3", 4 tt., 2 ASW, 1 dct.; cl. *Forrest Sherman*)

Jonas Ingram (DD-938) was laid down 15 June 1955 by the Bethlehem Steel Co., Quincy, Mass.; launched 7 August 1956; sponsored by Mrs. Lawrence Hays, Jr., daughter of Admiral Ingram; and commissioned 19 July 1957 at Boston Naval Shipyard, Comdr. G. L. Rawlings in command.

Following shakedown in the Caribbean and along the western coast of South America, *Jonas Ingram* departed Boston 26 February 1958 for patrols in the West Indies. She sailed from Newport, R.I., 2 September for the Mediterranean to join the 6th Fleet and participate in NATO exercises.

She returned to Newport 12 March 1959 and sailed 16 June for Mayport, Fla., her new homeport. She acted as recovery ship for an experimental Project Mercury nose-cone which splashed off the Florida coast 25 June.

The destroyer, as flagship for Rear Admiral E. C. Stephen, Commander South Atlantic Forces, sailed for the South Atlantic 24 August and conducted joint exercises with the French and South African navies visiting nine African countries from Tanganyika before returning Mayport 15 November.

Highlights of the next 16 months of operations out of Mayport were duty providing air-sea rescue cover for President Eisenhower's flights to and from the abortive Paris Summit Conference in May 1960 and a role in another Project Mercury space test late in the year. The hardy destroyer departed 15 March 1961 for the African coast to support United Nations peace-keeping efforts in the Congo.

Returning home 8 September, she sailed 18 October for NATO exercises in Northern European waters and returned 21 December. For the next 2 years *Jonas Ingram* alternated Mediterranean deployments with operations out of Mayport. On 21 September 1964 she was one of our representatives at Malta during ceremonies at which Great Britain granted independence to the island. During this cruise she embarked four Turkish naval officers for a 4-week visit under the NATO exchange program. She returned from the Mediterranean in time to serve as one of the recovery ships for the unmanned Gemini space shot GT-2 in December. Atlantic Fleet ASW exercises in the North Atlantic during February 1965 were followed by Operation "Springboard" in the Caribbean in March. In the summer *Jonas Ingram* got underway on a people-to-people cruise in Middle Eastern waters and visited such parts as Djibouti, French Somaliland; Berbera, Somalia; Aden; Karachi, Pakistan; and Beirut, Lebanon.

The destroyer returned to Mayport in the fall to become a recovery ship for Walter Schirra and Thomas Stafford's Gemini 6 spacecraft in December. After operations in the Atlantic and Caribbean early in 1966 *Jonas Ingram* returned to the Mediterranean for service with the 6th Fleet. In September 1966 she accompanied *Stribbling* (DD-867) to Port Said, the first U.S. warships to visit Egypt in almost 15 years.

Jonas Ingram returned home 20 October where she prepared for Exercise "Lantflex 66-2." The fleet exercise took the destroyer to the Caribbean late in November and lasted through mid-December. *Jonas Ingram* operated out of Mayport until sailing for the Mediterranean 17 July 1967. She reached Gibraltar 29 July and steamed with the 6th Fleet into the fall.

Jones

(Brig: t. 509; l. 117'11"; cpl. 160; a. 16 42-pdr. car., 4 long 24-pdrs.)

Jones was built at Sackett's Harbor, N.Y., for service in Commodore Isaac Chauncey's fleet on Lake Ontario and was launched 10 April 1814.

Most of the cannon for the new American ships had not reached Sackett's Harbor 19 May when the British fleet arrived off the American base and established a strict blockade which temporarily bottled up the heavily out-gunned American squadron. After the British commander, Sir James Yeo, raised the blockade 6 June, an epidemic struck the American fleet causing further delay.

Jones sailed with Chauncey's vessels 31 July and arrived off Niagara 5 August. As the American ships approached that port, now in British hands, they intercepted enemy brig *Charwell* and chased her ashore where her crew set her ablaze. Chauncey then sailed to Kingston via York arriving 9 August. The next day *Jones* and schooner *Conquest* were ordered to cruise between Oswego and Sackett's Harbor protecting American communications.

Jones rejoined the fleet 17 September and operated with it during the remainder of the navigation season attempting to draw Sir James Yeo's ships into a decisive contest. Toward the end of November she returned to Sackett's Harbor, where she served as a receiving ship for several years after the end of the war. She was sold and broken up in 1821.

Jonquil

(ScStr: t. 90; l. 69'4"; b. 17'6"; dph. 6'7"; s. 8 k.; cpl. 15; a. 2 12-pdr. r.)

Jonquil was purchased at Philadelphia from S. F. Baker under the name *J. K. Kirkman* 21 October 1863; and commissioned at Philadelphia Navy Yard 28 October, Acting Ens. I. T. Halstead in command.

A week later *Jonquil* joined the South Atlantic Blockading Squadron and took station off Charleston. Except for brief periods of repair and 3 months in the sounds of Georgia during the fall of 1864, she served for the remainder of the war in Charleston waters. She took her first prize 25 February 1865 when she captured an unidentified sloop in Deer Creek about 18 miles upstream from Charleston. She repeated the feat only 2 days later with a second sloop in Silver Creek.

Perhaps *Jonquil's* most valuable service was early in March when she labored to clear Charleston waters of torpedoes after the city has surrendered. While she was so engaged, a torpedo exploded close aboard her, knocking nine men overboard and wounding three others. Prompt and effective repairs enabled the ship to be back at her task of sweeping the harbor the next day.

Jonquil returned north at the end of July and decommissioned 2 August 1865. She was sold at public auction 21 October 1865.

Jordan

Julian Bethune Jordan was born 11 April 1904, and graduated from the Naval Academy in 1925. He served in *Chester*, in *Dobbin*, and at various shore stations before reporting to *Oklahoma* (BB-37) 4 August 1938. While serving as assistant engineering officer on board that battleship, he was one of the valiant men who were lost in the Japanese attack on Pearl Harbor 7 December 1941.

(DE-204: dp. 1,400; l. 306'; b. 36'10"; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3", 4 40mm., 10 20mm., 2 dct., 9 dcp.; cl. *Buckley*)

Jordan (DE-204) was laid down 5 June 1943 by the Charleston Navy Yard; launched 23 August 1943; sponsored by Mrs. Lucy H. Jordan, widow of Lt. Jordan; commissioned 17 December 1943, Lt. Comdr. F. C. Billing in command.

After shakedown *Jordan* arrived New York in mid-March 1944 for duty as convoy escort. She sailed 17 April with a convoy bound for Gibraltar, arriving there 1 May with transports carrying vital cargo for the operations in the Mediterranean area. She returned to New York later that month and made one more European voyage in June before beginning duty as a training ship. During July and

August she engaged in training exercises at Quonset Point, R.I., and arrived Port Everglades, Fla., 17 September to commence experimental exercises in that area.

After a yard period at Charleston, *Jordan* resumed sound experiments out of Port Everglades in early 1945. During May she was deployed on another cruise to the Mediterranean as convoy escort, returning to New York 10 June. She engaged in submarine operations out of New London, Conn., and training exercises in Cuba, throughout the summer. It was through these experiments that new technological advancements in antisubmarine warfare were adopted, leading to a more powerful navy and a shorter war.

While on a training mission 18 September *Jordan* collided with a merchant vessel SS *John Sherman*, necessitating immediate repairs. She arrived Charleston 4 October and remained there until she decommissioned 19 December 1945. The ship was scrapped in 1947.

Jorkay, see *Tappahannock* (AO-43)

Joseph Cudahy

Former name retained.

(Str: dp. 7,045; l. 293'; b. 47'2"; dr. 22'11"; s. 10.5 k.; cpl. 61; a. 2 3")

Joseph Cudahy, a tanker, was launched 1917 by Baltimore Drydock & Shipbuilding Co., Baltimore, Md., for Sinclair Gulf Corp.; chartered by the Army Transport Service, she carried general cargo between New York and European posts during 1917-18. In mid-August 1918, she was steaming from France to New York to be commissioned in the Navy for service with NOTS when she was torpedoed by German submarine *U-90* some 700 miles from the English coast. Before *Joseph Cudahy* went under at 1830 on 17 August 1918 all but one of the crew managed to find safety on lifeboats.

Joseph E. Campbell

Joseph Eugene Campbell was born 23 July 1919 in Vigo County, Ind. He enlisted in the U.S. Naval Reserve 29 March 1941 at St. Louis, Mo. After preliminary flight training at Robertson, Mo., he was transferred to Pensacola for further flight training. Appointed Naval Aviator 17 December 1941, he was commissioned Ensign 21 January 1942. Assigned to Cruiser Scouting Squadron 6 in the Pacific, Ens. Campbell was killed in action while engaging the enemy 9 August 1942.

(DE-70: dp. 1,400; l. 306'; b. 37'; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3", 4 1.1", 8 20mm., 2 dct., 8 dcp., 1 dcp. (h.h.), 3 21" tt.; cl. *Buckley*)

Joseph E. Campbell (DE-70) was laid down 29 March 1943 by Bethlehem Shipbuilding Corp., Hingham, Mass.; launched 26 June 1943; sponsored by Mrs. Marie S. Campbell, mother of Ens. Campbell; and commissioned 23 September 1943, Lt. Comdr. J. F. Bowling, in command.

After shakedown off Bermuda, *Joseph E. Campbell* departed Boston 11 October; and, after escorting a convoy to Londonderry, Northern Ireland, returned to New York 16 December. Between 31 December 1943 and 8 October 1944 the destroyer escort made three convoy escort voyages to French North Africa.

Returning to New York from the last voyage 8 October, conversion to a high speed transport began and *Joseph E. Campbell* was reclassified APD-49 on 24 November 1944. After exercises and training along the East Coast, the high speed transport departed Key West 8 March 1945, arriving Pearl Harbor 8 April via the Panama Canal and San Diego. Departing Pearl Harbor the 29th, she steamed to Eniwetok, where she rendezvoused with two merchant ships and escorted them to Leyte. For the next 3 months *Joseph E. Campbell* served as antisubmarine screen for

LST groups in and out of Okinawa. On 1 September she departed Cebu, P.I., as part of the screen for occupation forces for Japan, where she arrived 8 days later. *Joseph E. Campbell* continued her escort duties between Japan and the Philippines until returning to the East Coast in December. After visiting Philadelphia and Norfolk she steamed to Guantanamo Bay, Cuba, and San Juan, P.R., where she embarked passengers and returned to Morehead City, N.C., 31 March 1946.

After visits to Philadelphia, Baltimore, and Hampton Roads, *Joseph E. Campbell* arrived Charleston, S.C., 22 May for inactivation. Secured for preservation, she was towed to Green Cove Springs, Fla., where she decommissioned 15 November 1946, and joined the Atlantic Reserve Fleet at Orange, Tex. *Joseph E. Campbell* was struck from the Navy List 1 December 1966 after being sold to Chile in November 1966.

Joseph E. Campbell received one battle star for World War II service.

Joseph E. Connolly

Joseph Edward Connolly was born 1 June 1904 in New York City. He served in the Navy 1927 to 1930 before enlisting in the Marine Corps 9 March 1936. Connolly attained the grade of Corporal by 1942 and took part in the assault on Guadalcanal, first American amphibious operation of the war. During the bitter fight for the island, Connolly and his men bore the brunt of a heavy Japanese assault along the Matanikau River 9 October 1942. For his extraordinary bravery in this action Corporal Connolly received the Navy Cross posthumously. Describing his gallantry, his citation reads in part: "Fighting desperately in hand-to-hand combat against the overwhelming hostile forces, Corporal Connolly refused to be dislodged from his position, and after exacting a tremendous toll of the enemy, heroically died at his post."

(DE-450: dp. 1350; l. 306'; b. 36'8"; dr. 9'5"; s. 24 k.; cpl. 186; a. 2 5", 10 40mm., 10 20mm., 2 dct., 9 dp.; cl. *John C. Butler*)

Joseph E. Connolly (DE-450) was laid down 6 April 1944 by Federal Shipbuilding & Dry Dock Co., Newark, N.J.; launched 6 August 1944; sponsored by Miss Cecilia C. Connolly, sister of Corporal Connolly; and commissioned 28 February 1945, Lt. Comdr. M. C. Walley in command.

Following shakedown training in the Caribbean *Joseph E. Connolly* departed Norfolk 10 May 1945 for assignment to the Pacific Fleet. She transited the Panama Canal and steamed by way of San Diego to Pearl Harbor, where she arrived 6 June for additional intensive training. The ship then steamed to Eniwetok in early July to act as an escort ship during the final days of the Pacific war. *Joseph E. Connolly* served as screen ship to logistic-support units of the 3d Fleet during the final strikes on the Japanese mainland.

The escort vessel returned to Ulithi after war's end, arriving 31 August, and joined the screening unit for logistic support ships. She arrived Tokyo Bay 13 September and steamed to Jinsen, Korea, 22 September to assist in the occupation of Korea and North China, then the subject of critical contention between Communist and Nationalist factions in China. *Joseph E. Connolly* spent 27 to 31 October at Shanghai in support of the Marines ashore, after which she joined a service squadron in supplying fuel and supplies to various Pacific island bases.

After patrol off Saipan in December, the ship sailed for the United States 4 January 1946, arriving Boston 17 February via San Diego and the Canal Zone. She later steamed to Green Cove Springs, Fla., where she decommissioned 20 June 1946 and entered the Reserve Fleet. *Joseph E. Connolly* is at present berthed with the Texas Group, Atlantic Reserve Fleet.

Joseph E. Connolly received one battle star for World War II service.

Joseph F. Bellows

A former name retained.

(SP-323: t. 315; l. 162'; b. 24'; dr. 14'; s. 13 k.; a. 1 6-pdr.)

Joseph F. Bellows (SP-323), a fishing steamer built in 1912 by E. J. Tull, Pocomoke City, Md., was acquired by the Navy from Bellows and Squires, Inc., Ocran, Va., in May 1917. She commissioned 18 May 1917, Ens. T. C. Christopher, USNRF, in command.

Assigned to the 5th Naval District at Norfolk, *Joseph F. Bellows* operated as a mine sweeper off Cape Henry and in the convoy channel to Hampton Roads. After the armistice she acted as a lightship tender and a supply ship until being sold 2 July 1919 to NeNeal Dodson Co., Inc., Reedville, Va.

Joseph H. Kibbey, see *Phobos* (AK-129)

Joseph Hewes

Joseph Hewes was born in Kingston, N.J., in 1730, and was educated at what is now Princeton. After engaging in business in Philadelphia, he moved to Edenton, N.C. in 1763 where he became a prosperous and influential merchant skipper. He was elected to the Continental Congress in 1774, and in 1775 became a member of the Marine Committee. In this capacity Hewes played a major part in the procurement and outfitting of Continental vessels, and had the distinction of securing a commission in the Continental Navy in December 1775 for one of the sea's greatest heroes-to-be, John Paul Jones. Hewes continued to take an active part in the movement for independence in North Carolina. He also took part in the discussions leading to the Declaration of Independence and signed the historic document. He died 29 October 1779 shortly after his return to the Continental Congress.

(AP-50: dp. 14,100; l. 450' (w.l.); b. 61'6"; dr. 26'4"; cpl. 358; a. 1 5", 4 3", 8 20mm.)

Joseph Hewes (AP-50), formerly *Excalibur*, was built in 1930 by the New York Shipbuilding Co., Camden, N.J.; acquired by the Navy 8 January 1942; and commissioned 1 May 1942, Captain Robert McL. Smith in command.

After conversion and fitting out, *Joseph Hewes* sortied from Hampton Roads 24 October with the Center Attack Group of Admiral Hewitt's Western Naval Task Force en route to French Morocco. She was carrying 80 officers and 1,074 men of the reinforced 3d Division, U.S. Army, plus vehicles and supplies. The transport arrived off Fedhala 8 November, by 0705 landed all troops, and then commenced unloading ammunition and supplies. By 11 November *Joseph Hewes* had completed unloading and had received 30 casualties from the beach. At 1950 she took a torpedo hit in No. 2 hold from *U-173*. The transport settled by the bow and began filling rapidly with water. Captain Smith endeavored to pick up anchor or slip chain but, as the entire forecabin was under water, this was not possible. He then attempted to beach the ship by backing engines but her propeller was out of the water, so the order was given to abandon ship. *Joseph Hewes* went down at 2032, taking Captain Smith and several seamen with her. By his coolness, calmness, and his devotion to duty in placing the safety of the crew and ship before his own, he instilled confidence in every officer and member of the crew. The *U-173* paid heavily for her victory, for she was sunk 5 days later off Casablanca by American destroyers.

Joseph Hewes received one battle star for World War II service.

Joseph Holland, see *Hannibal* (AG-1)

Joseph Holt

A former name retained.

(Str: dp. 10,500; l. 441'6"; b. 56'11"; dr. 27'9"; s. 11 k.; cpl. 72; a. 1 4", 10 20mm.; T. EC2-S-C1)

Joseph Holt, a dry-cargo merchant ship, was launched by Kaiser Richmond Yard #2, Richmond, Calif., 20 November 1942; sponsored by Mrs. Louise C. Hotting; and delivered under General Agency Agreement 28 November to the Prudential Steamship Co., San Francisco, Calif. She was acquired by the Navy at Buckner Bay, Okinawa, in late October 1945 and placed "in service," Lt. Comdr. E. R. Rifenburg in command.

Joseph Holt departed Okinawa 7 November for southern Japan. Arriving Hiro Wan 10 November, she joined other "guinea-pig" ships especially outfitted for minesweeping operations in the Japanese Inland Sea. She cleared shipping channels of pressure mines laid down during the war by B-29's. She concluded these operations 1 January 1946 and sailed for the United States. Arriving San Francisco early in February, she was placed "out of service" and turned over to the Maritime Commission. She then joined the National Defense Reserve Fleet, Suisun Bay, Calif., where she remained until she was sold for scrap in 1960.

Joseph K. Taussig

Joseph K. Taussig, born 30 August 1877 in Dresden, Germany, entered the Naval Academy in 1895. As a midshipman, he served on the flagship *New York* during the Battle of Santiago in the Spanish-American War. Following his graduation, in 1899 he was assigned to Newark and participated in the Allied Peking Relief Expedition during the Boxer Rebellion. After 2 years as a naval cadet, he was commissioned Ensign 28 January 1901 to begin a series of promotions and distinctions that would underscore his illustrious service to the Navy.

In July 1916, after serving in battleships, cruisers, destroyers, and on staffs afloat, he took command of Division 8, Destroyer Force, the first group of American destroyers sent abroad during World War I. After crossing the storm and gale filled Atlantic, Comdr. Taussig was asked by the Commander in Chief of the Coasts of Ireland when he would be ready for sea. Taussig replied in the now famous words; "We are ready now, Sir." He received the Distinguished Service Medal for World War I service. After the war he continued to serve the Navy at home and abroad. In 1922 his ship, *Cleveland*, rendered assistance to the victims of an earthquake and tidal wave in Chile. He served at the Naval War College, from 1923 to 1926. He also saw duty in the Bureau of Navigation, as Assistant Chief of Naval Operations, and as Commandant, 5th Naval District, in addition to commanding a battleship division and cruiser scouting force. Vice Admiral Taussig retired in 1941 but was recalled to active duty in 1943 to serve in the office of the Secretary of the Navy until 1 June 1947, only a few months before his death 29 October 1947.

(DE-1030: dp. 1,450; l. 314'6"; b. 36'9"; dr. 9'1"; s. 25 k.; cpl. 170; a. 3 3", 1 det., 6 dep., 1 rkt.; cl. *Evans*)

Joseph K. Taussig (DE-1030) was laid down 3 January 1956 by the New York Shipbuilding Corp., Camden, N.J.; launched 9 March 1957; sponsored by Mrs. Joseph K. Taussig, widow of Vice Admiral Taussig, and commissioned 10 September 1957, Lt. Comdr. R. S. Moore in command.

Following a Caribbean shakedown *Joseph K. Taussig* reported to Newport, R.I., 22 December for duty with the Atlantic Fleet. She departed Newport 12 May 1958 for Mediterranean service with the 6th Fleet. During this tour that a crisis erupted in Lebanon, and the 6th Fleet was dispatched to the area to prevent a Communist takeover. *Joseph K. Taussig* was at the scene, giving credibility to her namesake's words; "We are ready now." The

destroyer escort remained on patrol until the crisis subsided, and then returned to Newport 7 October.

She was assigned to an antisubmarine warfare group and continued these operations until 6 February 1959 when she made a goodwill cruise to South America. Upon completion of an overhaul at Boston Naval Shipyard, *Joseph K. Taussig* operated out of Newport prior to Caribbean exercises during January 1960. She returned to Newport 14 February and resumed operations along the Atlantic coast.

The destroyer escort steamed toward the North Atlantic 6 September for NATO exercises, designed to show the enemies of freedom, that peace-loving nations would join forces to thwart any efforts to undermine that freedom. *Joseph K. Taussig* resumed coastal operations upon her return to Newport 20 October.

During January and February 1961, *Joseph K. Taussig* once again participated in annual exercises in the Caribbean and in April engaged in joint American-Canadian exercises off Nova Scotia. For the remainder of the year she operated in a state of readiness along the Atlantic coast and in mid February 1962 commenced 6 months of extensive ASW exercises.

During October, intelligence reports revealed evidence of Russian missile installations in Cuba. President Kennedy responded to this Communist challenge, by establishing a naval quarantine around the island. *Joseph K. Taussig* was ordered off Jacksonville, Fla., in November to provide a second line of defense in the crisis.

With the easing of tensions, she began preparations for a goodwill cruise to Africa, and departed Newport 15 February 1963. After visiting 9 African and 3 Mediterranean ports, she returned Newport 25 May for summer convoy escort exercises and Cuban patrol duty. From August to December, *Joseph K. Taussig* engaged in coastal training operations.

Between January and May 1965 *Joseph K. Taussig* received DASH installation at Boston Naval Shipyard; and, after completing training in the Caribbean, she participated in the massive amphibious exercise, Operation "Steel Pike I," in October. During the remainder of 1965 and throughout 1966, she trained along the Atlantic Coast and in the Caribbean and, in addition, served as sonar school ship at Key West. Early in 1966 she began 6 months of duty as an E-4 training ship to train seamen as petty officers in response to the growing commitment of the Navy in the troubled waters of Southeast Asia. She resumed squadron training exercises in July. During the next 12 months she operated from New England waters to the Caribbean maintaining her high degree of readiness for defense of the nation and the free world.

Joseph M. Auman

Private Joseph Martin Auman was born at Chicago, Ill., 4 January 1922. He enlisted in the Marine Corps 27 August 1940 at Chicago. After duty at San Diego, Private Auman served at Guadalcanal where he was killed in action 12 November 1942. When his company was forced to make a temporary withdrawal, Private Auman with utter disregard for his own personal safety, manned a machine gun and covered the retirement. Steadfastly remaining at his exposed position, he continued to fire his gun until killed by the enemy. For his gallant devotion to duty for his country, Private Auman was posthumously awarded the Navy Cross.

(APD-117: dp. 1,390; l. 306'; b. 37'; dr. 12'7"; s. 24 k.; cpl. 204; a. 1 5", 6 40mm., 2 det.; cl. *Crosley*)

Joseph M. Auman (APD-117) was laid down 8 November 1943 as DE-674 by Consolidated Steel Co., Orange, Tex.; launched 5 February 1944; sponsored by Mrs. Bernard Tommey, aunt of Private Auman; reclassified APD-117 on 17 July 1944; and commissioned 25 April 1945, Lt. Comdr. H. A. Steinbach in command.

Following shakedown out of Guantanamo Bay, Cuba, *Joseph M. Auman* departed Norfolk 9 July 1945, reaching

San Diego 24 July via the Canal Zone. She conducted more intensive training with the San Diego Shakedown Group, then embarked Underwater Demolition Team No. 7 and carried them to Yoriage Beach, Shioyama, Japan for reconnaissance of landing beaches. After completing the mission, she returned the demolition group to San Diego 13 October.

Joseph M. Auman departed San Diego 20 October and steamed to Manila Bay, P.I., where she embarked 100 Navy passengers and carried them to Samar. From Samar the fast transport loaded cargo and delivered it to Shanghai, China, 4 December. *Joseph M. Auman* continued to carry cargo and passengers in the Pacific until she returned to the United States and decommissioned at Green Cove Springs, Fla. 10 July 1946, joining the Atlantic Reserve Fleet. She remained in the Reserve Fleet until struck from the Navy List 12 December 1963 and sold to the government of Mexico. She now serves the Mexican Navy as *Tehuantepec* (B-5).

Joseph M. Clark

A former name retained.

(SP-1244: t. 93; l. 86'2"; b. 20'7"; dr. 11'; s. 11 k.; a. 23-pdrs.)

Joseph M. Clark, a steam tug, built in 1899 by the R. W. Spedden Co., Baltimore, Md., was leased by the Navy from *Joseph M. Clark & Co.* of Norfolk, Va. 26 October 1917, and commissioned the same day, Boatswain Merriken, USNRF, in command.

Assigned to the 5th Naval District at Norfolk, *Joseph M. Clark* served as a harbor tug and section patrol sweeper out of Norfolk, operating along the lower reaches of the James and Elizabeth Rivers. She decommissioned 12 November and was returned to her owner.

Joseph Meseck (YN-51), see *Metacom* (YNT-19)

Joseph P. Kennedy, Jr.

Joseph Patrick Kennedy, Jr., older brother of President John F. Kennedy, was born in Nantasket, Mass., 25 July 1915. He attended Harvard College and Harvard Law School, enlisting in the Naval Reserve 24 June 1941. After flight training, Kennedy was commissioned Ensign 5 May 1942. He served with Patrol Squadron 203 and Bombing Squadron 110 before joining a special air unit in Britain in 1944. He was appointed Lieutenant 1 July 1944. Lt. Kennedy took part in a secret project to destroy German V-2 rocket launching sites by the use of radio controlled drone aircraft loaded with explosives. The plane could not take off by radio control, however, and Kennedy volunteered to take her into the air where guidance systems would take over. After exhaustive preparations he and another brave flyer, Lt. W. J. Willy, took off from Winfarthing 12 August 1944. However, the drone exploded with two enormous blasts, killing both officers. Lt. Kennedy was awarded the Navy Cross posthumously for this dangerous mission in the drone Liberator bomber. His citation testifies: "Intrepid and daring in his tactics and with unwavering confidence in the vital importance of his task, he willingly risked his life in the supreme measure of service, and, by his great personal valor and fortitude in carrying out a perilous undertaking, sustained and enhanced the finest traditions of the United States Naval Service."

(DD-850: dp. 2,425; l. 390'6"; b. 41'4"; dr. 18'6"; s. 35 k.; cpl. 367; a. 6 5", 12 40mm., 10 20mm., 10 21" tt., 6 dep., 2 det.; cl. *Gearing*)

Joseph P. Kennedy, Jr. (DD-850) was launched by Bethlehem Steel Co., Quincy, Mass., 26 July 1945; sponsored by Miss Jean Kennedy, sister of Lt. Kennedy; and commissioned at Boston 15 December 1945, Comdr. H. G. Moore in command.

The new destroyer sailed 4 February 1946 for shake-down training in the Caribbean. She returned to her homeport, Newport, in April, and was occupied for the next few months in Naval Reserve Training. Arriving Norfolk 8 October, the ship joined Admiral Leahy's flagship *Wisconsin* BB-64, and other units for a cruise to Chile and Venezuela. She traversed the Canal twice on this voyage, and was reviewed by the President of Venezuela 25 November 1946. *Joseph P. Kennedy, Jr.*, returned to her home port 14 December 1946.

During 1947 the destroyer operated on the East Coast and in the Caribbean. She sailed for fleet maneuvers off Puerto Rico 9 February and upon completion steamed eastward to join the 6th Fleet in the Mediterranean. During this period of great unrest in Europe, the fleet carried out the important role of peacekeeper and stabilizer. *Joseph P. Kennedy, Jr.* visited various Mediterranean ports before arriving Newport 26 June 1948. The remainder of the year was spent in antisubmarine exercises, and the first half of 1949 saw her make two training cruises to the Caribbean.

The ship sailed 23 August 1949 for 6th Fleet duty as flagship of Destroyer Squadron 18, returning 27 January 1950. With the advent of war in Korea she carried out reserve training during July 1950, followed by bombardment and convoy exercises to prepare for action defending South Korea from Communist aggression. *Joseph P. Kennedy, Jr.*, sailed for Japan 3 January 1951 by way of the Panama Canal, Pearl Harbor, and Midway. At Sasebo she loaded ammunition and, exactly 1 month after departure from Newport, joined Task Force 77 off Korea. From February to April she screened the attack carriers as they pounded enemy positions and supply lines. She departed 8 April for the Formosa Patrol, helping to prevent further hostilities across the volatile Straits. *Joseph P. Kennedy, Jr.*, then returned to Korea arriving off Wonsan 20 May to take up bombardment station in support of the Allied siege and occupation of harbor islands. This duty continued until 13 June, a period of almost constant bombardment of great importance to the operation, after which the ship steamed to Sasebo.

Joseph P. Kennedy, Jr., did not return to the West Coast immediately upon the termination of this combat duty, but instead steamed westward to complete a circuit of the globe. With other units of Destroyer Squadron 8, she visited Singapore, Bahrein, Port Said, Naples, and Gibraltar before returning to Newport 9 August 1951. Until January 1953 she conducted battle practice and served as school ship for the Fleet Training School at Newport that serves well to keep the fleet abreast of the latest developments. She sailed 7 January for another 6th Fleet cruise, returning to Newport 18 May 1953. Anti-submarine training exercises and another Mediterranean cruise January-May 1954 comprised her duty through most of 1955, and she sailed 5 November for Arctic maneuvers off northern Europe. The ship visited Oslo, Norway, and Bremerhaven, carrying out tactical exercises with units of the 6th Fleet before returning to Newport 5 March 1956.

In June 1956 the veteran ship arrived Annapolis with *Iowa* (BB-61) and *New Jersey* (BB-62) to embark Naval Academy midshipmen for a practice cruise. Upon returning from Northern Europe 1 August, the ship took part in training operations until 6 May 1957, when she sailed once more for 6th Fleet duty. The Jordanian crisis had just passed with the strong support of the fleet, and *Joseph P. Kennedy, Jr.*, took part in carrier operations until September, when she steamed to the coast of Norway for NATO joint maneuvers. She returned to Newport 22 October 1957. Again in 1958 the ship sailed to the Mediterranean, and on this cruise spent April in the Persian Gulf with the Middle East Force that helps stabilize that critical area before arriving Newport 1 July 1958.

After a needed period of overhaul at Boston, *Joseph P. Kennedy, Jr.*, arrived Annapolis once more 3 June 1959 for midshipman training. Along with other ships of the task group, she entered the St. Lawrence and repre-

sented the Navy at the opening of the Seaway 26 June 1959. Following the ceremonies, in which both President Eisenhower and Queen Elizabeth II took part, the destroyer entered the Seaway and steamed to Chicago 2 July. The ship visited various ports before returning to the Atlantic 6 August. In 1960 she returned to the Mediterranean with *Forrestal* (CVH-59) and *Franklin D. Roosevelt* (CVB-42), returning to Newport 15 October.

In January 1961 *Joseph P. Kennedy, Jr.*, steamed to Washington for the inauguration of John F. Kennedy, brother of her namesake. During February and April of that year she took part in space shots in the Project Mercury series. She then arrived New York 1 July 1961 for a FRAM (Fleet Rehabilitation and Modernization) overhaul in the Naval Shipyard. During this period she received the latest in antisubmarine gear, a new helicopter flight deck and hangar aft, and numerous other modifications designed to increase greatly her useful life. After emerging in her new dress in late May 1962, she underwent exhaustive shakedown out of Guantanamo Bay, Cuba, returning 26 August 1962.

Joseph P. Kennedy, Jr., with other ships of the fleet, reacted quickly to the threat of offensive missiles in Cuba, and President Kennedy's quarantine order. Sailing 22 October, the ship took an active part in the blockade which forced an easing of the crisis, and boarded Greek freighter *Marucla* 26 October. After participating in this graphic demonstration of the power and mobility of the modern Navy, *Joseph P. Kennedy, Jr.*, remained on patrol in the Caribbean until returning to Newport 7 December 1962.

During 1963 the veteran destroyer carried out training operations off the Virginia Capes and Nova Scotia. She departed Newport 29 April 1964 for another Med cruise

until 26 August, and in October was underway for Operation "Steel Pike I", one of the very largest amphibious operations since World War II. During the passage of the task force to the Spanish coast, she acted as anti-submarine screening ship. *Joseph P. Kennedy, Jr.* returned to Newport 19 November 1964.

Late in January of 1965, *Joseph P. Kennedy, Jr.*, put to sea for Port Canaveral, Fla., where she helped qualify two newly constructed Polaris submarines for patrol over seas. There followed a regular 3-month overhaul in the Boston Naval Shipyard.

Comdr. J. W. Hayes took over command of *Joseph P. Kennedy, Jr.*, from Capt. J. V. Peters on July 14; the next day, a 2-month period of refresher training commenced as the ship set sail for Guantanamo Bay, Cuba.

The U.S. Man In Space Program was one of *Joseph P. Kennedy, Jr.*'s most recent commitments; leaving Newport on November 27, 1965, the ship took station 1,200 miles southeast of Bermuda as part of the afloat recovery team for Gemini 6 and 7 on a 14-day orbital and rendezvous mission in space. The shots a success and her duty done, *Joseph P. Kennedy, Jr.* returned to Newport 21 December to prepare for another deployment in the Mediterranean.

Assigned to DesRon 10, *Joseph P. Kennedy, Jr.* departed Newport 15 February 1966 for duty with the 6th Fleet. After arriving Gibraltar 24 February, she participated during the next 4 months in AAW and ASW operations and ranged the Mediterranean from the North African coast to Turkey. She completed her peace-keeping patrols late in June and returned to Newport 8 July.

During the remainder of the year she conducted destroyer exercises and carrier screening operations off the eastern seaboard. In mid-November she participated in

USS *Joseph P. Kennedy, Jr.* (DD-850)

U. S. S. JOSEPH P. KENNEDY, JR. (DD-850)

CARE OF FLEET POST OFFICE
NEW YORK, NEW YORK

DD850:KCR:rms
3000
Ser: 021

27 OCT 1962

From: Commanding Officer, USS JOSEPH P. KENNEDY, JR. (DD 850)
To: Commander U.S. SECOND FLEET
Via: Commander Destroyer Division 102

Subj: Visit and Search of SS MARUCLA on 26 October 1962; report of

Encl: (1) Boarding officer's report with enclosures thereto

1. USS JOSEPH P. KENNEDY, JR. (DD 850) was directed to intercept the SS MARUCLA by Commander Task Force 136. A rendezvous was effected with USS JOHN R. PIERCE (DD 753) and the MARUCLA was intercepted at first light on 26 October 1962. The vessel was visited, searched, and subsequently cleared to proceed. Paragraph (2) below outlines a chronological sequence of events. Enclosure (1) is the Boarding Officer's report and recounts in detail the actual activities of the Visit and Search Party on board.

2. SS MARUCLA, Beirut, Lebanon enroute Havana, Cuba via Providence Channel and Straits of Florida:

0600 KENNEDY broke flaghoist signal: CODE OSCAR NOVEMBER
0610 KENNEDY sent by flashing light: REQUEST YOU STOP
0615 KENNEDY sent by flashing light: I INTEND TO BOARD YOU, REQUEST YOU ADVISE WHEN YOUR SEA LADDER IS READY
0630 SS MARUCLA sent: WE ARE READY TO RECEIVE YOU
0632 KENNEDY Visit and Search Party left for USS PIERCE
0635 SS MARUCLA flying: CODE ANSWERING SIGNAL
KENNEDY hauled down: CODE OSCAR NOVEMBER
0642 LCDR D.G. OSBORNE, Executive Officer from USS PIERCE boarded KENNEDY's whaleboat as member of Boarding Party - whaleboat proceeding to SS MARUCLA
0647 Whaleboat commenced circling the SS MARUCLA
0651 Visit and Search Party commenced boarding SS MARUCLA - portside
0654 Whaleboat departed SS MARUCLA - standing off
0900 Boarding Officer briefs COMESDIV 102 and Commanding Officer, USS JOSEPH P. KENNEDY, JR. over portable radio and recommends vessel clearance to proceed
0910 SS MARUCLA cleared to proceed however, surveillance maintained pending further instructions from Task Force Commander
0915 Boarding Party departing SS MARUCLA
0925 Boarding Party returned on board KENNEDY for debriefing
1015 Executive Officer PIERCE departs ship via whaleboat
1030 Whaleboat returns to ship
1235 Surveillance terminated as directed by Task Force Commander KENNEDY returning to assigned station

3. Visit and Search Party was not armed nor were any small arms in the whaleboat. The USS JOSEPH P. KENNEDY, JR. was close aboard on the SS MARUCLA's port quarter during the visit and was at general quarters. The USS PIERCE was on the merchant ship's starboard quarter. The ship was in continuous communications with the Visit and Search Party via portable radio.

4. The entire operation went smoothly and without any undesirable incidents.

Nicholas MIKHALEVSKY

recovery operations following the successful 4-day flight of Gemini 12. On 1 March 1967 *Joseph P. Kennedy, Jr.* again sailed for duty with the mighty 6th Fleet. She cruised the Mediterranean until late April, thence transited the Suez Canal for the Red Sea and Indian Ocean. Late in June she departed the Gulf of Aden for the United States. Steaming via the Cape of Good Hope and South America, she arrived Newport the following month. There she resumed readiness training in preparation for any duty in the interest of the nation and the free world.

Joseph P. Kennedy, Jr. received two battle stars for Korean service.

Joseph R. Parrott, see Salem (CM-11)

Joseph Strauss

Joseph Strauss was born 16 November 1861 in Mount Morris, N.Y. He was commissioned Ensign 1 July 1887 and began a distinguished career as specialist in ordnance in June 1893 when he reported to the Bureau of Ordnance in Washington, D.C. During the Spanish-American War he served in *Lancaster* blockading the Cuban coast, then returned to the Bureau of Ordnance. He established the Naval Proving Ground, Indian Head, Md., 1900 to 1902; served on a Special Board of Naval Ordnance in 1906; and was a member of the Joint Army-Navy Board on Smokeless Powders the following year. He conducted experimental work with torpedoes while commanding cruiser *Montgomery* 1909 to 1911; commanded *Ohio* (BB-12) in 1912; then became Chief of Bureau of Ordnance 21 October 1913.

Strauss assumed command of *Nevada* (BB-36) 30 December 1916 and remained in command as the United States entered World War I. Detached from the battleship in February 1918, he was designated Commander, Mine Force, Atlantic Fleet. He was awarded the Distinguished Service Medal both for directing the laying of the North Sea Mine Barrage and for the hazardous task of clearing it after peace came. In October 1919 he returned to the Navy Department to serve as a member of the General Board until March 1921 when he became Commander in Chief of the Asiatic Fleet with the rank of Admiral. He resumed duty with the General Board in October 1922. The following year he also worked with Congress on the budget and appropriations. He transferred to the Retired List 16 November 1925 but returned briefly to active duty 8 October 1937 to 8 February 1938 to serve the Advisory Board on Battleship Plans.

Admiral Strauss was a founder of the Naval Historical Society and a long time financial adviser of the Navy Relief Society. Among his inventions were the superimposed system of mounting guns; the first spring recoil gun mount, the first disappearing mount for deck guns of submarines, and the 12-inch gun, the fore-runner of the mighty guns for capital ships' main batteries. He received a special letter of appreciation from Secretary of the Navy Charles F. Adams in 1929 for his work on safety devices of submarines and the salvaging of sunken submarines. He died 30 December 1948 and was buried in the Arlington National Cemetery.

(DDG-16: dp. 4,500 t.; l. 437'; b. 47'; dr. 21'10"; s. over 30 k.; cpl. 334; a. Tar. mis., 2 5", 6 21" tt., ASROC; cl. *Charles F. Adams*)

Joseph Strauss (DDG-16) was laid down 27 December 1960 by the New York Shipbuilding Corp., Camden, N.J.; launched 9 December 1961; sponsored by Mrs. Lawrence Haines Coburn, granddaughter of Admiral Joseph Strauss; and commissioned in the Philadelphia Naval Shipyard 20 April 1963, Cdr. William M. A. Greene in command.

Joseph Strauss departed Philadelphia 6 June 1963 for a brief cruise to Puerto Rico and Willemstad, Cracao, and then transited the Panama Canal to join the Pacific Fleet on the western seaboard. She arrived in the Long

Beach Naval Shipyard 13 July 1963 for alterations, followed by tactics out of San Diego north to Seattle, Wash.

The flagship of Destroyer Squadron 3, *Joseph Strauss* sailed from Long Beach 30 June 1964. After calling at Pearl Harbor and Midway Atoll, she arrived in Yokosuka, Japan, 18 July. She departed 3 August 1964 to rendezvous off Okinawa 6 August with *Constellation* (CVA-65). She then patrolled off the Vietnam coast and the South China Sea with task forces built around *Constellation*, *Kearsarge* (CVS-31) and *Ticonderoga* (CVA-14). Brief sweeps were made to the Philippines and ports of Japan. She arrived in Yokosuka 15 December 1964 for upkeep, again sailing 21 January 1965 to support U.S. Forces in Vietnam until 1 March. During this period, she operated with *Ranger* (CVA-61), *Hancock* (CVA-19), *Coral Sea* (CVA-43), and *Yorktown* (CVS-10).

Following upkeep in Subic Bay (1-10 March), *Joseph Strauss* sailed with ships of the Royal Thai Navy for exercises in the Gulf of Thailand. She was briefly flagship of the 7th Fleet (22-26 March) during the official visit of Vice Admiral Paul B. Blackburn, Jr., to Bangkok, Thailand. She departed Yokosuka, 19 April for operations that brought recognition and honor to both the ship and her crew.

Commencing 24 April 1965, *Joseph Strauss*, together with *Ernest G. Small* (DDR-838), was part of the first advanced SAR/AAW picket team in the Gulf of Tonkin to support U.S. air strike operations against North Vietnam. From 16 through 21 May, she observed operations of a Russian task unit. She returned to Yokosuka (23 May-4 June), then again sailed for the Gulf of Tonkin. Her ensuing 27 days as flagship of the AAW/SAR picket unit were highly successful, establishing operational procedures and capabilities which remain destroyer standards. On 17 June 1965, two F4B Phantom's from *Midway* (CVA-41), under *Joseph Strauss*' advisory control, shot down two MIG-17's, accounting for the first two hostile aircraft downed by U.S. Forces in aerial combat since 1953. Three days later, two propeller-driven Skyraiders, also from *Midway* and under *Joseph Strauss*' Combat Information Center team were decorated by the Secretary of the Navy.

Joseph Strauss arrived in Hong Kong 6 July 1965, putting out to sea 14 to 16 July to avoid Typhoon Freda, and again 18 to 19 July to carry the 7th Fleet Salvage Officer to Pratus Reef to assist in refloating *Frank Knox* (DDR-742). She departed Hong Kong 21 July for Yokosuka. The following day she took a disabled Nationalist Chinese fishing boat in tow and delivered it safely to Keelung the 23d, thence sailed to Yokosuka, arriving 25 July for upkeep.

On 3 September 1965, she successfully fired two improved Tartar missiles off Okinawa. After a 1-day stop at Sasebo, *Joseph Strauss* proceeded south in the screen of *Bon Homme Richard* (CVA-31). Upon arrival in the South China Sea, she was detached for picket patrol in the Gulf of Tonkin during the last 3 weeks of September. She spent the first 2 weeks of October supporting operations off Vietnam in the screen of *Bon Homme Richard* and *Oriskany* (CVA-34). She then returned to Subic Bay for naval gunfire support training which continued off Danang, South Vietnam. On 28 October 1965, she fired her first shots in anger, expending 217 5-inch shells in support of a combined ARVN-Marine Corps search-and-destroy operation against the Viet Cong. Throughout November she formed an advanced SAR/AAW picket team with *Tucker* (DD-875) in the Gulf of Tonkin. She returned to Yokosuka 7 December 1965 for upkeep and preparations to resume operations off South Vietnam. *Joseph Strauss* returned to the Gulf of Tonkin 10 February 1966 and remained active in the war zone until heading for Hong Kong exactly one month later. Back in the fighting 26 April, she remained in the war zone until returning to Yokosuka 15 June. That day her home port was changed to Pearl Harbor which she reached 26 July.

Joseph Strauss operated in the Hawaiian area until heading back for the Western Pacific 14 January 1967. She remained in the Far East supporting the struggle

against Communist aggression until returning to Pearl Harbor 17 June. There she prepared for future action.

Joseph T. Dickman

An army name retained.

(AP-26: dp. 21,900; l. 535'2"; b. 72'4"; dr. 31'3"; s. 17 k.; cpl. 693; a. 43")

Joseph T. Dickman (AP-26) was built as *Peninsula State* for the U.S.S.B. by New York Shipbuilding Co., Camden, N.J., in 1921 and 1922. She began transatlantic service for United States Lines in 1922, and soon afterward in May was renamed *President Pierce*. In August 1922 the ship was renamed *President Roosevelt*, a name she carried during her many years of passenger service. Taken over by the War Department in October 1940, she was named *Joseph T. Dickman* and converted to a troopship by Atlantic Basin Iron Works of Brooklyn. The ship was subsequently transferred to the Navy 27 May 1941 and further converted to Navy use at New York Navy Yard. She commissioned at the Navy Yard 10 June 1941, Lt. Comdr. C. W. Harwood, USCG, in command.

The new transport got underway 26 June 1941 for Hampton Roads, and until August she took part in amphibious training exercises off Onslow Beach, N.C. After these important landings, which helped develop the tactics and equipment to be used later with such great success, *Joseph T. Dickman* returned to New York 14 August. She then moved to Boston for further conversion, remaining there until 1 October. Stores were loaded at Norfolk in October, after which the transport proceeded to Halifax to load British troops. With five other troop ships she departed 10 November 1941 on the long voyage to India. While the ship carried these British reinforcements, the Japanese attack on Pearl Harbor brought the United States into the war 7 December 1941. *Joseph T. Dickman* arrived Bombay via Trinidad and Capetown 27 December 1941 and debarked troops. Departing 10 January, she retraced her steps to New York, arriving 28 February 1942 for the installation of new boats and lowering equipment.

After leaving the yard in April the ship underwent tests in Hampton Roads before departing 11 May for transport duties in the Caribbean. She stopped at San Juan and Bermuda to debark troops before returning to Norfolk 27 May 1942. *Joseph T. Dickman* carried further reinforcements to Caribbean bases in June, and spent July on amphibious exercises in Chesapeake Bay. Training and additional conversion to increase her boat capacity continued into October, when the ship prepared for Operation "Torch", the invasion of North Africa.

As part of the Western Naval Task Force, *Joseph T. Dickman* got underway from Norfolk 24 October to take part in the first amphibious invasion ever launched across an entire ocean. Arriving in the transport area of Fedhala early 8 November, she began the debarkation. She remained off shore until German submarine attacks forced her seaward 12 November. As the successful invasion was consolidated, however, *Joseph T. Dickman* entered Casablanca harbor 15 November and completed unloading. Two days later she was underway for Norfolk, arriving 30 November 1942.

After embarking troops and taking on cargo, *Joseph T. Dickman* departed 27 December 1942 for the Pacific via the Panama Canal. She stopped at Noumea and Brisbane before sailing for Norfolk again, where she arrived 10 March 1943. During this voyage, on 1 February 1943, the ship was reclassified APA-13.

The veteran troopship departed 10 May 1943 for North Africa, in preparation for the invasion of Sicily. She arrived Mers el Kebir 23 May and, after landing rehearsals, got underway with the invasion fleet from Algiers 6 July. As a part of Rear Admiral Hall's Gela landing force, she arrived off the beaches 10 July and began the long process of debarkation. Next day she suffered minor

damage fighting off German bombing attacks, damaging at least three of the attackers with her accurate gunfire. With the invasion quickly successful, the ship was underway for Algiers 12 July for more exercises.

The next major amphibious operation in the campaign to regain Italy was slated for Salerno; and, after training, *Joseph T. Dickman* arrived off the beaches with Hall's Southern Attack Force 9 September. Rockets from an LCS attached to the ship helped clear the way for the first wave of boats, and, after receiving near misses from shore batteries, the transport debarked her troops and returned to Mers el Kebir. As the battle to consolidate the beachhead began, *Joseph T. Dickman* returned with reinforcements to Salerno 6 October. She made two other follow-up voyages from Africa to Italy, the final one with over 1,000 French troops.

The ship sailed 30 November 1943 for Norfolk by way of Scotland. Upon her arrival 1 January 1944, the ship underwent battle repairs; and, after embarking troops, sailed 11 February 1944 for Glasgow. During the next few months the ship was engaged in intensive training for the giant Normandy invasion, scheduled for June. Sailing from England 5 June, she arrived off Utah Beach early the next day and landed her troops without a mishap. On the afternoon of D-day, she steamed to Portland with casualties, later making a shuttle voyage to the beaches 14 June as troops moved inland to liberate France.

Upon arriving Mers el Kebir 10 July 1944, *Joseph T. Dickman* began preparations for still another landing, this time in southern France. After exacting training operations, she sailed from Sicily 13 August 1944, arriving off the Delta Force beaches next day to debark her troops. After smooth and skillful unloading, she steamed to Naples, arriving 17 August. In the weeks that followed, *Joseph T. Dickman* made five follow-up voyages to southern France from Mediterranean staging points as the Allies pressed northward. The veteran ship sailed from Mers el Kebir 25 October for the United States, arriving Boston 8 November.

Joseph T. Dickman, after taking part in every major amphibious operation in the European-African theater, now turned her attention to the Pacific. She sailed 24 January 1945 with troops for Guadalcanal, arriving via Espiritu Santo 12 February. There she began training operations for the invasion of Okinawa. From 21-27 March the transports made final preparations at Ulithi, sailing the latter date for the last and greatest of the Pacific invasions. The troops stormed ashore 1 April, but the transport remained off the beaches helping to ward off air attacks while unloading cargo until 9 April. She then sailed to Saipan, and continued to Pearl Harbor, where she anchored 25 April 1945. *Joseph T. Dickman* arrived at San Francisco with veterans 30 May.

After two troop voyages to Pearl Harbor, the ship remained at the Navy Yard there for conversion to a casualty evacuation ship for the projected invasion of Japan. Emerging 10 August, she was en route to San Francisco when the fighting ended 14 August 1945. *Joseph T. Dickman* then sailed for the Philippines 24 August; and, upon arrival in Manila 17 September, took on American and Allied soldiers who had been prisoners of the Japanese for transportation to the United States. Ironically, four British enlisted men came on board, who after 3½ years in a prison camp were returning to the United States on the same ship which had carried them from Halifax to Bombay in 1941. The ship reached San Francisco 16 October.

Assigned to Operation "Magic-Carpet," *Joseph T. Dickman* made a voyage to Pearl Harbor, returning to Seattle 2 December 1945. She moved south to San Francisco 13 January 1946. The ship steamed to Suisun Bay in March, decommissioned 7 March, and was returned to the Maritime Commission. She was scrapped in 1948.

Joseph T. Dickman received six battle stars for World War II service.

Josephine, see *Vixen* (PY-4)

Josephine

Former names retained.

I

(SP-913: l. 60'; b. 13'6"; dr. 3'3"; a. 1 3-pdr., 1 mg.)

The first *Josephine* (SP-913), a motor boat, was built in 1916 by New York Yacht, Launch, & Engine Co., Morris Heights, N.Y., and acquired from her owner, L. A. Lehmaier, 9 August 1917. She commissioned 20 September 1917 at Brooklyn Navy Yard, Boatswain J. D. Cremin, USNRF, in command.

Josephine was attached to the 3d Naval District and performed patrol duty in the New York area, including Long Island Sound. She was returned to her owner 20 December 1918.

II

(SP-1243: t. 32; l. 82'; b. 12'10"; dr. 4'6"; s. 12 k.; a. 1 3-pdr., 1 1-pdr.)

The second *Josephine* (SP-1243), a motor yacht, was built in 1905 by Peter Grutti Shipyards, New Orleans, and acquired by the Navy from her owners, Lee H. Tate, *et al.*, of St. Louis, 27 October 1917 at New Orleans. She commissioned 5 November 1917, Ens. J. S. Waterman, Jr., USNRF, in command.

Attached to the 8th Naval District, *Josephine* patrolled the southwest pass of the Mississippi River and the Gulf of Mexico, based at Burrwood, La. She decommissioned 6 December 1918 and was returned to her owners.

III

(SP-3295: l. 48'; b. 8'6"; dr. 4'; s. 12 k.)

The third *Josephine* (SP-3295), a motor boat, was built in 1913 by Jacob Shipyard, City Island, N.Y., and acquired by the Navy 30 October 1918 from her owner, Frank S. Sample.

Josephine operated as a patrol and harbor craft in the 3d Naval District until being returned to her owner 3 January 1919.

Josephine H. II

A former name retained.

(SP-245: l. 65'; b. 12'6"; dr. 4'8"; s. 12 k.; a. none)

Josephine H. II (SP-245), a wooden motor boat, was built in 1912 by Bosserdet Yacht & Engine Co., and acquired by the Navy in July 1917 from her owners, John R. Shuman *et al.* She commissioned 3 August 1917, Chief Boatswain's Mate G. F. Noyes in command.

Josephine H. II was assigned to the 9th, 10th, and 11th Naval Districts for patrol duty based at Detroit. She performed guard duty and regulated traffic on the Detroit River and in Lake St. Clair until decommissioning 29 November 1918. She was returned to her owners 11 March 1919.

Josephus

A former name retained.

(t. 1,340; l. 229'; b. 39'2"; dr. 20'8"; epl. 7)

Josephus was built in 1876 by E. Haggett, of Newcastle, Maine, and purchased by the Navy from Luckenbach Steamship Co., 18 October 1917. She commissioned 8 November 1917 and immediately began collier duties in the 3d Naval District. She was assigned to NOTS 8 August 1918 and operated with the coastwise collier service from Norfolk to New England ports.

Josephus was detached from NOTS 27 March 1919 to take up peacetime collier duties in the 5th Naval District. She was stricken from the Navy List 13 June 1919 and sold to the Neptune Line 11 September 1919.

Josephus Daniels

Josephus Daniels was born 18 May 1862 in Washington, N.C. As editor and publisher of the Raleigh, N.C., *News and Observer*, he became a major editorial voice in the South. He was appointed Secretary of the Navy by President Wilson in 1913. A number of his naval reforms included abolishing the officer's wine mess, the introduction of women into the service, and establishment of service schools on board ships and stations. He evinced great interest in the common man, favoring promotion from the ranks and inaugurating the practice of making 100 sailors from the fleet eligible for entrance into the Naval Academy annually. Under his leadership, the Navy expanded greatly and fought effectively in World War I. He resigned as head of the Navy Department in 1921, returning to his job as editor and publisher of the *News and Observer* until his appointment as Ambassador to Mexico from 1933 to 1942. After furthering President Roosevelt's "Good Neighbor" policy with Mexico, he devoted the remainder of his life to editing and the writing of a number of books, including *Our Navy at War* and *Life of Woodrow Wilson*. He died at Raleigh 15 January 1948.

(DLG-27: dp. 7,930; l. 547'; b. 55'; dr. 28'10"; s. over 20 k.; epl. 418; a. Ter. mg., 1 5', 2 3', 2 21' tt.; cl. *Belknap*)

Josephus Daniels was laid down 23 April 1962 by Bath Iron Works Corp., Bath, Maine; launched 2 December 1963; sponsored by Mrs. Robert M. Woronoff and Mrs. Clyde R. Rich Jr., granddaughters of Josephus Daniels; and commissioned 8 May 1965, Captain Harry A. Cummings in command.

The guided missile frigate, based at Norfolk, Va., cruises as a unit of Cruiser-Destroyer Force, U.S. Atlantic Fleet. *Josephus Daniels* operated off the East Coast until departing the Virginia Capes 9 December for the Mediterranean. She operated with the 6th Fleet, a force of peace and stability in the volatile Middle East, until returning home in the spring of 1967.

Josiah D. Whitney, see *Livingston* (AK-222)

Josiah Paul, see *Nashira* (AK-85)

Josiah Willard Gibbs

San Carlos (AVP-51) (*q.v.*) was renamed *Josiah Willard Gibbs* and reclassified AGOR-1 on 15 December 1958.

Jouett

James Edward Jouett was born near Lexington, Ky., 7 February 1826 and was appointed Midshipman 10 September 1841. He served on the African coast in *Decatur* with Mathew C. Perry and in *John Adams* during the Mexican War.

At the beginning of the Civil War, Jouett was captured by Confederates at Pensacola but was soon paroled. He then joined the blockading forces off Galveston, distinguishing himself during the night of 7 to 8 November 1861 in the capture and destruction of Confederate schooner *Royal Yacht*. Jouett later commanded *Montgomery* and *R. R. Cuyler* on blockading duty and in September 1863 took command of *Metacomet*. In the Battle of Mobile Bay, 5 August 1864, his ship was lashed to Admiral Farragut's flagship *Hartford* as the gallant ships entered the bay. Monitor *Tecumseh* was sunk by an underwater "torpedo", but the ships steamed boldly on, inspired by Farragut's famous command: "Damn the torpedoes, full speed ahead." *Metacomet* was sent after two Confederate gunboats, and in a short chase Jouett riddled *Gaines* and captured *Selma*.

Jouett had various commands ashore and afloat after the Civil War, taking command of the North Atlantic

USS *Josephus Daniels* (DLG-27) on sea trials near Bath, Maine

Squadron in 1884. In 1889 he commanded a naval force which forced the opening of the isthmus of Panama, threatened by insurrection. Rear Admiral Jouett retired in 1890 and lived for most of his remaining years at "The Anchorage," near Sandy Springs, Md. He died 30 September 1902.

I

(DD-41: dp. 787 (n.); l. 293'11"; b. 27'; dr. 8'4"; s. 30 k.; cpl. 83; a. 5 3", 6 18" tt.; cl. *Monaghan*)

The first *Jouett* (DD-41) was laid down 7 March 1911 by Bath Iron Works, Ltd., Bath, Maine; launched 15 April 1912; sponsored by Miss Marylee Nally; and commissioned at Boston 24 May 1912, Lt. Comdr. W. P. Cronan in command.

Jouett joined the Atlantic Fleet Torpedo Flotilla and operated off the East Coast until early 1914, when events in Mexico threatened American interests and officials at Tampico arrested American sailors without cause. *Jouett* supported the landing of Marines at Vera Cruz 21 April 1914. Returning to the East Coast after this operation, the destroyer continued to carry out training maneuvers until the United States entered World War I in April 1917.

The ship was assigned patrol in Delaware Bay in April 1917 and remained on that duty until sailing from New York 8 August 1917 as an escort for five troopships bound for France. After returning from Europe, *Jouett* resumed patrolling until she arrived New London, Conn., 15 January 1918 for experimentation with antisubmarine detection devices. Completing this duty 4 June 1918, the ship operated until the armistice with a special antisubmarine group along the East Coast of the United States.

Following the war *Jouett* conducted training exercises and fleet maneuvers until entering Philadelphia Navy Yard 20 July 1919. She decommissioned 24 November 1919 and remained inactive until being loaned to the Coast Guard 23 April 1924 for use as a cutter. Returned to the Navy 22 May 1931 she was sold for scrap to Michael Flynn Inc., Brooklyn, N.Y.

II

(DD-396: dp. 1,850; l. 390'11"; b. 36'11"; dr. 11'4"; s. 38 k.; cpl. 235; a. 8 5"; 2 1.1"; 9 21" tt.; cl. *Somers*)

The second *Jouett* (DD-396) was laid down 26 March 1936 by Bath Iron Works Corp., Bath, Maine; launched 24 September 1938; sponsored by Mrs. J. R. Todd; and commissioned at Boston 25 January 1939, Comdr. G. W. Clark in command.

Following shakedown training which took *Jouett* to England and Ireland, the ship returned to Norfolk 29 April 1939 and began operating on neutrality patrol along the East and Gulf Coasts. She stood out of Pensacola Bay 15 February 1940 as one of the escorts for *Tuscaloosa* (CA-37), carrying President Roosevelt on a cruise through the Gulf of Panama, returning to Pensacola 1 March 1940. *Jouett* then set course for the Panama Canal and the Pacific, arriving Pearl Harbor for duty 10 April 1940.

The destroyer remained in Hawaiian waters during the next year exercising with America's vital carriers and perfecting tactics. Sailing 18 April 1941, *Jouett* accompanied *Yorktown* (CV-5) through the canal to Cuba, proceeding from there to Port-of-Spain, Trinidad, 19 May. The ship then joined a cruiser and destroyer force under Rear Admiral Jonas H. Ingram charged with guarding against German surface or submarine attacks on American shipping. *Jouett* was at Port of Spain 7 December 1941 when the Japanese attack on Pearl Harbor brought America into the war. The ship then began offensive anti-submarine patrols between Brazil and Africa, helping to keep the all-important ocean supply lines open. She accompanied Army engineers to lonely Ascension Island 30 March 1942 where an airfield was carved from the bleak landscape. *Jouett* convoyed the precious oil tankers from Trinidad south during the months that followed, often attacking submarines with depth charges. In December

1942, the ship returned to Charleston for repairs, but by 21 January 1943 she was back in Natal harbor, Brazil.

Jouett received President Vargas of Brazil 27 January 1943, providing quarters for him and his party during important conferences on board *Humboldt* (AG-121) with President Roosevelt. Following the talks, which cemented relations between the countries and provided for closer naval cooperation, President Vargas departed *Jouett* 29 January.

The veteran destroyer resumed her escort duties in February, and 14 May joined in the search for *U-128* off Bahia, Brazil. Aircraft dropped depth charges on the sub and brought her to the surface where gunfire from *Jouett* and *Moffett* (DD-362) sent her to the bottom. The destroyer continued to serve with Admiral Ingram's crack antisubmarine force, now 4th Fleet, through the rest of 1943. On New Year's Day 1944 she joined *Omaha* (CL-4) for ocean patrol; and the ships intercepted German blockade runner SS *Rio Grande*, with a vital cargo of crude rubber. After the crew abandoned ship, *Omaha* and *Jouett* sank the German ship. This effective closing of the South Atlantic to German blockade runners was demonstrated even more forcefully 5 January when patrol planes reported a strange ship identifying herself as *Floridian*. Intelligence identified her, however, as blockade runner *Burgenlund*. Before aerial attacks could begin *Omaha* and *Jouett* picked her up on radar and closed in. Scuttling charges and the cruiser's gunfire sank her just after 1730.

Jouett returned to Charleston once more in March 1944 and engaged in training operations in Casco Bay, Maine, before sailing for England in convoy 16 May 1944. There she joined a Reserve Fire Support Group for the long-awaited invasion of France. *Jouett* arrived off Omaha beach 8 June, escorting coastal steamers with support troops embarked. She repelled an air attack that day, and until 21 June screened British heavies during shore bombardment and provided antisubmarine screen for the Omaha Beach transport area. The second front established, *Jouett* escorted convoys to and from the Firth of Clyde until 12 July 1944 when she sailed with a convoy for Algeria.

The destroyer arrived at Oran 21 July to prepare for the next major European operation, the invasion of southern France. Departing Naples 14 August, *Jouett* arrived off the Delta assault area next day and, as troops landed, acted as command ship of the Convoy Control Group charged with the smooth routing and unloading of support troops. This duty continued until 3 September, after which the ship operated on patrol out of Toulon. In early October *Jouett* steamed off Cape Ferrat, giving gunfire support to American troops in the bitter fighting ashore. She also destroyed mines off San Remo 9 October, destroyed bridges, and covered Allied minesweeping operations in the area.

Jouett sailed from Oran 31 December 1944 for repairs at Charleston. After refresher training in Casco Bay in April, the battle-tested ship made convoy voyages to England and Cuba before the end of the war 15 August 1945. She decommissioned at Philadelphia Naval Shipyard 1 November 1945 and was scrapped there in 1946.

Jouett received three battle stars for World War II service.

III

(DLG-29: dp. 7,900 (f.); l. 547'; b. 54'9"; dr. 14'9"; s. over 30 k.; cpl. 418; a. Ter. mis., ASROC, 1 5", DASH; cl. *Belknap*)

The third *Jouett* (DLG-29) was laid down 25 September 1962 by Puget Sound Naval Shipyard, Bremerton, Wash.; launched 30 June 1964; sponsored by Mrs. S. J. Ervin, Jr., wife of the Senator from North Carolina; and commissioned 3 December 1966, Captain Robert S. Hayes in command.

Carrying the most modern antisubmarine detection and missile warfare gear, *Jouett* joins the fleet as a ready defender of freedom. Her motto, "Eternal Vigilance," serves as a reminder of the ship's mission in war and peace.

Upon completion of fitting out in February of 1967 *Jouett* was assigned to Cruiser-Destroyer Force, U.S. Pacific Fleet, and operated out of her home port, San Diego.

Joy

A former name retained.

(SP-643) : t. 41; l. 93'; b. 11'; dr. 4'; s. 23 k.; epl. 12;
a. 1 mg.)

Joy (SP-643), ex-*Dodger*, was built by B. F. Wood, City Island, N.Y. in 1905, and acquired by the Navy in June 1917 from her owners, T. M. Jones, and P. C. Kauffman of Newport, R.I.

The motor yacht was assigned to the 2d Naval District, Newport, R.I., and was used on patrol only a short time before being declared unserviceable. She was finally returned to her owners 6 May 1919.

Joy (DD-951) was renamed *Turner Joy* (q.v.) 26 July 1957 prior to being launched 5 May 1958.

Joy, Daniel A., see *Daniel A. Joy* (DE-585)

Joyance

A former name retained.

(SP-72: t. 119; l. 134'8"; b. 16'; dr. 5'6"; s. 14 k.; a. 1 3-pdr.)

Joyance (SP-72), a steam yacht built in 1907 by Robert Jacobs, City Island, N.Y., was purchased by the Navy from William H. Childs of New York City in May 1917; and commissioned 20 July 1917, Boatswain Martin Grady, USNRF, in command.

Joyance was assigned to the 3d Naval District as a harbor patrol boat, and operated in New York harbor and Long Island Sound. She decommissioned 6 May 1919 and was sold 5 August 1919 to Reinhard Hall at Brooklyn.

Joyce

Philip Michael Joyce was born 23 October 1920 in St. Louis, Mo., and enlisted in the Navy 11 July 1940. Selected for an appointment as a midshipman during his preliminary training, he was commissioned Ensign 28 February 1941. He served on *Langley* (CV-1) until 10 August when he reported to *Peary* (DD-226) for duty in the Pacific. Following the outbreak of war between the

USS *Jouett* (DLG-29) in 1966

United States and Japan, *Peary* suffered heavy damage during an enemy air attack while moored at Cavite, Philippines 10 December. Despite this and two subsequent attacks, *Peary* reached Darwin, Australia, effected repairs and commenced antisubmarine patrols. While anchored in Darwin harbor 19 February 1942 she was destroyed by five bombs which struck her during a devastating, enemy raid. Though fighting to the end, *Peary* went down; and Ens. Joyce perished in a holocaust that only 1 officer and 30 men survived.

(DE-317: dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; cpl. 186; a. 3 3", 2 40mm., 8 20mm., 3 21" tt., 8 dep., 1 dep. (h.h.), 2 dct.; cl. *Edsall*)

Joyce (DE-317) was laid down 8 March 1943 by the Consolidated Steel Corp., Orange, Tex.; launched 26 May 1943; sponsored by Mrs. Harold T. Joyce, mother of Ensign Joyce; and commissioned 30 September 1943, Lt. Comdr. R. Wilcox, USCG, in command.

After shakedown off Bermuda, *Joyce* joined Escort Division 22 for trans-Atlantic convoy escort duty. Sailing from Norfolk 4 December 1943, she helped escort a 100-ship convoy to North Africa. She returned to New York from Casablanca 31 January 1944, then departed 1 March as part of the escort for a fast convoy bound for Londonderry, Northern Ireland. While steaming 400 miles south of Iceland on the night of 9 March *Joyce* braved two attacks from a German U-boat to rescue 28 survivors from the stricken *Leopold* (DE-319), which was torpedoed while investigating a radar contact. *Joyce* steamed at top speed for Londonderry and arriving 11 March, transferred *Leopold's* wounded. A week later she departed for New York in company with a westbound convoy, which reached the East Coast 28 March.

Joyce departed New York 15 April for her second escort run to Northern Ireland. While screening for a straggler the following morning she was ordered to direct rescue operations for the gasoline tanker SS *Pan Pennsylvania*, which was torpedoed and set aflame while taking station in the convoy. After picking up 31 survivors, including the tanker's captain, *Joyce* detected a submarine by sonar at 0950 and pressed home an attack. She dropped a deadly pattern of 13 depth charges which forced *U-550* to the surface, bow first, some 2,000 yards to her stern. A screening escort, *Gandy* (DE-764), opened fire and rammed the after section of the U-boat. *Joyce*, *Gandy*, and *Peterson* (DE-152) shelled the submarine, silenced her deck guns and forced the hapless *U-550* to surrender. *Joyce* ordered the Germans to abandon ship, but before a boarding party could seize the captured prize, the Germans scuttled her. Only 40 minutes after *Joyce* had detected her, she plunged stern first beneath the waves. *Joyce* rescued and took prisoner 13 survivors, including the U-boat's skipper, escorted the convoy safely to Londonderry 26 April, and returned in convoy to the United States where she arrived New York 12 May. During the next year *Joyce* conducted eight more escort voyages for convoys bound from New York to Great Britain; she returned to New York from her last convoy run 13 May 1945.

Joyce departed New York 4 June and steamed for ASW and gunnery training with units of Escort Division 22 in the Caribbean. Sailing from Guantanamo Bay 20 June, she transited the Panama Canal the 23d and steamed via San Diego for Pearl Harbor where she arrived 11 July for duty with the Pacific Fleet. She conducted ASW exercises in the Hawaiian operating area until 28 August when she sailed for Saipan Island and Sasebo, Japan, as escort for a convoy of amphibious landing ships. Upon her arrival at Sasebo 22 September, she escorted a convoy of LSTs to the Philippine Islands 3 days later, arriving Leyte Gulf 2 October. She remained in the Philippines on escort duty throughout October and sailed from Guinan, Samar, 4 November with 29 returning veterans for Pearl Harbor. Arriving the 15th, she continued to San Diego 17 November; upon her arrival the 23d she debarked her passengers and received orders to report for

duty with the Atlantic Fleet. Sailing from San Diego the 25th, she passed through the Canal 3 December and put into New York harbor on the 10th.

Joyce remained at New York for an inactivation overhaul until 21 January 1946 when she departed for a 3-day voyage to Green Cove Springs, Fla. She remained there and decommissioned 1 May to become a unit of the Florida Group, Atlantic Inactive Reserve Fleet.

With the outbreak in June 1950 of Communist aggression in South Korea *Joyce* was recalled to active duty; taken to Mare Island Naval Shipyard, Vallejo, Calif., where she converted to a radar picket escort (DER-317); and recommissioned 28 February 1951, Lt. Comdr. J. P. McGrady, in command.

Following shakedown along the California coast, she departed 12 May for duty with the Atlantic Fleet; arriving Newport, R.I., 21 June, she joined Escort Squadron 10 and commenced picket duty. She participated in air defense exercises along the New England coast and during the next 8 months made three barrier picket patrols along the Atlantic coast from Newfoundland to Puerto Rico. She steamed from Newport 19 February 1952 in company with Escort Squadron 10 bound for practice barrier patrols in the Caribbean. Cruising the Caribbean from Panama to Trinidad, she returned to Newport 20 March and joined Escort Squadron 16.

After conducting ASW tactics with *Cobbler* (SS-344) in the Virginia Capes Operating Area, she departed Newport 30 June, joined the Eastern Air Defense Force, and commenced radar barrier station patrols to protect North America from surprise attack. Interrupted only by overhauls and refresher training, these picket patrols continued for 5 years; *Joyce* ranged the Atlantic from Nova Scotia and Newfoundland to the Virginia Capes and the West Indies.

Departing Newport 17 July 1957, *Joyce* sailed with her squadron for duty in the Pacific and, via the Dominican Republic, Panama, and San Diego, arrived Pearl Harbor 18 August. Following 6 weeks of training, she commenced radar picket and ASW patrols from Pearl Harbor to Midway Atoll and the Marshall Islands. She departed Pearl 13 May 1958 and sailed for Eniwetok Atoll where she conducted search and rescue operations at the Eniwetok Proving Grounds Area. Returning to Pearl Harbor 17 June, she resumed her picket patrols until 16 March 1960 when she set sail for the West Coast. Arriving Long Beach 22 March, she entered the Naval Shipyard for inactivation overhaul. *Joyce* decommissioned 17 June 1960 and was assigned to the Long Beach Group, U.S. Pacific Fleet Reserve. *Joyce* later transferred to the San Diego, Calif., Group, where she remains.

Joyce received one battle star for World War II service.

Jubilant

Shouting with joy; exulting.

(AM-255: dp. 530; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.; cpl. 105; a. 1 3", 2 40mm., 6 20mm., 2 dep., 2 dct.; cl. *Admirable*)

Jubilant (AM-255) was launched 20 February 1943 by American Shipbuilding Co., Lorain, Ohio; sponsored by Mrs. C. D. Bishop; and commissioned 27 August, Lt. (j.g.) W. P. Sprunt in command.

Jubilant departed Lorain 13 September and steamed via

Quebec and Argentia, Newfoundland for Little Creek, Va. While sailing along the Atlantic coast, she made a submarine contact, 23 October and launched a depth charge and hedgehog attack which resulted in a probable hit. Arriving Little Creek the 23d, she commenced 4 months of minesweeping and escort training, then departed 1 March 1944 for convoy escort duty in the South Atlantic.

She arrived Trinidad, British West Indies 12 March and departed the next day as escort for a convoy bound for Recife, Brazil. Arriving 26 March, she proceeded to Rio de Janeiro and Bahia, Brazil before returning to Trinidad 30 May. *Jubilant* made several escort voyages between Trinidad and Brazilian ports and engaged in coastal minesweeping operations before departing Trinidad 23 March 1945 for the United States. Reaching Norfolk, Va., 29 March, she conducted minesweeping operations in the Chesapeake Bay until departing 30 April for convoy duty along the eastern seaboard. On 17 May she returned to Norfolk and resumed minesweeping operations. Serving as a minesweeping training ship, she continued her duty out of Norfolk until 4 March 1946; then she departed for Orange, Tex. Arriving 11 March, *Jubilant* decommissioned 18 May and joined the Atlantic Reserve Fleet.

In order to bolster the fleet during the Korean conflict, *Jubilant* recommissioned 11 May 1951. Departing 24 May, she steamed to Charleston, S.C., to join Mine Squadron 8, Atlantic Fleet, 29 May. For more than 2 years *Jubilant* operated out of Charleston along the Atlantic coast up to the Chesapeake Bay. She cleared Charleston 19 February 1954 and returned to Orange the 28th. *Jubilant* decommissioned 27 April and entered the Atlantic Reserve Fleet. She was redesignated MSF-255 on 7 February 1955. Subsequently, *Jubilant* was stricken from the Navy List 1 May 1962. At present she serves the Mexican Navy as *DM-01 (D-1)*.

Jubilee

A former name retained.

(Bark: t. 233; a. none)

Jubilee was purchased at Portland, Maine, 28 November 1861 for service as an obstruction in the second stone fleet which was sunk in the Maffitt's Channel approach to Charleston 26 January 1862.

Judah Touro, see *Mink* (IX-123)

Judge Torrence

A former name retained.

(SwStr: t. 700; l. 179'1"; b. 45'6"; dr. 9'; s. 6 k.; a. 2 24-pdr. how. sb.)

Judge Torrence was a steamer purchased by the War Department 10 February 1862 for use as an ordnance ship in the Western Gunboat Flotilla organized by the Army on the Ohio and Mississippi Rivers soon after the outbreak of the Civil War. She was transferred to the Navy 30 September 1862 and commissioned at Cairo, Ill., 25 December, Comdr. Le Roy Fitch in command.

Judge Torrence departed Cairo 14 March 1862 to supply the flotilla with ammunition during operations against Island No. 10. She continued to support Union mortars and gunboats throughout the operations which wrested control of the Mississippi and her tributaries from the South, cutting the Confederacy in two. After the Confederate surrender of Vicksburg Rear Admiral Porter praised *Judge Torrence* and sister ordnance ship *Great Western* for "unremitting attention to their duties during the siege, supplying without delay every requisition made on them by Army and Navy." *Judge Torrence* continued to provide efficient and vital service throughout the war, decommissioning at Cairo 1 August 1865. She was sold at public auction at Mound City to John A. Williamson

et al. 17 August 1865. Redocumented as *Amazon* 2 January 1866, she served American commerce until she sank after striking a snag off Ozark Island, Ark., 19 February 1868.

Julia

Former names retained.

I

(Sch: t. 53; cpl. 40; a. 2 guns)

In September 1812, Lt. M. T. Woolsey purchased schooner *Julia* for the Navy on Lake Ontario. *Julia*, Sailing Master James Trant in command, sailed from Sackett's Harbor 8 November 1812 with Commodore Chauncey's flotilla. That afternoon lookouts on the American ships spotted HMS *Royal George*, the largest warship yet constructed on the Great Lakes, off False Ducks Island and sent her scurrying into the Bay of Quinté where she escaped in the rapidly falling night. The next morning they again sighted her and resumed the chase. When the British ship reached the shelter of the Canadian batteries at Kingston, Chauncey decided to follow her in to test the strength of the defenses and, if possible, to capture the warship. Led by *Conquest* and *Julia*, Chauncey's daring little vessels, defying the fire from ship and shore, stood toward the harbor entrance.

Approaching nightfall and threatening weather interrupted the raid by forcing Chauncey to haul off to deeper water where he anchored hoping to resume the action with the sunrise.

However, heavy weather on the morning of the 10th ruled out a renewal of the attack and dictated a return to the American base at Sackett's Harbor. As the little flotilla retired, their lookouts spied HMS *Simcoe* and chased her into shoal water. Although fire from *Julia*, *Thompkins*, and *Hamilton* damaged the British ship considerably, *Simcoe* managed to cross a reef to safety. The audacious attack on Kingston was excellent tonic for the spirit of the flotilla giving Chauncey confidence in the fighting ability of his officers and men and inspiring the crews with respect and admiration for their leaders. At this point a bitter winter interrupted operations until spring.

With the return of good weather, Chauncey's ships sortied from Sackett's Harbor 25 April 1813 for a raid on York (now Toronto), Canada. Two days later, after landing some 1,700 men under General Dearborn, *Julia* and her sister ships supported the American troops with grape at rapid fire, enabling them to beat off counterattacks by Indians and British sharpshooters while taking York. The American loot included large amounts of naval and military stores and British brig *Duke of Gloucester*. Moreover, a 24-gun ship nearing completion was burned at York.

On 8 May, bad weather, which had detained Chauncey at York, cleared enabling his ships to get under way beginning a fortnight's duty transporting and conveying troops and supplies for General Dearborn. On the 27th, *Julia* and *Growler* led the flotilla into the Niagara River to open an attack on Fort George by shelling a British battery dug in near the lighthouse. The other American ships took preassigned positions where they shelled targets ashore. Meanwhile Captain Oliver Hazzard Perry directed the disembarkation of troops. In 3 hours, the carefully coordinated attack drove the defenders from the field.

With Fort George in American hands, the British gave up their forts on the Niagara frontier leaving Chauncey and Dearborn in control of the entire Niagara River.

On the night of 7 and 8 August, *Julia* rescued a number of survivors of *Seourge* after that schooner had capsized and sunk in a heavy gale. During the next 3 days, the American flotilla and the British squadron maneuvered

seeking to move into an advantageous position for a general engagement. On the 10th *Julia* and *Growler* were cut off from their sister ships and captured. The British renamed the schooners *Confiance* and *Hamilton* and used them as troop transports until Chauncey recaptured them near False Ducks Islands, 5 October. However, the schooners, having proven unstable in heavy seas, were soon retired from service.

II

(Slp: t. 10; cpl. 7)

The second *Julia* was an English sloop operating out of Nassau captured by Union gunboat *Sagamore* 8 January 1863. When taken some 10 miles north of Jupiter Inlet, Fla., she was attempting to slip through the Union blockade laden with salt badly needed by the Confederacy. She was taken to Key West where she was condemned by a prize court and sold to the U.S. Navy.

She was placed in service 15 February, Acting Master's Mate L. C. Coggeshall in charge, and used as a tender to Northern blockaders along the coast. *Tahoma*, *Pursuit*, and *Eugenic* were among the ships she assisted during the war. On 20 February, she shared in the capture of bark *Stonewall*. She was broken up and sold at Key West in 1865.

Julia Eleanor, see *Egret* (AMc-24)

Julia Hamilton

A former name retained.

(Sch: l. 55'; b. 16'; 4'6"; cpl. 3; a. none)

Julia Hamilton, a wooden schooner, was acquired by the Navy from the Maryland Conservation Commission and enrolled in the Naval Coast Defense Reserve 17 August 1917. Assigned to the 5th Naval District, she served in Chesapeake Bay out of Norfolk, Va. She was returned to her owner 28 March 1918.

Julia Luckenbach

Former name retained.

(Str: dp. 16,533; l. 456'6"; b. 57'2"; dr. 31'6"; s. 14 k; cpl. 70; a. 1 4', 1 3')

Julia Luckenbach, a cargo ship, was built 1917 by Fore River Shipbuilding Co., Quincy, Mass. for the Luckenbach S.S. Co.; she was taken over by the Navy 7 August 1918, and commissioned 15 August, Lt. Cmdr. George C. Benner, USNRF, in command.

Assigned to NOTS, *Julia Luckenbach* sailed from New York 10 September with vital cargo for the European forces, arriving Marseilles 2 weeks later. After the Armistice was signed 11 November 1918, she continued transporting cargo to France while returning to the United States with troops, patients, and other veterans who had fought well to make "the world safe for democracy." *Julia Luckenbach* arrived in New York from her final cruise in July 1919 and remained there until she decommissioned 9 September 1919. She was returned to her owners the same day.

Juliet

A former name retained.

(StwStr; t. 157; l. 155'6"; b. 30'2"; dr. 5'; s. 4 mph.; a. 6 24-pdr. how.)

Juliet was built at Brownsville, Pa., in 1862 and purchased by the Navy at Cincinnati 1 November 1862. After receiving armorplate protection, she commissioned 14 December, Acting Volunteer Lieutenant Edward Shaw in command.

Assigned to the Mississippi Squadron and ordered to the vicinity of Vicksburg, *Juliet* helped clear the Yazoo River of torpedoes 23 December in preparation for General

Sherman's valiant but unsuccessful attack on the Chickasaw Bluffs, which protected Vicksburg. She remained in the Yazoo until 2 January 1863 when she followed the transports and other gunboats downstream, covering their withdrawal to the Mississippi.

On 6 January Rear Admiral Porter assigned *Juliet* to 1st Division of Light Draft Gunboats where she served the Mississippi Squadron as an escort vessel maintaining communications along the river and protecting the vital flow of shipping which sustained military and naval strength throughout the campaigns and cut the Confederacy in two with the fall of Vicksburg and Port Hudson.

The most dangerous service during the faithful tinclads career came during the Red River expedition. Admiral Porter's gunboats, in cooperation with General Banks, had ascended the Red River in an effort to replant the United States flag on Texas soil as a check against French interference in Mexico and to encourage the re-establishment of loyal state governments in Louisiana and Arkansas. While the Union ships were at Springfield Landing making preparations to clear away the sunken hulk of an old steamer which had stopped their progress toward Shreveport, La., a messenger arrived with word that General Banks had suffered a severe defeat near Mansfield and was falling back to Grand Ecore. Reluctantly Porter ordered the gunboats to reverse course. During the passage down, the Northern gunboats were severely punished by fire from Confederate shore batteries. On 26 and 27 April *Juliet* again and again fought off cannon and musketry, suffering 16 casualties including 2 killed and heavy damage to the ship. Skillful repair work under the most trying conditions kept the vessel afloat and finally enabled her to pass the batteries.

After repairs at Cairo, *Juliet* recommissioned 6 September and returned to duty with the Mississippi Squadron, serving as an escort and patrol vessel. After the end of the war, *Juliet* decommissioned at Mound City 30 June 1865, and was sold at public auction there to Philip Wallach 17 August 1865. Redocumented *Goldina* that day, she was stranded 31 December and abandoned.

Juliette W. Murray

Former name retained.

Juliette W. Murray, a tug, was acquired by the Navy 5 March 1918 and commissioned 1 June 1918. She operated in the 5th Naval District on a full ship basis until she decommissioned and subsequently returned to her owners 30 November 1918.

Julius A. Furer

Julius Augustus Furer, naval constructor, inventor, administrator, and author, was born 9 October 1880 at Mosel, Wis. Appointed to the Naval Academy in 1897, he graduated at the head of his class in 1901. After sea duty in *Indiana* and *Shubrick*, he acquired a Master of Science degree from the Massachusetts Institute of Technology in 1905.

In the era of great naval expansion after the Spanish-American War, Furer established a reputation for professional competence in his remarkably expeditious outfitting of the Navy Base at Charleston, S.C., which at that time lacked a physical plant, natural resources, and a skilled shipbuilding labor force.

While serving in the Philadelphia Navy Yard in 1911, he applied new theories of scientific management. His advanced thinking and methods of procurement brought him the added task of purchasing all tools, machinery, and dock facilities for the Navy's new base for the Pacific Fleet—Pearl Harbor. Furer installed the equipment in 18 months, but delayed his departure when *F-4* (SS-23) sank in 50 fathoms off Honolulu. He insisted on salvaging her, and invented a submersible pontoon which raised the boat and enabled her to be moved to drydock. An investigation of her hull revealed a design error which was corrected to avoid similar accidents.

Furer returned to Washington late in 1915 and took charge of the Supply Division, Bureau of Construction and Repair. Against some opposition by advocates of smaller vessels, he proposed the construction of 110-foot submarine chasers to meet the threat of the German U-boat. Furer's arguments persuaded the Navy's General Board to order 450 vessels constructed on Furer's basic design. These contributions to the American war effort earned Furer the Navy Cross.

Following the war, he reported to the staff of the Commander in Chief, Pacific Fleet, and tirelessly devoted his talent to the improvement of damage control, ship design, and crew comfort. From December 1922 to April 1927, he was a member of the U.S. Naval Mission to Brazil. Furer next was assigned to the Asiatic Station, where he developed extensively the aircraft facilities at Cavite, Philippine Islands.

In 1928, he became Manager of the Industrial Department of the Philadelphia Navy Yard, and supervised the

modernization of battleships *Pennsylvania* and *New Mexico*. Under his management, the yard set records for low costs and speed of construction.

Between July 1935 and December 1937, Furer was Naval Attaché at embassies in London, Paris, Berlin, and Rome. His technical advice aided the American delegation to the London Naval Conference in 1936.

A Rear Admiral at the outbreak of World War II, he became the Coordinator of Research and Development, and the senior member of the National Research and Development Board. He coordinated widespread research that speeded development of modern weapons systems for the Navy. These services won Furer the Legion of Merit 30 June 1945.

Julius Furer retired from active service in 1945, but was recalled to duty in the Navy's History Division in 1951. During a second retirement, he wrote the widely acclaimed study, *Administration of the Navy Department in World War II*, published in 1960.

USS *Julius A. Furer* (DEG-6) Bath Iron Works Corp. 22 July 1966

Rear Admiral Julius A. Furer died 6 June 1963 and is buried at Arlington National Cemetery.

(DEG-6: dp. 3,426 t.; l. 414'6"; b. 44'1"; dr. 24'6"; s. 27.2 k.; cpl. 248; a. 1 5", 1 Tar. mis., 1 DASH; cl. *Brooke*)

Julius A. Furer was launched 22 July 1966 by the Bath Iron Works, Bath, Maine; and sponsored by Mrs. Julius A. Furer, widow of Rear Admiral Julius A. Furer. Commissioned 11 November 1967.

Julius A. Raven

Julius Arthur Raven was born in New York City 6 January 1918. He enlisted in the United States Naval Reserve as Seaman Second Class 5 June 1939 at New York. He was discharged and accepted an appointment as Aviation Cadet 5 September 1939. After preliminary flight training at the Naval Reserve Aviation Base, Floyd Bennett Field, Brooklyn, he was assigned advanced training at Pensacola, Fla. After flight school Raven was assigned to a patrol squadron in the Pacific. He was awarded the Air Medal for meritorious achievement and extreme courage while effecting a rescue at sea 25 June 1942. While returning from a combat mission and flying over enemy controlled waters, he sighted grounded *S-27* (SS-132). Disregarding the danger to his life, Lt. (j.g.) Raven skillfully and coolly landed in a rough sea, embarked 13 of the submarine's crew, and took off—all without damage to his plane—to safely return them to Dutch Harbor. All of the men of *S-27* were later rescued due to the intelligence provided by Lt. (j.g.) Raven. He posthumously received the Distinguished Flying Cross for action against enemy forces during the Aleutian Islands Campaign, conducting dangerous reconnaissance and bombing runs on Kiska Island until being lost at sea while on a mission 9 August 1942.

(APD-110: dp. 1,650; l. 306'; b. 37'; dr. 12'7"; s. 23 k.; cpl. 204; a. 1 5", 6 40mm., 6 20mm., 2 dct.; cl. *Crosley*)

Julius A. Raven (APD-110) was laid down as DE-600 on 26 January 1944 by Bethlehem Steel Co., Hingham, Mass.; launched 3 March 1944; sponsored by Mrs. Irene E. Raven, widow of Lt. (j.g.) Raven; reclassified APD-110, 17 July 1944; and commissioned 28 June 1945, Comdr. William J. Barney, Jr., USNR, in command.

After shakedown training in the Caribbean, *Julius A. Raven* served as a training ship at Miami for student officers until she decommissioned 31 May 1946 at Green Cove Springs, Fla., joining the Reserve Fleet. In July 1959 she joined the Texas Group, Atlantic Reserve Fleet, where she remained until struck from the Navy List 15 January 1966 after transfer on loan as *Ung Po* (APD-83) to the Republic of Korea 13 January 1966 under the Military Assistance Program.

Junaluska

Junaluska, Chief of the Cherokee Indians in North Carolina, led his warriors in support of General Andrew Jackson during the Creek Indian War of 1813. For this service *Junaluska* was granted United States citizenship.

(YT-176: dp. 206; l. 102'; b. 25'; dr. 10'; s. 12 k.; a. 2 30 cal. mg.)

Junaluska (YT-176) was built by the Gulfport Boiler & Welding Co., Port Arthur, Tex., in 1941 as *Gulfport Hull 189*; acquired by the Navy from the General Motors Corp. 4 June 1941; and commissioned at Port Arthur, Tex., 23 October, Ens. D. A. Tufts in command.

Junaluska, sailing from Port Arthur 3 November for the Atlantic coast and via Key West arrived Hampton Roads, Va., 23 November, and reported for duty with the Atlantic Fleet. Three days later she departed for the Naval Operating Base, Argentina, Newfoundland. Steaming via Boston, she arrived Argentinia 16 December. She immediately

commenced duty as a yard tug, assisting destroyers, escort ships, and merchantmen to and from the harbor as they departed or returned from the busy North Atlantic convoy routes. She towed targets during air and naval gunnery practice and tended the ASW defense nets that protected Placentia Bay.

Except for a visit to Portsmouth, N.H., and Boston for repairs from 21 October to 10 December 1942, she served at Argentinia throughout World War II. She was reclassified as YTB-176 on 15 May 1944. After the cessation of hostilities, *Junaluska* subsequently returned to Boston where she decommissioned 30 September 1947 and was placed in service assisting ships of the Navy to and from Boston Harbor. Reclassified YTM-176 on 1 February 1962, the tug continues to perform this necessary duty into 1967.

Juneau

Capital city of Alaska named after the American pioneer Joe Juneau, who, with his partner Dick Harris, founded a miners camp in 1880 where the city, Juneau, now stands.

I

(CL-52: dp. 6,000; l. 541'6"; b. 53'2"; dr. 16'4"; s. 32 k.; cpl. 623; a. 16 5", 16 1.1", 8 20mm., 6 dcp., 2 dct.; cl. *Atlanta*)

Juneau (CL-52) was laid down by Federal Shipbuilding Co., Kearny, N.J., 27 May 1940; launched 25 October 1941; sponsored by Mrs. Harry I. Lucas, wife of the Mayor of the city of Juneau; and commissioned 14 February 1942, Captain Lyman K. Swenson in command.

Following a hurried shakedown cruise along the Atlantic coast in the spring of 1942, *Juneau* assumed blockade patrol in early May off Martinique and Guadeloupe Islands to prevent the escape of Vichy French Naval units. She returned to New York to complete alterations and operated in the North Atlantic and Caribbean from 1 June to 12 August on patrol and escort duties. The cruiser departed for the Pacific Theater 22 August.

After stopping briefly at the Tonga Islands and New Caledonia, she rendezvoused 10 September with Task Force 18 under the command of Rear Admiral Leigh Noyes, flying his flag in *Wasp* (CV-7). The following day Task Force 17, which included *Hornet* (CV-8), combined with Admiral Noyes' unit to form Task Force 61 whose mission was to ferry fighters to Guadalcanal. On 15 September *Wasp* took three torpedo hits from the Japanese submarine *I-19*, and, with fires raging out of control, was sunk at 2100 by *Lansdowne* (DD-486). *Juneau* and screen destroyers rescued 1,910 survivors of *Wasp* and returned them to Espiritu Santo, New Hebrides, 16 September. The next day the fast cruiser rejoined Task Force 17. Operating with the *Hornet* group, she supported three actions that repulsed enemy thrusts at Guadalcanal: the Buin-Fasi-Tonolai Raid; the Battle of Santa Cruz Island; and the Naval Battle of Guadalcanal (Third Savo).

The ship's first major action was the Battle of Santa Cruz Island 26 October. On 24 October *Hornet's* task force had combined with the *Enterprise* (CV-6) group to reform Task Force 61 under the command of Rear Admiral Thomas C. Kinkaid. This force positioned itself north of the Santa Cruz Islands in order to intercept enemy units that might attempt to close Guadalcanal. Meanwhile, on Guadalcanal, the Japanese achieved a temporary breakthrough along Lunga Ridge on the night of 25 October. That short-lived success evidently was a signal for enemy surface units to approach the island.

Early in the morning 26 October, U.S. carrier planes uncovered the enemy force and immediately attacked it, damaging two Japanese carriers, one battleship, and three cruisers. But while our aircraft were locating and engaging the enemy, American ships were also under fire. Shortly after 1000 some 27 enemy aircraft attacked *Hornet*. Though *Juneau* and other screen ships threw up an effective AA barrage which splashed about 20 of the attackers,

Hornet was badly damaged and sank the next day. Just before noon *Juneau* left *Hornet's* escort for the beleaguered *Enterprise* group several miles away. Adding her firepower, *Juneau* assisted in repulsing four enemy attacks on this force and splashing 18 Japanese planes.

That evening the American forces retired to the southeast. Although the battle had been costly, it, combined with the Marine victory on Guadalcanal, turned back the attempted Japanese parry in the Solomons. Furthermore, the damaging of two Japanese carriers sharply curtailed the air cover available to the enemy in the subsequent Naval Battle of Guadalcanal.

On 8 November *Juneau* departed Noumea, New Caledonia, as a unit of Task Force 67 under the command of Rear Admiral R. K. Turner to escort reinforcements to Guadalcanal. The force arrived there early morning 12 November, and *Juneau* took up her station in the protective screen around the transports and cargo vessels. Unloading proceeded unmolested until 1405 when 30 Japanese planes attacked the alerted United States group. The AA fire was devastating, and *Juneau* alone accounted for six enemy torpedo planes shot down. The few remaining attackers were pounced on by American fighters; only one bomber escaped. Later in the day an American attack group of cruisers and destroyers cleared Guadalcanal on reports that a large enemy surface force was headed for the island. At 0148 on 13 November Rear Admiral D. J. Callaghan's relatively small Landing Support Group engaged the enemy. The Japanese force of 18 to 20 ships, including 2 battleships, far outnumbered and outgunned his force, but did not outfight it.

American gunnery scored effectively almost immediately sinking an enemy destroyer. *Juneau* teamed with *Atlanta* (CL-51) to destroy another as the two forces slugged it out at close range. During the exchange *Juneau* was struck on the port side by a torpedo causing a severe list and necessitating withdrawal. Before noon 13 November, the battered American force began retirement. *Juneau* was steaming on one screw, keeping station 800 yards on the starboard quarter of the likewise severely damaged *San Francisco* (CA-38). She was down 12 feet by the bow, but able to maintain 13 knots. A few minutes after 1100 three torpedoes were launched from the Japanese submarine *I-26*. *Juneau* successfully avoided two, but the third struck her at the same point which had been damaged during the surface action. There was a terrific explosion; *Juneau* broke in two and disappeared in 20 seconds. The gallant ship with Captain Swanson and most of her crew, including the five Sullivan brothers, was lost. Only 10 members of the crew survived the tragedy.

Juneau received four battle stars for World War II service.

II

(CL-119: dp. 6,000; l. 541'6"; b. 53'2"; dr. 16'4"; s. 32 k.; cpl. 623; a. 12 5", 2 3-pdrs., 24 40mm., 4 20mm; cl. *Juneau*)

The second *Juneau* (CL-119) was laid down by Federal Shipbuilding Co., Kearny, N.J., 15 September 1944; launched 15 July 1945; sponsored by Mrs. E. L. Bartlett; and commissioned 15 February 1946, Captain Rufus E. Rose in command.

Juneau spent her first year of commissioned service in operations along the Atlantic seaboard and Caribbean. Prior to the Korean War, she deployed three times in the Mediterranean. The ship cleared New York 16 April 1947, and joined the 6th Fleet at Trieste 2 May where she aided in stabilizing the unresolved question of territorial ownership between Italy and Yugoslavia. During an extended tour of Greece, she provided ample warning to the communists that aggression would not go unchallenged. The ship returned to Norfolk 15 November for training, and was back on duty with the 6th Fleet from 14 June to 3 October 1948 and again from 3 May to 26 September 1949. As on her first cruise, she ranged the Mediterranean to assure Europeans and Africans of our intention to guard world peace and freedom.

Having been reclassified CLSS-119 on 18 March 1949, *Juneau* departed Norfolk 29 November for the Pacific. She arrived Bremerton, Wash., 15 January 1950 and took part in operations along the Pacific coast. On 22 April she became flagship for Rear Admiral J. M. Higgins, Commander CruDiv 5, and reported for duty in Yokosuka, Japan, 1 June where she began surveillance patrols in the Tsushima Straits. When the Korean War broke out on 25 June, *Juneau* was one of the few ships immediately available to Vice Admiral C. Turner Joy, Commander of Naval Forces, Far East. She patrolled south of the 38th parallel to prevent enemy landings, conducted the first shore bombardments 29 June at Bokuko Ko, destroyed enemy shore installations, engaged in the first naval action 2 July when she sank three enemy torpedo boats near Chumonchin Chan, and supported raiding parties along the coast. On 18 July *Juneau's* force, which included British units, laid down a deadly barrage on enemy troop concentrations near Yongdok which slowed down the North Korean advance southward.

The ship departed Sasebo Harbor 28 July and made a sweep through Formosa Straits before reporting for duty with the 7th Fleet at Buckner Bay, Okinawa, 2 August. She became flagship of the Formosa Patrol Force 4 August, remaining until 29 October when she joined the Fast Carrier Task Force operating off the east coast of Korea. The ship conducted daily plane guard for the attack carriers, and returned to Long Beach, Calif., 1 May 1951 for overhaul and a period of operations off the Pacific coast and in Hawaii. She returned to Yokosuka 19 April 1952 and conducted strikes along the Korean coast in coordination with carrier planes until returning to Long Beach 5 November.

Juneau engaged in training maneuvers and operations until 7 April 1953 when she arrived Norfolk to rejoin the Atlantic Fleet. On 13 May the cruiser departed for

USS *Juneau* (CL-52)

duty with the 6th Fleet once again, and returned home 23 October. She operated in the Atlantic and Caribbean until 18 November 1954, then returned to the Mediterranean for her last tour of duty. After her return to the East Coast 23 February 1955, she was placed in reserve at Philadelphia 23 March 1956, and remained inactive until decommissioned 23 July 1956. The ship was then attached to the Philadelphia Group of the Atlantic Reserve Fleet until 1 November 1959 when she was struck from the Navy List. *Juneau* was sold for scrapping to Union Metals & Alloys Corp., New York, in 1962.

Juneau received five battle stars for Korean War service.

The third *Juneau* (LPD-10) was laid down by Lockheed Shipbuilding & Construction Co., Seattle, Wash., 23 January 1965; launched 12 February 1966; sponsored by Mrs. William A. Egan, wife of the Governor of Alaska; and scheduled to be commissioned early in 1969.

Junemma, see *YP-130*

Juniata

A river in Pennsylvania emptying into the Susquehanna.

I

(ScSlp: t. 1,240; dr. 15'3½"; s. 9 k.; cpl. 160; a. 1 100-pdr. P.r., 1 11" D.sb., 4 30-pdr. P.r., 1 12-pdr., 4 24-pdr. how.)

The first *Juniata* was a steam sloop of war launched at Philadelphia Navy Yard 20 March 1862; sponsored by Miss Angela Turner; and commissioned there 4 December, Comdr. John M. B. Clitz in command.

Scheduled for service in the West Indies, *Juniata* was temporarily assigned to the North Atlantic Blockading Squadron and stationed at Norfolk, where her guns could help defend the area while machinery defects were corrected at the Navy Yard. She departed Hampton Roads for the West Indies 26 April 1863 and 4 days later captured schooner *Harvest* bound for Nassau, New Providence, with a cargo of cotton. She joined the West Indies Squadron at Havana 5 May. She captured English steamer *Victor* about 8 miles off Morro Castle, Cuba, 28 May and took schooner *Fashion* 13 June loaded with chemicals critically needed by the Confederacy. The next day she captured English schooner *Elizabeth*, and *Don Jose* 2 July.

Juniata continued to cruise in the West Indies convoying California-bound ships to safe waters and alertly watching for signs of Confederate cruisers and blockade runners until she sail for New York 24 November, arriving there 2 December. Under repairs at Philadelphia during the first half of 1864, *Juniata* departed 12 August in search of Confederate cruiser *Tallahassee* reported off Sandy Hook, N.J. Five days later she anchored in Hampton Roads and joined the North Atlantic Blockading Squadron. She operated out of Hampton Roads until steaming to Wilmington early in December in preparation for forthcoming offensive operations against that powerful stronghold and blockade running center. She was in the thick of the fighting during the first attack on Fort Fisher, closing Southern batteries to get in position for effective bombardment. Her daring upon this occasion, which cost her 2 officers and 3 men killed and 11 men wounded, was again displayed during the second attack on Fort Fisher between 13 and 15 January 1865. Five more of her men were killed and 10 wounded in this assault which wrestled Wilmington from Southern hands, sealing off the Confederacy from effective foreign aid.

Juniata was transferred to the South Atlantic Blockading Squadron 18 January and arrived Charleston Roads the next day. After a brief visit to Port Royal, S.C. to repair some of the damage sustained in the furious action at Fort Fisher, she participated in the expedition to Bull's Bay in support of General Sherman's drive north through 17 February.

Juniata received orders 23 February to cruise along the coast of Brazil as far south as Buenos Aires protecting American citizens and interests. After extensive repairs she departed Port Royal on this assignment 17 June and arrived Bahia, Brazil, 8 August bringing that city its new United States consul. With the exception of a cruise to the coast of Africa from 12 June to 30 September 1866, she remained in South American waters until 30 April 1867 when she sailed from Rio de Janeiro for home, arriving Philadelphia 24 June.

Juniata decommissioned at Philadelphia Navy Yard 29 June and remained there until recommissioned 19 July 1869 and departed for Europe. She served, in European waters until 18 June 1872 when she sailed for the United States arriving Boston Navy Yard 29 June. She decommissioned 10 July.

Juniata recommissioned 10 February 1873 serving on the northeast coast until 26 June when she got underway for St. John's, New Foundland en route to the west coast of Greenland to assist *Tigress* in her quest for survivors of *Polaris* which had come to grief exploring the Arctic. *Juniata* steamed as far north as Upernavik some 250 miles above Godhaven, Greenland, where she supplied *Tigress*. She returned to New York 1 November 1873.

After a cruise to the Caribbean, *Juniata* sailed for the European Station 6 May 1874 and remained on duty there until she returned to the United States, arriving Baltimore 6 February 1876. She decommissioned at Norfolk 1 September.

Juniata recommissioned at New York Navy Yard 30 October 1882, Comdr. George Dewey in command, and departed on a voyage which took her around the World through the Strait of Gibraltar, the Suez Canal, to Bombay, Batavia, Singapore, and Hong Kong, among her many ports of call. She returned to New York 10 December 1885 and operated from that port until she sailed for the Pacific 16 August 1886. She again returned to New York 4 February 1889 and decommissioned 28 February. *Juniata* was sold at Navy Yard, Portsmouth, N.H., 25 March 1891 to Herbert H. Ives.

II

(SP-602: t. 142; l. 139'6"; b. 17'; dr. 6'; s. 17 k.; 1 3-pdr., 1 1-pdr., 2 mg.)

The second *Juniata* (SP-602), a motor yacht, was built in 1911 by Robert Jacobs, City Island, N.Y., and acquired by the Navy 1 June 1917 from her owner, G. W. Elkins, of Philadelphia. She commissioned at Philadelphia Navy Yard 1 June, Lt. (j.g.) W. G. Morse, USNRF, in command.

Assigned to the 4th Naval District, *Juniata* was based at Lewes, Del. She performed patrol duties in Delaware Bay until decommissioning 13 July 1918 and was returned to her owner 25 July 1918.

III

(IX-77: t. 242; l. 134'; b. 28'2"; dr. 17'5"; s. 11 k.)

The third *Juniata*, formerly *Vega*, was built in 1930 by Krupp, of Kiel, Germany, and purchased by the Navy from her owner, H. W. Rohl, of Los Angeles, in 1942. Delivered 20 July, she was placed in service 11 August 1942.

Juniata was assigned to the Western Sea Frontier and was based at San Francisco. She alternated with other ships on patrol on the great circle route to Hawaii, steaming to and from her station some 500 miles west of Eureka, Calif. *Juniata* was placed out of service at Treasure Island, San Francisco, 1 January 1945, returned to the Maritime Commission, and sold to a private owner in June 1945.

USS *Juniata*—dual propulsion by sail and steam

Juniata County

A county in south-central Pennsylvania.

(LST-850: dp. 1,625; l. 328'; b. 50'; dr. 14'1"; s. 12 k.; cpl. 226; a. 8 40mm., 12 20mm.; cl. LST-542)

LST-850 was laid down by Chicago Bridge & Iron Co., Seneca, Ill., 15 August 1944; launched 3 November 1944; sponsored by Mrs. Mildred Margaret Tegge Honig; and commissioned at New Orleans, La., 27 November 1944, Lt. Perry B. Hazard in command.

After shakedown off the coast of Florida, LST-850 loaded military cargo at Gulfport, Miss., and departed New Orleans for the Pacific 31 December. Steaming via the Panama Canal and San Diego, she reached Pearl Harbor 1 February 1945. On 20 February she sailed with five other landing ships for the Solomons, arriving Guadalcanal 7 March. After loading a cargo of LVT's, she departed 19 March, touched at Eniwetok 25 March, and reached Guam the 31st. There she unloaded her cargo before steaming to Saipan 3 April to prepare to support operations at Okinawa.

Between 12 and 14 April LST-850 embarked Seabees and loaded construction and combat equipment; then she departed 20 April for that strategic island, which lay at the gateway to the heart of the Japanese Empire. Arriving 27 April, she discharged troops and cargo despite intermittent enemy air attacks. From 7 to 13 May she returned to Saipan where she embarked 371 officers and men of the 2d Marine Division and loaded a cargo of LTV's. Sailing 24 May, she arrived Okinawa 30 May. On 3 June, and again on 9 June, she carried these seasoned veterans of the Pacific fighting for amphibious assaults against Iheya Shima and Aguni Shima. Departing in convoy 18 June, she reached Saipan the 24th; and, after embarking Seabees at Guam, she returned to Okinawa 28 July. Sailing once more for the Marianas 8 August, she arrived Saipan 14 August as Japan accepted Allied peace terms and agreed to surrender.

Assigned to transport occupation forces to Japan, LST-850 steamed via Leyte to Manila Bay, Luzon, where she embarked Army troops and departed in convoy for Japan. She entered Tokyo Bay 11 September and discharged her troops. Departing Tokyo early in October, during the next month she returned to Luzon, embarked additional troops, and carried them to Yokohama where she arrived 4 No-

vember. After supporting occupation landings along the coast of Honshu, she sailed in mid-November for the United States. She sailed via Saipan and Pearl Harbor and arrived Astoria, Oreg., 30 December.

LST-850 operated out of Astoria during the next 10 months and then was placed in commission in reserve 17 May 1946. She transferred to Portland in October, decommissioned 18 January 1947, and entered the Pacific Reserve Fleet. While berthed in the Columbia River, she was named *Juniata County* 1 July 1955. She was recommended for use as a target to destruction 20 October 1958. Her name was struck from the Navy List 1 November 1958.

LST-850 received one battle star for World War II service.

Juniper

A genus of evergreen shrubs and trees.

I

(ScStr: t. 116; l. 79'6"; b. 18'4"; dr. 9'; s. 10 k.; cpl. 26; a. 1 20-pdr. P.r., 1 12-pdr. heavy r.)

The first *Juniper* was purchased at New York from Solomon Thomas 7 June 1864; and commissioned at New York Navy Yard 11 July 1864.

Juniper sailed for Washington via Hampton Roads arriving at the Washington Navy Yard 17 July 1864. Two days later she was attached to the Potomac Flotilla where she served during the remainder of the war performing varied duties as a tug, dispatch vessel, and patrol ship. She sailed from the lower Potomac 5 May 1865 for the Washington Navy Yard, where she decommissioned 26 May. *Juniper* was sold to the Treasury Department for service under the Lighthouse Board 29 June 1865.

II

(ScStr: l. 90'; b. 18'; a. none)

The second *Juniper* was a lighthouse tender built in Baltimore in 1903. She was transferred to the Navy with the entire Lighthouse Service by Executive order 11 April 1917 and served the Navy as a patrol vessel. She was returned to the custody of the Department of Commerce 1 July 1919.

Laid down 2 October 1940, *Juniper* (YN-15) was re-named *Elder* (q.v.) 16 October.

Jupiter

The largest planet in the solar system.

I

Navy collier *Jupiter* (AC-3) was converted into the Navy's first aircraft carrier and renamed *Langley*, (q.v.) 21 April 1920.

II

(AK-43: dp. 4,350; l. 459'2", b. 63'1 dr. 25'10"; s. 10 k.; cpl. 245; a. 14", 13", 4 20 mm.; cl. *Aldebaran*)

Jupiter (AK-43) was built in 1939 as *Flying Cloud* by Federal Shipbuilding & Drydock Co., Kearny, N.J.; she was later renamed *Santa Catalina*. She was acquired by the Navy 19 June 1941; the next day renamed *Jupiter*; and commissioned 22 August 1942, Lt. Comdr. D. S. Baker in command.

Jupiter departed San Diego 1 September for operations in the Pacific as the American campaign in the Solomon Islands was getting under way. From September through December she carried supplies and troops to staging areas for the Navy's first great offensive in the Pacific. She continued to discharge cargo in the Solomon Islands through the early part of 1943, bringing invaluable support to the closing phases of the Guadalcanal campaign.

Jupiter departed Espiritu Santo 1 February, commencing a series of three cruises to San Francisco for supplies and personnel. On the first of these voyages she returned captured Japanese equipment, including a "Betty" bomber, a "Tony" fighter, and several "long lance" torpedoes.

The cargo ship returned to battle during the Gilbert Islands invasion late November, landing equipment to aid in the successful assault on Tarawa. *Jupiter* then continued cargo operations until she was assigned to the 5th Amphibious Forces in April 1944 for the Marianas campaign. She departed Pearl Harbor 30 May and arrived in the Saipan assault area 15 June. She discharged her cargo despite constant enemy air attack and 10 days later proceeded toward Eniwetok.

Following a summer of amphibious rehearsals, *Jupiter*, under Comdr. J. M. Bristol, departed Guadalcanal 8 September to support the invasion of the Palau Islands. She unloaded her cargo without incident and returned to Manus to prepare for the important Philippine invasion. Departing Hollandia 16 October, she arrived at Leyte and commenced unloading cargo 22 October. As other units of the fleet were engaging the Japanese in the famed

"Battle of Leyte Gulf", *Jupiter* returned to the Marianas to pick up additional material. She continued reinforcing units in the Philippines until she steamed into Ulithi 23 January 1945 to prepare for the next Campaign.

When continued progress along the "road to Japan" required a stop-over base for B-29 raids on Tokyo, Iwo Jima was selected. *Jupiter* got underway 16 February with cargo and units of the 3d Marine Division to secure this fortified atoll. After unloading her cargo under most difficult conditions, she remained in the area until Japanese resistance had ceased 16 March.

After repairs at Pearl Harbor, *Jupiter* departed Hawaii 1 May with supplies for American troops fighting for Okinawa. She returned to San Francisco 27 July for conversion to an aviation supply ship and was redesignated AVS-8, 31 July 1945. Following replenishment-at-sea exercises the following year, she supported outlying bases and ships until decommissioning at San Diego 23 May 1947 and joining the reserve fleet.

In June 1950 a new threat to world peace exploded in Asia—Communist aggression in South Korea. The United States answered this challenge by dispatching troops and supplies to the war-torn peninsula. *Jupiter* recommissioned 10 October 1950, Comdr. H. R. McKibben in command, and sailed for Yokosuka, Japan, 8 January 1951. Arriving 29 January, she operated out of Japan, replenishing units fighting ashore until returning to San Francisco 11 August 1952. After operations along the West Coast, the supply ship returned to the war zone in March 1953 to supply troops and replenish carriers engaged in air strikes on the Korean peninsula. Following the cessation of hostilities, *Jupiter* returned to the West Coast 3 October.

This active ship was again deployed to the Pacific in 1954 to replenish ships in the tense Formosa area. The 7th Fleet prevented any major crisis from developing, and *Jupiter* steamed into San Francisco 20 October 1954. She resumed her operations in the Far East March 1955; this time for an extended period. For the next 9 years (1955-63) she operated out of Yokosuka, replenishing units of the 7th Fleet, as it took on greater roles in "keeping the peace". During *Jupiter's* service in the Far Pacific, the 7th Fleet averted major crises in Formosa, Indonesia, and Laos; and played an important part in the Vietnam struggle. She continued to carry vital supplies to the Far East until struck from the Navy List 1 August 1965. *Jupiter* was then transferred to the Maritime Administration and joined the National Defense Reserve Fleet at Olympia, Wash., where she remains.

Jupiter received six battle stars for World War II and seven battle stars for Korean conflict service.

Jupiter, see *Elder* (AN-20)

USS *Jupiter* (AC-3) at Mare Island 16 October 1913—*Jupiter* was later converted into the first aircraft carrier, USS *Langley* (CV-1).

USS *Jupiter* (AVS-8) on 28 July 1963

Justice

A British name retained.

(ATR-20: dp. 1,360; l. 165'5"; b. 33'6"; dr. 15'10"; s. 12 k.; cpl. 32; a. 1 3", 2 20mm.; cl. ATR-1)

ATR-20 was laid down by Camden Ship Building & Marine Railway Co., Camden, Maine, 20 January 1943; launched 18 October 1943; sponsored by Miss Joy D. Creyk; transferred to the United Kingdom under lend-lease 24 April 1944; and commissioned as H.M.S. *Justice* at Boston, Mass., the same day, Lt. J. S. Allison, RNR, in command.

During the remainder of World War II, *Justice* served as a rescue tug in the Royal Navy. She was returned to the U.S. Navy 20 March 1946. Her name was struck from the Navy List 3 July 1946, and she was sold 3 October 1947.

Justin

The first *Justin* retained a former name, and the second *Justin* was named after the first.

I

(Sch: dp. 1,419, t.; l. 287'6"; b. 39; dr. 19'8"; s. 10 k.; cp. 35; a. 2 6-pdrs.)

The first *Justin*, a schooner, was launched in 1891 by R. Dixon & Co., Middlesbrough, England; purchased from Bowring & Archibald; and commissioned 27 April 1898, Comdr. George E. Ide in command.

Justin performed collier service in the Chesapeake Bay area until sailing for Guantanamo Bay 2 June for coaling duties during the Spanish-American War. Returning to Virginia, *Justin* operated along the East Coast and in New England, then departed Norfolk 11 October. After visiting Brazil, Chile, Peru, and Mexico, she arrived San Francisco 3 February 1899 and decommissioned there 17 February.

Recommissioned at Mare Island 19 September 1900, *Justin* sailed 1 October for duty in the Far East. For the next 7 years she provided fuel and supplies to the Asiatic Fleet during a period of intense and growing American activity in the Orient. She returned to San Francisco 23 November 1907 via Guam and Honolulu. From 1907 to 1915 *Justin* carried coal to units of the Pacific Fleet stationed at widely scattered points from the West Coast to South America. She decommissioned at Mare Island 20 December 1915.

II

(IX-228: dp. 3,381; l. 441'6"; b. 56'11"; dr. 27'11"; s. 11 k.; cpl. 210; a. 1 3", 1 5", 3 20mm.; T. EC2-S-C1)

The second *Justin* (IX-228), formerly liberty ship *Gus W. Darnell*, was built by Todd-Houston Shipbuilding Corp., Houston, Tex., in 1944; operated as a cargo ship in the Pacific; was acquired by the Navy 2 September 1945; and commissioned at Guian Roadstead, Philippine Islands 4 September 1945, Lt. William T. Hamilton in command.

Justin departed for Shanghai, China, 20 October where she embarked naval passengers for transport to the United States. She picked up a cargo of 3,000 bags of mail at Guam before arriving San Francisco 23 December 1945. *Justin* decommissioned at San Francisco 23 January 1946 and was turned over to the WSA. She was placed in the National Defense Reserve Fleet at Suisun Bay, Calif., until being sold 25 May 1954 to Boston Metals Corp. and scrapped.

K

K-1

I

(SS-32: dp. 392 (surf.), 521 (subm.); l. 153'7"; b. 16'8"; dr. 13'1"; s. 14 k. (surf.), 10.5 k. (subm.); cpl. 28; a. 4 18" tt.; cl. K)

On 17 November 1911 while under construction *Haddock* (SS-32) was renamed *K-1* and launched 3 September 1913 by the Fore River Shipbuilding Co., Quincy, Mass.; sponsored by Mrs. Albert Ware Marshall and commissioned 17 March 1914, Lt. (j.g.) E. F. Cutts in command.

Upon completion of 6 months training, *K-1* joined the 4th Division Atlantic Torpedo Flotilla, Newport, R.I., 9 October 1914. The submarine departed New York 19 January for underwater development training out of Key West. She continued operations along the East Coast for almost 3 years, aiding in the development of submarine-warfare tactics. The techniques learned from these experiments were soon put into practice when German U-boats interfered with Allied shipping bound for Europe.

K-1 departed New London 12 October 1917, arriving Ponta Delgada 15 days later to conduct patrol cruises off the Azores. For the duration of the war she conducted patrol cruises off the Azores and searched for the enemy U-boats, and protected shipping from surface attack.

Upon cessation of hostilities 11 November 1918, the submarine arrived Philadelphia 13 December to resume coastal operations.

From 1919 to 1923 *K-1* cruised along the Atlantic coast from New England to Florida conducting experimental exercises. The development of submarines was greatly accelerated through the technology learned from these experiments. New listening devices, storage batteries, and torpedoes were tested; and their later adoption contributed greatly to continued American strength on the seas. *K-1* arrived Hampton Roads 1 November 1922 and remained until she decommissioned 7 March 1923. She was sold as scrap 25 June 1931.

The second *K-1* was renamed *Barracuda* (q.v.) 15 December 1955.

K-2

I

(SS-33: dp. 392 (surf.), 521 (subm.); l. 153'7"; b. 16'8"; dr. 13'1"; s. 14 k. (surf.), 10.5 k. (subm.); cpl. 28; a. 4 18" tt.; cl. *K-1*)

During construction *Cachalot* (SS-33) was renamed *K-2* 17 November 1911 and launched 4 October 1913 by Fore River Shipbuilding Co., Quincy, Mass.; sponsored by Mrs. Ruth Chamberlain McEntee; and commissioned 31 January 1914, Ens. R. Moses in command.

After trials and exercises in New England waters throughout the spring and summer of 1914, *K-2* joined the 4th Division Atlantic Torpedo Flotilla, Newport, R.I., 9 October. She commenced operations immediately and for almost 3 years operated along the American coast from New England to Florida conducting experiments to develop the techniques of submarine warfare.

As World War I raged in Europe, guarding the vital shipping lanes across the Atlantic became imperative. *K-2* departed New London, Conn., 12 October 1917 and arrived in the Azores for patrol duty 27 October. She was among the first U.S. submarines to engage in patrol duty during the war, and cruised in these waters searching for enemy U-boats. *K-2* continued these vital patrols until 20 October 1918 when she sailed for North America, arriving Philadelphia 10 November to resume coastal operations.

From 1919 to 1923 she cruised along the East Coast engaging in submarine development experiments. These early exercises coupled with the great strides made in naval technology greatly contributed to the excellence of the U.S. submarine force in later years. After her arrival at Hampton Roads 15 November 1922, *K-2* remained there until she decommissioned 9 March 1923. She was sold as scrap 3 June 1931.

The second *K-2* (SSK-2) was renamed *Bass* (q.v.) 15 December 1955.

K-3

I

(SS-34: dp. 392 (surf.), 521 (subm.); l. 153'7"; b. 16'8"; dr. 13'1"; s. 14 k. (surf.), 10.5 k. (subm.); cpl. 28; a. 4 18" tt.; cl. *K-3*)

During construction *Orca* (SS-34) was renamed *K-3* 17 November 1911 and launched 14 March 1914 by Union Iron Works, San Francisco, Calif., sponsored by Mrs. Clarence Meigs Oddie and commissioned 30 October 1914, Lt. F. T. Chew in command.

K-3 joined the 3d Submarine Division, Pacific Torpedo Flotilla 11, December 1914 and operated along the California coast developing underwater warfare tactics and coordinating the use of underseas craft with the fleet. She arrived in Hawaiian waters 14 October 1915 to

perform similar exercises in the light of increasing emphasis on submarine warfare.

America's entry into World War I placed a greater urgency on the need for experienced submariners, and *K-3* was dispatched to Key West, arriving 8 January 1918. For the remainder of the war she conducted patrols along the Florida coast while training men in underwater techniques. *K-3* continued operations along the East Coast after the war, testing new devices such as listening gear, storage batteries and torpedoes. On 7 November 1922, the submarine arrived Hampton Roads and decommissioned there 20 February 1923. She was scrapped 3 June 1931.

The second *K-3* (SSK-3) was renamed *Bonita* (q.v.) 15 December 1955.

K-4

(SS-35: dp. 392 (surf.), 521 (subm.); l. 153'7"; b. 16'8"; dr. 13'; s. 14 k. (surf.), 10.5 k. (subm.); cpl. 28; a. 4 18" tt.; cl. *K-3*)

K-4 (SS-35), originally named *Walrus*, was renamed 17 November 1911; launched 19 March 1914 by the Moran Co., Seattle, Wash.; sponsored by Mrs. James P. Olding, wife of the commanding officer; and commissioned 24 October 1914, Lt. J. P. Olding in command.

Joining the Pacific Torpedo Flotilla, *K-4* operated along the coast of California, conducting constant exercises and experiments to develop the techniques of submarine warfare. From 14 October 1915 to 31 October 1917 she carried out similar operations in the Hawaiian Islands. When America's involvement in World War I called for increased naval activity, *K-4* departed Hawaii for service out of Key West, arriving 9 January 1918. For the rest of the war she remained at Key West, where she patrolled the Florida peninsula. After the Armistice of 11 November 1918, *K-4* operated along the East Coast training officers and men for duty in submarines. She continued these duties for 4 years before arriving at Hampton Roads, Va., 24 March 1923. *K-4* decommissioned there 19 May 1923 and was sold as scrap 3 June 1931.

K-5

(SS-36: dp. 392 (surf.), 521 (subm.); l. 153'7"; b. 16'8"; dr. 13'1"; s. 14 k. (surf.), 10.5 k. (subm.); cpl. 28; a. 4 18" tt.; cl. *K-1*)

K-5 (SS-36) was launched 17 March 1914, by the Fore River Shipbuilding Co., Quincy, Mass., under a subcontract from the Electric Boat Co., Groton, Conn.; sponsored by Mrs. Warren G. Child; and commissioned 22 August, Lt. (j.g.) H. Gibson in command.

K-5 departed Boston 16 November for Newport, R.I., where she joined the 4th Division, Atlantic Torpedo Flotilla, for experiments and exercises to develop the techniques of submarine warfare. She operated for almost 3 years along the Atlantic coast from New England to the Gulf of Mexico conducting underwater maneuvers, undergoing diving and torpedo firing practice, and training submariners.

She departed New London, Conn., 12 October 1917, for duty in the Atlantic. Steaming via Halifax, N.S., with *K-1*, *K-2*, and *K-6* she arrived Ponta Delgada, Azores, 27 October for patrol duty. As the first U.S. submarine to cruise European waters during the war, they operated out of the Azores searching for enemy U-boats and surface raiders. *K-5* continued this important duty until 18 April 1918, when she headed home via Bermuda and Hampton Roads, Va., arriving Philadelphia 16 May. Proceeding to New London 27 September, she departed for Key West, Fla., 7 January 1919, to resume development operations.

K-5 operated in the Gulf of Mexico out of Key West and New Orleans. After cruising the Mississippi River

to St. Louis, Mo., she sailed from New Orleans 27 July 1919, for operations between Key West, Fla., and Havana, Cuba. *K-5* departed Key West for Philadelphia 12 June 1920, arriving the 17th for overhaul.

Repairs completed, she sailed to Hampton Roads, Va., 5 March 1921 to continue coastal operations. For almost 2 years she ranged the eastern seaboard from Cape Cod to the Florida Keys, participating in numerous experiments and maneuvers to improve the operational and tactical abilities of the submarine. Following diving trials off Cape Cod, *K-5* arrived Hampton Roads 7 September 1922. She continued operations in the Chesapeake Bay, then decommissioned at Hampton Roads 20 February 1923. Taken in tow to Philadelphia 13 November 1924, she was struck from the Navy List 18 December 1930. She was sold for scrapping 3 June 1931.

K-6

(SS-37: dp. 392 (surf.), 521 (subm.); l. 153'7"; b. 16'8"; dr. 13'1"; s. 14 k. (surf.), 10.5 k. (subm.); cpl. 28; a. 4 18" tt.; cl. *K-1*)

K-6 (SS-37) was launched 26 March 1914, by the Fore River Shipbuilding Co., Quincy, Mass., under a subcontract from the Electric Boat Co., Groton, Conn.; sponsored by Mrs. Thomas Gaines Roberts; and commissioned 9 September at Boston, Lt. J. O. Fisher in command.

Steaming to Newport, R.I., 16 November, *K-6* joined the 4th Division, Atlantic Torpedo Flotilla, for shakedown and training. For almost 3 years she conducted experimental and development operations along the Atlantic coast and in the Gulf of Mexico. She underwent diving tests off Cape Cod and Long Island; practiced firing torpedoes in Chesapeake Bay; and participated in tactical submarine exercises out of New London, Key West, and Pensacola. Following overhaul at Philadelphia, she departed New London 12 October 1917, and steamed via Halifax, N.S., for patrol duty in the Azores.

K-6 arrived Ponta Delgada, Azores, 27 October in company with three other *K*-class submarines. For more than a year they patrolled the surrounding ocean, searching for German submarines and surface raiders and preventing them from using the islands as a haven. After the surrender of Germany, *K-6* sailed for the United States 21 November arriving Philadelphia via Bermuda 13 December. After overhaul *K-6* proceeded to New London 28 May 1919, to resume development and tactical operations along the New England coast.

During the 4 years of service that followed, *K-6* ranged the Atlantic from New England to the Caribbean. Op-

erating primarily out of New London, Hampton Roads, and Key West, she trained prospective submariners, conducted experimental dives and underwater maneuvers, and proved the value of submarines as an effective part of the mighty Navy. Arriving Hampton Roads from New London 21 March 1923, *K-6* decommissioned 21 May. Subsequently, she was towed to Philadelphia 13 November 1924. Her name was struck from the Navy List 18 December 1930. She was broken up and sold for scrapping 3 June 1931.

K-7

(SS-38: dp. 392 (surf.), 521 (subm.); l. 153'7"; b. 16'8"; dr. 13'1"; s. 14 k. (surf.), 10.5 k. (subm.); cpl. 28; a. 4 18" tt.; cl. *K-3*)

K-7 (SS-38) was launched 20 June 1914 by the Union Iron Works, San Francisco, Calif., under a subcontract from Electric Boat Co., Groton, Conn.; sponsored by Mrs. Katie-Bel McGregor, daughter of the President of Union Iron Works; and commissioned at Mare Island 1 December, Lt. J. V. Ogan in command.

As a unit of the Pacific Torpedo Flotilla, *K-7* sailed for San Diego 26 December, arriving the 28th to commence shakedown and training along the California coast. She returned to San Francisco 4 June 1915, then departed 3 October for experimental duty in the Hawaiian Islands. Arriving Pearl Harbor 14 October, she conducted torpedo and diving tests and participated in operations developing the tactics of submarine warfare. *K-7* departed Pearl Harbor 31 October 1917, and sailed via the West Coast and the Panama Canal for antisubmarine patrol duty in the Gulf of Mexico.

Arriving Key West, Fla., 8 January 1918, *K-7* patrolled the shipping lanes of the Gulf of Mexico from the Florida Keys to Galveston Bay. She returned to Key West from Galveston, Tex., 27 November and resumed training and development operations until departing for Philadelphia Navy Yard 14 April 1919. She received an overhaul from 21 April to 10 November, then resumed operations out of Key West in the Caribbean. Following additional overhaul during the latter half of 1921, *K-7* resumed her training and development operations at the Naval Academy 19 January 1921. For more than 2 years she ranged the eastern seaboard from Hampton Roads, Va., to Provincetown, Mass., training submariners, conducting diving experiments, and practicing underwater warfare tactics. During April and May 1921 she visited the service academies at Annapolis and West Point. After conducting almost 7 months of submarine instructions at New London, Conn. she arrived Hampton Roads, 7 September 1922, for

USS *K-5* (SS-36), the first submarine to navigate the Mississippi River, arriving St. Louis 14 June 1919

submarine flotilla operations in Chesapeake Bay. Subsequently, *K-7* decommissioned at Hampton Roads 12 February 1923. She was towed to Philadelphia 23 August 1924; struck from the Navy List 18 December 1930; and sold for scrap 3 June 1931.

K-8

(SS-39: dp. 392 (surf.), 521 (subm.); l. 153'7"; b. 16'8"; dr. 13'1"; s. 14 k. (surf.), 10.5 k. (subm.); cpl. 28; a. 4 18' tt.; cl. *K-8*)

K-8 (SS-39) was launched 11 July 1914, by the Union Iron Works, San Francisco, Calif., under subcontract from Electric Boat Co., Groton, Conn.; sponsored by Mrs. John W. Lewis, wife of the first commanding officer; and commissioned 1 December at Mare Island, Lt. John W. Lewis in command.

K-8 departed San Francisco 26 December with *K-7* for training operations along the coast of southern California. Returning to Mare Island 4 June 1915, she sailed 3 October for duty in the Hawaiian Islands, arriving Pearl Harbor 14 October. For more than 2 years she operated with *K-3*, *K-4*, and *K-7*, developing and perfecting submarine techniques in diving, torpedo firing, and underwater tactics. Ordered to return to West Coast 31 October 1917, she arrived San Pedro 12 November and proceeded 27 November for patrol duty out of Key West.

Arriving Key West 8 January 1918, she conducted patrols from Key West to Galveston, Tex., during the remaining months of World War I. Departing Galveston 21 November, she returned to Key West to continue experimental operations along the Florida coast until she sailed for Philadelphia 14 April 1919. Arriving 21 April, *K-8* underwent overhaul before sailing 10 November for Key West. Upon arrival 3 December she began 7 months of operations in the Caribbean. After returning to Philadelphia 8 June 1920, she proceeded to Annapolis, Md., 19 January 1921, for training operations at the Naval Academy. Steaming to Hampton Roads, Va., 15 February, she continued development operations along the Atlantic coast from Norfolk to Cape Cod, returning to Annapolis 4 through 14 April and visiting West Point 24 through 30 May. She conducted experimental maneuvers in the Chesapeake Bay from 4 December to 16 May 1922; trained students out of New London, Conn., from 20 May to 5 September; and returned Hampton Roads 7 September to resume operations in the lower Chesapeake Bay. *K-8* decommissioned at Norfolk 24 February 1923. Towed to the Philadelphia Navy Yard 2 September 1924, she was sold for scrapping 25 June 1931.

K. I. Luckenbach

A former name retained.

(Str: dp. 16,000; l. 468'3"; b. 56'; dr. 30'6"; s. 15 k.; cpl. 99; a. 1 6", 1 3")

K. I. Luckenbach was launched 27 October 1917 by the Fore River Shipbuilding Co., Quincy, Mass., for the Luckenbach Steamship Co. of New York; acquired by the Navy at New York 8 August 1918; and commissioned 9 August, Lt. Comdr. James A. McDonald, USNRF, in command.

K. I. Luckenbach served as a cargo transport supplying the AEF in France. From 12 August to 22 December she made two round-trip voyages carrying general Army cargo to France. She was detached from NOTS 24 December and assigned to the Cruiser and Transport Force to assist in returning American troops from France. She made three round-trip voyages before debarking her last soldiers in New York 14 September 1919. Two days later she arrived Norfolk, decommissioned 5 October, and returned to her owner.

K. T. 9, see *YHB-27*

Kabout

An Indian word meaning canoe.

(YTB-221: dp. 415; l. 110'; b. 27'; dr. 11'4"; a. 2 .50 cal. a.a.; cl. *Cahto*)

Kabout was laid down as YT-221; launched December 1943 by the Elizabeth City Shipyard, Elizabeth City, N.C.; sponsored by Mrs. J. C. Fegan; and reclassified YTB-221 on 15 May 1944 prior to being placed in service 3 July for duty in the 5th Naval District. She remained in operation there until 1 May 1959 when she was struck from the Navy List. She was sold to Ships, Inc., Norfolk, Va., 7 August 1959.

Kadashan Bay

A bay in Alaska.

(CVE-76: dp. 7,800; l. 512'3"; b. 65'; ew. 108'1"; dr. 22'6"; s. 19 k.; cpl. 860; a. 1 5", 16 40mm., 20 20mm.; cl. *Casablanca*)

Kadashan Bay (AVG-76) was reclassified ACV-76 20 August 1942; reclassified CVE-76 15 July 1943 and launched 11 December 1943 by Kaiser Co., Inc., Vancouver, Wash., under a Maritime Commission contract; sponsored by Miss Audrey Ackerman and commissioned 18 January 1944, Captain R. N. Hunter in command.

After shakedown *Kadashan Bay* departed San Diego 6 March 1944 on the first of two cruises to Espiritu Santo. She transported a total of 154 aircraft on these assignments before returning San Diego 13 May. Following repairs and training, the escort carrier sailed 10 July to join a carrier division at Pearl Harbor. One month later she sailed for Tulagi and final preparations for the September assault on the Palau.

Kadashan Bay departed Tulagi 6 September and six days later her air group launched a preinvasion air attack against enemy positions on Peleliu. Ground forces landed 15 September to gain control of the island as an air base to support the Philippine operation. After preparations were concluded at Manus, the escort carrier steamed toward Leyte Gulf 14 October.

Arriving there 21 October she immediately commenced raids and strikes in support of troops ashore. Four days later one of her patrol planes, piloted by Ens. Hans L. Jensen, sighted the Central Force of the Japanese fleet off Samar. After reporting his sighting he launched an unsupported attack against the leading cruiser, beginning the famous battle off Samar. The carrier's air group launched three fighter and three torpedo strikes against Kurita's force. The flyers' courage and gallantry contributed greatly to the sound defeat from which the Japanese never recovered. Upon completion of this mission, *Kadashan Bay* steamed toward Manus, arriving 3 November.

As the action in the Philippines continued, *Kadashan Bay's* air group accounted for 11 planes in encounters with the enemy during mid-December. Preparations were now underway for the Luzon landings and the escort carrier rendezvoused with the main force 3 January 1945. She arrived off Luzon 5 days later and commenced an early morning air attack. That same morning a kamikaze aimed his death dive at *Kadashan Bay*. Despite repeated hits the enemy plane plunged into the ship amidships directly below the bridge. After an hour and a half of feverish damage control effort, fires and flooding were checked, and the escort carrier returned to Leyte 12 January for temporary repairs before returning San Francisco 13 February for complete overhaul.

Kadashan Bay sailed for Pearl Harbor 8 April, arriving 14 April. She then commenced ferrying aircraft and passengers among the Pacific islands. During July the escort carrier was assigned as a replenishment carrier for the 3d Fleet and was on her way from Pearl Harbor to begin her new duty when news of Japan's collapse came.

Kadashan Bay joined the "Magic-Carpet" fleet at Guam

in September and arrived San Francisco 26 September with her first group of veterans. For the next 3 months the escort carrier made runs from Pearl Harbor, Guam, Okinawa, and China to return battle-weary Americans home. She arrived San Pedro 22 December from her last Pacific cruise, and departed San Diego 10 January 1946 for Boston. *Kadashan Bay* arrived Boston 29 January, decommissioned 14 June 1946, and was placed in the Atlantic Reserve Fleet there. She was reclassified CVU-76 on 12 June 1956 and scrapped 13 August 1959.

Kadashan Bay received two battle stars for World War II service.

Kailua

A bay off the coast of Hawaii.

(IX-71: dp. 1,411; l. 189'9"; b. 30'; dr. 15'9"; s. 9.8 k; cpl. 61; a. 1 3", 4.50 cal. mg., 2 det.)

Kailua (IX-71), formerly *Dickenson*, was launched in 1923 by the Sun Shipbuilding & Drydock Co., Chester, Pa.; acquired by the Navy 19 May 1942 on a bare-boat basis and commissioned 5 May 1943, Lt. C. R. Bower in command.

Kailua departed Pearl Harbor 15 May 1943 to join the Service Force of the 7th Fleet. Upon her arrival at Pago Pago, Samoa, 25 May, she immediately commenced operations as an auxiliary in the Pacific islands. During June she arrived Milne Bay, New Guinea, and for the next year remained there laying cables, ASW nets, and buoys. *Kailua* arrived Pearl Harbor 4 July 1944 and performed similar services there for the rest of the war. *Kailua* decommissioned at Pearl Harbor 29 October 1945 and was later sunk intentionally.

Kaiser Wilhelm II

Kaiser Wilhelm II was seized by the United States in 1917; acquired by the Navy 22 May 1917; and renamed *Agamemnon* (q.v.) on 5 September 1917.

Kaiserin Auguste Victoria

Former name retained.

(Str: dp. 22,000; l. 677'6"; b. 77'4"; dr. 28'; s. 17.5.)

Kaiserin Auguste Victoria, formerly a German ship, was built in 1905 by Vulcan at Stettin; taken over by the Navy after the Armistice; and commissioned at Paullac, France, 15 February 1919, Captain Frank Evans in command.

Kaiserin Auguste Victoria was assigned to NOTS for duty as a troop transport. She departed Brest, France, 8 April with her first contingent of American troops who fought so valiantly to make the world safe for democracy. The transport made a total of five cruises from France to the United States, arriving New York from her final cruise 21 August. *Kaiserin Auguste Victoria* remained at New York for 4 months before decommissioning 23 December 1919. She was returned to the USSB the same day. Sold to the Cunard S.S. Co., Ltd., in 1920, *Kaiserin Auguste Victoria* was subsequently sold to the Canadian Pacific Line and renamed *Empress of Scotland*.

Kaita Bay

Prior to launch, escort aircraft carrier *Kaita Bay* (CVE-78) was renamed *Savo Island* (CVE-78) (q.v.) 6 November 1943.

Kajeruna

A former name retained.

(SP-389: t. 147; l. 153'; b. 14'6"; dr. 7'9"; s. 14 k.; a. 2 6-pdrs., 1 mg.)

Kajeruna (SP-393), a steel-hulled steam yacht, was built in 1902 by John N. Robinton & Son, Erie Basin, N.Y., and was acquired from her owner, A. W. Gieske of Baltimore, in May 1917 and commissioned, Lt. J. R. Hudgins, USNRF, in command.

Assigned to the 5th Naval District based at Norfolk, *Kajeruna* acted as flagship for Patrol Squadron 3. She operated in Hampton Roads and Chesapeake Bay until being returned to her owner 16 January 1919.

Kalae, see YT-322

Kalamazoo

A river in Michigan.

(ScStr: t. 6,160; l. 354'5"; b. 56'8"; dr. 17'6"; s. 19 k.; a. none)

Kalamazoo, a double turreted monitor, was laid down in 1863 at New York Navy Yard. Work on the monitor was suspended 27 November 1865 and was never resumed. The unfinished ship was renamed *Colossus* 15 June 1869; without seeing any service she was broken up in 1884.

I

(AOG-30: dp. 845; l. 220'6"; b. 37'; dr. 13'11"; s. 10 k.; cpl. 62. a. 1 3", 2 40mm., 3 20mm.; cl. *Mettawee*; T. T1-M-A2)

Kalamazoo (AOG-30) was laid down 7 July 1944 by East Coast Shipyards, Inc., Bayonne, N.J., under a Maritime Commission contract; launched 30 August 1944; sponsored by Miss Harriett Savage; acquired by the Navy 7 October; and commissioned 14 October at New York Navy Yard, Lt. W. Pierson, Jr., USCGR, in command.

Following shakedown in the Caribbean, *Kalamazoo* cleared Norfolk, Va., 7 December for Aruba, Dutch West Indies, to load fuel oil. She departed Aruba 21 December for duty in the Southwest Pacific. After fueling operations in the Solomons, Admiralties, and Humboldt Bay, New Guinea, she arrived Leyte Gulf, P.I., 4 March 1945 as a unit of the Service Force, 7th Fleet. She operated as a gasoline tanker out of San Pedro Bay until 15 April when she sailed for fueling operations off the southern Philippines. Arriving Polloc Harbor, Mindanao, 20 April, she served for more than 7 months in the Celebes Sea, transporting cargo and fuel from Borneo and Morotai to ports in Mindanao.

Departing Zamboanga, Mindanao, 1 December, *Kalamazoo* steamed via Manila to Subic Bay, Luzon, where she remained until sailing for the United States 11 January 1946. She reached San Francisco 12 March and cleared port on the 22d for passage to the Gulf Coast. On 1 April while en route to the Panama Canal Zone her main engine failed. *Kcnnabago* (AO-81) assisted her to Balboa where she arrived 10 April. Under tow from rescue tug *ATR-85*, she departed Cristobol, C.Z., 26 April for Mobile, Ala., where she arrived 3 May. *Kalamazoo* decommissioned 18 May and subsequently was turned over to the Maritime Commission for disposal. She transferred to Colombia 26 November 1947 and was renamed *Bals de Lezo* (BT-62).

Kalinin Bay

A bay on the northern shore of Kruzof Island in the Alexander Archipelago of southeastern Alaska.

(CVE-68: dp. 7,800; l. 512'3"; b. 65'; ew. 101'1"; dr. 22'6"; s. 19 k.; cpl. 860; a. 1 5", 16 40mm., 20 20mm., 28 ac.; cl. *Casablanca*; T. S4-S2-BB3)

Kalinin Bay, originally designated an AVG, was classified ACV-68 on 20 August 1942; laid down under a Maritime Commission contract 26 April 1943 by the Kaiser

Shipbuilding Co., Inc., Vancouver, Wash.; reclassified CVE-68 on 15 July 1943; launched 15 October 1943; sponsored by Mrs. Anna Mary Updegraff; and commissioned 27 November at Astoria, Oregon, Captain C. R. Brown in command.

After shakedown along the Pacific Coast, *Kalinin Bay* departed San Diego 3 January 1944 for replenishment duty in the Pacific. Laden with troops and a cargo of planes, she steamed via Pearl Harbor for the Gilbert Islands, arriving off Tarawa Atoll 24 January to supply 5th Fleet carriers then engaged in the conquest of the Marshalls. For more than 2 weeks she provided logistic support from Tarawa to Majuro Atoll before returning to Alameda, Calif., 24 February.

With Composite Squadron 3 embarked 9 April, *Kalinin Bay* reached Majuro, Marshalls, 23 April; conducted ASW air patrols off Mili Atoll; and proceeded to Pearl Harbor 1 May to prepare for the Marianas operation. She departed Pearl Harbor 30 May; and, while en route to Saipan, she successfully evaded a Japanese torpedo that crossed her bow close aboard. Touching at Eniwetok 9 June, *Kalinin Bay* reached the eastern coast of Saipan 15 June and commenced air operations in support of the invasion. After repelling an enemy air attack at dusk on the 17th, she sailed 19 June to ferry planes to and from Eniwetok. Returning to Saipan 24 June, she resumed effective air strikes against enemy positions on the embattled island until 9 July when she steamed via Eniwetok for similar duty at Guam. Arriving 20 July, she launched direct support and ASW sorties until 2 August, then returned to Eniwetok to prepare for operations in the Palau Islands.

Kalinin Bay cleared Eniwetok 18 August and proceeded via Tulagi, Florida Island, to the Southern Palaus where she arrived 14 September with units of the 3d Fleet. Ordered to furnish air support for the capture, occupation, and defense of Peleliu, Angaur, and Ngesebus, she launched air strikes to support landing operations. For 2 weeks her planes, flying almost 400 sorties, inflicted heavy damage on enemy ground installations and shipping. On 25 September, alone, they sank or destroyed three cargo transports and six landing barges.

She departed the Palaus 30 September; and, upon arriving Seeadler Harbor, Manus Island, 3 October, she received a new commanding officer, Captain T. B. Williamson. *Kalinin Bay* departed Manus 12 October en route to the Philippine Islands. Ordered to provide air coverage and close air support during the bombardment and amphibious landings on Leyte Island, she arrived off Leyte 17 October. After furnishing air support during landings by Ranger units on Dinagat and Homonhon Islands in the eastern approaches to Leyte Gulf, she launched air strikes in support of invasion operations at Tacloban on the northeast coast of Leyte. Operating with Rear Admiral C. A. F. Sprague's "Taffy 3" (TU-77.4.3), which consisted of 6 escort carriers and a screen of 3 destroyers and 4 destroyer escorts, *Kalinin Bay* sailed to the east of Leyte and Samar as her planes, flying 244 sorties from 18 to 24 October, struck and destroyed enemy installations and airfields on Leyte, Samar, Cebu, Negros, and Panay Islands.

Steaming about 60 miles east of Samar before dawn 25 October, "Taffy 3" prepared to launch the day's initial air strikes. At 0647 Rear Admiral Sprague received word that a sizable Japanese fleet was approaching from the northwest. Comprised of 4 battleships, 8 cruisers, and 12 destroyers, Vice Admiral Takeo Kurita's Center Force steadily closed and at 0658 opened fire on "Taffy 3."

So began the Battle off Samar—one of the most memorable engagements in U.S. naval history. Outnumbered and outgunned, the slower "Taffy 3" seemed fated for disaster; but the American ships defied the odds and gamely accepted the enemy's challenge.

Kalinin Bay accelerated to flank speed; and, despite fire from three enemy cruisers, she launched her planes, ordering the pilots "to attack the Japanese task force and proceed to Tacloban airstrip, Leyte, to rearm and re-gas." As salvos fell "with disconcerting rapidity" in-

creasingly nearer *Kalinin Bay*, her planes, striking the enemy force with bombs, rockets, and gunfire, inflicted heavy damage on the closing ships.

As the trailing ship in the escort carrier van, *Kalinin Bay* came under intense enemy fire. Though partially protected by chemical smoke, by a timely rain squall, and by valiant counterattacks of screening destroyers and destroyer escorts, she took the first of 15 direct hits at 0750. Fired from an enemy battleship, the large caliber shell (14-inch or 16-inch) struck the starboard side of the hangar deck just abaft the forward elevator.

By 0800 the enemy cruisers, which were steaming off her port quarter, closed to within 18,000 yards. *Kalinin Bay* gamely responded to their straddling salvos with rapid fire from her single 5-inch gun, which only intensified the enemy fire. Three 8-inch, armor-piercing projectiles struck her within minutes of each other. At 0825 the spirited carrier's barking 5-incher scored a direct hit from 16,000 yards on the No. 2 turret of a *Nachi*-class heavy cruiser, and a second hit shortly thereafter forced the enemy ship to withdraw temporarily from formation.

At 0830 five enemy destroyers steamed over the horizon off her starboard quarter. The closing ships opened fire from about 14,500 yards; and, as screening ships engaged the cruisers and laid down concealing smoke, *Kalinin Bay* shifted her fire and for the next hour traded shots with the guns of Japan's Destroyer Squadron 10. Many salvos exploded close aboard or passed directly overhead; and, though no destroyer fire hit *Kalinin Bay* directly, she took ten more 8-inch hits from the now obscured cruisers. One shell passed through the flight deck and into the communications area, where it destroyed all radar and radio equipment.

Under heavy attack from the air and harassed by incessant fire from American destroyers and destroyer escorts, the enemy cruisers broke off action and turned northward at 0920. At 0915 the enemy destroyers, which were kept at bay by the daring and almost singlehanded exploits of *Johnston* (DD-557), launched a premature torpedo attack from 10,500 yards. As the torpedoes approached the escort carriers, they slowed down. An Avenger torpedo-bomber from doomed *St. Lo* (CVE-63) strafed and exploded two torpedoes in *Kalinin Bay's* wake about 100 yards astern, and a shell from the latter's 5-inch gun deflected a third from a collision course with her stern.

At about 0930, as the enemy ships fired parting salvos and reversed course northward, *Kalinin Bay* scored a direct hit amidships on a retreating destroyer. Five minutes later she ceased fire and retired southward with the surviving ships of "Taffy 3." At 1050 the task unit came under a concentrated air attack; and, during the 40-minute battle with enemy suicide planes, all escort carriers but *Fanshaw Bay* (CVE-70) were damaged. One plane crashed through *St. Lo's* flight deck and exploded her torpedo and bomb magazine, mortally wounding the gallant carrier. Four diving planes attacked *Kalinin Bay* from astern and the starboard quarter. Intense fire splashed two close aboard; but a third plane crashed into the port side of the flight deck, damaging it badly. The fourth hit destroyed the aft port stack.

As one of the fearless ships of "Taffy 3," *Kalinin Bay* had prevented a Japanese penetration into Leyte Gulf and saved General MacArthur's beachhead in the Philippines. At a cost of five gallant ships and hundreds of brave men "Taffy 3," aided by her own planes and those of "Taffy 2," sank three enemy cruisers, seriously damaged several other ships, and turned back the "most powerful surface fleet which Japan had sent to sea since the Battle of Midway." Domination of the skies, superior seamanship, and prudent, timely maneuvers helped to nullify the overwhelming odds. In the highest tradition of naval service, the finest qualities of the American sailor became commonplace during the heroic fight. Devotion to duty, daring courage, uncommon bravery, and an indomitable spirit were part and parcel of this victory.

Despite the battle damage, "Taffy 3" cleared the air of attacking planes; and at noon the escort carriers

retired southeastward while their escort searched for survivors from *St. Lo*. Though *Kalinin Bay* suffered extensive structural damage during the morning's furious action, she counted only 5 dead among her 60 casualties. Weary and battle scarred, *Kalinin Bay* was awarded the Presidential Unit Citation for heroic conduct as a unit of "Taffy 3". She steamed via Woendi, Schouten Islands, to Manus, arriving 1 November for emergency repairs. Getting under way for the United States 7 November, the escort carrier reached San Diego 27 November for permanent repairs and alterations.

Repairs completed 18 January 1945, the veteran escort carrier departed San Diego 20 January to ferry planes and men to Pearl Harbor and Guam. For more than 8 months she served as a replenishment carrier in the Pacific Carrier Transport Squadron; and, during six cruises between the West Coast and Pearl Harbor, Eniwetok, and Guam, she transported more than 600 planes. Departing San Diego 2 September, she steamed to the Philippines, arriving Samar 28 September for "Magic-Carpet" duty. With 1,048 men embarked, she departed Samar 1 October and arrived San Francisco 19 October.

After conducting two more voyages between California and Pearl Harbor, *Kalinin Bay* departed San Diego 8 December for the Far East. On 25 December while she steamed to Yokosuka, Japan, an intense storm heavily damaged her flight deck. Arriving the 27th, she received emergency repairs, then sailed 3 January 1946 for the West Coast and arrived San Diego 17 January. On 13 February she proceeded to the eastern seaboard, reaching Boston 9 March. *Kalinin Bay* decommissioned 15 May, and she was sold for scrapping 8 December to Paptasco Steel Co., Baltimore, Md.

In addition to the Presidential Unit Citation, *Kalinin Bay* received five battle stars for World War II service.

Kalispell

A city in Flathead County, Mont. The city is named for a tribe of Indians.

(YTB-784: dp. 283; l. 109'; b. 31'; dr. 14'; s. 12 k.; cpl. 12; cl. *Natick*)

Kalispell (YTB-784) was laid down by Marinette Marine Corp., Marinette, Wis., 14 September 1965; launched 13 December; and placed in service 3 May 1966.

Assigned to the Atlantic Fleet, *Kalispell* at present performs towing operations and harbor duties in the 5th Naval District, Norfolk, Va.

Kalk

Stanton Frederick Kalk, born 14 October 1894, in Ala., graduated from the Naval Academy in 1916. After serving in *Florida* (BB-30), he was assigned to *Jacob Jones* (DD-61) 10 September 1917. While steaming on patrol duty from Brest, France, to Queenstown, Ireland, *Jacob Jones* was attacked 16 December by German submarine *U-53*. Although Kalk, officer-of-the-deck during the attack, "took correct and especially prompt measures in maneuvering to avoid the torpedo," the destroyer could not turn in time to escape. She sank stern first in 8 minutes. Though stunned by the explosion and weakened by his action after the ship went down, Kalk swam from one raft to another in an attempt to equalize weight on them. Displaying "extraordinary heroism," he disregarded his own condition while endeavoring to save the lives of his men. Game to the last, Kalk overtaxed his own strength; he died from exposure and exhaustion. For his "splendid self-sacrifice" Lt. (j.g.) Kalk was posthumously awarded the Distinguished Service Medal.

I

(DD-170: dp. 1,060; l. 314'5"; b. 31'8"; dr. 9'2"; s. 35 k.; cpl. 101; a. 4 4", 2 1-pdrs., 12 21" tt.; cl. *Wickes*)

Kalk (DD-170), laid down as *Rodgers* 4 March 1917, was launched 21 December 1918, by the Fore River Shipbuilding Corp., Quincy, Mass.; sponsored by Mrs. Flora Stanton Kalk, mother of Lt. Kalk.; renamed *Kalk* 23 December 1918; and commissioned at Boston 29 March 1919, Lt. Comdr. N. R. Van der Veer in command.

After shakedown off Newport, *Kalk* departed Boston 3 May for Newfoundland. Arriving Trespassey 5 May, she sailed 3 days later for the mid-Atlantic to provide rescue cover during the pioneer flight of Navy seaplane *NC-4* from Newfoundland to the Azores 16 to 17 May. After returning to Boston 20 May, she sailed for Europe 10 July, arriving Brest, France, 21 July. Proceeding via England to Hamburg, Germany, she arrived 27 July to begin a 3-week cruise through the Baltic Sea, visiting Baltic and Scandinavian countries on American Relief Administration operations. She returned to Brest 23 August to serve as a dispatch and escort ship until departing for the United States 25 January 1920.

Arriving Boston 12 February, she trained reserves of the 1st Naval District and operated with *DesRon 3* along the Atlantic Coast from Cape Cod to Charleston. As a result of the Five Power Naval Treaty, which was signed at the Washington Conference 6 February 1922, *Kalk* departed Boston 10 May for Philadelphia, where she decommissioned 10 July and was placed in reserve.

When war in Europe threatened the security of the entire world, *Kalk* recommissioned 17 June 1940, Lt. T. P. Elliott in command. Departing Philadelphia 26 July, she arrived Charleston the 31st for duty with the Neutrality Patrol in the Atlantic. *Kalk* was one of 50 overage 4-pipers turned over to Britain in exchange for strategic bases in the Atlantic under terms of the "Destroyers for Bases Agreement" of 2 September. She cleared Charleston 7 September and steamed via Hampton Roads and Newport to Halifax, N.S., arriving 18 September. *Kalk* decommissioned 23 September and was turned over to the British the same day.

Commissioned in the Royal Navy as *HMS Hamilton*, she collided with *HMS Georgetown* (formerly *Maddox*, DD-168) at St. John's Newfoundland, 1 October while en route to England. Proceeding to St. John, New Brunswick, for repairs, she went aground and suffered extensive damage. Because of a British manpower shortage, she was manned by Canadians during and after repair operations; late in June 1941 she commissioned in the Royal Canadian Navy as *HMCS Hamilton*.

Throughout her active service, she remained in North American waters, protecting convoys from St. John's to New York. On 2 August 1942, she sighted and attacked a German U-boat and, by forcing it to submerge, prevented an attack on the convoy. Declared unfit for operations 11 August 1943, she became a tender to *HMCS Cornwallis* at Annapolis, Nova Scotia. Declared surplus 1 April 1945, she decommissioned 8 June at Sydney, Nova Scotia. *HMCS Hamilton* departed Sydney 6 July under tow for Baltimore, Md., where she was scrapped by the Boston Iron & Metal Co.

Kalk (DD-254) was renamed *Rodgers* (DD-254) (q.v.) 23 December 1918.

II

(DD-611: dp. 1,620; l. 348'4"; b. 36'1"; dr. 11'9"; cpl. 258; s. 37.5 k.; a. 4 5", 4 40mm., 7 20mm., 5 21" tt., 6 dep., 2 dct.; cl. *Benson*)

The second *Kalk* (DD-611) was laid down 30 June 1941 by the Bethlehem Steel Co., San Francisco, Calif.; launched 18 July 1942; sponsored by Mrs. Flora Stanton Kalk, mother of Lieutenant Kalk; and commissioned 17 October, Lt. Comdr. C. T. Singleton, Jr., in command.

Following shakedown along the California coast, *Kalk* departed San Francisco 28 December for patrol and escort duty in the Aleutians. Steaming via Dutch Harbor, she arrived Adak 9 January and patrolled from Adak to Amchitka Island. On the 16th she embarked 185 survivors

of SS *Arthur Middleton* and *Worden* (DD-352) which had foundered in an Arctic storm. She transported them to Adak, then continued intermittent patrols until she sailed 26 February for home, arriving San Francisco 4 March.

After repairs, *Kalk* steamed from San Francisco 7 April and proceeded via the Panama Canal to New York, where she arrived a fortnight later for Atlantic convoy escort duty. She cleared New York 28 April and the next day joined a 35-ship convoy, UGF-8, headed for Oran, Algeria. Arriving 12 May, she searched for a suspected U-boat. The destroyer departed Casablanca, French Morocco, 19 May escorting a westbound convoy. Arriving New York 31 May, she sailed 13 June via Casco Bay, Maine, and Argentia, Newfoundland, to Norfolk for further convoy-escort duty. From 27 June to 6 December she escorted three convoys between the United States and North Africa. After overhaul at New York and Boston, she arrived Norfolk 29 December and then sailed 2 January 1944 for the Pacific.

She departed Balboa, Canal Zone, 8 January with DesDiv 38, escorting battleships *New Jersey* (BB-62) and *Iowa* (BB-61). Reaching Funafuti, Ellice Islands 27 January, *Kalk* searched for downed fighter planes before sailing for New Guinea 31 January to join the 7th Fleet at Milne Bay 7 February. She operated in the New Guinea area, primarily on patrol and convoy escort duty, until 12 June. During the protracted struggle for New Guinea, she also covered amphibious invasions, bombarding Manus, Pityilu, Los Negros, and Rambutye Islands, Admiralties; Tanahmerah Bay and Wakde-Sarmi, New Guinea; and Biak and Owi, Schouten Islands.

After providing fire support during the invasion of Biak Island 27 May, *Kalk* continued escort and picket duty between Biak and Humboldt Bay. While on patrol 12 June off the southern coast of Biak, an enemy plane dived out of the sun and released a bomb which struck abaft her forward stack at the base of her starboard torpedo tubes. As *Kalk's* 20mm. gunfire splashed the attacker, the bomb exploded the air flasks of her torpedoes, destroying several 20mm. guns, showering her crew with shrapnel, and damaging her superstructure amidships. Though suffering 70 casualties, her heroic crew rallied to save the destroyer. Skillful firefighters extinguished each blaze; and, while other hands tended the wounded, volunteers detached the warheads from torpedoes scattered about the deck. Every man knew what to do and did it.

The only Allied ship seriously damaged in more than 2 weeks of repeated air attacks at and near Biak, *Kalk* retired to Hollandia, New Guinea, for emergency repairs and sailed 20 June via the Admiralties and Pearl Harbor for the United States. Reaching San Francisco 31 July, she received complete repairs and underwent alteration at Mare Island.

Then the gallant destroyer departed 26 October for Pearl Harbor, arriving 1 November. On 12 November she headed via Eniwetok to Ulithi, Western Carolines, where she arrived 26 November to resume her duty in the western Pacific.

For more than 8 months *Kalk* operated out of Ulithi on ASW patrols screening sea logistics forces during offensive operations from Luzon to Okinawa. From 16 to 23 December she patrolled northeast of Luzon during replenishment of the 3d Fleet. Sailing from Ulithi 29 December, she screened supply units which supported TF 38 during the crucial Lingayen Gulf operations on western Luzon. She continued this important duty until returning to Ulithi 27 January 1945.

As a unit of DesDiv 38, *Kalk* rendezvoused with TG 50.8 on 18 February for refueling and replenishment operations of TF 58 during the savage campaign on Iwo Jima. Returning to Ulithi 6 March, she sailed northward 13 March with TG 50.8 to screen logistic support for the 5th Fleet which was then clearing Ryukyu waters of enemy shipping and aircraft in preparation for the invasion of Okinawa 1 April. From then to the end of the war, *Kalk* operated with the 5th and 3d Fleets off the Ryukyus as escort, plane guard, and ASW screen. Con-

cerned primarily with screening supply ships between Ulithi and Okinawa, she destroyed numerous Japanese mines during patrols. While steaming for Okinawa 5 June with logistic support group TG 30.8, she passed through a raging typhoon with destructive winds of more than 90 knots. Suffering only minor damage, *Kalk* continued screening patrols. When the war ended 15 August, she was steaming from Okinawa to Ulithi.

Departing Ulithi 20 August, *Kalk* sailed via Saipan and Okinawa to Japan, arriving Tokyo Bay 1 September escorting *Detroit* (CL-8). Present at the formal Japanese surrender 2 September, she departed the 3d on an escort run to Eniwetok. After returning to Tokyo Bay 16 September, she departed for the United States 12 October via the Philippines, Eniwetok, and Pearl Harbor. Reaching San Diego 17 November, she proceeded on the 17th for the East Coast, arriving Boston 11 December. After overhaul, she departed Boston 18 January 1946 and arrived Charleston, S.C., on the 20th. *Kalk* decommissioned at Charleston 3 May, entered the Atlantic Reserve Fleet, and is currently berthed at Orange, Tex.

Kalk received eight battle stars for World War II service.

Kalkay, see *Mattaponi* (AO-41)

Kalmia

A genus of North American shrubs of the heath family with evergreen leaves and umbellate clusters of rose, purple, or white flowers.

I

(ScStr: t. 112; l. 85'; b. 19'6"; dr. 8'; s. 12 k.; a. 2 guns)

The first *Kalmia*, a screw steamer, was built as *Innes* at Philadelphia in 1863 and purchased for the Navy by Rear Admiral Hiram Paulding 5 October from her owner, Arron Innes, Poughkeepsie, N.Y. Renamed *Kalmia* 24 April 1864, the Naval Register of 1865 lists her as assigned to the North Atlantic Squadron as a fourth-rate tug. No further record of her other naval service has been found.

Kalmia was sold at public auction in New York, N.Y., 25 October 1865. She was redocumented as *F. B. Thurber* 12 December; renamed *James Hughes* 8 November 1898; and destroyed by fire 15 June 1905 at Bartlett's Point, N.Y.

II

(AT-23: dp. 1,000; l. 158'6"; b. 30'; dr. 14'7"; s. 13 k.; cpl. 44; a. 1 mg.; cl. *Bagaduce*)

The second *Kalmia* (AT-23) was laid down 23 August 1918; launched 26 August 1919 by Ferguson Steel & Iron Co., Buffalo, N.Y.; sponsored by Mrs. E. D. Bishop; and commissioned 18 November, Lt. (j.g.) W. S. Burns in command.

Steaming to Montreal 21 November, *Kalmia* joined the St. Lawrence Division of Eagle Boats for towing and ice-breaking duty between Montreal and Quebec. She departed Quebec 24 May 1920 for the eastern seaboard; sailing via Portsmouth, N.H., she arrived Philadelphia 18 June. Attached to the 4th Naval District, she operated out of Philadelphia as a tow for barges and yard craft. On 10 January 1934 she joined the Special Service Squadron to assist in transporting armament to Guantanamo Bay, Cuba. Assigned to Train Squadron 1, Base Force, 1 May, she sailed to Norfolk 24 May and on 13 October departed for the West Coast. Steaming via the Panama Canal, she established her base at San Diego 22 November and commenced target towing operations along the California coast.

On 30 June 1941 *Kalmia* sailed for the Atlantic, arriving Norfolk 10 August. She proceeded to Portland, Maine, 10 October and arrived on the 13th to join the Service Force, Atlantic Fleet. For the next 3 years she towed gun targets in Casco Bay. From 8 to 11 September 1942 she assisted in salvage and rescue operations

of auxiliary-transport *Wakefield* (AP-21), gutted by fire while off Halifax, Nova Scotia. Redesignated AT0-23 on 15 May 1944, she returned to Norfolk 24 October for target-towing duty in the Chesapeake Bay.

Departing Norfolk 14 December, *Kalmia* sailed for the West Coast arriving Seattle, Wash., 14 February 1945 with floating dry dock AFDL-33 in tow. Following two towing runs from San Diego and San Francisco to Seattle, she arrived San Diego 30 May to resume bomb and gun target towing operations off Santa Catalina and Santa Cruz Islands. Steaming to San Pedro 29 March 1946, *Kalmia* decommissioned 15 May. She was struck from the Navy List 3 July 1946, and sold to Bay Cities Transportation Co., San Francisco, Calif., 21 January 1947.

III

(ATA-184: dp. 835; l. 143'; b. 33'10"; dr. 13'2"; s. 13 k.; cpl. 45; a. 1 3", 2 20mm.; cl. *Maricopa*)

The third *Kalmia* (AT-184) was laid down as *ATR-111* on 27 July 1944; redesignated *ATA-184* 15 May 1944; launched 29 August by Levingston Shipbuilding Co., Orange, Tex.; and commissioned 6 November as *ATA-184*, Lt. (j.g.) W. E. Hummel in command.

Following shakedown, *ATA-184* departed New Orleans, La., 10 December for the Southwest Pacific with *APL-9* in tow. Transiting the Panama Canal 27 December, she added *ATR-64* to her towlines 2 January 1945, sailed via the Galapagos and Society Islands, and arrived Florida Island, Solomons, 16 February to deliver *ATR-64* for duty. The next day, as a unit of Service Squadron 3, *ATA-184* sailed for Manus Island, Admiralties, arriving the 22d with *APL-9*. After towing and salvage duty at Manus and Hollandia, New Guinea, she steamed for the Philippines 27 March with *YRDH-3* and *YRDM-3* in tandem tow. Arriving Subic Bay, Luzon, 14 April, she commenced towing and salvage operations throughout the Philippines that ranged from northern Luzon to southern Palawan and Mindanao. Following a towing run to Brunei Bay, Borneo, *ATA-184* cleared Guiuan Roadstead, Samar, 22 June and returned to Manus the 29th.

ATA-184 proceeded to Russell Islands, Solomons, 4 July. While the tug was operating off Hui Island 12 July, a large quantity, estimated between 9 and 26 tons, of deteriorated and condemned dynamite exploded on the island causing minor damage to the tug. She departed the Russells 17 July for Guiuan, Samar, with five pontoon barges in tow. Arriving 6 August, she resumed towing duty in Leyte Gulf until she sailed 18 August for Manus Island to tow two pontoon drydocks to Luzon. *ATA-184* reached Subic Bay 11 September and commenced towing runs between Subic Bay and Guiuan. From 2 to 7 October she operated in the typhoon area northeast of Luzon and recovered harbor tugs *YTB-377* and *YP-572* adrift at sea. During November and December she operated out of San Fernando, Luzon, on typhoon salvage and rescue patrols off northern Luzon, rescuing four men 26 December from a drifting Army barge.

ATA-184 continued towing and salvage operations off western Luzon until she departed Subic Bay 30 April 1946 with *APL-19* in tow. Steaming via Guam and Bikini Atoll, she arrived Pearl Harbor 7 June and continued 11 June with *APL-21* in tow for the West Coast. Arriving Astoria, Oreg., 23 June, *ATA-184* decommissioned 24 June and entered the Columbia River Group, Pacific Reserve Fleet. On 16 July 1948 she was named *Kalmia* (ATA-184). Placed in service 1 April 1952, she departed Astoria 24 April for San Diego, where she recommissioned 5 May, Lt. T. P. Dorr in command.

Attached to the 11th Naval District since recommissioning, *Kalmia* has operated out of San Diego, providing valuable service for the Underway Training Command during training and readiness operations of the Navy's combat ships. As an integral link in training the Navy's fighting ships, especially destroyers, in gunnery, she has towed target sleds in the Southern California Operating Area. Equipped with a hydraulic launching catapult on her bow, she serves as one of the smallest "aircraft car-

riers" in the Navy by launching, controlling, and retrieving drone target aircraft during antiaircraft and aerial gunnery exercises. She also tows and services bomb targets and retrieves practice torpedoes and mines. When not at sea, she provides a variety of important services in San Diego and Long Beach harbors, towing ships in reserve to and from overhaul, assisting disabled or grounded ships, and moving a multitude of yard craft and a vast quantity of varied equipment. A floating workhorse, *Kalmia* continues to provide essential service to the 11th Naval District and the Pacific Fleet through 1967.

Kalolah, see *YP-340*

Kaloli

A point on the western coast of Hawaii.

(AOG-13): dp. 3,610; l. 258'; b. 43'; dr. 14'10"; s. 9.5 k.; cpl. 63; a. 1 3", 4 20mm.)

Kaloli (AOG-13) was launched in 1941 as *Flying A* by the Charleston Shipbuilding & Drydock Co., Charleston, S.C.; owned by Tidewater Associated Oil Co., San Francisco, Calif.; and acquired and commissioned by the Navy at Honolulu, Hawaii, 29 April 1942, Lt. Comdr. G. H. Chapman, Jr., in command.

Taken over on time charter through the Maritime Commission, *Kaloli* served as a unit of Service Squadron 8, supplying forward island depots in the Pacific with military supplies and material. Operating out of Pearl Harbor, she ranged the Central Pacific and provided logistic support for bases at Midway, Johnston, Canton, Christmas, and Palmyra Islands. She conducted over 40 fueling missions to these islands between 28 May 1942 and 3 July 1945, carrying over 20 million gallons of aviation gasoline as well as lesser quantities of commercial gasoline and diesel fuel. Though she was never in combat, her service to combat ships of the Navy was both efficient and valuable.

Kaloli shuttled fuel among various tank farms in the Hawaiian Islands from July to October 1945. On 11 October she cleared Pearl Harbor for the West Coast, arriving San Diego 23 October. She departed the 29th for the eastern seaboard, and, after transiting the Panama Canal 12 November, she arrived New York 25 November. *Kaloli* decommissioned 7 December and transferred to the Maritime Commission for return to her former owner. She was struck from the Navy List 3 January 1946.

Kamehameha

Kamehameha, a Hawaiian king and warrior whose name means "the lonely one," was born at Kohala, Hawaii, in 1758. In 1782 he conquered three petty kingdoms to begin a campaign to take all the Hawaiian Islands. The conquest was completed with the defeat of Kalanikupule on Oahu in 1795. He acquired the islands of Kauai and Niihau without a fight.

At the end of these terrible and devastating civil wars, Kamehameha worked to establish a stable government and to restore the island's shattered economy. An excellent judge of men, he inspired great loyalty. Though ruthless in war, he was kind and forgiving after the fighting. He encouraged trade by insisting upon protection and justice for foreigners. He welcomed new ideas, and tried to apply them to help his people. By the time of his death, Kamehameha had consolidated the islands under one government, ending the feudal wars and anarchy which had ravaged the beautiful Hawaiian Islands.

(SSB(N)-642: dp. 7,250 (surf.), 8,250 (subm.); l. 425'; b. 33'; dr. 31'5"; s. over 20 k.; cpl. 140; a. 16 Pol. mis., 4 21" tt.; cl. *Lafayette*)

Kamehameha (SSB(N)-642) was laid down 2 May 1963 by the Mare Island Naval Shipyard; launched 16 January

1965; sponsored by Mrs. Samuel Wilder King, widow of Captain King, who was governor of Hawaii from 1953 to 1957; and commissioned 10 December 1965, Comdr. Roth S. Leddick (blue crew) and Comdr. Robert W. Diekleson (gold crew) in command.

After shakedown off the Florida Coast, early in 1966, the new Polaris submarine joined the Pacific Fleet and began her first patrol 6 August, silently and invisibly roving the seas as a mighty deterrent against aggression, preserving peace and protecting freedom.

Kamehameha returned from a successful patrol in November, switched crews, and was soon underway again. She continued this pattern of duty in defense of the free world in 1967.

Kamesit

A former name retained.

(Str: dp. 12,614; l. 416'6"; b. 53'; dr. 26'5"; s. 10 k.; cpl. 81; a. 2 5', 2 4')

Kamesit, a cargo ship, was built by Moore Ship Co., Oakland Calif., in 1918 for the USSB; delivered to the Navy in January 1919; and commissioned 29 January at Mare Island, Calif., Lt. Comdr. A. J. Shrader, USNRF, in command.

Departing Mare Island 1 February, *Kamesit* loaded with barley at Porta Costa, Calif., and sailed 13 February for New York via the Panama Canal. She transited the canal

USS *Kamehameha* (SSBN-642) launching at Mare Island 16 January 1965

28 February and diverted to Newport News, arriving 8 March. After receiving repairs and fuel, *Kamesit* sailed the 18th for Hull, England, where she arrived 6 April to discharge her cargo. Loaded with ballast, she departed for New York the 18th and returned to Hull the same day for repair of a disabled steering gear. Underway 26 April, she received orders 8 May to proceed to Philadelphia and arrived 18 May. *Kamesit* decommissioned 23 May and was delivered to USSB the same day. She remained in custody of USSB until abandoned in 1930.

Kamishak

A bay off the coast of Alaska.

The Navy's contract with Lake Washington Shipyard, Houghton, Wash., for the construction of *Kamishak* (AVP-44), a *Barnegat*-class, small seaplane tender, was cancelled 22 April 1943 before her keel was laid.

Kanak, see *Mikanopy* (YT-329)

Kanalku Bay

A bay in Alaska.

Kanalku (CVE-77) was laid down under Maritime Commission contract 15 September 1943, by Kaiser Co., Inc., Vancouver, Wash., and was renamed *Marcus Island* (q.v.) 6 November 1943.

Kanawha

A river in southwest West Virginia formed by the confluence of the New and Gauley Rivers at Gauley Bridge, W. Va. The Kanawha empties into the Ohio River at Point Pleasant, W. Va.

I

(ScGbt: t. 507'; l. 158'; b. 28'; dr. 7'8"; cpl. 87; a. 6 24-pdr. how.)

The first *Kanawha* was launched 21 October 1861 by G. E. & W. H. Goodspeed, East Hadden, Conn.; and commissioned at New York Navy Yard 21 January 1862, Lt. John C. Febiger in command.

Assigned to the Gulf Blockading Squadron, the new gunboat arrived off Pass a l'Outre, La., 13 February and a week later was ordered to take station off Mobile, Ala., where she soon distinguished herself for vigilance.

She drew first blood with a vengeance 10 April capturing four blockade-running schooners in a single day: *Southern Independence*, *Victoria*, *Charlotte*, and *Cuba*. The first three had attempted to slip to sea laden with cotton and naval stores while the latter had tried to run into Mobile with supplies badly needed by the South.

Thereafter, her kills were frequent. She caught schooner *R. C. Files* carrying cotton out of Mobile 21 April and took British sloop *Annie* on the 29th between Ship Island and Mobile headed for Cuba. On 17 November near Mobile she and *Kennebec* chased an unidentified schooner ashore where she was set afire by her crew. Then the guns of the Union ships assured her complete destruction by preventing Confederate coast guards from boarding her to extinguish the flames.

On 25 March 1863 *Kanawha*, then commanded by Lt. Comdr. William K. Mayo, took schooner *Clara* attempting to run the blockade at Mobile. Schooner *Dart* attempted to slip into Mobile from Havana 1 May but fell prey to this vigilant blockader. A fortnight later the same fate befell British brig *Comet* some 20 miles east of Fort Morgan, Ala. On 17 May *Kanawha* snared schooner *Hunter*, laden with cotton for Havana, running out of Mobile. The next day she caught schooner *Ripple* attempting the same feat.

Dawn of 12 October disclosed steamer *Alice* aground

under the guns of Fort Morgan and an unidentified Confederate tug attempting to pull her free. *Kanawha*, accompanied by tender *Eugenie*, steamed boldly toward the strongly defended Confederate shore to destroy the Southern vessels; but Fort Morgan's batteries, outranging the guns of the Union ships, hulled *Kanawha*, forcing the Union ships to retire. *Lackawanna* and *Genessee* then headed in to finish the task with their 150-pounders; but, before they got in range, the daring tug managed to refloat *Alice* and escaped with her into Mobile Bay.

On 29 November *Kanawha* took schooner *Albert*, also called *Wenona*, attempting to carry cotton, naval stores, and tobacco out of Mobile. The toll collected by relentless Northern blockaders like *Kanawha* in capturing Southern blockade runners steadily drained away the life blood of the Confederacy. The loss of ships carrying the products of Southern fields and forests to foreign markets undermined the South's financial structure and increased her difficulty in purchasing war material abroad. The loss of incoming ships deprived Southern armies of a growing proportion of the shrinking supplies and equipment persuasive Confederate agents did manage to procure.

In the spring of 1864 *Kanawha* was transferred to the Texas coast. On 8 July, now under Lt. Comdr. Bushrod B. Taylor, she forced steamer *Matagorda* aground near Galveston. On 9 September, after Union troops had been withdrawn from the area, *Kanawha* reinstated the blockade of Brownsville, Tex., which had been lifted by Presidential proclamation in mid-February. On 23 December she forced an unidentified sloop ashore near Caney Creek, Tex., and destroyed her. She captured *Mary Ellen* of Montreal 3 January 1865 as the schooner tried to run into Velasco, Tex. She remained on blockade duty until after the end of the war and was ordered north 27 May. *Kanawha* decommissioned 5 July and was sold at New York 13 June 1866.

II

(ScStr: t. 175'; l. 114'; b. 18'; dr. 7'; s. 14 k.; a. 1 3-pdr., 3 1-pdrs., 2 mg.)

The second *Kanawha* was built in 1896 by Charles L. Seabury & Co., Nyack on Hudson, N.Y.; purchased early in the Spanish-American War by the Navy from John P. Duncan 7 June 1898; and commissioned at New York Navy Yard 26 July, Lt. Frank F. Fletcher in command.

Kanawha steamed out of New York Harbor 5 August and touched Port Royal, S.C., and Key West, Fla., before arriving Gibara, Cuba, on the 21st. She operated in Cuban waters supporting occupation forces until departing Gibara 12 September. After calling at Port Royal, Charleston, and Hampton Roads, she returned New York 29 September. She decommissioned 8 October and was loaned to the Rhode Island Naval Militia 12 December.

Kanawha was returned to the Navy 12 August 1899 and transferred to the War Department.

Kanawha (SP-169) was purchased by the Navy from H. C. Baxter of Brunswick, Maine 27 April 1917. She was found defective during fitting out and returned to her owner.

III

(AO-1: dp. 4,990; l. 475'7"; b. 56'; dr. 10'; s. 14 k.; cpl. 150; a. 4 4"; cl. *Kanawha*)

The third *Kanawha* (AO-1) was laid down 8 December 1913 by the Mare Island Navy Yard, San Francisco, Calif.; launched 11 July 1914; sponsored by Miss Dorothy Bennett; and commissioned 5 June 1915, Lt. Comdr. Richard Werner, USNRF, in command.

Kanawha cleared San Diego 9 June 1915 and arrived Newport, R.I., for service with the Atlantic Fleet. During the following year the oiler made seven trips to Port Arthur, Tex., for fuel oil and gasoline. On 11 October 1916 *Kanawha* was assigned to the Atlantic Fleet. Then, in addition to her fueling duties, she participated in tactical exercises, carried mail, and towed targets.

USS *Kanawha*, a Steam Gunboat

After America entered World War I, the oiler was assigned to Commander, Destroyer Force, Atlantic Fleet, as an escort for the first A.E.F. sent to France. *Kanawha* cleared New York 17 June 1917 and crossed the submarine-infested Atlantic, arriving St. Mazarie 2 July. She returned to New York 10 August for repairs before sailing again 23 September. The oiler cruised in Atlantic waters until 1 November supplying fuel oil to the cruiser force and escorting convoys to Europe. *Kanawha* returned to Philadelphia for repairs, then joined NOTS 8 January 1918. For the rest of the war, the oiler, ignoring torpedo warnings, carried fuel oil from Halifax to United Kingdom and French ports. *Kanawha* arrived New York 1 May 1919 from her final cruise; she was detached from NOTS 12 May for reassignment to the Atlantic Fleet.

The oiler departed Port Arthur, Tex., 24 July and arrived San Pedro 9 August. From 1919 to 1929, *Kanawha*, with the exception of three cruises to Port Arthur to supply units and ports along the Atlantic coast, operated in the Pacific. In addition to servicing ships, the oiler participated in the Army-Navy maneuvers in Hawaii during April 1925. She then accompanied the Battle Fleet on a goodwill cruise to Australia and New Zealand before resuming coastal fueling operations 25 September 1925. *Kanawha* decommissioned at Puget Sound Yard 18 December 1929.

She recommissioned 5 June 1934 and cleared Bremerton 21 June for her base at San Pedro. For the following 6 years she cruised along the West Coast supplying oil and gasoline to ports in the Canal Zone, the Caribbean, and Hawaii. In 1941 *Kanawha* widened her operations, sailing east to Midway and Wake Islands and as far north as Alaska. The oiler was at Mare Island undergoing overhaul at the time of the Japanese attack on Pearl Harbor.

Kanawha departed San Pedro 21 March 1942 with a convoy loaded with supplies for Hawaii. She continued convoy runs from California to Pearl Harbor until 18 May when she arrived Tongatabu for fueling operations in the South Pacific. Throughout the summer she cruised to New Caledonia, Espiritu Santo, and Efate, providing fuel for destroyers and transports en route to the Pacific campaigns. The oiler departed Pago Pago 12 October and put into San Francisco 29 October for repairs and overhaul.

Kanawha resumed fueling operations upon her return to Pago Pago 13 February 1943. For the next 2 months she serviced ships engaged in the struggle in the Solomon Islands.

On 7 April a group of enemy "Vals" slipped through fighter defenses and zeroed in on *Kanawha* as she awaited an escort in Tulagi Harbor. At 1502, shortly after clearing the harbor, the slow and vulnerable oiler came under bomb attack. The first five planes hit an oil tank under the bridge, causing fires to spread rapidly along the deck. Lt. Comdr. Bock ordered the ship abandoned to minimize danger to his crew from burning oil on the surface. After rescue operations were underway, volunteers returned on board and extinguished fires amidst exploding ammunition. The tug *Rail* towed *Kanawha* on the west side of Tulagi where she was beached shortly before midnight. However, she slid off into deep water and sank before daybreak 8 April. Nineteen of her crew were lost.

Kanawha received one battle star for World War II service.

IV

(AOG-31: dp. 2,270; l. 220'6"; b. 37'; dr. 13'1"; s. 10 k.; cpl. 62; a. 1 3", 2 40mm., 3 20mm.; cl. *Sequatchie*; T. T1-M-A2)

The fourth *Kanawha* (AOG-31) was laid down 30 August 1944 by the East Coast Shipyard, Inc., Bayonne, N.J., under a Maritime Commission contract; launched 18 October 1944; sponsored by Mrs. May T. Norton; transferred to the Navy 13 November; and commissioned 23 November 1944, Lt. C. J. Byrne, USCGR, in command.

Following shakedown in Chesapeake Bay, *Kanawha* cleared Norfolk 15 January 1945 to load oil at Aruba, Netherlands West Indies, and arrived San Pedro 13 February. She arrived Pearl Harbor 20 March and departed 6 April with a cargo of lube oil, arriving Eniwetok 2 weeks later. *Kanawha* continued fueling services in the Marshalls and Marianas until she departed Ulithi 7 June with a cargo of lube oil for the Philippines and arrived Leyte 11 June. The tanker operated in the Philippines for the rest of the war and began similar duties at Okinawa 6 October. *Kanawha* sailed for America 14 November and arrived Mare Island 14 December via Pearl

Harbor. She decommissioned 23 March 1946 and was transferred to the WSA August 1946. She entered the National Defense Reserve Fleet at Suisun Bay, Calif., 4 September. She was sold for scrapping 2 March 1964.

Kanawha II

Kanawha II (SP-130) was renamed *Piqua* (q.v.)
1 March 1918.

Kane

Elisha Kent Kane, born in Philadelphia 28 February 1820, graduated from the University of Pennsylvania Medical School in 1842. He became Assistant Surgeon in the Navy 14 September 1843 to serve in the China Commercial Treaty mission under Caleb Cushing, in the Africa Squadron, and in the Marines during the Mexican War.

He became senior medical officer of the unsuccessful Arctic expedition searching for explorer Sir John Franklin in 1850 and 1851. Kane organized and headed a second rescue expedition which sailed from New York 31 May 1853, and wintered in Rensselaer Bay. Though at times near death, and scurvy-ridden he resolutely pushed on and chartered the coasts of Smith Sound (now called Kane Basin) and penetrated farther north than any other explorer had done up to that time. At Cape Constitution he discovered the ice-free Kennedy Channel, later followed by Hayes, Hall, Greely, and Robert E. Peary in turn as they drove toward the North Pole.

Kane finally abandoned the icebound brig *Advance* 20 May 1855 and escaped the clutches of the frozen north by an 83-day march of indomitable courage to Upernavik. The party, carrying the invalids, lost only one man in the retreat to stand in the annals of Arctic exploration as the archetype of victory over defeat. Kane returned to New York 11 October 1855 and the following year published his two-volume "Arctic Explorations." After visiting England, he sailed to Havana, Cuba, where he died 16 February 1857

I

(DD-235: dp. 1,215 t.; l. 314'5"; b. 31'8"; dr. 9'4"; s. 35 k. cpl. 101; a. 4 5", 1 3"; 2 .30 cal., 12 21" tt.; cl. *Clemson*)

The first *Kane* (DD-235) laid was down 3 July 1918 by the New York Shipbuilding Corp., Camden, N.J.; launched 12 August 1919, sponsored by Miss Florence Kane, cousin of Elisha Kent Kane; and commissioned 11 June 1920, Comdr. William Hall in command.

Kane departed Newport 20 August 1920 for her shake-down cruise to Gibraltar, Brest, Copenhagen, Danzig, and the Gulf of Riga. She was just outside the Gulf in the Baltic Sea 1 October 1920 and supposedly well-clear of the minefields laid in World War I when a mine exploded, bending her port engine shafts and port propeller struts. After repair at Landskrone, Sweden, and overhaul at Chatham, England, she sailed 21 May 1921 for the Mediterranean.

On 22 June 1921 *Kane* rescued an Italian torpedo boat drifting upon the rocks off Cape Spartivento. On 3 July she reached Constantinople for relief work in Turkish waters. She returned to Newport 23 August. She sailed 2 October with Destroyer Squadron 14 to evacuate refugees and perform other relief work in Asia Minor. She arrived in Constantinople 22 October, and was constantly used to carry supplies, medical aid, refugees and relief officials between ports of the Black Sea and the Eastern Mediterranean. She departed Constantinople 18 May 1923 and spent the next 5 years with the Scouting Fleet operating along the East Coast and in the Caribbean. She departed New York 13 February 1925 for a fleet training cruise to San Diego, thence she sailed to Pearl Harbor and returned 17 July. In the spring of 1927 the

destroyer patrolled off bandit-plagued Nicaragua and the Honduras. She decommissioned in the Philadelphia Navy Yard 31 December 1930.

Kane recommissioned 1 April 1932 and departed Philadelphia 29 June for San Diego, her base for the next 4 years. She got underway from San Diego 27 April 1936 for fleet exercises in the Caribbean before entering the New York Navy Yard to prepare for special service.

Kane departed New York 17 August 1936 for Spain to evacuate American citizens whose lives were endangered by the Civil War in Spain. On 30 August en route to Bilbao she had to open fire three times to drive off a trimotored monoplane dropping bombs within a hundred yards of the destroyer. A strong protest to both Spanish Civil War factions was then made and forestalled similar incidents. She called at Bilbao and Gijon embarking refugees who were taken to St. Jean de Luz France.

Cruiser *Raleigh* (CL-7) arrived at Gibraltar 27 September 1936 as flagship of Squadron Forty-T commanded by Rear Admiral Arthur P. Fairfield. This special squadron, initially comprising *Raleigh*, destroyers *Kane* and *Hatfield*, and CGC *Cayuga*, saved hundreds of American and other nationals from the dangers of the war in Spain. *Kane* and *Hatfield* were relieved by destroyers *Clarton* and *Manley* 9 November 1937 and sailed for home. *Kane* entered the Charleston Navy Yard 22 November and decommissioned 28 April 1938.

Kane recommissioned 23 September 1939 to serve in the neutrality patrol in the North Atlantic. On 7 August she took up inshore defensive patrol along both coastlines of Panama. She then steamed to San Diego, arriving 4 November 1940, to patrol off the coast of California. She overhauled in the Puget Sound Naval Shipyard from 4 January to 3 March 1941, she was based at Seattle for patrols north to Alaska, and along the western seaboard. After the Japanese struck Pearl Harbor, she departed Seattle for Kodiak, Alaska, and escorted troop transports back to Seattle 23 December. Following a similar escort voyage, she arrived at Seward 19 April 1942 for inter-island convoy and submarine patrols among Alaskan ports.

On 11 June *Kane* rescued 11 survivors of the torpedoed SS *Arcata*. The morning of 3 August 1942, she found her antiaircraft guns of little use against two attacks by high-altitude Japanese 4-engine bombers. Skillful maneuvering and speed saved the plucky destroyer from bombs which fell in her wake. She continued patrol and escort duty in Alaskan and Aleutian sectors until February 1942, then was converted to a high speed transport by Todd's Dry Docks, Seattle, Wash., and reclassified APD-18. Conversion was completed by 3 April 1943 when she departed for amphibious training with the Army's 7th infantry in Monterey Bay, Calif.

Kane departed San Francisco 24 April and arrived in Cold Bay 30 April to prepare for the recapture of Attu, Aleutian Islands. The morning of 11 May, submarines *Narwhal* and *Nautilus* landed 100 Army Scouts northwest of Holtz Bay. Several hours later *Kane* was coaxed in through blinding fog by battleship *Pennsylvania*'s radar to land 400 reconnaissance troops, who then joined the scouts.

During the bitter ground fighting on Attu, *Kane* served as evacuation hospital transport and shuttled medical supplies between Holtz and Massacre Bay. Off the entrance to Dutch Harbor 17 July, she received 12 survivors of the Russian *Seiner No. 2*. Following amphibious exercises off Amchitka Island, she landed elements of the Army's 1st Special Service Force on Kiska 14 August and later on Little Kiska Islands. But the Japanese had evacuated under cover of fog, leaving a few mongrel dogs as sole inhabitants. This marked the end of the last Japanese hold in the Aleutians. *Kane* remained on duty between Alaskan and Aleutian ports until 20 November 1943, then steamed south for an overhaul in the Mare Island Navy Yard until 7 January 1944.

Kane arrived in Pearl Harbor 18 January 1944 to join the 5th Amphibious Force for the capture of the Marshalls. Her Marine escort secured the channel islets at

the entrance of Majuro Lagoon the night of 30 to 31 January 1944 and later took the islands on the east side of Kwajalein Lagoon. She sailed 25 February to help screen amphibious landing ships for the invasion of Milne Bay, New Guinea, then entered Seeadler Harbor, Manus, as the 7th Cavalry Regiment took the remaining strong point in the Admiralties. The high speed transport landed men of the 163d Infantry at Aitape 22 April 1944, and bombarded enemy positions before withdrawing to pound Ali Island. After escorting a convoy to the Solomons she returned to Pearl Harbor 23 May 1944.

After training out of Pearl Harbor and preparations at Eniwetok, *Kane* landed Marines for the invasion of Saipan 15 June 1944. After the fast carriers of the 5th Fleet destroyed Japan's carrier-based airpower in the Battle of the Philippine Sea, the transport supported Underwater Demolition Team 4 in operations off Saipan. On 23 June she dodged an aerial bomb that sprayed her with sharpnel and wounded three men. She replenished at Eniwetok, then entered Agat Bay, Guam, the afternoon of 17 July. The Japanese had planted three lines of palm-log cribs filled with coral rocks, linked each to the other by wire cables. Her "naked warriors" of Underwater Demolition Team 4, assisted by other teams, blew up hundreds of these obstacles, clearing the way for the marines, who landed 21 July 1944. On 24 July, as the frogmen worked into the night, Japanese mortar fire in Agat Bay barely missed *Kane*. She returned to Pearl Harbor 10 August 1944 but entered Leyte Gulf 18 October carrying 100 tons of demolition explosives to be used in clearing the way for the Leyte Invasion landings 2 days later. She carried her demolition teams to the Admiralty Islands, then set course for home and an overhaul arriving San Pedro, Calif., 4 December.

Kane departed San Diego 20 April 1945 to train Underwater Demolition Team 24 in Hawaiian waters until 4 May, then arrived off Kerama Retto 12 June. After escorting hospital *Solace* (AH-5) out of the combat zone, she patrolled the southwest anchorage of Iinawa and fought off two suicide planes 21 June. A week later she sailed with a convoy bound for Leyte. She became a unit of the Philippine Sea Frontier on 4 July and patrolled the shipping lanes leading eastward guarding against submarines until the close of hostilities.

Kane departed San Pedro Bay, Leyte, 13 September escorting occupation troops to Korea, arriving Jinsen 17 September. Thereafter she became an unofficial receiving ship and handled communications for the Jinsen representative of the 7th Amphibious Force. Relieved 12 November 1945, she headed for home arrived San Diego 13 December 1945. After sending 149 Navy veterans

ashore, she transited the Panama Canal for the Philadelphia Navy Yard, where she decommissioned 24 January 1946. She was sold for scrapping 21 June 1946 to Northern Metals Co., Philadelphia.

Kane received seven battle stars for service in World War II.

II

(T-AGS-27: dp. 2,623 t.; l. 282'11½"; b. 48'; s. 12 k.; cpl. 44; a. none.)

The second *Kane* (T-AGS-27) was launched 20 November 1965 by the Christy Corp., Sturgeon Bay, Wis.; sponsored by Mrs. Harold T. Duetermann, wife of Vice Admiral Duetermann; assigned to MSTTS; and placed in service 26 May 1967 for scientific operations under the Atlantic. Besides conducting coastal hydrographic and oceanographic surveys, *Kane* also tends small survey craft, helicopters, and Marine Corps survey teams. She is capable of compiling and printing finished charts on the spot to meet fleet and landing force requirements and has accommodations for scientists.

Kane County

Counties in Illinois and Utah.

(LST-853: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 268; a. 8 40mm., 12 20mm.; cl. LST-542)

LST-853 was laid down by Chicago Bridge & Iron Co., Seneca, Ill., 30 August 1944; launched 17 November; sponsored by Mrs. Ellen Scott DeCoursey; and commissioned 11 December, Lt. Charles B. Salsbury in command.

After shakedown off Florida, *LST-853* departed New Orleans for the Pacific 19 January 1945. She loaded troops and equipment on the West Coast before steaming from Seattle 10 March. Sailing via Pearl Harbor, Eniwetok, and Guam, she arrived Saipan 25 April. The landing ship embarked units of the 1878th Engineer Aviation Battalion, then sailed on the 27th for Okinawa. Arriving 6 days later in the midst of enemy air raids, *LST-853* discharged men and equipment on this strategic base which lay at the gateway to Japan.

She returned Saipan 24 May and, during the remaining months of the war, shuttled troops and equipment among the Marianas, Philippines, and Okinawa staging areas for the planned invasion of Japan. The enemy's acceptance of Allied peace terms obviated an invasion, so *LST-853* then operated in the Far East, transporting occupation forces until early December.

Arriving Saipan 13 December, she embarked veterans

USS *Kane* (DD-235)

of the Pacific fighting in the Marianas and sailed for the United States in January 1946. After arrival on the West Coast, *LST-853* then sailed to Astoria, Oreg.; and decommissioned at Vancouver, Wash., 24 July. While berthed in the Columbia River with the Pacific Reserve Fleet, she was named *Kane County* 1 July 1955.

Under provisions of the Military Assistance Program, she was transferred to the Republic of Korea 22 December 1958, and serves the ROK navy as *Su Yong* (LST-813).

LST-853 received one battle star for World War II service:

Kangaroo

Any of a family of herbivorous, leaping, marsupial mammals of Australia, New Guinea, and adjacent islands.

I

A former name retained.

(SP-1284: t. 29; l. 62'4"; b. 10'11"; dr. 3'6"; s. 21 k.; cpl. 11; a. 1 1-prdr.)

Kangaroo, a motor boat, was built in 1917 by Herreshoff Mfg. Co., Bristol, R.I.; purchased 18 September at Boston from her owner, Henry A. Morse, of Marblehead, Mass.; and commissioned 10 December, Chief Quartermaster C. H. Waterman, USNRF, in command.

Assigned to the 1st Naval District, *Kangaroo* served on section and inner harbor patrol in Penobscot Bay, Maine, until 14 October 1918, when she sailed for Key West, Fla. Arriving 12 January 1919, she performed patrol and dispatch duties along the Florida Keys and Atlantic coastal waters. She decommissioned 20 May and was taken over by the U.S. Coast Guard 22 November for customs and coastal surveillance patrols. Serving at Key West, Charleston, and Norfolk, she was renamed *AB-6* on 6 November 1923. She was sold to John H. Curtis of Norfolk 1 October 1932.

II

(IX-121: dp. 3,665; l. 441'6"; b. 56'11"; dr. 28'4"; s. 11 k.; cpl. 79; a. 1 5', 1 3'; cl. *Armadillo*: T. Z-ETI-S-C3)

Kangaroo (IX-121) was laid down as *Paul Tulane* under Maritime Commission contract by Delta Shipbuilding Co., New Orleans, La., 28 September 1943; renamed *Kangaroo* 27 October 1943; launched 6 November 1943; sponsored by Mrs. Rufus C. Harris; acquired by the Navy on bareboat basis 17 December; and commissioned 20 December, Lt. G. D. Lawson in command.

Following shakedown in the Gulf of Mexico, *Kangaroo* departed Guantanamo Bay 24 January 1944, transited the Panama Canal the 28th, and steamed to Noumea, New Caledonia, arriving 1 March. Assigned to the Service Force Pacific as a replacement for *Stag* (IX-128), she loaded fuel and supplies and departed for Guadalcanal 21 March. Upon arrival 26 March, she commenced fueling operations; and for the next 5 months she plied the waters of the Solomons, replenishing ships with fuel needed to steam into battle.

Departing Tulagi 10 September, she sailed to the Tonga Islands, received a cargo of fuel oil, and delivered her cargo at Noumea 5 October. For 7 months she served as a shuttle and station tanker, transporting bunker oil from the Fiji and Tonga Islands to bases in the New Hebrides and New Caledonia. After a voyage to New Zealand for repairs, she departed Auckland 6 June to load fuel oil at American Samoa. Subsequently, she conducted fueling operations in the Solomons, Eniwetok, and the Western Carolines before arriving Buckner Bay, Okinawa, 14 August to resume duty as a station tanker.

While in the Pacific *Kangaroo* steamed over 20,000 miles and hauled more than 38,000,000 gallons of fuel oil and hundreds of drums of lubricating oil for fighting ships of the Navy. During her service she refueled more than 80 ships, including 10 carriers, 34 destroyers, 20

troop transports 12 cargo ships and numerous merchantmen—not to mention storage barges, oilers, and tank farms.

Kangaroo departed Okinawa 2 February 1946, for the United States. Transiting the Panama Canal 9 March, she put into Norfolk 30 April after a 6-week anchorage at Lynnhaven Roads and Hampton Roads, Va., *Kangaroo* decommissioned 13 May, and the following day she was turned over to the Maritime Commission for disposal.

Kanised

A former name retained.

(SP-439: t. 61; l. 100'; b. 17'6"; dr. 7'7"; s. 12 k.; a. 2 1-prdrs.)

Kanised (SP-439), a motor yacht, was built in 1910 at Long Branch, N.J., and acquired from her owner, Louis Kann, of Baltimore in May 1917. She had formerly been named *Nahmeoka* and *Tuscanola*. *Kanised* commissioned soon afterward, Ens. C. Van Voorhis, USNRF, in command.

Assigned to the 5th Naval District at Norfolk, *Kanised* operated in the Hampton Roads area during the balance of World War I. She served as mail ship on harbor patrol and as flagship of Squadron 4 on section patrol. After the war, she remained at Norfolk until being sold 13 December 1919, to J. A. Mickelson of Morris Heights, N.Y.

Kankakee

A river in Indiana and Illinois that joins the Des Plaines River to form the Illinois River.

(AO-39: dp. 6,013; l. 501'5"; b. 68'; dr. 30'9"; s. 17 k.; cpl. 261; a. 1 5', 4 3'; 8 40mm., 8 20mm.; cl. *Kennebec*; T. T2-A)

Kankakee (AO-39) was launched as SS *Colina* by Bethlehem Steel Co., Sparrows Point, Md., 24 January 1942; sponsored by Mrs. D. A. Little; acquired for the Navy 31 March through the Maritime Commission from her owner, Socony-Vacuum Oil Co., New York, N.Y.; and commissioned as *Kankakee* at Norfolk, Va., 4 May, Captain W. H. Mayes in command.

Departing Norfolk 1 June, *Kankakee* transported a cargo of fuel oil from Baton Rouge, La., to Coco Solo, C.Z., and arrived San Francisco via San Pedro 14 July for additional conversion. She cleared the Golden Gate 27 August and steamed to Noumea, New Caledonia, arriving 18 September to commence duty as a unit of SerRon 8. Sailing between New Caledonia, the New Hebrides, the Fijis, and Pearl Harbor, she spent the next 7 months refueling combat ships and convoys engaged in the bitter, protracted struggle for the Solomon Islands. She departed Noumea 18 April 1943 and arrived San Pedro 3 May for a 6-week overhaul before returning to the South Pacific 19 June.

Reaching Noumea 8 July, she resumed refueling, cargo, and passenger runs, serving the 3d Fleet between the New Hebrides and Solomon Islands. Sailing to the south of Guadalcanal 1 November, she refueled Admiral Sherman's fast carriers, *Saratoga* (CV-3) and *Princeton* (CV-23), 3 to 4 November in preparation for a surprise air strike against Japanese shipping at Rabaul on the 5th. From 21 February to 2 March 1944 she replenished destroyers to the east of New Ireland as they battered the Bismarck Barrier with bombardments on Kavieng and Rabaul. Captain Arleight A. Burke, Commander of the "Little Beavers" (DesRon 23) and later Chief of Naval Operations, commended *Kankakee* as the "most efficient tanker we have met." And while on a similar mission 22 to 30 March, she refueled carriers of a task force as they sailed to launch destructive air strikes 30 March to 1 April against the enemy-held Palau, Yap, and Woleai Islands in the Western Carolines. Loaded with fuel oil and gasoline, she next refueled escort ships engaged in the Saipan

landings. On 14 July she returned to San Diego for a short upkeep.

Kankakee departed the West Coast 24 August; she arrived Kossol Roads, Palaus, 10 October to serve as station tanker until 1 November when she shifted her base to Ulithi, Western Carolinas. From there she provided logistics support to ships that were hitting the enemy from the Philippines to the "home islands," forcing Japan's unconditional surrender. Throughout November and December 1944 and January 1945 she replenished Task Force 38. This Task Force struck the enemy devastating blows at Luzon, Formosa, the China Coast, and French Indochina. Departing Ulithi 8 February, she steamed northward and remained at sea until 3 March to refuel carriers, battleships, cruisers, and destroyers of the 5th Fleet engaged in the savage struggle for Iwo Jima and the supporting carrier air strikes on Tokyo. After renewing her cargo at Ulithi, she sailed 13 March to supply carriers, including *Franklin* (CV-13) and *Langley* (CVL-27) as they were conducting air strikes on Kyushu, the Inland Sea, and the Ryukyus. On 1 April, as landings on Okinawa progressed, *Kankakee* departed Southern Anchorage, Ulithi, for logistic support duty off Okinawa. Under the operational command of Rear Admiral D. B. Beary, Commander SerRon 6, she furnished fuel and supplies at sea to ships of the 5th Fleet. During much of the next 3 months she helped maintain their striking power and mobility in the last great amphibious campaign of the war. Completing her Ryukyus duty 14 June, she resumed support 3 July for the 3d Fleet as Task Force 38 conducted devastating aerial and naval bombardments on the "home islands" from Hokkaido to the Inland Sea. *Kankakee* steamed southeast of Japan as offensive operations ceased 15 August; but she maintained logistic support until her return to Ulithi 5 September. After putting into Tokyo Bay 20 September, she proceeded to the United States, arriving San Pedro 18 November for overhaul.

Assigned to NOTS 28 February 1946, *Kankakee* departed San Pedro 13 March to serve as station tanker in Japan and China. For much of the next 5 years, she cruised the North Pacific Ocean from Alaska to the Philippines. During 1946 and 1947 she transported fuel oil from Bahrain Island in the Persian Gulf to Japan and the Philippines.

Now assigned to MSTs, she had an overhaul at Mare Island. *Kankakee* departed Seattle 2 February 1951 for duty with the 6th Fleet. She loaded aviation gasoline at Marcus Hook, Pa., and sailed 13 March to join *Coral Sea* (CVB-43) in the Mediterranean 2 April. Spending 4 months in support of the 6th Fleet she returned to San Pedro 7 September. She departed Wilmington, Calif., 23 December with a cargo of Korean-bound gasoline. Reaching Pusan 10 January 1952 after discharging her cargo, she returned via Sasebo, Japan, to San Francisco 2 February.

Kankakee departed San Francisco 1 April; after loading fuel oil at Houston, Tex., she sailed 19 April for the Mediterranean, arriving Oran, Algeria, 4 May to fuel 6th Fleet carriers. Completing this important duty 21 November, she transported aviation gasoline from Saint Rose, La., to the West Coast, arriving Wilmington 20 December. She conducted fueling operations along the Pacific coast and sailed from San Pedro 26 August 1953 for deployment with the 6th Fleet. From her departure at Beaumont, Tex., 12 September to her arrival at New York 31 May 1955 she conducted two, 7-month deployments to the Mediterranean in support of 6th Fleet peace-keeping operations. Placed in commission in reserve at Norfolk 17 August, she was towed to Baltimore 14 October, thence to Philadelphia 29 November. She decommissioned 30 November and entered the Atlantic Reserve Fleet.

Kankakee recommissioned 20 December 1956, Comdr. G. R. Wells in command. Assigned to MSTs, she departed Philadelphia 26 December for 8 months of Atlantic fuel-shuttle duty that carried her from the eastern seaboard and Venezuela to Newfoundland, Labrador, and the coast of western Europe. From 14 to 21 September 1957 she operated out of Portland, England, to support the NATO

exercise "Strikeback." Following return to Norfolk 1 October, she sailed via New York for Port Arthur, Tex., arriving 4 November. She decommissioned the next day and entered the Maritime Defense Fleet Reserve.

Placed in reserve 1 February 1959, *Kankakee* was reinstated 1 September 1961 and recommissioned 29 November at New Orleans, Captain M. O. Slater in command. Assigned to SerRon 4, she departed New Orleans 9 December, arriving Newport, R.I., 15 December. After a Caribbean cruise from 8 January to 8 March 1962, she operated along the Atlantic coast. On 24 October, 2 days after President Kennedy imposed a naval quarantine against the shipment of Russian offensive missiles into Cuba, *Kankakee* departed Newport to furnish logistic support for the powerful fleet swiftly assembled there. Before returning to Newport 5 December, she refueled 89 ships at sea, pointing out the self sufficiency and mobility of seapower.

Operating out of Newport, this versatile oiler engaged in a variety of missions between 25 February 1963 and 5 June 1964. During June 1963 she participated in joint U.S.-French convoy exercises, and in August she supported Atlantic ASW exercises. *Kankakee* deployed to the Mediterranean 3 July. While serving with the 6th Fleet, she refueled and serviced 269 ships and supplied them with more than 29 million gallons of fuel oil and aviation gasoline. During August she supported the Fleet's Cyprus patrol as the United States continued its role of world importance of keeping the peace in the Middle East. Her deployment completed, *Kankakee* returned to Newport 22 December.

Kankakee operated along the East Coast and in the Caribbean into 1967. One of the highlights of her service occurred in March 1965 when she acted as a recovery unit for NASA's Gemini 4 space flight. On this operation, besides her glamorous recovery duty, she refueled other ships of the recovery team. She continues to bring vital fuel to the ships of the Atlantic Fleet.

Kankakee received six battle stars for World War II service and one for Korean service.

Kansas

The first *Kansas* was named for the Kansas River, which is formed by the confluence of the Republican and Smoky Hill Rivers at Junction City and northeastern Kansas, and flows east some 200 miles before emptying into the Missouri River at Kansas City.

The second *Kansas* was named for the state, which was admitted to the Union 29 January 1861, as the 34th state.

I

(Gbt: t. 625; l. 129'6"; b. 29'; dr. 10'6"; s. 12 k.; epl. 108; a. 1 150-pdr. r., 2 12-pdr. r., 2 20-pdr. D.r., 2 9" D.sb.)

The first *Kansas* was built at Philadelphia Navy Yard with machinery taken from prize steamer *Princess Royal*; launched 29 September 1863; sponsored by Miss Annie McClellan; and commissioned at Philadelphia 21 December 1863, Lt. Comdr. Pendleton G. Watmough in command.

The day of her commissioning, the gunboat was ordered to Hampton Roads to join the North Atlantic Blockading Squadron. She arrived Newport News, Va., 30 December; but engine and boiler trouble required her to return to the Washington Navy Yard for repairs.

In March 1864 the gunboat was stationed at Wilmington, N.C., off New Inlet, where she served during most of the remainder of the war. With *Mount Vernon*, *Howquah*, and *Nanscomd*, she engaged Confederate ironclad-ram *Raleigh*, (Flag Officer Lynch) which had steamed over the bar at New Inlet 6 May to attack the Northern blockaders. The withering fire from the Union ships caused *Raleigh* to withdraw toward safety within the harbor, but she grounded and broke her back while attempting to cross the bar at the mouth of the Cape Fear River. After strenuous efforts to save the stricken vessel proved fruitless, she was destroyed to prevent her falling into Union hands.

Shortly before dawn 15 May, *Kansas* ended a 2-hour chase by capturing British steamer *Tristram Shandy* as the blockade runner attempted to escape to sea with a cargo of cotton, tobacco, and turpentine. The next day the proud gunboat towed her prize into Beaufort. On her return passage she brought Colonel James Jourdan to reconnoiter Confederate defenses at Fort Fisher in preparation for future attacks.

Throughout the night of 27-28 May, *Kansas* chased a blockade-running steamer which finally escaped. That morning boiler trouble prevented her getting underway to chase another steamer which dashed out from Wilmington. After remaining on blockade duty at New Inlet until August, the gunboat returned to Philadelphia for repairs.

Kansas rejoined her squadron late in September; and, after briefly cruising at sea, she returned to her old station off New Inlet in mid-October. There she chased and headed off steamer *Annie* trying to slip out of New Inlet with a cargo of cotton. This action 31 October enabled *Wilderness* and *Nippon* to capture the chase a short time later. On 7 December, while Admiral Porter and General B. F. Butler planned joint operations against Wilmington to close that vital Confederate port once and for all, *Kansas* was one of the Union gunboats which were making blockade-running in that quarter hazardous. That day they forced steamer *Stormy Petrel* ashore where she was abandoned by her crew and, a few days later, destroyed by a gale.

At daylight Christmas Eve, *Kansas* was part of the huge fleet which formed in line of battle before Fort Fisher and pounded the formidable Confederate works with a furious bombardment. Although the cannonade drove the staunch Southern defenders from their guns to shelter in bombproofs, transports carrying the Union soldiers did not arrive from Beaufort until too late to launch the assault that day.

The next morning, the ships again opened fire on the forts and maintained the bombardment while troops landed near Flag Pond Battery, north of the main defensive works. Some 2,000 men established a beachhead under the protection of naval gunfire which kept the Confederate garrison pinned down and away from their guns. Late that afternoon, supported by heavy fire from the Union ships, Army skirmishers advanced to within yards of the fort. Lt. Aeneas Armstrong of the Confederate Navy later described the effectiveness of the bombardment: "The whole of the interior of the fort, which consists of sand, merlons, etc., was as one 11-inch shell bursting. You can not inspect the works and walk on nothing but iron." However, General Butler, considering the works too strong to be carried by assault with the troops available, aborted the operation by ordering his troops to reembark.

Undaunted by this setback, the Navy was not to be denied. At Porter's request Grant sent him a new commander. *Kansas* was one of some five dozen ships which Porter sent against Fort Fisher 13 January 1865. A naval landing party of 2,000 sailors and marines reinforced 8,000 soldiers under Major General Alfred H. Terry. The ensuing onslaught was a classic example of complete Army-Navy coordination. *New Ironsides* led three monitors to within 1,000 yards of Fort Fisher and opened on its batteries. Meanwhile, *Kansas* and the other wooden warships formed in line of battle in close order and shelled Flag Pond Battery and the adjacent woods at 0715. Half an hour later they sent in boats to assist in disembarking the landing party which went ashore out of range of the fort's guns. Once the beachhead had been established, *Kansas* stood toward Fort Fisher to join in the bombardment of the main Confederate works. She continued the bombardment intermittently for the next 2 days. Shortly before noon 15 January, her launch went ashore with 20 men to join the naval brigade for the final push. The gunboat maintained heavy fire during the following hours while soldiers, sailors, and marines braved the deadly fire of the stouthearted

Southern defenders. Finally at 2200 loud cheering and illumination of the fleet announced the fall of the forts.

After cleanup operations in the Wilmington area, *Kansas* moved to the James River late in February to support General Grant's final drive to Richmond. From time to time during the closing weeks of the war, *Kansas* supported Army operations ashore with her guns, particularly near Petersburg. The day after General Lee surrendered at Appomattox Court House, the gunboat was ordered to a station off Cape Henry to prevent the escape of Confederate sympathizers who were reportedly planning to capture vessels in the bay.

Kansas entered the Philadelphia Navy Yard 23 April and decommissioned 4 May. She recommissioned 28 July, Lt. Cmdr. Clark H. Wells in command, and departed Philadelphia 5 August to begin a 4-year voyage in the South Atlantic which took her to Cape Town, Africa, as well as to many ports in the Caribbean and South America. This long and interesting deployment ended 15 September 1869, when the gunboat arrived Washington Navy Yard, where she decommissioned a week later.

After a year in ordinary at Washington, she recommissioned 26 September 1870, Lt. Cmdr. Norman H. Farquhar in command. She stood down the Potomac 10 October and arrived Hampton Roads 3 days later to join *Mayflower* for the Tehuantepec surveying-expedition sent to southern Mexico to determine the feasibility of constructing an interoceanic canal across the Isthmus of Tehuantepec which separates the Gulf of Mexico from the Pacific Ocean. The ships sailed via Key West for Vera Cruz 14 October. The expedition carefully surveyed the narrow neck of land and recorded invaluable scientific information making "many calculations to prove that a ship-canal across the Isthmus of Tehuantepec is not only practicable, but that the obstacles in the way of the canal route are of the most ordinary nature."

When she returned to Washington 15 June 1871, her crew was seriously debilitated by fever contracted in the tropics. As a result, she was ordered to the North Atlantic to join a special squadron under Vice Admiral Rowen at Portsmouth, N.H. She stood in to Staten Island 10 October to participate in the reception given the Russian Fleet. She departed New York Harbor 29 November for Cuba and arrived Havana 5 December. The gunboat left that port 25 February 1872 to obtain supplies and await Comdr. A. F. Crossman who headed another Nicaragua-surveying expedition. She was employed gathering data on potential interoceanic canal routes until returning to Key West 13 July.

Kansas departed Key West 6 August to determine positions for a submarine cable between Key West and Havana and returned a week later. She departed Key West 21 August and arrived Halifax, N.S., 5 September. She stood out of Halifax 17 September and arrived New York 21 November after visiting Salem, Mass., and Newport, R.I., en route. She got underway for another surveying expedition of Central America 1 January 1873, which ended when she returned to Key West 15 July.

In November Spanish authorities in Cuba seized arms-running ship *Virginius*, illegally flying the American flag on the high seas, and summarily shot 53 of her passengers and crew. On hearing of this incident, *Wyoming* sailed without orders to Santiago and entered a vigorous protest. *Kansas* stood out of New York 14 November to join *Wyoming* in checking brutal action and in protecting the nation's interests. After battling severe weather, she arrived Santiago 2 December. As a host of other warships from the Home Fleet, the South Atlantic, and the European station converged on Cuba, the 102 survivors of *Virginius*, owing their lives to the prompt naval action, were delivered on board the first arrival, *Juniata*, and taken to New York.

Kansas returned to Key West Christmas Day. In February 1874 she participated in a naval drill in Florida Bay. Her final year of active service was devoted to cruising in the Caribbean Sea and the Gulf of Mexico, at the time a region of considerable unrest. She sailed

from Pensacola 8 July 1875, and arrived Portsmouth, N.H., on the 21st. She decommissioned there 10 August and laid up until sold at Rockland, Maine, to Captain Israel L. Snow 27 September 1883.

II

(BB-21: dp. 16,000; l. 456'4"; b. 76'10"; dr. 24'6"; s. 18 k.; cpl. 880; a. 4 12", 8 8", 12 3-pdrs., 2 1-pdrs., 2 .30 cal., 4 21" tt.; cl. *Vermont*)

The second *Kansas* (BB-21) was launched by New York Shipbuilding Corp., Camden, N.J., 12 August 1905; sponsored by Miss Anna Hoch, daughter of the Governor of Kansas; and commissioned in Philadelphia Navy Yard 18 April 1907, Captain Charles B. Vreeland in command.

The new battleship departed Philadelphia 17 August 1907, for shakedown training out of Provincetown, Mass., and returned home for alterations 24 September. She joined the "Great White Fleet" at Hampton Roads 9 December and passed in review before President Theodore Roosevelt while getting underway on the first leg of the fleet's historic world cruise. The American ships arrived Port-of-Spain, Trinidad, 23 December and 6 days later got underway for Rio de Janeiro. From there they sailed south along the east coast of South America and transited the perilous Straits of Magellan in open order. Turning north, the fleet visited Valparaiso, Chile, and Callao Bay, Peru, en route to Madalena Bay, Mexico, for a month of target practice.

The "Great White Fleet" reached San Diego 14 April 1908, and moved on to San Francisco 7 May. Exactly 2 months later the spotless warships sortied through the Golden Gate and headed for Honolulu. From Hawaii they set course for Auckland, New Zealand, to be greeted as heroes upon arrival 9 August. The fleet made Sydney 20 August and, after enjoying a week of the most warm

and cordial hospitality, sailed to Melbourne where they were welcomed with equal graciousness and enthusiasm.

Kansas had her last glimpse of Australia 19 September on leaving Albany for ports in the Philippine Islands, Japan, and Ceylon before transiting the Suez Canal. She departed Port Said, Egypt, 4 January 1909, for a visit to Villefranche, France, and then staged with the combined "Great White Fleet" at Gibraltar and departed for home 6 February. She again passed in review before President Roosevelt as she entered Hampton Roads 22 February, ending a widely acclaimed voyage of good will subtly but effectively demonstrating American strength to the world.

A week later *Kansas* entered the Philadelphia Navy Yard for overhaul. Repairs completed 17 June, the battleship began a period of maneuvers, tactical training, and battle practice which lasted almost until the close of the following year. With the 2d Battleship Division, she sailed 15 November 1910, for Europe visiting Cherbourg, France, and Portland, England, before returning to Hampton Roads via Cuba and Santo Domingo. She again departed Hampton Roads 8 May 1911, for Scandinavia, visiting Copenhagen, Stockholm, Cronstadt, and Keil before returning to Provincetown, Mass., 13 July. She engaged in fleet tactics south to the Virginia capes before entering the Norfolk Navy Yard 3 November for overhaul.

Early in 1912, she began several months of maneuvers out of Guantanamo Bay and then returned to Hampton Roads to serve as one of the welcoming units for the German Squadron which visited there from 28 May to 8 June and New York from 8 to 13 June.

The battleship embarked Naval Academy Midshipmen at Annapolis 21 June for a summer practice cruise which took her, among other ports of call along the Atlantic seaboard, to Baltimore during the Democratic National Convention which nominated Woodrow Wilson. After debarking her midshipmen at Annapolis 30 August, she

USS *Kansas*, a Steam Gunboat in 1863

sailed from Norfolk 15 November for a training cruise in the Gulf of Mexico. She returned to Philadelphia 21 December to enter the Navy Yard for overhaul.

Back in top shape 5 May 1913, *Kansas* operated on the East Coast until she stood out of Hampton Roads 25 October, bound for Genoa, Italy. From there she proceeded to Guantanamo Bay en route to the coast of Mexico to operate off Vera Cruz and Tampico watching out for American interests in that land then troubled by revolutionary unrest as rival factions struggled to attain and hold power. She returned to Norfolk 14 March 1914, and entered the Philadelphia Navy Yard for overhaul 11 April.

Kansas departed Norfolk 1 July with the body of the Venezuelan Minister to the United States, arriving La Guaira 14 July. Then she returned to the Mexican coast to patrol off Tampico and Vera Cruz supporting the A.E.F. which had landed there. She departed Vera Cruz 29 October to investigate reports of unstable conditions at Port au Prince, Haiti, where she arrived 3 November. The battleship stood out of Port au Prince 1 December and reached Philadelphia a week later. Maneuvers off the East Coast and out of Guantanamo Bay occupied her until she entered the Philadelphia Navy Yard for overhaul 30 September 1916.

Kansas was still in that yard 6 April 1917 when the United States entered World War I. She arrived in York River from Philadelphia 10 July and became a unit of the 4th Battleship Division, spending the remainder of the war as an engineering training ship in Chesapeake Bay occasionally making escort and training cruises to New York. After the Armistice, she made five voyages to Brest, France, to embark and return veterans home.

She was overhauled at the Philadelphia Navy Yard from 29 June 1919 to 17 May 1920. Three days later she arrived at Annapolis where she embarked midshipmen and sailed 5 June for a practice cruise to Pacific waters, transiting the Panama Canal to visit Honolulu, Seattle, San Francisco, and San Pedro. She departed the latter port 11 August, transitted the canal, and visited Guantanamo Bay before returning to Annapolis 2 September.

Proceeding to Philadelphia, *Kansas* became flagship of Rear Admiral Charles F. Hughes, Commander of Battleship Division 4, Squadron 2, and future Chief of Naval Operations. She sailed for Bermuda 27 September and was inspected by the Prince of Wales at Grasse Bay, Bermuda, 2 October. Two days later she was underway for the Panama Canal and Samoa. She was at Pago Pago, Samoa, 11 November when Captain Waldo Evans became Governor of American Samoa. After visiting

Hawaiian ports and transiting the Panama Canal, she cruised in the Caribbean and the Panama Canal before returning to Philadelphia 7 March 1921.

Kansas embarked midshipmen at Annapolis and sailed 4 June 1921, with three other battleships bound for Christiania, Norway, Lisbon, Gibraltar, and Guantanamo Bay. She returned 28 August to debark her midshipmen before visiting New York from 3 to 19 September. She entered the Philadelphia Navy Yard 20 September and decommissioned 16 December. Her name was struck from the Navy List 24 August 1923, and she was sold for scrap in accordance with the Washington Treaty limiting naval armament.

Kansas City

Large cities in Missouri and Kansas.

The keel of *Kansas City* (CA-128) was laid 9 July 1945 by the Bethlehem Steel Co., Quincy, Mass., but further construction was cancelled 12 August 1945.

I

(AOR-3: dp. 37,360 (f.); l. 659'; b. 96'; dr. 33'; s. 20 k.; cpl. 350; a. 43'; cl. *Wichita*)

The name *Kansas City* was assigned to AOR-3 on 27 April 1967. The General Dynamics Corp., Quincy Div., Quincy, Mass., began construction of the replenishment fleet tanker in the summer of 1967 with completion planned for the summer of 1969.

Once commissioned, *Kansas City* will operate as a multi-purpose replenishment ship furnishing fuel, ammunition, and fleet provisions and stores to the far-ranging U.S. force at sea.

Kapvik

Name coined by Rear Admiral Russell S. Berkey, who fashioned it by combining the first three letters of the surname of Comdr. Leonard Kaplan with Vik, a village on the southernmost point of Iceland.

(YO-155: dp. 792; l. 208'1"; b. 39'1"; dr. 11'8"; a. none)

Kapvik (YO-155) was built as *Poling Bros. Barge No. 9* by John H. Mathis Co., Camden, N.J., in 1934 and owned by Augustus and Chester A. Poling of New York City. Loaded with a partial cargo of gasoline, the commercial barge broke from her moorings in New York harbor during a storm in late 1941; drifted out to sea; and

USS *Kansas* (BB-21) in 1907—a sister ship of USS *Vermont* (BB-20) and *Minnesota* (BB-22)

finally washed ashore in January 1942 8 miles east of Vik on the southern coast of Iceland. On 17 May plans were approved for the Naval Operating Base at Reykjavik, Iceland, to salvage *Poling Bros. Barge No. 9*.

Under the command of Comdr. L. Kaplan, Salvage Officer of the Naval Operating Base, salvage operations began 26 May. Though not a large undertaking, the task proved both challenging and trying. Along the coast of southern Iceland, where the sea was calm for less than 7 days out of the year, the powerful surf pounded the shore with "unremitting force." And yet, aided by a favorable sea and wind at the crucial moment, the barge was pulled off the shore 23 June by *Barnegat* (AVP-10) and refloated. The following day she was towed to Hvalfjordur, Iceland. Renamed *Kapvik*, she was placed "in operation" 10 September.

Serving as a fuel oil barge, *Kapvik* operated out of Reykjavik and Skerjafjordur until 24 January 1944 when she was transferred to the United Kingdom under the Lend-Lease Act. Returned to custody of the U.S. Navy 26 June 1946, she was struck from the Naval Register 29 September 1947, and transferred to the Maritime Commission for disposal.

Karibou

A former name retained.

(SP-200; t. 25; l. 65'6"; b. 12'5"; dr. 4'6"; s. 10 k.; cpl. 7; a. 1 1-pdr.)

Karibou, a motor boat, was built by Salisbury Marine Construction Co., of Salisbury, Md., in 1911. The Navy chartered her from her owner, Harwood Spencer, of Asheville, N.C., 17 May 1917; and she commissioned the following day, Boatswain Albert Miller, USNFR, in command.

Assigned to the 5th Naval District at Norfolk, *Karibou* served as an armed guard patrol in the harbors of Norfolk and Newport News. She acted as a mail and dispatch boat along the lower reaches of the James and York Rivers and patrolled Atlantic coastal waters from Norfolk to Virginia beach. *Karibou* decommissioned 5 February 1919, and was returned to her former owner the same day.

Karin

A minor planet revolving around the sun between the orbits of Mars and Jupiter.

(AF-33; dp. 3,139; l. 338'6"; b. 50'; dr. 21'1"; s. 11.5 k.; cpl. 85; a. 1 3", 6 20mm.; cl. *Adira*)

Karin (AF-33) was launched 22 June 1944 by Pennsylvania Shipyard Inc., Beaumont, Tex., under a Maritime Commission contract; sponsored by Mrs. E. M. Ratcliff; acquired by the Navy and commissioned 3 February 1945, Lt. Richard C. Mallon in command.

After a brief shakedown in the Gulf of Mexico, *Karin* loaded cargo at Mobile, Ala., sailed through the Panama Canal, and arrived Pearl Harbor 23 March 1945. She departed 4 April with food for the Pacific Fleet and discharged cargo at Eniwetok and Saipan. For the closing months of the war, the store ship made two additional cruises from Pearl Harbor to Saipan and Ulithi.

After the end of the war, *Karin* carried supplies to occupation forces in the western Pacific. Early in November she steamed to the assistance of *Bridge* (AF-1) after the other store ship had struck a mine off Korea. After salvaging the ship's cargo and distributing it at Pusan and Jinsen, she got underway on the 22d for Seattle, arriving 21 December.

From 1946 to 1950 *Karin* made cruises from San Francisco to the mid-Pacific and the Far East, supplying the fleet with fresh and frozen provisions.

During the summer of 1950, *Karin* was in the Far East when Communist forces invaded South Korea. She remained in the area until January 1951, provisioning U.S. and U.N. ships operating there. After returning to San Francisco 19 February for overhaul at Mare Island, she

resumed provisioning cruises to the Marshalls and Pearl Harbor.

On 7 January 1952 *Karin* departed San Francisco and resumed supply operations out of Japan in early February. She made runs between Sasebo and Yokosuka, and two cruises to Pusan and Inchon, Korea. *Karin* returned to San Francisco 18 December to prepare for provisioning duties in the mid-Pacific.

During 1954 her home port was changed from Mare Island to Pearl Harbor. She arrived Sasebo, Japan 17 June for operations in the Far East. While there, *Karin* was assigned to special duty in Indochina and from 25 August to mid October participated in Operation "Passage to Freedom." During this period more than 100,000 Vietnamese men, women, and children were evacuated from the Communist dominated North to the free world in the south. *Karin* assisted this gigantic population transfer by supplying many ships with fresh and frozen foods while providing the Vietnamese with rice and small essentials.

Karin returned Pearl Harbor 10 November to prepare for her regular duties. From 1955 to 1958 she made 18 cruises to the mid-Pacific with provisions and supplies. *Karin* departed Pearl Harbor 25 September 1958, arriving Astoria, Oreg., 6 October; and decommissioned there 15 December 1958. She was transferred to WSA and struck from the Navy list September 1961. She was placed in the National Defense Reserve Fleet and at present is berthed at Puget Sound, Olympia, Wash.

Karin received two battle stars for Korean conflict service.

Karluk, see YP-561

Karnes

A county in Texas.

(APA-175; dp. 6,873; l. 455'; b. 62'; dr. 24'; s. 17.7 k.; cpl. 536; a. 1 5", 12 40mm., 1 20mm.; cl. *Haskell*)

Karnes (APA-175) was launched 7 November 1944 by Oregon Shipbuilding Corp., Portland, Oreg., for the Maritime Commission; sponsored by Miss Nora Clancy; acquired and commissioned by the Navy 3 December 1944, Captain R. B. Miller in command.

After shakedown along the California coast *Karnes* arrived Pearl Harbor 13 February 1945 with passengers and cargo from the West Coast. Six days later she sailed in convoy to land troops at Saipan and other staging areas in the Pacific. At Saipan she embarked 406 Marines wounded in the Iwo Jima campaign and returned Pearl Harbor 17 March.

With the Okinawa invasion well underway, *Karnes* departed Pearl Harbor 7 April with troops and supplies to reinforce Americans fighting on that bitterly contested island. She arrived Okinawa 3 May and unloaded troops and equipment while under heavy kamikaze attack. She departed the battle zone 8 May with 866 survivors of ships damaged by kamikazes. *Karnes* discharged some survivors at Saipan and arrived San Francisco 27 May with the remaining group.

She returned to the embattled Pacific islands, arriving Manila 1 July with troop replacements and cargo. Following this mission, the transport returned Pearl Harbor 23 July to begin training for the anticipated invasion of the Japanese home islands and maneuvers.

Upon the cessation of hostilities 14 August *Karnes* began preparing for the occupation of Japan, arriving Sasebo 22 September. She was then assigned to "Magic-Carpet" duty returning men eligible for discharge, and arrived San Francisco 11 November with her first group of veterans. *Karnes* ended a second "Magic-Carpet" cruise 12 January 1946, returning American fighting men from China. On 13 February she departed San Francisco and arrived Norfolk 2 March where she decommissioned 11 April 1946. *Karnes* was returned to the WSA 24 April 1946. She entered the National Defense Reserve Fleet and is berthed in James River, Va.

Karnes received one battle star for World War II service.

Kasaan Bay

An eastern inlet on Prince of Wales Island off southern coast of Alaska.

(CVE-69; dp. 7,800; l. 512'3"; b. 65'; ew. 108'1"; dr. 22'6"; s. 18 k.; cpl. 856; a. 1 5", 16 40mm., 20 20mm.; cl. *Casablanca*)

Kasaan Bay (CVE-69) was classified ACV-69 on 20 August 1942, launched as CVE-69 on 24 October 1943 by Kaiser Co., Inc., Vancouver, Wash., under a Maritime Commission contract; sponsored by Mrs. R. W. Morse; and acquired and commissioned by the Navy 4 December 1943, Captain B. E. Grow in command.

Kasaan Bay reported for duty late in December and 8 January 1944 departed San Francisco with a cargo of planes and passengers for Pearl Harbor. Upon returning San Diego she sailed for Norfolk, arriving 28 February for overhaul and operations along the East Coast. On 28 May, she departed New York in company of *Tulagi* (CVE-72) and *Mission Bay* (CVE-59) with a cargo of planes for Casablanca, returning New York 17 June with 342 survivors of *Block Island*, torpedoed 29 May.

The escort carrier departed Quonset Point, R.I., 30 June and arrived Oran 10 July. Throughout July she engaged in ASW patrol and flight operations in the Mediterranean before rehearsing for the assault on Southern France. *Kasaan Bay* departed Malta 12 August, and 3 days later arrived in the invasion area off the French Riviera. Planes from the carrier bombed and strafed German positions, destroying hundreds of enemy vehicles and tanks and downing two enemy aircraft over the beach. She completed her assignment 30 August and departed Oran, Algeria, 6 September, arriving Norfolk 12 days later.

Following a cruise carrying planes to Casablanca in late October, *Kasaan Bay* was assigned to the Pacific Fleet and arrived San Diego 2 January 1945. During January she sailed to Pearl Harbor, Guam, and Ulithi with planes and replacements for other ships of the Fast Carrier Task Force.

The escort carrier returned Pearl Harbor 14 February and immediately commenced training operations for air groups and replacement pilots. *Kasaan Bay* continued this duty until early June when she was assigned ASW patrols in the shipping lanes between the Marshalls and Marianas protecting the fleet's supply line during its final assault on Japan's defenses.

When hostilities ended 14 August, *Kasaan Bay* returned to Guam where she was assigned "Magic-Carpet" duty. She departed Saipan 13 September with her first group of returning veterans arriving San Diego 30 September. For the next 3 months she made three cruises to Hawaii and the Philippines to transport homeward bound troops to the United States.

The escort carrier returned to San Francisco 28 December and sailed for the East Coast 29 January 1946, arriving Boston 22 February. She decommissioned 6 July 1946 and joined the Atlantic Reserve Fleet. While in reserve, *Kasaan Bay* was reclassified CVHE-69 on 12 June 1955. She was sold for scrap 2 February 1960.

Kasaan Bay received one battle star for World War II service.

Kaskaskia

A river in Illinois.

(AO-27; dp. 7,256 (lt.); l. 553'; b. 75'; dr. 32'4"; s. 18 k.; cpl. 272; a. 2 5", 2 3"; cl. *Cimmarron*)

Kaskaskia (AO-27) was launched 29 September 1939 by the Newport News Shipbuilding & Drydock Co., Newport News, Va.; sponsored by Mrs. Joseph P. Kennedy; acquired by the Navy from Esso Oil Co., 22 October 1940; and commissioned 29 October 1940, Comdr. U.S. Gregory in command.

Kaskaskia cleared Boston 19 November 1940 for Pearl Harbor, arriving 3 January 1941. She transported oil between West Coast ports and Pearl Harbor, making six cruises before 7 August, when she made an oil run to Johnston Island. The oiler returned to Mare Island 10 September for overhaul and repairs. In San Francisco when the Japanese made their surprise attack on Pearl Harbor, *Kaskaskia* immediately began preparations to join the Service Force in the Pacific.

Sailing from San Diego 6 January 1942, *Kaskaskia* commenced fueling operations en route before arriving Pago Pago 20 January. For the next 6 months she operated out of Noumea refueling the ships engaged in the violent struggle to stem the Japanese advance. The oiler arrived Kodiak, Alaska, 3 July with a cargo of oil and fuel to be used in the Aleutian Islands campaign. She returned Wilmington, Calif., loaded oil and aviation gasoline and continued oil runs to Alaskan ports until she steamed to Noumea late in March 1943. *Kaskaskia* supplied many ships, increasing the mobility of the fleet during the successful campaigns in the South Pacific.

Kaskaskia returned San Pedro 28 July for repairs before resuming her duties at Pearl Harbor 21 September. She transported oil between California and Hawaii until she sailed 25 November to support the Gilbert Islands campaign. Returning to Pearl Harbor 10 December, the oiler resumed her cruises between San Pedro and Hawaii.

As the Navy pushed relentlessly toward Japan, *Kaskaskia* departed Pearl Harbor 16 January 1944 to support operations in the Marshall Islands. After the Navy had captured the Kwajalein and Majuro Atolls, *Kaskaskia* supported carrier task forces during their devastating raids on Truk, the Marianas, and Palaus in February and March.

The oiler continued fueling operations in the Marshall Islands area until she cleared Majuro 6 June to fuel destroyers and destroyer escorts in the invasion of Saipan. Throughout June and July *Kaskaskia* remained on hand, assisting the fleet to take Saipan, Guam, and Tiwan—important supply areas in the future campaign for the Philippines.

As the Navy fought toward the Philippines, Admiral Nimitz decided to take the Palau Islands as a staging area for aircraft and ships during the invasion of Leyte. *Kaskaskia* departed Manus 4 September with a task group bound for an assault on Peleliu. She operated in the Palau area until returning Manus 8 October. Her stay was a brief one, however, as she sailed 10 October for Leyte. Prior to the actual landings, she fueled units of the fleet, continuing this vital duty until a beachhead had been established. The oiler returned Ulithi 23 October and made another fueling run to the Philippine area early in November.

After an overhaul at San Diego December 1944 through February 1945, *Kaskaskia* arrived Kwajalein 11 March to service the fleet. The oiler cleared Ulithi 30 March for the fueling area off Okinawa, the last major step before the Japanese homeland itself. Once again the oilers, the unsung heroes of the war, stood by refueling the many ships engaged in the irresistible assault from the sea on Okinawa.

Kaskaskia was relieved of fueling duties off Okinawa, only to be summoned for another important service. She departed Ulithi 3 July to refuel units of the carrier task forces, launching raids on the Japanese Islands of Honshu and Hokkaido. When the enemy capitulated, *Kaskaskia* steamed into Tokyo Bay 10 September with ships of the Occupation Forces. She continued refueling operations in Japan, China, and Formosa for an entire year before arriving San Pedro 28 September 1946.

Between 1947 and 1950 she ferried oil and aviation gasoline from the West Coast to the Far East and naval bases in the mid-Pacific. When Communist troops invaded South Korea, the United States accepted the challenge and ordered its forces to defend the embattled peninsula. *Kaskaskia* cleared San Diego 16 September to operate out of Sasebo. During October she entered

the heavily-mined waters off Wonsan, fueling ships blockading and bombarding that key port.

During December she arrived off Hungnam to service ships engaged in evacuation operations in that area. Throughout the harsh winter months, *Kaskaskia* continued vital fueling missions between Japan and Korea. During the U.N. counteroffensive in the spring of 1951, she also stood by for fueling operations. The oiler returned to Long Beach, Calif., 27 August for overhaul and operations along the Pacific Coast.

She sailed for the second Korean tour January 1952, arriving Sasebo on the 22d to refuel the ships engaged in the Korean conflict. In addition to services in Korea, she also supplied units in Japan, Okinawa and Formosa before returning Long Beach 31 July. Overhaul and training preceded her third Korean deployment from 27 December to July 1953. On this tour she supported ships engaged in fire support operations. Returning home 17 August. *Kaskaskia* underwent overhaul; she then sailed again for the Far East 4 January 1954, operated out of Sasebo and returning San Francisco 12 October. Following coastal operations, the oiler was placed out of Commission in reserve 8 April 1955.

Kaskaskia was transferred to MSTS 8 January 1957, and operated in that capacity with a Navy crew until 21 October 1967 when she decommissioned and was turned over to the Maritime Administration 10 December. *Kaskaskia* was struck from the Navy List 2 January 1959.

The Berlin Crisis of 1961 necessitated the reactivation of ships and *Kaskaskia* was reinstated 8 September. Following overhaul and alterations she recommissioned at Hoboken, N.J., 6 December, Captain John D. Howell in command. After shakedown operations in the Caribbean, the oiler arrived Mayport, Fla., 1 May 1962. Throughout the summer she engaged in exercises off the Florida Coast, and sailed to the Azores to participate in Project Mercury, manned orbital flights. She was in company with *Kearsarge* during the latter's recovery of Astronaut Walter Schirra 3 October, demonstrating the large role of the Navy in space operations.

Kaskaskia return to Mayport 22 October and 2 days later sailed to participate in the Cuban quarantine. President Kennedy ordered the blockade when the Soviet Union tried to plant offensive missiles only 90 miles from the United States. The naval pressure persuaded the Soviet Union to withdraw the missiles, easing the crisis. The oiler returned to operations out of Mayport 21 November.

She cleared Mayport 5 February 1963, for a six month Mediterranean cruise to refuel ships of the 6th Fleet, then resumed refueling exercises off Florida for the rest of the year. During 1964 *Kaskaskia* engaged in fueling operations and exercises off Florida and in the Caribbean, constantly seeking improved methods to increase the mobility of the Fleet.

On 6 January 1965, *Kaskaskia* sailed for another 6th Fleet deployment. While she was operating in the Mediterranean, her crew worked day and night delivering over 19,000,000 gallons of fuel to 169 ships.

Kaskaskia returned to Mayport, Fla., 7 June. She operated primarily along the Atlantic Coast and in the Caribbean into 1967. Highlights of this period were service to ships patrolling off the coast of riot-torn Santo Domingo in the summer of 1965 and participation in the recovery team for an unmanned Apollo space flight in February of 1966.

Kaskaskia received nine battle stars for World War II and seven stars for Korean service.

Kasota

An Indian word meaning clear skies.

(YTB-222: dp. 410; l. 110'; b. 27'; dr. 11'4"; cl. *Cahto*)

Kasota was laid down as YT-222; launched 20 January 1944 by the Elizabeth City Shipyard, Elizabeth City, N.C.; sponsored by Miss Norma Crawley; and reclassified YTB-

222 15 May 1944 prior to being placed in service 4 September for duty in the 5th Naval District. *Kasota* operated out of Norfolk as a district and service craft until 1 May 1961 when she was struck from the Navy List.

Kasuga Maru, see YP-330

Katahdin

A mountain peak in Maine.

I

(Gbt: t. 507; l. 158'; b. 28'; dr. 10'3"; s. 9 k.; cpl. 78; a. 1 11" D.sb., 1 20-pdr. P.r., 2 24-pdr. how.; cl. *Unadilla*)

The first *Katahdin* was launched by Larrabee & Allen, Bath, Maine, 12 October 1861; and commissioned at Boston Navy Yard 17 February 1862, Lt. George Henry Preble in command.

The "90-day gunboat" was assigned to the West Gulf Blockading Squadron to bolster its strength as Flag Officer Farragut prepared for his epochal attack on New Orleans. After entering the Mississippi early in April. *Katahdin* assisted Farragut in his unprecedented effort to work the squadron's deep-draft, salt-water ships across the bar into the river.

On 16 April she moved up the river with the fleet to a position below Forts Jackson and St. Philip guarding the approaches to New Orleans with over 100 guns. The next morning a Confederate steamer came down and fired at the fleet; but, when *Katahdin's* guns answered briskly, the Southern ship retired out of range. The following day the mortar flotilla opened an intensive bombardment of the forts which continued intermittently for the next 6 days until it reached a mighty crescendo in the small hours of 24 April as the Union fleet got underway and headed up the river toward the forts.

Half an hour later, when the Confederate guns opened fire, *Katahdin* steamed steadily ahead, replying with all her guns. Only two rounds struck the gunboat during the dash, one damaging the foremast and the other the smokestack.

After passing the forts and sailing beyond the range of their artillery, the Union ships anchored opposite Quarantine abreast a Confederate encampment which raised a white flag. During the morning she collected ordnance surrendered by Confederate troops ashore. The next day she proceeded up the river firing on and silencing Southern batteries on both banks. The afternoon, upon arriving New Orleans with the fleet, she captured schooner *Jon Gilpin* with a cargo of cotton.

Katahdin operated in the vicinity of New Orleans until 16 May when she got underway up river to join the squadron, which had proceeded her to Vicksburg. While moving up stream, she gathered valuable information about conditions in the valley; and, throughout Farragut's operations above Vicksburg, she continued to perform reconnaissance missions as she convoyed vessels which supplied the force at Vicksburg from New Orleans. In July, when Farragut withdrew from the Mississippi to attend to his blockaders in the gulf, he left *Katahdin* in the river with *Essex*, *Sumter*, and *Kineo* to protect Army units in the area and to police the river. During much of this time *Katahdin* was stationed at Baton Rouge, La. On 5 August Confederates attacked the Union encampment at Baton Rouge in force. The gunboats supported the badly outnumbered Northern soldiers enabling them to repulse the attack. Then they fired over the town into the Confederate camp, forcing them to withdraw out of range. The next morning *Kineo* and *Katahdin* guarded the right flank of the Army while *Essex* and *Cayuga* got underway to engage ironclad ram *Arkansas*. However, as the Union warships were closing on *Arkansas*, the ram's engines, failed leaving her unable to flee or fight; she was set afire by her officers and abandoned before she blew up. For the next fortnight the threat of an attack

kept the ships constantly on the alert to protect the troops which depended upon naval fire support. Finally, upon orders from General Butler, the Army evacuated Baton Rouge 21 August. Just before embarking the troops, the gunboats beat off an attack on the Union pickets with rapid and heavy fire. *Katahdin* brought up the rear as the ships steamed to New Orleans, where they arrived the following morning.

After repairs at New Orleans, the gunboat stood up the river 5 September with *Kineo* and *Scioto* scouring the banks for information. With *Itasca* she covered the landing of Army troops 22 September at Donaldsonville, La. While the expedition was ashore, the gunboats protected them; and, shortly before the soldiers reembarked, naval gunfire beat back a Southern attack which threatened to cut off the landing party. This support prevented annihilation of the landing party by vastly superior forces and enabled it to retreat to *Laurel Hill* for passage to safety in New Orleans.

In the months that followed, the gunboats constantly patrolled the river to protect Union communications, to gather information on Confederate activity, and to cut the flow across the Mississippi of food and men to Confederate armies in the East. With 3 other gunboats *Katahdin* intercepted a drove of some 1,500 cattle from Texas and loaded them on transports for passage to New Orleans. The value of this beef to the South can be attested by the fact that, 4 miles below Donaldsonville, about 3,000 infantrymen supported by 9 field pieces struck back at the ships in a desperate attempt to recapture the cattle. The gunboats opened promptly and in about 20 minutes drove the Confederates from their position.

The months that followed were a period of constant stress and peril for the gunboats. "We are constantly under fire . . . as we pass up and down the river," Lt. Roe, the commanding officer of *Katahdin*, reported. "Our fighting is a savage Indian warfare. The troops and guns are concealed, and watch for us as we pass along and fire and flee."

In January 1863 *Katahdin* was ordered to reinforce the blockade off Galveston after that port had been recaptured by the Confederacy on New Year's Day. While serving in the Gulf off the Texas coast, *Katahdin* and *Owasco* chased, captured, and burned blockade running schooner *Hanover* 10 May 1863. She captured schooner *Excelsior* 13 July off San Luis Pass, Tex.

Thereafter *Katahdin* continued to serve in the blockade of the Texas coast, cutting off supplies sorely needed by the Confederates. On 30 April 1864 she chased the former revenue cutter *Harriet Lane* and steamer *Alice* as they escaped from Galveston; but, after a brisk and lengthy race, *Katahdin* was finally outdistanced. She was more successful 31 October when the gunboat overtook *Albert Edward* as the British schooner tired to slip out of the same port with a cargo of cotton.

After the Confederate collapse in April 1865, the veteran gunboat returned north and decommissioned 14 July 1865. *Katahdin* was sold at New York 30 November and documented as *Juno* 20 October 1866.

II

(IrcRam : t. 2,155; l. 250'9"; b. 43'5"; dr. 15'1"; s. 16 k.; cpl. 97; 46-pdr. r.)

The second *Katahdin* was launched by Bath Iron Works, Bath, Maine, 4 February 1893; sponsored by Miss Una Soley, daughter of the Assistant Secretary of the Navy; and commissioned at New York Navy Yard 20 February 1896, Comdr. Richard P. Leary in command.

The experimental, harbor-defense ram was a new departure in ship design, built to ride extremely low in the water with her bow awash while under way. Her hull embodied several new features later used in early submarines.

Katahdin departed New York Harbor 4 March 1897, the day of President McKinley's first inauguration, and sailed to Norfolk before decommissioning at Philadelphia Navy Yard 17 April. A year later, with the Navy preparing for

USS *Katahdin*, 90-day gunboat in 1861

an impending war with Spain, she recommissioned there 10 March 1898. She was attached to the North Atlantic Squadron and operated along the Atlantic Coast from New England to Norfolk protecting the Nation's seaboard cities from possible attack. After decisive American naval victories at Manila Bay and Santiago Harbor eliminated this threat, the ram decommissioned for the last time at Philadelphia Navy Yard 8 October.

However, *Katahdin* advanced knowledge of naval weaponry to her end. She was struck from the Navy List 9 July 1909; and designated "Ballistic Experimental Target 'A' ". *Katahdin* was sunk by gunfire at Rappahannock Spit, Va., in September.

Katahdin (AT-28) was renamed *Sunnadin* (q.v.) 17 February 1919.

Kate

A former name retained.

(Gbt: t. 242; dr. 5'6"; s. 5 k.; a. 2 20-prd. P.r., 6 24-prd. how., 2 12-prd. how.)

Kate was built as *Kate B. Porter* at Belle Vernon, Pa., in 1864, and was purchased at Cincinnati by the Navy from J. B. Porter & Son, 23 December 1864; converted into a gunboat and commissioned at Mound City, Ill., Acting Volunteer Lt. W. R. Wells in command.

Kate's first duty was patrolling the Mississippi River from Mound City to Memphis during the closing days of the Civil War. The tinclad gunboat was ordered downstream 28 April 1865 to intercept Confederate President Jefferson Davis in his flight toward freedom in exile. After his capture, she returned up the river to assist in the demobilization of the squadron.

She was sent to the Tennessee River to clear away the hulks of a number of sunken gunboats and barges. In August she was ordered to Jefferson Barracks Reserve to discharge her ordnance and to assist in disarming other vessels. One of the last vessels in the Mississippi to remain on naval duty, she decommissioned at Mound City 25 March 1866 and was sold at public auction there 4 days later. The gunboat was redocumented *James H. Trover* 12 April 1866 and stranded 300 miles below Fort Benton, Mont., 21 June 1867.

Kathay, see *Auburn* (AGC-10)

Katherine

A former name retained.

(SP-715: t. 6; l. 35'; b. 9'; dr. 2'; s. 7 k.; a. none)

Katherine, a motor boat, was built in 1907 by J. T. Sharpley of Greenbackville, Va., and owned by the Virginia Fish and Oyster Commission. Chartered on free lease to the Government, she commissioned 26 April 1917 and was taken over by the Navy at Norfolk 18 May, Chief Master at Arms C. C. Jones in command.

Assigned to the 5th Naval District at Norfolk, *Katherine* operated out of Greenbackville, Va., as a shore and section patrol boat patrolling southern Chesapeake Bay and Atlantic coastal waters in and around Chincoteague Bay. She decommissioned 22 October 1918 and was returned to her former owner the same day.

Katherine F. Saunders, see YP-426

Katherine K.

A former name retained.

(SP-220: t. 14; l. 55'; b. 12'4"; dr. 4'2"; s. 10 k.; a. 2 1-pdrs.)

Katherine K. (SP-220), a motor boat, was built in 1894 by M. D. Battomer of Baltimore, Md., and acquired from Samuel H. Freas of Miami, Fla., 9 June 1917. Enrolled in the Naval Coast Defense Reserve on 16 June, she was delivered to Key West 10 July and commissioned 7 September, Machinist's Mate Second Class T. M. Lett, Jr., USNRF, in command.

Assigned as a section patrol ship to the 7th Naval District, *Katherine K.* patrolled the waters in and around Key West and served as a harbor and target towing tug. She was ordered transferred to the U.S. Coast Guard 17 March 1919; but on 21 May she was placed on the list of ships for sale. *Katherine K.* was sold to Eugene E. Bates of Key West. However, before delivery, she was swept away in a hurricane 9 to 10 September.

Katherine W. Cullen

Former name retained.

(Bar: t. 703; l. 144'8"; b. 30'2"; dr. 15'; cpl. 3)

Katherine W. Cullen, a barge, was launched 1903 at Baltimore; purchased by the Navy from the Cullen Transportation Co., New York; and commissioned 28 September 1918, Lt. Goodwin in command. She operated with NOTS along the New England coast, transporting coal from New York. She was detached from NOTS 11 December and was assigned to the 1st Naval District. *Katherine W. Cullen* operated there until 30 December 1918 when she sunk 15 miles southeast of Boston light ship while in tow of *Heron*.

USS *Katahdin*, a Steel Armored Ram from 1896 to 1909

Kathrich II

A former name retained.

(SP-148: t. 12; l. 40'; b. 10'; dr. 4'; s. 9 k.; a. none)

Kathrich II, a motor boat, was built by E. S. Thibault of Jacksonville, Fla., in 1913 and acquired by the Navy from her owner, Richard B. Marks, of Jacksonville, Fla. She enrolled in the Naval Coast Defense Reserve 20 April 1917 and was taken over by the Navy 8 May. *Kathrich II* commissioned 9 May at Charleston, S.C., Boatswain's Mate Second Class Robert Fisher, USNRF, in command.

Assigned to the 6th Naval District, *Kathrich II* operated as a section patrol ship in Savannah, Ga., harbor, boarding and inspecting ships and sealing radios. On 5 February 1919 she was assigned to NOTS for duty as a dispatch and radio inspection ship in Savannah harbor. Placed out of commission 6 February, *Kathrich II* remained with NOTS until 4 September when she was turned over to the Coast Guard for use in communications work.

Katie

A former name retained.

(SP-660: t. 15; l. 48'; b. 11'2"; dr. 3'8"; s. 10 k.; cpl. 4; a. none)

Katie, a motor boat, was built by C. E. Bush of Crittenden, Va., in 1916 and owned by the Virginia Fish and Oyster Commission. Chartered to the Government, she commissioned 24 April 1917 and was taken over by the Navy at Norfolk 18 May, Chief Master-at-Arms J. B. Bush, USNRF, in command.

Assigned to the 5th Naval District, *Katie* operated out of Crittenden, Va., as a shore and section patrol boat. Her patrols extended from Norfolk and the James River to the lower reaches of the Potomac River and Chesapeake Bay. She decommissioned 22 October 1918 and was returned to her former owner the same day.

Katie S., see YP-345

Katlian

An Eskimo chief of Sitka, Alaska, at the time of Russian colonization in 1804.

(YN-48: dr. 129'1 93'; b. 22'; dr. 8'; cl. *Cockenoe*)

Katlian (YN-48), formerly *A. D. Canulette*, was launched 1939 by Canulette Shipbuilding Co., Slidell, La.; purchased by the Navy 22 October 1940 from the Gulf Coast Towing Co.; and placed in service 19 December 1940. She was reclassified YNT-16 on 1 May 1942.

Following conversion at New Orleans, she sailed 31 December 1940 for Mare Island, arriving 7 March 1941 via Guantanamo and the Canal Zone. She was assigned to the 12th Naval District and served as a net-tender out of Mare Island throughout her naval service. *Katlian* was placed out of service 30 January 1946 and transferred to the Maritime Commission 2 June 1947. Sold to R. J. Fenzl in 1948, she served as a tug under the name *Captain Rudy* and subsequently named *A. D. Canulette* and *Ethel McDermott*.

Katmai, see YP-575

Katoura, see *Patriot* (PYC-47)

Katrina

A former name retained.

(SP-1144: t. 31; l. 66'6"; b. 11'7"; dr. 5'; s. 9 k.; cpl. 8; a. 1 mg.)

Katrina, a wooden steam yacht, was built in 1913 by George F. Lawley & Son Corp., Boston. She was chartered by the Navy from her owner, Mrs. Anna C. Ewing of Yonkers, N.Y., 18 May 1917; and commissioned with a Naval Reserve crew 30 May, Boatswain Alvin A. Hanna, USNRF, in command.

Assigned to the Bar Harbor Section Patrol, she served in a variety of ways, patrolling, tending lookout stations, and breaking ice. She was placed in full commission 22 June and enrolled in the Naval Coast Defense Reserve 28 July.

Ordered to Halifax, Nova Scotia, 5 June 1918, she arrived at her new station 11 June and was used to transport men between visiting ships, the receiving ship, and the station hospital. *Katrina* was returned to her owner 15 February 1919.

Katrina Luckenbach

Former name retained.

(Str: dp. 16,000; l. 468'3"; b. 55'11"; dr. 30'6"; s. 14 k.; cpl. 91; a. 1 5", 1 6-pdr.)

Katrina Luckenbach was launched 22 February 1918 by the Fore River Shipbuilding Co., Quincy, Mass.; she was acquired by the Navy from Luckenbach Steamship Co. on a bare-ship basis and commissioned 18 May 1918, Lt. Comdr. Eldon H. Read, USNRF, in command.

Katrina Luckenbach was assigned to NOTS, and departed New York 10 June with a cargo of Army supplies for American forces in France. The cargo ship returned to the States 16 August and, following repairs, was transferred to the Cruiser and Transport Force to assist in returning American forces from Europe. She sailed from Boston 15 June 1919 with cargo for France. Upon her return to New York, *Katrina Luckenbach* decommissioned 25 November 1919 and was returned to her owners.

Katy D., see YP-409

Katydid

(SP-95: t. 10; l. 40'; b. 9'2"; dr. 3'4"; s. 10 k.; cpl. 7; a. 1 1-pdr.)

Katydid was built in 1912 at New Rochelle, N.Y., by William Hoff and was purchased by the Navy from Arnold G. Dana 27 March 1917. The wooden motor boat was assigned to section patrol in the 3d Naval District 4 April and commissioned 10 May, Chief Boatswain's Mate Asher A. Howell in command. In 1917 she operated in New York Harbor and nearby waters serving as launch to *Wasp* and *President Grant*. Subsequently, she sailed for France. She was laid up 9 December 1919 and transferred to the War Department 18 February 1920 for service with the Army Ordnance Department at Neville Island, Pa.

Kaukauna

Named for city in Wisconsin. Indian word meaning portage.

(YTM-749: dp. 390; l. 107'; b. 26'6"; d. 12'; s. 10 k.; cpl. 10)

Kaukauna, a medium harbor tug, was built in 1953 by Higgins at New Orleans. From 1953 to 1963 she served the U.S. Army as LT-2082. *Kaukauna*, on loan from the Army, was then assigned to the 14th Naval District and is now serving the Pearl Harbor area.

Kaula

A small, rocky, 550-foot high islet in the Hawaiian Islands, nearly 20 miles west-southwest of Niihau Island.

(AG-33: dp. 2,100; l. 267'; b. 38'3"; s. 12 k.; cpl. 70; a. 1 4', 2 3', 4 .50 cal. mg.)

Kaula (AG-33) was built in 1938 by Henry Robb, Ltd., Leith, Scotland; acquired as *Cubahama* 3 January 1941 from her owner, Balboa Shipping Co., N.Y.; renamed *Kaula* 15 January; and commissioned at Baltimore 22 January, Lt. Comdr. W. L. Ware in command.

Sailing to Hampton Roads, Va., 25 January, *Kaula* departed 4 February for Hawaii, via the Panama Canal and the West Coast, reaching Pearl Harbor 17 March. Prior to the outbreak of war in the Pacific, she carried cargo from Pearl Harbor and Honolulu to various islands in the Hawaiian chain and to Johnston and Palmyra Islands. During the Japanese raid on Pearl Harbor 7 December, she was en route to Palmyra Island.

Throughout the struggle with the Japanese Empire, *Kaula* operated out of Pearl Harbor and Honolulu to principal Hawaiian Islands and to outlying islands west to Midway and south to Palmyra. Usually sailing in convoy, she ranged the Hawaiian Sea frontier carrying military equipment, ammunition, and contingents of Seabees until she sailed for the United States 18 May 1945, arriving Seattle 26 May.

Following 2 months of overhaul *Kaula* departed Seattle 31 July on the first of several voyages to Alaska. Assigned to the 13th Naval District, she steamed for the U.S. Coast Guard to Ketchikan, Juneau, Seward, Kodiak, and Dutch Harbor before returning to Seattle 18 September. She operated in Puget Sound and the Strait of Juan de Fuca before steaming to Blake Island Anchorage, Wash., 6 December and decommissioning 14 January 1946. Struck from the Naval Register 12 March, *Kaula* was transferred to the Maritime Commission 15 July for sale to her former owner.

Kaweah

A river in California named for the Kawia or Cahuilla tribe, a southern California group of the Shoshonean division of Uto-Aztecan Indians.

(AO-15: dp. 14,450; l. 446'; b. 58'2"; dr. 25'6"; s. 11 k.; cpl. 252; a. 2 5", 2 3", 2.50 cal., 2.30 cal.; cl. *Kaweah*)

Kaweah (AO-15) was launched 1919 by William Cramp & Sons, Philadelphia, under USSB account; acquired by the Navy 20 October 1921; and commissioned 28 December 1921, Lt. Comdr. O. Beuilagua, USNRF, in command.

After sea trials *Kaweah* departed New Orleans early January 1922 and arrived Philadelphia 18 January. She departed 14 March for a cruise to the Canal Zone and the Gulf of Mexico. She returned to Norfolk 7 May and decommissioned 15 August 1922.

Kaweah recommissioned 16 December 1940, Comdr. Charles B. McVay in command. From early 1941 until late fall, she made oil runs between ports on the East Coast and the Caribbean. She arrived Argentia, Newfoundland, 17 November for duty in the North Atlantic. For the next 14 months she operated between Iceland, Greenland, and Boston, supplying the fleet with gasoline and diesel oil. She departed New York 13 January 1943 with a cargo of diesel oil for Casablanca, returning New York 12 March. *Kaweah* made another round trip cruise to Casablanca in April before resuming fueling operations at Halifax, N.S., 26 June. For the remainder of 1943 she cruised in convoy between New England and Iceland supplying the fleet units with vital fuel.

For the duration of the war the oiler cruised along the North American coast, Greenland, and the Caribbean with aviation fuel and diesel oil. Throughout the war *Kaweah* remained almost constantly at sea on the important, never-ending duty of keeping the fleet supplied with petroleum products. Following the cessation of hostilities 14 August 1945, *Kaweah* arrived Hampton Roads, Va., 26 September and decommissioned at Norfolk 16 November 1945. She was transferred to the WSA 28 May 1946 and sold to Boston Metals Co., Baltimore, for scrapping.

Kawishiwi

River in Minnesota.

(AO-146. dp. 11,600; l. 655'; b. 86'; dr. 35'; s. 20 k.; cpl. 254; a. 2 5", 6 3"; cl. *Neosho*)

Kawishiwi (AO-146) was launched 11 December 1954 by New York Ship Building Corp., Camden, N.J.; sponsored by Mrs. Edmund T. Wooldridge; and commissioned 6 July 1955, Captain Joseph B. Swain in command.

Kawishiwi cleared Philadelphia 18 November 1955, and arrived at home port Long Beach 8 December for shake-down training. Upon completion of the training, she departed Long Beach 25 April 1956 to replenish ships of the 7th Fleet. She remained in the Far East on refueling operations until returning to Long Beach 10 October.

During 1957 the oiler divided the year into refueling duties in the Far East and operations out of Long Beach. *Kawishiwi* arrived Pearl Harbor, her home port, 21 January 1958, and 1 month later sailed for her third Westpac deployment. Her ability to refuel ships at a rapid rate increased the mobility of the U.S. 7th Fleet as it protected peace in the Far East.

Kawishiwi sailed once again 18 November, after a 5-month interval of Hawaiian exercises, for duty with the service force in the Far East. Carrier task groups were then operating off Taiwan, as the Chinese Nationalist held islands Quemoy-Matsu appeared in danger. The 7th Fleet served notice of America's intention to resist aggression blunting another Communist probe to test the Free World's determination. The oiler returned Pearl Harbor 23 March 1959 and resumed Hawaiian operations.

Her next Westpac cruise in August was also in the midst of Communist pressure, this time at Laos. However, the show of strength by the United States averted a crisis, and, after completing refueling duties, the oiler arrived Pearl Harbor 23 November. She sailed again 3 May 1960 on her sixth Westpac deployment, replenishing ships of the Taiwan patrol before returning to Hawaii 22 August.

Following replenishment operations in Hawaiian waters, *Kawishiwi* departed 6 February 1961 for 7th Fleet services. In addition to standing watch over the tense situation in Laos, the Fleet engaged in SEATO exercises in April. The oiler returned home 26 June for a 4-month respite before another Far East tour commencing 23 October. She fueled units of the 7th Fleet as the need for peacekeeping missions by the Navy intensified. *Kawishiwi* returned Pearl Harbor 27 February 1962 for overhaul.

From 17 September 1962 to 5 February 1963, she engaged in another Far East deployment with the 7th Fleet. During October she replenished many ships participating in amphibious exercises off Okinawa. *Kawishiwi* returned home 5 February and operated in Hawaiian waters throughout the year engaging in exercises and replenishment duties. As military operations in Vietnam grew in intensity, her duty in the Orient concentrated more and more on refueling the Navy's ships which were fighting Communist aggression in Southeast Asia. After devoting most of the first half of 1966 to servicing ships off Vietnam, she returned to Pearl Harbor 15 July. Operations in the mid-Pacific ensued until she headed back to the Western Pacific 27 March 1967. *Kawishiwi* arrived Subic Bay 12 April and fueled the ships of the mighty 7th Fleet thru mid-1967.

Kearny

Lawrence Kearny was born in Perth Amboy, N.J., 30 November 1789 and appointed Midshipman in the Navy 24 July 1807. Commodore Kearny was known for his tenacity in capturing slave traders in West-Indian waters and his tireless efforts in fighting Greek pirates in the Mediterranean. In the early 1840's he began negotiations with China which opened that country to U.S. trade and pointed the way toward the American "Open Door Policy" a half century later. He later served as Commandant at the Norfolk and New York Naval Shipyards. Retiring 14 November 1861, Commodore Kearny died at Perth Amboy, N.J., 29 November 1868.

U. S. Brig Enterprise

Charleston S. C. Nov 12th 1821

Sir
I have the honor to report my arrival here from a cruise in the Bay of Mexico off Cape Antonio on the 10th Ulto we had the fortune to capture four piratical Schooners and a Sloop they were manned by Spaniards about 70 or 80 strong.

The pirates ran their vessels on shore when pursued by our boats and made their escape except one man now a prisoner on board this vessel.

One of the Schooners full of goods was burnt by the Pirates another I ordered burnt for want of men to man her; she was in ballast.

Two of the Schooners have arrived here with goods saved from the American Brig Aristides a vessel they had on a

shore and were plundering when we were
in sight.

We also recaptured the American
Ship Lucies from them with a full cargo
from Liverpool.

The Lucies is now at the Heavens
having been taken in by the Master in vi-
olation of my orders and against the
direction of the judge Master. He was ordered
for this port.

We also found an English Brig
called the Larch in their possession. She
being in ballast was given up to the
Master and allowed to proceed on her
voyage. We have come in to supply ourselves
with a cable and Anchor and a Sawn
log at Cape Antonio also to get some
sails and rigging which we use in
great number.

My cruise from this if with your
approbation will be along the South
side of Cuba where a number of Pirates

are committed

Your Instructions will find
me at this place -

I have the honor to be
Your most obedt. Servt.

Lawrence Kearney
U.S. Navy

To
The Hon: Smith Thompson
Secy of the Navy

P.S.

The U.S. Schooner Porpoise is
off Cape Antonio - LK

(DD-432: dp. 2,060; l. 347'4"; b. 36'1"; dr. 11'10"; s. 33 k.; cpl. 208; a. 4 5", 12 .50 cal., 2 10" tt., 2 dct.; cl. *Gleaves*)

Kearny (DD-432) was launched 9 March 1940 by the Federal Ship Building & Dry Dock Co., Kearny, N.J.; sponsored by Miss Mary Kearny; and commissioned on 13 September 1940, Comdr. A. L. Danis in command.

After shakedown and sea trials, *Kearny* got underway 19 February 1941 from New York Harbor for St. Thomas, V.I., where she took part in the "Neutrality Patrol" off Fort de France, Martinique, French West Indies, until 9 March. The new destroyer patrolled around San Juan, P.R., and escorted ships in the Norfolk area until August when she sailed for Argentina, Newfoundland, to escort North Atlantic convoys.

While *Kearny* was escorting a convoy in the North Atlantic before the United States entered the war, three convoy merchant ships were torpedoed 16 October. *Kearny* immediately began dropping depth charges and continued to barrage throughout the night. At the beginning of the midwatch 17 October, a torpedo struck *Kearny* on starboard side. The capable crew confined flooding to the forward fire room enabling the ship to get out of the danger zone with power from the aft fire room. Regaining power in the forward fire room, *Kearny* steamed to Iceland at 10 knots, arriving 19 October. *Kearny* lost 11 bluejackets and 22 others were injured in this attack. After temporary repairs *Kearny* got underway Christmas Day 1941, and moored 6 days later at Boston, Mass., for permanent repairs.

From 5 April to 28 September 1942, *Kearny* was busy escorting convoys to the British Isles, Panama Canal, and Galveston, Tex. Late in September, she sailed to act as a fire support unit in the North African invasion. There she screened *Texas* and *Savannah* on fire support missions, shot down an enemy plane, and escorted troop ships to Safi, French Morocco. *Kearny* departed the invasion theater and escorted a convoy back to New York, arriving 3 December 1942.

Kearny escorted ships to Port of Spain, Recife, Brazil, and Casablanca until 15 November 1943, then joined the *Core* hunter-killer task group 25 November. During the day of 1 January 1944, in coordination with antisubmarine planes from *Core*, *Kearny* fired a depth charge attack on a submarine resulting in a large oil slick; she returned to New York 18 January.

Next month *Kearny* joined the 8th Fleet in French Algeria. She reported to *Brooklyn* 10 March for duty in Italy, where both warships engaged in supplying fire support for the 5th Army. Due to their daily fire-support trips to the Anzio beachhead area, the warships became known as the "Anzio Express." They later were commended by General Mark Clark for the accuracy of this fire support.

Kearny was detached from the group the beginning of June and steamed to Anzio alone to give Allied troops their last naval fire support prior to their breakthrough and capture of Rome. The veteran destroyer saw more convoy duty before sailing for the invasion of Southern France.

Kearny was inner fire support ship for Red Beach, Cavalaire Bay, France, and rendered counter-battery fire and pre-H-hour bombardment. She screened heavy fire support ships; laid smoke screens off Toulon; and, on 19 August 1944, began 2 months of duty screening transports carrying troops between Naples and Southern France.

Afterward, *Kearny* made several cross-Atlantic voyages from New York to Oran. On 6 August 1945, *Kearny* transited the Panama Canal for duty in the Pacific, arriving at Pearl Harbor late in August after hostilities had ended. She escorted a transport squadron carrying occupation troops to Japan via Saipan, arriving at Wakayama, Japan, 27 September. During the next month *Kearny* made voyages to Philippine Islands and Okinawa before returning to Japan in October. She sailed from Wakayama, Japan, 29 October 1945 for home via Pearl Harbor, San Diego, and the Panama Canal, arriving Charleston, S.C., 5 December 1945. She decommissioned there 7 March

1946, and went into reserve. *Kearny* was subsequently moved to Orange, Tex. where she remains into 1967.

Kearny received three battle stars for service in World War II.

Kearsarge

A mountain in Merrimack County, N.H.

(ScSlp: dp. 1,550 t.; l. 201'4"; b. 33'10"; dr. 14'3"; s. 11 k.; cpl. 163; a. 2 11", 4 32-pdr., 1 30-pdr.)

The first *Kearsarge* was launched 11 September 1861 by the Portsmouth Navy Yard, Portsmouth, N.H.; sponsored by Mrs. McFarland, wife of the editor of the *Concord Statement*; and commissioned 24 January 1862, Captain Charles W. Pickering in command.

Kearsarge departed Portsmouth 5 February 1862 for the coast of Spain; thence sailed to Gibraltar to join the blockade of Confederate raider *Sumter*, forcing her abandonment in December. But her commanding captain, Raphael Semmes, soon commissioned Confederate raider *Alabama* on the high seas off the Azores.

Kearsarge prepared for her fight with *Alabama* at Cadiz (November 1862-March 1863), then searched for the raider from along the coast of Northern Europe to the Canaries, Madeira, and the Western Islands. Arriving at Cherbourg, France, 14 June 1864, she found *Alabama* in port and took up patrol at the harbor's entrance to await Semmes' next move.

On 19 June, *Alabama* stood out of Cherbourg Harbor for her last action. Careful of French neutrality, *Kearsarge's* new commanding officer, Captain John A. Winslow, took the sloop-of-war well clear of territorial waters, then turned to meet the Confederate cruiser.

Alabama opened fire first while *Kearsarge* held her reply until she had closed to less than 1,000 yards. Steaming on opposite courses, the ships moved around a circle as each commander tried to cross his opponent's bow to deliver deadly raking fire. The battle quickly turned against *Alabama* for the quality of her long-stored powder and shells had deteriorated. *Kearsarge*, on the other hand, had been given added protection by chain cable triced in tiers along her sides abreast vital spaces. One hour after she fired her first salvo, *Alabama* had been reduced to a sinking wreck. Semmes struck his colors and sent a boat to *Kearsarge* with a message of surrender and an appeal for help. *Kearsarge* rescued the majority of *Alabama's* survivors; but Semmes and 41 others were picked up by British yacht *Deerhound* and escaped in her to England.

Kearsarge steamed along the French coast in an unsuccessful search for CSS *Florida*, thence proceeded to the Caribbean before turning northward for Boston where she decommissioned 26 November 1864 for repairs. She recommissioned 1 April 1865 and sailed on the 14th for the coast of Spain in an attempt to intercept *Stonewall*; but the Confederate ram eluded Federal ships and surrendered to Spanish authorities at Havana, Cuba, 19 May. After cruising the Mediterranean and the English Channel south to Monrovia, Liberia, *Kearsarge* decommissioned 14 August 1866 in the Boston Navy Yard.

Kearsarge recommissioned 16 January 1868 and sailed 12 February to serve in the South Pacific operating out of Valparaiso, Chile. On 22 August she landed provisions for destitute earthquake victims at Africa, Peru. She continued to watch over American commercial interests along the coast of South America until 17 April 1869. Then she sailed to watch over American interests among the Marquesas, Society, Navigators (Samoa), and Fiji Islands. She also called at the ports of New South Wales and New Zealand before returning to Calao, Peru, 31 October 1869. She resumed duties on the South Pacific Station until 21 July 1870, then cruised to the Hawaiian Islands before decommissioning in the Mare Island Navy Yard, Calif., 11 October 1870.

Kearsarge recommissioned 8 December 1873 and departed 4 March 1874 for Yokohama, Japan, arriving 11 May. She cruised on Asiatic Station for 3 years, protecting American citizens and commerce in China, Japan, and

the Philippines. From 4 September to 16 December 1874, she carried Professor Hall's scientific party from Nagasaki, Japan, to Vladivostok, Russia, to observe the transit of Venus. She departed Nagasaki 3 September 1877 and returned to Boston 30 December via the Suez Canal and Mediterranean ports. She decommissioned at Portsmouth, N.H., 15 January 1878.

Kearsarge recommissioned 15 May 1879 for 4 years of duty in the North Atlantic ranging from Newfoundland to the Caribbean Sea and the coast of Panama. She departed New York 21 August 1883 to cruise for 3 years in Mediterranean, Northern European waters, and along the coast of Africa. She returned to Portsmouth, N.H., 12 November and decommissioned in the Portsmouth Navy Yard 1 December 1886.

Kearsarge recommissioned 2 November 1888 and largely spent her remaining years protecting American interests in the West Indies, off Venezuela, and along the Central Americas. She departed Haiti 30 January 1894 for Bluefields, Nicaragua, but was wrecked on Roncador Reef off Central America 2 February 1894. Her officers and crew safely made it ashore.

Congress appropriated \$45,000 to raise *Kearsarge* and tow her home; but a salvage team of the Boston Towboat Co. found that she could not be raised.

The name of *Kearsarge* was struck from the Navy List in 1894.

II

(BB-5: dp. 11,540; l. 375'4"; b. 72'3"; dr. 23'6"; s. 16 k.; cpl. 553; a. 4 13", 4 8", 14 5", 20 6-pdr., 8 1-pdr., 4 .30 cal.)

The second *Kearsarge*, named by act of Congress to commemorate the famed steam sloop-of-war, was launched 24 March 1898 by the Newport News Shipbuilding Co., Newport News, Va.; sponsored by Mrs. Herbert Winslow, daughter-in-law of *Kearsarge's* commander, Captain John A. Winslow, during her famous battle with *Alabama*; and commissioned 20 February 1900, Captain William M. Folger in command.

Kearsarge became flagship of the North Atlantic Station, cruising down the Atlantic seaboard and in the Caribbean. From 3 June 1903 to 26 July 1903 she served briefly as flagship of the European Squadron while on a cruise that took her first to Kiel, Germany. She was visited by the German Emperor 25 June 1903 and by the Prince of Wales 13 July. She returned to Bar Harbor, Maine, 26 July 1903 and resumed duties as flagship of the North Atlantic Fleet. She sailed from New York 1 December 1903 for Guantanamo Bay, Cuba, where, on 10 December, the United States took formal possession of the Guantanamo Naval Reservation. Following maneuvers in the Caribbean, she led the North Atlantic Battleship Squadron to Lisbon where she entertained the King of Portugal, 11 June 1904. She next steamed to Phaleron Bay, Greece, where she celebrated the Fourth of July with the King, Prince Andrew, Princess Alice of Greece. The squadron paid goodwill calls at Corfu, Trieste, and Fiume before returning to Newport, R.I., 29 August 1904.

Kearsarge remained flagship of the North Atlantic Fleet until relieved 31 March by battleship *Maine*, but continued operations with the fleet. During target practice off Cape Cruz, Cuba, 13 April 1906, an accidental ignition of a powder charge of a 13-inch gun killed two officers and eight men. Four men were seriously injured. Attached to the 2d Squadron, 4th Division, she sailed 16 December 1907 with the "Great White Fleet" of battleships, sent around the world by President Theodore Roosevelt. She sailed from Hampton Roads around the coasts of South America to the western seaboard, thence to Hawaii, Australia, New Zealand, the Philippines, and Japan. From there, *Kearsarge* proceeded to Ceylon, transited the Suez Canal, and visited ports of the Mediterranean, before returning to the eastern seaboard of the United States. President Theodore Roosevelt reviewed the Fleet as it passed into the Hampton Roads 22 February 1909, having completed a world cruise of overwhelming success, show-

ing the flag and spreading good will. This dramatic gesture impressed the world with the power of the U.S. Navy.

Kearsarge decommissioned in the Philadelphia Navy Yard 4 September 1909 for modernization. She recommissioned 23 June 1915 for operations along the Atlantic coast until 17 September when she departed Philadelphia to land a detachment of marines at Vera Cruz, Mexico. She remained off Vera Cruz from 28 September 1915 to 5 January 1916, then carried the marines to New Orleans before joining the Atlantic Reserve Fleet 4 February 1916 at Philadelphia. She trained Massachusetts and Maine State Naval Militia until America entered World War I, then trained thousands of armed guard crews as well as naval engineers in waters along the East Coast ranging from Boston to Pensacola. On the evening of 18 August 1918, *Kearsarge* rescued 26 survivors of Norwegian Bark *Nordhav* which had been sunk by German Submarine U-117. The survivors were landed in Boston.

Kearsarge continued as engineering training ship until 29 May 1919 when she embarked Naval Academy Midshipmen for training in the West Indies. The midshipmen were debarked at Annapolis 29 August and *Kearsarge* proceeded to the Philadelphia Navy Yard, where she decommissioned 10 May 1920 for conversion to a crane ship and a new career. She was designated AB-1 5 August 1920.

In place of military trappings, *Kearsarge* received an immense revolving crane with a rated lifting capacity of 250 tons, as well as hull "blisters," which gave her more stability. The 10,000-ton craneship rendered invaluable service for the next 20 years. One of many accomplishments was the raising of sunken submarine *Squalus* off the New Hampshire coast. On 6 November 1941 she was designated *Crane Ship No. 1*, giving up her illustrious name which was assigned to a mighty aircraft carrier. But she continued her yeoman service and made many contributions to the American victories of World War II. She handled guns, turrets, armor and other heavy lifts for new battleships such as *Indiana* and *Alabama*; cruisers *Savannah* and *Chicago*; and guns on the veteran battleship *Pennsylvania*.

In 1945 the crane ship was towed to the San Francisco Naval Shipyard where she assisted in the construction of carriers *Hornet*, *Bower*, and *Saratoga*. She departed the West Coast in 1948 to finish her career in the Boston Naval Shipyard. Joe McDonald, master rigger, described her as "a big gray hulk of a thing" which was "pulled around by two or three tugs" on the job; "But the old girl has brought millions of dollars worth of business to Boston. Without her we would never have been able to do many of the big jobs that cost millions of dollars." As one example, he recalled that the former battleship lifted a gantry crane intact at the South Boston Naval Drydocks and transporting it to Charleston where she placed it on crane tracks to be driven away. As *Crane Ship No. 1*, her name was struck from the Navy List 22 June 1955. She was sold for scrapping 9 August 1955.

Kearsarge (CV-12) was renamed *Hornet* (q.v.) on 24 January 1943.

III

(CV-33: dp. 30,800; l. 888'; b. 93'; ew. 136'; dr. 30'8"; s. 33 k.; cpl. 2,100; a. 12 5", 2 3-pdr., 44 40mm., 36 20mm.; cl. *Essex*)

The third *Kearsarge* (CV-33) was launched 5 May 1945 by the New York Naval Shipyard, New York; sponsored by Mrs. Aubrey W. Fitch; and commissioned 2 March 1946, Captain Francis J. McKenna in command.

Kearsarge arrived at her homeport Norfolk 21 April 1946, and for the next year engaged in training operations along the East Coast and Caribbean. She cleared Norfolk 7 June 1947 on a midshipmen training cruise to the United Kingdom. Upon her return to the United States in August, the carrier engaged in maneuvers for 10 months

USS *Kearsarge* (BB-5)

before departing Hampton Roads 1 June 1948 for duty with the 6th Fleet. During her tour in the Mediterranean, units of the 6th Fleet were placed on alert to insure peace in the Arab-Israeli area. *Kearsarge* returned Quonset Point, R.I., 2 October and operated along the Atlantic Coast and the Caribbean until 27 January 1950 when she sailed for the West Coast. The carrier arrived Puget Sound Navy Yard 23 February and decommissioned there 16 June 1950 for a modernization overhaul that would enable her to handle new jet aircraft.

Kearsarge recommissioned 15 February 1952, Captain Louis B. French in command. Following shakedown the carrier cleared San Diego 11 August for intensive flight training in the Hawaiian Islands. Her readiness complete, she sailed for the Far East to engage in combat missions in the Korean war. Arriving Yokosuka 8 September, *Kearsarge* joined the fast carrier Task Force 77 off the east coast of Korea 6 days later. For the next 5 months the carrier's planes flew nearly 6,000 sorties against Communist forces in North Korea, unleashing considerable damage on enemy positions. She completed her tour in late February 1953, returning to her homeport, San Diego 17 March. While serving in Korea her classification was changed to CVA-33.

Kearsarge sailed again for the Far East 1 July 1953 and operated with the 7th Fleet fast carrier force during the uneasy truce in Korea. The "Mighty Kay" also kept watch over the Formosa Straits to prevent the Communists from interfering with the Chinese Nationalists on Taiwan. *Kearsarge* returned San Diego 18 January 1954 to resume training operations off California. Clearing San Diego 7 October, she steamed toward her third deployment to the Far East. While operating with the 7th Fleet, the carrier stood by to assist the Nationalist Chinese in the evacuation of the Tachen Islands. From 6 to 13 February 1955 *Kearsarge* supported units of the fleet in the successful evacuation of 18,000 civilians and 20,000

military personnel from the islands. Her cruise ended at San Diego 12 May and for the next 3 years operated on the annual deployment schedule to the Far East and training operations off California.

During the summer of 1958 *Kearsarge* was fitted out as an antisubmarine warfare support carrier and reclassified CVS-33. Following intensive training in her new role, the carrier sailed 5 September 1959 for 7th Fleet operations in the Far East. Early in her tour Japan was hit with a violent typhoon, and *Kearsarge* played an important role in providing relief to the victims. Her planes landed parties of medical and supply units, while her crew and air group donated clothing and money to the distressed people. After participating in SEATO exercises and 7th Fleet operations, she cleared Yokosuka 3 March 1960 for her homeward voyage. Three days later in stormy waters 1,200 miles off Wake Island, four Russians were rescued after drifting 49 days in disabled landing craft. They were flown back to their country after *Kearsarge* arrived Alameda, Calif., 15 March; and the carrier received thanks from the Soviet Union for this gesture.

A year of training operations preceded her next deployment from San Diego which began 3 March 1961. The antisubmarine carrier steamed to Southeast Asian waters as the Communists intensified their effort to overthrow the government in Laos. The power and determination of the 7th Fleet was observed by the enemy and the crisis eased. Peace prevailed. After 6 months in the Far East, *Kearsarge* arrived Puget Sound 1 November for the second phase of her modernization.

Upon completion of repairs and training *Kearsarge* departed Long Beach 1 August 1962 to station herself in the Pacific missile range as a recovery ship in the Mercury orbital space flight of astronaut Walter Schirra. On October after a flawless flight, the carrier played her role in the "Space Age" by retrieving Schirra and his capsule and returning him to Honolulu for flight back to the States.

USS *Kearsarge* (CVA-33) in Korean waters 1952—planes are F2H Banshees.

Kearsarge resumed training exercises, continuing these for 6 months before arriving Pearl Harbor 29 April 1963 to once again take part in the space program. The carrier repeated her earlier recovery by plucking astronaut Gordon Cooper on 18 May 1963 after he orbited the earth 22 times in his capsule "Faith 7." She returned the space hero to Pearl Harbor, then departed 4 June on her eighth cruise to the Far East. Operations with the 7th Fleet included keeping watch on the unsettled problems in South-east Asia. *Kearsarge* returned Long Beach 3 December, for training exercises off California.

Six months later, 19 June 1964 the antisubmarine carrier was deployed on her ninth Far Eastern cruise. Arriving Yokosuka 30 July, *Kearsarge* was dispatched to the South China Sea, following the North Vietnamese patrol boat attack on U.S. destroyers in the Gulf of Tonkin. While U.S. Navy planes destroyed North Vietnam oil and supply depots, *Kearsarge* provided antisubmarine protection for the 7th Fleet. The decisiveness of American action persuaded the Communists to delay their objectives for the time being; and *Kearsarge* returned Long Beach 16 December.

After overhaul during the first half of 1965, *Kearsarge* operated off the West Coast until sailing for the Far East 9 June 1966. Steaming via Hawaii and Japan, she reached "Yankee Station" 8 August and operated off Vietnam through 24 October. The next day she headed for the Kuala Lumpur area and anchored in the Strait of Malacca on the 30th. She returned via Subic Bay to "Yankee Station" 5 November and operated there through the 23d. The next day the carrier started home via Hong Kong and Japan, arriving San Diego 20 December. She operated on the West Coast until departing San Diego 18 August and reached Pearl Harbor 10 days later to prepare for future action.

Kearsarge received two battle stars for Korean War service.

Keathley, Sgt. George, see *Sgt. George Keathley* (APC-117)

Keats

A British name retained. Sir Richard Keats (1756-1834), a captain in the Royal Navy, commanded HMS *Superb* from 1801 to 1807.

Tisdale (DE-278) (*q.v.*) was renamed HMS *Keats* upon transfer to the United Kingdom under lend-lease 19 October 1943.

Keegan, V. L., see YO-166

Keith

Ellis Judson Keith, Jr., was born at Houston, Tex., on 30 June 1919 and entered the Navy as a Seaman Second Class on 2 October 1941. He was assigned as a radioman and gunner on a patrol plane that flew on aerial bombardments and strafing attacks on enemy ships in the Aleutian Islands. Killed in action during a mission over Kiska Harbor 11 June 1942, Seaman Keith was awarded the Air Medal posthumously for his courage and fortitude.

(DE-241; dp. 1,200; l. 306'; b. 26'7"; dr. 8'7", s. 21 k.; cpl. 186; a. 3 3", 8 40 mm., 10 20mm., 2 dct., 8 dcp., 3 21" tt.; cl. *Edsall*)

USS *Kearsarge* (CVA-33) and destroyers arrive Subic Bay 1961.

Keith (DE-241), laid down as *Scott* and renamed *Keith* 8 December 1942, was launched 21 December 1942 by Brown Ship Building Co., Houston, Tex.; sponsored by Mrs. Ellis J. Keith, Sr., mother of Seaman Keith; and commissioned 19 July 1943 at Houston, Tex., Lt. D. Cochran in command.

After shakedown and training exercise out of Bermuda, *Keith* sailed from Norfolk 14 September 1943 on the first of three voyages escorting convoys from East Coast ports to Gibraltar.

After returning from convoy escort duty 22 February 1944, *Keith* underwent extensive refresher training and participated in antisubmarine warfare exercises before sailing on 15 March as part of escort carrier *Tripoli's* newly-formed hunter-killer group. With this group she patrolled the Atlantic from Brazil to Newfoundland in quest of enemy submarines.

In July she joined a similar group operating with escort carrier *Core*. On 30 August, *Core's* hunter-killer group contacted an enemy submarine. *Keith*, assisting in the search, made two hedgehog attacks with inconclusive results.

Keith continued to operate with the hunter-killer group patrolling the vast waters of the Atlantic, escorting convoys from "mid-ocean point" to ports in Brazil, Bermuda, Newfoundland, Cuba, and the United States.

On 23 April 1945, the hunter-killer group, operating as a combined force against a large wolfpack of U-boats, spotted a partially submerged submarine but could not locate it after it dived. While searching the next day, *Davis*, a destroyer in company, was torpedoed and sunk.

Keith and task group ships headed to the position where *Davis* had gone down and launched a severe depth charge attack that lasted some 12 hours before *U-546* was forced to surface. The destroyer escorts opened fire on the submarine; and *Keith* made two direct hits before the U-boat sank. After the engagement, *Keith* rescued four survivors from the submarine.

In mid-July, *Keith* departed Guantanamo Bay, Cuba, for duty in the Pacific. *Keith* found herself in Pearl Harbor at the end of hostilities and got underway for Saipan for escort duty and mop-up operations. Shortly after arriving 31 August, she was assigned an air-sea rescue station between Iwo Jima and Japan. At the end of the year *Keith* sailed for China, arriving Shanghai on the last day of December. She remained there patrolling and escorting vessels until sailing for home on 10 April 1946 via Pearl Harbor and the Panama Canal arriving at Charleston, S.C., 15 May 1946. *Keith* was towed to Green Cove Springs, Fla., where she was decommissioned and placed in reserve 20 September 1946. At present she is berthed at Orange, Tex.

Keith received one battle star for World War II service.

Kellar

John Gilbert Kellar, born 11 March 1871 near Peoria, Ill., graduated from Dartmouth College in 1893 and studied civil engineering at the University of Colorado in 1898 and 1899. As a civilian hydrographic engineer, he was appointed to the Hydrographic Office in 1908. Between 1908 and 1927 he served as civilian leader of ocean and coastal survey cruises and completed 15 cruises off the coasts of Panama, Cuba, and Nicaragua. Renowned for his contributions to the fields of geodesy, hydrography, and astronomy, he invented the Altitude-Azimuth Star Plotter and Identifier. In addition, he published "Manual of Hydrographic Surveying" in 1927 and "Glossary of Cartographic Terms" in 1943. He retired in 1943 and died 20 October 1947 in Washington, D.C.

(AGS-25: dp. 1,320; l. 209'; b. 39'; dr. 14; s. 17 k.; cpl. 26; a. none; cl. *Kellar*)

Kellar (AGS-25) was laid down by Marietta Mfg. Co., Point Pleasant, W. Va., 20 November 1962; launched 30 July 1964; sponsored by Mrs. Harriet K. Pond; transferred to Boland Machine Mfg. Co., New Orleans, La., 30 July 1966 for completion of construction; and scheduled for completion in the winter of 1968.

Once commissioned, *Kellar* will provide valuable assistance to the Navy as a far-ranging hydrographic and oceanographic survey ship. Operating under the control of the Hydrographic Office, she will possess the latest survey equipment, with which she can compile field charts

and amphibious data. During the continuing task of "keeping the peace" over the vast reaches of global waters, she will contribute vital information for determining potential amphibious landing sites. In addition she will be able to transport and support a combat coastal survey team.

Kelso

A city in Cowlitz County, Wash.

(PC-1170: dp. 295; l. 174'; b. 23'; dr. 8'; s. 20 k.; cpl. 65; a. 1 3', 1 40mm., 2 20 mm., 2 rkt., 4 dep. 2 dct.

PC-1170 was laid down by Sullivan Dry Dock & Repair Co., Brooklyn, N.Y., 3 July 1943; launched 16 October; sponsored by Mrs. M. M. McCauley; and commissioned 21 February 1944; Lt. Burrill D. Barker, Jr., in command.

USS *Kearsarge* (CVA-33) near Honolulu 3 October 1962—Astronaut Walter M. Schirra emerges from Sigma 7 spacecraft after being hoisted aboard Carrier.

After shakedown off the Florida coast, *PC-1170* was assigned to convoy escort duty between Guantanamo, Cuba, and New York. Screening against possible German U-boat attacks, the subchaser made the New York-Cuba voyage 33 times from May 1943 to June 1945. Departing New York 18 June, she steamed to the Pacific to strengthen naval strength in that unfinished war.

Following a brief stay in San Diego, *PC-1170* proceeded to Pearl Harbor, arriving there late July. On 2 August she departed Hawaii for patrol duty in the Marshall Islands. The veteran subchaser was operating out of Eniwetok when World War II ended. Transferred to the Hawaiian Sea Frontier, *PC-1170* for the next 10 years performed patrol duty and reported weather information in the Central Pacific.

On 26 February 1955 she arrived San Francisco and decommissioned 8 August 1955. While berthed with the Pacific Reserve Fleet, she was named *Kelso* 15 February 1956. *Kelso* was struck from the Navy List 1 July 1960 and sold to Ship Supply Corp. 25 April 1961.

Kemah

A former name retained.

(SP-415: t. 300; l. 146'; b. 21'; dr. 9'; s. 13 k.; a. 2 3'')

Kemah (SP-415), a motor yacht, was built by Luders Marine Construction Co., Stamford, Conn., in 1917 to 1918 and acquired while under construction from her owner, F. E. Lewis II, of New York City, 7 October 1917. Brought to the Navy Yard, New York in April 1918, *Kemah* commissioned 16 July, Lt. L. L. Rand, USNRF, in command.

Originally assigned to the 6th Naval District at Charleston, she was transferred upon commissioning to the 3d Naval District, New York, for the period of her service. Restricted to protected waters, *Kemah* served as a guard ship on coastal waters of New York Harbor. She continued her patrol duty until 3 September 1919 when she was withdrawn from active duty. *Kemah* decommissioned 18 September and was sold 22 September 1920 to R. T. Robinson of San Diego.

Kemper County

A county in Mississippi.

(LST-854: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 266; a. 3 40mm., 12 20mm.; cl *LST-542*)

LST-854 was laid down by the Chicago Bridge & Iron Co., Seneca, Ill., 30 August 1944; launched 20 November; sponsored by Mrs. M. A. Menkol; and commissioned 14 December, Lt. E. J. Robeson in command.

After shakedown off Florida, *LST-854* departed New Orleans for the Pacific 16 January 1945. Steaming via the Panama Canal, the West Coast, and Pearl Harbor, she reached Ulithi, Caroline Islands, 1 April. There she prepared to support the invasion of Okinawa; then, with an Army Aviation Engineer Battalion on board, she sailed 12 April for that strategic island which lay at the gateway to the heart of the Japanese empire.

The campaign was well underway when *LST-854* arrived Nago Wan, Okinawa, 6 days later. Despite heavy enemy air raids, she unloaded troops and equipment, then returned Ulithi 5 May. During the remaining months of the war, she shuttled troops and equipment among the Philippines and Okinawa in preparation for a possible invasion of Japan. Following the end of World War II, she operated in the Far East, transporting occupation forces until November.

LST-854 arrived Seattle, Wash., 16 December, then after overhaul and training returned to the Far East 27 June 1946. From 1946 to 1949 she transported Navy and

Marine Corps troops and cargo among Chinese ports and the Marianas. The veteran landing ship returned to the United States 6 June 1949, and decommissioned 21 October at Puget Sound Navy Yard.

After Communist aggression threatened the freedom of South Korea, the United States responded by sending American forces to aid the embattled country. To assist in the transportation of troops and cargo, *LST-854* recommissioned 20 November 1950; then, after training, she departed San Diego 17 March 1951. Three months later she commenced operations in the war zone, and from June to December operated between Japan and Korea. Her duties in Korea were transporting prisoners-of-war from Pusan to Koje Do, furnishing logistics support for troops at Koje Do, and rotating cargo and troops among Korean ports.

During early January 1952, *LST-854* participated in the landing of the 40th Division at Inchon and provided refugees lifts along the Korean coast. Departing Yokosuka 25 February, the landing ship arrived San Diego 16 March. After overhaul and training along the West Coast, she was back in Japan 26 November. For the remaining months of the Korean conflict, *LST-854* shuttled troops and cargo in support of U.N. forces engaged in fierce combat on the Asian mainland. Following the truce which ended hostilities, the veteran landing ship transported pro- and anti-Communist prisoners to await repatriation.

LST-854 returned San Diego 17 October and, following overhaul, performed training exercises along the West Coast. From May 1954 to May 1960, she sailed on four WestPac cruises in which she supported the 7th Fleet operating to protect U.S. interests in the event of reckless Communist attempts to upset the peace and stability of Asia. *LST-854* was named *Kemper County* 1 July 1955.

After returning from her WestPac cruise 6 May 1960, *Kemper County* spent the next 5 years performing amphibious training exercises along the California coast and in the Hawaiian operating area.

As Communist aggression increased, the United States expanded efforts to protect the integrity and independence of the Republic of South Vietnam. To aid in the vast logistic demands created by the crisis, *Kemper County* departed San Diego 11 October 1965, arriving Subic Bay, Philippines, 12 November. Ten days later she arrived Da Nang, and operated along the coast of South Vietnam for the rest of the year. She operated primarily in the rivers of the Mekong Delta transiting enemy-controlled territory to carry supplies to the Vietnamese Army Headquarters Can Tho. Four times she ascended these streams as far as 90 miles inland. On 3 March 1966 she assisted tanker *SS Paloma* which lay burning and adrift in the Saigon River after a Viet Cong attack. On reaching the scene, she shelled the river bank from which the Communist attack had been launched while fighting the conflagration on the tanker.

During this deployment *Kemper County* carried over 10,000 tons of military cargo and vast quantities of food and clothing for the war-stricken civilian population of South Vietnam before returning to San Diego 28 May 1966. Her services won her the Battle Efficiency "E" of 1966. She operated off the West Coast into 1967 preparing for future action.

LST-854 received one battle star for World War II service and five stars for service in the Korean conflict.

Kempthorne

A British name retained. Sir John Kempthorne (1620-79), a captain in the British Navy, commanded *Mary Rose* during her historic fight with seven Algerines in 1669.

Trumpeter (DE-279) (*q.v.*) was renamed HMS *Kempthorne* upon transfer to the United Kingdom under lease 23 October 1943.

Kendall C. Campbell

Kendall Carl Campbell, born 25 July 1917 in Garden City, Kans., after enlisting in the Naval Reserve 28 October 1940, reported to the Naval Reserve Aviation Base in Kansas City for flight training 15 November. Appointed Aviation Cadet 1 February 1941, he became an Ensign 19 August. He was assigned to carrier combat squadrons, courageously engaging the enemy in the early actions.

During the Battle of the Coral Sea, Ens. Campbell "with disregard of personal safety contributed materially to the sinking or damaging of eight enemy vessels in Tulagi Harbor on 4 May and to the sinking of the enemy aircraft carrier *Shoho* 7 May." He lost his life in this action and was awarded the Navy Cross posthumously.

He was also awarded the Gold Star in lieu of the Second Navy Cross for service in New Guinea. "On 10 March 1942, in the face of heavy antiaircraft fire Ensign Campbell . . . by his superb airmanship and outstanding courage contributed to the destruction of three enemy ships and upheld the highest traditions of the United States Naval Service."

(DE-443; dp. 1,350; l. 306'; b. 36'8"; dr. 9'5"; s. 24 k.; cpl. 186; a. 2 5", 4 40mm., 10 20mm., 2 dct., 9 dcp., 3 21" tt.; cl. *John C. Butler*)

Kendall C. Campbell (DE-443) was launched 19 March 1944 by the Federal Shipbuilding & Drydock Co., Newark, N.J.; sponsored by Mrs. Carl B. Campbell; and commissioned 31 July 1944, Lt. Comdr. R. W. Johnson in command.

Kendall C. Campbell departed New York 20 August 1944 for shakedown exercises off Bermuda. Ten days later she departed Norfolk, transited the Panama Canal, and arrived Pearl Harbor 30 October. The destroyer escort was assigned to hunter-killer operations out of Hawaii with *Corregidor* (CVE-58) and performed this duty until she sailed for Ulithi 24 November. She immediately commenced ASW patrols designed to keep the supply lanes to the Marianas and Western Carolines open.

Anxiously awaiting her first major encounter, *Campbell* put to sea 1 January 1945, and sortied with the Luzon Attack Force for the invasion of Lingayen Gulf. She returned to Ulithi 5 February for a short overhaul period, departing 2 weeks later for carrier escort duty during the occupation of Iwo Jima. When the volcano island was secure, *Kendall C. Campbell* put into Ulithi to prepare for the Okinawa invasion.

The destroyer escort sailed 21 March accompanying escort carriers as they unleashed air raids in the pre-invasion strikes against Japanese positions on Okinawa. After the American assault forces hit the beach 1 April, *Kendall C. Campbell* stood by until the island was free of enemy resistance and offered all possible support to the successful campaign.

As the war moved closer to the enemy homeland, on 26 June *Campbell* joined the Logistics Support Group, which operated northeast of Honshu, during the carrier strikes on Japan's home islands. In early August she searched for Japanese submarines southeast of Okinawa Gunto and was on this mission when the fighting ended. During the first week of September she furnished ASW patrols for the Tokyo Occupation Force en route to Japan. After escorting a group of 54 LST's from Tokyo to Maui, she returned to Yokosuka 16 October. *Kendall C. Campbell* departed Japan 4 November, arriving San Pedro, Calif., 22 November. The destroyer escort decommissioned at San Diego 31 May 1946 and joined the Pacific Reserve Fleet. At present she is berthed at Stockton, Calif.

Kendall C. Campbell received four battle stars for World War II service.

Kendrick

Charles S. Kendrick was born in Kentucky 23 January 1817. Early in the Civil War, as Third Master in Army

gunboat *St. Louis* of the Western Flotilla, he took part in the captures of Fort Henry, Fort Donelson, Island No. 10, Memphis, and Fort St. Charles. On 1 October 1862, when the Western Flotilla was transferred to the Navy Department, he was commissioned Acting Master in the U.S. Navy. On 30 April 1863, while commanding a landing party which drove Confederate sharpshooters from the river banks at Haines Bluff, he personally captured a Southern officer in hand-to-hand combat. In July he commanded *Petrel* when she and *Forrest Rose* ascended the Tensas River and captured Confederate steamers *Louisville* and *Elmira*. The following month Acting Master Kendrick was stricken with fever and died at the Naval Hospital, Memphis, Tenn., 13 August 1863.

(DD-612; dp. 1,620; l. 348'4"; b. 36'1"; dr. 11'9"; s. 37.5 k.; cpl. 256; a. 4 5", 4 40mm., 6 dcp., 2 dct., 5 21" tt.; cl. *Benson*)

Kendrick (DD-612) was launched 2 April 1942 by Bethlehem Steel Co., San Pedro, Calif.; sponsored by Mrs. J. Hanson Delvac, a great-granddaughter of Acting Master Charles S. Kendrick; and commissioned 12 September 1942, Lt. Comdr. C. T. Caufield in command.

After shakedown exercises along the West Coast, *Kendrick* cleared San Diego 11 December 1942 and arrived Casco Bay, Maine, 28 December for ASW exercises. The destroyer then sailed to New York to join Convoy UG-S-4 and sailed 13 January 1943 for Casablanca. She returned New York 13 February with another convoy, and commenced patrol, escort, and training from Norfolk to Newfoundland. *Kendrick* departed New York 28 April for a round trip escort mission to Oran, Algeria, and returned New York 8 June.

After 3 days the destroyer once again steamed toward the Mediterranean, escorting Rear Admiral Kirk's Task Force 85, which carried Major General Troy Middleton's famed 45th Infantry Division. She arrived Oran, staging area for the invasion of Sicily, 22 June. *Kendrick* sailed 5 July and arrived off the beaches of Scoglitti 4 days later. She guarded transports and landing craft until 12 July, then steamed as escort for troop ships via Oran to New York, arriving there 4 August.

She returned to Oran 2 September; that night a German dive bomber made a surprise attack on *Kendrick's* starboard quarter. The plane roared in 50 feet above the water and launched two torpedoes before it was shot down by the destroyer's gunners. One of the "fish" struck *Kendrick's* stern damaging her rudder, steering compartment, and fantail, but without harming her crew. As she turned back to Oran, the destroyer stopped to throw life rings to the crew of the enemy plane and reported their position.

After temporary repairs at Oran, *Kendrick* was towed to Norfolk, arriving 26 October. Upon completion of repairs she made a round-trip escort cruise to the United Kingdom before sailing 18 February as convoy escort. Arriving Oran 5 March she prepared for patrol and screening operations, and joined the screen of cruiser *Philadelphia*. For nearly 3 months the destroyer repeatedly provided effective gunfire in support of ground troops advancing up the Italian boot. After Rome was liberated, she stood by to support the Allied drive in northern Italy.

She cleared Palermo 12 August for the invasion of southern France. As a unit of Rear Admiral Deyo's American-French bombardment group, *Kendrick* gave direct fire support to the 36th Infantry Division storming the beaches 15 August. She helped silence German 88mm. guns 15 to 16 August and bombarded gun emplacements and ammunition dumps at St. Madrier, France, 25 to 26 August. Upon completion of her mission the destroyer steamed toward the United States, arriving Boston 19 September.

Kendrick escorted a convoy to the Mediterranean in mid-November, before returning New York 15 December. She joined a convoy and once again departed Norfolk 6 January 1945, reporting for duty with the 8th Fleet 18 January. For the next 4 months she performed air-sea rescue, escort duty, fire support missions, and patrol duty

in the Mediterranean as the war in Europe came to an end. *Kendrick* cleared Oran 15 May with a convoy and put into New York 8 days later. Following repairs at New York and refresher training in Cuba, the destroyer transited the Canal, arriving Pearl Harbor 28 August via San Diego. She engaged in training exercises out of Hawaii before returning Charleston, S.C., 16 October. *Kendrick* remained at Charleston until she decommissioned and joined the Atlantic Reserve Fleet at Orange, Tex., 31 March 1947. On 1 May 1966 her name was struck from the Navy List, and *Kendrick* was used in destruction tests at sea by the David Taylor Model Basin, Carderock, Md.

Kendrick received three battle stars for World War II service.

Kenmore

Home of George Washington's sister Betty.

Kenmore (AP-62) was converted to a hospital ship and renamed *Refuge* (AH-11) (q.v.) 2 September 1943.

I

(AP-162: dp. 12,350; l. 441'6"; b. 56'11"; dr. 24'6"; s. 12.8 k.; cpl. 1,242; a. 1 5", 4 3", 8 20mm.; cl. *Crater*; T. EC2-S-C1)

Kenmore (AP-162) was launched as *James H. McClintock* 30 May 1943 by California Shipbuilding Corp., Wilmington, Calif., under a Maritime Commission contract; sponsored by Mrs. T. J. Bluechel; renamed *Kenmore* 27 October 1943; acquired by the Navy and commissioned 14 November 1943, Lt. Comdr. O. H. Pitts, in command.

Kenmore loaded cargo and departed Oakland, Calif., 22 November, arriving Pearl Harbor 1 December. After repairs at Pearl Harbor, she prepared for the Marshall Islands invasion and departed Hawaii 25 January 1944. Nine days later she arrived off the shores of Majuro Atoll with troops and equipment of the attacking force. The cargo ship returned to Pearl Harbor 21 February to embark garrison troops for the Gilbert Islands, debarking them at Tarawa in March.

After shuttling troops between the Gilberts and Hawaii for the next 2 months, *Kenmore* departed Honolulu 29 May for Kwajalein, the staging area for the invasion of the Marianas. There she loaded troops of the 106th Infantry and arrived with the massive amphibious force in the assault area off Saipan 20 June. After a beachhead was secured, *Kenmore* remained in the area until 8 July unloading cargo and equipment. Throughout the summer she transported troops among the Marshalls, Marianas, and Hawaii.

Reclassified AK-221 on 20 August, *Kenmore* stood out of Honolulu 25 September with cargo and reinforcements for the Palau Islands via Eniwetok, arriving Kossal Roads 29 October. She continued supplying the Pacific Islands with men and equipment for the next 6 months. The cargo ship departed Ulithi 20 April with reinforcements needed for the Okinawa campaign, arriving there 6 days later.

In the closing days of the war, *Kenmore* shuttled troops between California and the Pacific Islands, insuring the already inevitable victory. When hostilities ended 15 August, *Kenmore* was assigned to "Magic-Carpet" duty. She made two cruises between the Islands, China, and San Francisco arriving with her final group 15 December. *Kenmore* remained in San Francisco and decommissioned there 1 February 1946. She was delivered to WSA the same day for return to her owner.

Kenmore received two battle stars for World War II service.

Kenmore, see *President Madison* (AP-62)

Kenmore (AK-221), see *James H. McClintock* (AP-162)

Kenmore, see *Refuge* (AH-11)

Kennebago

A river in western Maine that empties into Mooselookmeguntic Lake.

(AO-81: dp. 5,782 (lt.); l. 523'6"; b. 68'; dr. 30'10"; s. 16 k.; cpl. 267; a. 1 5", 4 3", 4 40mm., 12 20mm., 2 dep.; cl. *Escambia*; T. T2-SE-A2)

Kennebago (AO-81) was laid down under Maritime Commission contract by Marineship Corp., Sausalito, Calif., 9 January 1943; launched 9 May 1943; sponsored by Mrs. W. E. Waste; acquired by the Navy 30 July 1943; converted by Matson Navigation Co., San Francisco, Calif.; and commissioned 4 December 1943, Comdr. B. N. Bock in command.

After shakedown off the West Coast, *Kennebago* carried a cargo of fuel oil and aviation gasoline from San Diego to bases in the Aleutians between 24 January and 19 February 1944. After returning to San Pedro 28 February, she loaded fuel oil and departed for the Marshalls 31 March. Steaming via Pearl Harbor, she reached Majuro Atoll 15 April. Assigned to Service Force, Pacific Fleet, during the next 2 months she made fueling runs among the Marshalls and between the Marshalls and Pearl Harbor.

Following the amphibious invasion of the Marianas 16 June, *Kennebago* departed Eniwetok 19 June to supply fire and support ships with fuel. She arrived off Saipan 22 June, and during the next several weeks refueled fighting ships of the 5th Fleet. She returned to Eniwetok 11 August; and, after loading oil and gasoline, she sailed for the Admiralties the 26th, arriving Manus 31 August.

Kennebago departed 11 September to support invasion operations in the Palaus. During and after the landings, she steamed to the east of the Palaus, refueling escort carriers and fire support ships. She continued replenishment operations between Manus and the Palaus until 7 October, then returned to Manus to prepare for the invasion of the Philippines.

In company with two other fleet oilers, *Kennebago* sortied from Manus 9 October and rendezvoused with carriers of Vice Admiral Mitscher's Fast Carrier Task Force. Steaming in the Philippine Sea, she refueled ships until 23 October. Then she sailed for Ulithi where she arrived the 29th. Operating out of Ulithi, she carried out additional refueling operations east of the Philippines between 12 and 24 November and between 16 and 25 December.

Task Force 38 again departed Ulithi 29 December to cover amphibious landings in Lingayen Gulf, Luzon. Steaming with other logistics ships, *Kennebago* refueled fighting ships at sea while American carrier-based air power pounded enemy air bases from Formosa to Luzon. Between 3 and 9 January 1945, planes from the fast carriers flew more than 3,000 sorties, wrecked havoc on Japanese air defenses, and directly contributed to the success of the Luzon invasion 9 January.

Returning to Ulithi 9 January, *Kennebago* refueled before resuming fuel replenishment operations off Luzon from 15 to 24 January. She arrived Ulithi the 27th; then, from 5 to 11 February, she steamed via Manus to Florida Island, Solomons, for anchorage fueling duty during the next month. Departing Tulagi 20 March, she loaded fuel at Espiritu Santo, New Hebrides, and sailed for Ulithi via Manus 24 March. She reached Ulithi 2 April; after discharging her cargo, she sailed the 6th for the United States and arrived Los Angeles 24 April.

After overhaul at Terminal Island Navy Yard, *Kennebago* departed 12 June for the Western Pacific. Steaming

via San Francisco and Pearl Harbor, she reached Ulithi 4 July and rejoined the logistics ships supporting carrier operations off the coast of Japan. She departed Ulithi 10 July and until 2 August operated in the refueling areas as the mobile carriers ranged Japanese waters, launching strike after strike against targets on Honshu and Hokkaido. She returned to Ulithi 5 August for refueling, then continued at sea replenishment off Honshu from 8 to 28 August.

Following the Japanese surrender, *Kennebago* operated out of Okinawa from 19 September to 5 October. Loaded with fuel oil, she steamed to Taku, China, arriving 9 October. During the next 2 months she served at Taku and fueled ships of the 7th Fleet as American Naval forces assisted Nationalist Chinese troops during the struggle against the Communist Chinese for control of China. Departing Taku 14 December, she steamed via Yokosuka, Japan, to Pearl Harbor, arriving the 28th. Between 26 January 1946 and 14 February she returned to the Far East, carrying fuel to Yokosuka and Hong Kong. She departed Hong Kong 17 February for the United States; and after reaching San Francisco 7 March, she sailed the 28th for the East Coast. *Kennebago* arrived Boston 19 April and decommissioned there 19 July.

Transferred to the Maritime Commission 24 May 1947, *Kennebago* was reacquired by the Navy and assigned to MSTs 1 October 1949. She reactivated in September 1950, and, during the war to repel Communist aggression in Korea, she carried vital oil to bases in the Far East. During the following years, in response to intermittent threats to world peace by nations under Communist control, she helped support the might of American sea power in the Atlantic, Pacific and Mediterranean. On 27 November 1957 she was inactivated at Beaumont, Tex., and transferred to the Maritime Administration the same day. She was returned to MSTs control 23 May 1958 and reactivated for logistics duty in the Pacific. She provided refueling services during supply operations to American bases located in the Arctic. During late 1958 and early 1959 she supported the mighty 6th Fleet in the Mediterranean. She returned to New York 22 May 1959, transferred to the Maritime Administration 23 June and entered the National Defense Reserve Fleet in James River, Va. She transferred to the Army 20 May 1966 for use as a floating power plant in South Vietnam.

Kennebago received six battle stars for World War II service.

Kennebec

A river in central and southern Maine flowing from Moosehead Lake to the Atlantic.

I

(Gbt : t. 507' : l. 158' ; b. 28' ; dr. 10'3'')

The first *Kennebec* was launched 5 October 1861 by G. W. Lawrence, Thomaston, Maine; and commissioned at Boston Navy Yard 8 February 1862, Lt. John H. Russell in command.

The new gunboat was assigned to Admiral Farragut's newly created West Gulf Blockading Squadron and stood out to sea 12 February 1862. She reached Ship Island, Miss., 5 March and 3 days later crossed the bar at Pass a l'Outre and entered the Mississippi.

In the ensuing weeks she did reconnaissance and patrol duty, occasionally engaging Confederate ships chasing them upstream. On 28 March she and *Wissahickon* steamed up the river within sight of Fort Jackson and found the cable-linked line of hulks which the South had placed across the river to bar Farragut's invaders. After Southern batteries at the Fort opened a rapid fire on the gunboats, they retired down the river; but, from time to time thereafter, they steamed up to learn more about the Southern defenses while Farragut made ready to attack.

On 18 April a flotilla of Mortar schooners under Commander David Dixon Porter opened a steady fire on Forts

Jackson and St. Philip, and maintained the barrage until it reached a crescendo on the night of 24 April as Farragut in *Hartford* led his fleet past the forts. *Kennebec*, in the gunboat division commanded by Captain Henry H. Bell, became entangled in the line of rafts which obstructed the river and struck one of the Confederate schooners. This delayed her until Admiral Farragut had completed his dash, enabling the Confederate guns fire to concentrate their fire on *Kennebec*, *Itasca* and *Winona*. As dawn had made their ships even more vulnerable targets, their commanders ordered the crews to lie flat on the decks while the gunboats drifted down stream out of action. However, *Kennebec's* disappointment was softened 4 days later when she was on hand to see the Stars and Bars at Fort Jackson lowered and the Stars and Stripes raised in their place.

Patrol and convoy duty up and down the Mississippi occupied *Kennebec* for the next 2 months. She was with Farragut below Vicksburg 25 June, and began a bombardment of the Confederate batteries there the next day. She remained below with *Brooklyn* continuing the shelling until Farragut had safely run by the Southern guns on the 28th and joined Flag Officer Davis above Vicksburg. The gunboat engaged batteries and snipers ashore for 2 days before heading down stream to resume escort and patrol duty. The tricky waters of the Mississippi ever threatened to fling the gunboat hard aground in hostile territory; and Confederate cannon and riflemen lay hidden ashore waiting to harass the Union ships and their men.

On 9 August *Kennebec* headed for the open sea for blockade and cruising duty in the Gulf. From time she exchanged fire with shore batteries and shelled targets ashore. She helped capture schooner *Jupiter* 4 May 1863 and took schooner *Hunter* on the 17th. Steamer *William Bayley* fell prey to the vigilant blockader 18 July. She shared in the capture of schooner *Winona* off Mobile 29 November and she took schooner *Marshall J. Smith* laden with 260 bales of cotton 9 December. On the last day of 1863, she made a prize of steamer *Grey Jacket* after the blockade runner had slipped out of Mobile laden with cotton, rosin, and turpentine for Havana. She then took schooner *John Scott* after an 8-hour chase 7 January 1864.

The conquest of Mobile was Farragut's next major objective. *Kennebec* helped blockade the port during the spring and summer of 1864, tightening the noose around the valuable Southern port. One of her most daring exploits of the war occurred during this duty. On 30 June *Glasgow* had forced blockade-running steamer *Ivanhoe* to run aground near Fort Morgan 30 June. Because the steamer was protected by the fort's guns, Rear Admiral Farragut attempted at first to destroy her by long range fire from *Metacomet* and *Monongahela*. When this proved unsuccessful, Farragut authorized his Flag Lieutenant, J. Crittenden Watson, to lead a boat expedition to burn *Ivanhoe*. Under the cover of darkness and the ready guns on board *Metacomet* and *Kennebec*, Watson led four boats directly to the grounded steamer and fired her in two places shortly after midnight 6 July. Farragut wrote: "The admiral commanding has much pleasure in announcing to the fleet, what was anxiously looked for last night by hundreds, the destruction of the blockade runner ashore under the rebel batteries by an expedition of boats . . . the entire conduct of the expedition was marked by a promptness and energy which shows what may be expected of such officers and men on similar occasions."

On the morning of 5 August Admiral Farragut was ready to attack Mobile. *Kennebec* was lashed alongside *Monongahela* when the Union ships got underway shortly after 6 A.M. An hour later the guns at Fort Morgan opened fire and Confederate steamers *Morgan* and *Gaines* soon joined them. Undaunted Farragut's ships steamed steadily ahead and answered as they came within range. After an hour of fighting, the South's ironclad ram *Tennesses* passed across *Monongahela's* bow and struck *Kennebec's* bow; glanced off; and fired into the gunboat's berth deck as she pulled away, wounding four members

of *Kennebec's* crew but doing little damage to the ship. *Kennebec* then cast off from *Monongahela* and steamed up the bay. By mid-morning all major Confederate opposition afloat had been destroyed or captured; and the rest of the day was spent rounding up Southern merchant ships. *Kennebec* chased several and captured schooner *Corina*.

On 8 August Fort Gaines surrendered; and *Kennebec* turned her attention to shelling Fort Morgan until that valiantly-defended southern stronghold surrendered on the 23d. After repairs at Pensacola, *Kennebec* sailed for the Texas coast 10 March 1865 and remained on blockade there until the Confederacy collapsed. Off Galveston she engaged in one of the last actions of the war. On 24 May blockade runner *Denbigh*, once described by Admiral Farragut as "too quick for us," was found aground at daylight on Bird Key Spit, near Galveston. She had attempted to run into the Texas port once again under cover of darkness. She was destroyed during the day by gunfire from *Cornubia* and *Princess Royal*, and later boarding parties from *Kennebec* and *Seminole* set her aflame. Prior to the capture of Mobile Bay, *Denbigh* had plagued Farragut by running regularly from Mobile to Havana.

After the war ended, *Kennebec* remained off the Texas coast providing stability as Union authority was restored and keeping an eye on events in Mexico, where French intervention had violated the Monroe Doctrine. She headed eastward 6 July, stopped at Pensacola a week, and reached Hampton Roads on the 23d. Five days later she sailed North and reached Boston 1 August. *Kennebec* decommissioned at Boston Navy Yard 9 August and was sold at New York 30 November 1865.

II

(AO-36: dp. 21,100; l. 501'5"; b. 68'; dr. 30'2"; s. 16.5 k.; cpl. 214; a. 1 4", 2 3", 2 dep.; cl. *Kennebec*; T. T2-A)

The second *Kennebec* (AO-36) was launched as *Corsicana* 19 April 1941 by Bethlehem Steel Shipbuilding Corp., Sparrows Point, Md.; sponsored by Mrs. E. Rolfe Brown; renamed *Kennebec* 9 January 1942; acquired by the Navy from the Maritime Commission 13 January 1942; and commissioned 4 February 1942, Comdr. S. S. Reynolds in command.

Kennebec departed 11 February 1942 and joined the Service Force of the U.S. Atlantic Fleet. The fleet oiler arrived New Orleans 27 February and commenced oil runs from Gulf ports to depots along the Atlantic coast and South America. *Kennebec* was almost constantly at sea, supplying the fleet from Brazil to Newfoundland with vital fuel oil, kerosene, diesel oil, and aviation gasoline. She departed Norfolk 4 May for fueling operations in the Caribbean, then resumed coastal oil runs throughout the summer.

Kennebec cleared Hampton Roads, Va., 24 October to provide logistic support to the American invasion fleet in the North African campaign. The fleet oiler arrived off French Morocco 7 November and operated with a carrier formation near the coast, remaining there until the landings were completed. She sailed for Norfolk 14 November, arriving there 12 days later to continue her coastal fuel runs. She made another cruise to Casablanca in January 1943 with a cargo of gasoline for the continuing operations in North Africa.

Upon her return to Norfolk 14 February, *Kennebec* resumed fuel runs from Port Arthur, Tex., to various ports along the Atlantic coast. She continued these operations for 11 months, including another cruise to Casablanca in October. On 18 January 1944, she cleared Bayonne, N.J., to fuel ships of convoys bound to and from the United Kingdom. The fleet oiler returned to New York 13 February and commenced regular runs from Gulf and Atlantic ports to North Africa and the Caribbean. She made a total of four cruises to the submarine-infested waters of the Mediterranean during the year carrying oil and gasoline to support the fleet in that area.

Following an overhaul at Norfolk in January 1945, *Ken-*

nebec cleared Norfolk 5 February for fueling operations in the West Indies. She sailed 28 March for another cruise to Oran and after discharging her cargo reported for duty in the Azores 15 April. The oiler returned Norfolk 28 May and resumed coastal fuel runs until 20 July when she departed Galveston, Tex., for the Pacific. She arrived in Japan 9 September via Pearl Harbor and Adak, Alaska, for duty as a station tanker supporting the occupation forces in the Far East. She remained there for 10 months replenishing the fleet in China and Japan with oil from Bahrein, Saudi Arabia. She cleared Shanghai, China, 8 July 1946 and put into Bremerton, Wash., 29 July for a much needed overhaul.

From 1947 to 1950 *Kennebec* was assigned to the Naval Transport Service, and circled the globe providing fuel to American ships from oil depots in Saudi Arabia, Aruba, and Texas. She operated both in the Atlantic and Pacific during this period, acting as the "lifeline" in the era of mobile seapower. Following coastal operations between California and Alaska, the oiler decommissioned at San Diego 4 September 1950.

Kennebec was recommissioned at Oakland 11 January 1951, Comdr. A. G. Beckman in command. Assigned to MSTs, she cleared San Pedro 9 March on the first of four fuel runs to the Hawaiian Islands that year. The oiler also replenished coastal ports in Washington, Oregon, and Alaska. For the next 3 years, *Kennebec* shuttled oil to Hawaii and Alaska staging areas for the supply runs to the Korean battle zone. In addition to the increased activity in the Pacific because of the Communist aggression in Korea, *Kennebec* also made two cruises to the Caribbean before decommissioning at San Diego 25 September 1954.

Kennebec (T-AO-36) recommissioned 14 December 1956 at San Diego, Comdr. Naden F. Stimac in command. Following a cruise to Pearl Harbor 1-15 January, the oiler transited the Panama Canal and arrived Norfolk 10 February. She made six logistics cruises between Aruba in the Dutch Antilles to Norfolk before departing Bermuda 11 May for the Mediterranean. After supplying ports in Spain and Italy, she transited the Suez Canal to pick up fuel cargo in Arabia. She unloaded her cargo at Japan, then returned to the Atlantic to participate in the NATO exercise "Strikeback" during September. *Kennebec* returned to New York 12 October and decommissioned 31 October 1957. She was struck from the Navy List 14 January 1959.

As a result of the Berlin crisis, President Kennedy ordered an augmentation of the military forces. *Kennebec* was reacquired by the Navy and recommissioned 16 December 1961. She cleared New York 19 January, picked up cargo at Aruba and arrived at her new home port San Francisco 15 February. The oiler engaged in replenishment operations until June when she put into Hunter's Point for an extensive overhaul.

The overhaul was completed 5 January 1963, and *Kennebec* departed San Francisco 25 February 1963 for the Far East. She arrived Sasebo 1 April and commenced operations with the 7th Fleet peacekeeping force. The oilers played an important role of increasing the mobility of the fleet, a powerful factor helping to prevent crises from exploding into war. She returned to San Francisco 7 August and operated along the West Coast for the rest of the year. *Kennebec* departed San Francisco 21 March 1964 for another Far East deployment to replenish units of the mighty 7th Fleet. During the summer, the North Vietnamese Communist Navy decided to test the determination of the United States by firing on U.S. destroyers in international waters off the coast of Vietnam. On 4 August, President Johnson ordered the Navy to retaliate by destroying North Vietnamese naval bases and oil depots. *Kennebec* remained in the South China Sea through August until the crisis eased, and she returned to San Francisco 21 October.

During ensuing years, *Kennebec* continued to alternate operations along the West Coast with Far Eastern deployment. For example, she returned from the Orient 18 June 1966 after a cruise in which she had fueled many of the

USS *Kennebec* (AO-36) on 4 October 1942

Navy's ships fighting off Vietnam. Then she operated out of San Francisco until heading back to the Far East 10 January 1967. She operated out of Subic Bay supporting the effort to thwart Communist aggression in south-east Asia until returning to San Francisco 8 September.

Kennebec received one battle star for World War II service.

Kennedy

John Pendleton Kennedy was Secretary of the Navy in 1852 and 1853. See *John P. Kennedy*.

(DD-306: dp. 1,190; l. 314'5"; b. 31'5"; dr. 9'3"; s. 35 k.; cpl. 95; a. 4 4", 1 3", 12 21" tt.; cl. *Clemson*)

Kennedy (DD-306) was launched 15 February 1919 by Bethlehem Shipbuilding Corp., San Francisco, Calif.; sponsored by Mrs. Eugene F. Essner; and commissioned 16 August 1920, Lt. Comdr. C. J. Parrish in command.

Kennedy arrived in San Diego, her homeport, 7 October 1920 and joined the Pacific Fleet in exercises and maneuvers along the West Coast from the Pacific Northwest

to South America. Gunnery drills, torpedo practice, plane-guard duty, fleet problems, and war maneuvers with the Army kept *Kennedy* busy at sea, perfecting the techniques of naval warfare which were to make possible the great victories of World War II.

During the spring of 1924, the destroyer transited the Panama Canal for fleet concentrations in the Caribbean. She returned San Diego 22 April to resume operations of her homeport. She sailed 13 June 1925 for a fleet problem and joint exercises off Hawaii. During this cruise she accompanied the Battle Fleet to Pago Pago, Samoa, and ports in Australia and New Zealand, returning San Diego 26 September. In 1927 she revisited the Caribbean for more exercises, this time calling at Norfolk and New York before returning San Diego 22 May. *Kennedy* sailed once again 9 April 1928 for large scale maneuvers in Hawaiian waters, resuming operations out of San Diego 2 months later.

After training cruises for reserves during the summer of 1929, *Kennedy* arrived San Diego 27 September and decommissioned there 1 May 1930. Her hulk was sold 19 March 1931 and scrapped in accordance with the terms of the London Treaty limiting naval armament.

(DD-850)

Kennesaw

A town in Cobb County in northwest central Georgia, 22 miles northwest of Atlanta, nearby where Union forces under General W. T. Sherman defeated Confederate troops under General Joseph Johnston defending Atlanta in the Battle of Kennesaw Mountain late in June 1864.

(YTB-255: dp. 415; l. 110'; b. 27'; dr. 11'4"; s. 12 k.; a. 2.50 cal. mg.)

Kennesaw was laid down as YT-255; reclassified YTB-255 on 15 May 1944; and launched 30 September 1944 by William F. Stone & Sons., Oakland, Calif.; sponsored by Mrs. Mary Ehrhorn; and assigned to the 11th Naval District. She operated there as a service craft until struck from the Navy List 1 February 1960.

Kenneth D. Bailey

Kenneth Dillion Bailey, born 21 October 1910 in Pawnee, Okla., was commissioned Second Lieutenant in the U.S. Marine Corps 10 July 1935. Assigned to various sea and shore billets before the outbreak of World War II, he served with the Marine detachment on board *Pennsylvania* (BB-38) from 2 June 1938 to 14 July 1940. Transferred 30 April 1942 to field duty in the Pacific with the 1st Marine Raider Battalion, he was promoted to Major 18 May. During the invasion of Tulagi, Solomon Islands, 7 August, he led a successful assault against an enemy machine gun nest. Although seriously wounded, he directed the action of his company until forcibly evacuated. For his "conspicuous gallantry and intrepidity," Major Bailey was awarded the Silver Star.

As commanding officer of Company C, 1st Raider Battalion, he led his men in repulsing a Japanese attack, which had penetrated American lines during the Battle of Bloody Ridge, Guadalcanal, 12 to 14 September. Despite a severe head wound, he directed his men for more than 10 hours of fierce hand-to-hand fighting. "His great personal valor while exposed to constant and merciless enemy fire, and his indomitable fighting spirit inspired his troops to heights of heroic endeavor which enabled them to repulse the enemy and hold Henderson Field." Killed 26 September while heading his men in an attack on the enemy at the Matanikau River, Guadalcanal, Major Bailey was posthumously awarded the Medal of Honor and the Presidential Unit Citation.

The name *Kenneth D. Bailey* was assigned to DE-552 on 30 November 1943; cancelled 10 June 1944; and reassigned to DD-713 on 8 July 1944.

I

(DD-713: dp. 2,425; l. 390'6"; b. 41'1"; dr. 18'6"; s. 35 k.; cpl. 336; a. 6 5", 16 40 mm., 20 20mm., 5 21" tt., 6 dcp., 2 dct.; cl. *Gearing*)

Kenneth D. Bailey (DD-713) was launched 17 June 1945 by Federal Shipbuilding & Drydock Co., Kearny, N.J.; sponsored by Elizabeth Speissegger Bailey, widow of Major Bailey; and commissioned 31 July 1945, Comdr. G. H. Richards, Jr., in command.

After shakedown in the Caribbean, *Kenneth D. Bailey* operated in the Atlantic from the New England coast to the Caribbean. Working out of Newport, R.I., and Norfolk, Va., she served as plane guard during the qualification of pilots in carrier operations and trained men for the crews of new destroyers. From 13 February to 26 March 1947 she cruised along the eastern coast of South America and returned to Norfolk 31 March.

On 10 November *Kenneth D. Bailey* departed Norfolk on the first of many Mediterranean cruises during the Cold War. While deployed with the mighty 6th Fleet, she has strengthened American naval power during its constant vigil to maintain peace, preserve freedom, contain Communist expansion, and keep the Middle East facing west. From 13 December to 5 January 1948, she patrolled the coast of Greece to insure Greek independence despite Communist aggression. While operating in the Mediterranean from 13 January to 12 May 1949, she supported the still unsettled truce in Israel and helped to maintain peace between Italy and Yugoslavia during their struggle for Trieste. Again, from 3 September 1951 to 4 February 1952, she ranged the Mediterranean from Spain to Turkey to maintain the freedom of the nations which rim that ancient sea.

When not deployed with the 6th Fleet, *Kenneth D. Bailey* joined operations that carried her from the Caribbean and the reaches of the Arctic Ocean to the shores of Northern and Western Europe. Undertaking a variety of duties, she trained naval reservists, served as plane guard and screen during carrier operations, and participated in cold weather exercises north of the Arctic Circle. On 2 December 1952 she entered the Boston Naval Shipyard for modernization and conversion to a radar picket destroyer and decommissioned on the 22d.

Redesignated DDR-713, *Kenneth D. Bailey* recommissioned 29 August 1953, Comdr. W. D. Gaddis in command. Based at Newport, she operated along the East Coast, then deployed with the 6th Fleet 19 May 1954. Before returning to Newport 28 September, she participated in joint NATO operations in the Eastern Mediterranean. She again deployed to the Mediterranean from 5 November 1955 to 17 March 1956, and in February 1956 she patrolled the Red Sea along Israeli and Egyptian coasts to express U.S. concern over the mounting Suez crisis. In April 1957 she cruised the eastern Mediterranean in support of King Hussein's pro-Western Jordanian government, then threatened by Communist subversion. And while on her next deployment (2 September 1958-28 March 1959), she supported U.S. operations in Lebanon, begun in July 1958 at the request of Lebanese President Chamoun, who feared a Communist coup.

Kenneth D. Bailey shifted her homeport from Newport to Mayport, Fla., 16 June 1959. After completing destroyer operations in the Atlantic, she entered Charleston Navy Yard 26 January 1960 for a 9-month FRAM II overhaul that equipped her with new radar, sonar, and communication facilities. She returned to Mayport 27 October well prepared to help maintain American security on the seas. She sailed 14 November for waters off Guatemala and Nicaragua to establish barrier patrols to prevent the landing of Cuban supplies and armed forces during small-scale revolts in those Central American nations. She continued this important duty until 4 December, then returned to Mayport 18 December to prepare for further service in the Mediterranean.

Departing Mayport 9 February 1961, *Kenneth D. Bailey* arrived Gibraltar 18 February to commence 6 months of Fleet and NATO operations that carried her from the coast of France to the shores of Greece, Turkey, and Lebanon. Since that time, she has deployed to the Mediterranean four times within 4 years to support the Fleet's peace-keeping mission. Returning from her latest deployment 26 October 1966, this versatile destroyer remained off Mayport, Fla., until 12 April 1967 when she arrived at Charleston, S.C., for overhaul, where she remains into the fall of 1967.

Kenneth L. McNeal

A former name retained.

(SP-333: t. 331; l. 160'; b. 24'; dr. 12'; s. 11 k.; cpl. 24; a. 1 3")

Kenneth L. McNeal, a fishing boat, was built by M. M. Davis of Solomon's Island, Md., in 1913; sold to the Government by her owner, McNeal Dodson Co., Inc., of

Readville, Va., 31 May 1917; delivered to the Navy 14 June at Norfolk; and commissioned 10 August, Lt. (j.g.) C. B. Byrne in command.

Fitting out as a minesweeper, *Kenneth L. McNeal* departed Norfolk 17 August for Boston. On the 26th she sailed from Boston for Brest, France, where she arrived 9 September and commenced minesweeping patrols and coastal escorts along the Brittany coast from Vannes to St. Brieu. Damaged while operating out of Brest on patrol in February 1919, she was offered for sale 11 May. *Kenneth L. McNeal* decommissioned at Brest 8 September and was sold to Union d'Entreprises Marocaine of Casablanca, French Morocco.

Kenneth M. Willett

Kenneth Martin Willett, born 9 April 1919 in Overland, Mo., enlisted in the Naval Reserve as an apprentice seaman 9 July 1940. Appointed to the Naval Reserve Midshipmen's School 9 August, he was commissioned Ensign 14 November and assigned to *California* (BB-44), where he served until 24 November 1941. He then reported to the 12th Naval District for duty at the Armed Guard Center, San Francisco, 22 January 1942. While serving as commanding officer of the Naval Armed Guard on board freighter SS *Stephen Hopkins*, he was promoted to Lieutenant (j.g.) 15 June.

While en route from Capetown, South Africa, to Paramaribo, Dutch Guiana, *Stephen Hopkins* was attacked 27 September by two enemy surface raiders. Though seriously wounded by one of the first enemy shells, Lt. Willett courageously manned the 4-inch gun and fired shell after shell into the nearer, more heavily armed raider. Inflicting heavy damage on both enemy ships, his accurate fire eventually sank one of them. Even after an exploding magazine silenced his gun, Lt. Willett refused to give up his struggle for both ship and crew. When last seen, although weakened and suffering, he was helping to launch life rafts from the flaming freighter in a desperate effort to save lives. For his "great personal valor and gallant spirit of self-sacrifice," Lt. Willett was posthumously awarded the Navy Cross.

(DE-354: dp. 1,350; l. 306'; b. 36'8"; dr. 9'5"; s. 24 k.; cpl. 186; a. 2 5", 4 40mm., 10 20mm., 3 21" tt., 9 dep., 2 dct.; cl. *John C. Butler*)

Kenneth M. Willett (DE-354) was launched 7 March 1944 by Consolidated Steel Corp., Orange, Tex.; sponsored by Mrs. D. C. Willett, mother of Lt. (j.g.) Willett; and commissioned 19 July 1944 at Orange, Lt. Comdr. J. M. Stuart in command.

After shakedown and training off Bermuda, *Kenneth M. Willett* served as a training ship in the Chesapeake Bay from 1 to 20 October. Joining CortDiv 82, she departed Norfolk 21 October for duty in the Pacific with the 7th Fleet. Steaming via the Panama Canal, the Galapagos Islands, and the New Hebrides, she reached Hollandia, New Guinea, 28 November.

Assigned to convoy escort duty between Humboldt Bay, New Guinea, and Leyte Gulf, Philippines, *Kenneth M. Willett* made seven trips from 13 December 1944 to 25 February 1945. On 1 January 1945, while she screened a convoy to Hollandia, *Kenneth M. Willett's* guns brought down an attacking enemy torpedoplane close aboard one of the merchant ships.

Upon arriving Leyte Gulf 25 February, the destroyer escort was assigned to patrol and ASW duty. Steaming to Mangarin Bay, Mindoro, 6 March, she made hunter-killer patrols off Mindoro and Luzon, then returned to Leyte Gulf 4 June for escort duty between Leyte and Ulithi, Western Carolines. After two runs to Ulithi, she resumed patrol duty off Mindoro 2 July; and on the 10th she returned to Leyte for a convoy escort run to Okinawa.

Departing 17 July with a convoy of LCI's and LST's, *Kenneth M. Willett* steamed via Casiguran Bay, Luzon, for the Ryukyus. After safely passing through a typhoon

30 to 31 July, the convoy reached Okinawa 7 August. *Kenneth M. Willett* departed the next day for Leyte. During the next 16 weeks she made convoy runs out of Leyte and Manila to Ulithi, Tokyo, and Shanghai. And from 29 December to 29 January 1946 she operated out of Guiuan Roadstead, Samar, on intermittent weather patrols east of Leyte Gulf.

Steaming to Manila 10 February, *Kenneth M. Willett* cleared the bay 15 February for patrol duty along the Chinese coast. She arrived Tsingtao 20 February with five other destroyer escorts and commenced operations from the Yellow Sea to Shanghai in support of Chinese Nationalists' efforts to wrest control of the northern Chinese Mainland from the Communists. Following ASW operations in the North Yellow Sea 1 to 5 April, she departed Tsingtao 15 April en route to the United States. Steaming via Guam, Eniwetok, and Pearl Harbor, she arrived San Pedro 11 May. She decommissioned 24 October and entered the Pacific Reserve Fleet at San Diego 10 November.

During the Korean War *Kenneth M. Willett* recommissioned 25 May 1951 at San Diego, Lt. Comdr. E. N. Weatherly in command. After shakedown along the California coast, she departed San Diego 4 September and steamed via the Panama Canal en route to New Orleans, where she arrived 18 September for duty as a Naval Reserve training ship. Assigned to the 8th Naval District, she departed 5 November on a Naval Reserve cruise to San Juan, P.R. From then until 16 October 1958 she made 63 training cruises that carried her from New Orleans to South America, Canada, the eastern seaboard of the United States, and throughout the Caribbean. During this time she rendered vitally important service, making certain that men of the Naval Reserve remained qualified to serve on a moment's notice to guard the nation's security on the high seas.

Upon her arrival from Havana, Cuba, 16 October 1958 *Kenneth M. Willett* completed her final training cruise. She departed New Orleans 30 November, arriving Orange, Tex., the following day. She then operated out of Orange until decommissioning 26 February 1959. Assigned to the Atlantic Reserve Fleet, she at present is berthed at Philadelphia.

Kenneth Whiting

Kenneth Whiting, born at Stockbridge, Mass., 22 July 1881, was appointed Naval Cadet 7 September 1900. He was commissioned Ensign 25 February 1908 after attending the Naval Academy and serving the required sea duty. Whiting then became qualified in submarines, subsequently commanding *Porpoise*, *Shark*, *Tarpon*, and *Seal*. In 1914 his interest turned to aviation. After learning to fly under Orville Wright, he was designated Naval Aviator 16. As a true pioneer of naval aviation, he assumed command of the 1st Naval Air Unit in France following America's entry into World War I. Lt. Comdr. Whiting was then assigned to command Naval Air Stations 14 and 15 at Killingholme, England. For this service he was awarded the Navy Cross "for exceptionally meritorious service in a duty of great responsibility."

After the war his interest in and support of aviation was partially responsible for the conversion of collier *Jupiter* into the Navy's first aircraft carrier *Langley*. He continued active participation in naval aviation, commanding *Langley* and *Saratoga*, and various air squadrons prior to his retirement as Captain 30 June 1940. He was then retained on active duty as General Inspector of Naval Aircraft, Eastern Division until 1943. Captain Whiting was assigned command of the Naval Air Station, New York, 19 February; and held this post until his death 24 April 1943.

(AV-14: dp. 8,510; l. 492'; b. 69'6"; dr. 26'; s. 18.7 k.; cpl. 1,077; a. 2 5", 12 40mm., 16 20mm.; cl. *Whiting*; T. CS)

Kenneth Whiting (AV-14) was launched 15 December 1943 by Seattle-Tacoma Shipbuilding Co., Seattle, Wash.;

sponsored by Mrs. Kenneth Whiting, widow of Captain Whiting; and commissioned 8 May 1944, Comdr. R. R. Lyons in command.

After shakedown along the West Coast, *Kenneth Whiting* cleared San Diego 21 July 1944 and arrived Saipan 14 August for operations in the Marianas. Her PB2Y squadron made reconnaissance flights which provided valuable data necessary to the success of the Allied operations. At Tanapag Harbor, Saipan, *Kenneth Whiting* used a former Japanese seaplane ramp to augment the maintenance facilities and increase the availability of planes. She sailed for Kossol Passage 20 November, relieving tender *Pocomoke* there 3 days later. She remained in the Palau Islands until 5 February 1945.

Arriving Ulithi 6 February, *Kenneth Whiting* resumed tending seaplanes. On 11 March while she was still off Ulithi, two enemy suicide planes attacked the base. One crashed into Sorlen Island; but the second dove into *Randolph* (CV-15). The seaplane tender cleared Ulithi 2 April; received provisions and supplies at Guam and Saipan; then steamed to Okinawa, arriving 25 April and immediately commencing combat and search operations. On 11 May her lookout sighted a group of 29 Koreans waving a white flag on the beach of Gerum Shima. An armed boat party from the tender took them into custody for transfer to the POW camp on Zamami Shima. While at Okinawa *Kenneth Whiting* operated as fleet post office and a housing center for aircraft survivors.

At 1830, 21 June, 5 hours after Major General Geiger had declared Okinawa secured, a small group of kamikazes penetrated Kerama Retto. *Kenneth Whiting* knocked down an "Oscar" but part of the plane hit her, causing minor damage and wounding five men. However, she continued operations out of Okinawa for the rest of the war. During July her planes flew armed reconnaissance along the coasts of Japan, Korea, and China locating targets for 3d Fleet raids.

Kenneth Whiting departed Okinawa 19 September and anchored at Sasebo 2 days later. The tender was then assigned to China duty, arriving Hong Kong 14 October. Her VPB squadron commenced patrol courier service, and continued this until she was relieved 28 November. She arrived San Francisco 22 December with 572 Navy officers scheduled for release. With the close of the war and the emergence of the Atomic Age, *Kenneth Whiting* cleared San Diego 6 May 1946 to operate with support forces during Atomic tests at Bikini. She returned to San Diego 30 August; transferred to San Pedro 30 October; and decommissioned there 29 May 1947.

Kenneth Whiting recommissioned at San Diego 24 October 1951, and sailed for Far Eastern duty 13 March 1952. She arrived Yokosuka, Japan, 29 March to assist U.S. naval forces in resisting Communist aggression in Korea. The seaplane tender operated out of Iwakuni until 16 October when she sailed for the United States.

Following overhaul at Bremerton, Wash., and coastal operations out of San Diego, *Kenneth Whiting* sailed 2 March 1953 for another Westpac deployment, supporting seaplane activities out of Japan in the final months of the Korean conflict.

After the war, *Kenneth Whiting* made annual deployments to the Far East in support of the 7th Fleet activities. During the summer of 1955, she operated in the Formosa-Pescadores area in the wake of repeated Communist harassment on Chinese Nationalist-held islands. On 29 March 1957 she arrived at her new home port Crescent Harbor, Wash., but sailed for another Far Eastern tour 12 August. She continued operations with the 7th Fleet until 31 January 1958 when she cleared Subic Bay, P.I., and returned Crescent Harbor, Wash., 10 March. *Kenneth Whiting* decommissioned at Puget Sound 30 September, and was struck from the Navy List 1 July 1961, and sold 21 February 1962 to Union Minerals & Alloy Corp.

Kenneth Whiting received two battle stars for World War II.

Kennison

William W. Kennison, born 28 February 1828 in Massachusetts, was appointed Acting Master's Mate 28 August 1861. Durig the Civil War he was promoted to Volunteer Lieutenant for gallant conduct in action between the CSS *Merrimac* and the USS *Cumberland* 7 March 1862. Following the war, he was honorably discharged 4 May 1866, but was reappointed Acting Master 20 August 1866. His final muster out date was 16 November 1868.

(DD-138: dp. 1,154; l. 314'5"; b. 31'9"; dr. 9'; s. 35 k.; cpl. 113; a. 4 4", 2 3-pdrs., 1 1-pdr., 12 21" tt.; cl. *Wickes*)

Kennison (DD-138) was launched 8 June 1918 by the Mare Island Navy Yard, Vallejo, Calif.; sponsored by Miss Elizabeth Riner; and commissioned 2 April 1919, Comdr. R. P. Enrich in command.

Following completion, shakedown, and acceptance trials, *Kennison* arrived San Diego, her home port, 25 March 1920. During the summer she engaged in experimental torpedo and antiaircraft exercises. The destroyer continued coastal operations and tactical exercises until 12 August 1921 when she put into San Diego with 50 percent complement. She decommissioned at San Diego 22 June 1922.

Recommissioned 18 December 1939, Lt. W. G. Michelet in command, *Kennison* joined the Neutrality Patrol out of San Diego 6 May 1940. From June to September she engaged in reserve training cruises before rejoining the Neutrality Patrol 14 October. The destroyer continued patrol operations along the West Coast until the United States entered World War II. As the war effort increased in early 1942, *Kennison* intensified her ASW operations including escort of convoys and submarines to various California ports until 22 September 1944 when she sailed for Bremerton to undergo conversion.

Redesignated AG-83, *Kennison* returned to San Diego 9 November 1944 to resume service. For the rest of the war she operated out of San Diego as a target ship for plane exercises with aerial torpedoes. These exercises, provided invaluable training to Navy pilots preparing for combat. Following the war *Kennison* sailed for the East Coast, arriving Norfolk late October. She decommissioned 21 November 1945 at Portsmouth, Va. She was sold 18 November 1946 to Luria Bros. & Co., Inc., Philadelphia, Pa., and scrapped.

Kenosha

A county in Wisconsin.

Kenosha (ScStr) was renamed *Plymouth* (q.v.) on 15 May 1869.

(AK-190: dp. 7,450; l. 338'7"; b. 50'; dr. 21'1"; s. 12 k.; cpl. 85; a. 1 3", 6 20mm.; cl. *Alamosa*)

Kenosha (AK-190) was launched 25 August 1944 by Walter Butler Shipbuilding Co., Superior, Wis., under a Maritime Commission contract; sponsored by Miss Marion Crowley; acquired by the Navy 1 August 1945; and commissioned 7 September 1945, Lt. S. Bernsen in command.

After shakedown out of Galveston, Tex., *Kenosha* arrived Gulfport, Miss., 19 October to load cargo for the Marianas. The cargo ship departed Gulfport 25 November, cleared the Panama Canal, and arrived Guam via Pearl Harbor 10 January 1946. Upon discharging her cargo, she loaded cargo for the Marines and sailed for the East Coast, arriving Lynnhaven Roads, Va., 7 March. On 3 April *Kenosha* arrived Baltimore and decommissioned there 16 April 1946. She was returned to a Norwegian shipping firm in 1947, and renamed *Rio Dale*. She was renamed *Torian* in 1959.

Kensington

Former names retained.

(Ship: t. 357; dr. 15'; a. none)

The first *Kensington* was a wooden, ship-rigged vessel purchased by the Navy at New Bedford, Mass., 28 October 1861 for service in the "Stone Fleet." She departed New Bedford 20 November and arrived Port Royal, S.C., by 17 December. She was presumably sunk in the main channel leading into Charleston Harbor 21 December.

II

(ScStr: t. 1,053; l. 195'; b. 31'10"; dr. 18'; s. 10 k.; cpl. 72; a. 2 32-pdrs., 1 30-pdr. P.r.)

The second *Kensington* was built at Philadelphia by J. W. Lynn in 1858 and was purchased by the Navy at Boston 27 January 1862. She commissioned at Boston Navy Yard 15 February, Acting Master Frederick Crocker in command.

The wooden steamer departed Boston 24 February for the Gulf of Mexico, but heavy winds, rough seas, and engine trouble required her to stop at Charleston for repairs. While at Charleston she was of great service to ships of the North Atlantic Squadron furnishing them with fresh water. The supply and water vessel resumed her voyage in April and joined the West Gulf Blockading Squadron at New Orleans 4 May. After bringing water and supplies to Flag Officer Farragut's ships blockading the Gulf Coast, *Kensington* was ordered to ascend the Mississippi towing *Horace Beals* and *Sarah Bruen*, both of Comdr. David D. Porter's Mortar Flotilla. While passing Ellis Cliffs, Miss., the three ships came under fire of Confederate batteries. Their answering salvos silenced the Southern guns enabling the Union force to continue passage to Vicksburg. After placing her charges in position to bombard the cliffside batteries which defended Vicksburg, *Kensington* remained with Porter's flotilla issuing water and supplies and from time to time assisting sailing ships to change positions.

After dropping down the river in mid-July, the water and supply ship visited blockaders stationed along the Louisiana and Texas coast. She joined *Rachel Seaman* and *Henry James* in bombarding Confederate batteries at Sabine Pass, Tex., 24 and 25 September. The action was broken off when defending troops spiked their guns and evacuated the fort. Though Sabine Pass surrendered the next day, a shortage of troops prevented the Navy from occupying the area. Nevertheless, this operation and similar attacks were a constant drain on Southern strength, and compelled the Confederacy to disperse its forces widely.

During operations along western Gulf coast in September and October, *Kensington* captured British blockade running schooners *Velocity*, *Adventure*, *Dart*, and *West Florida*. She also took Confederate schooners *Conchita*, *Dart*, and *Mary Ann*; sloop *Eliza*; and steamer *Dan*.

Kensington began her voyage to Pensacola with her prizes 13 October, delivering water en route to blockading ships stationed along the coast of Texas. Arriving Pensacola 24 October, the fighting supply ship began operating from that base, capturing Confederate schooner *Course* 11 November and British schooner *Maria* the next day.

Kensington moved to New Orleans 26 January 1863 and 5 months later set sail for New York for long needed repairs. Back in fighting trim 1 August 1864, *Kensington* functioned as a supply vessel for ships of the North Atlantic Blockading Squadron until 30 November. She sailed from Boston as a transport vessel 7 December visiting Port Royal, Key West, Mobile, Pensacola, and New Orleans. After returning to New York 11 January 1865, *Kensington* made two similar voyages to Southern ports before decommissioning 5 May 1865. She was sold at public auction at New York to Brown & Co. 12 July 1865 and redocumented 31 July.

Kensington sank after colliding with an unknown sailing vessel at sea 27 January 1871.

A former name retained.

(AP-28: dp. 5,341; l. 373'6"; b. 51'6"; dr. 22'8"; s. 12 k.; trp. 751; a. 4 3", 8.50 cal. mg.)

Kent (AP-28) was launched as *Santa Teresa* in November 1918 by William Cramp & Sons Ship & Engine Building Co., Philadelphia, Pa., for her owner, Grace Lines of New York. She operated as a passenger ship between California and the west coast of South America until sold in 1936 to Merchants & Miners Transportation Co., Baltimore, Md. Renamed *Kent*, she made passenger runs along the Atlantic Coast. In April 1941 she was purchased by the Army, renamed *Ernest Hinds*, and converted to a troop transport. She was transferred to the Navy 21 July under her previous name of *Kent* at New York 22 July, Comdr. E. J. Kidder in command.

Departing New York *Kent* sailed 16 August, for Panama and arrived 23 August with military passengers and cargo. Six days later she cleared Coco Solo, C.Z., for New York and arrived 5 September. At New York when the Japanese attacked Pearl Harbor, *Kent* resumed transport duty along the Atlantic coast 22 December. Before returning New York 11 February 1942, she visited Charleston, Bermuda, and New Orleans. She was decommissioned at New York 24 March; turned over to the Army; and struck from the Navy List 8 May 1943. She resumed service with the Army Transport Service as *Ernest Hinds*. Arriving San Francisco from New York in May 1942, she carried troops and supplies throughout the Pacific and sailed to bases in Alaska, Hawaii, the Solomons, the New Hebrides, New Caledonia, and Australia. Returning to San Francisco in September 1943, *Ernest Hinds* was converted to a hospital ship.

Departing San Francisco in June 1944, the hospital ship steamed to Charleston to begin service between the East Coast and Europe. *Ernest Hinds* returned to New York in September 1945; reconverted to a transport; and transferred to the WSA to transport Jamaican laborers between the West Indies and Florida. Transferred to the U.S. Public Health Service in April 1946, she then served as a floating isolation ward at Jacksonville, Fla. Subsequently, she was returned to the Maritime Commission and entered the James River Reserve Fleet. She was scrapped in 1957.

Kent County

Counties in Delaware, Maryland, Michigan, Rhode Island, and Texas.

(LST-855: dp. 1,625; l. 328'; b. 50'; dr. 11'; s. 12 k.; cpl. 266; a. 8 40mm., 12 20mm.; cl. LST-542)

LST-855 was laid down by the Chicago Bridge & Iron Co., Seneca, Ill., 6 September 1944; launched 27 November; sponsored by Mrs. Jean Henning Hoerner; and commissioned 21 December, Lt. (j.g.) Thomas P. Kierl in command.

After shakedown off Florida, LST-855 loaded cargo and departed New Orleans 25 January 1945. Steaming via the Panama Canal and San Diego, she reached Pearl Harbor 28 February. Following repairs and training in Hawaii she sailed 7 April for the Western Pacific. During the remaining months of World War II, she shuttled supplies and equipment among the Marianas, Philippines, and Okinawa staging areas for a possible invasion of Japan. The enemy's acceptance of Allied peace terms precluded an invasion; and the landing ship then operated between the Philippines and Japan, transporting occupation forces until mid-November.

On 20 November LST-855 departed Guam with over 300 U.S.-bound Pacific veterans on board, arriving San Francisco the following month.

Returning to the Far East seven months later, she arrived Taku, China, 16 July 1946 to support U.S. forces in the area. She made cargo runs among Chinese ports, and served in this capacity until 1949. After the Communist

takeover of mainland China, *LST-855* returned to the United States, arriving San Diego 29 July 1949. Operating along the West Coast, the veteran landing ship sailed to Alaska in early September for cargo operations in the North Pacific. She returned Seattle 15 November and decommissioned at Bremerton 15 February 1950.

When Communist aggression in Korea threatened the peace and stability of Asia, the United States acted to halt the advance. To aid in the movement of men and equipment, *LST-855* recommissioned 3 November, Lt. L. J. Parsons in command. After training off the West Coast, she departed Long Beach 26 March 1951 for duty in the Western Pacific. Arriving Pusan, Korea, 23 May she unloaded cargo for the war effort, then sailed for Yokohama, Japan. For the next 4 months she continued cargo operations out of Japan, before making another cargo run to Korea in mid-October. Two months later she embarked North Korean refugees at Paengyang Do and transferred them to Makpo; and in late December she transported troops and vehicles of the 27th Infantry Regiment combat team from Inchon to Koje Do. *LST-855* departed Yokosuka, Japan, 25 February 1952 for a stateside overhaul.

She was back in the Far East 2 November, and resumed cargo operations out of Japan and Korea. For the remainder of the Korean conflict, she shuttled between Korean and Japanese ports as a logistic support ship. Following the July 1953 armistice which ended the fighting, *LST-855* continued cargo runs, operated as a station ship, and transported prisoners of war for repatriation. Returning San Diego 25 September, she operated off the West Coast for the rest of 1953.

The landing ship sailed for another Far East tour 28 May 1954, arriving Yokosuka 1 month later. While operating with 7th fleet units from August to October, she participated in the "Passage to Freedom" Operation. She carried refugees, troops and supplies from Northern Indo China and transported them to the South, where they would establish a free form of government.

LST-855 continued operating in the Far East; and on 6 February 1955 she was en route to the Tachen Islands to evacuate Nationalist Chinese troops to Formosa when their positions could no longer be defended. Loading 300 troops and vehicles, she departed Tachen Islands 10 February; and, after off-loading at Keelung, Formosa, she resumed duties out of Japan.

Returning San Diego 20 April, *LST-855* performed amphibious exercises off the West Coast for the remainder of the year. She was named *Kent County* 15 July 1955. *Kent County* made her final WestPac cruise in August 1956, engaging in amphibious exercises with 7th Fleet units, then returning to the United States 14 May 1957. She performed amphibious exercises off the West Coast and Hawaii until she decommissioned 22 January 1958. *Kent County* was used as a target and destroyed 19 March 1958.

LST-855 received six battle stars for the Korean conflict.

Kent Island

An island in the Chesapeake Bay, Md., where a trading post was established in 1631 by William Claiborne.

(AG-78: dp. 5,766; l. 441'6"; b. 56'11"; dr. 23'; s. 12.5 k.; cpl. 883; a. 1 5", 12 20mm.; cl. *Belle Isle*)

Kent Island (AG-78) was launched 9 January 1945 by New England Shipbuilding Corp., South Portland, Maine, under a Maritime Commission contract; sponsored by Mrs. Nan Hatch; transferred to the Navy 19 January 1945; commissioned the same day, ferried to Todd Shipbuilding Co., Hoboken, N.J.; decommissioned 23 January 1945 for conversion to a barracks and issue ship; and recommissioned 1 August 1945, Comdr. W. C. Ball, USNR, in command.

After shakedown in Chesapeake Bay, *Kent Island* cleared Norfolk 31 August for duty with the Service

Force of the Pacific Fleet. She arrived Pearl Harbor 9 October via San Diego to commence operations in Hawaiian waters. She sailed for Okinawa 17 October to receive Navy veterans for transportation to the United States, and returned San Francisco 30 November. *Kent Island* cleared San Francisco 3 January 1946, transited the Panama Canal, and arrived Hampton Roads 26 January. Following upkeep, she put into Orange, Tex., 15 March where she was placed out of commission in reserve 22 June 1946. She was redesignated AKS-26 on 18 August 1951 and struck from the Navy List 1 April 1960. *Kent Island* was sold to Southern Scrap Material Co. 2 November 1960 to be scrapped.

Kenton

A county in Kentucky.

(APA-122: dp. 6,873; l. 455'; b. 62'; dr. 24'; s. 17 k.; cpl. 536; a. 1 5", 12 40mm., 10 20mm.; cl. *Haskell*; T. VC2-S-AP5)

Kenton (APA-122) was launched 21 August 1944 by the California Shipbuilding Corp., Wilmington, Calif., under a Maritime Commission contract; sponsored by Mrs. Paul A. Everett; acquired by the Navy 31 October on a loan charter basis; and commissioned 1 November at San Pedro, Captain V. B. Tate in command.

Following shakedown along the California coast, *Kenton* departed Seattle 27 December carrying some 1,500 Army troops to Pearl Harbor, arriving 4 January 1945. After amphibious training maneuvers to prepare for operations in the western Pacific, she cleared Pearl Harbor 18 February with troops and equipment for the Philippines on board and arrived Leyte Gulf via Eniwetok and the Palaus 10 March.

After landing rehearsals, *Kenton* departed Leyte 27 March to participate in the Okinawa invasion. She reached Kerama Retto 1 April, unloaded Seabee construction equipment, and proceeded 3 April to Hagushi Beach, Okinawa, to discharge troops and cargo. During an air attack 6 April, *Kenton's* guns claimed two of the seven enemy planes that were shot down. She completed unloading 9 April, embarked 95 battle casualties, and sailed 10 April for Guam, arriving the 14th. She sailed 16 April on a cargo run to the Philippines, then proceeded to Ulithi, Western Carolines, 29 April to embark casualties for passage to the United States. Returning to Guam 24 May, she embarked additional casualties and proceeded the next day en route to San Francisco, where she arrived 12 June.

Kenton departed San Francisco 6 July with troop replacements for the Philippines. She reached Tacloban, Leyte, 29 July; cleared Leyte Gulf 1 August; and returned to Seattle 19 August. Embarking occupation troops for Japan she sailed 29 August, via the Philippines to Yokohama, arriving 24 September. As a unit of the "Magic-Carpet" fleet, she took on board 1,527 homebound troops; departed 29 September; and arrived San Francisco 10 October.

After two additional "Magic-Carpet" cruises to the western Pacific between 28 October and 26 January 1946, *Kenton* departed Portland, Oreg., 28 January for the East Coast. Sailing via San Francisco and the Panama Canal, she arrived Newport News 16 February, decommissioned at Portsmouth, Va., 28 March and transferred to the Maritime Commission the next day. Her name was struck from the Navy List 12 April. *Kenton* was placed in the National Defense Reserve Fleet and in 1967 was berthed in James River, Va.

Kenton received one battle star for World War II service.

Kentuckian

A former name retained.

(SP-1544: dp. 6,582; l. 414'6"; b. 53'8")

Kentuckian was built in 1910 by Maryland Steel Co., Sparrows Point, Md.; acquired by the Navy 16 December 1918; and commissioned 28 January 1919, Lt. Comdr. Carrol E. Higgins, NAR, in command.

Kentuckian was assigned to transport duty as thousands of American World War I veterans were awaiting return to the United States. She cleared New York on her first cruise 2 March 1919, picked up nearly 2,000 troops at St. Nazaire, France, and returned New York 1 April. The transport made a total of five cruises from New York to France, unloading general cargo at France and returning with troops. *Kentuckian* arrived Norfolk 31 August from her final cruise, decommissioned 15 September 1919, and returned to her owners the same day.

During World War II, *Kentuckian* operated with a naval armed guard on convoy runs between the East Coast and the Mediterranean. She won a battle star for her service in convoy HX-233 during April 1943. She was subsequently scuttled as a blockship at the Normandy beachhead.

Kentucky

Kentucky was admitted to the Union 1 June 1792 as the 15th state.

The Mississippi Flotilla captured Confederate transport *Kentucky* (q.v.) at Memphis 6 June 1862. The *Navy Register* for 1863 listed her as assigned to the Mississippi Squadron but no other record of her service in the Union Navy has been found.

(BB-6; dp. 11,520; l. 375'4"; 72'2½"; s. 16.9 k.; cpl. 554; a. 4 13", 4 8", 14 5", 20 6-pdrs., 8 1-pdrs., 4 .30 mg., 4 18" tt.; cl. *Kearsarge*)

Kentucky (BB-6) was launched 24 March 1898 by Newport News Shipbuilding & Dry Dock Co., Newport News, Va.; sponsored by Miss Christine Bradley, daughter of Governor William Bradley of Kentucky; and commissioned 15 May 1900, Captain Colby M. Chester in command.

After fitting out in New York Navy Yard during the summer, *Kentucky* sailed 25 October 1900 for the Far East via Gibraltar and the Suez Canal. She joined the

other American ships on the Asiatic Station at Manila 3 February 1901 and 6 days later sailed for Hong Kong, where she became flagship of the Southern Squadron under Rear Admiral Louis Kempff 23 March. Throughout the following year the battleship led her squadron as it watched over American interest in the Far East, visiting principal ports of China and Japan including Chefoo, Taku, Nanking, Woosung, Hong Kong, Amoy, Nagasaki, Kobe, and Yokohama.

Rear Admiral Frank F. Wildes also selected *Kentucky* as his flagship upon relieving Admiral Kempff 1 March 1902, but he transferred his flag to *Rainbow* 7 April. Rear Admiral Robely D. Evans, Commander in Chief, Asiatic Fleet, chose *Kentucky* as his flagship at Yokohama 4 November; and he continued to direct American naval operations in the Far East from her until she sailed from Manila for home 13 March 1904. After retracing her steps through the Suez Canal and the Strait of Gibraltar, she arrived New York 23 May.

Upon completing overhaul in New York Navy Yard 26 October, *Kentucky* devoted the following year for tactics and maneuvers off the Atlantic coast with the North Atlantic Fleet. The battleship joined the welcome of the British Squadron at Annapolis and New York in the fall of 1905 and then cruised along the eastern seaboard until 23 September 1906. On that day off Provincetown, she embarked marines from *Maine*, *Missouri* and *Kearsarge* and landed them at Havana 1 October to protect American lives and property during the Cuban Insurrection. She stood by to support forces ashore until 9 October before resuming battle practice and tactics in the North Atlantic.

Kentucky visited Norfolk 15 April 1907 to attend the Jamestown Exposition; and, after more exercises off the New England coast, she returned to Hampton Roads to join the "Great White Fleet" of 16 battleships for a world cruise that brought great prestige and honor to the Navy and the Nation. Rear Admiral Evans, *Kentucky's* former Flag Officer, commanded the fleet as it circumnavigated the globe receiving warm and enthusiastic welcomes at each port of call. As the famous voyage got underway from Hampton Roads 16 December, *Kentucky* passed in review before President Roosevelt as a unit in the 2d Squadron. After calling at Trinidad and Rio de Janeiro, the warships passed in open order through the Straits of

USS *Kentuckian*, a transport of World War I

Magellan to visit Punta Arenas and Valparaiso, Chile. A stop at Callao Bay, Peru, was followed by a month of target practice out of Magdalena Bay, Mexico. The fleet reached San Diego 14 April 1908 and moved on to San Francisco 7 May. Exactly 2 months later the spotless warships sortied through the Golden Gate and sailed for Honolulu. From Hawaii they set course for Auckland, New Zealand, arriving 9 August. The fleet made Sydney 20 August and, after a week of warm and cordial hospitality, sailed for Melbourne.

Kentucky departed Albany, Australia, 10 September for ports in the Philippine Islands, Japan, China, and Ceylon before transiting the Suez Canal. She departed Port Said 8 January 1909 to visit Tripoli and Algiers with the 4th Division before reforming with the fleet at Gibraltar. Underway for home 6 February, she again passed in review before President Roosevelt upon entering Hampton Roads 22 February, ending a widely-acclaimed voyage of good will in which she and her sister ships subtly but effectively demonstrated American strength to the world.

After local operations and repairs at Philadelphia Navy Yard, *Kentucky* decommissioned at Norfolk 28 August 1909. She recommissioned in the 2d Reserve 4 June

1912 but, save for a run to New York, did not operate at sea before being placed in ordinary in Philadelphia Navy Yard 31 May 1913.

The veteran battleship recommissioned at Philadelphia 23 June 1915 and sailed 3 July to train New York militia in a cruise from Long Island to ports in New England and Chesapeake Bay. She debarked the militia at New York and sailed to Portland to embark Maine militia for a training cruise. Returning to Philadelphia 31 August, she sailed 11 September for the coast of Mexico to watch over American interests during the unrest caused by the Mexican Revolution. She reached Vera Cruz 28 September 1915; and, but for a visit to New Orleans for Mardi Gras in March 1916, she remained on patrol off the Mexican coast until 2 June 1916.

The battleship called at Guantanamo Bay and Santa Domingo en route home to Philadelphia, where she arrived 18 June. Following maneuvers and tactics ranging north to Newport during the summer, *Kentucky* arrived New York 2 October and remained in the North River until the end of the year. She entered New York Naval Shipyard for repairs 1 January 1917 and was still there when the United States entered World War I. She ar-

Husband E. Kimmel

USS *Kentucky* (BB-6) was one of the ships Admiral Husband E. Kimmel served in between graduation from the Naval Academy and receipt of his commission as an Ensign in 1906.

rived Yorktown, Va., 2 May for duty as a training ship and trained recruits on cruises in Chesapeake Bay and along the Atlantic coast as far north as Long Island Sound. When the Armistice was signed 11 November 1918, she was training her 15th group of recruits, having already trained several thousand men for service in ships of the war-expanded Navy.

Kentucky entered Boston Navy Yard 20 December for overhaul. She sailed 18 March 1919 for refresher training out of Guantanamo Bay and then participated in fleet maneuvers and exercises ranging north from Norfolk to the New England coast. She arrived Annapolis 29 May to embark midshipmen and got underway 9 June for a summer practice cruise that took her to Cuba, the Virgin Islands, Panama, New York, Boston, and Provincetown. She returned Annapolis 27 August to debark her midshipmen and entered Philadelphia Navy Yard 30 August. She remained there until decommissioning 29 May 1920. *Kentucky* was sold to Dravo Construction Co., Pittsburgh, Pa., for scrapping 23 January 1924 in compliance with U.S. commitments under the Washington Treaty which limited naval armaments.

The keel of *Kentucky* (BB-66), an *Iowa*-class battleship, was laid at Norfolk Navy Yard, Portsmouth, Va., 6 December 1944.

Construction was suspended 17 February 1947 when the battleship was 72.1 percent complete. Her name was struck from the Navy List 9 June 1958; and her uncompleted hull was sold for scrapping to Boston Metals Co., Baltimore, Md., 31 October.

Kenwood

The first *Kenwood* retained her former name; the second was named for the first.

I

(StwStr: t. 232; dr. 5'6"; s. 7 k., a. 2 32-pdrs., 4 24-pdrs. how.)

The first *Kenwood*, a stern wheel steamer was launched 3 April 1863, by H. A. Jones at Cincinnati, Ohio; purchased for the Navy by Rear Admiral D. D. Porter and commissioned at Cairo, Ill., 24 May 1863, Acting Master John Swaney in command.

Kenwood joined the Mississippi squadron, 1 June 1863, and operated on the Arkansas River in the vicinity of Fort Pillow. Following brief river convoy duty, *Kenwood* participated in the joint Army-Navy expedition which captured Yazoo City, 13 July 1863. *Kenwood* was sent to the Port Hudson Division, 19 August 1863 and served as a convoy and patrol gunboat at Baton Rouge, La., until 10 February 1865, when she was ordered to the 4th River District at Natchez. After helping to neutralize Rebel forces west of the Mississippi, *Kenwood* was sent 28 May 1865 to New Orleans as a transport for officers. Following this duty, she steamed to Mound City, Ill., and decommissioned 7 August 1865.

Kenwood was sold at Mound City to W. J. Priest 17 August 1865. After merchant service, as *Cumberland*, she exploded and sank at Shawneetown, Ill., 14 August 1869 with the loss of 18 lives.

II

(IX-179: dp. 6,368; l. 416'8"; b. 56'; s. 10 k.; cpl. 70; a. 1 4", 2 3", 8 20mm.)

The second *Kenwood* (IX-179) was built in 1916 as *Texas* by Fore River Shipbuilding Corp., Quincy, Mass. She was operated by the Texas Oil Co., until she was taken over by the Maritime Commission at the beginning of World War II. After a year's charter to the Soviet Union, she returned to the Maritime Commission in July 1944. Renamed *Johren*, she subsequently sailed to Brisbane, Australia, where she was taken over by the

Navy on bare boat charter 16 November. She commissioned at Brisbane 6 December as *Kenwood*, Lt. Comdr. R. L. West in command.

Assigned to the Service Force, 7th Fleet, she departed Brisbane 13 December for New Guinea, and arrived Hollandia 21 December. After loading a cargo of fuel, she sailed 30 December for the Philippines and arrived Leyte Gulf 7 January 1945. Departing in convoy 16 January, *Kenwood* proceeded to Lingayen Gulf where she arrived 21 January, to begin duty as a mobile floating fuel storage ship. Loaded with gasoline and oil, she operated in Lingayen Gulf until 9 March, then proceeded to Subic Bay, Luzon, to continue station tanker operations. Returning to Lingayen Gulf 6 May, she served as a diesel and bunker oil tanker at San Fernando Roads, Luzon, from 15 May to 5 July when she again sailed to Subic Bay. Alternating between Lingayen Gulf and Subic Bay, she continued fueling operations until 2 November when she steamed into Manila Bay. Proceeding to Subic Bay 17 December, she decommissioned 10 January 1946 and was transferred to the Maritime Commission for disposal.

Kenwood was sold for scrap 3 March 1948 to Asia Development Corp.

Kenyon, Henry R., see *Henry R. Kenyon* (DE-683)

Keokuk

A town in Iowa named for a leader of the Sauk Indians born in Illinois about 1780. His name has been translated as "one who moves about alert" and as "Running Fox." His career was distinguished by opposition to Sauk participation in the Black Hawk War and by skillful diplomacy in negotiations with agents of the Federal Government and leaders of other tribes. He died in 1848 in Kansas.

I

(IrcStr: t. 677; l. 159'6"; b. 36'; dr. 8'6"; s. 9 k.; cpl. 92; a. 2 11" D.sb.)

Laid down as *Moodna*, the first *Keokuk* was launched at New York by Charles W. Whitney 6 December 1862; sponsored by Mrs. C. W. Whitney, wife of the builder; and commissioned March 1863; Comdr. Alexander C. Rhind in command.

The experimental ironclad steamer embodied some unusual concepts: her two stationary, cylindrical gun towers, each pierced with three gun ports, which often caused her to be mistaken for a double-turreted monitor; and her armor of horizontal iron bars alternating with strips of wood.

The new ironclad departed New York 11 March and steamed south to join the South Atlantic Blockading Squadron for the attack on Charleston and arrived Newport News 2 days later. She got underway again on the 17th but returned to Hampton Roads for repairs when her port propeller fouled a buoy. She stood out of Hampton Roads again 22 March and arrived Port Royal, S.C., the 26th.

As the day of attack on Charleston approached, *Keokuk* and *Bibb* were busy laying buoys to guide Rear Admiral Du Pont's ironclad flotilla into the strongly fortified Confederate harbor. The Union ships crossed the Stono Bar 6 April but were prevented from attacking that day by hazy weather which obscured targets and blinded pilots.

The advance began at noon on the 7th, but difficulties in clearing torpedoes from the path of Du Pont's ironclads slowed their progress. Shortly after three, they came within range of Forts Moultrie and Sumter; and the battle began. Southern obstruction and a strong flood tide made the ironclad virtually unmanageable, while accurate fire from the forts played upon them at will. With the Union formation scrambled, *Keokuk* was compelled to run ahead of crippled *Nahant* to avoid fouling her in

the narrow channel. This brought her less than 600 yards from Fort Sumter, where she remained for half an hour receiving the "undivided attention" of the Confederate guns.

The game ironclad was riddled by 90 hits, one-fifth of which pierced her at or below the waterline. She was withdrawn from the action and anchored overnight beyond range of the forts while her crew struggled to keep her afloat. Next day, 8 April, when a breeze came up, *Keokuk* took on more water; filled rapidly; and sank off Morris Island.

II

(CMC-6: dp. 6,150; l. 353'; b. 57'; dr. 17'; s. 12 k.; cpl. 278; a. 2 3', 4 .50 cal. mg., 2 .30 cal. mg.; cl. *Keokuk*)

The second *Keokuk* (CMC-6), formerly *Columbia Heights*, was launched 1914 by William Cramp & Sons, Philadelphia, Pa.; she was acquired by the Navy 28 July 1941 on a Maritime Commission bare boat charter; reclassified AN-5 on 15 August 1941; and commissioned 28 February 1942, Lt. Comdr. L. Brennan, USNR, in command.

Keokuk cleared Delaware Bay 7 March 1942 and arrived Norfolk the same day to commence service as a net layer. She operated out of Norfolk and Key West for 2 months before she was reclassified CM-8 on 18 May 1942. Based at Yorktown, Va., mine depot that summer, *Keokuk* engaged in high priority mine laying along the Atlantic coast.

As the war in Europe intensified, the mine layer made preparations for service in the Mediterranean. Departing Brooklyn, N.Y., 13 November, *Keokuk* crossed the submarine-infested Atlantic and arrived Casablanca 1 December. She remained in North African waters for 7 weeks, laying mines off the harbor of Casablanca. She sailed 20 January 1943 with convoy GUS-3, arriving New York 7 February. Following repairs at Hoboken, N.J., *Keokuk* sailed 1 March to commence net-laying exercises out of Melville, R.I.

During April and May, the mine layer operated with the mine warfare school at Yorktown, Va.; then sailed to Brooklyn to join a convoy bound for Algeria. *Keokuk* departed Brooklyn 13 June, arriving Oran, Algeria, 4 July. Two days later she steamed toward Gela, Sicily, to lay antisubmarine minefields prior to the landings there. During these operations, on 11 July, *Keokuk* was attacked by six enemy planes; but antiaircraft fire drove the raiders off. After the successful conclusion of the Sicilian campaign, she operated out of Algeria until sailing for Norfolk 7 October.

Upon completion of a short overhaul, *Keokuk* converted to a net layer and, reclassified AKN-4, departed Norfolk 23 November to meet another enemy in the Pacific. She arrived Tarawa 3 February 1944 after a month's stay at Pearl Harbor, and immediately commenced net laying operations in the Marshall Islands. She continued this service until 12 April when she cleared Eniwetok to load new net at San Francisco. *Keokuk* returned Kwajalein 9 June, and departed 2 days later to engage in the amphibious assault on Saipan. She arrived in Saipan waters 19 June and began laying antisubmarine net off Tanapag Harbor.

Following the Saipan campaign the net-cargo ship operated out of Eniwetok until 17 July when she once again sailed for San Francisco. Upon her return to Guadalcanal 1 September, *Keokuk* readied herself for the assault on Peleliu—needed as a base for the subsequent and invasion in the Philippines. She arrived off Kossol Passage 17 September and continued net laying operations for 1 month before arriving Manus 17 October. The next day *Keokuk* sailed for San Francisco to undergo repair and overhaul.

The net-cargo ship returned Eniwetok 6 February 1945 as the raging war was approaching its climax. *Keokuk* departed Guam 16 February, bound for the Japanese-held volcano fortress, Iwo Jima. She commenced net laying operations 4 days later, as she played her key role in this

courageous undertaking. On 21 February just prior to sunset while cruising in formation with a group of LST's, an enemy "Jill" dived out of the clouds and hit *Keokuk* on the starboard side, knocking out most of the starboard 20mm. battery. The fires were extinguished by 1850; the ship had 17 killed and 44 wounded in the action.

Upon completion of repairs at Leyte, the net-cargo ship sailed 19 March toward the last great hurdle—Okinawa. *Keokuk* arrived off Kerama Retto 26 March to lay anti-submarine nets prior to the invasion. With the invasion well under way, she cleared the battle area 4 April, arriving Saipan 10 April. Then after a 2-month overhaul at Pearl Harbor, *Keokuk* returned Eniwetok 2 July to unload net material. As the war entered its final month, she sailed from Ulithi 25 July, and, after a stop at Pearl Harbor, arrived San Francisco 10 September. The veteran ship remained there until she decommissioned 5 December 1945. She was transferred to the WSA 1 July 1946 and sold to the West India Fruit & S.S. Co. 7 March 1947.

Keokuk received five battle stars for World War II service.

III

(YTB-771: dp. 270; l. 109'; b. 31'; dr. 14; cpl. 12)

The third *Keokuk* (YTB-771) was launched 21 May 1964 by the Mobile Ship Repair Inc., Mobile, Ala.; and placed in service 4 September 1964, Chief Boatswain's Mate Jerry R. Richter in command. She serves in the Norfolk area as a tug.

Keosanqua

I

(AT-38: dp. 969; l. 156'8"; b. 30'2"; dr. 14'7"; s. 13 k.; cpl. 61; a. 2 3'; cl. *Allegheny*)

The first *Keosanqua* (AT-38) was launched 26 February 1920 by Staten Island Shipbuilding Co., Port Richmond, N.Y.; and commissioned 9 December at New York Navy Yard, Lt. (j.g.) G. F. Coulson in command.

Departing New York 2 February 1921, *Keosanqua* sailed for Hawaii via Charleston, the Panama Canal, and San Diego. Arriving Pearl Harbor 16 April, the tug was based at the Navy Yard there, towing ships and targets until she decommissioned 8 June 1922.

Keosanqua recommissioned at Pearl Harbor 1 July 1934, Lt. (j.g.) H. O. Parish in command. During the remainder of 1934 she operated with Submarine Squadron 4, towing targets and retrieving torpedoes; she provided similar services for Submarines Squadron 9 the following year. Duty with submarines continued until January 1938 when she commenced towing operations with the Pacific Fleet, participating in joint Army-Navy maneuvers off Oahu during May 1939. She was assigned to the Navy Yard, Pearl Harbor, 29 January 1940 for harbor tug duty.

On 7 December 1941 *Keosanqua* was taking over a tow from *Antares* (AG-10) southwest of the entrance to Pearl Harbor when the infamous Japanese raid began. Attacked by enemy planes which bombed and strafed the ship, she promptly opened fire with her machine guns. During the attack she coolly completed the transfer of the tow and proceeded to Honolulu unharmed. After the raid, she operated as a salvage tug, swept for mines, and searched for enemy submarines. She departed 21 December 1943 for towing duty in the central Pacific.

Assigned to Service Squadron 4, she arrived Fuaafuti, Ellice Islands, 4 January 1944 for harbor duty. Proceeding in convoy en route to the Marshalls 28 February, she reached Kwajalein 8 March and joined Service Squadron 10 on 17 March; then departed 1 April for Eniwetok with a barge of aviation gasoline in tow. She arrived 4 April and commenced operations as harbor tug, station ship, and harbor pilot-training ship.

Redesignated ATO-38 on 15 May, she operated out of Eniwetok until 25 November 1945, and then proceeded via Kwajalein, Johnston Island, and Pearl Harbor for the West Coast, arriving San Francisco 24 December for tow-

ing duty along the California coast. *Keosanqua* sailed for Seattle 25 February 1946; and, arriving Blake Island 1 March, she decommissioned 6 May. Her name was struck from the Navy List 7 February 1947.

Transferred to the Maritime Commission 11 July for disposal, she was sold the same day to Puget Sound Tug & Barge Co., Seattle, Wash. Resold to a Canadian shipping firm in 1948, she was renamed *Edward J. Coyle*. In 1960 she was renamed *Commodore Straits*.

II

(ATA-198: dp. 534; l. 143'; b. 34'; s. 13 k.; cpl. 48; a. 1 3", 2 20mm.; cl. *Maricopa*)

Originally designated as *ATR-125*, she was redesignated *ATA-198* on 15 May 1944; launched 17 January 1945 by Livingston Shipbuilding Co., Orange, Tex.; and commissioned 19 March, Lt. J. L. Bean in command.

Departing Galveston 18 April, *ATA-198* steamed via the Panama Canal and San Francisco for duty in the Pacific. She reached Pearl Harbor 1 June, then continued 7 June via Eniwetok and Ulithi towing *Pegasus* (IX-222) to the Philippines. Arriving Leyte Gulf 18 July, she departed the 21st and reached Pearl Harbor via Kwajalein 7 August. From 9 August to 31 October she made two towing runs to San Francisco, and then resumed harbor and barge towing duty out of Pearl Harbor. For more than 3 years she made periodic towing runs to Wake Island; to various islands in the Hawaiian chain, including Maui and Midway; and to the West Coast.

Renamed *Keosanqua* 16 July 1948, she departed Pearl Harbor 7 December for Long Beach, where she arrived 22 December. Proceeding to San Diego 3 January 1949, she commenced target towing duty with the Fleet Sonar School and provided harbor and coastal towing services between San Diego and Long Beach. On 19 June 1951, while the United States fought to protect South Korea from Communist aggression, she departed San Diego for a 10-month deployment in the western Pacific.

Operating primarily out of Sasebo, Japan, *Keosanqua* provided tug service along the coast of Korea from Makpo to Inchon. Departing Sasebo 25 March, she steamed via Pearl Harbor to San Diego, arriving 19 April.

On two subsequent deployments (26 January-30 September 1953 and 7 February-2 October 1955) *Keosanqua* served with the mighty 7th Fleet in the Far East, providing harbor tug and target towing services out of Sasebo and Yokosuka. After returning from the western Pacific in 1955, she continued operations out of San Diego until 25 May 1956 when she decommissioned and entered the Pacific Reserve Fleet. Her name was struck from the Navy List 1 May 1961. She was transferred to the Republic of Korea and commissioned *ROKS Yong Mun* (ATA-2) on 1 February 1962.

Keosanqua received three battle stars for Korean War service.

Keosauqua

A town in Iowa located in Van Buren County.

Keosauqua, a screw sloop-of-war, was listed in the 1864 Naval Register as "building." The hull was projected but never completed. She was never commissioned and saw no service. Her name was struck from the Navy List in 1866.

Kephart

William Perry Kephart, born Meyersdale, Pa., 9 September 1915, enlisted in the Naval Reserve 15 August 1937 and was appointed Aviation Cadet 3 months later. After flight training at Pensacola, Fla., he was commissioned Ensign 1 December 1938. He served with air groups in *Saratoga* (CV-3) and *Wasp* (CV-7), and in May 1940 returned to Pensacola as a flight instructor. Six months later he rejoined Scouting Squadron 71 on

USS *Keosanqua* (AT-38) at Pearl Harbor circa 1930

board *Wasp*. Promoted to Lieutenant (j.g.) 15 June 1942 and Lieutenant (temporary) 1 October, Lt. Kephart was killed in action 14 October while engaging the enemy over Guadalcanal.

(DE-207: dp. 1,400; l. 306'; b. 36'10"; dr. 9'5"; s. 24 k.; cpl. 186; a. 3 3', 4 1.1", 8 20mm., 3 21" tt., 8 dep., 1 dep. (h.h.), 2 dct.; cl. *Buckley*)

Kephart (DE-207) was launched 6 September 1943 by Charleston Navy Yard, Charleston, S.C.; sponsored by Mrs. A. P. Kephart, mother; and commissioned 7 January 1944, Lt. Comdr. I. H. Cammarn in command.

After shakedown off Bermuda, *Kephart* departed New York 23 March for convoy escort duty in the Atlantic. During the next 3 months she made three runs from New York to Gibraltar and Bizerte, Tunisia. Returning New York 30 June for conversion to a high speed transport, she was reclassified APD-61 on 5 July.

Kephart departed New York 30 September and joined the 7th Fleet at Hollandia, New Guinea, 10 November. As a unit of TransDiv 103, she departed in convoy 17 November and arrived Leyte Gulf, Philippines, 24 November. After a run to the Palaus, she embarked troops of the 77th Infantry at Leyte and steamed 6 December with Task Group 78.3 for amphibious assault at Ormoc Bay. During landing operations 7 December *Kephart's* guns splashed two Japanese planes in a fierce raid. Returning to Leyte 8 December, she embarked soldiers of the 19th Infantry; sailed 12 December for Mindoro; and landed assault troops at San Jose 15 December, again under heavy enemy air attack. Returning to Leyte 17 December, she continued 20 December to Hollandia to prepare for antisubmarine and amphibious operations.

Carrying men of the 158 RCT, *Kephart* departed Noemfoor, Schouten Islands, 4 January 1945 to rejoin the fight to liberate the Philippines. Steaming to Luzon, she arrived San Fabien, Lingayen Gulf, 11 January and landed reinforcements, despite constant harassment from enemy planes emerging from the heavy air attack unscathed. Returning Leyte 15 January for 3 months of antisubmarine patrol, *Kephart* took part in scattered landing operations in the Philippines: at Grande Island, Subic Bay (30 January); Puerto Princesa, Palawan (28 February); Zamboanga, Mindanao (10 March); Cebu City, Cebu (26 March); and Cotabato, Mindanao (17 April).

Kephart departed Leyte Gulf 4 May for escort and assault operations in the Dutch East Indies, arriving Morotai 7 May. After escorting a convoy to Mindanao (18-20 May), she returned to Morotai 21 May and embarked troops of the Australian Army for an amphibious assault at Brunei Bay, North Borneo. Sailing 4 June, she landed troops 10 June amid dwindling enemy resistance; then she patrolled the South China Sea hunting submarines before returning Morotai 19 June. She sailed 26 June carrying Australian soldiers to the eastern coast of Borneo 1 July for the final major amphibious operation of the war—the landing operations at Balikpapan, Borneo.

Continuing escort and antisubmarine duty, *Kephart* departed Morotai 16 July and reached Leyte Gulf 2 days later. On 4 August she began amphibious training at Albay and Lagonoy Gulfs, Luzon, in preparation for a possible invasion of Japan. After the fighting ended 15 August, she sailed from Leyte Gulf 29 August to Okinawa to embark occupation troops for Korea. She reached Jinsen, Korea, 8 September; and then shuttled between the Philippines and Korea. She steamed from Jinsen 29 October via Sasebo, Japan, and Okinawa to Tsingtao, China, arriving 14 November to support the Chinese Nationalists' effort to repel Communist aggression on the Chinese mainland.

Returning Okinawa 22 November, *Kephart* embarked 147 homebound veterans and departed 26 November for the United States. Steaming via Pearl Harbor, she reached San Diego 16 December. Two days after unloading her passengers she sailed for the East Coast and arrived New York on New Year's Day 1946. Following overhaul, she departed 8 February for Green Cove Springs,

Fla., arriving the 11th. *Kephart* decommissioned 21 June and entered the Atlantic Reserve Fleet at Orange, Tex. She was struck from the Navy List 1 May 1967 and transferred under the Military Assistance Program to the Republic of Korea 16 May 1967.

Kephart received five battle stars for World War II service.

Keppler

John Reinhardt Keppler, born in Ralston, Wash., 22 January 1918, enlisted in the Navy 19 February 1936. After an honorable discharge, he reenlisted 25 April 1940 and was assigned to San Francisco. During the war Boatswain's Mate First Class John R. Keppler participated in action at Pearl Harbor, Bougainville, Salamana, Guadalcanal, and Savo Island. He lost his life in the Savo Island campaign and was awarded the Medal of Honor posthumously. The citation reads: "For extraordinary heroism and distinguished courage above and beyond the call of duty while serving aboard the *San Francisco* (CA-38) during action against enemy Japanese forces in the Solomon Islands, November 12-13, 1942. When a hostile torpedo plane, during a daylight air raid, crashed on the after machine gun platform, Keppler promptly assisted in removal of the dead and by his capable supervision of the wounded, undoubtedly helped save the lives of several shipmates who otherwise might have perished. . . . Later, although mortally wounded, he labored valiantly in the midst of bursting shells, persistently directing firefighting operations and administering to injured personnel until he finally collapsed from loss of blood. His great personal valor, maintained with disregard of personal safety, was in keeping with the highest traditions of the United States Naval Service. He gallantly gave up his life for his country."

Keppler (DE-311) was cancelled during construction 13 March 1944.

Keppler (DE-375) was cancelled during construction 6 January 1944.

I

(DD-765: dp. 2,425; l. 390'2"; b. 40'11"; dr. 18'6"; s. 35 k.; cpl. 336; a. 6 5", 12 40mm., 10 20mm., 6 dep., 2 dct., 5 21" tt.; cl. *Gearing*)

Keppler (DD-765) was launched 24 June 1946 by Bethlehem Steel Co. Shipbuilding Div., San Francisco, sponsored by Mrs. Elizabeth L. Keppler, widow of John R. Keppler and commissioned 23 May 1947, Comdr. P. M. Cauglio in command.

After shakedown along the West Coast, *Keppler* cleared San Diego 9 October 1947 for training exercises in Hawaiian waters. The destroyer then sailed to Australia and China before returning San Diego 20 May 1948. Early in 1949 *Keppler* entered San Francisco Navy Yard for conversion to antisubmarine destroyer. Resuming operations on the West Coast 9 June, she departed San Diego 5 October for duty in the Atlantic.

Arriving Norfolk 15 days later, she immediately commenced intensive ASW exercises along the Atlantic Coast. *Keppler* sailed to Newport, R.I., her new homeport, for additional hunter-killer operations, arriving 27 November. She was reclassified DDE-765 on 4 March 1950 and cleared Newport 5 July for the Mediterranean. Arriving Crece 27 July, the antisubmarine destroyer was ordered to the Far East to help repel Communist aggression in Korea.

After transiting the Suez Canal and crossing the Indian Ocean, *Keppler* joined the 7th Fleet in mid-August. For the next 2 months she patrolled the Formosa Strait before joining *Philippine Sea* (CV-47) on 17 November. For the next 3 months she screened her task group during continued carrier air strikes against Communist positions on the Korean mainland. *Keppler* then steamed for Yoko-

suka, Japan, arriving 7 February 1951. Three days later she cleared port for the United States, reaching Newport 14 March. She was overhauled and for the rest of the year engaged in refresher training and ASW operations.

Kepler cleared Newport once again 9 January 1952 to participate in antisubmarine exercises with the powerful 6th Fleet. This cruise culminated in NATO Exercise "Grandslam," in which ships of several freedom-loving nations operated together in practice maneuvers to prevent aggression. The antisubmarine destroyer returned to Newport 26 March and resumed operations along the Atlantic Coast.

From 1952 to 1957 *Kepler* continued her vital ASW exercises out of Newport and the Caribbean in addition to NATO operations and Mediterranean cruises with the 6th Fleet. During these years such exercises steadily perfected her ability to protect the nation from the threat of a growing Soviet submarine force.

On 4 January 1957 she sailed toward South American waters for a training and good will cruise. Before returning Newport 18 March, she visited ports in Colombia, Ecuador, Peru, Chile, and Panama. After completing additional coastal exercises, *Kepler* was deployed to the Mediterranean 12 August. During September she transited the Suez Canal to strengthen forces in the Red Sea, as Communists had gained control of the Syrian Army and threatened the pro-western government in Jordan. This display of American determination assuaged the crisis enabling *Kepler* to return to Newport 21 December.

From 1958 to 1961 the antisubmarine destroyer engaged in concentrated ASW operations along the Atlantic coast and Caribbean NATO exercises, a midshipmen cruise in 1959, and a 6th Fleet deployment in the summer of 1960. *Kepler* entered New York Naval Shipyard 1 March 1961 for a FRAM II overhaul designed to increase her service and effectiveness. Following the overhaul she returned Newport 25 October and resumed antisubmarine duty 8 March 1962. *Kepler* sailed 4 June for a summer midshipmen cruise to Europe, returning to Newport 30 August. She was reclassified DD-765 during that period.

Two months later a grave international crisis loomed, as the Russians planted offensive missiles in Cuba only 90 miles from the United States. President Kennedy accepted this challenge and ordered a naval quarantine of Cuba. *Kepler* cleared Newport 22 October to take her station in the blockade. While patrolling her Caribbean sector, she sighted a surfaced Russian submarine 2 November and observed her for the next 7 days. On 9 November the submarine joined a Russian trawler, and *Kepler* continued her surveillance until the Russian ships turned back toward the Azores. Effective American seapower helped persuade the Soviet government to withdraw the missiles easing the crisis. The destroyer returned Newport 21 November.

During 1963 and 1964 *Kepler* continued hunter-killer exercises along the East Coast and Caribbean. She sailed 8 September 1964 for Mediterranean deployment and engaged in NATO exercises en route. The destroyer returned home 18 December.

Following overhaul in Boston Naval Shipyard, *Kepler* operated out of Newport until sailing for the Far East 4 October 1966. Steaming via the Panama Canal she arrived Pearl Harbor 24 October and pushed on toward Japan a week later. She departed Yokosuka 14 November for plane guard duty in the Gulf of Tonkin. Early in December she was assigned naval gunfire support missions to assist allied troops fighting in South Vietnam, and she also served in Operation "Sea Dragon" helping to interrupt infiltration of men and weapons into South Vietnam from the North. On the night of 11 and 12 December she rescued a downed pilot. Early in 1967 she returned to "Yankee Station" for plane guard duty and on 28 January assisted in the rescue of another pilot. In January and February her guns damaged or destroyed 51 Communist junks. *Kepler's* crew derived great "satisfaction from the fact that many of these targets suffered second-

ary explosions thus proving it was not 'fish' they were carrying." During this period *Kepler* frequently engaged enemy batteries ashore, and 11 March a Communist gun scored a hit on one of the destroyer's gun mounts. Nevertheless she remained in the fight until returning to Subic Bay on the 23d. Three days later she headed homeward via the Indian Ocean, the Suez Canal, and the Mediterranean. Upon arriving Newport 8 May she resumed operations along the East Coast to prepare for future action.

Kepler received two battle stars for Korean service.

Keresan

A family of Pueblo Indians living in the Rio Grande Valley in central New Mexico.

(Str: dp. 8,700; l. 380'6"; b. 50'1"; dr. 11'; s. 11 k.; cpl. 62; a. 1 6', 1 3')

Keresan, a cargo ship, was launched as *Electra* in 1912 by Pickersgill & Sons Ltd., Newcastle, England, and, subsequently, renamed *Erodiade*. She was taken over by the Navy from M. U. Martinolich Co. and commissioned 18 September 1918, Lt. Comdr. R. Douglas in command.

Assigned to NOTS, *Keresan* sailed from New York 1 October with a cargo of ammunition for U.S. forces in Europe. Following the Armistice of November 1918, *Keresan* returned to New York 13 December to prepare for a cruise to South America. She steamed to Buenos Aires in January 1919 with general cargo, and returned New York 5 June. *Keresan* decommissioned 26 June 1919 and was returned to her owner.

Keresaspa

A former name retained.

(Str: t. 3,019; l. 360'; b. 48'; dr. 13'5"; s. 9 k.; cpl. 86; a. 1 5')

Keresaspa, formerly *Franconia*, was launched 1903 by Northumberland Shipbuilding Co., Ltd., Newcastle, England. The cargo ship was acquired by the Navy from the Franconia S.S. Co., Ltd. and commissioned 31 October 1918, Lt. Comdr. James J. Boyce in command.

Assigned to NOTS, *Keresaspa* departed New York with a cargo of 400 horses and mules for transport to France. She discharged her cargo at La Pallice, France, and returned to Baltimore 20 January 1919. Following repairs *Keresaspa* decommissioned 11 February 1919 and was returned to her owners.

Kerkenna

A group of seven islands (often spelled Kerkennah) in the Gulf of Gabes belonging to Tunisia.

(Str: dp. 3,621; l. 380'7"; b. 45'7"; dr. 22'2"; s. 8 k.; cpl. 65; a. 2 3')

Kerkenna, a cargo ship, was built in 1900 as *Borneo* by William Hamilton & Co., Port Glasgow, Scotland; taken over by the Army 22 November 1917 from her owner, Kerr Navigation Corp., New York; and acquired and commissioned by the Navy 28 September 1918 at Brest, France, Lt. Comdr. A. F. Dahlstedt, USNRF, in command.

Attached to NOTS, *Kerkenna* carried coal and Army supplies between British and French ports. She departed Inverness, Scotland, 24 February 1919 with a cargo of mines and mine supplies for return to the United States. Reaching New York 19 March, she proceeded 2 days later to Norfolk, arriving 24 March. She then decommissioned 16 April, and was transferred to the USSB for immediate return to her owner.

Kerlew

A former name retained.

(Str: dp. 3,563; l. 336'; b. 41'9"; dr. 25'; s. 10 k.; cpl. 77; a. 1 4")

Kerlew, a cargo ship, was built in 1906 by Craig, Taylor & Co., Ltd., Stockton, England; acquired on bare-charter basis by the Army 17 October 1917 from her owner, Kerr Navigation Corp., New York; and taken over and commissioned by the Navy 13 November 1918 at Cardiff, Wales, Lt. S. V. Kalhauge, USNRF, in command.

Assigned to the Army coal trade at Cardiff, *Kerlew* transported coal from British to French ports. She continued this channel duty until 29 January 1919 when she arrived Invergordon, Scotland, to load a cargo of mines for return to the United States. Departing 19 February she arrived Norfolk, Va., 9 March. Transferred to USSB, she was placed in line for demobilization. *Kerlew* decommissioned 12 April and was returned to her owner the same day.

Kermanshah

A former name retained.

(Str. dp. 4,948; l. 390'; b. 52'6"; dr. 26'7"; s. 9.5 k.; cpl. 84; a. 1 4", 1 6-pdr.)

Kermanshah, a cargo ship, was built in 1910 by Northumberland Shipbuilding Co., Newcastle, England; taken over by the Navy from her owner, Kerr Navigation Corp., New York, 1 August 1918; and commissioned at New York 3 August, Lt. Comdr. S. W. Hickey, USNRF, in command.

Kermanshah departed New York 17 August in convoy for Bordeaux, France, with a cargo of general Army supplies. Arriving 3 September she returned to New York 24 September. Departing once again for Bordeaux 12 October, she made two more trips between New York and French ports. Subsequently, she arrived New York 13 February 1919 from Nantes, France, with a cargo of munitions. *Kermanshah* decommissioned 5 March and was turned over to the USSB for return to her owner the same day.

Kermit Roosevelt

Kermit Roosevelt, born 10 October 1889 at Oyster Bay, Long Island, N.Y., was the second son of President Theodore Roosevelt. Following graduation from Harvard University in 1912, he accompanied his father to Brazil on an exploring expedition seeking the source of the River of Doubt and remained in South America for 4 years. In 1917 he was commissioned in the British Army to serve under General Maude in the Mesopotamia campaign. Transferring to the American Army in France in 1918, he served as a captain in the 7th Field Artillery until the end of the war.

He then devoted his energy and talents to the merchant marine. During the next 20 years, he served as a member of the Board of Directors of the American Ship & Commerce Corp.; the founder and president of the Roosevelt Steamship Co., and the vice president of Kerr Steamship Co., the American Mercantile Marine, and the United States Lines.

At the outbreak of World War II in Europe in September 1939, he was recommissioned in the Middlesex Regiment of the British Army with the rank of major. In 1941, after serving in Norway and Egypt, he was "invalided out" of the British Army. In July 1942 he was commissioned Major in the U.S. Army and served in Alaska until his death 4 June 1943.

(ARG-16: dp. 5,159; l. 441'6"; b. 56'11"; dr. 23'; s. 12.5 k.; cpl. 401; a. 1 5", 3 3", 4 40mm., 12 20mm., cl. *Luzon*; T. EC2-S-C1)

Originally laid down as *Deal Island* (ARG-16), she was renamed *Kermit Roosevelt* 29 September 1944; launched 5 October by Bethlehem-Fairfield Shipyard Inc., Baltimore, Md., under a Maritime Commission contract; sponsored by Mrs. Kermit Roosevelt; acquired by the Navy 21 October; and commissioned 31 May 1945, Comdr. C. W. Scribner in command.

After shakedown along the Virginia coast, *Kermit Roosevelt* departed Norfolk 21 July for duty in the Pacific. Steaming via Pearl Harbor and Okinawa, she arrived Tsingtao, China, 16 October and began service as a station repair ship. A unit of SerRon 10, she supported U.S. Naval forces aiding the Chinese Nationalists on the Chinese mainland. She departed Tsingtao 11 March 1946 and arrived Hong Kong 16 March for 5 months of similar duty. There after serving briefly at Guam and Saipan, she returned to Bremerton, Wash., 3 February 1947.

Clearing San Pedro Bay 21 April, *Kermit Roosevelt* returned to Tsingtao 4 September and provided ship repair services there until 28 February 1949. Then she continued operations in the Philippines and the Pacific until departing Kwajalein, Marshalls, for the West Coast 8 June. Steaming via Pearl Harbor, she reached San Diego 24 July. On 23 January 1950 she sailed for the Central Pacific; and, before returning to San Diego 12 June, she provided repair facilities at Kwajalein and Majuro, Marshalls; Truk, Carolines; and Nauru, Gilberts.

Between 10 July 1950 and 23 October 1953 *Kermit Roosevelt* made four deployments to the Far East. Operating out of Sasebo, Japan, she repaired ships fighting Communist aggression in Korea and keeping the peace in the Strait of Formosa. From 10 October to 27 November 1950 she supported Task Group 95.6 at Wonsan, Korea, and during 13 to 23 December she performed similar duty at Hungnam for ships of Task Group 79.2. And while operating out of Pusan from 7 August to 16 September 1953, she helped salvage SS *Cornhusker Marine*.

Kermit Roosevelt returned to Long Beach 23 October 1953 and operated along the West Coast until she again sailed for the Far East 6 October 1954. Between then and 30 April 1956 she made two more deployments to the Western Pacific, where she provided important repair services for the 7th Fleet by maintaining U.S. sea power, helped contain Communist aggression from Korea to Vietnam. After returning to the United States in 1956, *Kermit Roosevelt* operated out of Long Beach until she departed 1 October 1959 for Bremerton, Wash., arriving 7 October. She decommissioned 31 October and entered the Pacific Reserve Fleet. Her name was struck from the Naval Register 1 January 1960, and she transferred to the Maritime Administration 23 June. On 25 August 1960 she was sold to Zidell Explorations Inc. for scrap.

Kermit Roosevelt received three battle stars for Korean War Service.

Kermoor

A former name retained.

(Str: dp. 3,106; l. 378'; b. 52'4"; dr. 22'6"; s. 9 k.; cpl. 67; a. 1 3")

Kermoor, a cargo ship, was built in 1907 by J. L. Thompson & Sons, Ltd., Sunderland, England; taken over by the Army 14 March 1918 from her owner, Kerr Navigation Corp., New York; and acquired and commissioned by the Navy 1 November at Cardiff, Wales, Lt. Comdr. T. Cartwright, USNRF, in command.

Operated by the Navy under Army account, *Kermoor* served out of Cardiff, carrying coal and military supplies between British and French ports. Detached from channel service 1 March 1919, she sailed for Queenstown, Ireland, 6 March for the United States with a cargo of military stores. Reaching Baltimore, Md., 27 March, she continued to New York 21 April. She arrived 23 April and discharged her cargo. *Kermoor* decommissioned 5 May and was returned to her owner by the USSB the same day.

USS *Kermit Roosevelt* (ARG-16) in December 1959

Kern

A river in south-central California.

(AOG-2: dp. 1,850 (lt.); l. 310'9"; b. 48'6"; dr. 15'8"; s. 14 k.; cpl. 133; a. 4 3', 12 20mm., 2 dep.; cl. *Patapsco*)

Kern (AOG-2) was laid as *Rappahannock* by Seattle-Tacoma Ship Building Co., Tacoma, Wash., 25 May 1942; renamed *Kern* 18 July 1942; launched 7 September 1942; sponsored by Mrs. L. A. Oldin; and commissioned at Seattle, Wash., 9 March 1943, Lt. Comdr. Lewis Williams in command.

Departing Seattle 24 March, *Kern* arrived San Pedro, Calif., 28 March for shakedown. On 12 April she joined a convoy out of Los Angeles and reached Pearl Harbor the 22d. Loaded with aviation gas and diesel oil, she steamed to Midway between 8 and 12 June. She returned to Pearl Harbor 18 June, and from 27 June to 11 July she made a similar run to Canton and Palmyra Islands.

During the next year *Kern* continued tanker operations out of Pearl Harbor, supplying American bases on Midway, Canton, and Palmyra I lands with gasoline and oil. Departing Pearl Harbor 19 August 1944, she sailed to Eniwetok, Marshalls, where she arrived 31 August and served as station tanker during September. She departed Eniwetok 5 October and carried gasoline to the Marianas and Ulithi before reaching Kossol Roads, Palaus, 28 October.

From November to July 1945 *Kern* served as a station tanker at Kossol Roads and as a shuttle tanker to Peleliu and Angaur. In addition, she made replenishment runs between the Palaus and Ulithi during March, May, and June. Departing Kossol 21 July, she steamed via Ulithi to Guam where she arrived 6 August for overhaul.

Following the end of hostilities in the Pacific, *Kern* returned to Ulithi 31 August. She steamed to Okinawa from 17 to 21 September and served as station tanker

until sailing for Japan 13 October. She reached Hiro Wan, Honshu, 15 September and began refueling ships in support of occupation operations in Japan. She operated along the coast of Japan until 31 January 1946 when she departed Sasebo, Kyushu, for Korea. She arrived Jinsen 2 February, served there as a station tanker, then sailed for Japan 15 April. The veteran tanker arrived Kobe, Honshu, 18 April and resumed refueling duties along the coast of Japan. She decommissioned at Yokosuka, Honshu, 6 August 1946 and was transferred to the Army the same day.

Reacquired by the Navy 1 July 1950, *Kern* was assigned to MSTs. Manned by a civilian crew, she operated in the Western Pacific. During the effort to repel Communist aggression in Korea, she supplied fighting ships of the mighty 7th Fleet with gasoline and oil. After the end of the Korean conflict, she continued to operate in the Pacific as the might of U.S. seapower sought to keep the peace in the tense Far East. She was inactivated at San Francisco in September 1956 and was berthed in the National Defense Reserve Fleet at Suisun Bay, Calif., from 28 September to 30 April 1957. During the late spring and throughout the summer of 1957 she returned to tanker duty for Naval replenishment operations in the Arctic Ocean north of Alaska. She was again inactivated at San Francisco 1 October. She entered the National Defense Reserve Fleet at Suisun Bay and remained under MSTs control until 10 April 1958 when she was transferred to the Maritime Administration. At present she remains berthed at Suisun Bay, Calif.

Kerowlee

A former name retained.

(Str: dp. 3,350; l. 350'; b. 46'8"; dr. 23'; s. 10 k.; cpl. 84; a. 1 4')

Kerowlee, a cargo ship, was built by J. Readhead & Sons, South Shields, England, in 1901; taken over by the Army 1 December 1917 at Havre, France, from her owner, Kerr Navigation Corp., New York; acquired by the Navy and commissioned 17 October 1918 at Cardiff, Wales, Lt. Comdr. W. L. Strong, USNRF, in command.

Departing 3 November for Brest, France, *Kerowlee* operated between channel ports in England and France, carrying coal and military supplies. She was assigned to the Food Administration 11 April 1919 to carry foodstuffs between St. Nazaire, France, and Danzig, Germany. Transferred to USSB account 1 June, she departed St. Nazaire 8 July with a load of Army cargo for the United States. Arriving Norfolk 25 July, she decommissioned 11 August and the same day was returned to her owner by the USSB.

Kerrville

A city of Kerr county, 55 miles northwest of San Antonio, Tex.

(PC-597; dp. 295; l. 174'; b. 23'; dr. 8'; s. 20 k.; cpl. 65; a. 1 3", 1 40mm., 5 20mm., 2 rkt., 2 dcp., 2 dct.; cl. PG-451)

PC-597 was laid down by the Commercial Iron Works, Portland, Oreg., 9 May 1942; launched 7 September; sponsored by Miss Doris Lee Riley; and commissioned 15 February 1943, Lt. L. L. Thurber in command.

After shakedown off the West Coast, *PC-597* departed San Francisco 5 April and arrived Pearl Harbor 2 weeks later. For the next 8 months she remained in the Hawaiian Islands on ASW patrol and convoy escort duty. The sub chaser sailed 28 December to perform similar operations in the South Pacific.

Through the early months of 1944, she operated out of New Caledonia and the New Hebrides before assignment in the Solomons during April. From April to December she continued screening and escort duty while the Solomon Islands were being used as staging bases for assault on the Marianas and the Philippines.

For the remainder of World War II, *PC-597* played a major role in the South Pacific escorting supply-laden transports to reinforce U.S. forces on the "road to Japan." A rotation policy shifted her base of operations among New Caledonia, New Hebrides, Fiji Islands, and Samoa. After the war, the veteran sub chaser searched out-of-the-way islands for overlooked survivors of ship wrecks and plane crashes. The search was concluded 30 October 1945.

Proceeding to Suva, Fiji Islands, 4 November *PC-597* was assigned to air-sea rescue work. She continued similar operations off other South Pacific Islands during the early months of 1946 before departing Kwajalein 1 May en route to the United States. Upon arrival at San Diego one month later, she remained off the West Coast until she sailed for the Atlantic late in the summer. Arriving Key West, Fla., 9 October, *PC-597* was towed to Green Cove Springs and decommissioned there 30 April 1947.

While berthed with the Atlantic Reserve Fleet, *PC-597* was named *Kerrville* 15 February 1956. She was struck from the Navy List 5 September 1957 and sold to Boston Metals Co., Baltimore, Md.

Kerry Patch, see *Celtic* (IX-137)

Kershaw

A county in South Carolina.

(APA-176; dp. 6,873; l. 455'; b. 62'; dr. 24'; s. 17 k.; cpl. 536; a. 1 5" 12 40mm., 10 20mm.; cl. *Haskell*; T. VC2-S-AP5)

Kershaw (APA-176) was launched 12 November 1944, by the Oregon Shipbuilding Corp., Portland, Oreg.; sponsored by Miss Helen Molloy; and commissioned 2 December 1944, Comdr. A. G. Davenport in command.

After shakedown, *Kershaw* cleared San Francisco 7 February 1945, with nurses and naval personnel, arriving Guam 23 February. Moving to Saipan 27 February, the transport prepared for the invasion of the Ryutyus, the last enemy stronghold before Japan itself. During March she loaded equipment and troops of the 2d Marine Division; then, following amphibious exercises off Tinian, she sailed for the assault area 27 March.

The invasion got underway as the troops hit the beach at Okinawa 1 April. After troops from *Kershaw* landed on the southeastern shore of the island, the transport stood by for the next 10 days. She returned Saipan 14 April, remaining there until sailing for the Solomons 5 June. Following brief stops at Tulagi, Espiritu Santo, and Eniwetok, she arrived Guam 14 July.

Following a short overhaul period at San Francisco, the transport loaded cargo and troops to replace veterans in the occupation area. She cleared San Francisco 17 August and steamed into Tackoban, Leyte, 10 September. From there she ferried occupation troops to Honshu, Japan, before returning to San Pedro 19 October. On the third of four additional "Magic-Carpet" cruises to the Far East, *Kershaw* delivered equipment to Bikini for the atomic tests before sailing on to Samar to embark another 2,000 veterans for return to San Francisco 25 May. On her final cruise she took on units of the 2d Marines at Sasebo before transiting the Panama Canal and arriving Norfolk 8 August.

Kershaw remained at Portsmouth, Va., until she decommissioned 20 December 1946, and entered the Atlantic Reserve Fleet at Norfolk. Struck from the Navy List 1 October 1958, she joined the National Defense Reserve Fleet 19 December 1958 and at present is berthed in James River, Va.

Kershaw received one battle star for World War II service.

Kerstin

An asteroid (No. 842) of 13.7 magnitude discovered in 1916 by Max Wolf in Heidelberg.

(AF-34; dp. 3,139; l. 338'6"; b. 50'; dr. 21'1"; s. 12 k.; cpl. 83; a. 1 3", 6 20mm.; cl. *Adria*; T. R1-M-AV3)

Kerstin (AF-34) was launched 16 July 1944 by Pennsylvania Shipyards, Inc., Beaumont, Tex., under a Maritime Commission contract; sponsored by Mrs. W. B. Towns; acquired by the Navy 22 January 1945; and commissioned 23 February 1945 at Houston, Tex., Lt. H. C. Prichard in command.

Departing Galveston, Tex., 14 March, *Kerstin* loaded cargo at Mobile, Ala., and arrived Pearl Harbor 14 April. Assigned to Service Squadron 8, she took on board 1,680 tons of refrigerated and dry provisions and sailed 20 April, reaching Eniwetok 2 May. For more than 6 months she made supply runs, transporting frozen food to ships and bases at Iwo Jima, Saipan, Tinian, Guam, Ulithi, Manus, Noumea, and Auckland, New Zealand. While steaming from Saipan to Iwo Jima 13 July, she directed the prompt rescue of nine men from a disabled B-29 bomber, which splashed about 2 miles off her port quarter while returning to Tinian after a raid over Tokyo. Before departing Saipan 29 November for her return to the United States, *Kerstin* had travelled more than 26,000 miles and delivered over 5,500 tons of refrigerated cargo.

Arriving San Pedro 20 December, *Kerstin* again deployed to the Pacific 1 January 1946 to transport provisions to Wake, Tarawa, Samoa, and the Marshalls before returning to San Francisco 24 May. Departing 29 June for cargo operations in the Far East, *Kerstin* made 11 voyages to the Pacific between June 1946 and December 1949. Steaming to bases scattered throughout the Pacific, her deployments included four runs to the Far East, three to the Marianas and the Marshalls, and four to Pearl Harbor.

Departing Manila Bay 25 November 1949, *Kerstin* steamed via Guam en route to San Francisco, where she arrived 22 December. After overhaul at Mare Island

Navy Yard, she decommissioned 12 May 1950 and transferred to the Maritime Commission. Her name was struck from the Naval Register 16 June. At present she is in the Maritime Administration Reserve Fleet, berthed at Suisun Bay, Calif.

Kerwood

A former name retained.

(AK: dp. 2,321 t.; l. 331'; b. 48'4"; dr. 21'4"; s. 10 k.; cpl. 52; a. 2 3')

Kerwood (No. 1489), formerly *Budapest*, was launched in 1911 by Richardson, Duck & Co., Stockton-on-Tees, England; acquired by the Navy; and commissioned 5 November 1918, Lt. Comdr. E. Ellis in command.

Kerwood was assigned to NOTS and commenced coaling runs from Cardiff, Wales, to French ports. The cargo ship continued these operations until 28 December when she arrived Bordeaux with 1,000 tons of Army stores. From Bordeaux she sailed to Cardiff before sailing for the United States 29 January 1919. *Kerwood* arrived Norfolk 27 February; decommissioned 19 March 1919; and returned to the USSB for simultaneous return to her owner.

Keshena

An Indian word meaning "swift flying."

(YN-37: dp. 132; l. 111'; b. 22'6"; dr. 9'3"; a. 2 3')

Keshena (YN-37), formerly *Raymond Card*, was launched 1910 by J. H. Dialogue & Son, Camden, N.J.; she was acquired by the Navy 20 September 1940 from the Card Towing Line, New York; and placed in service 19 October 1940. *Keshena* cleared Hampton Roads, Va., 30 October and arrived Guantanamo 9 November for service as a net tender.

She remained in the 10th Naval District operating out of Guantanamo throughout the war. She was reclassified YNT-5 on 8 April 1942, and subsequently YTM-731 on 4 August 1945. *Keshena* was struck from the Navy List 28 August 1946 and transferred to the Maritime Commission for disposal on 12 February 1947.

Kestrel

I

A small European falcon.

(AMC-5: dp. 219; l. 98'10"; b. 21'8"; dr. 6'7"; s. 11 k.; cpl. 19; a. 2 30 mg.)

The first *Kestrel* (AMC-5), formerly *Chanco*, was built 1938 by Salisbury Yacht Co., Salisbury, Md.; acquired by the Navy 1 October 1940 from the Chanco Corp., Gloucester, Va.; and placed in service 21 January 1941. She was assigned to the 5th Naval District and operated on in-shore patrol duty out of Norfolk until 11 January 1944. Sailing to Boston, *Kestrel* performed similar duties in the 1st Naval District. She was reclassified IX-175 on 10 July 1944 and operated for the remainder of her service as an experimental vessel for Radiation Laboratory, M.I.T., Cambridge, Mass. *Kestrel* was placed out of service 29 October 1945 and delivered to the WSA for disposal on 5 August 1946.

II

(LCI(L)-874: dp. 209; l. 159'; b. 24'; dr. 6'; s. 14 k.; cpl. 239; a. 5 20mm.; cl. (LCI(L)-351)

LCI(L)-874 was laid down by New Jersey Shipbuilding Corp., Barber, N.J., 7 September 1944; launched 6 October; and commissioned 13 October, Lt. (j.g.) J. O. Harrison in command.

Following shakedown and training off the Atlantic coast, *LCI(L)-874* departed Key West 25 November for the Pacific. She engaged in additional training after ar-

riving San Diego 13 December. Departing 29 January 1945, she touched Pearl Harbor, Eniwetok, and Guam before arriving Peleliu 12 April. She performed picket and patrol duty in the Palau Islands during the remaining months of World War II.

From September 1945 to February 1946, *LCI(L)-874* operated between the Palau and Mariana Islands, providing mail and shuttle service among the Islands. Departing Eniwetok 4 February she arrived San Pedro, Calif., 1 month later. Sailing to Oregon in May *LCI(L)-874* decommissioned there 10 July 1946 and joined the Pacific Reserve Fleet.

She was reclassified and named *Kestrel* (AMCU-26) 7 March 1952; then recommissioned 8 February 1954, Lt. Gurley P. Chatelain in command. After shakedown and training, she arrived San Diego 27 March for operations in the 11th Naval District. From 1954 to 1957, *Kestrel* operated out of San Diego on underwater mine location exercises. She was reclassified MHC-26 in February 1955. *Kestrel* decommissioned at San Diego 2 December 1957. She was sold to Murphy Marine Service on 28 June, 1960.

Kestrel II

A former name retained.

(SP-529: t. 93; l. 108'; b. 18'; dr. 8'6"; s. 12 k.; cpl. 9; a. 1 3-pdr.)

Kestrel II, a motor boat, was built by Percy Tuttle of Greenport, Long Island, N.Y., in 1912 and owned by D. Herbert Hostetter of New York City. Acquired under free lease, she was taken over by the Navy 2 June 1917 and commissioned at Newport, R.I., 4 June, Chief Boatswain's Mate C. E. Black, USNRF, in command.

Assigned to the 2d Naval District at Newport, *Kestrel II* operated out of New London, Conn., on section and shore patrol in Long Island Sound. She decommissioned 6 January 1919 and was returned to her former owner the same day.

Ketchikan, see *YP-84*

Kete

A species of North Pacific salmon also called "chum" or "dog salmon" (*Oncorhynchus keta*).

(SS-369: dp. 1,526 (surf.), 2,424 (subm.); l. 311'9"; b. 27'3"; dr. 15'3"; s. 20 k. (surf.), 9 k. (subm.); cpl. 66; a. 1 5", 1 40mm., 1 20mm., 10 21" tt.; cl. *Balao*)

Kete (SS-369) was launched 9 April 1944 by Manitowoc Shipbuilding Co., Manitowoc, Wis.; sponsored by Mrs. E. S. Hutchinson; and commissioned 31 July, Comdr. R. L. Rutter in command.

Departing Manitowoc 20 August, *Kete* sailed via New Orleans to Panama. Arriving 5 September, she trained with SubRon 3 until 28 September; then the new submarine sailed to Pearl Harbor, arriving 15 October, and steamed westward on the 31st for her first war patrol.

She topped off her fuel at Midway 4 November and reached her assigned patrol area in the East China Sea on 15 November in company with *Sea Lion* (SS-315). Harassed by heavy weather and nonfunctioning bow planes, she sailed 19 November for Saipan, where she arrived the 24th. She departed Saipan with *Kraken* (SS-370) on 24 December and resumed her war patrol north of Okinawa 4 days later. Despite prolonged periods of heavy weather, she made lifeguard patrols off the central Ryukyus from 1 January to 27 January 1945 searching for American fliers downed during air strikes on the Ryukyus. After gathering vital weather data, she sailed to Guam and arrived 30 January for refit.

Lt. Comdr Edward Ackerman in command. *Kete* cleared Guam 1 March for her second war patrol. Assigned to waters surrounding the Nansei Shoto Chain, she resumed lifeguard duty and gathered weather data for

An Indian chief of what is now Michigan whose name meant "North Wind."

Kewaydin, a screw steamer, was laid down at Boston Navy Yard in 1864, but her hull was never completed. Renamed *Pennsylvania* 15 May 1869, she was broken up in 1884.

The double-turret monitor *Kickapoo* (*q.v.*) carried the name *Cyclops* from 15 June 1869 to 10 August when she was renamed *Kewaydin*. She saw no service as *Kewaydin*.

I

(AT-24: dp. 795; l. 156'8"; b. 30'2"; dr. 14'7"; s. 13 k.; cpl. 35; a. none; cl. *Bagaduce*)

Kewaydin (AT-24) was launched 25 June 1919 by Ferguson Steel & Iron Co., Buffalo, N.Y.; accepted by the Navy 31 October; and commissioned 4 November, Lt. M. A. McDuffie in command.

Assigned to the 5th Naval District, *Kewaydin* arrived Norfolk, Va., 19 June 1920. For more than 22 years she operated out of Norfolk from Boston, Mass., to Charleston, S.C., towing ships and targets and performing yard, harbor, and salvage duty. She departed New York 16 November 1942 with a Iceland-bound convoy and was damaged while steaming through heavy seas 19-27 November. After repairs at St. John's, Newfoundland, she arrived Hvalfjörður, Iceland, 22 December. Assigned to the Naval Operating Base, she towed gasoline barges, provided harbor tug services, and assisted in salvage operations. On 13 April 1943 she assisted in freeing *Uranus* (AF-14), grounded off Akureyri, along the northern coast of Iceland.

Kewaydin departed Reykjavik 19 April for Argentina, Newfoundland, where she arrived 28 April for duty as harbor tug and target-towing ship for Task Force 22. She served at Argentina until she sailed 2 June for Norfolk, arriving on the 7th. Resuming duty out of Norfolk, *Kewaydin* towed antisubmarine and surface targets in Chesapeake Bay and steamed from Maine to South Carolina on towing and salvage duty. While steaming off Cape Henry 17 and 18 November, she helped to free grounded *Melville* (AD-2); and, during towing operations along the New England coast 11 to 13 December, she searched for SS *Suffolk*, disabled in heavy seas.

Departing Charleston, S.C., 25 January 1944, *Kewaydin* steamed in convoy via Bermuda and the Azores for England. She reached Falmouth, England, 13 March, and for more than 2 months she made towing runs along the southern coast of England from Falmouth to the Thames River. Reclassified as ATO-24 on 13 April, *Kewaydin* joined in the Normandy Invasion. Departing Selsey, England, 8 June, she towed lightship *AL-28* to Utah Beach at St. Laurent, France. Between 8 June and 14 January 1945 she made 22 Channel crossings. Although harassed by unfavorable weather and German V-1 robot-bombs, she towed barges and landing craft from Lee-on-Solent, Falmouth, Plymouth, Portland, and other English ports to St. Laurent, Arramanches, Cherbourg, and Calais, France. While anchored at Dungeness, England, 29 June, she was slightly damaged by a V-1 robot-bomb that exploded close aboard after being shot down by British fighters.

Kewaydin continued operating along the English coast until she departed Plymouth 16 March 1945 for the United States. Steaming via Belfast, Ireland, she reached Cape Cod, Mass., 12 April and arrived Norfolk 22 April. After a complete overhaul, she sailed 16 June with YR-31 in tow. Steaming via Bermuda, Cuba, and the Panama Canal, she reached San Diego 31 July as the Navy's final blows against Japan brought the war in the Pacific to a close. *Kewaydin* decommissioned at San Diego 10 December and was transferred to the Maritime Commission. She was

the forthcoming invasion of Okinawa. While patrolling west of Tokara Retto on the night of 9 and 10 March, she surprised an enemy convoy and torpedoed three marus totaling 6,881 tons. During the night of 14 March, she attacked a cable-laying ship. With only three torpedoes remaining, she was ordered to depart the area 20 March, refuel at Midway, and proceed to Pear Harbor for refit. *Kete* acknowledged these orders 19 March; and, while steaming eastward the following day, she sent in a weather report from a position south of Colnett Strait. Scheduled to arrive Midway by 31 March, she was neither seen nor heard from again. Repeated attempts to contact her by radio failed; and on 16 April she was reported as presumed lost.

Circumstances surrounding her loss remain a mystery. The cause could have been an operational malfunction, a mine explosion, or enemy action.

Kete received one battle star for World War II service.

Kettering, Robin, see *Alhena* (AK-26)

Kevin Moran, see *Yaqui* (AT-80)

Kewaunee

A city in eastern Wisconsin, 25 miles east of Green Bay.

I

(PC-1178: dp. 315; l. 174'; b. 23'; dr. 8'; s. 20 k.; cpl. 59; a. 1 3", 1 40mm., 5 20mm., 2 rkt., 2 dcp., 2 dct.; cl. *PC-461*)

PC-1178 was laid down by Leathem D. Smith Shipbuilding Co., Sturgeon Bay, Wis., 11 August 1943; launched 2 October; sponsored by Miss Elsie Krause; and commissioned at New Orleans 6 January 1944, Lt. (J.G.) Norman E. Jones in command.

After shakedown off Florida, *PC-1178* escorted convoys along the East Coast until May 1944. Departing New York on the 26th, she screened a convoy to Guantanamo, then proceeded to the West Coast, arriving San Diego 16 June. Following a brief stay in Pearl Harbor, the sub-chaser continued her voyage to the Pacific war zone. Arriving Florida Island 24 August, *PC-1178* prepared for her initial assignment in a combat area.

Departing Guadalcanal 8 September, she took up patrol station on the approaches to the Palau Islands, needed as a staging base for the Philippine invasion. The conquest of the Palaus began with landings on Peleliu 15 September. *PC-1178* continued patrol and escort duty in the vicinity of the Palaus until departing for Eniwetok 15 November. For the next 3 months, she operated on patrol and escort duty between the Marshall and Mariana Islands, then sailed for Pearl Harbor 8 March 1945.

Following a brief overhaul at Pearl Harbor, she returned to Eniwetok 1 June and resumed operations in the western Pacific, remaining there for the duration of World War II. Reclassified *PCC-1178* in August, she continued servicing the occupation forces in Okinawa and the Philippines following the cessation of hostilities. With many months of foreign duty behind her, she departed Manicani, P.I., 19 April 1946, and arrived Astoria, Oreg., 6 June. *PCC-1178* decommissioned at Astoria 4 September 1946 and joined the Pacific Reserve Fleet.

While berthed in the Columbia River, she was once again reclassified *PC-1178* in October 1955, and named *Kewaunee* 15 February 1956. She remained in the Pacific Reserve Fleet until struck from the Navy List 1 November 1959. She was sold to the Port of Portland, Portland, Oreg., 30 June 1960.

PC-1178 received one battle star for World War II service.

II

Shamokin (YTM-752) (*q.v.*) was renamed *Kewaunee* 15 March 1966.

sold to Bay Cities Transportation Co., San Francisco 23 December.

Kewaydin received one battle star for World War II service.

Keweenaw

A bay of Lake Superior along the northern shore of the upper peninsula of Michigan.

(CVE-44: dp. 9,800; l. 495'8"; b. 69'6"; ew. 111'6"; dr. 26'; s. 18 k.; cpl. 890; a. 2 5"; 16 40mm., 27 20mm., 28 ac.; cl. *Bogue*; T. C3-S-A1)

Keweenaw (CVE-44) was laid down as ACV-44 under Maritime Commission contract by Seattle-Tacoma Shipbuilding Corp., Tacoma, Wash., 27 November 1942; launched 6 May 1943; sponsored by Mrs. R. G. Risley; assigned to the United Kingdom 10 June 1943; reclassified CVE-44 on 15 July 1943; and transferred to the United Kingdom under lend-lease 22 October 1943. During the remainder of World War II, she served the Royal Navy as HMS *Patroller* and operated in the Atlantic on convoy escort and patrol duty. Arriving Norfolk, Va., 9 December 1946, she was returned to the U.S. Navy the same day. Her name was struck from the Navy List 7 February 1947, and she was sold to Waterman Steamship Corp. 26 August 1947.

Key

Eugene Morland Key, born Conroe, Tex., 5 October 1916 enlisted as a Private in the U.S. Marine Corps Reserve 17 January 1941. Commissioned Second Lieutenant 29 May, he served at San Diego and Washington, D.C., before joining the 1st Marine Raider Battalion 19 March 1942. Promoted to First Lieutenant 4 June, he participated in the amphibious invasion of Tulagi Island, Solomons, 7 August. While leading the assault against a heavily defended, enemy position, Lieutenant Key was hit by hostile sniper fire. Although mortally wounded, he courageously struggled forward and threw hand grenades into the Japanese position, thus destroying the enemy resistance and allowing his platoon to advance without further loss. For his "indomitable fighting spirit, outstanding skill, and great personal valor" First Lieutenant Key was posthumously awarded the Navy Cross.

(DE-348: dp. 1,350; l. 306'; b. 36'8"; dr. 9'5"; s. 24 k.; cpl. 186; a. 2 5", 4 40mm., 10 20mm., 3 21" tt., 8 dep.; 1 dep. (h.h.), 2 dct.; cl. *John C. Butler*)

Key (DE-348) was launched 12 February 1944 by Consolidated Steel Corp., Orange, Tex., sponsored by Mrs. Ira F. Key, mother of Lt. Key; and commissioned 5 June 1944, Lt. Comdr. F. D. Buckley in command.

Following shakedown off Bermuda, *Key* operated out of Norfolk, training crews for destroyer escorts and patrolling the North Atlantic in quest of submarines. Clearing Hampton Roads 20 September, she escorted a convoy to Naples, Italy, then returned to New York 24 October. As a unit of CortDiv 76, she sailed from New York 10 November for duty with the 7th Fleet in the Southwest Pacific.

Key arrived Hollandia, New Guinea, 27 December, and between 1 January 1945 and 6 February she made five escort runs from Hollandia to Leyte Gulf. On 9 February she began antisubmarine patrols east of Leyte Gulf; then she steamed to Mangarin Bay, Mindoro, 19 February for similar duty in the South China Sea. Returning to Leyte 14 March, the versatile destroyer escort operated out of Leyte Gulf and Polloc, Mindanao, screening ships en route to Lingayen Gulf, Luzon; Zamboanga, Mindanao; Jolo, Sulu Archipelago; and Legaspi and Manila, Luzon. After escorting a convoy of LSM's and LCI's to Davao Gulf 15 May, *Key* bombarded and destroyed an important Japanese PT base at Piso Point before returning to Polloc the 17th.

After additional escort runs to Davao Gulf, Leyte Gulf, and Legaspi, Luzon, *Key* departed Manila Bay 11 June for

duty in the Dutch East Indies. Arriving Morotai Island 14 June, she screened Tawitawi-bound LCI's 23-26 June before escorting a convoy the 28th to a rendezvous the following day with the amphibious force en route to the assault at Balikpapan, Borneo. While at Balikpapan 7 July, *Key* rescued a survivor from a LCM sunk by a mine in the harbor. She patrolled for enemy submarines until 22 July when she sailed via Morotai for Leyte Gulf, arriving 4 August.

Operating out of Leyte after the end of hostilities, *Key* steamed on anti-submarine patrols east of Leyte 22 to 31 August and escorted a convoy to Ulithi, Western Carolines before sailing to Manila 8 September. Between 18 September and 23 November she made two escort runs from Manila Bay to Okinawa to support American Occupation operations in Japan. Clearing Manila Bay 25 November, she embarked homebound veterans 27 November at Guiuan, Samar and departed the next day for the United States. Arriving San Pedro, Calif., 17 December, she decommissioned 9 July 1946 at Terminal Island and entered the Pacific Reserve Fleet. At present she is berthed at Bremerton, Wash.

Key received one battle star for World War II service.

Key Pittman, see *Leonis* (AK-128)

Key West

The largest seaport in the Florida keys.

I

(StwStr: t. 207; l. 156'; b. 32'; dph. 4'6"; a. 6 24-pdr. how.)

The first *Key West* was built in 1862 at California, Pa., as *Key West No. 3*; purchased by the Navy from W. S. Evans *et al.* at Cairo, Ill., 16 April 1863; and commissioned 26 May, Acting Master E. M. King in command.

The wooden stern-wheel steamer departed Cairo that day for patrol duty in the Tennessee River, supporting Army efforts and protecting Federal positions in the Tennessee Valley from Confederate Calvary raids. Frequently, as she patrolled the river and escorted transports and supply ships, her guns engaged hit-and-run batteries and bands of riflemen. On 10 October 1864, as troops debarked at Eastport, Miss., from three transports *Key West* and *Undine* had escorted from Clifton, Tenn., a hidden Confederate 6-gun battery at Eastport and a 3-gun battery near Chickasaw opened fire on the Union ships. After the Southern guns had set two of the transports on fire and damaged *Key West* with two rifle shots, the Union ships reluctantly retired downstream out-of-range.

On 2 November at Johnsonville, Tenn., *Key West* assisted *Tawah* in recapturing transport *Venus*, taken along with *Undine* and *Cheeseman* by the Confederates there 30 October. On 4 November *Key West*, *Tawah*, and *Elfin* were caught in a narrow, shallow section of the river near Johnsonville by a Confederate force under General Nathan B. Forrest. After a vigorous action in which *Key West* was hit 19 times by rifled artillery, the 3 Union gunboats, riddled and almost out of ammunition, were set afire and scuttled.

II

(PF-17: dp. 1,430; l. 303'11"; b. 37'6"; dr. 13'8"; s. 20.3 k.; cpl. 190; a. 3 3", 4 40mm., 9 20mm., 9 dep., 2 dct.; cl. *Tacoma*)

The second *Key West* (PF-17) was launched 29 December 1943 by the American Shipbuilding Co., Lorain, Ohio; sponsored by Mrs. Vernon Lowe; sister of Lt. Harold Felton, the first resident of Key West reported missing in World War II; and commissioned at Houston 7 November 1944, Lt. Comdr. B. Papanek, USCGR, in command.

Key West stood out of Galveston Bay 17 November 1944 for training exercises and escort duty out of Bermuda. The frigate operated there until sailing for Norfolk 22

December. *Key West* departed Hampton Roads 18 January 1945 escorting a convoy to Oran, Algeria, and returned Boston 28 February.

During the next 4 months, she made two cruises out of Casco Bay, Maine. Upon her return New York 14 June, from her final cruise, *Key West* remained at Brooklyn until 5 July when she sailed for Boston for conversion to a weather ship.

She departed Boston 31 July and, after transiting the Canal, arrived Pearl Harbor 23 August. *Key West* was then assigned to duty of weather station patrol in the vicinity of Guam, arriving there 10 September. She operated out of Apra Harbor reporting meteorological data and stood by to aid ships in distress until 14 March 1946 when she arrived San Francisco. *Key West* departed San Francisco 9 April and served for 3 weeks on plane-guard station off the North California Coast. The weather ship arrived Seattle, Wash., 1 May and decommissioned at Bremerton, Wash., 14 June 1946. She was sold 18 April 1947 to Cascade Enterprises, Oakland, Calif., and scrapped.

Keyport

A town in Kitsap County, Wash.

Keyport was named YF-885 (q.v.) 8 June 1965.

Keystone State

A symbol of Pennsylvania.

I

(SwStr: t. 1,364; l. 220'; b. 35'; dr. 14'6"; s. 9.5 k.; cpl. 163; a. 2 12-pdrs. (lt.), 2 12-pdrs (h.))

The first *Keystone State*, a wooden side wheel steamer built at Philadelphia in 1853 by J. W. Lynn was chartered by the Navy 19 April from the Ocean Steam Navigation Co. at Philadelphia, and purchased 10 June 1861. She commissioned at Philadelphia Navy Yard 19 July 1861, Comdr. G. H. Scott in command.

Chartered to search for Confederate raider *Sumpter*, she shared in the capture of *Hiawatha* at Hampton Roads 20 May 1861. When her charter expired 23 May, she returned to Philadelphia, where she was purchased; fitted out; and commissioned. She left the Delaware Capes 21 July and cruised in the West Indies seeking Confederate blockade runners in Carribean ports; and on the high seas she captured *Saloon* 10 October and towed her to Philadelphia via Key West, Fla.

At Philadelphia Comdr. W. E. Le Roy took command of the ship 12 November. The side wheeler stood down the Delaware and out to sea 8 December, visited Bermuda.

USS *Key West* (PF-17) launching 29 December 1943 at Lorain, Ohio

and arrived Hampton Roads the day after Christmas. She got underway 9 January 1862 and joined the South Atlantic Blockading Squadron at Charleston 13 January 1862.

Ordered to the Florida coast she engaged Confederate batteries at Amelia Island on the 18th and captured schooner *Mars* 5 February.

Keystone State arrived Port Royal, S.C., for replacement 18 March and got underway again on the 29th. She chased a blockade runner and fired at another 3 April; but both escaped. On the 10th she chased schooner *Liverpool* of Nassau ashore where she was burned to the water's edge. Schooner *Dixie* fell prey to the vigilant blockader 15 April, steamer *Elizabeth* then struck her colors 29 May, and schooner *Cora* surrendered 2 days later. *Keystone State* took blockade runner *Sarah* off Charleston 20 June and pursued an unidentified steamer all day and night of the 24th before giving up the chase. She took schooner *Fanny* attempting to slip into Charleston with a cargo of salt 22 August.

However, this was dangerous work; and *Keystone State* well earned her long list of prizes. On the last day of January 1863 she discovered a ship off Charleston, stood fast, and fired at her. The ship responded in kind, from time to time hitting the blockader. At 0600 a shot ripped into *Keystone State's* steam drum, scalding 1 officer and 19 men to death and wounding another score. Later that morning *Memphis* towed *Keystone State* to Port Royal for repairs. Ready for action again, she got underway on George Washington's Birthday for blockading station off St. Simons Sound, Ga., where she served until departing for Philadelphia 2 June for repairs at the Navy Yard, where she decommissioned on the 10th.

Keystone State recommissioned 3 October, Comdr. Edward Donaldson in command, and stood out from Delaware Capes on the 27th. Three days later she joined the North Atlantic Blockading Squadron at Wilmington, N.C. While cruising off Wilmington, the veteran side wheeler captured steamer *Margaret* and *Jessie* 5 November. On 29 May 1864 she picked up 235 bales of cotton which had been thrown overboard by a chase; and the next day she captured steamer *Caledonia*. She took steamer *Suez* off Beaufort, N.C., 5 June and steamer *Rouen* at sea 2 July. On the 26th she chased a steamer which escaped after throwing her cargo of cotton overboard. *Keystone State* then picked up over 60 bales. On a similar occasion 8 August she salvaged 225 bales. On the 24th she chased and captured steamer *Lilian* and, with *Gettysburg*, picked up 58 bales. On 5 September with *Quaker City* she chased and fired at steamer *Elsie*. A shell exploded in the blockade runner's forward hold, starting a fire which *Keystone State* extinguished. *Keystone State* then escorted her prize to Beaufort, N.C.

During the fall of 1864, the side wheeler continued blockade duty off the North Carolina coast; and, as winter set in, she prepared to attack Fort Fisher, which protected the important Confederate port of Wilmington. Shortly after dawn on Christmas Eve, *Keystone State*, steaming with the reserve squadron of the fleet in line of battle, got underway toward Fort Fisher. Her guns, firing over and between the ships in the first echelon, supported troops as they landed and fought to take the fort. However, late in the afternoon, the Army Commander, General Benjamin F. Butler, decided that the Confederate works could not be taken and ordered his troops to reembark. *Keystone State* withdrew to Beaufort, N.C.

Rear Admiral Porter, the Navy Commander, was not to be thwarted. He renewed the attack on Fort Fisher 13 January with a force of 59 warships. He sent some 2,000 sailors and marines ashore to aid the 8,000 Army troops led by Major General Alfred H. Terry. After 3 days of bitter fighting, the bravely defended Confederate fortress fell, closing the South's last supply line with Europe. *Keystone State* reached the scene before dawn the 16th and received the wounded.

After the capture of Wilmington, the side wheeler continued to operate along the Carolina coast supporting

clean-up operations which snuffed out Southern resistance. She got underway 13 March towing monitor *Montauk* to Hampton Roads and arrived Baltimore the 20th. *Keystone State* decommissioned 25 March and was sold at auction at Washington 15 September to M. O. Roberts. She was redocumented 22 December 1865, and operated in merchant service until 1879.

Sloop-of-War *St. Louis* (*q.v.*) was renamed *Keystone State* 30 November 1904.

• *Keywadin*

An Indian word meaning "North Wind."

I

After decommissioning 29 July 1865, a double-turreted monitor *Kickapoo* (*q.v.*) was renamed *Cyclops* 15 June 1869 and then *Keywadin* 10 August 1869 before being sold 12 September 1874.

II

(ATA-213; dp. 835; l. 143'; b. 34'; dr. 13'2"; s. 13 k.; cpl. 45; a. 1 3', 2 20mm.; cl. *Maricopa*)

ATA-213 was authorized ATR-140; reclassified ATA-213 on 15 May 1944; launched 9 April 1945 by the Gulfport Boiler & Welding Works, Port Arthur, Tex.; and commissioned 1 June 1945, Lt. Vincent A. Galterio, USNR, in command.

After shakedown in the Gulf of Mexico, ATA-213 cleared New Orleans 4 July 1945, towing a barracks ship and floating derricks to the Marshall Islands. The tug arrived Majuro 24 September, and after several towing assignments, returned Pearl Harbor 17 October where she operated until sailing for the East Coast 28 June 1946.

Following towing assignments enroute, the tug arrived Boston 28 September to serve in the 1st Naval District. ATA-213 was named *Keywadin* 16 January 1948, and from that time through 1964 she performed various towing duties along the Atlantic coast. She operated out of Boston engaging in essential although unheralded assignments of the U.S. Navy. She towed disabled ships to port for repairs; towed targets in gunnery exercises; and delivered mail. Although operating primarily in the 1st and 4th Naval Districts, *Keywadin* frequently cruised south to Charleston, S.C., and Mayport, Fla., towing barges and ships for overhaul. During October 1964 the tug commenced torpedo recovery services for patrol aircraft, continuing this duty for the next 2 months. *Keywadin* continues to serve in the 1st Naval District through 1967.

Khedive

A British name retained. A title granted in 1867 by the sultan of Turkey to the viceroy or governor of Egypt.

Cordova (CVE-39) (*q.v.*) was renamed HMS *Khedive* upon transfer to the United Kingdom under lend lease 25 August 1943.

Khedive, see *Nehenta Bay* (CVE-74)

Kiamichi

A river in Oklahoma.

(AOG-73; dp. 4,335; l. 325'2"; b. 48'2"; dr. 15'8"; s. 10 k.; cpl. 80; cl. *Klickitat*; T. T1-M-BT1)

Kiamichi (AOG-73) was launched 17 August 1945 by St. Johns River Shipbuilding Corp., Jacksonville, Fla.;

and sponsored by Mrs. B. C. Lourex. *Kiamichi's* acquisition was cancelled 29 August 1945 prior to commissioning. She was later completed for International Tankers, Panama. She was renamed *Transmerc* in 1951, and in 1952 sold to Colombia and renamed *Sancho Jimeno*.

Kiasutha

An Indian chief of the Mingo band noted as an orator and advocate of peace between the French and English during the French and Indian War.

(YT-463: dp. 206; l. 102'2"; b. 241; dr. 12'4"; s. 12 k.; a. 2.50 cal. mg.)

Kiasutha (YT-463) was built in 1943 by Gulfport Boiler & Welding Works, Port Arthur, Tex., and placed in service 13 September 1943. Assigned to the Pacific, she departed New Orleans 3 October and sailed via the Panama Canal for Espiritu Santo, New Hebrides, to join Service Squadron, South Pacific Force. Reclassified as YTB-463 on 15 May 1944, she conducted tug and salvage operations out of Espiritu Santo until she reported to the Commander, Pacific Forward area 12 May 1945. She continued to operate in the Pacific until she was placed out of service at Pearl Harbor 1 May 1947. Towed by *PCE-844*, *Kiasutha* arrived San Diego 23 September and was transferred to the Panama Canal Zone 15 November. Departing San Diego 20 November, she arrived Panama Canal under tow 11 December. Her name was struck from the Naval Register 5 December. She was subsequently transferred to the Panama Canal Corp.

Kibbey, Joseph H., see *Phobos* (AK-129)

Kickapoo

A tribe of Algonquian Indians.

(BM: t. 970; l. 220'; b. 57'; dr. 6-7'; cpl. 123; a. 4 11'')

Kickapoo was a double-turreted monitor built at St. Louis by G. B. Allen & Co., in 1864 and commissioned at Mound City, Ill., 8 July 1864, Lt. David C. Woods in command.

After serving the Mississippi squadron off the mouth of the Red River during the summer, the new ironclad was transferred to the West Gulf Blockading Squadron 1 October and stationed in Mobile Bay, where Admiral Farragut was building up strength for operations against the forts which protected the city. Lt. Comdr. Meriweather P. Jones assumed command of the monitor 23 December.

In the spring of 1865 *Kickapoo* engaged in the dangerous work of sweeping the water approaches to the forts clearing defensive minefields. On 28 March she rescued the crew of *Milwauke* after the ship struck a torpedo and sunk. The next day she was on hand to save the men of *Osage* after that monitor had met a similar fate.

Late in June *Kickapoo* sailed for New Orleans where she decommissioned 29 July and was laid up. Her name was changed to *Cyclops* 15 June 1869 and then *Kewaydin* 10 August. She was sold at public auction in New Orleans to Schickels, Harrison & Co., 12 September 1874.

Prior to launch 24 February 1919, *Kickapoo* (AT-29) was renamed *Mahopac* (q.v.).

Kidd

Isaac Campbell Kidd, born in Cleveland, Ohio, 26 March 1884, entered the Naval Academy in 1902. He served in *Columbia*, *New Jersey*, *North Dakota*, *Pittsburgh*, *San Diego*, *New Mexico*, *Utah*, and *Vega*. During the Japanese attack on Pearl Harbor, 7 December 1941, Rear Admiral Kidd was Commander of Battleship Division 1

and Chief of Staff and Aide, Commander, Battleship Battle Force. At the first knowledge of the attack, he rushed to the bridge of *Arizona* (BB-39), his flagship, and "courageously discharged his duties as Senior Officer Present Afloat until *Arizona* blew up from a magazine explosion and a direct bomb hit on the bridge which resulted in the loss of his life."

He was awarded the Medal of Honor and the Purple Heart for his "conspicuous devotion to duty, extraordinary courage, and complete disregard of his own life . . ."

(DD-661: dp. 2,050; l. 376'6"; b. 39'8"; dr. 17'9"; s. 35 k.; cpl. 273; a 5 5', 10 21" tt.; 6 dct.; cl. *Fletcher*)

Kidd (DD-661) was launched 28 February 1943 by Federal Shipbuilding & Drydock Co., Kearny, N.J.; sponsored by Mrs. Isaac C. Kidd, widow of Rear Admiral Kidd, and commissioned 23 April 1943, Comdr. Allan Roby in command.

After shakedown out of Casco, Maine, in June, *Kidd* cruised in the Atlantic and Caribbean escorting large combatant vessels until she departed for the Pacific in August 1943 in company with *Alabama* (BB-60) and *South Dakota* (BB-57). Arriving Pearl Harbor 17 September 1943, she got underway 29 September escorting aircraft carriers toward Wake Island for the heavy air attacks 5 October and returned to Pearl Harbor 11 October 1943.

Mid-October found *Kidd* underway with a formidable task force to strike Rabaul and to support the Bougainville landings. Upon reaching a strike position south of Rabaul on the morning of 11 November, the task force struck hard at Japanese positions on the island. *Kidd* dropped astern of her formation to rescue the crew of a plane from aircraft carrier *Essex* (CV-9) which had splashed as the American carrier launched a strike at Rabaul. A group of planes from an extremely heavy Japanese counterattacking force dove at the destroyer in an attempt to sink her while she was on her own. Striking back hard, she splashed three Japanese planes and successfully completed the rescue while skillfully maneuvering to dodge torpedoes and bombs. Comdr. Roby, her commanding officer, received the Silver Star for gallantry during this action. The destroyer returned to Espiritu Santo 13 November.

Kidd next screened carriers making air attacks on Tarawa during the Gilbert Island invasion from 19 to 23 November. On the 24th she spotted 15 low flying enemy bombers heading toward the heavy ships, gave warning, and shot down 2 "Vals." After Tarawa was secure, *Kidd* remained in the Gilbert Islands to support cleanup operations before returning to Pearl Harbor 9 December.

On 11 January 1944 *Kidd* sailed for the forward area, touched at Espiritu Santo, then sailed next day for Funafuti, arriving 19 January. During the invasion of the Marshall Islands 29 January to 8 February, *Kidd* screened heavy ships and bombarded Roi and Wotje, then anchored at Kwajalein 26 February.

From 20 March to 14 April *Kidd* guarded an airstrip under construction on Emirau and supported the occupation of Aitape and Hollandia in New Guinea 16 April to 7 May. She fought in the Marianas campaign 10 June to 8 July and helped soften up Guam for invasion 8 July to 10 August.

In need of repairs, *Kidd* sailed for Pearl Harbor, arriving 26 August 1944. On 15 September she departed Pearl, reached Eniwetok 25 September, and arrived Manus 3 October. There she became part of the giant Philippines invasion fleet and entered Leyte Gulf 20 October. Here she screened the initial landings and provided fire support for soldiers who fought to reconquer the island until she sailed 14 November for Humboldt Bay, New Guinea, arriving 19 November. On 9 December *Kidd* headed toward Mare Island Navy Yard for overhaul and moored at Mare Island Christmas Day.

Kidd sailed 19 February 1945 to join Task Force 58 for the invasion of Okinawa. Trained and battlewise, *Kidd* played a key role during the first days of the Okinawa campaign, screening battleships, bombarding key targets

ashore, rescuing downed pilots, sinking floating mines, providing early warning of enemy air raids, guarding heavily damaged *Franklin*, and shooting down kamikazes.

While on picket station 11 April 1945, *Kidd* and her division mates, *Black* (DD-666), *Bullard* (DD-660) and *Chanucey* (DD-667), with the help of Combat Air Patrol, repelled three air raids. That afternoon a single enemy plane crashed *Kidd*, killing 38 men and wounding 55. As the destroyer headed south to rejoin the task group, her effective fire drove off enemy planes trying to finish her. Stopping at Ulithi for temporary patchwork, she got underway 2 May for the West Coast, arriving Hunter's Point Naval Shipyard 25 May.

On 1 August 1945, *Kidd* sailed to Pearl Harbor and returned to San Diego 24 September 1945 for inactivation. She decommissioned 10 December 1946 and entered the Pacific Reserve Fleet.

When the United States had allowed her military strength to shrink beyond the danger point, the Communist struck in Korea. Fortunately, there were ships in reserve, though it took time to obtain and train crews and provide material. *Kidd* recommissioned 28 March 1951, Lt. Comdr. Robert E. Jeffery in command; sailed to the Western Pacific 18 June; and arrived Yokosuka 15 July. She joined Task Force 77 and patrolled off the Korean coast until 21 September when she sailed for the East Coast of Korea. From 21 October to 22 January 1952, *Kidd* bombarded targets of opportunity from Wan-Do Island to below Koesong. She then sailed with Destroyer Division 152 to San Diego, arriving 6 February 1952.

Kidd again got underway for Korea 8 September 1952; joined the screen of a hunter-killer group near Kojo; and, in November, was back on bombardment missions off North Korea. Shortly thereafter, truce talks began. *Kidd* continued to patrol the Korean coast during negotiations, strengthening the position of American representatives by showing the Communists that we were ready

and able to intensify operations. She departed Far East 3 March 1953 via Midway and Pearl Harbor and arrived San Diego for overhaul 20 March.

Overhaul completed, *Kidd* proceeded to Long Beach 20 April 1953. Next day Swedish freighter *Hainan* rammed *Kidd* in Long Beach harbor requiring repairs until 11 May 1953.

From late 1953 to late 1959 *Kidd* alternated Westpac cruises with operations on the West Coast making stops at Pearl Harbor and various ports in Japan, Okinawa, Hong Kong, and the Philippines.

She visited Sydney, Australia, 29 March 1958 and later that year patrolled the Formosa Straits.

Kidd got underway 5 January 1960 for the East Coast via the Panama Canal, arriving Philadelphia 25 January. From there she made Naval Reserve training cruises to various East Coast ports. She joined fleet operating forces during the Berlin Crisis in 1961. December 1961 found *Kidd* patrolling off the Dominican Republic in a "show-of-force" patrol to provide an element of security in the troubled Caribbean.

Kidd arrived Norfolk 5 February 1962 and joined Task Force Alfa for ASW exercises. On 24 April she was assigned to the Naval Destroyer School at Newport. After a cruise to the Caribbean, on 1 July 1962 she resumed Naval Reserve training. *Kidd* decommissioned 19 June 1964, entered the Atlantic Reserve Fleet, and at present is berthed at Philadelphia.

Kidd received four battle stars for World War II service and four battle stars for Korean service.

Kidder

Hugh P. Kidder was born in Waukon, Iowa, in 1897. He was awarded the Croix de Guerre with palm and star during World War I for courage and endurance while car-

USS *Kidd* (DD-661) in December 1959

rying orders to advanced positions under violent machine gun fire during a period of 9 days. Lt. Kidder was awarded the Distinguished Service Cross for extraordinary heroism near Blanch Mont. France, 2 to 3 October 1918 when he led a small patrol into enemy trenches and captured two strong machine gun positions. First Lieutenant Kidder was killed in action 3 October attempting to better his position in the face of heavy machine gun and artillery fire.

(DD-319: dp. 1,190; l. 314'5"; b. 31'8"; dr. 9'10"; s. 35 k.; cpl. 95; a. 4 4', 12 21' tt.; cl. *Clemson*)

Kidder (DD-319) was launched 10 July 1919 by Bethlehem Shipbuilding Corp., San Francisco, Calif.; sponsored by Miss Ethel Murry Jonstone; and commissioned 7 February 1921, Comdr. H. J. Abbett in command.

After shakedown along the coast, *Kidder* was assigned to Destroyer Division 34, Battle Fleet, at San Diego. From 1921 to 1924 she operated along the West Coast between Washington and the Canal Zone engaging in training maneuvers, fleet problems, and gunnery exercises. The destroyer played an important role in the development of naval warfare through using experimental torpedoes in exercises.

Kidder transited the Panama Canal during January 1924 for fleet concentrations in the Caribbean, returning San Diego 22 April. She continued her training operations before clearing San Francisco 15 April 1925 for a fleet problem and joint exercises off Hawaii. *Kidder* then accompanied the Battle Fleet to Samoa, Australia, and New Zealand before returning Mare Island 26 September.

For the rest of her naval service she was almost constantly at sea, including winter fleet concentrations in the Caribbean during 1927 and a joint submarine exercise off Hawaii in the spring and summer of 1928. The Navy gained valuable experience from the various exercises and experiments which *Kidder* conducted—information that made possible many of the great naval victories of World War II. During her final year of service, *Kidder* operated out of San Diego and decommissioned there 18 March 1930. After scrapping, her materials were sold 31 October 1930 in accordance with the terms of the London Treaty limiting naval armament.

Kiel, see *Camden* (IX-42)

Kilauea

An active volcano on the Island of Hawaii.

Kilauea (AE-4) was renamed *Mount Baker* (q.v.) 17 March 1943.

(AE-26: dp. 20,500; l. 564'; b. 81'; s. 20 k.; a. 8 3'; cl. *Kilauea*)

Kilauea (AE-26) was laid down 10 March 1966 by General Dynamics Corp., Quincy Div., Quincy, Mass.; launched 9 August 1967; sponsored by Mrs. Michael J. Kirwin, wife of Representative Kirwin of Ohio; and will be completed by early 1968.

Once commissioned, the ammunition ship will deliver ammunition and limited quantities of freight, mail, and passengers to the Pacific Fleet at sea and in port.

Killarney

A former name retained.

(SP-219: t. 32; l. 64'10"; b. 13'; dr. 4'6"; 10 k.; a. none)

Killarney (SP-219), a motor yacht, was built by Defoe Boat Works, Bay City, Mich., in 1910; purchased 30 April 1917 from her owner, James H. McGillan, of Green Bay, Wis., and commissioned 12 June, Ens. James H. McGillan, USNRF, in command.

Assigned to the Naval District at Great Lakes, Ill., *Killarney* served as a section patrol ship on the St. Mary's River in the Straits of Mackinac during the summer and fall of 1917. She wintered in Detroit and continued her duties on Lake St. Clair and the Detroit and St. Clair Rivers, where she patrolled channels and regulated traffic. *Killarney* was transferred 3 March 1919 to the Naval Training Camp at Detroit and declared inactive 12 August. Struck from the Navy List 3 November, *Killarney* was sold 18 December to John J. Kiley of Detroit.

Killdeer

A ringed plover: a North American shore and field bird (*Charadrius vociferus*).

(AMC-21: dp. 275; l. 105'7"; b. 22'10"; dr. 9'8"; s. 10 k.; cpl. 18; a. 1.50 cal. mg.)

Killdeer (AMC-21) was originally built as a purse seiner in 1930 by Al Larson, Los Angeles with the name of *Vindicator*; rebuilt in 1940 by Harbor Boat Works, San Pedro, Calif.; acquired by the Navy from her owner, Mr. Martin Trutanich, 8 November 1940; and placed in service the same day as *Killdeer*.

From 9 November 1940 to 17 April 1941 she underwent conversion to AMC-21, and on 8 May 1941 she began service with the 12th Naval District. Operating out of San Francisco, *Killdeer* transferred to the Western Sea Frontier 1 August for further service as a channel minesweeping ship. She continued sweeping shipping lanes in the approaches to San Francisco Bay until 12 September 1944 when she was placed out of service. Reclassified as IX-194 on 25 September, *Killdeer* was used by the 12th Naval District as a general utility vessel. Her name was struck from the Naval Register 2 June 1945, and she was turned over to the Maritime Commission for disposal 9 January 1946.

LSIL-883 (q.v.) was commissioned 26 October 1944 and decommissioned in March 1946. On 7 March 1952, while out of commission in reserve, she was named *Killdeer* and reclassified AMCU-27. In July 1954 she was again reclassified *LSIL-883*.

Killen

Edward Killen joined the Navy 5 May 1801 as a seaman aboard *Enterprise*. Accompanying her to the Mediterranean Edward Killen served with skill and devotion, and was promoted to Master's Mate 9 November 1803. He volunteered for Stephen Decatur's daring expedition into Tripoli Harbor 16 February 1804 to destroy *Philadelphica*, a United States frigate captured by Tripolitan pirates. After successfully completing this mission in *Intrepid*, Killen served on board *Enterprise* until his death 24 July 1806.

(DD-593: dp. 2,050; l. 376'6"; b. 39'8"; dr. 17'9"; s. 35 k.; cp. 273; a. 5 5', 10 40mm.; 7 20mm.; 6 dep., 2 det., 10 21' tt.; cl. *Fletcher*)

Killen (DD-593) was launched 10 January 1943, by the Puget Sound Navy Yard, Bremerton, Wash.; sponsored by Mrs. Inez Cowdrey; and commissioned 4 May 1944, Comdr. H. G. Corey in command.

After shakedown *Killen* cleared Port Angeles, Wash., 19 August 1944, escorted a convoy from Pearl Harbor, and arrived Manus, Admiralty Islands, 14 September. Following training exercises the destroyer departed Hollandia 12 October with the Central Philippine Attack Force that arrived off San Pedro Bay on the 20th. For the next 5 days she gave day and night fire support to troops ashore on Leyte, and during one 30-minute period on the 21st silenced three enemy artillery positions. When the Japanese Navy decided to contest the landings in the Battle of Leyte Gulf, *Killen's* squadron engaged the enemy at Surigao Strait. On the morning of 25 Oc-

tober, at 0325, she launched five torpedoes toward battleship *Yamashiro*. One hit slowing her to 5 knots enabled other American destroyers to maneuver for the kill. In the widespread fleet actions for Leyte, covering hundreds of thousands of sea miles, the U.S. Fleet reduced the Japanese Fleet to an ineffective force thus greatly speeding up the advance toward Japan and end of the war.

Killen resumed antiaircraft screen. While on patrol off Leyte 1 November she was attacked by seven enemy aircraft. The destroyer splashed four raiders before a bomb from one of the attackers found its mark in *Killen's* port side, killing 15 men. After temporary repairs at San Pedro Bay and Manus, she steamed into Hunter's Point, Calif., 15 January 1945, for overhaul.

Returning to Manus 9 May, the gallant destroyer sailed the next day for convoy escort and patrol duty in the Philippines. *Killen* steamed into Brunei Bay, Borneo, 10 June with the assault forces, and supported the troops with prelanding bombardment. She resumed exercises 15 June before arriving off Balikpapan, Borneo, 27 June for fire support missions. After silencing enemy shore batteries on Borneo, *Killen* prepared for the final phase of the Pacific war as she arrived Manila 14 July. She cleared that port 2 weeks later, and joined the North Pacific Force in the Aleutian Islands.

Upon the cessation of hostilities the destroyer was assigned to the occupation forces in the Japanese islands. Departing Adak 31 August, *Killen* supported the occupation forces until 14 November when she sailed to Puget Sound. From there she proceeded to San Diego, arriving 2 April, and decommissioning 9 July 1946.

The veteran destroyer served as a trial ship during the atom bomb tests in 1958, and in 1962 engaged in high explosive tests in the Chesapeake Bay. *Killen* was struck from the Navy List in January 1963 to be used as a target ship for missiles off Vieques Island, P.R.

Killen received two battle stars for World War II service.

Killerig

(SI: t. 576; l. 172'; b. 30'; dr. 14'6"; a. 1 6-pdr.)

During World War II, *Killerig*, a salvage ship built in 1918 by Smith Dock Co., Ltd., South Bank, Middlesborough, Yorkshire, England, was operated out of Kingston, Jamaica, by Merritt-Chapman & Scott, Co. under direction of the Chief of the Bureau of Ships.

Killigrew, William H., see YP-434

Kilty

Rear Admiral Augustus H. Kilty, born in 1807 at Annapolis, Md., was appointed Midshipman 4 July 1821. He served in Pacific, Asiatic, Mediterranean, and African waters. In February 1832 he took part in Commodore George Reid's operations in defense of American merchantmen at Quallah Batto. During the Civil War, he was conspicuous for his skill and bravery at Island No. 10 and Fort Pillow. He commanded an expedition to White River, Ark.; during this operation he was severely wounded 17 June 1862, causing the loss of his left arm. He was commissioned Rear Admiral 13 July 1870 and died 10 November 1879.

(DD-137: dp. 1,090; l. 314'5"; b. 31'9"; dr. 8'6"; s. 35 k. cpl. 113; a. 4 4", 1 1-pdr.; cl. *Wickes*)

Kilty (DD-137) was launched 25 April 1918 by the Mare Island Navy Yard, Vallejo, Calif.; sponsored by Miss Elizabeth Harrison Shapley; and commissioned 17 December 1918, Lt. Comdr. Timothy Jerome Keleher in command.

After a Caribbean shakedown and a European cruise

during the summer of 1919, *Kilty* returned to San Diego and operated there until she decommissioned 5 June 1922.

Kilty recommissioned 18 December 1939; and in April 1940 sailed on Neutrality Patrol out of San Diego. During the summer she conducted reserve training cruises and resumed her patrols early in September. The destroyer continued these operations until the United States entered World War. II. Then *Kilty* intensified ASW patrols, trained armed-guard crews for merchantmen, and escorted coastal convoys throughout 1942.

Reclassified APD-15 on 2 January 1943, *Kilty* cleared Mare Island 2 March for the South Pacific. After arriving Noumea 8 April with a Marine Raider battalion, the transport steamed toward Guadalcanal as an ASW screen 28 April. She made similar cruises until June when she reported for patrol and escort duty in the Solomons. *Kilty* played a vital role in the conquest of the Solomons, landing troops of the 37th Division on New Georgia Island 30 June and 4 July. Continuing operations in the area, she made three reinforcement runs up the "Slot" during July and landed troops on Vella Lavella Island 15 August.

As Allied operations built up momentum, *Kilty* moved on to the Treasury Islands Campaign. She successfully landed New Zealand troops on Stirling Island 27 October and a Marine force on Bougainville 9 days later, enabling Allied Forces to take Rabaul. *Kilty* effectively aided this campaign in three more landings before sailing for Brisbane 21 November.

Returning Milne Bay in mid-December, the transport began preparing for the assault on the Bismark Archipelago. *Kilty* landed units of the 7th Marine Regiment for the initial attack on Cape Gloucester, New Britain 26 December. Following two more landings there, she sent troops ashore at Saidor 2 January 1944 to take an air strip which would help the Air Force patrol and support Cape Gloucester. *Kilty's* next objective was Green Island, where she landed troops on 15 and 20 February before returning to Port Purvis.

Following an unopposed assault on Emiran Island 20 March, the transport prepared for the Hollandia campaign. Completing landings at Aitape 22 April, *Kilty* then participated in New Guinea landings, including Wakde 17 May and Biak 10 days later before putting into Humboldt Bay 28 May.

After a minor overhaul at Milne Bay, she landed troops on Cape Sansapor 30 July before sailing to Sydney. Returning to Humboldt Bay 30 August, *Kilty* landed troops on Morotai 15 September to complete her operations in New Guinea area. *Kilty* departed Hollandia 12 October as part of the spearhead for the giant Leyte assault that bore down on the enemy like a typhoon. In the advance assault force she landed rangers on Dinagat in the entrance to Leyte Gulf 17 October to pave the way for the main Philippine invasion. While *Kilty* was returning to Hollandia 23 October, the U.S. Fleet was crushing the Japanese Navy in the famous battle for Leyte Gulf.

During another cruise to Leyte in mid-November, the transport splashed two "Vals" before they could crash into American LST's. Continuing operations in the strategic Philippines, *Kilty* landed troops 15 December in the invasion of Mindoro, and on 11 January 1945 supported the Luzon landings. She made additional landings at Nasugbu 31 January and at Corregidor in mid-February before sailing for Ulithi 25 February for overhaul.

Battle-proven *Kilty* cleared Ulithi 2 April as escort to four escort carriers ferrying planes to the Okinawa beachhead. During May she made another escort cruise from Saipan to Okinawa, and on the 4th rescued survivors from *Luce* (DD-522) sunk during a kamikaze attack. With the Okinawa campaign well under way, *Kilty* departed Guam 17 May and arrived San Diego 18 June for overhaul. Redesignated DD-137 on 20 July 1945, *Kilty* was still in the yard as the war came to an end. The veteran destroyer decommissioned 2 November 1945, and was sold 26 August 1946 to the National Metal & Steel Corp. for scrapping.

Kilty received ten battle stars for World War II service.

USS *Kilty* (DD-137) at Guantanamo Bay in January 1920

Kimberly

Lewis Ashfield Kimberly was born 22 April 1838, in Troy, N.J., and was appointed a Midshipman 8 December 1946. From 1847 to 1860 he was in the African, Pacific, and East-India Squadrons. During the Civil War he served on *Potomac* in the West Gulf Blockading Squadron, and took part in the Mississippi River operations at Port Hudson, Grand Gulf, and Vicksburg. He was Executive Officer of *Hartford* in the Battle of Mobile Bay, and was warmly commended for gallant and efficient service.

During the period 1866 to 1889 he cruised in European, Atlantic, Pacific, and East Indian waters. He commanded *Canonicus*, *Monongahela*, and *Omaha*, before assuming the Presidency of the Naval Examining Board in 1885 with the rank of Commodore. On 11 April 1887, he took command of the Asiatic Station, and 2 months later was promoted to Rear Admiral. While Commander in Chief of the Pacific station, he was unable to save his flagship *Trenton* for a violent typhoon which struck Samoa 15 to 17 March 1889. Guiding his men with the inspiring words, "If we go down, let us do so with our flag flying," Kimberly skillfully beached his flagship, losing only one man in the raging storm that wrecked *Trenton*. Following his return to the United States in January 1890, Rear Admiral Kimberly was appointed President, Board of Inspection and Survey; and he held that post until retirement in April 1892. Rear Admiral Kimberly died in West Newton, Mass., 28 January 1902.

I

(DD-80: dp. 1,060; l. 315'5"; b. 31' 8"; dr. 8'6"; s. 35 k.; cpl. 100; a. 4 4", 2 1-pdrs., 12 21" tt.; cl. *Wickes*)

The first *Kimberly* (DD-80) was launched 14 December 1917, by Fore River Shipbuilding Co., Quincy, Mass.; sponsored by Miss Elsie S. Kimberly, daughter of Rear

Admiral Kimberly; and commissioned 26 April 1918, Comdr. A. W. Johnson in command.

After shakedown *Kimberly* cleared Boston 19 May 1918, escorting a convoy to the United Kingdom. After her arrival in June, the destroyer spent the remainder of the war protecting ships bound for the battle zones in Europe from the British Isles. She departed Queenstown, Ireland, 26 December; and, after arrival Boston 8 January 1919, *Kimberly* engaged in training operations along the coast. In May the destroyer served as a lifeguard ship in New England waters during the world's first transatlantic flight—that of the Navy's NC-4 hydroplane commanded by Lt. Comdr. Albert C. Read.

Kimberly completed maneuvers out of Newport, and entered Boston Navy Yard for extensive repairs. She joined the Destroyer Force at Newport 18 April 1921, and throughout the summer operated with submarines. Information gained through these early experiments was of great value in refining the techniques of undersea warfare. *Kimberly* spent the winter at Charleston, S.C., before arriving Philadelphia 29 March 1922, where she decommissioned 30 June. Her hull was sold to Boston Iron & Metal Co., Baltimore, Md., for scrapping.

II

(DD-521: dp. 2,050; l. 376'6"; b. 39'8"; dr. 17'9"; s. 35 k.; cpl. 273; a. 5 5", 14 40mm., 12 20mm., 6 dcp., 2 dcl., 5 21" tt.; cl. *Fletcher*)

Kimberly (DD-521) was launched 4 February 1943, by Bethlehem Steel Co., Staten Island, N.Y.; sponsored by Miss Elsie S. Kimberly, daughter of Admiral Kimberly; and commissioned 22 May 1943, Comdr. H. W. Smith in command.

After shakedown *Kimberly* cleared Norfolk 10 September 1943, and steamed toward the action in the Pacific. Following additional training at Pearl Harbor, the de-

stroyer arrived off Makin 20 November to begin the Navy's relentless conquest of Micronesia. Throughout the Gilbert Islands campaign, the destroyer served in ASW screen for the battleships and cruisers supporting marines fighting ashore with deadly accurate and devastating gunfire.

Kimberly departed Tarawa 6 December for the West Coast. After repairs at San Francisco, she sailed 22 January 1944, for the Aleutian Islands. Operating with Rear Admiral Baker's Task Force 94, the destroyer departed Attu 1 February to silence enemy antiaircraft batteries on Suribachi Wan and Kurabi Saki. *Kimberly* remained in the Aleutians for 7 months on ASW patrols, offensive sweeps, bombardment of the Kuriles, and training exercises before steaming toward San Francisco 18 September.

As the tempo of the Pacific war quickened, *Kimberly* arrived at Manus, Admiralty Islands, to prepare for her roles in the reconquest of the Philippines. In 10 November she departed escorting a supply convoy to Leyte Gulf, carrying material to replenish U.S. forces there. On the evening of 21 December, while *Kimberly* escorted another convoy to Mangarin Bay, Mindoro, Japanese suicide planes attacked the American ships. During the 2-hour battle, *Kimberly's* guns splashed one plane and assisted in the downing of two others. After repulsing the attack, the convoy proceeded to Mangarin Bay bringing men and material for the construction of an airstrip and a PT-boat base needed to support the invasion of Luzon, *Kimberly's* next mission.

The destroyer departed Leyte 2 January 1945, screening a preinvasion battleship group. En route, during one of many kamikaze attacks, the destroyer scored another kill. Arriving off Lingayen Gulf 6 January, the bombardment group was immediately placed on alert to ward off the fanatic enemy suicide pilots. That day *Kimberly* splashed two more planes. For the remainder of the month, she bombarded enemy railroad and supply centers.

During February the destroyer prepared for the Okinawa campaign which would advance American forces next door to the Japanese homeland. Departing San Pedro Bay 21 March for radar picket duty, the destroyer, off the Ryukyus, was attacked 26 March by two "Vals." Despite accurate antiaircraft fire and numerous hits, one enemy plane, trailing fire and smoke, crashed into the aft gun mounts killing 4 men and wounding 57. *Kimberly* cleared the area 1 April for repairs at Mare Island, arriving 25 April.

Returning to the fight, she cleared Pearl Harbor 10 August but Japan capitulated as the veteran destroyer steamed to join the 3d fleet in the Far East. She entered Tokyo Bay 4 September and 2 days later sailed, escorting *Missouri*. In company with the famed battleship, she arrived Philadelphia 18 October. After Navy Day ceremonies, *Kimberly* departed Philadelphia 2 November and arrived Charleston, S.C., the next day. She remained there until 5 February 1947 when she was placed in reserve.

The United States shrank her Navy too far. Encouraged by the weakness, the Communists struck in Korea. As fast as crews and material could be assembled, the nation rebuilt her fleet. *Kimberly* recommissioned 8 February 1951, Comdr. O. B. Parker in command. After shakedown out of Guantánamo and exercises along the coast, she cleared Norfolk 15 May 1951, and steamed to the Pacific as reinforcement. She arrived Yokosuka 18 June and 5 days later sailed for fire support operations off the western coast of Korea. The destroyer also acted as ASW screen and plane guard for the carriers during the raids on enemy positions ashore. In mid-September she arrived off Formosa for patrol operations before sailing 6 October via the Philippines, the Suez Canal, and the Mediterranean, for the United States.

Arriving Norfolk 12 December, *Kimberly* operated along the Atlantic coast and Caribbean on training exercises until she arrived Charleston, S.C., 20 June 1953. She remained there and decommissioned 15 January 1954.

After 12 years in the Atlantic Reserve Fleet at Charles-

ton, S.C., *Kimberly* proceeded to Boston Naval Shipyard in July 1966 for overhaul prior to being loaned to the government of the Republic of China.

Kimberly received five battle stars for World War II and one star for Korean service.

Kimbrow, Sgt. Truman, see *Sgt. Truman Kimbro* (AK-254)

Kimmel, Charles J., see *Charles J. Kimmel* (DE-584)

Kineo

A mountain peak in central Maine.

I

(Gbt: t. 507'; l. 158'; b. 28'; dr. 4'6"; cpl. 81; a. 1 11''
D.sb., 1 20-pdr. P.r., 2 24-pdr. hows.)

The first *Kineo*, an ironclad gunboat, was launched 9 October 1861 at Portland, Maine, by J. W. Dyer; sponsored by Miss Eunice C. Dyer, daughter of the builder, and commissioned at the Boston Navy Yard 8 February 1862, Lt. George M. Ransom in command.

Slated for Admiral Farragut's West Gulf Blockading Squadron, the new 90-day gunboat got underway 13 February and reached Ship Island, Miss. 7 March to prepare for the conquest of New Orleans. She did reconnaissance work in the lower Mississippi while Farragut labored to get his deep-draft oceangoing ships over the bar and into the river. The mortar flotilla opened a steady fire on Fort Jackson and St. Philip 18 April which continued until the Union ships braved a heavy Confederate cannonade as they dashed by the forts 24 April. *Kineo* was hit several times as she ran the gauntlet in the division commanded by Captain Bailey. On 27 April she captured 5 Confederate sail boats below New Orleans.

In ensuing months, she patrolled the Mississippi from time to time exchanging fire with shore batteries. She reached sight of Vicksburg 19 May and engaged Southern batteries at Grand Gulf a week later. On 6 August with *Sumter*, *Cayuga*, and *Katahdin*, she helped repel a Confederate attack on the Union garrison at Baton Rouge enabling the Union Navy to maintain its blockade of the important Red River supply line. She shelled a guerrilla camp on the 9 and fired over the city on the 20th to stop the approach of a Confederate force. On the 28th she captured and destroyed several small boats.

October opened with the capture of a large drove of cattle near Donaldsonville, La., which were being sent east to feed Lee's Army. Two days later transports arrived, loaded the cattle—some 1,500 head—and carried them downstream. The next day a member of the crew was killed and another wounded in engaging a battery on the west bank.

Gunboats were constantly necessary to protect Union steamboats from attacks by flying batteries and roving snipers. *Kineo* efficiently performed this duty during the months when the Union Navy and Army fought and labored to take Vicksburg. As the campaign to clear the Mississippi approached its climax, Farragut decided to move up the river to a position where he could interrupt Southern supplies from the West at the mouth of the Red River. Powerful batteries at Port Hudson, La., barred his way, but the Admiral was undaunted. He lashed gunboats to his deep-water ships to shield them from gunfire and to assist them in navigating the tricky waters of the Mississippi. *Kineo* was paired with *Monongahela* for the dash on the night of 13 and 14 March. Heavy and deadly accurate fire rained down on the Union ships which prevented all but the flagship *Hartford* and her consort *Albatross* from passing the fort.

A shot disabled *Monongahela's* rudder causing her and *Kineo* to run aground. The gunboat worked herself free

and then pulled *Monongahela* off and guided her as they drifted down stream out of range.

After this engagement *Kinco* resumed her varied but vital duties in the lower river and remained at the task until after the fall of Vicksburg. She left the Mississippi 16 August and reached Baltimore on the 25th for repairs.

Back in top trim, *Kineo* departed the Delaware Capes 29 February 1864 and rejoined the West Gulf Blockading Squadron at New Orleans 17 March and was assigned to blockade duty off the Texas coast. She boarded British schooner *Sting Ray* 22 May, but the blockade runner's crew overcame the prize crew, ran the schooner aground on the Texas crew, and turned the Union prize master and sailors over to Confederate troops.

Kineo returned to New Orleans 8 December and served in the Mississippi until the final weeks of the Civil War. She stood to sea 5 April 1865 and entered Chesapeake Bay on the 17th. She entered Philadelphia Navy Yard on the 26th, decommissioned 9 May, and was sold 9 October 1866.

II

Kineo (Tug No. 39) was renamed *Montcalm* (q.v.) 24 February 1919.

King

The first *King* was named after Frank Ragan King, born 15 October 1884 in Montevallo, Ala. He was appointed midshipman at the Naval Academy 6 May 1903 and graduated 11 February 1907. After serving as passed midshipman, he was commissioned Ensign 12 February 1909. He served in *Arkansas*, *Hartford*, *Milwaukee*, *Pennsylvania*, and *Illinois* before attaining the rank of Commander 21 September 1918. He assumed command of trawler *Richard Buckley* 7 July 1919 during minesweeping operations in the North Sea. On 12 July 1919 his ship struck a mine and went down in only 7 minutes.

During the crisis King exerted himself to see that all of his crew might be saved. King's feeling for his men was evidenced by the fact that his final act before going down with his ship was to strap his own life preserver to a stunned sailor and help him over the side. Comdr. King received the Distinguished Service Medal for his valor.

The second *King* (DLG-10) was named after Ernest Joseph King, born 23 November 1878 in Lorain, Ohio. He was appointed to the Naval Academy in 1897. In July 1898, during the Spanish-American War, he served as Naval Cadet in *San Francisco*, flagship of the Northern Patrol Squadron. Upon graduation from the Academy he was commissioned Ensign 7 June 1903.

Prior to World War I King served in the Asiatic Fleet, Atlantic Fleet, and shore duty at Annapolis, Md. During World War I he served as Aide and Squadron Engineer to Admiral Mayo, Commander in Chief, Atlantic Fleet. After the war, with the rank of Captain, he again served at the Naval Academy as head of the Postgraduate Department.

King next turned his attention to submarines and the expanded role of naval aviation. After training at Pensacola, he received his wings. He was named Assistant Chief of the Bureau of Aeronautics, Navy Department in August 1928. After promotion to Rear Admiral 26 April 1933 King served as Chief of the Bureau.

On 1 February 1941 he was designated Commander in Chief, Atlantic Fleet with the rank of Admiral. Soon after the United States entered World War II, President Roosevelt appointed King Chief of Naval Operations and the Senate confirmed the appointment 18 March 1942. In this office, with wisdom, inflexible integrity, and determination, he mapped out the strategy and vigorously directed the operations of the unprecedented naval campaigns which led to victory over Axis powers in Europe and crushed Japan in the Pacific. By act of Congress 14 December 1944, the grade of Fleet Admiral U.S. Navy was established; his appointment to that rank was confirmed the same day.

After he was relieved by Fleet Admiral Nimitz as Chief of Naval Operations, King continued to serve on active duty in an advisory capacity in the Office of the Secretary of the Navy. He died at the Naval Hospital, Portsmouth, N.H., 25 June 1956. During his naval career, Fleet Admiral King received the Navy Cross, and the Distinguished Service Medal with two Gold Stars, in addition to many other awards from the United States and foreign governments.

I

(DD-242: dp. 1,190; l. 314'5"; b. 31'8"; dr. 9'3"; s. 35 k.; cpl. 101; a. 4 4", 1 3", 12 21" tt.; cl. *Clemson*)

The first *King* (DD-242) was laid down 28 April 1919 by the New York Shipbuilding Corp., Camden, N.J.; launched 14 October 1920; sponsored by Mrs. Allene A. King, widow of Comdr. King; and commissioned 16 December 1920, Lt. Comdr. R. C. Smith, in command.

After shakedown and training operations along the Atlantic Coast *King* cleared Hampton Roads 2 October 1921 for her first Mediterranean cruise. Arriving Smyrna, Turkey, 8 November, the destroyer received 300 Greek refugees for transport to Mitylene, Greece. The destroyer served as station ship during the Crimean Crisis, remaining in Turkish waters until June 1923.

Upon return to the United States during the summer, *King* joined the Atlantic Scouting Fleet and from 1923 to 1930 engaged in fleet exercises and reserve training cruises along the coast and in the Caribbean. She sailed for the Pacific 15 April 1925 for maneuvers in Hawaiian waters. During the spring of 1927, she patrolled waters off Nicaragua to protect American citizens and interests during civil war in that country. *King* decommissioned at Philadelphia 10 March 1931.

She recommissioned 13 June 1932 and departed Hampton Roads 18 August to join the Pacific Scouting Force. *King* operated out of California for the next 6 years, engaging in central Pacific exercises, reserve cruises and training maneuvers to strengthen America's powerful sea force. The destroyer decommissioned at San Diego 21 September 1938.

Soon after Nazi aggression plunged Europe into war, *King* recommissioned 26 September 1939, Lt. Comdr. E. E. Berthold in command. The veteran destroyer cleared San Diego 13 November to join the Caribbean Neutrality Patrol. Following arrival at Norfolk 22 February 1940, the destroyer operated along the East Coast on Neutrality Patrol out of Boston and Key West, before returning to the West Coast during the fall. She continued patrol and maneuvers out of San Francisco, operating in that area at the outbreak of hostilities with Japan.

During the first 5 months of the war, *King* operated on patrol and escort duty along the West Coast. Departing Mare Island 22 May 1942, she joined Task Force 8 escorting troop transport *President Fillmore* to the Aleutians. Arriving Dutch Harbor 3 June, *King* operated on ASW and screening patrols in the Aleutians throughout the summer, and fought with Task Group 8.6 during the bombardment of Kiska in August. She remained in the frigid Aleutians until she sailed for San Francisco 22 December 1943.

After overhaul, *King* operated off the West Coast for the rest of the war, as patrol vessel and an ASW screen. She departed Treasure Island 28 August 1945 arriving Philadelphia 20 September. *King* decommissioned there 23 October 1945, and was sold to Boston Metals for scrapping on 29 September 1946.

King received one battle star for World War II service.

II

(DLG-10: dp. 4,700; l. 512'6"; b. 52'3"; dr. 20'; s. 30 k.; cpl. 378; a. 1 5", 4 3", 6 21" tt., ASROC, Ter. mis.; cl. *Coontz*)

The second *King* (DLG-10) was laid down 1 March 1957 by Puget Sound Naval Shipyard; launched 6 December 1958 sponsored by Mrs. Oliver W. Vandenberg, daughter

of Fleet Admiral King; and commissioned 17 November 1960, Comdr. Melvin E. Bustard, in command.

After shakedown along the coast, and in Hawaiian waters, *King* continued training out of San Diego for the remainder of 1961. Following extensive preparations the guided-missile frigate sailed on her first WestPac cruise, 7 June 1962, strengthening the mighty 7th Fleet with her Terrier missile arsenal. Operating with this mighty peacekeeping force, *King* helped to check Communist aggression in Southeast Asia.

Upon returning San Diego 31 December, she resumed tactical exercises off the West Coast until 1 August 1963 when she departed on her second WestPac cruise. Once again her operations with the 7th Fleet helped maintain stability in the Far East. *King* returned San Diego 10 March 1964 and conducted operations along the coast, for the rest of the year constantly perfecting her fighting skills and increasing the peacekeeping ability of the Navy.

King headed back for the Far East 5 April 1965 escorting *Oriskany* (CVA-34). She operated from the South China Sea during May screening carriers and participating in air-sea rescue work. She continued to serve off Vietnam until returning to San Diego 2 November.

The guided missile frigate operated off the West Coast until heading back for the Western Pacific 26 May 1966. On this cruise she carried a helicopter for search and rescue missions to save American pilots during strikes against North Vietnam. She arrived Da Nang, South Vietnam, 27 June. During July she saved five downed aviators, including one who was rescued from deep within North Vietnam by the ship's daring helicopter crew. In August the ship was stationed in a positive identification and radar advisory zone (PIRAZ) in the Gulf of Tonkin to help protect American ships from enemy aircraft. Before she was relieved, she had checked over 15,000 aircraft. During this duty she also rescued seven pilots whose planes had gone down during strikes against enemy targets. She continued this duty, except for brief runs to Hong Kong and Subic Bay, until relieved by *Long Beach* (CGN-9) on 29 November.

King returned to San Diego 20 December and operated off the West Coast into 1967 preparing for future action.

King County

Counties in Texas and Washington.

(LST-857: dp. 1,625; l. 328'; b. 50'; dr. 14'1"; s. 12 k.; cpl. 226; a. 8 40mm., 12 20mm.; cl. *LST-511*)

LST-587 was laid down by Chicago Bridge & Iron Co., Seneca, Ill., 19 September 1944; launched 6 December 1944; sponsored by Mrs. Beatrice Snow Major; and commissioned at New Orleans, La., 29 December 1944, Lt. Roy C. Parlier in command.

After shakedown off the Florida coast, *LST-857* departed New Orleans for the Pacific 1 February 1945. Steaming via the Panama Canal, she touched the Hawaiian and Marshall Islands and reached Guam 30 March. There she loaded bombs and ammunition and departed 21 April for Iwo Jima. Steaming via Saipan, she reached Iwo Jima 1 May, unloaded her cargo, then sailed 18 May. Carrying 334 enemy prisoners, she returned to Guam the 21st.

Between 23 and 30 May, *LST-857* carried a cargo of fog oil to Okinawa. She supplied ships at Hagushi until 24 June. Returning to Guam the 4th of July, she loaded troops and Army construction equipment, then sailed for Okinawa the 16th. She operated there from 28 July to 5 August; and, after returning to Saipan 11 August, she loaded cargo and departed for the Philippines 3 September.

LST-857 arrived San Pedro Bay, Leyte, 10 September and was assigned to support occupation operations in Japan. After embarking ordnance and construction troops and loading equipment at Iloilo, Panay, and Batangas, Luzon, she sailed in convoy for Japan 20 September. She reached Tokyo Bay the 29th and, until 25 October, operated along the coast of Honshu shuttling occupation troops and cargo. She returned to the Philippines early in November; and, after embarking additional troops, she returned to Japan 18 November and resumed occupation operations. Departing Yokohama 15 December, she steamed via Saipan and Pearl Harbor to the United States and arrived San Francisco 25 January 1946.

During the next six months *LST-857* operated along the California coast between San Francisco and San Diego. She departed San Diego 31 July, reached Pearl Harbor 11 August, and began supply runs under Service Force, Pacific Fleet. For more than 3 years she operated out of Pearl Harbor, carrying passengers and supplies to bases in the Hawaiian Islands and to Johnson and Canton Islands. Between 3 April and 6 August 1948 she deployed to the Marshall Islands where she conducted shuttle service among the atolls.

Departing Pearl Harbor 3 January 1950, *LST-857* returned to the West Coast 14 January. After overhaul at Mare Island, she operated out of Astoria, Oregon, and San Diego until 1 July when she departed San Francisco for Hawaii. She arrived Pearl Harbor 11 July; and, after serving briefly as interisland transport, she departed 18 August to support the effort to repel Communist aggression in South Korea. She arrived Yokosuka, Japan, 4 September, then shifted to Kobe, Japan, the next day. After embarking men and equipment of the 1st Marine Engineer Battalion, she sortied 10 September as part of an amphibious attack convoy bound for Inchon, South Korea.

Assigned to Task Element 90.32, *LST-857* arrived off Inchon 15 September while a heavy air-sea bombardment pounded enemy shore positions. Late that afternoon, she closed Red Beach under heavy mortar and machine gun fire to take part in landings which were designed to spearhead an Allied offensive northward. Despite concentrated enemy fire, she debarked assault troops and unloaded vital supplies and equipment. In addition she provided counter-battery fire and embarked battle casualties for emergency treatment. For daring bravery and heroic performance of duty on Red Beach, the ag-

gressive and intrepid tank landing ships, including *LST-857*, received the Navy Unit Commendation.

LST-857 completed unloading and departed the beach early 16 September. She returned to Sasebo, Japan, 19 September. She again returned to Inchon 2 October and delivered a cargo of ammunition to *Missouri* (BB-63). On 14 October she departed Sasebo for Hawaii and arrived Pearl Harbor 3 November. Following shipyard repairs, she departed 1 December on a cargo run to the Marshall Islands. During the next 10 months she conducted passenger and cargo service out of Pearl Harbor to the Marshall, Samoa, and Palmyra Islands, as well as to ports in the Hawaiian Islands.

Departing Pearl Harbor 28 September 1951, *LST-857* sailed for the Far East and arrived Yokohama 18 October. On the 22d she sailed for Sasebo where she arrived 26 October to prepare for shuttle duty along the vital water supply line between Japan and Korea. Operating primarily out of Sasebo, she transported men and supplies to ports along the western coast of Korea. In addition she supplied fleet activities along the coast of Japan. She sailed for the United States 23 September 1954, touched at Pearl Harbor 9 October, and arrived San Diego 22 October.

LST-857 returned to Pearl Harbor from San Diego 27 November; and, after overhaul, she began passenger and cargo runs between Pearl Harbor and Midway 2 February 1955. Renamed *King County* 1 July, she continued this duty until August 1956. Between 17 August and 12 September she made a supply run to the Marshalls; then she sailed for the West Coast 1 October, arriving Oakland the 11th. She entered the Mare Island Naval Shipyard 12 October and began conversion to an experimental guided missile test ship. Reclassified AG-157 on 17 May 1958, she completed conversion 15 November, then departed for testing and evaluation operations out of San Diego and Port Hueneme.

While undergoing conversion, *King County* appeared as though she had swallowed a submarine. A mock-up submarine hull was installed on her deck for use in testing a prototype missile handling system. In addition she received launching, recording, and evaluation equipment for testing the launch and flight capabilities of Regulus II guided missiles. Capable of carrying four missiles in her hangar, she was designed as a mobile testing center for these surface-to-surface missiles.

Assigned to Submarine Squadron 5, *King County* conducted her first missile engine firing 8 December while operating in the Pacific Missile Range. She fired her first Regulus II missile 2 days later. During the next 6 months she performed simulated missile launchings and served on telemetry and recovery stations in the Pacific Missile Range. Moreover, she supported the development of America's space program and participated in tracking and recovering missile nose cones.

Transferred to the 11th Naval District 1 July 1959, she continued operating as a missile tracking and recovery ship. During the next year she cruised the missile range off Southern California and Baja California supporting missile firing and recovery operations. Operating out of Port Hueneme, she participated in tracking Corvus missile firings in May and July 1960. She also supported the telemetering and recovery of the data capsule from Discovery XII. After returning to Port Hueneme 8 July, she steamed to Long Beach 19 July and decommissioned the same day. She was sold to Zidell Explorations Inc., 25 April 1961.

LST-857 received one battle star for World War II service and seven battle stars for Korean service.

King Philip

(SwStr: t. 500; l. 204'; b. 22'11"; dph. 8'; cpl. 14; a. 1. gun)

Pouchatan, a side wheel steamer built at Baltimore in 1845 by J. A. and E. T. Robinson, operated on the Potomac

out of Georgetown, D.C. Early in the Civil War the Army seized the side wheeler 21 April 1861 and transferred her to the Navy. The next day she entered the Washington Navy Yard to be fitted out for war service. A week later Lt. John Glendy Sproston was ordered to take command of *Powhatan* and proceed to Kettle Bottom Shoals to replace and protect buoys there which had been removed by Confederate agents.

After patrol duty in the Potomac helping to protect the Nation's Capital during the early months of the Civil War, *Powhatan* steamed to Baltimore for repairs. She was renamed *King Philip* 4 November 1961.

Throughout the Civil War *King Philip* was used as a dispatch vessel shuttling mail, supplies, and passengers between Washington and Union ships in the Potomac and Rappahannock Rivers. After peace had been restored and the Nation reunited, *King Philip* was sold at auction to H. F. Harrill 15 September 1865.

Kingbird

Any of several American tyrant flycatchers.

I

(AMC-56: dp. 206; l. 96'; b. 21.6'; dr. 7'; s. 9 k.; a. 2.30 cal. mg.; T. Wooden Dragger)

The first *Kingbird* (AMC-56), ex *Governor Saltonstall*, was built in 1939 by the Quincy Drydock & Yacht Co., Quincy, Mass., acquired by the Navy 26 December 1940, and placed in service as a coastal minesweeper in the 1st Naval District 24 July 1941.

Following assignment to Portsmouth, N.H., in January 1942, *Kingbird* operated in the 1st Naval District as a coastal minesweeper for over 2 years. She was reclassified IX-176 10 July 1944 and placed out of service 28 July 1944 for use in training sound operators for new submariners. *Kingbird* was transferred to the WSA 7 June 1946 for disposal.

II

(MSC-194: dp. 370; l. 144'; b. 28'; dr. 8'6"; s. 14 k.; a. 2 20mm.; cl. *Bluebird*)

The second *Kingbird* (MSC-194) was launched 21 May 1954 by the Quincy Adams Yacht Yard Inc., Quincy, Mass.; sponsored by Mrs. Marion Cushman Wilson; and commissioned 27 April 1955, Lt. (j.g.) R. E. Alder, in command.

After shakedown, *Kingbird* arrived Charleston, S.C., for minesweep training and for the entire year she perfected methods of detecting and destroying mines. She also participated in exercises which kept her ready for any service she might be called upon to perform. From 1956 through 1964 *Kingbird* engaged in minesweeping exercises along the Atlantic coast from Nova Scotia to the Canal Zone in the Caribbean. During 1965 she displayed her versatility in two search operations: one for a downed Navy plane and the other a lost merchant ship. In 1967 she still operates out of Charleston.

Kingfish

A fish found along the Atlantic coast of the United States.

(SS-234: dp. 1,526; l. 311'8"; b. 27'4"; dr. 15'3"; s. 20 k.; cpl. 60; a. 13", 10 21" tt.; cl. *Gato*)

Kingfish (SS-234) was launched by Portsmouth Navy Yard 2 March 1942; sponsored by Mrs. Harry A. Stuart, wife of Read Admiral Stuart; and commissioned 20 May 1942, Lt. Comdr. V. L. Lowrance in command.

Kingfish arrived Pearl Harbor from New London 31 August 1942, and sailed on her first war patrol 9 September. Patrolling close to Japan's coast *Kingfish* sighted a three-ship convoy and fired a three torpedo spread at

the last freighter, scoring one hit. Unable to determine the extent of the damage due to an uncomfortably efficient barrage of depth charges which lasted 18 hours, *Kingfish* successfully outwitted her attackers and cleared the area. Sighting freighter *Yomei Maru* 1 October, *Kingfish* fired a three torpedo spread which sent her to the bottom. Going deep for the inevitable depth charging, *Kingfish* rearmed her tubes and continued scouting shipping lanes. Four days later she sighted and torpedoed a freighter off Muroto Zaki but could not verify the sinking. Two weeks of frustration followed due to lack of targets. On 23 October a freighter was sighted; immediately her able crew went into action and sent *Seiko Maru* to the bottom with two torpedoes. Completing her first war patrol, *Kingfish* arrived Midway 3 November.

After refit *Kingfish* sailed 25 November to Chichi Jima on her second war patrol. Entering the South China Sea 5 December, she sighted freighter *Hino Maru No. 3* and sank it 2 days later. Then, on 28 December, she sent another freighter *Choyo Maru* to the bottom. Two trawlers were attacked by gunfire early in January. The first was riddled and set afire and the second sunk by gunfire. *Kingfish* sailed for Pearl Harbor from her second war patrol, arriving 23 January 1943.

Kingfish was underway for her third war patrol 16 February. En route Formosa she sank a trawler off Bonins and torpedoed a passenger freighter. Damage to this ship could not be ascertained as the submarine was immediately attacked by enemy bombs and depth charges. On 17 March, a freighter was tracked and a precise torpedo spread damaged it considerably. Two days later she sighted, tracked, and sank a troop transport as enemy troops scrambled down her sides. On 23 March *Kingfish* was subjected to a severe depth charge attack. The attack was so intense and the damage so great that secret codes and material were burned in preparation to abandoning ship. The last string of depth charges bashed in the main induction piping allowing a huge bubble to escape to the surface, apparently causing the enemy to think the ship had sunk. *Kingfish* cautiously surfaced, cleared the area and set course for Pearl Harbor, arriving 9 April with a grateful crew. The submarine then proceeded to Mare Island Navy Yard, where entire sections were rebuilt and installed.

Battle damage repaired, *Kingfish* sailed to Pearl Harbor, arriving 23 June 1943. She sailed 1 July for her fourth war patrol in the Babuyan Channel, north of the Philippines, off southern Formosa, and near Manila. *Kingfish* was ordered to depart the patrol area due to lack of enemy activity and to report to Fremantle, Australia, for refit.

Assigned the South China Sea as her fifth patrol area, *Kingfish* sailed 24 September. While on this patrol, she accomplished two special missions. The first entailed planting mines on enemy shipping lanes and the second, the secret and successful landing of a party of Allied personnel and equipment on the northeast coast of Borneo. Continuing on her patrol, she sank a gunboat by gunfire and damaged a tanker with torpedoes 9 October off Sibutu Islands. She sank cargo ship *Sana Maru* off Cape Varella 20 October. Her patrol a success, *Kingfish* sailed into Fremantle 14 November 1943.

Kingfish departed Fremantle on 16 December 1943 with a new commanding officer, Lt. Comdr. H. L. Jukes. Threading her way in the South China Sea, she made first contact on 3 January when she sent tankers *Ryuei Maru* and *Bokuei Maru* to the bottom and sank tanker *Fushimi Maru No. 3* 7 January. Having navigated brilliantly through extremely dangerous waters and having outwitted the enemy escort vessels, *Kingfish* headed for Pearl Harbor with a proud record, arriving 26 January 1944.

Kingfish's seventh war patrol was in the Mariana Islands area from 19 February to 9 April 1944. No attacks were possible during this patrol, although the boat underwent a bombing and depth charge attack. *Kingfish* departed her patrol area, arriving Majuro, Marshall Islands, 9 April for refit.

The submarine's eighth war patrol was made in the Bonins. Since this patrol was unfruitful because of the lack of worthwhile targets, *Kingfish* received orders to return to Midway, arriving there 19 June. While there she was ordered to Mare Island, Calif., for overhaul.

Her overhaul completed, with a new commanding officer, Comdr. T. E. Harper, *Kingfish* sailed for Pearl Harbor on her ninth war patrol 12 October. The day *Kingfish* entered her patrol area she spotted freighter *Ikutagawa Maru* and sent her to the bottom off Chichi Jima Retto 24 October. Three days later she sank the cargo ship *Tokai Maru No. 4* and a landing craft transport off Kita, Iwo Jima. Changing patrol areas to Okinawa, *Kingfish* tracked a convoy but was unable to attack. Dropping anchor at Guam, she completed her patrol 28 November.

On 23 December 1944 *Kingfish* steamed out of Guam toward the Japanese home islands for her 10th war patrol. A convoy was sighted 2 January 1945, but heavy weather prevented the submarine from attacking. The following night the submarine made up for lost time and sent the freighter *Yaci Maru* and the passenger-cargo ship *Shibozono Maru* to the bottom. For the remainder of the patrol *Kingfish* was assigned the additional task of lifeguard duties. She returned to Guam 1 February.

The submarine refitted at Guam and sailed 6 March, operating in a coordinated attack group with *Icefish* and *Sawfish*. Despite thorough coverage, no targets worthy of torpedo fire were encountered. However, late in March *Kingfish* experienced the great pleasure of rescuing four downed aviators from a British task force. Leaving the area *Kingfish* debarked the British aviators at Saipan and set course for Pearl Harbor, arriving 25 April.

Departing Hawaii 17 June with a new commanding officer, Lt. Comdr. T. D. Keegan, the submarine sailed via Guam for the Japanese island of Honshu. In smartly executed night gun attacks, she sank two sampan picket boats off Honshu 5 August, also exploding several drifting mines during this patrol. Having completed her 12th and last war patrol, *Kingfish* arrived Midway 2 hours before the war ended.

Kingfish got underway for Galveston, Tex., 27 August via Pearl Harbor and Panama Canal, arriving 23 September. She sailed to Orange, Tex., 25 October for Navy Day.

Kingfish sailed 30 October to New London, Conn., arriving 5 November, was decommissioned, and placed in reserve 9 March 1946. She was struck from the Navy List on 1 March 1960, sold to Albert Heller 6 October 1960, and scrapped.

Kingfish made 12 war patrols, sinking 14 enemy ships totaling 48,866 tons, and was awarded 9 battle stars for World War II service.

Kingfisher

One of Europe's most beautiful birds (*Alcedo Ispida*) conspicuous for its blue-green back and rich chestnut breast.

I

(Bark: t. 451; l. 121'4"; b. 28'8"; dph. 14'4"; cpl. 97; a. 4 8" D.sb.)

The first *Kingfisher* was purchased by the Navy at Boston 2 August 1861; and commissioned at Boston Navy Yard 3 October, Acting Lt. Joseph P. Couthouy in command.

That day she was ordered to Key West, Fla., for duty in the Gulf Blockading Squadron. On 21 January she joined *Ethan Allen* in capturing *Olive Branch* bound from Ceder Keys to Nassau with a cargo of turpentine. She again cooperated with *Ethan Allen* 26 January in manning and equipping a boat expedition to the mouth of the Manatee River which captured sloop *Mary Nevis* and burned Confederate calvary barracks. Three days later she took Spanish brig *Terisita* of Havana bound for Matamoras with a contraband cargo. On 25 February *Kingfisher* overtook blockade runner *Lion* in the Gulf of Mexico after a 3-day chase.

The great risks involved in blockade duty during the Civil War have not been generally recognized. The need for water, food, or timber often forced parties from the Union ships to venture ashore in hostile territory. On 2 June two boats from *Kingfisher* rowed up Aucilla River, Fla., to obtain fresh water. A Southern raiding party surprised the expedition killing two men and capturing the remaining nine.

Other landing parties from the bark fared better. An expedition destroyed salt works at St. Joseph's Bay, Fla., which had produced some 200 bushels a day.

But the hardships of blockade duty in the Gulf were unabated. Early scurvy became a serious problem for the crew prompting Rear Admiral Lardner to order *Kingfisher* to Boston. When the ship had been repaired and her crew reinvigorated, *Kingfisher* was assigned to the South Atlantic Blockading Squadron and ordered to Port Royal, S.C., where she arrived 21 December.

The bark was stationed in St. Helena Sound, S.C., where she distinguished herself for efficiency in reconnaissance work and operations against small parties of Confederates ashore. On 9 April 1863 a party from *Kingfisher* landed at Middleton's estate, Edisto Island, S.C., and captured a group of Southern cavalymen stationed there to observe and report activity of Union ships in the area. From time to time during the ensuing year, she shelled Confederate troops ashore and sent small landing parties inland to gather information and capture food for her crew and for refugees who had flocked to her for protection.

Kingfisher grounded on Combahee Bank in St. Helena Sound 28 March 1864 and filled with water. After efforts to save the stranded ship proved fruitless she was abandoned 5 April.

II

(SP-76: dp. 17; l. 60'; b. 10'9"; dr. 3'; s. 26 k.; a. 1 1-pdr., 1 .30 cal. mg.)

Kingfisher, a motor launch, was built in 1916 by George Lawley & Sons, Neponset, Mass.; acquired by the Navy 8 May 1917 from her owner, R. P. Mathiesson, Chicago, Ill.; and commissioned 15 May at Newport, R.I., Ens. R. P. Mathiesson, USNRF, in command.

Assigned to the 2d Naval District, Newport, *Kingfisher* enrolled in the Naval Coast Defense Reserve 9 June. Based at New London, Conn., she patrolled Long Island Sound. On 7 January 1919 she was ordered returned to her former owner. *Kingfisher* decommissioned 22 January and was turned over to her previous owner 4 March.

III

(AM-25: dp. 950; l. 187'10"; b. 35'6"; dr. 9'10"; s. 14 k.; cpl. 78; a. 2 3", 3 .50 cal. mg.)

Kingfisher (AM-25) was launched 30 March 1918 by Puget Sound Naval Shipyard, Puget Sound, Wash.; sponsored by Miss Nancy Griswold; and commissioned 27 May 1918, Lt. (j.g.) C. L. Greene in command.

Departing Bremerton, Wash., 17 June, *Kingfisher* steamed to Philadelphia, where she arrived 8 August for duty as a minesweeper off Cape May, N.J. On 5 April 1919 she departed Boston for the North Sea, arriving Inverness, Scotland, 20 April. Assigned to the North Sea Detachment at Kirkwall, Orkney Islands, she swept up mines of the Northern Barrage until 1 October when she sailed for the United States. Steaming via France, Portugal, and the Azores, she reached New York 19 November.

Assigned to the Train Force, Pacific Fleet, *Kingfisher* departed Hampton Roads, Va., 9 August 1920 for the West Coast. Arriving San Diego 3 October, she began duty as a fleet tug and minesweeper. Over the next 19 years fleet maneuvers and supply, towing, and minesweeping operations sent her to the East Coast, Puerto Rico, Cuba, the Canal Zone, and Hawaii. During the summers of 1933, 1934, and 1935 she supplied naval ships and bases in Alaskan waters for the Aleutian Islands Survey Expedition.

Subject: U.S.S. KINGFISH - Report of Third War Patrol.

Mar. 22 - Submerged patrol along traffic lane north and east of FORMOSA.
 1625 H Sighted 3 trawlers of about 200 tons with what appeared to be machine guns mounted on pilot house. Estimated speed 12 knots. They searched about in our area for about one hour and then disappeared to the south.
 1900 Surfaced and stood over to patrol in vicinity of transport sinking.

Mar. 23 - Sighted ship bearing 150° T distance 5000 yards, angle on bow 90° Starboard. Appears to be a destroyer. Manned battle stations with intentions of gaining position ahead for a dawn attack.
 0300 H
 0325 H Everything was working nicely and we were gaining position ahead when target apparently saw or heard us and headed for us at 16 knots. Opened out on target very slowly at flank speed. At 0345 Target trained searchlight on us at range of about 5500 yards at which time we dove. Did not attempt a shot at target as visibility was too poor to stay at periscope depth and try an approach against a high speed zig-zagging target that had sighted us before we dove. Submerged to 250 feet, rigged for depth charge attack and ran silent changing course frequently. Thought we were evading successfully but at 0448 H commenced the first of eight runs during which the enemy dropped 40 depth charges. All except the last ones at 1228 H were close and were estimated at 25-150 yards.
 0752 H Heard screws of another vessel joining in the hunt. We ran silently as possible at 300 feet in 350 feet of water making anywhere from 40-60 turns but our adversary seemed to have no trouble staying on us with both listening and pinging. Several times after daylight we started up for a torpedo shot but as soon as we would reach 200 feet he would start another run. Up until 1225 H we had escaped serious damage but at 1227 H on his last run he dropped two charges over the engine room at an estimated distance of 25-50 feet. These bulged in the hull over the engine rooms about 4 inches and bottomed us in 350 feet of water. Water commenced coming

ENCLOSURE (A)

Extract from *Kingfish* (SS-234)'s Third War Patrol

Departing San Diego 4 October 1939, she sailed to Pearl Harbor for duty with the Base Force, Hawaiian Detachment. Arriving 19 October, she towed target rafts and conducted gunnery and minesweeping exercises until sailing for Samoa 26 October 1941. *Kingfisher* reached Tutuila 5 November and was on station duty 7 December when hearing of the Japanese attack on Pearl Harbor.

With Lt. Comdr. C. B. Schiano in command, *Kingfisher* began defense patrol and mine laying operations off Samoa.

On 19 February 1942 she departed Tutuila for similar duty in the Fijis and arrived Viti Levu 23 February. Returning to Samoa 12 April, she was reclassified AT-135 on 1 June; she then sailed to Wallis Island 28 July for a month of plane guard and rescue duty. With a lighter in tow she departed Suva, Fiji, 12 September for Noumea, New Caledonia. Arriving 18 September, she served under the command of the Port Director until she departed for Hawaii 8 October.

Subject: U.S.S. KINGFISH - Report of Third War Patrol.

0752 H (Cont'd)

thru the engine hull flappers where their seats had been sprung. Rigged chain falls on these and stopped leaks. Silenced ship completely and waited for dark. Destroyed ECM and rendered TDC inoperative. JK - QC sound heads apparently knocked out of line by depth charging. Unable to lower QB sound head before bottoming and after surfacing. Unable to train either sound head.

1700 H

Same screws heard for about 15-30 minutes.

1830 H

Manned battle stations and completed plans for scuttling ship in case escape seemed impossible.

1848 H

Surfaced and sighted patrol vessel of about 1000 tons, lying to about 2000 yards on our starboard bow. Cleared area at flank speed on 4 engines.

2000 H

Started battery charge on one engine. Night is dark and sea is rough. By 2200 H the engine induction and bilges were dry and we were able to dive. Depth charging and damage incurred covered under A/S measures.

Mar. 24 -

0450

Submerged. Hull induction floods but engine induction is fairly tight. #2 periscope out and #1 barely usable.

Mar. 25 -

Submerged during the day.

Mar. 26 -

Commenced running on surface.

2100 H

Broadcast message to Comsubpac that we were clearing area. Receipt received about 5 hours later.

-9-

ENCLOSURE (A)

Arriving Pearl Harbor 30 October, *Kingfisher* served as a tug and torpedo recovery ship until 23 September 1943 when she sailed for the Ellice Islands. She reached Funafuti 5 October and undertook towing duty between the Ellice and Phoenix Islands. On 8 December she sailed for the Gilberts, arriving Tarawa Atoll 13 December. Though subjected to intermittent enemy bombing attacks, *Kingfisher* towed antisubmarine nets and laid telephone cables in Betio Harbor before departing 27 December for Funafuti. From 30 December to 15 April 1944 she continued towing, station ship, and harbor operations in the Ellice, Gilbert, and Marshall Islands; then she departed Kwajalein 16 April for Pearl Harbor, arriving 29 April.

Reclassified ATO-135 on 15 May, *Kingfisher* departed 19 September for further towing operations in the South Pacific. Towing runs sent her to Palmyra, Ellice, Solo-

mon, Admiralty, and Marshall Islands before she returned to Pearl 14 November. On 18 November she sailed for the West Coast, arriving San Diego 29 November. She returned to Pearl 29 January 1945 and resumed tug and target towing services. On 21 April she assisted in Salvage operations of grounded merchantman *Sarensen*. And while towing a gunnery target 4 May, she rescued the pilot of an Army P-47 that had splashed while on a training flight.

Kingfisher sailed for San Francisco 30 October, arriving 9 November. Remaining in the San Francisco Bay area, she decommissioned 6 February 1946 and entered the Pacific Reserve Fleet. Transferred to the Maritime Commission 3 June 1947, she was sold the same day to M. E. Baker at Suisun Bay, Calif.

Kingfisher received one battle star for World War II service.

Kingman

A county in Illinois.

(APB-47: dp. 4,080; l. 328'; b. 50'; dr. 11'2"; s. 10 k.; cpl. 137; a. 8 40mm., 12 20mm.)

Kingman (APB-17) was laid down as *LST-1113*; then reclassified AKS-18 and named *Kingman* 8 December 1944; again reclassified APB-47 on 3 March 1945; launched 17 April 1945 by Missouri Valley Bridge & Iron Co., Evansville, Ind.; sponsored by Mrs. K. B. Bragg; transferred to New Orleans; and commissioned 27 June 1945, Lt. R. J. Figaro in command.

After shakedown in the Gulf of Mexico, *Kingman* cleared Gulfport, Miss., and steamed westward through the Panama Canal, arriving Pearl Harbor 2 September, the day of Japan's historic surrender. Five days later the barracks ship sailed for the Far East, arriving Sasebo 8 October via Eniwetok and Guam. She remained in Japanese ports for 5 months before loading America-bound troops and departing Sasebo 16 March 1946. *Kingman* arrived San Diego 29 April and remained there until she decommissioned 15 January 1947. She was assigned to the Pacific Reserve Fleet and at present is berthed in San Diego.

Kingsbury

A county in east-central South Dakota.

(APA-177: dp. 6,873; l. 455'; b. 62'; dr. 24'; s. 17 k.; cpl. 536; a. 1 5", 12 40mm., 10 20mm.; cl. *Haskell*; T. VC2-S-AP5)

Kingsbury (APA-177) was launched 16 November 1944 by Oregon Shipbuilding Corp., Portland, Oreg., under a Maritime Commission contract; sponsored by Mrs. Leonard Euckler; and commissioned 6 December 1944, Comdr. J. H. Hughes in command.

After shakedown along the California coast, *Kingsbury* departed San Pedro 9 February 1945. Steaming via Pearl Harbor and Eniwetok, she arrived Iwo Jima 14 March, embarked battle-weary Marines, and returned to Pearl Harbor 5 April via Guam and Eniwetok. Sailing for Seattle 22 May, she arrived 29 May and embarked 1,507 soldiers before departing 15 June for Iwo Jima. Arriving 7 July, she debarked her passengers and then departed 10 July with 262 military passengers for Pearl Harbor where she arrived the 21st.

Supporting U.S. occupation operations in Japan, *Kingsbury* cleared Pearl Harbor 1 September and steamed via Saipan for Sasebo, Japan, where she arrived 22 September to debark occupation troops of the 5th Marine Division. From 25 September to 14 October she made a circular run between Japan and the Philippines to transport additional occupation troops; then she returned to the Philippines 26 October for "Magic-Carpet" duty. With 2,077 homebound troops embarked, she departed Tacloban, Leyte, 30 October and reached San Francisco 17 November. Between 2 December and 9 January 1946 *Kingsbury* made another trip to and from the Far East, carrying 935 replacement troops to Manila and returned 2,058 veterans to the West Coast.

Kingsbury sailed 11 February for the East Coast, arriving Norfolk 3 March. She decommissioned at Portsmouth, Va., 19 April. Turned over to custody of the Maritime Commission 23 April, her name was struck from the Naval Register 1 May. At present she is in the Maritime Defense Reserve Fleet, James River, Va.

Kingsbury received one battle star for World War II service.

Kingsmill

Sir Robert Kingsmill (1730-1805) commanded British ship *HMS Vigilant* during a major battle with a French fleet off Ushant, France, 27 July 1778.

(DE-280: dp. 1,140; l. 289'5"; b. 35'1"; dr. 8'3"; s. 21 k.; cpl. 156; a. 3 3", 4 1.1", 9 20mm., 2 dct., 8 dcp., 1 dcp. (h.h.); cl. *Everts*)

Kingsmill (DE-280) was launched 13 August 1943, by Boston Navy Yard, Boston, Mass.; assigned to the United Kingdom under lend-lease 10 June; and transferred to the British Navy 6 November.

During her service as an escort in the British Navy, *Kingsmill* operated in the English Channel. On 6 June 1944, she supported the amphibious invasion at Normandy, and in November she participated in the invasion of the Netherlands at Walcheren. Her service continued until 22 August 1945, when she was returned to the U.S. Navy and commissioned the same day at Harwick, England. Departing Harwick 26 August, Lt. Comdr. George B. Calkins in command, she arrived Philadelphia 8 September and decommissioned 26 October. Her name was struck from the Naval List 16 November. She was sold for scrapping 17 February 1947.

Kingsport Victory

A merchant name retained. Kingsport is a city in northeastern Tennessee.

(T-AK-239: dp. 10,680; l. 455'3"; b. 62'; dr. 28'6"; s. 16.5 k.; cpl. 52; a. none; cl. *Greenville Victory*; T. VC2-S-AP3)

Kingsport Victory (T-AK-239) was laid down under Maritime Commission contract by California Shipbuilding Corp., Los Angeles, Calif., 4 April 1944; launched 29 May 1944; sponsored by Mrs. George O'Brien; and delivered to WSA 12 July 1944.

From July to October 1944 *Kingsport Victory* made cargo runs between the West Coast and Pearl Harbor; then she sailed for the Western Pacific 17 October. After arriving Milne Bay, New Guinea, 2 November, she carried cargo during the remainder of the war to American bases at Eniwetok, Iwo Jima, Guam, Ulithi, and Okinawa. She departed Okinawa 27 December 1945; steamed via Hong Kong, Calcutta, and the Suez Canal; and reached New York 27 February 1946. During the remainder of 1946 she transported cargo between the East and West Coasts.

The cargo ship was acquired by the Navy from the Maritime Commission 1 March 1950 and assigned to MSTs.

Manned by a civilian crew, *Kingsport Victory* operated in the Atlantic, the Mediterranean, and the Caribbean from 1950 until late 1956. Carrying military cargo, she steamed out of New York and Charleston, S.C., to ports in the United Kingdom, Germany, France, Italy, Greece, Turkey, Spain, and North Africa. In addition, she transported supplies from Norfolk, Va., to the Canal Zone and to American bases in the Caribbean.

Loaded with cargo, *Kingsport Victory* departed Norfolk 13 November 1956 for the Far East. Steaming via the West Coast, she reached Yokohama, Japan, 20 December; and, during the next month, she shuttled supplies to Okinawa, Formosa, and South Vietnam. She departed Saigon for the United States 28 January 1957; reached San Francisco 15 February; and arrived New York 8 March to resume transatlantic cargo service.

Between March 1957 and August 1961 *Kingsport Victory* maintained a busy schedule for far-ranging cargo runs that sent her from the eastern Mediterranean to the western Pacific. In addition to numerous round-trip voyages between New York and West European ports, she deployed four times to the Mediterranean where she supported ships of the mighty 6th Fleet. Though operating out of New York, she completed eight deployments to the Far East. Her cargo runs sent her to Japan, South Korea, Formosa, Hong Kong, and Thailand, as well as to the Marshall and Aleutian Islands.

After returning to the United States from the Mediterranean 29 August 1961, *Kingsport Victory* departed New York for the West Coast 5 September. Steaming via

San Diego and San Francisco, she reached Portland, Oreg., 24 September and underwent conversion to a satellite communication ship by Willamette Iron & Steel Co. at Portland. On 14 November she was renamed *Kingsport* and reclassified AG-164.

Designed for use by the U.S. Army Satellite Communications Agency in the defense satellite communications programs, Project ADVENT, *Kingsport Victory* underwent extensive alteration during conversion. A special high frequency radio station was installed for ship-to-shore communications. She received advanced tracking and telemetry equipment and anti-roll stabilization tanks. In addition, a 30-foot, gyro-stabilized, computer-oriented, triaxial, parabolic antenna was installed on her afterdeck. Housed in a 53-foot, plastic, air-pressurized radome, this antenna permitted precision tracking of a high altitude satellite at any angle above the horizon.

From 12 to 26 April 1962 *Kingsport* steamed to the Philadelphia Naval Shipyard where, during the next 6 months, the antenna and radome were installed. Following shakedown and equipment trials off the coast of Virginia, she departed Philadelphia 5 January 1963 and arrived off Lagos, Nigeria, 18 January. During the next 2 months she conducted communications tests in the Gulf of Guinea before returning to Norfolk 29 March.

Between 17 June and 1 July, *Kingsport* again sailed to Lagos. After the successful launching of a synchronous communication satellite (SYNCOM 2) from Cape Canaveral 26 July, she served as terminal control station during the testing and evaluation of the satellite. She departed Lagos 23 September; reached Rota, Spain, 3 October; then sailed the 6th for further communication tests in the Mediterranean. She cruised the Mediterranean from 7 to 25 October and touched at Leghorn, Italy, and Beirut, Lebanon. During this time she conducted successful voice and teletype tests between the United States and ships of the 6th Fleet via satellite. She returned to Rota 26 October; and, after completing additional experiments, she sailed for Norfolk 9 November and arrived 21 November.

Kingsport departed for the Pacific 17 February 1964. Steaming via Puerto Rico and the Panama Canal, she touched at San Diego 13 March and reached Pearl Harbor

the 25th. During the next 10 months she steamed between Pearl Harbor and Guam while conducting communication experiments. She supported the evaluation of SYNCOM 3 after its launching 19 August, and communication experiments sent her throughout the Western Pacific and into the Indian Ocean. She continued to support these important tests until July 1965—when she provided her “know-how” and wealth of equipment for NASA’s Gemini unmanned space shots. She served as an on station communications ship between Okinawa and the Philippines during the flight of GT-5 from 21 to 29 August. She supported three more Gemini flights between 4 December and 16 March 1966, then returned to the West Coast the following month. She remained at San Francisco from 18 April to 27 October in a ready reserve status. During November she steamed to the East Coast, and in early 1967 was at New York undergoing repairs and alterations.

Kingsport Victory received one battle star for World War II service.

Kingston, see *Cacсар* (AC-16)

Kinsman

(SwStr: t. 245)

In 1854 *Kinsman* was built at Elizabeth, Pa., as *Gray Cloud*. She operated on the Mississippi River and its tributaries from St. Louis. After the capture of New Orleans in the spring of 1862, she was commandeered by General B. F. Butler and fitted out for river service.

Renamed *Kinsman*, the side-wheel steamer operated for the Army, Acting Master George Wigen in command. With *Calhoun*, *Estrella*, and *Diana*, she engaged Confederate ironclad gunboat *Cotton* in a spirited action 3 November. *Kinsman* was struck under her port bow and the other Union ships were damaged but they forced the Confederate vessel to retire. That night the Northern ships captured *A. B. Seger*, a small Steamer of the Confederate Navy used as a dispatch boat. Five days later

USNS *Kingsport* (T-AG-164), a satellite communications ship

Kinsman and *A. B. Seger* captured and burned steamers *Osprey* and *J. P. Smith* in Bayou Cheval, La.

Kinsman was transferred to the Navy 1 January 1863. With three other ships under overall command of Lt. Comdr. Thomas McKean Buchanan, she attacked the South's defenses at Bayou Teche, below Franklin, La. Vigorous prosecution of the action by Northern vessels forced the Southerners to retire permitting removal of obstructions which had impeded Union ships. Confederate gunboat *Cotton* engaged the attackers but was compelled to retire. Soon thereafter *Cotton's* crew set their ship afire and destroyed her to prevent capture. During the engagement, a torpedo exploded under *Kinsman* unshipping her rudder.

While transporting a detachment of troops 23 February 1863, *Kinsman* struck a snag and sank in Berwick Bay near Brashear City, La. Six men were reported missing.

Kinzer

Born in Rock, W. Va., 22 August 1917, Edward Blaine Kinzer enlisted in the Naval Reserve 26 February 1941. He was appointed Aviation Cadet 3 April and commissioned Ensign 20 October. On 12 November 1941 he was assigned to Scouting Squadron 5 on board *Yorktown* (CV-5). He was awarded the Navy Cross posthumously for extraordinary heroism and extreme disregard of his own personal safety during the Battle of Coral Sea. This aggressive and skillful pilot contributed materially to the sinking or damaging of eight enemy vessels in Tulagi Harbor 4 May and the sinking of Japanese aircraft carrier *Shoho*. On 8 May while on antitorpedo plane control, he died while fiercely engaging "the continued attack of enemy bombing and torpedo planes and their fighter support."

(APD-91: dp. 1,650; l. 306'; b. 37'; dr. 12'7"; s. 23.6 k.; cpl. 204; a. 2 5", 2 40mm., 10 20mm., 3 dct., 9 dcp.; cl. *Edsall*)

Kinzer (APD-91) was launched as DE-232 9 December 1943 by Charleston Navy Yard Charleston, S.C.; sponsored by Mrs. Charles E. Kinzer, mother of Ens. Kinzer; reclassified APD-91, 17 July 1944, converted to a high speed transport; and commissioned 1 November 1944, Lt. Richard C. Young, USNR, in command.

Kinzer departed Norfolk, Va., 1 January 1945, transitted the Panama Canal and docked at San Diego, Calif., 16 January. Two days later she sailed for Pearl Harbor via San Francisco, arriving 29 January. At Pearl Harbor *Kinzer* embarked marines of the Reconnaissance Battalion, Fleet Marine Force, and sailed 12 February for the Pacific war zone. She arrived at Okinawa Gunto for her preinvasion mission 26 March escorting LST's to their landings on Kerama Retto. When night came *Kinzer* landed marines on the various small islands surrounding Okinawa to gather data on terrain and enemy activity. Later, large guns set up on these bits of land aided the initial assault of Okinawa itself. *Kinzer* in company with *Scribner* (APD-122) continued this pattern while dodging enemy suicide planes during patrols and antisubmarine-screen duty until she sailed 15 July 1945 with a convoy headed for Guam. There she picked up *Sargent Bay* (CVE-83) escorted it to Pearl Harbor and continued on to the West Coast, arriving San Pedro, Calif., 9 August.

Completing overhaul, *Kinzer* sailed from San Pedro 6 September 1945, disembarked passengers at Pearl Harbor, Guam, and Ulithi, arriving at Manila 13 October. Ten days later she sailed for Haiphong, Indochina, where she embarked Chinese troops for transfer to Northern China. From 7 November to 22 April 1946, *Kinzer* re-deployed Chinese troops in Northern China and called on ports of Chinwangtao, Tsingtao, and Taku, China; Hulutao, Manchuria; and Jinsen, Korea. During this time, she served as flagship for Commander, LST Flotilla 15.

Kinzer cleared Tsingtao 25 April 1946 for the United States, calling at Guam and Pearl Harbor en route, arriving San Pedro 17 May.

Kinzer decommissioned 18 December 1946, entered the Pacific Reserve Fleet at San Diego, and later was moved to San Francisco. *Kinzer* was struck from the Navy List 1 March 1965; and on 21 April 1965 sold to Nationalist China under the Military Assistance Program.

Kinzer received one battle star for her service in World War II and the China Service Medal.

Kiowa

A tribe of warlike and predatory American Indians, who at one time resided in Missouri. They later moved southward and often joined the Comanches in raids on other tribes and American settlers. Some members of the tribe still reside on a reservation in Oklahoma.

I

(SP-711: l. 35'; b. 9'; dr. 3'6"; s. 10 k.; a. .30-cal. m.g.)

The first *Kiowa* (SP-711) was built 1915 by Lawley & Son Corp., Boston, Mass.; acquired by the Navy 5 May 1917, from Mr. Frank A. Marwell; and placed in service 14 May for Harbor Patrol duty in the 1st Naval District. *Kiowa* operated out of Boston in this capacity until placed out of service 24 November 1918. She was returned to her owner 28 March 1919.

II

(Str: dp. 4,500; l. 261'; b. 43'6"; dr. 17'9"; s. 9 k.; cpl. 62; a. 15", 13")

The second *Kiowa* (No. 1842) was launched 1917 by the American Shipbuilding Co., Cleveland, Ohio, taken over from the Atlantic, Gulf & West Indies S.S. Line 26 February 1918; and commissioned the same day, Lt. Comdr. A. Hopen in command.

Assigned to NOTS, *Kiowa* arrived Norfolk 25 March 1918, to transport coal along the Atlantic coast. She returned Hampton Roads during April to load mines for the North Sea mine-laying squadron. *Kiowa* sailed 30 April and arrived Obran, Scotland, 20 May. She made two additional cruises carrying mine equipment to North-Sea ports before clearing Norfolk 6 December with a cargo of coal for Bermuda. *Kiowa* returned Norfolk 22 December, and decommissioned there 16 January 1919 for simultaneous return to her owners.

III

(ATF-72: dp. 1,146 (lt.); l. 205'; b. 38'6"; dr. 14'3"; s. 16.5 k.; cpl. 85; a. 1 3", 4 .50 mg.; cl. *Apache*)

The third *Kiowa* (ATF-72) was launched 5 November 1942, by the Charleston Shipbuilding & Drydock Co., Charleston, S.C.; sponsored by Mrs. Hilda How Edwards; and commissioned 7 June 1943, Lt. William O. Kuykendall in command.

After shakedown off Key West, *Kiowa* reported Norfolk and sailed 26 July 1943, for operations off Newfoundland. During that summer the ocean tug performed various services, including towing targets for new *Iowa* (BB-61), enabling the larger ships to fulfill their vital roles. For 6 months *Kiowa* towed all kinds of ships and floating equipment before arriving New York 2 March 1944, to prepare for overseas operations. Sailing 3 weeks later, she arrived Falmouth, England, 19 April as the Allies were in the final planning stages for the Normandy invasion. Loaded with firefighting and salvage equipment, *Kiowa* sailed 3 June; joining a convoy of LST's, she made her way toward the largest amphibious operation of the war. D-day came 3 days later and the tug was actively engaged in repairing landing craft, assisting disabled ships, and performing general salvage duty. She remained off Normandy until 25 July and then operated in British waters before returning to Norfolk 30 September.

For the rest of the war *Kiowa* operated along the Atlantic coast, towing and assisting disabled ships and also escorting Allied merchant ships to the convoy lanes. During late spring 1945, the tug commenced operations as a tanker, fueling a number of ships at sea. Following the war *Kiowa* arrived Argentia, Newfoundland, 21 December for duty in the North Atlantic. From 1946 to 1959 the ocean tug continued operations along the coast from the Canal Zone to Newfoundland, as she engaged in salvage, target and ship towing. These unheralded but vital assignments are a major contribution to the power for peace of the Navy.

Arriving Guantanamo Bay 9 April, *Kiowa* prepared for her assignment in the Caribbean. She cleared San Juan 26 May and took station off Antigua as recovery ship for what was to be the beginning of space flight. On 28 May the tug recovered the nose cone of a Jupiter missile which contained monkeys Able and Baker, the first U.S. space riders. Thus *Kiowa* played a major role lifting America into space.

From 1959 into early 1965 *Kiowa* continued her vital towing operations out of Norfolk, and also performed extensive services at Guantanamo Bay during the tense years since Castro made Cuba a Communist foothold in the Western Hemisphere. The latter part of June and all of July 1965 *Kiowa* operated as a unit of a task force patrolling the West Indies during the second Dominican Republic Crisis. Her primary task was to maintain the off-shore pump for petroleum products to besieged Santo Domingo. En route to East Coast, the fleet ocean tug recovered experimental mines off San Juan, Puerto Rico, before arriving off her homeport, Little Creek, Va., early in August.

On 7 September *Kiowa* departed for the Mediterranean to join the 6th Fleet in more peace-keeping operations. Arriving off Rota, Spain, the 20th, she began her target-towing, diving, and salvaging duties which continued into 1966.

From 26 January to 26 February 1966 the ship participated in the search for an H-bomb that fell into the Mediterranean off Palomares, Spain, following an Air Force bomber's collision with a air-tanker. *Kiowa* then returned home, via South Wales, England, and San Juan, arriving Little Creek 16 April. *Kiowa* spent the next 5 months towing targets in the Virginia Capes area before entering drydock at Norfolk 27 September.

Her overhaul completed by late January 1967, *Kiowa* returned to operations off the East Coast, cruising from Bermuda to Canada and back into late 1967.

Kiowa received one battle star for World War II service.

Kirkpatrick

Thomas L. Kirkpatrick was born 5 July 1887, in Cozad, Nebr., and was appointed Acting Chaplain, U.S. Navy, 19 February 1918. After serving as chaplain to stations in the United States and abroad, Thomas Kirkpatrick was assigned to *North Dakota* 24 June 1919. For the next 20 years he served on *Utah*, *Pittsburgh* and *Saratoga* in addition to duty at Samoa from 1935 to 1937. He reported to *Arizona* 13 September 1940, and was commissioned Captain 1 July 1941. Captain Kirkpatrick lost his life when *Arizona* was sunk during the Japanese attack on Pearl Harbor 7 December 1941.

(DE-318: dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; cpl. 186; a. 3 3", 6 40mm., 10 20mm., 9 dep., 2 det.; cl. *Edsall*)

Kirkpatrick (DE-318) was launched 5 June 1943, by Consolidated Steel Corp., Orange, Tex., sponsored by Mrs. Genevieve Kirkpatrick, widow of Captain Kirkpatrick; and commissioned 23 October 1943, Lt. Comdr. V. E. Bakanas, USCG, in command.

After shakedown along the Atlantic Coast, *Kirkpatrick* arrived Norfolk 23 December 1943, to commence transatlantic escort duty. From January 1944 to May 1945 she made 1 convoy escort mission to the Mediterranean,

and 10 crossings between the United States and the British Isles. On her third voyage, *Gandy* (DE-764) another escort in the convoy rammed a German submarine U-550 after the U-boat had sunk tanker *Pan Pennsylvania*. Eleven prisoners from the sunken enemy submarine were captured in this action of 16 April 1944.

Kirkpatrick returned New York on completion of her final transatlantic escort mission 15 May 1945. After bombardment exercises in the Caribbean, she sailed for the Pacific. She entered Pearl Harbor 11 July, for tactics with submarines in Hawaiian waters until 29 August when she departed on an escort cruise to the Far East. Departing Sasebo 2 November, *Kirkpatrick* arrived Charleston 8 December 1945, via Pearl Harbor and the Panama Canal. She arrived Jacksonville 5 days later and decommissioned 1 May 1946, at Green Cove Springs, Fla.

Kirkpatrick was reclassified a radar picket ship (DER-318) on 1 October 1951, and recommissioned 23 February 1952, Lt. Comdr. George S. Davis in command. After shakedown and training out of Guantanamo Bay, Cuba, *Kirkpatrick* reported to Newport 11 July 1952, for radar picket operations on the Atlantic Barrier, the seaward extension of the Distant Early Warning (DEW) line across northern Canada. She manned radar picket stations in the North Atlantic until 1960, a seaborne unit of the air defense system of the United States and Canada. Incidental to this service she visited ports of northern Europe in the summers of 1958 and 1959. The radar picket ship departed Newport 27 March 1960, and arrived Philadelphia 2 days later. She decommissioned there 24 June 1960, and entered the Atlantic Reserve Fleet. At present she is berthed at Philadelphia.

Kirwin

John Joseph Kirwin was born 4 July 1918, in Newport, R.I., and enlisted in the U.S. Naval Reserve 11 December 1935. Kirwin was appointed Midshipman 11 August 1937, and commissioned Ensign 7 February 1941, reporting for duty aboard *Savannah* (CI-42). During World War II, Kirwin was appointed Lieutenant (j.g.) 16 June 1942, and saw action aboard *Savannah* in the North African and Sicilian campaigns. He was promoted to Lieutenant 1 December 1942.

On 11 September 1943, while bombarding German shore defenses in Salerno Bay, Sicily, *Savannah* and her sister cruisers came under heavy aerial attack. The cruisers and British spitfires drove off nearly 60 German bombers before 1 aimed a secret-type bomb at *Savannah*. The radio-controlled, armor-piercing bomb struck *Savannah's* number three turret immediately in front of the bridge.

For his part in this action, Lt. Kirwin was awarded the Navy Cross with the following citation: "For extraordinary heroism as a turret officer. . . . When the detonation of an enemy bomb set off numerous fires and filled the turret with dense smoke and toxic gases, Lt. Kirwin promptly ordered the area abandoned and despite the imminent danger, stood by his station in the turret booth. With full knowledge of the serious hazards involved and with complete disregard for his own personal safety, he calmly supervised evacuation and deliberately remained behind to aid in saving the lives of as many of his command as possible . . . he eventually succumbed in the stricken booth, gallantly sacrificing his own life in order that his men might live."

(APD-90: dp. 1,650; l. 306'; b. 36'10"; dr. 9'8"; s. 24 k.; cpl. 186; a. 12 20mm.; cl. *Rudderow*)

Kirwin (DE-229) was launched 15 June 1944, by the Philadelphia Navy Yard, Philadelphia; sponsored by Mrs. Andrew J. Kirwin, mother of Lt. Kirwin; reclassified APD-90, on 7 July 1944; and commissioned 4 November 1945, Lt. Comdr. Lloyd G. Benson, USNR, in command.

After shakedown in the Chesapeake Bay, *Kirwin* cleared Norfolk 29 January 1946, and arrived Green Cove Springs

2 days later. *Kirwin* decommissioned there 6 April 1946, and was assigned to the Atlantic Reserve Fleet.

Kirwin recommissioned 15 January 1965, and in February sailed to Newport News for overhaul. She got underway for Guantanamo Bay 6 July and spent the next 5 weeks on atomic-defense, antisubmarine, and gunnery exercises. The destroyer escort visited San Juan, Puerto Rico, en route to Little Creek, Va., arriving 22 August. She sailed 29 November for the Caribbean to join Task Force 184 for amphibious and antisubmarine exercises. She returned to Little Creek 16 December.

In 1966 *Kirwin* operated out of Little Creek, Va., on training exercises along the Atlantic Coast and the Caribbean until heading for the Mediterranean 15 August. Arriving Rota, Spain, 10 days later, she visited Italy, Malta, Greece, Tunisia, Spain, and Morocco before returning home 3 December. She operated along the West Coast in 1967 preparing for future assignments.

Kishwaukee

A river in Illinois.

(AOG-9: dp. 4,130; l. 311'; b. 49'; dr. 14'6"; s. 15.5 k.; cpl. 127; a. 4 3"; 12 20mm.; cl. *Patapsco*)

Kishwaukee (AOG-9) was launched 24 July 1943, by Cargill Shipyard, Savage, Minn.; sponsored by Mrs. John Shipp; and commissioned 27 May 1944, Francis M. Hillman, USNR, in command.

After shakedown, *Kishwaukee* cleared Norfolk 8 July 1944, and joined the Service Squadron at Pearl Harbor 10 August. She completed a 2-month shuttle among the central Pacific islands before sailing west to support the reconquest of the Philippine Islands. *Kishwaukee* arrived off Leyte late in October and operated as station tanker, fueling ships in the vicinity. She supported the Philippine campaign until she sailed 1 February 1945, for operations in the Palau and Caroline Islands.

Late in March, as the war moved closer to Japan, *Kishwaukee* sailed for the Ryukyus to fuel ships engaged in the invasion of Okinawa. In spite of the constant enemy air raids, the oiler remained as station tanker until after Okinawa had been secured and continued servicing Allied ships in Okinawa until sailing for Japan, arriving Sasebo 22 December. Following 6 months as station tanker in the Far East, *Kishwaukee* cleared Japan 5 July and put into San Pedro 31 July.

From 1946 to 1950 *Kishwaukee* remained on active service with the Pacific Fleet. Based at Pearl Harbor she alternated tours in the Far East with cruises among the islands off the South and Central Pacific.

During the Korean conflict, she supplied vital fuel to Pacific staging areas and operated as a station ship out of Sasebo November through December 1950. Upon cessation of Korean hostilities, *Kishwaukee* resumed fuel shuttles from Pearl Harbor to the Pacific Islands and Alaska.

During 1954 the oiler unloaded cargo in French Indochina as the war in that country was nearing an end. That August she sailed to Formosa with a supply of aviation gasoline in anticipation of a possible Red Chinese attack on Nationalist held islands in the Formosa Straits. *Kishwaukee* returned Pearl Harbor 17 October and for the next 3 years continued runs between Hawaii and the Marshall Islands before sailing for the West Coast 10 November 1957. She arrived Astoria, Oreg., 11 December and decommissioned at Seattle 2 April 1958. Her name was struck from the Navy List 1 July 1960. *Kishwaukee* remained with the Maritime Administration Reserve Fleet until October 1965, when her name reappeared on the Navy List. The ship underwent extensive overhaul at Astoria, Oreg., and recommissioned 1 September 1966. After fitting out, *Kishwaukee* arrived Pearl Harbor, her homeport, 7 October 1966. Following shakedown training, she sailed to the Far East 5 December and arrived, via Guam, at Subic Bay 22 December. The gasoline tanker entered the combat zone the last day of the year

and supplied fuel for naval aircraft for strikes against Communist targets ashore. From 2 January 1967 into April she operated out of Da Nang, Vietnam, before departing for Yokosuka, Japan, arriving 30 April. *Kishwaukee* continued on to Pearl Harbor and joined ServRon 5 after her arrival 15 May.

Kishwaukee received two battle stars for World War II service.

Kite

A small or medium bird of the hawk family.

I

(AM-75: dp. 482'; l. 124'3"; b. 23'0"; dr. 10'6"; s. 9 k.; a. 1 3")

The first *Kite* (AM-75) was built in 1928 as beam trawler *Holy Cross* by Bath Iron Works, Bath, Maine; purchased by the Navy from H. C. Trawling Corp. 11 September 1940; and commissioned 3 March 1941, Lt. Comdr. George L. Burns in command.

Kite cleared Boston 27 March 1941; and, after training exercises with the mine warfare school Yorktown, Va., she operated with the Support Force out of Norfolk. Five months later she sailed for Newfoundland arriving Argentina 31 August for minesweeping operations in the North Atlantic. From August 1941 to 3 May 1944, *Kite* swept sea lanes in frigid Newfoundland waters. Clearing Argentina, *Kite* arrived Boston 7 May and decommissioned at Quincy, Mass., 14 August 1944. She was transferred to WSA 2 March 1945 and sold.

Kite (AM-403) was cancelled during construction 12 August 1945.

II

(YMS-374: dp. 270; l. 136'; b. 25'; dr. 8'; s. 15 k.; cpl. 32; a. 1 3", 2 20mm.; 3 dcp., 2 dcl.)

YMS-374 was launched 17 February 1944 by Weaver Shipyards, Orange, Tex.; and commissioned 31 May 1944, Lt. (j.g.) Robert A. Harris in command.

After shakedown out of Little Creek, Va., and minesweeping operations in Massachusetts Bay, *YMS-374* cleared Boston 30 September and steamed toward the Pacific war zone. The minesweeper arrived Pearl Harbor 18 November; and, following formation sweeping maneuvers, sailed 22 January 1945 escorting LST Flotilla 21 to Saipan.

As the struggle on the "road to Japan" was intensified, the minesweeper prepared for conquest of Iwo Jima. Arriving off the volcanic island 17 February, she cleared lanes for landings scheduled 2 days later. Following the invasion *YMS-374* made antisubmarine patrols, escorted support ships, and laid smoke screens before retiring to the Philippines and arriving Leyte 8 March.

The minesweeper steamed into Saipan 28 March and for nearly 5 months she operated in the Marianas on ASW patrols, convoy escort, submarine training exercises, and plane guard duty for crews of downed B-29 bombers. After the fighting stopped *YMS-374* sailed for Kakyo To Island on the southwestern coast of Korea to clear approaches to Jinsen for the landing of occupation troops. She swept Korean waters until she sailed 7 September for minesweeping operations in the Nagasaki-Sasebo area. *YMS-374* departed Japan 29 December and arrived on the West Coast in January 1946.

After a year of operations out of California she was reclassified AMS-22 on 18 February 1947 and assigned the name *Kite*. She decommissioned that same day and was placed in the Pacific Reserve Fleet.

Kite recommissioned 9 May 1949, Lt. (j.g.) Nicholas Grkovic in command. After repairs in San Diego and Long Beach, she sailed for Pearl Harbor 25 July and cleared Hawaii 26 September for operations in the Western Pacific out of Japan. Soon after Communist aggres-

USS *Kishwaukee* (AOG-9)

sors invaded South Korea, *Kite* sailed 13 July 1950 for Pusan to aid in the effort to contain the Communist drive. Operating in the Pusan area through most of the summer, *Kite* sailed 12 September to clear waters approaching Inchon. The American amphibious assault which followed there was among the most successful operations of the war and began a great Allied land offensive. During October, as the drive into North Korea gathered momentum, the minesweeper arrived Wonsan to open the mined harbor to Allied supply ships and then retired to Yokosuka for repairs.

Kite returned to the conflict zone 5 January 1951, and for the rest of the conflict she continued mine clearing operations along the Korean coast. Her services allowed Allied supply and fire support ships to complete their missions through heavily mined waters. After the Korean truce 27 June 1953, *Kite* remained in the Far East continuing minesweeping operations out of Korea and Japan.

Kite was reclassified MSC(O)-22 on 7 February 1955. She was transferred to the South Korean Navy 6 January 1956 and renamed *Kim Po* (MSC(O)-520).

Kite received 2 battle stars for World War II service and 10 stars for Korean service.

Kite, see *Otter* (OYFB-663)

Kitkun Bay

An Alaskan Bay on the southeast coast of Prince of Wales Island.

(CVE-71): dp. 7,800; l. 512'3"; b. 65'; ew. 101'1"; dr. 22'6"; s. 19 k.; cpl. 860; a. 15"; 16 40mm., 20 20mm., 28 ac.; cl. *Casablanca*: T. S4-S2-BB3)

Kitkun Bay, originally designated as an AVG, was classified as ACV-71 on 20 August 1942 and reclassified as CVE-71 on 15 July 1943. Laid down 3 May 1943 she was launched 8 November 1943 by Kaiser Shipbuilding Co., Inc., Vancouver, Wash., under a Maritime Commission contract; sponsored by Mrs. Edward A. Cruise; and commissioned 15 December 1943, Captain J. P. Whitney in command.

After a shakedown along the Pacific coast, *Kitkun Bay* departed San Diego 28 January 1944 on a replenishment voyage to the New Hebrides bases. After loading passengers, planes, and other cargo, she sailed for home 18 February via Pearl Harbor and arrived San Diego 6 March. Upon her return, the planes of VC-5 were brought aboard for training and assignment. With Rear Admiral Harold B. Salada, Commander, Carrier Division 26 embarked, she sailed 1 May for Pearl Harbor and the completion of her training exercises.

On 31 May her task unit sortied forth to escort the bombardment and transports units of Task Group 52.17 to Saipan. On 13 June her planes shot down their first enemy aircraft and the next day began the bombing and strafing of enemy positions in the Marianas. *Kitkun Bay's* planes alternated flying support missions for the Saipan landings and air cover for ships east of this island. Eight enemy planes were splashed in attacks on her formation on the 17th and her own guns downed three more the

next day. Early July brought a brief respite at Eniwetok but 14 July she resumed support sorties at Saipan, Tinian, and from 2 to 4 August at Guam.

Withdrawn, she steamed to Espiritu Santo, New Hebrides, for upkeep before sailing to the Solomons for additional practice in support of amphibious operations. Heading westward on 8 September her task unit escorted an assault force to Peleliu and Angaur Islands in the Palau group and provided cover from the 15th to 21st. Withdrawn to Manus, Admiralty Islands, she made preparations for the invasion of Leyte, P.I., and her finest hour.

Departing 12 October she soon joined Rear Admiral Clifton Sprague's task unit "Taffy 3" composed of 6 CVE's and their screen of escorts. On 20 October *Kitkun Bay* began launching strikes against Leyte. These operations conducted from a position east of Samar Island continued until early in the morning of the 25th when Japanese warships were sighted on the northwest horizon. Admiral Kurita's powerful Center Force had passed through the San Bernadino Straits unnoticed, hoping to destroy the supply ships off Leyte. Not designed to exchange gunfire with surface warships "Taffy 3" launched what planes were ready and turned southward behind a smoke screen. In the ensuing 2½-hour running battle, the courageous maneuvers and skillful action of its screen, the diverting attacks by its planes, the astute orders of its command officers averted annihilation. In the forefront of the circular formation *Kitkun Bay* escaped any direct hits as the shells splashed ever closer until 0925 when the enemy suddenly broke off the engagement and retired. The less fortunate *Gambier Bay* and three escort ships went down fighting valiantly; while suffering some gunfire damage, the Center Force lost three cruisers as a result of the attacks of the aircraft of "Taffies 2 and 3."

The final phase of the epic Battle of Leyte Gulf was the retaliatory air strikes by both sides. Before the "Forenoon" watch had expired, *Kitkun Bay* had splashed a suicidal Betty but had also been crashed by a Zeke which struck the port catwalk killing 1 man and wounding 16. The losses for the day also included two planes and their crews. The next day she sailed for Manus in the Admiralty Islands for replenishment and repairs.

Arrived 1 November, she departed Manus the 7th for Pearl Harbor where VC-5 was replaced by VC-91. Despite a submarine attack en route, *Kitkun Bay* returned safely to Manus 17 December. New Year's Day 1945 dawned with CVE-71 steaming as part of Task Unit 77.4.3 (Lingayen Transport Cover Group) bound for the invasion of western Luzon. After passing through Surigao Straits, the convoy underwent a series of air attacks. Air cover destroyed seven enemy planes but at 1857 an Oscar got through and crashed *Kitkun Bay's* portside amidships at the waterline. Almost simultaneously a 5-inch shell struck her starboard side. The resultant fires and flooding were brought under control but 16 were dead and 37 wounded. The following day with a list and only one engine operating she withdrew and proceeded by stages first to Leyte, Manus, Pearl Harbor and arrived San Pedro, Calif., 28 February.

Two months later she sailed again for the Western Pacific. After a training period in the Hawaiian Islands, she departed 15 June for Ulithi and duty with the 3d Fleet. On 3 July *Kitkun Bay* sortied forth with other escorts and ships of the "train" for support of the fast carriers operating off the coast of Japan. Mid-August she was reassigned to Task Force 44 gathering at Adak, Alaska, to escort Admiral F. J. Fletcher, COMNORPAC, who had been designated to receive the formal surrender of the Japanese in northern Honshu and Hokkaido. Arrived off Honshu 7 September, she remained in the area until the 27th, seeing to the feeding and transportation of American prisoners of war. Detached to participate in Operation "Magic-Carpet," she first debarked 554 troops at San Francisco 19 October. Additional voyages to Pearl Harbor and Okinawa concluded 12 January 1946 at San Pedro, Calif.

Kitkun Bay entered Puget Sound Naval Shipyard, Bremerton, 18 February and decommissioned 19 April.

Sold 18 November 1946 to Zidell Machinery & Supply Co., Portland, Oreg., she was scrapped early in 1947.

In addition to the Presidential Unit Citation *Kitkun Bay* earned six battle stars during World War II.

Kittanning

A town in Armstrong County in western Pennsylvania located on the Allegheny River 37 miles northeast of Pittsburgh. In Iroquois dialects the word, kittanning, means "on the great stream."

(YTB-787: dp. 325 (lt.); l. 109'; b. 28'; dr. 13'; s. 12 k.; cpl. 12; cl. *Pontiac*)

Kittanning (YTB-787) was laid down 22 December 1965 by Marinette Maine Corp., Marinette, Wis.; and launched 29 March 1966.

The new large harbor tug was placed in service in the Pacific Fleet 27 October 1966; and in 1967 operates out of Yokosuka, Japan, assisting ships of the American and Allied navies in the Far East. Her labors, like those of countless other service ships, are a major source of American naval strength in the Far East helping to prevent that troubled region from being engulfed by war or communism.

Kittatinny

A long mountain ridge in Pennsylvania and New Jersey continuing the Delaware Water Gap.

(Sch: t. 450; l. 129'; b. 29'; dph. 11'6"; cpl. 66; a. 4 32-pdrs.)

Kittatinny was a three-masted schooner purchased by the Navy at Philadelphia as *Stars and Stripes* from Simpson and Neile 21 September 1861; and commissioned at Philadelphia Navy Yard 9 December 1861, Lt. George E. Welch in command.

Assigned to the Gulf Blockading Squadron, she departed the Delaware 20 December and reached Key West 10 days later. An active blockader in the Gulf of Mexico, she shared in the capture of *Major Barbour* attempting to slip through the blockade with a cargo of gunpowder, niter, sulphur, percussion caps, and lead for the Confederate Army. She took schooner *Julio* near Barataria 11 May and captured schooner *Emma* 27 September. Schooner *Matilda* fell prey to the vigilant Union blockader off Matagorda Bay, Texas, 25 November; and schooner *Diana* was taken the next day. *Kittatinny* took sloop *D. Sargent* off Galveston 12 March 1863 shortly before sailing to New York for repairs.

Kittatinny recommissioned at New York 10 June 1863, Acting Master Isaac D. Seyburn in command. On the 15th she sailed on a cruise in the North Atlantic seeking Confederate raider *Tacony*, a ship taking a heavy toll on Northern shipping. She returned to New York on the 29th and sailed 11 August to return to the West Gulf Blockading Squadron for duty off the Texas coast. She arrived on station 2 September; and on the 22d she chased an unidentified schooner ashore where the blockade runner was burned by her crew. She captured schooner *Reserve* 25 October.

Early in 1968 *Kittatinny* sailed via New Orleans to Pensacola, where she was based for over a year. On 25 March 1865 she sailed for Mobile Bay, where she served until after the end of the Civil War. She stood out from Mobile Bay 8 August; touched Pensacola; and arrived New York 1 September where she decommissioned on the 14th. *Kittatinny* was sold at public auction 27 September 1865 to D. McCarty & Son.

Kittaton

A creek in Virginia named for an Indian word meaning "the great town or village."

(YTB-406: dp. 238; l. 100'; b. 25'; dr. 9'7"; s. 12 k.;
cpl. a. none; cl. *Sassaba*)

Kittaton (YTB-406) was laid down as YT-406; reclassified YTB-406 on 15 May 1944; launched 30 June 1944, by Ira Bushey & Sons, Inc., Brooklyn, N.Y.; and placed in service 19 January 1945, Ens. T. J. Barfield in command.

Assigned to duty in the Pacific, *Kittaton* joined Task Force 16 at Pearl Harbor 21 May. Departing 2 days later, she steamed via Kwajalein and arrived Guam in June for towing operations out of Apra Harbor. *Kittaton* served at Guam and in the western Pacific until February 1947 when she was assigned to further duty with Service Force, Pacific Fleet. Reclassified YTM-406 in February 1962, *Kittaton* in 1967 remains on active service with the Pacific Fleet out of Subic, Philippines.

Kittery

A coastal city in southwestern Maine.

I

(AK-2: dp. 3,300; l. 293'8"; b. 40'6"; dr. 13'3"; s. 15.5 k.; cpl. 87; a. none)

Kittery (AK-2) was launched as the German transport, *Praesident*, 30 November 1905, by G. Seebach Co., Bremerhaven, Germany. Owned by the Hamburg-American Line, *Praesident* operated throughout the waters of the West

Indies and the Caribbean. After the outbreak of World War I, she was suspected of supplying German cruisers in the Leeward Islands. Following several harrowing cruises, during which she narrowly avoided capture by English and French ships, she entered the port of San Juan, P.R., early in 1915 and was interned with two other German merchantmen. After the United States entered the war in April 1917, she was taken over 14 May by the U.S. Navy. *Praesident* sailed to the United States escorted by *Hancock* (AP-3) and was refitted for naval service. She commissioned as *Kittery* 6 July at Philadelphia, Lt. Comdr. Charles Geddes, USNRF, in command.

Assigned to cargo and troop transport duty between the United States and the West Indies, *Kittery* departed Philadelphia 18 July. Operating out of Charleston, S.C., she made monthly trips during the remainder of the war to supply American forces. After the war she continued her cargo service from Charleston and Norfolk for more than 15 years, making scores of runs to West Indian ports. Following a final trip to Guantanamo, Port-au-Prince, and Cape Haiten, she arrived Norfolk 21 December 1932. She proceeded to Philadelphia 28 January 1933, arriving the 30th. *Kittery* decommissioned 5 April, and her name was struck from the Navy List 11 April, 1933. Transferred to the USSB 26 June 1933, she was scrapped in 1937.

II

(PC-1201: dp. 295; l. 174'; b. 23'; dr. 8'; s. 20 k; cpl. 60;
a. 1 3", 1 40mm., 3 20mm., 2 rkt., 2 dcp., 2 dct.; cl. PC-592)

USS *Kittery* (AK-2)

PC-1201 was laid down 12 December 1942 by Consolidated Shipbuilding Corp., Morris Heights, N.Y.; launched 14 February 1943; sponsored by Mrs. A. E. Bradbury and Commissioned 11 June, Lt. (j.g.) William W. Huffman in command.

After shakedown and sound training off Florida, *PC-1201* was assigned to escort convoys in the Caribbean. Arriving Guantanamo Bay, Cuba, 20 August 1943, she sailed 7 days later on her first escort cruise to Trinidad. Throughout the remaining months of World War II, *PC-1201* continued the Guantanamo-Trinidad runs protecting supply laden convoys from evening U-boat attacks.

After the defeat of Nazi Germany, the sub chaser continued air-sea rescue operations out of Trinidad and Cuba until she sailed for New York via Puerto Rico and Norfolk, arriving Tompkinsville, Staten Island, N.Y., 21 June. *PC-1201* decommissioned there 30 July 1946, then began duty as a Naval Reserve Training Ship. She operated in this status until 1950 when she joined the Atlantic Reserve Fleet at Boston.

While berthed at Boston, *PC-1201* was named *Kittery* 15 February 1956. She was sold 9 October 1959 to Hughes Brothers Inc., New York, N.Y.

Kittiwake

Any of several gulls of genus *Rissa* which are found along the Atlantic and Pacific coasts of North America.

(ASR-13: dp. 1,780; l. 251'4"; b. 42'; dr. 16'; s. 16 k.; cpl. 115; a. 1 3", 4 20mm.; cl. *Chanticleer*)

Kittiwake (ASR-13) was launched 10 July 1945, by Savannah Machine & Foundry Co., Savannah, Ga.; sponsored by Mrs. Howard S. Rue, Jr.; and commissioned 18 July 1946, Lt. L. H. Collier in command.

After shakedown, *Kittiwake* departed Charleston, S.C., 3 October for Balboa, Canal Zone, arriving 8 October. Assigned to support and rescue duty with Submarine Squadron 6, the submarine rescue ship accompanied submarines during sea trials and maneuvers to monitor diving operations; to practice underwater rescue procedures; and to recover practice torpedoes. While based at Balboa, her operations carried her to the Virgin Islands, to Puerto Rico, and along the Atlantic coast to the Davis Strait.

Departing Balboa 31 May 1949, *Kittiwake* arrived Norfolk 6 June to continue duty with SubRon 6. From 17 January to 1 February 1950 she provided divers and equipment during salvage operations to free *Missouri* (BB-63), grounded in tidal banks off Thimble Shoals, Va. During the 1950's she cruised the Atlantic from New England to the Caribbean while supporting ships of the Silent Service with a trained and highly skilled crew. And while on station off the coast of Cape Canaveral, Fla., 20 July 1960, she stood ready to assist *George Washington* (SSB(N)-598) as the mighty nuclear-powered submarine successfully launched the first two Polaris ballistic missiles ever fired from a submarine beneath the sea.

Kittiwake continued operating out of Norfolk until 1 August 1961 when she departed for the Mediterranean. Arriving Rota, Spain, 15 August, she cruised the Mediterranean from Spain to Greece while deployed with the 6th Fleet. After supporting submarine maneuvers out of Pireaus, Greece, from 20 September to 9 October, she departed the Mediterranean 8 November and arrived Norfolk the 18th. She then conducted operations out of Norfolk for the next 18 months. While on duty off Key West 2 February 1963, she sighted a Cuban boat, *Jose Maria Perez*; took on board 12 refugees (including 3 children) fleeing Communist oppression in Cuba; and carried them to safety at Key West.

Departing Charleston, S.C., 16 April, *Kittiwake* arrived St. Nazaire, France, 3 May with two LCU's in tow. She proceeded to the Mediterranean 10 May and reached Rota the 14th. For more than 2 months she participated in fleet operations before departing Rota 31 July for the United States. Returning to Norfolk 10 August 1963, she resumed training and support operations with submarines, along

the Atlantic coast. Through 1964 and 1965, *Kittiwake* continued her role in maintaining the readiness of individual submarines which were to carry out their missions of defense and deterrant effectively. She escorted them as they left the East Coast shipyards for sea trials, standing ready to come to their rescue should difficulties arise. Constant exercise in use of weapons by submarines was furnished by *Kittiwake*, such as running as a target and recovering exercise torpedoes and mines. The operations ranged from the Virginia Capes to the Atlantic missile range off Florida. On 6 April 1965, she departed Norfolk with submarines for exercises off the coast of Spain, thence to the Mediterranean Sea.

Kittiwake departed Toulon 31 May 1965, to operate out of Rota, Spain, in support of FBM's of Submarine Squadron 16: *Andrew Jackson*, *Woodrow Wilson*, *James Madison*, and *Nathan Hale*. Following torpedo recovery and training off the coast of Spain, she sailed for Holy Loch 30 June 1965, to give support to Submarine Squadron 14. She recovered torpedoes for *James Monroe* and *John Adams*, provided underway training for men of tender *Hunley*, then sailed 20 July for Norfolk, arriving 30 July 1965. During the autumn months, *Kittiwake* guarded new Polaris submarines, *Lewis & Clarke* and *Simon Bolivar*, during their builders sea trials prior to commissioning.

Kittiwake operated on the East Coast and in the Caribbean until sailing for the Mediterranean 8 July 1966. She reached the Bay of Cadiz on the 20th and transited the straits 2 days later. She operated in the Mediterranean until emerging at Rota, Spain, 1 September. She headed for Holy Loch, Scotland, on the 6th and arrived on the 11th. Four days later she was ordered to the North Sea to assist in locating and salvaging German submarine *Hai* (S-171). She reached the scene of the tragedy 17 September and remained on hand assisting salvage operations until the 20th. She continued to operate off Western Europe until returning to Norfolk 13 November. *Kittiwake* operated on the East Coast into 1967.

Kittson

A county in Minnesota.

(APA-123: dp. 14,800; l. 455'; b. 62'; dr. 28'; s. 16.5 k.; a. 1 5", 12 40mm., 10 20mm.; cl. *Haskell*)

Kittson (APA-123) was launched 28 August 1944 by the California Shipbuilding Corp., Wilmington, Calif., under a Maritime Commission contract; acquired by the Navy 4 November 1944; and commissioned 5 November, Captain G. B. Helmick in command.

After shakedown along the Pacific coast, *Kittson* cleared San Diego 26 December 1944 with the 4th Marine Aircraft Wing aboard. She arrived Majuro 12 January 1945; unloaded the Marine unit; and sailed for Leyte, arriving 1 February. While operating in the Philippines for the next 6 weeks, the attack transport prepared for the Okinawa invasion.

Departing Leyte 27 March with units of the 7th Division on board, *Kittson* arrived off Hugushi Beach, Okinawa, 1 April. After the air was cleared of enemy aircraft, the transports commenced unloading troops and cargo for the largest amphibious assault to take place in the Pacific. *Kittson* stood off the area unloading cargo and assisting in smoke screen operations until she sailed for the West Coast 7 April and Pearl Harbor. She

steamed into San Francisco Bay 30 May, loaded cargo and sailors for the final push on Japan, and cleared port 6 June.

Stopping at Eniwetok and Ulithi en route, *Kittson* arrived Okinawa 24 July, unloaded cargo, and steamed toward Guam. While the transport was at Guam, hostilities ended; and she was assigned to ferry occupation troops to Japan. She made two runs from Cebu, Philippines, to Japan before clearing Tokyo Bay with troops for China. Arriving Taku Bay 24 October, *Kittson* was assigned to "Magic-Carpet" duty and sailed with her first group of returning veterans 2 November, arriving San Diego 24 November. After completing another "Magic-Carpet" cruise to Japan, the transport tied up at San Pedro 13 January 1946. *Kittson* sailed for the East Coast, arriving Norfolk 4 February, and decommissioned 11 March 1946. She was returned to the Maritime Commission 2 days later. *Kittson* was placed in the National Defense Reserve Fleet and at present is berthed at James River, Va.

Kittson received one battle star for World War II service.

Kitty Hawk

A small village in North Carolina where the Wright brothers made the world's first airplane flight 17 December 1903.

I

(APV-1: dp. 14,000; l. 478'; b. 63'6"; dr. 22'10"; s. 17 k.; cpl. 245; a. 4 3", 15"; cl. *Kitty Hawk*)

Kitty Hawk (APV-1), formerly SS *Scatrain New York*, was built in 1932 by Sun Ship Building & Dry Dock Co., Chester, Pa.; acquired by the Navy 25 June 1941; renamed *Kitty Hawk* 8 July; converted to an aircraft transport by Tietjin & Land Dry Dock Co., Hoboken, N.J.; and commissioned 26 November 1941, at New York Navy Yard, Comdr. E. C. Rogers in command.

After shakedown *Kitty Hawk* departed New York 16 December 1941, for Hawaii via the Panama Canal with aircraft to replace America's losses in the Japanese attack and arrived Pearl Harbor 8 February 1942. She unloaded her planes at Hickam Field and returned to the mainland 25 February. *Kitty Hawk* returned to Pearl Harbor 17 May. Intelligence reports arrived indicating that a Japanese fleet was approaching the Hawaiian Islands. Immediately *Kitty Hawk* loaded the men, armament, and equipment of the 3d Marine Defense Battalion and planes of Marine Air Groups 21 and 45 and sailed at top speed to reinforce Midway, escorted by *Gwyn*. En route a PBY reported a submarine in the area which *Gwyn* drove off with a heavy barrage of depth charges, enabling *Kitty Hawk* to deliver her vital fighting men and aircraft to Midway 26 May 1942.

Escorted by destroyers *Gwyn* and *Sicard*, *Kitty Hawk* departed Midway 29 May and arrived Honolulu 1 June 1942. On 5 June at Pearl Harbor she learned of the great American victory in the Battle of Midway, which turned back a giant Japanese offensive with disastrous results to the Japanese carrier attack force. That same day the proud aircraft transport sailed for the West Coast, arriving San Diego 13 June.

Kitty Hawk returned to Pearl Harbor 31 July 1942; loaded men, equipment and airplanes of the 2d Echelon of the 23d Marine Air Group; and set course for Port Vila, Efate, New Hebrides, arriving 28 August. She moored alongside escort carrier *Long Island* (CVE-1) transferring 40 aircraft which were immediately catapulted by *Long Island* and flown directly into combat on bitterly-contested Guadalcanal.

She sailed 4 October for San Francisco, discharged and loaded cargo, then headed for Pearl Harbor, arriving 20 October. Loading badly-needed airplanes for the Army, she steamed to Palmyra, arriving 30 October. There, under hazardous conditions, she embarked more planes, cargo and passengers. Sailing on 2 November, she arrived Dumbéa Bay, Noumea, 10 November where

she picked up men from *Hornet's* air group after that valiant carrier had gone down in battle. Arriving at Espiritu Santo, New Hebrides, 13 November, she discharged army aviators and planes. *Kitty Hawk* sailed from Espiritu Santo 22 November for home with 359 passengers, arriving San Diego 7 December. Carrying men and equipment of Marine Air Group 12, she got underway 4 January 1943, for the New Hebrides, arriving at Espiritu Santo 22 January; but, as enemy air raids prevented unloading, she sailed on to Pallikulo Bay, a safer place; then departed for Undine Bay, Efate, where she finished unloading men, munitions and aircraft of Marine Air Group 12. *Kitty Hawk* returned to San Diego 20 February.

Between 20 February 1943 and 25 June 1944, *Kitty Hawk* made seven voyages to Hawaii and seven to the Southwest Pacific carrying vital aircraft, fighting men and munitions to be used in pressing forward toward Japan and victory. The ship was reclassified AKV-1 on 15 September 1943. She returned to the West Coast and arrived at San Francisco for overhaul 5 August 1944.

Kitty Hawk loaded passengers, planes, and cargo at San Diego and sailed 29 August for Finschhafen, New Guinea; Seeadler Harbor, Manus, Admiralty Islands; Guadalcanal; and Espiritu Santo, returning San Diego 12 October 1944.

Kitty Hawk sailed directly from San Francisco to Manus, arriving 12 November. From Manus she steamed to the Solomons to pick up men of a radio control drone unit; called at Guadalcanal 26 November, Espiritu Santo 30 November; then sailed for Pearl Harbor, arriving 9 December. Two days later she sailed to Maui Island, where she debarked the radar control unit.

After minor repairs at San Diego, *Kitty Hawk* sailed 7 January 1945, to various ports in the South Pacific; returned to San Francisco 17 February; made a quick turn about; and steamed back to the forward area, returning to the West Coast 12 June.

Kitty Hawk received news of the end of hostilities 13 August 1945, while at Pearl Harbor. Basing from Pearl Harbor, she carried military cargo to the Marshalls, the Marianas, and the Philippines. She departed Pearl Harbor 24 November for the East Coast. *Kitty Hawk* arrived Bayonne, N.J., 15 December 1945; visited Norfolk; then decommissioned at New York 24 January 1946; and was returned to her owner, Seatrain Lines, Inc., the same day.

II

(CVA-63: dp. 60,000; l. 1,047'6"; b. 129'4"; ea. 252'; s. 35 k.; cpl. 4,582; a. Ter. mis.; cl. *Kitty Hawk*)

The second *Kitty Hawk* (CVA-63) was laid down by the New York Ship Building Corp., Camden, N.J., 27 December 1956; and launched 21 May 1960; sponsored by Mrs. Neil H. McElroy; and commissioned 21 April 1961 at Philadelphia Naval Shipyard, Captain William F. Bringle in command.

Following shakedown in the Western Atlantic, *Kitty Hawk* departed Norfolk 11 August 1961. After a brief stop at Rio de Janeiro, where she embarked the Secretary of the Brazilian Navy for a demonstration of exercises at sea with five Brazilian destroyers, the attack carrier rounded Cape Horn 1 October. She steamed into Valparaiso Bay 13 October and then sailed 2 days later for Peru, arriving Callao 20 October where she entertained the President of Peru. At San Diego Admiral George W. Anderson, Chief of Naval Operations, landed on her deck 18 November to witness antisubmarine demonstrations by *Wilson* and *Blueback*; a Terrier Missile demonstration by *Topeka*; and air demonstrations by *Kitty Hawk*.

Kitty Hawk entered San Francisco Naval Shipyard 23 November 1961, for alterations. Following operations out of San Diego, she sailed from San Francisco 13 September 1962. *Kitty Hawk* joined the 7th Fleet 7 October 1962, relieving *Midway* as flagship.

After participating in the Philippine Republic Aviation Week Air Show, *Kitty Hawk* steamed out of Manila

Harbor 30 November 1962, and welcomed Admiral H. D. Felt, Commander in Chief, Pacific Fleet, for a demonstration of modern naval weapons 3 December. The ship visited Hong Kong early in December and returned to Japan, arriving at Yokosuka 2 January 1963. During the following 2 months she visited Kobe, Beppu, and Iwakuni before returning to San Diego 2 April 1963.

On 6 June 1963, President Kennedy, with top civilian and military leaders, boarded *Kitty Hawk* to witness a carrier task force weapons demonstration off the California coast. Addressing the men of the task group from *Kitty Hawk* President Kennedy told them that as in the past, control of the seas still means security, peace and ultimate victory. He later wrote to President and Madam Chiang Kai-Shek who had witnessed a similar demonstration on board *Constellation*: "I hope you were impressed as I was, on my visit to *Kitty Hawk*, with the great force for peace or war, which these mighty carriers and their accompanying escorts provide, helping to preserve the freedom of distant nations in all parts of the world."

Following a series of strike exercises and tactics reaching along the California coast and off Hawaii, *Kitty Hawk* again sailed for the Far East. While approaching Japan she learned an assassin had shot President Kennedy. Flags were at half mast as she entered Sasebo Harbor 25 November 1963, the day of the President's funeral: and as senior ship present, she had the sad honor of firing memorial salutes. After cruising the South China Sea and ranging to the Philippines in readiness operations with the 7th Fleet, she returned to San Diego 20 July 1964.

Kitty Hawk overhauled in Puget Sound Naval Shipyard, then trained along the western seaboard. She sailed from San Diego 19 October 1965, for Hawaii, thence to Subic Bay, P.I., where she prepared for combat operations off the coast of Vietnam.

Kitty Hawk was awarded the Navy Unit Commendation for exceptionally meritorious service from 26 November 1965 to 14 May 1966 while participating in combat operations against the insurgent Communist guerilla forces in the Republic of Vietnam. The valiant men of her Carrier Air Wing 11 flew over 10,000 sorties and delivered over 10,700 tons of ordnance against enemy forces. The officers and men of *Kitty Hawk* displayed undaunted spirit, courage, professionalism and dedication to maintain their ship as a fighting unit under the most ardent operating conditions to enable her pilots to destroy vital military targets in North Vietnam despite intense opposition and extremely adverse weather conditions.

Kitty Hawk returned to San Diego in June 1965 for overhaul and training until 4 November 1966 when she again deployed to serve the cause of freedom and national security in waters of Southeast Asia. *Kitty Hawk* arrived at Yokosuka, Japan, 19 November to relieve *Constellation* (CVA-64) as flagship for Rear Admiral David C. Richardson, Commander Task Force 77. On 26 November *Kitty Hawk* departed Yokosuka for Yankee Station via Subic Bay, and on 5 December aircraft from *Kitty Hawk* began their around-the-clock missions over North Vietnam. About this time *Kitty Hawk*—already accustomed to celebrities as guests—entertained a number of extremely prominent visitors: William Randolph Hearst, Jr.; Bob Considine; Dr. Billy Graham; and John Steinbeck, among others. She remained in the Far East supporting the fight for freedom in Southeast Asia until departing Subic Bay 28 May 1967. Steaming via Japan, the carrier reached San Diego 19 June and a week later entered the naval shipyard at Long Beach for maintenance. *Kitty Hawk* returned to San Diego 25 August and began a rigorous training program to prepare her for future action.

Kiyo Maru, see YP-170

Klamath

A tribe of Indians formerly living along the Klamath River in California and Oregon.

(Monitor: dp. 1,175 (o.t.); l. 225'; b. 45'; dr. 6'4½"; s. 5.7 k.; cpl. 60; cl. *Casco*)

Klamath was a light-draft monitor launched 20 April 1865 by S. T. Hambleton & Co., Cincinnati, Ohio, under subcontract with Alexander Swift & Co., also of Cincinnati. She was delivered to the Navy 6 May 1866 but was never commissioned and saw no service. While laid up at Mound City, Ill., she was renamed *Harpy* 15 June 1869, but was changed back to *Klamath* 10 August. She was moved to New Orleans in 1870, and sold at auction there to Schickels, Harrison & Co. 12 September 1874.

Klaskanine

A river in the state of Oregon.

(AOG-63: dp. 845; l. 220'6"; b. 37'; dr. 13'11"; s. 10 k.; a. 13", 2 40mm., 3 20mm.; cl. *Mettawee*; T. T1-M-A2)

Klaskanine (AOG-63) was laid down 24 April 1944 by the East Coast Shipyard Inc., Bayonne, N.J., under a Maritime Commission contract: launched 3 February 1945; sponsored by Mrs. Thomas Harris; acquired by the Navy 26 February and commissioned 8 March 1945, Lt. R. O. Kostelak in command.

Klaskanine cleared New York 26 March; and, after shakedown in Chesapeake Bay, steamed to the Pacific, arriving San Diego 27 May. The small tanker loaded diesel oil and sailed for Pearl Harbor 4 days later. When her main engine broke down 6 June midway to her destination, she was towed to Pearl Harbor, arriving 14 June. *Klaskanine* operated as a shuttle tanker among the Hawaiian and mid-Pacific Islands through the summer.

After getting underway for Eniwetok 31 August, the oiler once again was stopped by engine failure before completing her cruise. Following repairs at Eniwetok and Pearl Harbor 21 September 1945 to 24 January 1946, *Klaskanine* put into San Francisco 7 February 1946 and decommissioned there 25 March 1946. She was returned to WSA the same day and later sold to Brazil. She at present serves the Brazilian Navy as *Raza* (G-19).

Kleinsmith

Charles Kleinsmith, born 28 September 1904 in Zionville, Pa., enlisted in the Navy 26 October 1922 as an apprentice seaman. Until honorably discharged 5 October 1926 as Fireman Second Class, he served on board several ships, including *Wyoming* (BB-32) and *Maryland* (BB-46). Kleinsmith reenlisted 20 December 1928, and during the next 11 years he had duty on board *Milwaukee* (CL-5), *Cincinnati* (CL-6), *Portland* (CA-33), and *Honolulu* (CL-48). He reported on board *Saratoga* (CV-3) 27 December 1939 and transferred to *Yorktown* (CV-5) 31 October 1940. During the Battle of Midway 4 June 1942, Kleinsmith maintained auxiliary power on *Yorktown* after an intense enemy bombing attack extinguished the fires in all boilers but one. Despite the stifling fumes, intense heat, and imminence of explosion, he performed courageously, enabling the fighting carrier to attain speed necessary for launching plances to oppose a Japanese aerial torpedo attack. At the end of the attack, Chief Water-tender Kleinsmith was missing and presumed dead. He was posthumously awarded the Navy Cross.

The name *Kleinsmith* was assigned to DE-376 31 May 1944, but construction of the ship was canceled 6 June 1944.

I

(APD-134: dp. 1,450; l. 306'; b. 36'10"; dr. 13'6"; s. 23.6 k.; cpl. 204; a. 1 5", 6 40mm., 6 20mm., 2 dct.; cl. *Crosley*)

Originally designated DE-718, a *Rudderow*-class destroyer escort, *Kleinsmith* was redesignated as APD-134 on

USS *Kitty Hawk* (CVA-63) refueling USS *McKean* (DD-784) and USS *Harry E. Hubbard* (DD-748)

17 July 1944; launched 27 January 1945 by Defoe Shipbuilding Co., Bay City, Mich.; sponsored by Mrs. Mary Agnes Kleinsmith; and commissioned at New Orleans 12 June 1945, Lt. Comdr. Alden J. Laborde in command.

After shakedown out of Guantanamo Bay, *Kleinsmith* arrived Norfolk 21 July. Departing 4 August for the Pacific, the high-speed transport steamed via San Diego and Pearl Harbor and reached Buckner Bay, Okinawa, 1 October. She operated between Okinawa and the Japanese home islands until 21 February 1946; then she sailed from Sasebo via the Marshalls and Pearl Harbor, arriving San Francisco 24 March with 118 returning veterans embarked. Departing 10 April, she proceeded via the Panama Canal to the East Coast, arriving Norfolk 1 May.

Based at Norfolk and Little Creek, Va., during the next 6 years, *Kleinsmith* operated along the Atlantic coast from Labrador to Venezuela while conducting amphibious and antisubmarine operations. She served primarily as an amphibious command ship; many of her cruises carried her into the Caribbean, where she operated out of Puerto Rico, the Virgin Islands, and Guantanamo Bay.

Returning from the Caribbean 13 February 1951, *Kleinsmith* departed Little Creek 5 March on the first of four deployments to the Mediterranean. Arriving Gibraltar 15 March with UDT personnel embarked, she deployed with the mighty 6th Fleet and participated in amphibious operations that ranged from Oran, Algeria, to Phaleron

Bay, Greece. After serving as amphibious control ship, she departed Gibraltar 26 June for the United States, arriving Little Creek 6 July. On 19 July 1952 she departed for a 4-month deployment with the 6th Fleet and supported its important peace-keeping activities off the troubled lands of the Mediterranean.

Returning to Little Creek 29 January 1955, *Kleinsmith* resumed operations along the eastern seaboard to the Caribbean. On 9 January 1957 she again departed for duty with the 6th Fleet and for almost 3 months operated in the Eastern Mediterranean. In response to an urgent request from King Hussein of Jordan, whose government was threatened with leftist-oriented, Egyptian-supported subversion, *Kleinsmith* departed La Spezia, Italy, 25 April for the Levantine Coast. Arriving off Beirut, Lebanon, 30 April, she joined ships of the 6th Fleet in a formidable display of seapower, designed to show U.S. determination that the integrity and independence of nations in the Middle East would be guaranteed against Communist subversion or aggression. Remaining on station until 3 May, she then departed Rhodes, Greece, 18 May and returned to Little Creek 1 June.

In less than 3 months *Kleinsmith* sailed once again for the Mediterranean, arriving Palermo, Sicily, 15 September. During the previous August, a pro-Soviet takeover of the Syrian Army had threatened the stability of the Middle East. The high-speed transport proceeded to the

Eastern Mediterranean 19 September and operated there to prevent aggression and to preserve peace. She departed Barcelona, Spain, 4 November arrived Little Creek 17 November.

In 1958 *Kleinsmith* continued her activities along the Atlantic coast. While operating out of Guantanamo Bay 24 October, she rescued 56 U.S. citizens and 3 foreign nationals at Nicaro, Cuba, where they were endangered by military operations between the Cuban Army and the Castro rebels. From 27 May to 3 August 1959 she cruised to the Great Lakes via the newly opened St. Lawrence Seaway. On 1 April 1960 *Kleinsmith* departed Little Creek for the Pacific. Steaming via San Diego, Pearl Harbor, and Guam, she arrived Tsoying, Taiwan 15 May. *Kleinsmith* decommissioned 16 May and was transferred the same day to the Nationalist Government of the Republic of China. At present she serves in the Nationalist Chinese Navy as *Tien Shan* (APD-215).

Klickitat

A river in the State of Washington.

(AOG-64: dp. 1,988; l. 325'2"; b. 48'2"; dr. 19'; s. 10 k.; cpl. 80; a. 1 3", 2 40mm., 8 20 mm.; cl. *Klickitat*; T. T1-M-BT1)

Klickitat (AOG-64) was launched 24 March 1945, by St. John's River Shipbuilding Corp., Jacksonville, Fla., under a Maritime Commission contract; sponsored by Mrs. I. B. McDaniel; acquired by the Navy and commissioned 14 July, Lt. M. J. Seibert, USCG, in command.

Departing Jacksonville 28 July, *Klickitat* arrived Hampton Roads, Va., 31 July. After shakedown in the Chesapeake Bay, the gasoline tanker proceeded on 23 August for Rockland, Maine, arriving the 26th. She returned to Norfolk 3 September and departed 23 November with *Michigamme* (AOG-65) for Houston, Tex. Arriving 2 December, she loaded a cargo of diesel oil, sailed 3 December for the East Coast, and arrived Norfolk 12 December. Remaining at Norfolk, *Klickitat* decommissioned 23 January 1946 and was returned to the Maritime Commission 24 January. Her name was struck from the Navy List 7 February 1946. Following merchant service as SS *Captain*, she was acquired in 1949 by the Argentine Navy and renamed *Punta Loyola*.

Kline

Stanley Fly Kline was born 15 November 1901 in Graterford, Pa., and enlisted in the U.S. Naval Reserve 2 February 1927. He began active duty 13 July 1942, and was assigned to British warship *Hartland*, former U.S. Coast Guard cutter *Pontchartrain*, as a member of an antisabotage party.

On November 8, as *Hartland* entered Oran Harbor, Algeria, the ship came under heavy fire from enemy ships and shore batteries. When a shell exploded in a compartment occupied by the boarding party, the survivors found themselves trapped by fire and fumes. Kline, crawling through a small overhead hatch and worming his way along the deck under a hail of shells and machine gun fire, opened a large hatch and assisted 42 men to safety. He then turned to loading ammunition clips for an automatic rifle and continued his heroic conduct with complete disregard of his own safety until killed by a shell explosion. Kline was posthumously awarded the Silver Star Medal for his conspicuous gallantry.

(APD-120: dp. 1,390; l. 306'; b. 37'; dr. 12'7"; s. 23.6 k.; cpl. 204; a. 1 5", 6 40mm.; 6 20mm., 2 dct.; cl. *Crosley*)

Kline (DE-687), was launched 27 June 1944 by the Bethlehem Steel Co., Quincy, Mass.; sponsored by Mrs. Hazel Kline, widow; redesignated APD-120 on 17 July; and commissioned 18 October 1944, Lt. B. F. Urban, USNR, in command.

While en route to shakedown, 6 November 1944, *Kline* rescued nine survivors from Navy dirigible K-34 which had been forced down in a storm. Completing her Bermuda shakedown the high-speed transport cleared Norfolk 24 December for the Pacific. Upon arriving Pearl Harbor 20 January 1945, *Kline* trained underwater demolition teams until sailing 14 February for Leyte. Intensive pre-invasion exercises were completed in the Philippines before the transport arrived off Okinawa 26 March. *Kline's* underwater demolition team cleared the approaches to the island, "the last stepping stone" on the road to Japan. After the main invasion force landed 1 April, *Kline* remained in the area as radar and ASW picket. Her guns also assisted in splashing an enemy aircraft on 1 April and helped down another on the 6th.

She departed Okinawa area 16 April and for the next 6 weeks underwent training and repairs. Sailing from Borneo 2 June, *Kline* provided close fire support during the invasion of Brunei Bay, Borneo on 10 June and 2 weeks later her underwater demolition unit gave valuable service during the invasion of Balikpapan. The high-speed transport departed Indonesian waters 7 July and, sailing via the Carolines and Marshalls, arrived Ocean-side, Calif., 5 August.

Following the cessation of hostilities *Kline* sailed for Japan, arriving Sasebo 20 September to commence underwater reconnaissance missions. After similar operations at Nagasaki she returned San Diego 19 October to prepare for "Magic-Carpet" service. *Kline* made 1 cruise to Pearl Harbor and returned 110 Pacific veterans to San Diego 19 November. Two days later she sailed for the East Coast, arriving Norfolk 5 December. On 28 January *Kline* arrived Green Cove Springs, Fla., where she decommissioned 10 March 1947 and joined the Atlantic Reserve Fleet. *Kline* was struck 15 January 1966 and on 22 February sold to Nationalist China under the Military Assistance Program.

Kline received two battle stars for World War II service.

Klondike

The mining district south of the Klondike River in Yukon Territory, Canada, which was the scene of the gold rush of 1897.

(AD-22: dp. 8,165; l. 492'; b. 69'8"; dr. 27'3"; s. 18.4 k.; cpl. 826; a. 1 5", 4 3", 4 40mm., 20 20mm.; cl. *Klondike*)

Klondike (AD-22) was launched 12 August 1944 by Todd Shipbuilding Corp., San Pedro, Calif.; sponsored by Mrs. Dorothy J. Dirck; and commissioned at San Pedro 30 July 1945, Comdr. M. E. Hatch in command.

After shakedown, *Klondike* loaded hundreds of tons of spares and stores in preparation for the important task of supplying and maintaining the speedy, hardhitting destroyers. Designed as a "mother ship" for the "greyhounds of the fleet," she departed San Pedro 19 October for Pearl Harbor, arriving the 25th. Recalled to the West Coast, she sailed from Pearl 7 November with 500 home-bound veterans embarked and arrived San Diego 15 November. On 21 November she became the flagship for Commander, San Diego Group, 19th Fleet; and commenced inactivation operations on ships scheduled for the Pacific Reserve Fleet. Placed on an inactive status (in commission, in reserve) 30 November 1946, *Klondike* was placed in service in late summer, 1948. She served as flagship until 11 May 1955.

Klondike recommissioned 15 July 1959 at Long Beach, Comdr. F. F. Mullins, Jr., in command. Returning to San Diego 4 December, she provided repair facilities as a unit of SerRon 1. On 20 February 1960 she was reclassified as repair ship AR-22 and she repaired vessels at San Diego, Long Beach, and San Francisco until 15 July 1961. *Klondike* then departed San Diego for duty in the Far East. Assigned to SerRon 3, she arrived Yokosuka, Japan 4 August; and until 23 February 1962 she provided repair facilities at Sasebo and Iwakuni, Japan, and Subic Bay, P.I., for the peace-keeping ships of the

mighty 7th Fleet. Returning to the West Coast 11 March, she resumed her duty out of San Diego.

Departing San Diego 17 July 1963, *Klondike* steamed via Pearl Harbor for the Western Pacific. While en route to Sasebo, she offered assistance 6 through 9 August to distressed Greek freighter *Cryssism* during a raging typhoon. Reaching Sasebo 11 August, she proceeded to Subic Bay 15 August for repair ship station duty. *Klondike* operated in the Far East until 30 November; then she returned to the United States, arriving San Diego 14 December. During the next year she continued servicing ships while operating out of San Diego and San Francisco. *Klondike* continued to repair the ships of the Pacific Fleet into mid-1967. Her last Far Eastern deployment began 25 February 1966 when she departed San Diego. She remained in the Orient repairing the ships of the mighty 7th Fleet until returning to Pearl Harbor 27 October. The remainder of the year was devoted to preparing for future action in 1967.

Klondike, see YF-391

Knapp

Harry Shepard Knapp, born 27 June 1856 in New Britain, Conn., graduated from the Naval Academy 20 June 1878. After serving in *Pensacola* as cadet midshipman and in *Minnesota* and *Jamestown* as a midshipman, he was commissioned Ensign 8 July 1882. Following assignments to a number of ships and stations ashore, he was ordered to *Dorothea* as executive officer at the outbreak of the Spanish American War. Outstanding service in a variety of important billets afloat and ashore was rewarded on 3 August 1908 when Knapp assumed command of *Charleston* (C-22). Promoted to Captain 1909, Knapp was assigned to the General Board 8 January 1910. At about this time he served intermittently on the Joint Army and Navy Board for Defense of the Panama Canal. He was in charge of *Florida* (BB-30) while she was fitted out and commanded the battleship when she first commissioned 15 September 1911. He took command of Cruiser Force, Atlantic Fleet 8 November 1915.

Knapp was promoted to Rear Admiral 17 March 1917 and a week before the United States entered World War I was appointed Military Governor of Santo Domingo and Military Representative of the United States in Haiti. "Meritorious service" in this post, labouring to protect Allied shipping from German U-boats and to make the Caribbean secure from enemy aggression, won Rear Admiral Knapp the Navy Cross. Soon after the armistice, he was Naval Attaché in London with staff duties and on 4 February 1920 assumed command of U.S. Naval Forces operating in European waters with rank of Vice Admiral. Even after Vice Admiral Knapp was placed on the retired list effective 27 June 1920, the Navy utilized his singular abilities. This won him temporary active duty as a consultant and as quasi-diplomat. He died at Hartford, Conn., 6 April 1928.

(DD-653: dp. 2,050; l. 376'6"; b. 39'7"; dr. 17'9"; s. 37 k.; cpl. 319; a. 5 5", 10 21" tt., 6 dep., 2 det.; cl. *Fletcher*)

Knapp (DD-653) was laid down 8 March 1943 by Bath Iron Works, Bath, Maine; launched 10 July 1943; sponsored by Misses Margaret L. and Mary C. Knapp; and commissioned 16 September 1943, Comdr. Frank Virden in command.

After shakedown out of Bermuda, *Knapp* departed Boston 26 November for the Pacific arriving Pearl Harbor 21 December. She departed Pearl Harbor 16 January with the mighty carriers of Admiral Mitscher's Task Force 58 for the Marshall Islands invasion. At sea on this duty from 16 January until 12 February when she put in to Majuro, *Knapp* also bombarded Kwajalein Island. She continued her screening as carriers launched raids on Truk 16-17 February and on bases in the Marianas from

21 to 22 February, then sailed from Majuro to Espiritu Santo to screen carriers providing air cover for the seizure of Emirau Island from 20 to 25 March and raiding the Palaus, Yap, and Woleai from 30 March to 1 April.

The destroyer returned to Majuro 6 April 1944 and a week later she sortied with heavy ships for the Hollandia landings of 21 to 24 April, and air raids on Truk, Satawan, and Ponape at the close of the month.

Following replenishment at Majuro in May *Knapp* joined and screened carriers during operations against Saipan. On 19 June *Knapp* guarded her force during the momentous air Battle of the Philippine Sea in which Japan's air power was annihilated. From 25 July to 5 August she continued her screening in the raids on Palau, Ulithi, Yap, Iwo Jima, and Chichi Jima during the last of which she joined in the surface gunfire which sank several ships of a Japanese convoy earlier badly mauled by carrier aircraft. *Knapp* refitted at Eniwetok 11 to 30 August.

Knapp steamed out of Eniwetok for the invasion of the Palaus 30 August screening five battleships and later rendezvous with carriers *Langley*, *Lexington*, *Essex*, and *Princeton* before their deadly strikes at targets in the Palaus during the bloody struggle to take Peleliu. During September *Knapp* screened heavy ships making strikes at the Philippines and 6 October she sailed from Ulithi for the air strikes on Okinawa and Formosa in preparation for the Leyte landings, and fired protective antiaircraft cover for her force during the Formosa air battle of 12-14 October. After guarding the retirement toward safety of the stricken *Canberra* which had been struck by an aerial torpedo 13 October, she rejoined her force for air strikes on Luzon, and screened them during the Battle of Surigao Strait, one phase of the decisive Battle of Leyte Gulf. She returned to Ulithi 30 October, 2 days later headed back to the Philippines. After *Reno* was damaged 3 November by a submarine torpedo, *Knapp* guarded her withdrawal to safety. From 25 November through the middle of January 1945 *Knapp* screened air strikes on Luzon, French Indo China, and cities on the China Coast neutralizing Japanese bases in preparation for the Lingayen invasion. Escorting *Ticonderoga* which was hit during an air attack on 21 January, *Knapp* arrived in Ulithi 24 January 1945 with the crippled carrier. Accomplishing her mission, the veteran destroyer sailed 30 January for the West Coast, arriving 20 February for overhaul.

Knapp sailed for the Western Pacific 23 April arriving off Okinawa 27 May 1945. She served on dangerous and demanding duty as radar picket ship until 26 June. Three days later she joined carrier Task Force 39 for the final series of raids against the Japanese home island. Following the end of fighting 15 August, *Knapp* arrived in Sagami Wan, Honshu, Empire of Japan, 27 August and sailed into Tokyo Bay 1 September for the surrender ceremonies aboard the *Missouri* (BB-63) 2 September. During the early days of the occupation she helped demilitarize Japanese midget submarine and suicide boat bases.

She sailed for the United States 5 December and arrived at San Diego 21 December 1945. Shortly thereafter *Knapp* sailed via the Panama Canal for Boston arriving 17 January 1946. She sailed for Charleston, S.C., 2 April and decommissioned 5 July 1946.

Knapp recommissioned 3 May 1951 when the outbreak of the Korean conflict necessitated more naval vessels. She served in the Atlantic Fleet working out of Newport, R.I. She cruised in the Caribbean from 20 July to 13 September when she pulled into Charleston, where she was refitted with modern equipment then sailed 4 February 1952 with a task force to England, Norway, and Germany. She made a voyage to the Mediterranean 22 November visiting ports in Italy, Turkey, and Spain. *Knapp* transitted the Straits of Gibraltar 26 January 1953 and overhauled at Boston until 10 August 1953 when she deployed with Destroyer Division 182 for a world cruise. Her cruise was delayed when she arrived in the Far East. She patrolled the Korean coast with Task Force 77 until 14 January 1954 when she resumed her cruise via Hong Kong; Singapore; Colombo; Aden; Saudi Arabia; Suez

Canal; visited Port Said, Naples, Barcelona, Lisbon, Bermuda, and arrived Fall River, Mass., 10 March 1954.

Knapp sailed from Newport for San Diego arriving 15 December. She got underway 4 January 1955 for the Western Pacific and patrolled the East China Sea and the Formosa Straits until the first part of June when she returned to San Diego 19 June 1955. After operations along the California coast she returned to the Far East 27 January 1956, visited ports of Kobe, Subic Bay, Buckners Bay and patrolled the Formosa Straits showing off to the Communists our interests in that part of the world before returning San Diego 31 May 1956. She operated along the California coast, entering Long Beach Naval Shipyard 4 September for overhaul. *Knapp* was decommissioned 4 March 1957 and assigned to the Long Beach Group, Pacific Reserve Fleet. At present she is berthed at Bremerton, Wash.

Knapp received eight battle stars for World War II service.

Knave

A servant or common person.

(AM-256: dp. 350; l. 184'6"; b. 33'; dr. 9'9"; s. 15 k.; cpl. 105; a. 1 3", 2 40mm., 6 20mm., 2 dcp., 2 dct.; cl. *Admirable*)

Knave (AM-256) was launched 13 March 1943, by American Shipbuilding Co., Lorain, Ohio; sponsored by Mrs. Geraldine Donohue; and commissioned 14 October 1943, Lt. Comdr. A. M. White in command.

Knave sailed for the Virginia Capes 24 October 1943, via the St. Lawrence River arriving Norfolk 24 November. After a brief period as school ship at Little Creek, Va., *Knave* departed Hampton Roads for Rio de Janeiro via Trinidad, B.W.I., and Recife, Brazil, arriving 11 February 1944. She swept Brazilian waters until 4 April when she began 9 months of escorting convoys between Trinidad and Recife. On 1 January 1945, she got underway for the United States, escorting *Pleiades* (AK-46) and arrived Miami, Fla., 15 January.

After overhaul at Miami, *Knave* served as school ship at the Naval Training Center, Miami and at Yorktown, Va., visiting Charleston, New Haven, and Norfolk. Detached from school ship duty 11 February 1946, *Knave* sailed from Norfolk to Orange, Tex., arriving 21 February.

Knave decommissioned and was placed in reserve at Orange, Tex., 1 May 1946. While in reserve *Knave* was reclassified MSF-256, sold to the Mexican Government 2 October 1962, and renamed *DM-13*.

Knickerbocker

A former name retained.

(SP-479: t. 123; l. 110'; b. 23'11"; dr. 11'; s. 9 k.)

Knickerbocker (SP-479), a steam tug, was built by Neafie & Levy, Philadelphia, Pa., in 1873 and rebuilt in 1904. She was leased by her owner, Cornell Steamboat Co., New York City, 2 May 1917 and enrolled in the Navy Coast Defense Reserve. Purchased 13 September, *Knickerbocker* commissioned 22 September at New York, Boatswain M. J. Lounsbury, USNRF, in command.

Assigned to the 3d Naval District, *Knickerbocker* operated on the Hudson River and New York Harbor as a minesweeper, tug, and dispatch ship. Though ordered struck from the Navy List 14 March 1918, the scarcity of tugs resulted in her retention for harbor duty. On 30 December she was assigned to the training and guard ship *Amphitrite* and served as a dispatch ship. *Knickerbocker* decommissioned 18 February 1919 and was sold the same day to Francis J. McDonald of Ardmore, Pa.

Knickerbocker, see *YF-569*

Austin Melvin Knight, born in Ware, Mass., 16 December 1854, graduated from the Naval Academy in 1873. After service as a Passed Midshipman, he was commissioned Ensign 16 July 1874. He served in various sea and shore assignments over the next two decades, including tours at the Naval Academy, and in *Tuscarora*, *Constellation*, *Chicago*, *Monongahela*, and *Lancaster*.

During the Spanish-American War he served in *Puritan*, blockading the coasts of Cuba and Puerto Rico. After attending the Naval War College at Newport in 1901, he commanded several ships during the next decade including *Yankton*, *Washington* (ACR-11), and *Castine*. Knight was promoted to Captain in 1907 and was commissioned Rear Admiral 29 January 1911. Subsequently he served twice as Commander in Chief, Atlantic Reserve Fleet, and commanded the Special Squadron and the Narragansett Bay Naval Station.

From 15 December 1913 to 16 February 1917 he served with distinction as President, Naval War College. On 22 May 1917, he took command of the Asiatic Fleet with the rank of Admiral (temporary); he was awarded the Distinguished Service Medal during Allied naval operations at Vladivostok, Siberia. He transferred to the retired list 16 December but subsequently served on active duty from 13 March 1919 until 30 June 1920 as Senior Member, Board of Awards. He died 26 February 1927, at Washington, D.C., and was buried at the Naval Academy Cemetery. On 17 November 1930, Austin Melvin Knight was commissioned Admiral posthumously on the Retired List from 26 February 1927.

(DD-633: dp. 1,630; l. 348'4"; b. 36'1"; dr. 17'5"; s. 35 k.; cpl. 261; a. 4 5", 4 40mm., 4 20mm., 5 21" tt., 6 dcp., 2 dct.; cl. *Gleaves*)

Knight (DD-633) was laid down 18 March 1941, by Boston Navy Yard; launched 27 September 1941; sponsored by Miss Elizabeth H. Royal, granddaughter of Admiral Knight; and commissioned 23 June 1942, Lt. Comdr. Richard B. Levin in command.

After shakedown off New England, *Knight* arrived Norfolk 6 October to prepare for Operation "Torch," the invasion of North Africa. She cleared Chesapeake Bay 23 October, joined her task force on the 27th, and arrived off Safi, French Morocco, 8 November. After serving as landing control ship, during the assault, she conducted antisubmarine patrols until she sailed 13 November for the United States, arriving Norfolk 24 November.

From 12 December to 28 April 1943, *Knight* escorted three convoys between New York and the Moroccan ports of Casablanca and Fedhala. Steaming to Norfolk 29 May, she departed 8 June in convoy for the Mediterranean, where she arrived Oran, Algeria, 22 June to prepare for the invasion of Sicily. Sailing 5 July with Rear Admiral A. G. Kirk's Task Force 85, she arrived off Scoglitti during first watch 9 July. As a fire support ship during "Cent" Force landings on the 10th, she silenced enemy shore batteries and screened transports from hostile submarines and planes. On the 11th she downed an attacking enemy fighter and on the 13th sailed, arriving Oran 16 July.

Knight made escort and patrol runs along the Algerian and Tunisian coasts, then returned to Sicily 31 July to provide effective fire support for General Patton's 7th Army. She operated out of Palermo until 22 August, helping repel several German night-bombing attacks and bombarding targets along the northern coast to Cape d'Orlando. While on an escort run to Malta 11 August, she rescued two sailors who were knocked overboard *Brant* (ARS-32) when the salvage repair ship, displaying inadequate recognition signals, was shelled and damaged by friendly gunfire the previous day. After escorting convoys between Palermo and Bizerte, Tunisia, *Knight* returned to Sicily 7 September for the invasion of Italy.

As flagship for Task Group 80.4, *Knight* closed Ventotene Island off Gaeta, Italy, 8 September and supported the capture of German and Italian troops on the 9th.

Arriving Salerno Bay 10 September with 87 German prisoners embarked, she fought off enemy air attacks the 10th and 11th that damaged *Savannah* (CL-42). The destroyer then supported the capture of Capri 13 September. During the next 2 weeks she operated along the coast of Italy in search of enemy submarines and supply convoys; and she guarded transports in the Gulf of Salerno from intermittent air attacks. On 27 September she embarked Rear Admiral Richard L. Conolly and sailed for Tunisia, arriving Bizerte the 28th. Proceeding along the North African coast, she departed Oran 30 September for the United States, arriving New York 9 October.

Between 21 October and 1 May 1944, *Knight* engaged in five Atlantic convoy escort runs from New York to ports in the United Kingdom. On 17 May she again sailed for the Mediterranean from Norfolk, reaching Oran 28 May. For almost 2½ months she steamed from North Africa to Italy and Gibraltar on antisubmarine patrols and escort missions. Returning New York from Oran 22 August, she resumed convoy escort duty to the British Isles 20 September. After two runs to England, she again took up convoy operations in the Mediterranean, making three runs between Norfolk and Oran from 28 December to 2 June 1945.

From 3 June to 24 July *Knight* was converted to a high-speed minesweeper at Philadelphia Navy Yard. Reclassified DMS-40 on 23 June, she arrived Norfolk 25 July, received intensive training in minesweeping, and departed 12 August for the Pacific. Steaming via San Diego and Pearl Harbor, she reached Okinawa 28 September. Assigned to Mine Squadron 21, she departed Okinawa 16 October for the Yellow Sea, where she swept for mines from 19 October to 16 November. Her operations between Okinawa and the Japanese home islands continued until 24 February 1946, when she departed Kobe for the United States, arriving San Francisco 5 April. *Knight* steamed to Bremerton, Wash., 27 to 30 November and decommissioned 19 March 1947. Reclassified DD-633 on 15 July 1955, *Knight* was berthed in the Pacific Reserve Fleet at Stockton, Calif., until she was struck from the Navy List 1 December 1966. As of 1 September 1967 *Knight* is scheduled to be used as a target off San Diego.

Knight received four battle stars for World War II service.

Knight, Elias D., see *Enceladus* (AK-80)

Knorr

Ernest R. Knorr was senior civilian and Chief Engineer Cartographer of the Hydrographic Office from 1860 to 1885. He was largely responsible for the success of the U.S. Navy's first systematic charting and surveying efforts, including the North Pole expedition by *Jeannette* through the Bering Strait and the Pacific coast surveys by *Jamestown* and *Tuscarora*. In 1871 he was cited by the Hydrographer of the Navy for "outstanding ability, and . . . constant and unremitting attention to his duties and the interests of the Office." He later became the first in the United States to advocate worldwide coordination of hydrographic research, publishing in 1879, at his own expense, *Memoir on International Cooperation in Maritime Hydrography*.

(AGOR-15: dp. 1,370; l. 209'; b. 40'; dr. 16'; s. 13 k.; cpl. 26; cl. *Robert D. Conrad*)

The name *Knorr* was assigned to AGOR-15 on 8 May 1967. The Defoe Shipbuilding Co., Bay City, Mich., began construction of the oceanographic research ship on 3 April 1967 with completion planned for the fall of 1968.

Knorr, an important addition to the Navy's new fleet for ocean research, will gather vital scientific data on the uncharted areas of the sea for the welfare of all peoples throughout the world.

The first *Knox* was named for counties in Illinois, Indiana, Kentucky, Maine, Missouri, Nebraska, Ohio, Tennessee, and Texas.

The second *Knox* was named for Dudley Wright Knox, born 21 June 1877, in Fort Walla Walla, Wash., and graduated from the U.S. Naval Academy 5 June 1896. During the Spanish-American War he served on board *Maple* in Cuban waters. He commanded gunboats, *Albany* and *Iris*, during the Philippine Insurrection and the latter during the Chinese Boxer Rebellion. He then commanded three of the Navy's first destroyers: *Shubrick*, *Wilkes*, and *Decatur* before commanding the First Torpedo Flotilla. During the cruise of the "Great White Fleet" sent around the world by President Theodore Roosevelt, he was ordnance officer of *Nebraska* (BB-14). In the years before World War I he was Fleet Ordnance Officer in both Atlantic and Pacific, served the Office of Naval Intelligence, and commanded the Guantanamo Bay Naval Station. In November 1917, he joined the staff of Admiral Sims, Commander of U.S. Naval Forces in European Waters, and earned the Navy Cross for "distinguished service" serving as Aide in the Planning Section, and later in the Historical Section. He was promoted to Captain 1 February 1918.

After returning to the United States in March 1919 for a year on the faculty of the Naval War College, he successively commanded *Brooklyn* (ACR-3) and *Charleston* (C-22) before resuming duty in the Office of the Chief of Naval Operations.

Transferred to the Retired List of the Navy 20 October 1921, he continued active duty simultaneously serving as Officer in Charge, Office of Naval Records and Library, and as Curator for the Navy Department. Early in World War II he was assigned important, additional duty as Deputy Director of Naval History. For a quarter of a century his leader-ship inspired diligence, efficiency, and initiative while he guided, improved, and expanded the Navy's archival and historical operations. During his tenure he contributed a written legacy that honored both the Nation and the Navy.

A master of content and style, his clear writings include *The Eclipse of American Sea Power* (1922); *The Naval Genius of George Washington* (1932); and *A History of the United States Navy* (1936), the latter recognized as "the best one-volume history of the United States Navy in existence." Advanced to Commodore 2 November 1945, he was awarded the Legion of Merit for "exceptionally meritorious conduct" while directing the correlation and preservation of accurate records of the U.S. naval operations in World War II, thus protecting this vital information for posterity. Commodore Knox was relieved of all active duty 26 June 1946. He died 11 June 1960.

I

(APA-46: dp. 8,100; l. 492'; b. 69'6"; dr. 26'6"; s. 16.5 k.; cpl. 553; a. 2 5", 4 40mm., 18 20mm.; cl. *Bayfield*; T. C3-S-A2)

The first *Knox* was originally classified AP-91 and reclassified APA-46 on 1 February 1943; launched 17 July 1943, by Ingalls Shipbuilding Corp., Pascagoula, Miss., under a Maritime Commission contract; sponsored by Mrs. R. K. Forde; acquired by the Navy 30 September 1943; placed in ferry commission from 30 September to 14 October during transfer to Bethlehem Steel Corp., Brooklyn, N.Y., for conversion; and commissioned in full 4 March 1944, Comdr. John K. Brady in command.

After shakedown, *Knox* departed Norfolk 6 April for the Pacific, arriving Pearl Harbor 23 April with Marines and Seabees embarked. Assigned to the 5th Amphibious Force, the transport sailed 29 May as part of Task Force 52 bound for the Marianas as the Navy's offensive in the Pacific moved into high gear. Steaming via Eniwetok, Marshall Islands, *Knox* arrived off Saipan 15 June and made a diversionary landing at Garapan before debarking her troops that afternoon at the actual landing area. She

remained off Saipan until 24 June, then sailed for Eniwetok, arriving the 28th with Saipan casualties on board.

Departing Eniwetok 15 July, she returned to Saipan 19 July to prepare for the assault on Tinian. With Marines of the 2d Division embarked, she engaged in another amphibious diversion during the 24 July invasion of Tinian. She then landed her troops the next day and operated off Tinian and Saipan until sure of the success of the conquest of the Marianas, which toppled Tojo and his cabinet and edged Japan toward peace. She departed 28 July for Pearl Harbor via Eniwetok, arriving 10 August.

After completing amphibious exercises, *Knox* sailed 15 September for Manus, Admiralties, where she arrived 3 October to prepare for the long awaited liberation of the Philippines. Loaded with Army troops and equipment, she departed Manus 14 October in the Southern Attack Force (TF-79). The transport arrived off Dulag, Leyte, 20 October; and, during a terrific aerial and Naval gunfire bombardment, lowered boats for the first assault. *Knox* completed unloading under a smoke screen the 21st and departed Leyte Gulf for New Guinea arriving Hollandia the 26th.

Knox steamed out of Humboldt Bay 5 November and returned to Leyte 18 November after loading troops and cargo at Noemfoor, Schouten Islands, 7 to 14 November. From Leyte she proceeded the same day to Manus; and, arriving 24 November, began a month of landing exercises off Manus, New Britain, and New Guinea in preparation for the invasion of Luzon. Loaded with 1,278 Army troops, she departed Manus 31 December for Lingayen Gulf, Luzon. Fighting through heavy enemy air attack, she reached Lingayen Gulf 9 January 1945, unloaded all troops and cargo within 8 hours, and headed back toward Leyte. While repelling air attacks 9 to 10 January, *Knox* hit two Japanese planes, splashing one of them.

After arriving Leyte Gulf 12 January, *Knox* proceeded to Ulithi 19 to 23 January and thence to Guam 6 to 8 February to embark Marines of the 3d Division for the invasion of Iwo Jima. Departing 17 February, she arrived off Iwo Jima 22 February and debarked her troops the 24th as part of a reserve force. After embarking casualties and loading cargo, *Knox* departed 6 March. Steaming via Saipan, Guam, and Tulagi, Solomons, she reached Noumea, New Caledonia, 18 March. Following overhaul and landing exercises, she got underway 3 May for the Philippines. Touching Manus en route, she arrived San Pedro Bay 16 May and unloaded troops and cargo. On 25 May she sailed for the United States arriving Portland, Oreg., for overhaul 14 June.

Knox sailed from Portland to San Francisco 14 to 16 August. After loading troops and cargo, she departed 18 August for the Philippines. Sailing via Pearl Harbor Eniwetok, Guam, and Ulithi, she reached Leyte Gulf 13 September. She operated among the Philippines until 1 October; then she carried occupation troops to Japan between 1 and 29 October. Returning to Samar 5 November, she embarked homebound veterans and sailed the 6th as a unit of the "Magic-Carpet" fleet. She arrived San Pedro 24 November. After another "Magic-Carpet" cruise to the Philippines from 7 December to 26 January 1946, she departed Long Beach 31 January for New Orleans where she arrived 12 February. *Knox* proceeded to Mobile, Ala., 6 March and decommissioned 14 March. Her name was struck from the Navy List 1 May and she was transferred to the Maritime Commission 14 May. In 1947 she was sold to Isthmian Lines, Inc., and renamed *Steel Recorder*.

Knox received five battle stars for World War II service.

The second *Knox* (DE-1052), the prototype in a new class of destroyer escorts, was laid down 5 October 1965, by Todd Shipyards Corp., Seattle, Wash.; launched 19 November 1966; sponsored by Mrs. Peter A. Sturtevant, granddaughter of Commodore Knox; and will be completed in the summer of 1968.

Once completed, *Knox* will perform search and rescue operations and provide evacuation, blockade, and surveillance support, when necessary, for the Pacific Fleet.

Knox Victory

Knox Victory was renamed *Huntsville* (g.v.) and classified AGM-7 on 27 November 1960.

Knoxville

A major city in Tennessee.

(PF-64: dp. 1,430; l. 303'11"; b. 37'6"; dr. 13'8"; s. 20 k.; cpl. 214; a. 3 3", 4 40mm., 9 20mm., 9 dep., 2 dct.; cl. *Tacoma*; T. S2-S2-AQ1)

Knoxville (PF-64) was launched 10 July 1943 by the Leatham D. Smith Shipyard, Sturgeon Bay, Wis., under a Maritime Commission contract; sponsored by Mrs. Cecelia Daniel; and commissioned 29 April 1944, Lt. Comdr. G. R. Reynolds, USCG, in command.

After shakedown out of Bermuda, *Knoxville* arrived Norfolk 16 November, and served briefly as a training ship. Clearing Norfolk 11 December, she escorted convoy UGS 63 to North Africa, arriving Oran 28 December. On her return voyage the patrol escort searched for enemy U-boats that plagued Allied shipping at the approaches to the Straits of Gibraltar and arrived Boston 20 January 1945.

During the early months of 1945, *Knoxville* escorted convoys across the submarine-infested Atlantic and occasionally she was dispatched for ASW search operations. Following her final escort cruise to the Azores, the patrol frigate arrived Philadelphia 1 June for conversion to a weather ship.

Knoxville cleared Philadelphia 17 June and two weeks later took position on air-sea rescue and weather stations off Newfoundland. For 10 months she operated from her post, flashing news of weather conditions to assist flight operations and ship movements in the western Atlantic. Upon completion of her tour *Knoxville* returned to Charleston, S.C., where she decommissioned 13 June 1946 and was sold 22 September 1947 to the Dominican Republic. *Knoxville* at present serves as *Capitan General Santana* (F-104).

Knudson

Milton Lox Knudson, born 20 October 1923 in Geneva, Ill., enlisted in the Navy 1 July 1941. While serving in *Laffey* (DD-459) in the Southwest Pacific he distinguished himself 15 September 1942 during rescue operations for survivors of the torpedoed *Wasp* (CV-7). With "courageous disregard" for his personal safety, he dived over the side of his ship and swam considerable distances with lines to rescue the stricken carrier's exhausted sailors, thus saving the lives of many who otherwise might have perished. During the heroic night naval action off Guadalcanal 13 November Seaman First Class Knudson was killed when *Laffey* was sunk by Japanese torpedoes and gunfire. He was posthumously awarded the Navy and Marine Corps Medal for his valor.

(APD-101: dp. 1,390; l. 306'; b. 37'; 12'7"; s. 24 k.; cpl. 204; a. 1 5", 6 40mm., 6 20mm., 2 dct.; cl. *Crosley*)

KNOX DE-1052
 LAUNCHING CEREMONY
 SHIP PASSING DOWN WAYS
 TODD SHIPYARDS CORP
 SEATTLE DIVISION
 NOVEMBER 19, 1966

Knudson (DE-591) was laid down 23 December 1943 by Bethlehem-Hingham Shipyards, Inc., Hingham, Mass.; launched 5 February 1944; sponsored by Mrs. Emmons R. Knudson; reclassified APD-101 on 17 July; and commissioned 25 November, Lt. Dudley C. Sharp in command.

After shakedown, *Knudson* departed Norfolk 18 January 1945 for the Pacific. Steaming via San Diego, the high-speed transport arrived Pearl Harbor 9 February for training with UDT units. With UDT 19 embarked, she departed Pearl 28 February, steamed via Eniwetok, and arrived Ulithi 12 March to prepare for operations in the Ryukyus. Clearing Ulithi 21 March for operations off Kerama Retto, she supported UDT 19 during reconnaissance and demolition operations on Kuba, Aka, Keise, and Geruma Shima from 25 March to 30 March. While serving as antisubmarine screen 26 March, she was attacked by an enemy bomber. Her guns splashed the plane after two bombs had missed her close aboard. On 1 April she continued ASW patrols during amphibious landings at Hagushi, Okinawa. During the next 2 weeks she conducted screening patrols off the western shores of Okinawa. Then she sailed 14 April for Guam escorting *Nevada* (BB-36), arriving 19 April. She proceeded to Ulithi 23 April, debarked UDT 19 on the 25th, and departed 5 May for Okinawa escorting *Portland* (CA-33). Reaching Okinawa 8 May, she resumed screening duty and helped repel enemy air attacks until 15 June when she departed Hagushi Anchorage for Leyte.

Arriving 18 June, *Knudson* operated in the northern Philippines until 4 July. She departed Subic Bay as escort for an Okinawa-bound, LST convoy, reaching Guam 16 July. After embarking UDT 19, she sailed 19 July for the West Coast via Eniwetok and Pearl Harbor, arriving San Diego 5 August. *Knudson* embarked UDT 25 on 13 August, departed 16 August for the Far East, and arrived Tokyo Bay, Japan, 4 September. She operated out of Yokosuka until 20 September when she returned to the United States, arriving San Diego 11 October. She continued her service in the Pacific from 30 October to 12 May 1946, carrying men and supplies to bases in the Marshalls, Marianas, Admiralties, and Philippines. Departing Manila Bay 20 April with homebound veterans embarked, she arrived San Pedro 12 May. *Knudson* decommissioned 4 November and entered the San Diego Group, Pacific Reserve Fleet, 15 November.

Knudson recommissioned 6 August 1953, Lt. Comdr. J. F. Roohan, Jr., in command. After shakedown and conversion to an APD Flagship, she departed San Diego 3 May 1954 for the Western Pacific. Arriving Yokosuka 23 May, she conducted amphibious exercises off Japan, South Korea, and Okinawa. Clearing Tokyo Bay 13 August, she sailed for the Vietnamese coast, where she arrived Haiphong, North Vietnam, 22 August. As flagship for the Commander, Embarkation Group, she participated in Operation "Passage to Freedom," through which the Navy evacuated almost 300,000 Vietnamese from

North to South Vietnam. From 22 August to 19 September, she operated out of Haiphong during the loading of refugees, cargo, and military equipment by Navy ships. Then she steamed to Saigon, South Vietnam, arriving 22 September. Continuing to Subic Bay 2 October, she returned to Yokosuka via Hong Kong 1 November. And on 7 November she sailed for the United States, arriving San Diego 23 November.

Knudson operated out of San Diego and Long Beach supporting amphibious training during 1955 and early 1956. Departing Long Beach 24 March 1956, she steamed via Pearl Harbor to Eniwetok where she arrived 10 April. Until returning to Pearl 23 July, she supported nuclear tests in the Marshall Islands. She returned Long Beach 6 August and resumed amphibious, UDT, and ASW training operations. After sailing to San Francisco 27 September, *Knudson* decommissioned 2 January 1958 and joined the Stockton Group, Pacific Reserve Fleet, later to transfer to the Texas Group, where she remains.

Knudson received one battle star for World War II service.

Ko-A.S.A., see *Luster* (IX-82)

Kochab

A star in the constellation *Ursa Minor*, the "Little Bear" or "Little Dipper."

(AKS-6: dp. 5,244; l. 441'6"; b. 56'11"; dr. 28'4"; s. 12 k.; cpl. 193; a. 1 5", 4 3", 8 20mm.; cl. *Acubens*; T. EC2-S-C1)

Kochab (AKS-6) was launched 30 March 1944, by Delta Shipbuilding Co., New Orleans, under a Maritime Commission contract; sponsored by Mrs. Thomas J. Crane; acquired by the Navy and commissioned 2 May, Lt. Comdr. R. E. King in command; transferred to Mobile, Ala., and decommissioned 5 May; converted to a general stores supply ship by Alabama Dry Dock & Shipbuilding Co.; and recommissioned 4 November 1944.

Kochab cleared Mobile Bay 17 November for shake-down in Chesapeake Bay before departing Norfolk 16 December for duty in the Pacific. Steaming via the Marshall Islands, she operated out of Ulithi and from 20 February to 28 April made replenishment runs to Manus, Admiralties. Steaming to the Marianas 13 to 15 May, she loaded cargo at Guam and Saipan before proceeding 29 May for the Ryukyus. She reached Kerama Rhetto 8 June and, despite enemy air attacks, conducted supply operations until 19 June. Proceeding then to Okinawa for further replenishment duty, she operated between the Ryukyus and the Marianas for almost 5 months.

After Japan surrendered, *Kochab* departed Okinawa 7 November for the United States as a unit of the "Magic-Carpet" fleet. Steaming via Pearl Harbor, she arrived San Francisco 3 December with 203 homebound passengers embarked. She operated out of San Francisco until 9 February 1946, then sailed for Pearl Harbor, arriving 18 February. *Kochab* decommissioned 17 April and entered the Pacific Reserve Fleet. Transferred under tow to the 12th Naval District 23 September 1947, she was turned over to the Maritime Commission 22 October and berthed with the Defense Reserve Fleet, Suisun Bay, Calif. She was sold for scrapping 14 January 1965, to Nicolas Joffe Corp., Beverly Hills, Calif.

Kochab received one battle star for World War II service.

Kodiak

A town on Kodiak Island, Alaska.

(LSM-161: dp. 52; l. 204'; b. 35'; dr. 7'; s. 13 k.; cpl. 106; 1 40mm., 4 20mm.; cl. *LSM-1*)

The keel of *LSM-161* was laid down 3 June 1944 by Charleston Navy Yard, Charleston, S.C.; launched 27 June 1944; and commissioned 16 August 1944, Lt. Joseph M. Gresser in command.

After serving at Little Creek, Va., as a training ship for more than 5 months, *LSM-161* departed Newport, R.I., 23 February 1945 for the West Coast, arriving San Diego 23 March. Departing 28 April for the Pacific, she arrived Saipan 6 June; then commenced supply operations in the Far East. For the remaining months of World War II, *LSM-161* shuttled troops and cargo among the Philippines, Okinawa, and the Marianas. Following the Allied victory in the Pacific, the medium landing ship supported occupation forces in the Western Pacific until she sailed for the United States 12 December. Arriving San Pedro, Calif., 12 January 1946, *LSM-161* remained along the West Coast; and decommissioned at Vancouver, Wash., 8 June 1946.

When the Korean conflict called for additional naval logistic support, *LSM-161* recommissioned 6 September 1950 and was assigned to LSM Division 12 out of San Diego. She operated off southern California until 11 February 1952 when she sailed for the Western Pacific. Arriving Yokosuka 26 March, she commenced supply and transport operations in support of U.S. forces in Korea. Sailing to Pusan Korea in mid-April, the veteran landing ship embarked prisoners-of-war and transported them to Koje Do. She continued operations between Japan and Korea until she departed Yokosuka 20 September for the United States.

Following operations out of San Diego, *LSM-161* sailed for Kodiak, Alaska, 16 June 1953. Arriving there 1 week later, she became a logistics support ship for the Alaskan area. From 1953 to 1965 she provided services for VP Squadrons at Kodiak, performed search and rescue missions, and made frequent resupply cruises to the Adak Naval Station. *LSM-161* was named *Kodiak* 14 October 1959.

Kodiak also participated in the Alaskan earthquake-relief operations from March to May 1964 by shuttling supplies to remote villages on the island of Kodiak. Later that summer she assisted the Red Cross in earthquake-relief work by carrying supplies and household furnishings to devastated areas.

After many years of naval service—a veteran of 2 wars—*Kodiak* decommissioned 19 April 1965 and was struck from the Navy List 1 June 1965.

LSM-161 received two battle stars for the Korean conflict.

II

(YF-866: dp. 160; l. 133'; b. 31'; dr. 9'; s. 10 k.; cpl. 11; cl. *YF-852*)

YF-866 was laid down by the Missouri Valley Bridge & Iron Co., Evansville, Ind., 4 April 1945; launched 26 October and placed in service May 1946. She operated for 1 year in the 15th Naval District and was placed out of service during May 1947.

After 18 years in the Pacific Reserve Fleet, *YF-866* was named *Kodiak* 21 April 1965; and placed in service for operations in the 14th Naval District. At present she performs harbor duties in the Hawaiian Islands.

Koelsch

John Kelvin Koelsch, born 22 December 1923 in London, England, enlisted as an Aviation Cadet in the U.S. Naval Reserve 14 September 1942. Following flight training, he was commissioned Ensign 23 October 1944. He served at Naval Air Stations at Fort Lauderdale, Fla., and Norfolk, Va., and subsequently flew with Composite Squadron 15 and Torpedo Squadrons 97 and 18. Promoted to Lieutenant (j.g.) 1 August 1946, he became an accomplished torpedo bomber pilot. After the outbreak of Communist aggression in Korea, he joined Helicopter Squadron 1 at Miramar, Calif., in August 1950. As Officer in Charge of a helicopter detachment, he joined *Princeton* in October for pilot rescue duty off the eastern coast of Korea. He served in *Princeton* until June 1951 when he joined Helicopter Squadron 2 for pilot rescue duty out of Wonsan, Korea, then under naval blockade. He provided life-guard duty for pilots who were downed either in coastal waters

or over enemy-held territory. On 22 June he rescued a Naval aviator from the waters of Wonsan Harbor, southeast of Yo Do Island. Late in the afternoon of 3 July, he responded to a distress call from a Marine aviator, Capt. James V. Wilkins, whose Corsair had been hit by enemy fire during an armed reconnaissance mission about 35 miles southwest of Wonsan. Capt. Wilkins parachuted from his burning plane at low altitude; and, though severely burned about the legs, he survived. Despite approaching darkness, worsening weather, and enemy ground fire, Lt. Koelsch located the downed aviator in the Anbyon Valley and began his pickup. Thick fog prevented the air cover from protecting the unarmed helicopter, and intense enemy fire downed the plane as the Lieutenant's crewman, George M. Neal, AM3, hoisted the injured pilot toward the helicopter. All three men survived the crash; and, after hiding in the mountains from enemy patrols for 3 days, they began a slow march to the coast. After 6 more days, they reached a coastal village where they were captured the following day while hiding in a hut. During his captivity Koelsch steadfastly refused to aid his captors in any manner. Though beaten and abused, he refused to submit to interrogation; and his fortitude and personal bravery inspired his fellow prisoners. He died of malnutrition and dysentery 16 October 1951. For his conspicuous gallantry, intrepidity, and heroic spirit of self-sacrifice Lt. (j.g.) Koelsch was posthumously awarded the Medal of Honor 3 August 1955.

(DE-1049: dp. 3,040; l. 414'6"; b. 44'1"; dr. 24'2"; s. 20+ k.; cpl. 239; a. 2 5", 4 tt., 1 ASROC, 1 DASH; cl. Garcia)

Koelsch (DE-1049) was laid down by Defoe Shipbuilding Co., Bay City, Mich., 19 February 1964; launched 8 June 1965; sponsored by Miss Virginia L. Koelsch; and commissioned 10 June 1967, Comdr. John A. Buck in command.

She at present is providing valuable support to ships of the Atlantic Fleet from her homeport, Newport, R.I., because she has the capabilities both to screen attack and support ships and to operate effectively against submarines. Operating either alone or with a hunter-killer group, she can seek out and destroy enemy submarines with the most advanced ASW equipment. Moreover, as is so important in a time of unrest and potential conflict, her ability to carry out blockade, surveillance, and evacuation missions at a moment's notice adds readily to the Navy's mighty deterrent force and to the continuing task of "keeping the peace."

Kohi

A former name retained.

(YAG-27: dp. 400; l. 93'; b. 28'; dr. 4'2")

Kohi, a wooden diesel-powered coastal scow, was purchased 17 November 1942 by the Navy from the New Zealand Joint Purchasing Board and commissioned the same day at Auckland. Assigned to Task Force 35, South Pacific Service Force, she operated out of Auckland, hauling military cargo to Norfolk Island and to Noumea, New Caledonia. After continuing this important duty for more than a year, she decommissioned at Auckland 3 March 1944. Departing for Wellington, New Zealand, the same day, she was turned over to the Joint Purchasing Board 14 March for return to her former owner.

Koiner

James Duval Koiner, born 16 February 1919, in Waynesboro, South River, Va., entered the Naval Reserve as Ensign 31 December 1940. He reported for active duty 17 March 1941, under instruction at the Supply Corps, Naval Medical Center, Washington, D.C. Koiner reported to the 3d Naval District 17 October 1941, for duty on board *Atlanta* (CL-51) upon her commissioning. After serving in the light cruiser during the Midway and Solomon

Islands campaigns, Koiner was promoted to Lieutenant (j.g.) 1 October 1942. He was killed in action 13 November 1942, on board *Atlanta*, during the Battle of Guadalcanal.

(DE-331: dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; cpl. 186; a. 3 3", 6 40mm., 10 20mm., 9 dcp., 2 dct.; cl. Edsall)

Koiner (DE-331) was laid down 26 July 1943, by Consolidated Steel Co., Orange, Tex.; launched 5 September 1943; sponsored by Mrs. Mae H. Koiner, the mother of Lt. (j.g.) Koiner; and commissioned 27 December 1943, Lt. Comdr. C. S. Judson, Jr., in command.

After shakedown off Bermuda, *Koiner* cleared Charleston, S.C., 28 February 1944, to join a convoy at Willemstad, Curacao, N.W.I., and escort tankers to Mediterranean ports. For the next 6 months she remained on convoy-escort duty in the Atlantic, making four roundtrip cruises from Curacao to North Africa and Naples.

Completing her final Mediterranean cruise 31 August, *Koiner* commenced escort duty for United Kingdom bound ships. From 20 September 1944 to 1 May 1945 the destroyer escort sailed with five convoys to British ports and upon cessation of hostilities in Europe she began preparations for Pacific duty.

Koiner arrived Pearl Harbor 25 June commencing training operations with *Corregidor* (CVS-58) and exercises with submarines. Departing Pearl Harbor 4 August, she was en route to Leyte when President Truman announced the end of hostilities with Japan. The destroyer escort remained in the Far East as part of the occupation forces on escort and patrol duty until 1 April 1946. Clearing Hong Kong she sailed by way of the Indian Ocean and Mediterranean Sea, and arrived Charleston, S.C., 30 May. *Koiner* decommissioned and joined the Atlantic Reserve Fleet 4 October 1946, at Green Cove Springs, Fla.

From 20 June 1951 to 14 May 1954, *Koiner* was on loan to the Coast Guard commissioned as WDE-431. She served as an ocean station vessel out of Seattle, Wash., until her return to the Navy in 1954. She was converted to a radar picket escort vessel and reclassified DER-331 on 28 September 1954. Recommissioned 26 August 1955, Lt. Comdr. V. W. Tracy in command, *Koiner* joined the Continental Air Defense System in the Pacific Barrier. From 1956 into 1965 *Koiner* operated on picket stations off the Washington and California coast to provide early warning in the event of enemy air attack. On 1 July 1965 *Koiner* departed Alamada, Calif., for her new homeport, Guam, arriving 28 July after a stopover at Pearl Harbor. On 6 August she left for the first of three "Market Time" patrols ending in December. The experience *Koiner* had gained during her patrols off the West Coast enabled the radar picket escort ship to contribute greatly to the surveillance tactics necessary to prevent the flow of supplies by sea to the Viet Cong.

During 1966 *Koiner* was again deployed for further "Market Time" operations off Vietnam. A 7-month West-Pac cruise began late in February. Between patrols the ship visited Hong Kong; Bangkok; Manila; and Kaoshiung, Formosa.

In late January 1967 *Koiner* participated in a gunfire mission after a brief inport period in Japan. She then resumed her regular duties. The important work radar picket escort and her sister ships is an example of the diversified roles which the Navy must play in defending the nation and encouraging peace abroad.

Koka

The phonetic spelling of Coca, formerly an Indian village in southern Arizona.

Koka, a single turret, light draft monitor, was launched 18 May 1865, by Wilcox & Whiting, Camden, N.J. Completion of the ship was ordered suspended 17 June, and she was laid up at League Island Navy Yard, Philadelphia,

without any active service. Renamed *Argos* 15 June 1869, she was again renamed *Koka* 10 August. She was broken up at Philadelphia 2 October 1874, by Harlan & Hollingsworth Co., Wilmington, Del., for use in the construction of Amphitrite (BM-2).

I

(AT-31: dp. 1,000; l. 156'8"; b. 30'; dr. 14'7"; s. 13 k.; cpl. 46; a. none; cl. *Bagaduce*)

Originally designated as *Oconee*, AT-31 was renamed *Koka* 24 February 1919; launched 11 July 1919, by the Puget Sound Navy Yard; and commissioned 18 February 1920, Lt. (j.g.) J. C. Bauman, Jr., in command.

Assigned to the 11th Naval District, *Koka* sailed from Puget Sound to San Diego during March 1920. For almost 18 years she operated out of San Diego along the coast of southern California, performing various tug and target-towing services. While steaming off San Clemente Island, she ran aground 7 December 1937, and was officially decommissioned the same day. Declared unsalvageable, *Koka* was abandoned as a wreck 22 January 1938. Her name was struck from the Navy List 2 March.

II

(ATA-185: dp. 534; l. 143'; b. 34'; dr. 13'; s. 13 k.; cpl. 48; a. 1 3", 2 20mm.; cl. ATA-174)

Originally designated as *ATR-112*, she was redesignated as *ATA-185* on 15 May 1944; launched 11 September 1944, by Livingston Shipbuilding Co., Orange, Tex.; and commissioned on 16 November, Lt. (j.g.) Woodrow Sullivan in command.

After shakedown in the Gulf of Mexico, *ATA-185* departed Galveston 14 December for duty in the Pacific. She reached Eniwetok, Marshalls, 26 February 1945; and for more than 5 months she operated out of Eniwetok; Guam and Saipan, Marianas; Ulithi, Carolines; and Kerama, Ryukyus, while performing a variety of towing services. After a month of target sled towing duty at Guam, *ATA-185* departed 4 August for Okinawa, where she arrived 11 August with two barges in tow. As a unit of SerRon 12, she performed tug and salvage operations in Buckner Bay until 3 November when she departed for the United States. Steaming via Eniwetok and Pearl Harbor, she arrived San Francisco 1 February 1946 with YNG-30 and YNG-38 in tow.

Clearing San Francisco Bay 22 March, *ATA-185* reached Pearl Harbor 13 April to prepare for participation in atomic weapons tests in the Marshall Islands. Departing Pearl 11 May, she assisted in mooring target ships for Operation "Crossroads" at Bikini Atoll. After the tests she recovered radiological instruments from various target ships, including *Nevada* (BB-36), former German cruiser *Prinz Eugen*, and former Japanese battleship *Nagato*. Departing Bikini 5 September, she reached Pearl Harbor 20 September then underwent a 4-month overhaul.

ATA-185 departed Pearl Harbor 20 January 1947, and arrived San Diego 3 February with *LCI-1062* in tow. Assigned to the 11th Naval District for coastal towing, she has operated out of San Diego since 1947. Renamed *Koka* (ATA-185) on 16 July 1948, most of her towing assignments have carried her to Long Beach, Port Huene, San Pedro, and San Francisco. Over the years she has traveled the Pacific coast from California to Alaska

USS *Koka* (AT-31)

while towing barges and district craft to Kodiak, Alaska; Seattle, Wash.; and Portland and Astoria, Oregon. *Koka* continues her coastal towing out of San Diego for the 11th Naval District into 1967.

Koka as *ATA-185* received one battle star for World War II service.

Koningen Der Nederlanden

A former name retained.

(Str: t. 5,020; l. 455'2"; b. 55'2"; dr. 26'5"; s. 14.5 k.; cpl. 221; a. 4 6", 2 1-pdrs., 2 mg.)

Koningen Der Nederlanden, a Dutch ship launched by Nederland S.B. Maats, Amsterdam, Holland, in 1911, was seized by custom officials at San Francisco, acting under the Executive Order of 20 March 1918; and commissioned 4 April, Lt. Comdr. N. T. Payne, USNRF, in command.

Assigned to NOTS, *Koningen Der Nederlanden* departed San Francisco 5 May 1918, arriving Balboa, C.Z., on the 11th. Here she was converted to a troop transport before steaming on to Norfolk in mid-July to prepare for a cruise to the war-ravaged European continent.

On 6 August *Koningen Der Nederlanden* was detached from NOTS and assigned to the cruiser-transport force embarking over 2,200 Army troops for duty in Europe. For the next 3 months the transport made two more round trip cruises from Norfolk to French ports, arriving Brest, France, on her third cruise 9 November. The Armistice which ended World War I was signed 2 days later, and *Koningen Der Nederlanden* was assigned the task of returning war veterans to the United States.

From November 1918 until August 1919 the transport made 5 cruises from French to American ports, carrying with her over 10,000 soldiers of the American-European forces to their home shores. *Koningen Der Nederlanden* arrived New York from her final crossing on 19 August and decommissioned 7 November 1919 for return to her owner.

Konoka

A village in Seneca County, N.Y.

(YT-151: dp. 237; l. 100'; b. 25'; dr. 9'7"; s. 12 k.)

Konoka (YT-151) was built 1940 to 1941 by the Defoe Shipbuilding Co., Bay City, Mich.; and placed in service 7 June 1941, in the 3d Naval District, New York, where she performed various harbor duties throughout her entire service. *Konoka* was reclassified YTB-151 on 15 May 1951. During Feb. 1962 she was again reclassified YTM-151, and in 1967 continues in service in the 3d Naval District, New York, N.Y.

• *Konpira Maru*, see YP-343

Kooyong III, see YP-75

Kopara

A former name retained.

(AK-62: dp. 679; l. 193'; b. 35'8"; dr. 13'8"; s. 12 k.; a. 4 20mm.)

Kopara (AK-62) was built in 1938 by Richardson Co., Ltd., Napier, New Zealand; purchased in early August 1942 from her owner, Henry Robb, Ltd., Auckland, New Zealand, through the New Zealand Government; and commissioned 21 September 1942 at Auckland, Lt. (j.g.) H. R. Greeley in command.

Reclassified as AG-50 on 23 September, *Kopara* departed Auckland 5 October for supply runs from Noumea, New Caledonia, and Espiritu Santo, New Hebrides, to

Guadalcanal and Tulagi, Solomons. Arriving Noumea 9 October, she steamed on the 14th for Espiritu Santo to take on board supplies for the embattled American force on Guadalcanal. Loaded with torpedoes and general cargo and escorted by *Nicholas* (DD-449), she departed 19 October. *Kopara* arrived Lunga Roads during mid-watch 22 October and began unloading operations which were completed that evening despite harassing gunfire from enemy shore batteries and a noon attack by Japanese dive bombers. Protected by *Nicholas*, *Kopara* departed Guadalcanal undamaged and returned to Noumea 27 October.

During the next few months, *Kopara* continued supply runs to the Solomons; and, while she unloaded at Guadalcanal and Tulagi 13 through 15 November, American battleships, cruisers, and destroyers fought the enemy in two fierce night naval battles off Savo Island. From 20 February to 26 June 1943, she carried cargo along the sea lanes between Auckland, Noumea, Efate, and Espiritu Santo. And from 11 July to 17 September she shuttled supplies between New Zealand and Norfolk Island.

After a voyage to the New Hebrides, *Kopara* departed Noumea 10 November to resume supply duty in the Solomons. She reached New Georgia 16 November; and, for almost 8 months, ranged the waters of Melanesia from Bougainville to New Caledonia bringing supplies to forces which loosened the enemy's hold on the Bismarck Archipelago and New Guinea. Returning to New Caledonia 7 August 1944, she began supply runs eastward out of Noumea. Between 10 August and 21 December she made four voyages to Fiji, American Samoa, and the Ellice Islands. She departed Noumea 24 December and steamed via Norfolk Island to Auckland 3 January 1945. *Kopara* decommissioned 12 January and was turned over to the New Zealand Joint Purchasing Board for return to her previous owner.

Kopara received one battle star for World War II service.

Korana, see YP-273

Kosciusko

Thaddeus Kosciusko, born in Lithuania 12 February 1746, came to America in 1776 to assist the colonies in their struggle for independence. He distinguished himself throughout the American Revolution, especially in the defense of West Point and at the siege of Yorktown. After the American victory, Kosciusko fought with skill and courage in Europe for Polish freedom. He died in Switzerland 2 April 1817.

Lancaster No. 3, a ship in the Ellet Ram Fleet, was ordered renamed *Kosciusko* 8 September 1862, but continued to be called *Lancaster No. 3* (q.v.) or simply *Lancaster*.

Koyo Maru, see YP-562

Kraken

A legendary sea monster believed to haunt the coasts of Norway.

(SS-370: dp. 1,526; l. 311'9"; b. 27'3"; dr. 15'3"; s. 20 k.; cpl. 66; a. 1 5", 10 21" tt.; cl. *Balao*)

Kraken (SS-370) was launched 30 April 1944, by the Manitowoc Shipbuilding Co., Manitowoc, Wis.; sponsored by Mrs. John Z. Anderson, wife of Congressman Anderson of California; and commissioned 8 September 1944, Comdr. Thomas H. Henry in command.

Kraken steamed by way of Chicago to Lockport, Ill., 27 September 1944, and was towed in floating dry dock down the Mississippi River arriving at Algiers, La., 4 October. Ten days later *Kraken* cleared Algiers, tran-

sited the Panama Canal and underwent intensive training in the Gulf of Panama. She sailed for Hawaii 4 November and arrived Pearl Harbor the 21st.

Kraken departed Pearl Harbor 12 December 1944, for her first war patrol, touched at Saipan the 23d, set course for Indochina next morning. There she maintained life-guard duty in support of 3d Fleet Carrier strikes. While on station she rescued a *Lexington* pilot from rough seas and evaded a strafing enemy plane by diving. Finding no targets *Kraken* set course for Fremantle, Australia, arriving there 14 February 1945.

Kraken departed on her second war patrol 15 March and maintained life-guard duty in the South China Sea supporting aircraft carrier strikes against Singapore and Saigon. She returned to Subic Bay, P.I., 26 April.

Departing on her third war patrol on 19 May 1945, *Kraken* set course for the Gulf of Siam. After searching in vain for enemy targets, she shifted to the Java Sea where on 19 June she bombarded Merak and riddled a coaster and a small ship with 5-inch and 40mm. projectiles. She saw the coaster sink and she left the small ship ablaze before clearing the harbor. Three days later, while chasing an eight-ship convoy, *Kraken's* torpedoes sank an oiler and a coastal steamer and her guns inflicted heavy damage on one of the Japanese submarine chasers. Then *Kraken* proudly sailed into Fremantle, Australia, 3 July 1945, ending her most successful patrol.

Kraken sailed on her fourth and last patrol 29 July. While seeking the enemy in the Java Sea, her patrol was cut short when she received news of Japan's capitulation. Sailing for Subic Bay, she arrived 21 August.

Kraken cleared Subic Bay 31 August 1945, touched at Pearl Harbor, and arrived at San Francisco 22 September. On 14 October she rendezvoused with Halsey's 3d Fleet and formed a part of honor escort for Admiral Halsey, as he passed under the Golden Gate Bridge in Flagship, *South Dakota*. Ten days later *Kraken* visited Longview, Wash., for the first postwar Navy Day celebrations and returned to San Francisco 31 October where she was placed out of commission 4 May 1946.

Kraken remained in reserve status until 18 September 1958, when she was assigned to Pearl Harbor Naval Shipyard for activation overhaul and fitting out preparatory to transfer for loan to the Spanish Government 17 October 1958. She serves the Spanish Navy as *Almirante Garcia* (S-31).

Kraken received one battle star for World War II service.

Kraus, Richard E., see *Richard E. Kraus* (AG-151)

Kretchmer

Raymond Joseph Kretchmer, born 30 January 1917, in Chicago, Ill., enlisted in the U.S. Naval Reserve 29 August 1940. He was appointed Midshipman, Naval Reserve, at Northwestern University and commissioned Ensign 12 September 1941.

Ens. Kretchmer was assigned to active duty 12 September and served on board *Astoria*. He was killed in action 9 August 1942 when *Astoria* was sunk by Japanese naval forces during the Battle of Savo Island.

(DE-329: dp. 1,200; l. 306'; b. 36'7"; dr. 8'7"; s. 21 k.; cpl. 186; a. 3 3", 6 40mm., 10 20mm., 9 dep., 2 dct.; cl. *Edsall*)

Kretchmer (DE-329) was laid down 28 June 1943, by Consolidated Steel Corp., Orange, Tex.; launched 31 August 1943; sponsored by Miss Betty Kretchmer, sister of Ens. Kretchmer; and commissioned 13 December 1943, Lt. R. C. Wing, in command.

After a Bermuda shakedown *Kretchmer* departed Charleston, S.C., 15 February 1944, for operations in the Caribbean. Based at Port-au-Spain, Trinidad, she es-

corted convoys to Cuba and Bermuda until sailing for Key West 2 May. Assigned to an air wing training detachment, *Kretchmer* operated with torpedo bombers for 3 weeks, before departing Charleston 8 June escorting a convoy to Europe. Sailing via Curacao, D.W.I., *Kretchmer* screened shipping bound for Naples in preparation for the assaults on southern France. After returning to the United States 16 July, the escort ship made one more cruise to Naples during the summer.

Between 20 September 1944 and 27 April 1945, *Kretchmer* sailed as escort to five convoys from New York to United Kingdom ports. After victory in Europe, she prepared for Pacific Fleet duty arriving Pearl Harbor 5 July. Clearing Pearl Harbor 1 August, *Kretchmer* was en route to the Philippines when hostilities stopped 14 August.

Serving in the Far East until 1 April 1946, the destroyer escort engaged in occupation and repatriation operations, including the evacuation of Allied prisoners of war from Formosa during September 1945. *Kretchmer* also served on escort duty, mine patrol, and mail runs between Chinese ports. Departing Hong Kong 1 April 1946, she returned home by way of the Indian Ocean and Mediterranean Sea, arriving Charleston, S.C., 29 May. *Kretchmer* decommissioned at Green Cove Springs, Fla., 20 September 1946.

After extensive conversion, *Kretchmer* recommissioned as DER-329 on 22 September 1956, Lt. Comdr. C. F. Fadeley in command. After shakedown in the Caribbean, the radar picket arrived at Boston 18 December to commence operations in the Northern Radar Barrier. Based at Newport, R.I., from 1957 to 1962, she remained on picket duty, making regular patrols to provide early warning to the continental air defense systems. *Kretchmer* also made cruises to northern Europe in 1958, 1961, and 1962, and in August 1961 rescued six men from foundered Icelandic fishing vessel *Sleipnir*.

In the aftermath of the Cuban missile crisis, *Kretchmer* departed Newport 23 November 1962 for picket duty off the southern coast of the United States. While operating as plane guard and screen for *Essex* (CVS-9) in Key West waters, *Kretchmer* rescued two shrimp fishermen from disabled fishing vessel *Ala*, after they had been fired upon by Cuban "Mig" aircraft. On 21 February 1963, while *Kretchmer* was guarding *Ala*, a Mig-17 made four passes at the disabled fishing craft before turning tail ahead of U.S. Marine aircraft.

Kretchmer continued picket and training operations in the Atlantic until 21 May 1965, when she entered Boston Naval Shipyard for overhaul prior to deployment in the western Pacific. The ship departed Newport, R.I., for Guam, arriving 2 August after a stopover at Pearl Harbor.

One month later, *Kretchmer* joined other vessels off the South Vietnam coast in Operation "Market Time," keeping coastal traffic under surveillance to prevent the shipment of Communist arms and supply to South Vietnam by sea. Her motor whaleboat came under heavy small arms fire during a roundup operation in November. No American casualties resulted and *Kretchmer's* search party seized a large number of suspected guerrilla infiltrators.

By the end of a year of patrol, the ship had investigated some 17,000 contacts, and boarded over 1,000 small craft. On 10 December *Kretchmer* steamed into Apra Harbor, Guam, where she remained until her departure 22 February 1966 for a 7½-month deployment with the 7th Fleet. She continued "Market Time" patrol off the northwest coast of Vietnam and provided gunfire support for the Marines and Army on shore. She left Subic Bay 29 September for her homeport, Guam, where she remained through part of October. *Kretchmer* then departed for further radar picket escort duties off Vietnam through 1966 into 1967. Her continued presence on the South China seacoasts delineates the commitment of the United States to the preservation of the independence of South Vietnam.

Krishna

In Brahmanic mythology, the eighth incarnation of Vishnu, second god of the Hindu Trimurti, and a hero of innumerable exploits whose feats surpassed those of Hercules and Achilles in prowess.

(ARL-38: dp. 2,125; l. 328'; b. 50'; dr. 11'2"; s. 12 k.; cpl. 253; a. 8 40mm., 12 20mm., cl. *Achelous*)

Originally classified LST-1149, *Krishna* was reclassified ARL-38 on 14 August 1944; and laid down 23 February 1945, by Chicago Bridge & Iron Co., Seneca, Ill.; launched 25 May 1945; sponsored by Mrs. Eva Best Smith; placed in reduced commission during transfer to Mobile, Ala., for conversion; and commissioned 3 December 1945, at Mobile, Lt. Lyle E. Brown in command.

Departing Mobile 8 January 1946, *Krishna* arrived Norfolk 14 January for duty with Amphibious Group 2 at Little Creek, Va. For more than 19 years the landing craft repair ship operated out of Little Creek, and support-and-repair operations have carried her from Baffin Bay to the Caribbean. From 25 May to 31 August 1951 she participated in Operation "Blue Jay" during the initial phase of establishing the large air base at Thule, Greenland. While at Little Creek she made annual deployments to Puerto Rico, the Virgin Islands, and other Caribbean Islands supporting amphibious landing exercises.

Krishna departed Little Creek 5 October 1964, and sailed to waters off southern Spain, arriving Huelva 26 October. While there she participated in Operation "Steel Pike I," the largest amphibious landing operation since World War II which sent more than 28,000 2d Division marines storming the shores on a mock invasion. One of 84 naval ships, *Krishna* provided support and replenishment services during this impressive exercise that clearly illustrated the strength and diversity of American naval sea power and emphasized the Navy's ability and readiness to move a vast amphibious force to any shore if needed in keeping the peace. Departing Huelva 4 November,

Krishna steamed to the East Coast via Oporto, Portugal, and arrived Little Creek 29 November.

From 1 December to 22 February 1965, *Krishna* reactivated *Kirwin* (APD-90), and on 1 June she was assigned to Service Force, Pacific Fleet. Departing Little Creek, she steamed via Pearl Harbor and Guam for duty in the Far East. Operating out of Subic Bay, Philippines, she reached the Gulf of Thailand off the coast of Vietnam 17 September and began duty as support ship for patrol craft of U.S. Coast Guard Squadron 1. While the cutters patrolled coastal waters to prevent infiltration of ammunition and supplies to the Viet Cong, *Krishna* served as a repair facility and fueling station as well as an operations, communications, and command center. Later in the year she also provided services for eight 50-foot "Swift" launches that arrived to strengthen the coastal surveillance program.

Krishna remained on station until 1 December when she departed for Bangkok, Thailand, arriving 3 December. She returned to her various support duties in the Gulf of Thailand 11 December. In February *Krishna* raised and salvaged *PCF-4*. On 30 April men from *Krishna* helped extinguish a fire in An Thoi, a South Vietnamese village. She had a number of distinguished visitors through 1966, including Secretary of the Navy Paul H. Nitze on the 15th of July. On 21 July the landing craft repair ship headed for Sasebo, Japan, with a stopover at Kaoshiung, Taiwan, 29 July to provide repair facilities, arriving Sasebo 9 August. *Krishna* departed Sasebo for Vietnam 22 September, arriving in the Gulf of Siam 7 October to resume her WestPac mission. *Krishna* continued to patrol off the coast of Vietnam through 1966 into 1967.

Kroll, Cornelius (YN42), see *Okisko* (YNT-10)

Kroonland

A former name retained.

USS *Krishna* (ARL-38)

(SP-1541: t. 12,241; l. 580'0"; b. 60'0"; dr. 31'1"; s. 16 k.; cpl. 414; a. 4'4", 2 1-pdrs., 2 mg.)

Kroonland was built in 1902 by William Cramp & Sons, Philadelphia, Pa., for the International Merchantile Marine Co. and operated as a passenger liner principally between New York and Antwerp. On 2 February 1915 en route to San Francisco, she was one of the first passenger liners to transit the Panama Canal. In 1916 she transferred to the American Line and ran between New York and Liverpool.

Shortly before the United States entered World War I, the Navy placed guns on the ship, and an armed naval guard embarked 25 March 1917 to protect her from German submarines. On the morning of 20 May 1917, while the liner steamed through a heavy fog toward Liverpool, a torpedo struck her without exploding. Two minutes later her lookouts spotted a submarine bearing down on *Kroonland* so close aboard that the liner's guns could not be depressed enough to open fire on the raider. Although the U-boat, apparently also taken by surprise, reversed her screws and tried to turn to avoid a collision, she lightly struck the liner's hull and scrapped along her side before diving out of sight. Meanwhile two more torpedoes came with some 20 feet of hitting *Kroonland's* stern. That afternoon the liner sighted another submarine surfaced some 1,000 yards off her port quarter. *Kroonland* immediately began shelling the U-boat, forcing her to dive for safety.

The Army took over the ship at New York 18 February 1918, loaded her with military equipment, and sent her to St. Nazaire, France. After returning New York 9 April, *Kroonland* was converted to a troop transport by William J. Kennedy Co. The Navy acquired and commissioned her 22 April, Commander Manley H. Simons in command. As a naval transport, she made five round-trip voyages to France before the Armistice.

On 10 July, as she steamed homeward from her second voyage for the Navy, a lookout spotted a periscope rising from the water about 200 yards away. *Kroonland* opened fire and the fourth shot from her No. 4 gun "burst with a tremendous cloud of dirty blue smoke" exactly on the periscope. The submarine zig-zagged "erratically back and forth until she was directly in the disturbed water of our wake." The transport continued firing until the submarine disappeared, leaving an oil slick which could be seen for at least 15 minutes.

After the war *Kroonland* shuttled across the Atlantic returning American veterans. She decommissioned and was returned to her owner 1 October 1919. On 14 April 1920 she resumed commercial runs between the United States and Europe. In 1923 she transferred to Panama Pacific Line to sail between New York and San Francisco. She was scrapped in 1927.

K'thanga, see YP-132

Kukui

A former name retained.

(t. 677; l. 174'; b. 30'; dr. 12'6")

Kukui (lighthouse tender) was acquired from the Lighthouse Service by an Executive Order of 11 April 1917. She operated out of Pearl Harbor in the 14th Naval District for the entire period she was under naval jurisdiction. *Kukui* was returned to the Lighthouse Service under an Executive Order of 1 July 1919.

Kula Gulf

The night naval battle of 6 July 1943 between an American cruiser-destroyer task group under Rear Admiral W. L. Ainsworth and a powerful Japanese destroyer force in a 5-mile-wide gulf between Kolobangara and New Georgia, Solomon Islands. The task group sank one enemy destroyer and drove a second ashore, while Japanese torpedoes sank cruiser *Helena*.

(CVE-108: dp. 11,373; l. 557'1"; b. 75'; ew. 105'2"; dr. 32'; s. 19 k.; cpl. 1,066; a. 2 5", 36 40mm., 20 20mm., ac. 34; cl. *Commencement Bay*)

Vermillion Bay (CVE-108) was renamed *Kula Gulf* 6 November 1943; laid down by Todd-Pacific Shipyards, Inc., Tacoma, Wash., 16 December 1943; launched 15 August 1944; sponsored by Miss Dorothy Mott; completed by Willamette Iron & Steel Corp., Portland, Oreg.; and commissioned at Portland 12 May 1945, Captain J. W. King in command.

After shakedown and night carrier training off the West Coast, *Kula Gulf* departed San Diego 5 August for operations with the 7th Fleet in the Western Pacific. Steaming via Pearl Harbor and the Marshalls, she arrived Leyte Gulf, Philippines, 14 September. During the next 2 months she patrolled the East China Sea out of Okinawa and shuttled planes between Saipan and Guam. Assigned to "Magic-Carpet" duty, she departed Guam 17 November with 600 veterans of the Pacific fighting embarked and steamed to San Francisco, arriving 4 December. Between 10 December and 10 January 1946 she returned to the Far East; and, after embarking 1,520 returning veterans at Tientsin and Tsingtao, China, she sailed to the West Coast, reaching San Diego 26 January. She departed San Francisco for the East Coast 26 February, arrived Norfolk 16 March, decommissioned at Boston 3 July, and entered the Atlantic Reserve Fleet.

When the Korean conflict brought an urgent need for a greatly expanded fleet throughout the world, *Kula Gulf* recommissioned at Boston 15 February 1951, Captain Alden D. Schwarz in command. After shakedown out of Guantanamo Bay, Cuba, the escort carrier departed Norfolk 6 August and carried a cargo of airplanes to Casablanca, French Morocco. Following her return to Norfolk 1 September, she spent the next 15 months training pilots of helicopter, air-antisubmarine, and fighter squadrons to strengthen U.S. forces in Korea.

During May 1952 *Kula Gulf* supported Marine helicopter maneuvers on Vieques Island, Puerto Rico; and in October she operated as ASW screen to troop transports bound for Labrador. Following a modernization overhaul from January to July 1953, she resumed air-antisubmarine maneuvers in the Caribbean and off the Atlantic coast.

From 1953 to 1955 *Kula Gulf* helped perfect ASW techniques by participating in search and kill exercises with ships of the Atlantic Fleet. She played an important role in the development of more effective antisubmarine warfare tactics that help the Navy control the seas. In addition to ASW development, she also aided the advancement of helicopter warfare tactics, which are now so important during the struggle to repel Communist aggression in South Vietnam. *Kula Gulf* supported Marine vertical assault landing exercises at Vieques Island between February and April 1955. After returning to Norfolk 26 April, she entered Boston Naval Shipyard 13 May and Philadelphia Naval Shipyard 19 August for inactivation overhauls. She decommissioned at Philadelphia 15 December 1955 and joined the Atlantic Reserve Fleet. She was reclassified AKV-8 on 7 May 1959.

As Communist aggression in South Vietnam increased, the United States expanded efforts to protect the integrity and independence of the Republic of South Vietnam. This assistance posed vast logistic demands and created the need for additional sea power. Because of this urgent need, *Kula Gulf* was transferred to MSTs 30 June 1965 for use as an aircraft ferry. During the summer of 1965 she carried helicopters and troops of the 1st Cavalry Division from the East Coast to Vietnam. Since then she has continued aircraft shuttle operations between West Coast ports and American bases along the coast of South Vietnam into 1967.

Kumigan

(SP-97: t. 34; l. 76'; b. 13'; dr. 2'9"; s. 23 k.; cpl. 8; a. 1 1-pdr.)

Kumigan, a motor yacht built in 1917 by Great Lakes Boat Building Corp., was taken over by the Navy 8 May 1917 from Albert Pack of East Chicago, Ill., and 2 days later enrolled in the Naval Coastal Defense Reserve. However, she saw no service and was returned to her owner early in the summer of 1917.

Kuper, Charles P., see *Charles P. Kuper* (SP-1235)

Kuru, see *YP-102*

Kuwana II

Former name retained.

(SP-97: t. 34; l. 76', b. 13'; dr. 2'9"; s. 23 k.; cpl. 8; 1 1-pdr.)

Kuwana II, a motor boat, was built by Elco Launch Co., Bayonne, N.J., in 1911; leased from her owner, Frank E. Masland of Philadelphia; taken over and commissioned 2 June 1917, Chief Quartermaster Schofield, USNRF, in command.

Enrolled in the Naval Coast Defense Reserve 8 June, *Kuwana II* was assigned to the 4th Naval District as a section patrol ship. She sailed the Delaware Bay and Delaware River from Cape May, N.J., to Wilmington, Del., and guarded the submarine net at Fort Delaware. Based at Cold Spring Harbor, Cape May, she also patrolled coastal waters and served as a dispatch and training ship. *Kuwana II* was struck from the Navy List and returned to her owner 5 December 1918.

Kwajalein

The World War II battle of 31 January 1944, for Kwajalein Atoll in the Marshall Islands.

(CVE-98: dp. 7,800; l. 512'33"; b. 65'; ew. 108'11"; dr. 22'6"; s. 19 k.; cpl. 860; a. 1 5", 16 40mm., 20 20mm.; cl. *Anzio*)

Kwajalein (CVE-98), formerly *Bucareli Bay*, was launched 4 May 1944, by the Kaiser Co., Inc., Vancouver, Wash., under a Maritime Commission contract; sponsored by Mrs. Rudolf L. Johnson; acquired by the Navy 7 June 1944, and commissioned the same day, Comdr. R. C. War-rack in command.

After shakedown along the West Coast, *Kwajalein* cleared San Pedro 19 July 1944, bound for Espiritu Santo with passengers and a cargo of fuel and planes. Arriving 3 August, she sailed 4 days later to transport aircraft to Guam and pick up salvaged Japanese equipment for intelligence studies in the United States.

Following repairs at San Diego, *Kwajalein* got underway 7 October for operations as replenishment carrier. She loaded combat-ready aircraft at Manus and sailed for Eniwetok 5 November to replenish the carriers of Task Force 38 as they prepared for raids on Manila and the Visayas. Continuing operations from Ulithi, *Kwajalein* furnished the big carriers with the planes needed to drive the Japanese out of the Philippines. During January 1945, replacement aircraft roared from her decks to Task Force 38 flat tops for strikes on enemy air bases on Formosa and the China coast. *Kwajalein* returned San Diego 23 February for overhaul and additional aircraft before resuming operations 9 March.

From March to August *Kwajalein* carried aircraft on three cruises from Pearl Harbor to the western Pacific keeping carrier-based air groups at full strength for the massive carrier raids on the Japanese home islands. With the cessation of hostilities 14 August 1945, the carrier was assigned the task of returning Pacific veterans to the United States. She made four cruises to the Pacific Islands before arriving San Pedro 2 February 1946, from her final "Magic-Carpet" mission. On 23 April *Kwajalein*

cleared San Pablo Bay for Mukilteo, Wash., arriving there 3 days later. She decommissioned at Tacoma, Wash., 16 August 1946, and joined the Pacific Reserve Fleet. Her name was struck from the Navy List 1 April 1960, and she was scrapped in Japan the following year.

Kwajalein received two battle stars for World War II service.

Kwasind

In Longfellow's poem, a friend of Hiawatha known for his great strength.

(SP-1233: t. 303; l. 180'; b. 23'6"; dr. 9'3"; s. 16 k.; cpl. 63; a. 2 3", 2 mg.)

Kwasind (SP-1233), a steam yacht, was built by Robins Dry Dock & Repair Co., Brooklyn, N.Y., in 1914 as *Nokomis I*; then purchased from her owner, Horace Dodge, 9 May 1917. After conversion to Navy use at New York, she commissioned at New York Navy Yard 5 December 1917, Lt. Comdr. W. W. Ramsay in command.

Assigned to service in the Caribbean, *Kwasind* departed New York 9 December and sailed via Charleston and Guantanamo Bay to Santo Domingo, where she arrived 28 December. For the next 18 months she was based at Santo Domingo and sailed to Puerto Rico, St. Thomas, and Cuba with Marines and passengers. *Kwasind* remained in the Caribbean after the Armistice, sailing 9 June 1919 via Charleston for New York where she arrived 23 June. The ship decommissioned 5 July 1919 at New York and was eventually sold to W. H. Raab of Brooklyn 4 December 1919.

Kyes, James E., see *James E. Kyes* (DD-787)

Kyma, see *YP-559*

Kyne

Elden Francis Kyne, born 4 June 1910, in Ringgold, Nebr., enlisted in the Navy 1 February 1929. He was appointed Machinist 15 April 1941. Reporting on board *Astoria* (CA-34) 8 August 1941, Kyne was commissioned Ensign 15 June 1942. Ens. Kyne was killed in action 9 August 1942, when *Astoria* was sunk by Japanese naval forces during the battle of Savo Island.

(DE-744: dp. 1,240; l. 306'; b. 36'8"; dr. 8'9"; s. 21 k.; cpl. 186; a. 3 3", 2 40mm., 10 20mm., 9 dp., 2 dct., 3 21" tt.; cl. *Cannon*)

Kyne (DE-744) was laid down on 16 April 1943, by the Western Pipe & Steel Co., Los Angeles, Calif.; launched 15 August 1943, sponsored by Mrs. Alma Marion Kyne, widow of Ens. Kyne; and commissioned 4 April 1944, Comdr. A. Jackson, Jr., in command.

After shakedown along the West Coast, *Kyne* cleared Los Angeles 6 June 1944, to join the Pacific Fleet. Following training and escort duty at Pearl Harbor, *Kyne* was underway 12 August to screen a task force which brought material and ships for the impending Palau Islands invasion. She departed Manus 15 September as escort to transports filled with garrison troops and supplies, landing at Peleliu 20 September. *Kyne* sailed the same day as escort to a convoy carrying wounded marines from the scene of battle.

For the next 3 months the destroyer escort continued screening operations out of Ulithi for a fleet logistic support unit which replenished both Task Force 38 and Task Force 58. Departing Ulithi 2 January 1945, *Kyne* provided escort service for refueling operations in support of the Luzon landings 6 January. She remained on station in the Philippines before returning Ulithi 21 January to prepare for the Iwo Jima landings.

Operating together with support units, she departed Ulithi 8 February to provide a screen for refueling opera-

USS *Kwajalein* (CVE-98) on 11 June 1944, later reclassified AKV-34

tions during the Iwo Jima invasion. When that island was secure, giving the United States an air strip vitally needed as base for future B-29 raids on Japan, *Kyne* returned Ulithi 5 March. Sailing again 25 March as a screen to oilers, she made her way to Okinawa—the last step on the road to Japan. She continued screen and patrol operations for the support unit throughout most of the Okinawa campaign, returning Ulithi 21 May.

Kyne cleared San Pedro Bay, P.I., 26 June to screen escort carriers as they provided air support for the invasion near Balikpapan, Borneo. Following the Borneo landings, she returned to the logistic support group during July as planes of the fleet rained fire on the Japanese home islands. Upon cessation of hostilities 14 August and, after 43 days at sea, *Kyne* arrived Tokyo Bay 28 August

as part of the occupation force. Departing Yokosuka 2 October, the destroyer escort arrived Philadelphia 23 November via Pearl Harbor and Long Beach. *Kyne* decommissioned at Green Cove Springs, Fla., 14 June 1946.

During 1947 *Kyne* was designated in service, in reserve, and operated as a reserve training ship out of Fort Schuyler, N.Y. She recommissioned 21 November 1950, Lt. Comdr. Carl L. Scherrer in command; and was assigned to the 3d Naval District as a reserve training ship. For the next nine years, *Kyne* provided the training necessary to maintain a well-drilled reserve, ready to defend the nation during any crisis. *Kyne* decommissioned 17 June 1960, at New York and remains in the Atlantic Reserve Fleet at Philadelphia.

Kyne received six battle stars for World War II service.

An 18th century map of the eastern shore of North America

USS *Alabama* (BB-60) 1 December 1942

USS *Arizona* (BB-39) Memorial at Pearl Harbor

PART I

ENSHRINED FIGHTING SHIPS OF THE CONTINENTAL, THE UNITED STATES AND THE CONFEDERATE STATES NAVIES

All over the United States there are museums and battlefield memorials, but there are no monuments on the high seas where our nation's fate has often hung in the balance. Enshrined warships can in some measure take their place. These ships are living museums, most being in their own environment near the stormy seas, but in a snug harbor. To visit and walk the deck of a ship launched in 1797 for example is an exciting and unforgettable experience.

This part covers enshrined fighting ships that are maintained by public spirited individuals through private enterprise and without the aid of Federal monies. Five exceptions exist to this general rule: USS *Constitution*, a commissioned Navy ship at Boston; USS *Arizona* and USS *Utah* at Pearl Harbor where they sank on 7 December 1941; USS *Missouri* (BB-63) as a part of the Navy's Reserve Fleet at Bremerton, Wash.; and *Intelligent Whale*, a very small submarine, at the Navy Yard, Washington, D.C.

No attempt has been made to create a complete history of each ship but rather to develop a listing of each by name and show the location of the ship. Complete histories on each will be included in the applicable volume of the *Dictionary of American Naval Fighting Ships*. For the convenience of the reader, Part VI of this listing provides an alphabetical index by State and city. The ships are not indexed but rather are listed alphabetically in the text.

USS *Alabama* (BB-60)

Dedicated on 9 January 1965 to the memory of the men and women of all the armed forces from Alabama who served so gallantly in World War II and Korea, USS *Alabama* has since been the

featured attraction of Mobile's 100-acre Marine Park, located on the south side of U.S. Route 90, just east of the Tensaw Bridge.

After commissioning in 1942 and underway training, *Alabama* reported for duty in the Pacific where, with her powerful 16-inch guns and antiaircraft batteries, she earned nine battle stars for her outstanding service in World War II.

Alabama was formally accepted by the USS *Alabama* Battleship Commission, a State sponsored but privately supported organization, in Seattle, Wash., 7 July 1964. The 35,000-ton battleship was then towed 5,600 miles to Mobile, Ala., through the Panama Canal which she cleared with only 12 inches on each side. Daily progress has brought the battleship closer to her wartime condition and appearance. In June 1965, an OS2U "Kingfisher" seaplane was placed on board; and several 20mm. guns have been added to her mighty armament. Public facilities and displays are in the Battleship park area.

During the first year of operation as a memorial, *Alabama* was visited by close to a half million people. In full view from Route 90, she is open every day from 8 a.m. to sunset. For information, address: USS *Alabama* Battleship Commission, Post Office Box 65, Mobile, Ala. 36601.

"The more you hurt the enemy, the less he will hurt you."

—Rear Admiral Alfred Thayer Mahan.

USS *Arizona* (BB-39)

Public Law 85-344, an act to authorize construction of United States Ship *Arizona* Memorial, was approved on 15 March 1958.

Partially submerged in Pearl Harbor, where she sank on 7 December 1941, *Arizona* proudly flies the National Ensign as she did on that day of infamy. Though no longer in commission, the American flag is raised and lowered aboard her in morning and sunset ceremonies as is the practice on board all commissioned ships of the Navy.

In recognition of her sacrifice Admiral Radford said on 7 March 1950:

“From today on, the USS *Arizona* will again fly our country’s flag as proudly as she did on the morning of 7 December 1941. I am sure the *Arizona’s* crew will know and appreciate what we are doing.”

At a cost of \$526,000 in public and private funds, the simple wooden platform erected for his speech was replaced in 1961 by a concrete memorial structure in gleaming white over the sunken hulk. Relics of *Arizona* may be viewed in a museum to the left of a ceremonial bridge, while to the right, white marble plaques bear the list of those killed on that fateful Sunday morning. The memorial was dedicated on 30 May 1962 in remembrance of all the valiant men who gave their lives for our country in the Pearl Harbor attack. More than half the men killed on that day died in the battleship *Arizona*.

Platforms which extend outward from the memorial accommodate visitors boarding or returning to shore. The Navy provides shuttle-boat service to *Arizona* leaving frequently from Halawa Gate Landing, Pearl Harbor. *Arizona’s* bells are now treasured relics. One hangs in Student Union Tower at the University of Arizona, Tucson; the other bell, displayed for many years at the First National Bank in Phoenix, Ariz., is now at Pearl Harbor as part of the *Arizona* Memorial.

“A nation’s character is the sum of its noble deeds.”

—Henry Clay.

USS *Banning* (PCE-886)

The patrol craft or escort ship is designed to screen coastal convoys and conduct antisubmarine patrol. Besides its ability to operate offensively and defensively against submarines, this type ship

can destroy surface or aerial targets at close range. These small guardians of the Fleet also proved valuable on air-sea rescue missions. *Banning* and her 97-man crew rendered yeoman service to the Pacific Fleet. During the first dozen years of her life her varied career included duty as a weather station in the Philippines for a year and as an interisland transport operating out of Tutuila for another year following World War II.

Banning also supported United Nations Forces in Korea. With the outbreak of hostilities in Korea in 1950, many ships of the Reserve Fleet were activated. *Banning* was among those recalled. Outfitted with a new suit of electronic gear, she assisted in the support of the Korean operation. Most noteworthy were her participation in the mock invasion of Kojo and her escort work with the 1st Marine Division at Inchon.

Placed in Reserve after Korea, *Banning* was transferred 15 July 1962 to the Port of Hood River, on the Columbia, near Portland, Oreg. Visits to her can be arranged through the Hood River Chamber of Commerce, whose members and associates contribute many hours of devoted labor to maintain their ship in top condition.

“Do your duty—fight until you sink.”

—Admiral Franklin Buchanan at Mobile Bay, 1864.

USS *Cairo*

Cairo was one of the famous ironclad river gunboats built by James B. Eads, which were known as “Pook Turtles” because of their ungainly appearance and their designer, naval constructor Samuel Pook, who worked under the supervision of Commander John Rodgers and Captain Andrew Foote. These warships spearheaded the Union thrust into the South along the Mississippi River and its tributaries, which split the Confederacy and won the war in the West.

Cairo was sunk 12 December 1862, first victim of a “torpedo” (mine) in combat on the Yazoo River. This was during the Yazoo Pass Expedition, a part of General Grant’s wide sweep to capture strongly fortified Vicksburg—“Gibraltar of the West.”

Visitors begin conducted tour of USS *Banning* (PCE-886) at Hood River, Oreg.

USS *Cairo*

She was rediscovered by National Park historian Edwin C. Bearss and geologist Warran Grabau in the summer of 1956. U.S. Navy divers and underwater demolition experts assisted with the removal of ammunition, including treacherous black powder, found in the magazine.

Cairo attracted wide attention during the difficult salvage operation. After restoration at Pascagoula, Miss., she returned to Vicksburg as the main attraction of an admirable local museum. The salvage of *Cairo* has been a joint venture of State and county organizations under the administration of the Mississippi Agricultural and Industrial Board.

“He who holds the sea must be master of the empire.”

—*Cicero, “Ad Atticus.”*

USS *Constellation*

Celebrated as our oldest warship afloat, built under an appropriation by the American Congress *Constellation* is a center of attention at Baltimore. She returned to her home port in July 1955 to be preserved as a national shrine by the Star Spangled Banner Flag House Association. The *Constellation* Committee of this small group of dedicated patriots has expended endless hours of volunteer service to preserve and restore this “living” example of America’s strong and great tradition. This splendid frigate, the “Yankee Race Horse” by nickname in the 1790’s, has seen significant progress in her return to her original appearance.

Much of the restoration is being financed by the sale of commemorative “coins” struck from the bronze spikes once used in the ship. These are not only collector’s items, but serve as life-time passes which entitle the bearer to free admission to the ship. When work is completed, she will be berthed in Baltimore Harbor at Fort McHenry. Already designated a National Historical Shrine, *Constellation* may be visited on the downtown Baltimore waterfront at the pier on Pratt Street.

One of the ship’s 6,000-pound anchors remains on display at the Naval Station in Newport, R.I., where she served as a training vessel for naval cadets in her last years in commission. There, too,

Fleet Admiral King flew his flag in her as Commander, U.S. Atlantic Fleet.

“I wish peace from the bottom of my soul, but I desire to see us prepared for war in every respect. . . .”

—*Commodore Thomas Truxtun in a Letter to Timothy Pickering, 8 December 1807.*

USS *Constitution* (IX-21)

“Old Ironsides” earned her sobriquet in fierce combat with HMS *Guerriere* 19 August 1812 when the heavier gunned British ship opened fire and the shot fell in the sea after glancing ineffectually off the hull of *Constitution*. When scheduled to be broken up for scrap, an effective measure to save her was Oliver Wendell Holmes’ stirring lines:

“Ay, tear her tattered ensign down!
Long has it waved on high,
And many an eye has danced to see
That banner in the sky;
Beneath it rung the battle shout,
And burst the cannon’s roar;
The meteor of the ocean air
Shall sweep the clouds no more.”

On her decks are enshrined some of the proudest traditions of the American people. “Old Ironsides” has become a living symbol of the Navy itself. A favorite frontispiece for school texts since the turn of the century, she was chosen by the Post Office Department in 1964 as one of the three symbols of our heritage—together with the eagle and Liberty Bell—to appear on a 4-cent blue stamped envelope. She is one of Boston’s leading tourist attractions and is especially sought out by foreign travelers.

Constitution may be visited outside the main gate of Boston Naval Shipyard, close to historic Bunker Hill in Charlestown, a stone’s throw from where she was launched in 1797. Proudly she flies her pennant as our oldest commissioned warship afloat, with the further distinction of being flagship of Commandant, 1st Naval District.

USS *Constellation* in 1893

“If that fellow wants a fight, we won’t disappoint him.”

—*Captain Isaac Hull,*
USS *Constitution* 1812.

The launching of the *Constitution*

Launching of USS *Holland* (SS-1), Crescent Shipyard, Elizabeth, N.J., 17 May 1897

Holland's Prototypes of USS *Holland* (SS-1)

John Philip Holland's first submarine, a steam-powered midget only 14 feet long, made experimental dives in the Passaic River, N.J., in 1878 for the Fenian Society, a group seeking independence for Ireland. Holland's project had been rejected by the U.S. Navy in 1875. Prevailing factors included the Nation's stringent economy of the 1870's and the impracticability of an effective sea-going submarine with existing technology. Experience gained with this one-man model led Holland, an immigrant schoolteacher in Paterson, N.J., to build his three-man *Fenian Ram* in 1881. He made frequent dives in New York Harbor. These two submarines were the forerunners of 54-foot USS *Holland* (SS-1) that the Navy bought from the Holland firm, 11 April 1900, to inaugurate the "Silent Service".

The first Holland product was raised from the Passaic River in 1927. She and *Fenian Ram* are on exhibit in Paterson, N.J., a few miles northwest of New York City's George Washington Bridge. The earlier submarine rests in the City of Paterson Museum, Broadway at Summer Street, while *Fenian Ram* is in West Side Park.

"I have always felt relieved when a naval officer has arrived on the scene because he always kept within the situation."

—John Hay, Secretary of State.

Intelligent Whale

On exhibit for many years as a relic at the New York Naval Shipyard, Brooklyn, opposite the main entrance to the Commandant's headquarters, was this hand-cranked, 30-foot experimental submarine. With the closing of the yard in 1966, she now is exhibited at the Navy Memorial Museum, Naval Historical Display Center, Washington Navy Yard.

Intelligent Whale was laid down during the Civil War and condemned in 1872. This was the United States' last official effort to develop an undersea warship until important engineering and electrical developments of the late 19th century made submarines practical.

Intelligent Whale, manned by six to 13 persons, could submerge for several hours, and make about 4 knots underwater. Plans for the submarine were proposed by Scovel S. Merriam, and financ-

ing and construction were largely by Augustus Price and Cornelius S. Bushnell. Mr. Halstead was the principal designer and operator of *Intelligent Whale*. Her sinking and condemnation came after his death when his heirs tried to complete the contract without his experience. This early submarine may be seen daily, along with many other interesting outdoor exhibits in the old Washington Navy Yard not far from the

U.S. Capitol. The stirring Navy Memorial Museum before which the submarine is displayed may also be visited every day except Sunday.

“ . . . if they had had two of those things in Manila, I never could have held it with the squadron I had.”
—Testimony of Admiral George Dewey, 1901, on military value of submarines.

Intelligent Whale

USS *Massachusetts* (BB-59)

Representative of the ultimate in U.S. Naval power at the opening of World War II, *Massachusetts* is the sixth battleship built in the Commonwealth of Massachusetts in the 20th century. She arrived from Norfolk, Va., 12 June 1965 for "Welcome Home, Mamie" ceremonies at State Pier, Fall River. She is enshrined there, in the shadow of the Braga Bridge (Interstate Route

195), as a permanent memorial to all war veterans of the Commonwealth and a monument to the Bay State's traditional shipbuilding skill. *Massachusetts* was first opened to the public at Fall River, 31 July 1965. Many thousands of visitors have boarded this great dreadnaught of World War II since then.

Massachusetts played a major role in the Casablanca action 8 November 1942. By August 1945

USS *Missouri* (BB-63)—16-inch projectiles in flight.

A commemorative plate in her deck marks the spot above which the Instrument of the Japanese Surrender in World War II was signed on board USS *Missouri* (BB-63).

she had won 10 more battle stars while adding mighty firepower to the Pacific Fleet from the Gilbert Islands to Japan. *Massachusetts*, south of Tokyo when hostilities ceased, had recently fired 265 of her 16-inch projectiles into industrial plants along the coast of Honshu. Upon arriving off Norfolk in 1946, the mighty battleship completed her last assignment when her crew manned the rail for President Truman, embarked in the newly commissioned carrier *Franklin D. Roosevelt*.

“If we fight, hit hard and break clean. There is glory enough for us all.”

—*Captain E. M. Whiting on board Massachusetts off Casablanca, November 1942.*

USS *Missouri* (BB-63)

This noted 45,000-ton battleship—illustrious symbol of VJ-Day—is at the Puget Sound Naval Shipyard, Bremerton, Wash. In Tokyo Bay, on her “surrender deck,” the formal capitulation document was signed by Japanese Premier Shigemitsu, bringing World War II to a close. A bronze plaque imbedded in *Missouri*’s deck marks the historic spot.

Next “Mighty Mo” became symbolic of American seapower in the Eastern Mediterranean. In response to strong Soviet pressure against Iran,

Turkey, and Greece—early manifestations of the Communist expansionism which precipitated the Cold War—the formidable warship arrived Istanbul, Turkey, 5 April 1946. Her presence in the Bosphorus underscored America’s determination to thwart the Russian thrust toward the ancient searoads of the Mediterranean and helped preserve the precarious peace in the troubled Middle East.

Again the symbol of American capability to protect freedom, *Missouri* returned President Truman and his family from the Rio de Janeiro Conference in September 1947. At this historic meeting, the United States joined the nations of Latin America in negotiating the Inter-American Treaty of Reciprocal Assistance, which remains the foundation for joint defense of the Western Hemisphere.

Following the invasion of the Republic of South Korea by North Korean troops in June 1950, *Missouri* once again steamed to the Western Pacific where she had first become a symbol of America’s modern seapower. As the first battleship to reach Korean waters, she unleashed her mighty guns during the campaign which, spearheaded by the brilliant amphibious invasion of Inchon, repelled the initial Communist advance. During ensuing months she cruised along both coasts of the war-torn peninsula and pounded important enemy positions with devastating gunfire.

While helping to contain the Communist aggression in Korea, this powerful vanguard of the

USS *Massachusetts* (BB-59) 4 July 1944

CSS *Muscogee* in the process of restoration

Pacific Fleet continued to serve the Nation and the free world as both a weapon of war and an instrument of peace until 26 February 1955 when she decommissioned at Bremerton, Wash. Although now in Reserve, "Mighty Mo" remains very much a part of the Navy and is a popular center of attention at Bremerton. Visited by more than 100,000 people during the Seattle Century 21 Exposition in 1962, she can best be reached by a once-daily, weekday, 75-minute guided bus tour of the Pacific Reserve Fleet at Bremerton.

"We will win only by fighting."
—*Fleet Admiral Chester Nimitz.*

CSS *Muscogee* (or *Jackson*)

Launched in December 1864 at Columbus, Ga., this Confederate ironclad was captured and burned before commissioning by Federal troops during Wilson's cavalry raid on Columbus, Ga., 17 April 1865. Her remains, raised and preserved by the Georgia Historical Commission, are priceless relics at the Confederate Naval Museum in Columbus.

Discovery of this gunboat added significantly to present day knowledge of Confederate naval construction and design. Until recently it was presumed that *Muscogee* was a centerwheel ironclad

steamer. The remains of this ship cast doubt as to the traditional theory of her propulsion, as the evidence now points to twin-screw machinery.

"America can make every product we need for the preservation of freedom; only men can make America."

—*Admiral Arleigh A. Burke, Commencement Address at the U.S. Naval Academy, June 1958.*

CSS *Neuse*

The ram *Neuse*, a flat-bottom, shallow-draft ship, was designed for duty principally in the sounds and rivers along the North Carolina coast. This twin-screw steamer of 376 tons, 158 feet long, with a draft of 7 feet, carried a crew of 150 officers and men.

She was burned and sunk by her own crew in March 1865 at the approach of General Sherman's Army from Georgia. Her hull has been raised and restored for public display at the Governor Richard Caswell Memorial site just off U.S. 70A, 2 miles west of Kinston, N.C. "Coins" of historical interest, struck by the local committee, are helping to finance enshrinement of this ship that lay on the bottom of the Neuse River for nearly 100 years.

CSS *Neuse* under reconstruction

“Every attempt to make war easy and safe will result in humiliation and disaster.”

—General W. T. Sherman, Personal Memoirs.

USS *Niagara*

Relief flagship of Commodore Oliver Hazard Perry in the Battle of Lake Erie, 10 September 1813, was the 110-foot brig *Niagara*, of 20 guns. Raised from the sands of Misery Bay near Erie during the centenary of the battle and reconstructed by the Commonwealth of Pennsylvania from the remains, *Niagara* may now be visited at the foot of State Street, Erie, Pa. After transferring his flag, inscribed with heroic words of Captain James Lawrence, “Don’t Give Up the Ship!”, from *Lawrence* to *Niagara*, Perry went on to victory and penned the immortal, “We have met the enemy and they are ours . . .”

“Aim not only to hit first, but to keep hitting, and oftener than the other fellow.”

—Fleet Admiral E. J. King.

USS *North Carolina* (BB-55)

First of the Navy’s modern, 35,000-ton battle-ships, *North Carolina* is berthed off the channel of the west bank of Cape Fear River, in full view of downtown Wilmington, N.C. This imposing memorial was dedicated 29 April 1962. Everything above her main deck is open to the public—officers’ quarters, examples of the crew’s living compartments, combat information center and, most impressive, three huge 16-inch gun turrets. This capital ship, a veteran with 12 Pacific battle stars, was known affectionately for years as “The Showboat”. Now she is one in a new sense—a new departure in telling the Navy’s story to the Ameri-

USS *Niagara*

can public. Some 2 million visitors have boarded *North Carolina*. Since 1 April 1965, they have been treated to a "sound and light" dramatic enactment of her career. Splendid illumination and animation, stereophonic sound, guns belching realistic fire and smoke captivate and inform up to 1,000 visitors during a typical 45-minute produc-

tion of "The Immortal Showboat"—first spectacle of its kind in this country.

North Carolina, the third ship so named, is a veteran of every major Pacific campaign of World War II from the time of the landings on Guadalcanal in 1942 until the formal signing of the document for the surrender of Japan on board *Mis-*

USS *North Carolina* (BB-55) at Wilmington. Photo by Hugh Morton

sour 2 September 1945. During 40 months of combat duty in the Pacific, she steamed over 300,000 miles and was six times reported sunk by the Japanese propagandist, "Tokyo Rose".

"Hit hard, hit fast, hit often."

—Fleet Admiral William Halsey, Jr.

USS *Olympia*

Commodore George Dewey's flagship led the Asiatic Squadron past the batteries on Corregidor into Manila Bay at daybreak, 1 May 1898. At 5:40 Dewey ordered *Olympia's* Captain, "You may fire when you are ready, Gridley!" By 12:40, Spain no longer had a fleet in the Philippines.

Today, our oldest remaining steel warship, built in 1895, is beautifully restored through the efforts of public-spirited citizens working through the Cruiser *Olympia* Association. *Olympia*, filled with stirring historic objects, is a major tourist attraction in Philadelphia, berthed in the Delaware River on the North Side of Municipal Pier, foot of Race Street. She may conveniently be included in a tour of our national treasures—such as the original Liberty Bell, Independence Hall, New Hall, U.S. Marine Corps Museum, and in time, Pemberton House Army-Navy Museum, which is being developed as part of the Independence Hall Complex.

Olympia, a protected cruiser, was built in San Francisco and launched there 5 November 1892. She cruised in Asiatic Waters until arriving Bos-

USS *Harvest Moon* Scuba divers are probing area where she sank to determine the possibility of raising her. Photo by Walter McDonald. See page 709.

Philadelphia, the Revolutionary War Gondola at the Smithsonian Institution

ton via the Suez Canal in 1899. Following duty in the North and South Atlantic, she sailed 28 April 1918 for Murmansk, Russia. A tour in the Mediterranean, return of the Unknown Soldier in 1921, a midshipman cruise and then Philadelphia Navy Yard in 1922 for decommissioning, completed her service as an active warship. Slated for the scrap pile in 1954, the public-spirited citizens of Philadelphia rescued Admiral Dewey's famous flagship and by 1958, she was completely restored.

"To defeat the enemy, come to grips with him and fight him."

—Fleet Admiral Chester Nimitz.

***Philadelphia*, Revolutionary War Gondola**

The Continental gondola *Philadelphia* has been acquired by the Smithsonian Institution (U.S. National Museum) in Washington, D.C. *Philadelphia* is our oldest ship extant. She fought gallantly in the Battle of Valcour Island on Lake Champlain on 11 October 1776 as a unit of the fleet that delayed British invasion from Canada, an action that greatly influenced the American victory at Saratoga the following year. *Philadelphia*, a small gunboat, carried a crew of 45 men. She lay on the bottom of Lake Champlain from 1776 to 1935.

The gondola's battle scarred hull, in a remark-

Pioneer

able state of preservation, is one of the main attractions at the Smithsonian's new Museum of History and Technology, Constitution Avenue at 14th Street NW. In addition to much of the ship's equipment, the shot that presumably sank her is prominently displayed.

"The Sea and ships are an integral part of this country's past, present, and future."

—*Lyndon Baines Johnson.*

Pioneer, Confederate Privateer Submarine

Long a fixture of Jackson Square in front of the Cabildo, New Orleans' own submarine *Pioneer* was moved to nearby Presbytere Arcade at Louisiana State Museum in 1957. Visitors to the Old Quarter of the city should be sure to inspect her. It was from their experience with *Pioneer* that Horace L. Hunley and his colleagues went on to construct two other pioneer submarines at Mobile, Ala.—an unnamed submersible boat, often called "*Pioneer II*," and the famous *H. L. Hunley*, first submarine to sink a ship in combat.

This first *Pioneer*, a two-man privateer, was started in 1861 to counter U.S. Navy moves to patrol Lake Pontchartrain. Completed early in 1862 from quarter-inch riveted iron plates cut from old boilers, she made several descents in the Lake and, during her trials, succeeded in destroying several practice targets, including a small schooner. Before *Pioneer* could attack a Federal ship, however, Flag Officer Farragut surprised New Orleans from the sea, beginning the dismemberment of the Confederacy by driving a wedge up the Mississippi. *Pioneer* was scuttled hastily to avoid capture and lay on the bottom for many years, while Hunley and his associates fled to Mobile to resume submarine building with renewed vigor. The war was long over before *Pioneer* was raised, and installed in Jackson Square.

"Gladly would I sell my life for success."

Words of H. L. Hunley just prior to his death in CSS H. L. Hunley. From the Mobile Advertiser and Register—16 November 1863.

USS *Texas* (BB-35) at San Jacinto Battleground. Photo courtesy of Harper Leiper Studios

USS *Texas* (BB-35)

This combat veteran of two world wars, preserved by the people of Texas in 1948, is on exhibit off the busy Houston Ship Channel. The historic battleship is the crowning touch of the remarkable San Jacinto Battleground. The *Texas* preservation project was the first to establish a coordinated ship-and-shore memorial to a state's naval namesake and encouraged other groups to create similar exhibits. Fleet Admiral Chester W. Nimitz was present at the dedication.

Texas (BB-35) is the third ship of the U.S. Navy named for the State of Texas. By demon-

strating the fighting spirit of the "Lone Star State" to the enemy in two world wars, this gallant ship proved worthy of her name.

Commissioned at Norfolk in 1914, she cruised in Mexican waters to secure redress of grievances and uphold United States' rights against the brutality of General Victoriano Huerta, who had ousted Mexico's President. She patrolled with the British Grand Fleet in World War I.

At the outbreak of war in Europe, 1 September 1939, *Texas* was ordered on neutrality patrol in the North Atlantic. Later, she joined the task force which landed 35,000 troops in North Africa. Bombarding munition dumps while her scout

USS *Utah* (BB-31)

planes bombed tanks with depth charges, this great battleship slugged it out with shore batteries until the success of the invasion of France was well assured.

In the Pacific, early in 1945, she was again on the front lines bombarding Iwo Jima and Okinawa. After the surrender of Japan she joined other ships in Magic Carpet Duty. Her last voyage was from Norfolk to Galveston in 1948 where she rests today, a justly proud addition to San Jacinto State Park. A short drive by freeway from downtown Houston brings the visitor to this panoramic naval display.

"Come on, Texas."

Signal from escorting destroyer as Texas, struck by a 280mm. shell, continues to oppose German guns on Normandy, June 1944.

USS *Utah* (AG-16, ex-BB-31)

This once powerful battleship served the Nation well for some 30 years—until the bombing of Pearl

Harbor. There, parts of her wreckage may be seen today, partially righted and turned inshore near where she capsized on the far side of Ford Island. Her bell is displayed by the Utah Historical Society in Salt Lake City, another bell is displayed at Naval Supply Depot, Clearfield, Utah.

Utah was a veteran of the Vera Cruz expedition and World War I Atlantic convoy duty. In 1931 she was transformed to a mobile target and anti-aircraft training ship (AG-16). *Utah* made a lasting contribution to the new sciences and proved her outstanding service in developing radio control target skills, anti-aircraft gunnery, dive bombing and amphibious tactics. She played a large role in the outstanding readiness of the U.S. Navy anti-aircraft gunners and carrier pilots when World War II opened.

"Control of the seas means security; control of the seas means peace; control of the seas means victory."

—John F. Kennedy.

USS *Utah* (BB-31)'s Bell on display at Clearfield, Utah

Masts of two of our great World War II fighting ships looking out over the sea by which they valiantly helped save America. San Francisco (see p. 715) Portland (see p. 714)

PART II

MAJOR PARTS AND COMMEMORATIVE DISPLAYS OF FIGHTING SHIPS OF THE UNITED STATES AND CONFEDERATE STATES NAVIES, AND CONTEMPLATED MAJOR SALVAGE PROJECTS

The second part of this description of ship exhibits contains major parts, displays and memorials of ships whether they be in the planning stages, now building or completed. As in Part I, no effort has been made to create a ship's history. These sketches index and catalogue those ships that have been or are about to be memorialized and show physical locations of the major parts and the memorials of famous fighting ships that no longer exist. Detailed historical sketches are contained in the appropriate volume of the *Dictionary of American Naval Fighting Ships*.

CSS *Arkansas*

A citizens' group in the Baton Rouge, La., area is interested in raising the remains of this Con-

federate ironclad, hero of the defense of Vicksburg commanded by the redoubtable Issac Newton Brown. Confederate Secretary of the Navy, Stephen R. Mallory truly observed, "Navy history records few deeds of greater heroism or higher professional ability" than her single-handed engagement with Farragut's and Davis' flotillas in the Mississippi, 15 July 1862.

"Good men with poor ships are better than poor men with good ships."

—Rear Admiral Alfred Thayer Mahan.

USS *Balao* (SS-285)

The conning tower-fairwater of this successful World War II submarine is on display at Admiral

CSS *Arkansas*

USS *Balao* (SS-285)—conning tower

Willard Park, outside the Naval Historical Display Center, Navy Yard, Ninth and M Streets S.E., Washington, D.C. *Balao*, first of her class, won nine battle stars in 10 patrols, sinking half a dozen Japanese merchantmen.

“We shall never forget that it was our submarines that held the lines against the enemy while our fleets replaced losses and repaired wounds.”

—*Fleet Admiral Chester W. Nimitz.*

CSS *Chattahoochee*

Plans are underway at Columbus, Ga., to raise and restore this ship sunk in the Apalachicola River, December 1864. This famous steam gunboat was a wooden twin screw bark with a complement of 120 men. Her boilers blew up, 27 May 1863, and she sank. *Chattahoochee* was raised and taken to Columbus, Ga., for repairs. On 1 November 1864, she was reported as thoroughly repaired and awaiting installation of boilers salvaged from wreck of CSS *Raleigh*. *Chattahoochee* has been described as having, “. . . three masts, one yard on foremast, one on mainmast. Hull black and has bowsprit.” When the Confederates abandoned the Apalachicola River, *Chattahoochee* was sunk just below Columbus, Ga., to prevent capture.

“ . . . no one will do wrong who lays his vessel alongside of the enemy and tackles with the ram.”
—Admiral David Farragut at Vicksburg,
July, 1862.

USS *Flasher* (SS-249)

With over 100,000 tons of enemy shipping sunk during World War II, this ship ranked as a high scorer in the Submarine Service. By herself, she sank nearly 2 percent of the total enemy tonnage destroyed by U.S. submarines.

Dedicated 4 July 1964, her conning tower, bridge, shears, and periscope are a permanent memorial at the U.S. Naval Submarine Base, New London, Conn., to all undersea heroes who lost their lives in World War II.

“The colors must never be struck.”

—Captain William Burrows, mortally wounded aboard *Enterprise* in action with HMS *Boxer*, 1813

USS *Franklin* (CV-13)

The fifth ship so named commissioned 31 January 1944. Before dawn of 19 March 1945 *Franklin* had maneuvered closer to the Japanese coast than had any other carrier during World War II. Her

CSS *Chattahoochee*, a wooden gunboat, was destroyed by Confederates to prevent capture. Some of her machinery, shown here, reveals that sledge hammers were used to disable the powerplant.

USS *Flasher* (SS-249)—conning tower

USS *Franklin* (CV-13) 26 April 1945

planes struck Honshu, the Japanese home island, and later Kobe Harbor. Suddenly a Japanese plane with semi-armor-piercing bombs made direct hits on *Franklin*. She lay dead in the water 50 miles from the Japanese coast and took on a 13° list. Burning fiercely, with no radio operable, *Franklin* was saved only by sheer valor and tenacity. Casualties totaled 724 killed and 265 wounded. Among those who saved many lives were Lt. Comdr. J. T. O'Callahan and Lt. (j.g.) Donald Gary, both Medal of Honor recipients. *Franklin* was taken in tow by *Pittsburgh* until she managed to get her speed up to 14 knots, to make for Pearl Harbor. She later sailed under her own power to Brooklyn, N.Y., where she was decommissioned in 1947. Her extreme damage made her unworthy of repair.

In 1966 *Franklin* was sold for scrap. Saved from *Franklin*, however, was her navigation bridge. The city of Norfolk, Va., will install this bridge in Norfolk as a permanent memorial to *Franklin* and her brave sailors.

"I'll never abandon ship, as long as a gun will fire."

—Commander Frederick Becton, USS Laffey, April 1945.

USS *Hartford*

During the Civil War, *Hartford* served as Admiral David G. Farragut's flagship in the actions at New Orleans, Vicksburg, and Mobile. For almost a century afterward, she was a familiar sight at Norfolk, Va., until she succumbed to old age and sank at her pier. The ship is no more, but mementos of her have found places in displays all over the eastern United States.

Many of these relics are now in the State of Connecticut, the location of the city after which *Hartford* was named. One of the ship's bells graces the city's new Constitution Plaza. The Navy League placed a bronze plaque with an anchor from the ship in a beautiful setting near the University of Hartford's North House administration offices on Navy Day, 1964. Connecticut Governor Abraham Ribicoff dedicated a second anchor memorial at the entrance to Mystic Seaport's yacht basin at Mystic, Conn.

The third of *Hartford's* anchors and one of her bells are among the many artifacts at the Naval Historical Display Center, Washington Navy Yard, in the National Capital. Across the Potomac River in the Pentagon, *Hartford's* skylight rests near the Secretary of the Navy's office.

David G. Farragut in *Hartford* bombards Forts Jackson and St. Philip en route to epic capture of New Orleans in 1862.

USS *Hartford* on 9 April 1901

USS *Harvest Moon*

Among the other relics at The Mariners Museum in Newport News, Va., the visitor finds the bilge pump, the gilded billethead, the fife rail, and a stanchion from *Hartford*. Her last anchor found its way to the exhibit at Fort Gaines on Dauphin Island in Mobile Bay, the scene of the actions which gave Farragut and the *Hartford* the adulation of a nation.

“The best protection against the enemy’s fire is a well-directed fire from our own guns.”

—*Admiral Farragut’s general order for passing Port Hudson, 1863.*

USS *Harvest Moon*

Flagship of Rear Admiral John A. Dahlgren, ordnance expert and Commander of the South Atlantic Blockading Squadron, *Harvest Moon* was sunk in Winyah Bay near Georgetown, S.C., 1 March 1865, by a Confederate “torpedo” (mine). The State of South Carolina and patriotic groups there plan to raise and preserve her as a Civil War monument.

“Should you be attacked . . . I shall expect of you, at all events, to defend her to the last man.”

—*Stephen Decatur.*

USS *Indiana* (BB-58)

The mainmast and two twin mount 40 mm guns of the second *Indiana* to serve the U.S. Navy have

been enshrined near the football stadium at the University of Indiana at Bloomington. An anchor is on view at Fort Wayne, and more than a thousand other relics have been placed in schools, museums, and exhibits throughout the State. Some 210 tons of her 12-inch armor plate now form a lead-lined laboratory for radiation research under the lawn of Salt Lake City’s medical center in the Utah State Capital. Another 65 tons serve a similar purpose at the VA Hospital, Hines, Ill.

The original *Indiana* (BB-1) was commissioned by Captain “Fighting Bob” Evans 20 November 1895. Her successor, BB-58, commissioned 30 April 1942 with the first *Indiana*’s 1898 battle flag flying.

Fast, tough, and powerful, she played an important part in the Pacific War. A unit in Vice Admiral J. F. Shafroth’s Task Group during July 1945, her 16-inch guns had a telling effect on targets on the Japanese island of Honshu.

“Cease firing, but if any enemy planes appear, shoot ’em down in a friendly fashion.”

—*Fleet Admiral William Halsey, Jr.*

USS *Maine*

In Arlington National Cemetery across the Potomac from Washington, D.C., the mainmast of the battleship, whose sinking triggered a war, is a memorial to the 260 men of the 355-man crew

USS *Maine* entering Havana Harbor

who died in Havana Harbor in 1898. Only 16 crew members escaped injury. Her foremast may be seen near the seawall at the U.S. Naval Academy, Annapolis. One anchor graces the memorial on Penn's Commons, Reading, Pa. Notable among other relics is a plaque, cast from *Maine* metal and dedicated to the "Americanism of Theodore Roosevelt" by his comrades in arms, on display at the Commissioned Officers' Mess at the Naval Station, Brooklyn, N.Y. A capstan is on display at Charleston, S.C.

USS *Maine* was commissioned in 1895 and was assigned to the North Atlantic Fleet. She cruised the Atlantic Coast from Maine to Key West and on 25 January 1898, she arrived Havana, Cuba. Her mission was to protect American interests during the Cuban revolt against Spain. On 15 February 1898 while moored to a buoy in Havana Harbor, she was rent in half by two explosions and sank within minutes. This appalling catastrophe precipitated the Spanish-American War.

"On the Presidential coat of arms, the American eagle holds in his right talon an olive branch, while in his left he holds a bundle of arrows. We intend to give equal attention to both."

—John F. Kennedy, "State of the Union Message, 1961."

USS *Michigan*—First U.S. Iron Warship

The bow of this sidewheeler, first iron hull ever built for the U.S. Navy, has been erected as a per-

manent memorial at the foot of State Street, Erie, Pa. In Erie her prefabricated sections, made in Pittsburgh, were fashioned into a hull. *Michigan* launched 5 December 1843. She spent over a century on the Great Lakes, 1844–1949, most of those years as the only ship of war on these inland waters. Renamed in 1905, when battleship *Michigan* was building, the "Original *Michigan*" is remembered with affection as *Wolverine* (later classified IX-31) by many a sailor who trained in her during the World War I era. Loaned to the City of Erie in 1927 as a relic, *Michigan* was scrapped in 1949.

"We are ready now, sir."

—Captain J. K. Taussig, *Arriving With Destroyer Division Eight in Queenstown May 1917 After an Arduous Crossing.*

Monitor-Merrimack (*Virginia*) Paintings

In Hampton Roads, off Newport News, Va., 9 March 1862, the first encounter between ironclads dramatized the opening of a new era in naval warfare. A plan proposed by a local editor and naval historian, Commander Alexander Crosby Brown, was adopted by the Newport News City Council in 1965: Oil paintings 4 feet by 8 feet are being executed by the muralist of Jamestown and Yorktown, Sidney E. King. The King oils are designed to be exhibited outdoor in heavy waterproof frames. The first depicts the 8 March battle when CSS *Virginia* (ex-USS *Merrimack*) destroyed

USS *Cumberland* and *Congress*, of the Hampton Roads Blockading Fleet. The work was unveiled in Christopher Newport Park late in September 1966. The second scene, the celebrated 4-hour ironclad battle of 9 March, is planned for 1968 at *Monitor-Merrimack* Overlook, near the mouth of Salter's Creek, east of Anderson Park. A large-scale diorama depicting the battle between *Monitor* and *Merrimack* is on display at The Mariners Museum, Newport News, Va. Another diorama exists at the Navy Memorial Museum, Naval Historical Display Center, Navy Yard, Washington, D.C.

“From their first volley at one another, modern naval history must date its birth.”

—G. E. Hopkins.

USS *Narwhal* (SS-167)

Built by the Navy Yard, Portsmouth, N.H., *Narwhal* commissioned 15 May 1930. Commencing her first war patrol 2 February 1942, she was one of the oldest submarines to participate in World War II. Credited with sinking seven Japanese ships including a river gun boat, *Narwhal* also served as a troop and cargo submarine. She supplied guerrilla forces with provisions and ammunition as well as being the carrier for covert troop landings.

Narwhal's two 6-inch deck guns, much used during her 13 war patrols, are permanently enshrined at New London, Conn. These guns may be viewed at the Submarine Base near Morton Hall.

USS *Michigan* Bow

NEWPORT NEWS BY JOAQUIN MILLER

THE HUGE SEA MONSTER, THE "MERRIMAC";
THE MAD SEA MONSTER, THE "MONITOR";
YOU MAY SWEEP THE SEA, PEER FORWARD AND BACK,
BUT NEVER A SIGN OR A SOUND OF WAR.
A VULTURE OR TWO IN THE HEAVENS BLUE;
A SWEET TOWN BUILDING, A BOATMAN'S CALL;
THE FAR SEA—SONG OF A PLEASURE CREW;
THE SOUND OF HAMMERS. AND THAT IS ALL.

AND WHERE ARE THE MONSTERS THAT TORE THIS MAIN?
AND WHERE ARE THE MONSTERS THAT SHOOK THIS SHORE?
THE SEA GREW MAD! AND THE SHORE SHOT FLAME!
THE MAD SEA MONSTERS THEY ARE NO MORE.
THE PALM, AND THE PINE, AND THE SEA SANDS BROWN;
THE FAR SEA SONGS OF THE PLEASURE CREWS;
THE AIR LIKE BALM IN THIS BUILDING TOWN—
AND THAT IS THE PICTURE OF NEWPORT NEWS.

COMPOSED BY THE "POET OF THE SIERRAS,"

JOAQUIN MILLER

1837 - 1913

ON THE OCCASION OF HIS VISIT TO NEWPORT NEWS IN THE
1860'S AS A GUEST OF SHIPYARD FOUNDER COLLIS P. HUNTINGTON.

THIS TABLET INSTALLED BY
THE BETHEL CHAPTER, UNITED DAUGHTERS OF THE CONFEDERACY,
1965

Monitor-Merrimac Plaque

"Go tell the Bashaw of Tripoli and the people of your country that in the future they may expect only tribute of powder and ball from the sailors of the United States."

—Lieutenant Andrew Sterret, Commanding Enterprise in the Tripolitan Wars, February, 1801.

Naval Museum

The U.S. Naval Historical Display Center is the national museum of the U.S. Navy, a memorial to all those who have served our beloved Nation at sea. This striking museum is filled with historic objects covering the stirring role of the Navy in

the history of the United States from 1775. The huge building is a historic site in itself, having been built in 1828 and later expanded into the Breech Mechanism Shop where all major caliber guns produced for the Navy were assembled.

Exhibits are arranged in chronological order commencing with the Revolutionary War, where John Paul Jones' deathless words "I have not yet begun to fight" are reenacted by a sound and visual display. The exhibit ends with the current operations of the U.S. Navy in outer and inner space. In the huge central area of the museum, thousands of items commemorate a great variety of the Navy's complex and far-reaching activities, including diplomacy, exploration, scientific achievement and

USS *Monitor* and CSS *Virginia* engagement 1862. From F. D. Roosevelt Collection. Painting by O. O. Davidson

missions of mercy. There are “please touch” displays for juniors as well as seniors. For instance, one may view the nearby countryside and the Anacostia River through a World War II submarine periscope. There is a ship model collection that President Kennedy started from boyhood, pieces from the illfated *Thresher* recovered by *Trieste* in 8,000 feet of water, and many pieces of ordnance from the 18th, 19th, and 20th centuries. Numerous dioramas narrate the highlights of the glorious achievements of our past and present naval heroes.

The museum is open daily except Sunday from 9 a.m. to 4 p.m. and there is no charge for admission. Upon your arrival at the Navy Yard, Washington, D.C., 11th and M Streets S.E., the guards at the M or 11th Street gate will direct you to the museum and the waterfront display. Ample parking is available adjacent to the museum as well as to the outside display area. The destroyer escort USS *Loefer* and the submarine USS *Drum*, World War II ships now used for Naval Reserve training, are moored nearby.

“The physical Navy ever changes, ever evolves. Our high traditions of loyalty, service, and devotion to duty endure.”

—Admiral Forrest Sherman.

USS *Oregon* (BB-3)

On 25 June 1925, USS *Oregon* (BB-3) was loaned to the State of Oregon to be berthed at Portland as a floating monument. USS *Oregon* was moored in Portland Harbor as a museum until World War II when the Navy recalled her for duty. Eventually she was scrapped but the city of Portland managed to salvage her mast and bow plate which are now standing in a special park on the Willamette River front. The Oregon Historical Society also preserved USS *Oregon*'s elaborate silver service, homeward bound pennant and other memorabilia.

Characteristic of the above and beyond the call of duty tradition of the U.S. Navy is the cruise of battleship *Oregon* when called on for duty in a crisis due to the impending war with Spain in 1898. She sailed around South America at a speed that astounded all naval experts. This alone would have given her an unparalleled record among battleships of the day but the culmination came in the great Battle of Santiago Harbor on 3 July when she took part in the action in which Spanish Admiral Cervera's fleet was destroyed.

Operations on the Asiatic Station, service as flagship of the Pacific Fleet, and duty as escort for transports of the Siberian Expedition in 1918 completed her commissioned service. During World

One of *Narwhal's* 6-inch guns on display near Morton Hall, U.S. Naval Submarine Base at New London

War II she served as a floating ammunition depot at Guam. In 1956 she was sold and towed to Japan for scrap.

“We come from a land that has always been brave, and therefore free.”

—*Thucydides*, Peloponnesian War.

USS *Portland* (CA-33)

The mast, open bridge, bell, and other artifacts from this heavy cruiser are preserved in Portland, Maine, as a memorial in Fort Allen Park overlooking scenic Casco Bay. A scant 2 months after her commissioning in 1933, she was the first ship

USS *Oregon* (BB-3) en route to Cuba in 1898

at the scene of the airship *Akron* disaster. Veteran of 24 major Pacific actions against Japan, and winner of a Navy Unit Commendation for heroic naval actions in the Solomons, she was the first *Portland* in the U.S. Navy and known affectionately as "The Sweet Pea."

"Don't tell me it can't be done—go out there and do it."

—*General Lucian K. Truscott.*

USS *Saginaw's* Gig

The gig in which heroic survivors of USS *Saginaw*, shipwrecked off Ocean Island, sailed 1,500 miles to Hawaii in 1871 to obtain aid for their shipmates, is at the Saginaw Museum, 1126 North Michigan Avenue, Saginaw, Mich. Generations

of Naval Academy Midshipmen will remember the gig when it was exhibited at the Naval Academy Museum. The gig is in storage in 1967 and not on public display.

"The best diplomacy is futile unless supported by naval and military power."

—*Rear Admiral Richard Wainwright.*

USS *San Francisco* (CA-38)

The shell-riddled navigation bridge of this fighting cruiser, second of her name in the Navy, is mute testimony to her valiant action in the Naval Battle of Guadalcanal, 12–15 November 1942. The bridge was preserved when a replacement had to be fitted during extensive repairs after the battle. It has been built into a memorial on

USS *Saginaw*'s gig

“Land’s End,” a 450-foot cliff overlooking the Golden Gate. *San Francisco*, commissioned at Mare Island in 1934, earned 17 battle stars and both U.S. and Philippine Republic presidential unit citations. She was scrapped in 1960.

“We all admire a ship that can’t be licked.”
—*Fleet Admiral Chester Nimitz.*

USS *Seawolf* (SS-197)

A monument to this famous submarine and her crew and passengers was unveiled 28 May 1967 by the Texas Chapter of the U.S. Submarine Veterans of World War II. The monument, a full size torpedo flanked by 3-inch guns, is located alongside USS *Texas* at the San Jacinto Battleground. During her 15 war patrols, USS *Seawolf* sank more enemy tonnage than any other American ship up to that time. She went down in 1944 while on a special mission carrying 30 Army commandos to the Japanese-held Philippines.

USS *South Dakota* (BB-57)

The beautiful memorial to *South Dakota* at North Sheraton Park, 12th and Kiwanis Avenue, Sioux Falls, S.D., will be unique when completed in 1968. Although more than 1,000 miles from the

oceans that floated the “Coyote State’s” powerful namesake, her spirit will be fittingly preserved in a manner unexcelled. The ship’s lifelines will recreate the perimeter of the battleship whose dimensions and contour will be faithfully reproduced. This will be even more apparent from the air. As if by a “sea change”, her main turrets will take the form of three reflecting pools of similar size and shape, while smaller pools will represent two of her 5-inch, 38-caliber gun mounts. In lieu of bridge and superstructure amidships will stand a museum housing mementos from her gallant Pacific years, when she was “Battleship X”, the ship the Japanese claimed to have sunk at least five times. The “Battleship X” name came from the press account of her shooting down 20 aircraft in one action off Guadalcanal before her addition to the Fleet had been declassified.

Battleship *South Dakota* was built in Camden, N.J., 1939 to 1942, first of a new class that included *Indiana*, *Massachusetts*, and *Alabama*. *South Dakota* went back to the Delaware River to be scrapped 21 years later, but she had won her fame across the world in the Far Pacific, with 13 battle stars and a unit commendation on her record.

Like those that have carried the message of *Constellation*, *Neuse*, and *Olympia*, attractive historical “coins” recalling *South Dakota*’s exploits have been struck by the commission to aid con-

USS *San Francisco* (CA-38)

USS *South Dakota* (BB-57) Memorial Artist's Conception

struction of this remarkable memorial. *South Dakota's* propellers are on display at the Washington, D.C. Navy Yard and at the entrance to The Mariner's Museum, Newport News, Va.

“Without a decisive naval force we can do nothing effective, and with it everything honorable and glorious.”

—George Washington, to the Marquis de Lafayette, November, 1781.

USS *South Dakota* (BB-57) propeller at Newport News, Va. Courtesy of The Mariners Museum

USS *Squalus* (SS-192)

Raised from a watery grave in the Isles of Shoals off New Hampshire after a diving mishap 23 May 1939, *Squalus* was reconstructed, and re-commissioned *Sailfish*. The operation that rescued 33 men from the partially flooded submarine was probably one of the most publicized of its kind in modern times, and a milestone in the art of naval salvage.

Although she saw very successful service in the Pacific War, sinking the Japanese escort carrier *Chuyo* and a number of transports, her conning tower, erected at the Portsmouth Naval Shipyard, Kittery, Maine, is a memorial primarily to the 26 men who lost their lives on board her in 1939.

“Uncommon valor was a common virtue.”
—Fleet Admiral Chester Nimitz, after
operations on Iwo Jima.

Submarine Memorial—Submarine Base Pearl Harbor, Hawaii

At the Submarine Base, Pearl Harbor, Hawaii, is a Submarine Memorial, the only one of its kind in the world. The memorial was completed in 1960 and dedicated to the officers and men of those submarines who made the supreme sacrifice. A total of 52 submarines were lost during World War II. Each bronze plaque represents a submarine and lists those lost in the undersea craft. The 52 submarines are:

<i>Albacore</i> (SS-218)	<i>Corvina</i> (SS-226)
<i>Amberjack</i> (SS-219)	<i>Darter</i> (SS-227)
<i>Argonaut</i> (SS-166)	<i>Dorado</i> (SS-248)
<i>Barbel</i> (SS-316)	<i>Escolar</i> (SS-294)
<i>Bonefish</i> (SS-223)	<i>Flier</i> (SS-250)
<i>Bullhead</i> (SS-332)	<i>Golet</i> (SS-361)
<i>Capelin</i> (SS-289)	<i>Grampus</i> (SS-207)
<i>Cisco</i> (SS-290)	<i>Grayback</i> (SS-208)

USS *Squalus* (SS-192) Memorial with memorial wreath of USS *Thresher* at Portsmouth, N.H.

USS *Swordfish* (SS-193) Memorial at St. Paul, Minn., September 1964

<i>Grayling</i> (SS-209)	<i>S-36</i> (SS-141)
<i>Grenadier</i> (SS-210)	<i>S-39</i> (SS-144)
<i>Growler</i> (SS-215)	<i>S-44</i> (SS-155)
<i>Grunion</i> (SS-216)	<i>Scamp</i> (SS-277)
<i>Gudgeon</i> (SS-211)	<i>Scorpion</i> (SS-278)
<i>Harder</i> (SS-257)	<i>Sculpin</i> (SS-191)
<i>Herring</i> (SS-233)	<i>Sealion</i> (SS-195)
<i>Kete</i> (SS-369)	<i>Seawolf</i> (SS-197)
<i>Lagarto</i> (SS-371)	<i>Shark</i> (SS-174)
<i>Perch</i> (SS-176)	<i>Shark</i> (SS-314)
<i>Pickrel</i> (SS-177)	<i>Snook</i> (SS-279)
<i>Pompano</i> (SS-181)	<i>Swordfish</i> (SS-193)
<i>R-12</i> (SS-89)	<i>Tang</i> (SS-306)
<i>Robalo</i> (SS-273)	<i>Trigger</i> (SS-237)
<i>Runner</i> (SS-275)	<i>Triton</i> (SS-201)
<i>S-26</i> (SS-131)	<i>Trout</i> (SS-202)
<i>S-27</i> (SS-132)	<i>Tullibee</i> (SS-284)
<i>S-28</i> (SS-133)	<i>Wahoo</i> (SS-238)

“We’ll take the big ones first.”

—Rear Admiral Daniel Callaghan.

USS *Swordfish* (SS-193)

A torpedo has been enshrined in the city of St. Paul, Minn., with plaques on either side—one sacred to the memory of the officers and men of *Swordfish*, lost off Okinawa in January 1945, after

sending to the bottom a dozen ships vital to Japanese supply lines; the other tablet honors all who perished in the other 51 World War II submarines still on patrol in dark waters, whose names are individually recorded in bronze. The St. Paul City Council, Minnesota building tradesmen, and the Minnesota Viking Squadron of the U.S. Submarine Veterans of World War II devoted much to the financing and building of this admirable memorial.

“All the Axis is hearing the tolling of the bells, and we are doing the rope pulling.”

—Fleet Admiral William Halsey, Jr.

USS *Trout* (SS-202)

A memorial to this hard-hitting submarine and her men, lost on her 11th patrol on 29 February 1944, was dedicated 15 June 1963 alongside the Cape Cod Canal between the Bourne and Sagamore bridges, not far from Falmouth, Mass. *Trout* carried out the gold and securities from Corregidor in January 1942 after supplying ammunition to prolong the defense, a memorable incident in the first of three patrols for which she received Presidential Unit Citations. She went on to sink a dozen Japanese ships and thus con-

Submarine Memorial Submarine Base, Pearl Harbor

tributed materially to the defeat of the Island Empire.

“I have not yet begun to fight.”

—*John Paul Jones in action against the Serapis, 23 September 1779.*

USS *Wahoo* (SS-238)

A Mark XIV torpedo with memorial plaque has been placed in Wahoo, Nebr., to honor an out-

standing submarine and crew. The display is in the court house yard, alongside highways 77 and 30A. Her active life was little over a year but *Wahoo's* “feats have become submarine legend.” In seven patrols, she sank some 20 Japanese ships and won a Presidential Unit Citation. Commander Dudley W. Morton’s motto is still often quoted: “Just sight, track, shoot and sink!” It was he and the last crew of *Wahoo* who sank a heavily laden transport in Tsushima Strait, and

"You may fire when you are ready, Gridley."
—Admiral George Dewey, Manila Bay,
May 1898.

USS *Wahoo* (SS-238)

USS *Washington* (BB-56)

A major display—including the bell, wheel, and other relics of the battleship *Washington*—is exhibited in the State Capitol, Olympia. It is an outstanding monument, beautifully executed, to the memory of a great fighting ship and all who sailed in her. Commissioned in May 1941, *Washington* won 13 battle stars from Murmansk to Okinawa, and sank the Japanese battleship *Kirishima*.

Some are born great, some achieve their greatness, but others have gratefully had greatness thrown their way. In World War II *Washington* met the conditions of greatness. In the Atlantic and in the Pacific she not once left her nation waiting. It has been said that *Washington* was “the ship that was always there.”

“It’s going to be a real party, boys.”

—*Captain C. P. Nelson, preparing to attack the Austrian naval base at Durazzo on the Adriatic, October, 1918.*

USS *West Virginia* (BB-48)

Commissioned December 1923, the last of the post-World War I era “super-dreadnaughts” was the second “WeeVee” in the U.S. Navy. She won battle efficiency laurels no less than five times between 1925 and 1934. Her mast is displayed in Morgantown at the University of West Virginia on the main campus near Oglebay Hall. Her flagstaff is on the Main Street side of the court-

house yard at Clarksburg and other relics are exhibited throughout the “Mountain State”. Sunk at Pearl Harbor, *West Virginia* was raised 30 May 1942, and returned to war in full fury in October 1944 to pour destruction upon the enemy from Leyte Gulf to Japan. She earned five battle stars in a few months.

USS *White Plains* (CVE-66)

The bell, flag and other mementos from “their ship” are displayed with pride by the citizens of White Plains, a suburban community in New York’s Westchester County, whence the ship received her name. Christened by Mrs. Marc A. Mitscher, 27 November 1943 at Vancouver, Wash., *White Plains* steamed over 150,000 miles in 1944–45, and won five battle stars from Kwajalein to Leyte and the Philippine Republic Presidential Unit Citation.

PROJECTS IN THE VERY EARLY PLANNING STAGE

1. William Penn’s *Welcome* at Philadelphia.
2. Replica of the Continental Frigate *Raleigh* at Portsmouth, N.H.
3. Baltimore Clipper Schooner of 1812 at Portsmouth, N.H.
4. USS *Key West*, *Tawah*, and *Elfin*.

Some effort is being made in the vicinity of Johnsonville, on the Tennessee River to locate these gunboats. They were sunk to prevent

PART III

FOREIGN WARSHIPS

This descriptive part of ships' exhibits deals exclusively with foreign warships on exhibit in the United States. All of the ships are submarines and they include the captured German *U-505*, plus the German, Japanese and Italian midget submarines. Though the midget submarines may not be boarded, a complete tour of the *U-505* may be made at Chicago for a nominal fee.

German Midget Submarines

Type Seehund II, *HU75*, from Hitler's Navy, is exhibited at the U.S. Naval Submarine Base, New London, Conn. Another example is well known to Washingtonians who visit Admiral Willard Park in the Navy Yard at Eighth and M Streets SE, Washington, D.C., as part of the Naval

Historical Display Center. At The Mariners Museum, Newport News, Va., there exists a German one-man torpedo carrying Marder type submarine. This type of submarine was used in the Mediterranean during World War II.

"You can get a man down quicker by hitting him on the same tooth than by hitting him all over."

—Rear Admiral Forrest Sherman, May 1945.

Italian Midget Submarines

The Mariners Museum at Newport News, Va., has on exhibit two Italian midget submarines. One of them, a two-man submarine described as

German Midget Submarine, Type Seehund II, at U.S. Naval Submarine Base, New London, Groton, Conn.

a "Pig," is of the type which penetrated the harbor of Alexandria, Egypt on 19 December 1941 and sank the British battleships *Queen Elizabeth* and *Valiant* and a large oil tanker. These craft were used during World War II to attach warheads to the keel of the ship to be destroyed. The operators of this type wore diving suits equipped with underwater breathing apparatus and rode in the open cockpit.

"Guts as well as guns win battles."

—Admiral Harold R. Stark.

Japanese Midget Submarines

The U.S. Naval Submarine Base, New London, Conn., has two of the two-man Japanese midget submarines on display. One was recovered intact off Cape Esperance in 1943; the other, used by the Japanese for instruction at the Submarine School, Yokosuka, has the sides cut away. These small submarines carried two 18-inch torpedoes plus a 200-pound demolition charge. Still others are on display at Admiral Willard Park as a part of the Naval Historical Display Center in the Navy Yard, Washington, D.C.; at the "Lighthouse Museum" of the Key West Art Historical Society in Florida; and at the Submarine Base, Pearl Harbor. A type of Japanese submarine known as a diverging boat and used for salvage work is on

display at The Mariners Museum, Newport News, Va. This craft was built in 1935 for the gathering of coral but did not prove successful. The exhibit is a full scale model found at Kure, Japan, at the conclusion of World War II.

"Ninety-five percent of my country's naval losses were attributed to action of the United States Navy."

—Admiral Osami Nagano, Imperial Japanese Navy, Interview, 1946.

U-505

This 740-ton German U-boat rests on dry land as a permanent exhibit outside the Museum of Science and Industry on the lake front at Lake Shore Drive and East 57th, Chicago. Admiral D. V. Gallery's Task Group captured her on the high seas off Cape Blanco, French West Africa, 4 June 1944. USS *Guadacanal* (CVE-60) was the flagship, accompanied by five destroyer escorts USS *Chatelain* (DE-149), *Jenks* (DE-665), *Pillsbury* (DE-133), *Flaherty* (DE-135), and *Pope* (DE-134). Moving *U-505* the 3,000 miles under tow from Portsmouth, N.H., to the Windy City was much simpler than the 800 feet overland from Lake Michigan, well described as a "unique engineering accomplishment." It also took a committee of 100 enthusiastic Chicagoans and other

Japanese Midget Submarine with sides cut away to reveal interior

Captured Japanese Midget Submarine, showing arrangement of torpedo tubes

admirers of Admiral Gallery, a native son, to raise the money needed for this last journey of *U-505*. Visitors may walk through this submarine from stern to bow and view the filter cover that the boarding party replaced to prevent the ship from sinking. For this action of conspicuous gallantry and intrepidity at the risk of life, Lt. Albert L.

David, USN, the leader of the boarding party, was awarded the Medal of Honor.

“When outstanding heroism was required, it was commonplace among the boarding parties.”

—Rear Admiral Daniel V. Gallery, reporting the capture of *U-505*, June 1944.

Bow on view of *U-505* in place before the Museum of Science and Industry in Chicago

PART IV

SELECTED MERCHANT SHIPS

Our country owes much to the sea. Since the settlement of the frontiers, we have been dependent on overseas commerce for our very existence. Without the essential materials imported over the high seas, our domestic economy could barely sustain itself. Most all of the chromium and manganese we need is imported by ocean-going ships. Our national interest in prosperity—in survival itself—is preserved by the use and protection of our nonmemorialized sea lanes.

It is fitting that our ships have recognized memorials for themselves and those sailors and ships that are lost at sea only to rest in unmarked graves. Part IV is a fitting and inspiring resume of some of the ships that have been preserved and others that have been reproduced and now exist as identical replicas of the originals, in order that the memory of the sea may be perpetuated.

Falls of Clyde

A full-rigged, four-masted wrought iron ship, built on clipper lines in 1878, *Falls of Clyde* is to

be preserved in Honolulu as a floating museum and focus for interest in Hawaiian maritime history. This 1809-ton ship is 266 feet long and was built in Port Glasgow, Scotland.

“There are no tombstones on the sea.”

—Rear Admiral Daniel V. Gallery.

Jamestown, Va., Ships

Moored at Centennial Park are full-rigged replicas of *Discovery*, 20 tons, *Godspeed*, 40 tons, and *Susan Constant*, 100 tons. These three ships brought the first permanent English settlers to America at Jamestown in 1607. The voyage to Jamestown was indeed a saga of seamanship. Considering the standards of 1607, *Susan Constant*, *Godspeed*, and *Discovery* were small ships and to cross the stormy Atlantic in wintertime is still not an easy task. The crews manning these sturdy ships were instinctive sailors, and much

The Jamestown Ships (l. to r.) *Susan Constant*, *Godspeed*, and *Discovery*. Photo courtesy of T. I. Williams

credit is due them and the shipwrights of England.

We must even consider their load list as exceptionally well planned, for they carried oats, barley, and wheat for seed. Other provisions included tools, beer and wine. Crew and passengers were fed a watery gruel or thin porridge, made from meal or flour and water.

The three Jamestown ship replicas were built in West Norfolk, Va. in 1956. They then moved to Jamestown Festival Park, where over 3 million visitors have boarded them since 1 April 1957.

“The ocean knows no favorites. Her bounty is reserved for those who have the wit to learn her secrets, the courage to bear her buffets, and the will to persist . . . in her rugged service.”

—*Samuel Eliot Morison.*

J. T. Leonard

At the Chesapeake Bay Maritime Museum, St. Michaels, Md., there exists the last of the round-bottom topmast sloops under her original rig. *J. T. Leonard* was built in 1882 on Taylor's Island, Md. She was one of the hundreds of round-bottomed, weatherly, sailing ships that carried farm cargoes to and from the tidewater towns of the Chesapeake. As the steamers took over this trade, ships like *J. T. Leonard* joined the bugeyes and the newer, flatter skipjacks in dredging oysters. *J. T. Leonard* with her lofty topsail gaff rig, had until the spring of 1966 sailed in the oyster fleet. She is an inspiring holdover from an earlier era of the dying age of commercial sail and plans are underway to preserve her. The Museum may be reached from the Nation's Capital by a motor trip east across the Chesapeake Bay Bridge and south on Maryland Route 33.

“If a man does not know to what port he is steering, no wind is favorable to him.”

—*Seneca.*

Kaiulani

The last American-built merchant square-rigger—a product of the Sewall Yard in Bath, Maine—was presented in a White House ceremony by the people of the Philippines to the American people early in 1965 as a symbol of the warm and

enduring friendship between the two nations. She is being restored at Subic Bay by the Maritime Historical Society of the District of Columbia, assisted materially by the Republic of the Philippines Navy. As a barge, *Kaiulani* had been hauling mahogany logs among the islands since World War II. Once restored to her former beauty, the stately ship will be sailed by a volunteer crew across the Pacific, “round the Horn,” and up the Potomac to a permanent site being reserved as an essential part of the new Maine Avenue waterfront development in the Nation's Capital. *Kaiulani* is the sole survivor of some 17,000 square-rigged merchant ships—Salem, East Indiamen, Clippers, down-Easters—built in this country over a span of three centuries.

“Any fool can carry on, but only the wise man knows how to shorten sail in time.”

—*Joseph Conrad.*

Mayflower II

A replica of the ship that brought the Pilgrims to the shores of New England is a memorial in Plymouth, Mass. Built in Britain, and given to the United States as a token of friendship, *Mayflower II*, taking 53 days was sailed across the Atlantic by a volunteer crew of 33 in 1957 and was present at the great International Fleet Review at Jamestown, Va., before being moored permanently at Plymouth, Mass.

“Of seas, ships are the grace.”

—*Ancient Greek saying.*

Mystic Seaport, Conn.

Many interesting ships and small craft form one of the outstanding tourist attractions of its kind anywhere. The Marine Historical Association's seaport village preserves the following representative vessels among the larger of its many and unusual exhibits:

Whaleship—*Charles W. Morgan*

Schooner—*Bowdoin*

Schooner—*Dorothy A. Parsons*

Danish Training Ship—*Joseph Conrad*

Ketch—*Gundel*

Schooner—*Regina M.*

Schooner—*L. A. Dunton*

Schooner—*Brilliant*

Kaulani, sailing as the *Star of Finland* in 1913. Photo courtesy of the National Maritime Historical Society

“But the ships, they carries me long, long ways,
an’ draws far places near.”

—*J. J. Bell, “On the Quay.”*

Santa Maria

In the Nation’s Capital on the Maine Avenue Waterfront at Pier 3, there rests a replica of Columbus’ ship *Santa Maria*. This reproduction, constructed nearly 500 years after Christopher Columbus made his voyage to America, is open

to the public. The ship was constructed in Spain using many 15th century tools and methods.

The replica was sailed to the United States and spent 1964 and 1965 at the World’s Fair in New York prior to her arrival in Washington, D.C.

“They that go down to the sea in ships, that do
business in great waters; these see the works of
the Lord, and His wonders in the deep.”

—*Psalm 107.*

Mystic Seaport, Conn.

San Francisco Ships

Balclutha

A stately windjammer built on the Clyde in 1886 at Glasgow, this Cape Horner of the eighties has been restored by the San Francisco Mariners Museum and is docked at Pier 43 on the Embarcadero near the Museum in San Francisco.

Gjoa

The famous Norwegian ship that transited the Northwest Passage in 1903–06 under Captain Roald Amundsen may be visited at Golden Gate Park, San Francisco.

San Francisco Maritime Historic Park

Four historic ships, not long ago seemingly consigned to a fate of rotting disintegration, once again are moored proudly in San Francisco Bay. Visitors may climb the gangplanks of sailing schooner *C. A. Thayer*, the sidewheel ferryboat *Eureka*, the steam schooner *Wapama*, and the hay scow *Alma*, all important types in San Francisco maritime history.

“Maritime skill is not a thing to be cultivated by the way or at chance times.”

—*Thucycides*, Peloponnesian War.

Star of India

Another Clyde-built square-rigger once sailing in the same fleet with *Balclutha* and *Falls of Clyde*, she is said to be the oldest iron-hulled windjammer still afloat. She is a landmark at San Diego, Calif.

Built in Scotland about 1863, *Star of India* is 205 feet long and carried a crew of 16. After a few years in the Indian trade *Star of India* became an emigrant ship, sailing to New Zealand and Australia. Her track out carried her via the Cape of Good Hope and she came home around Cape Horn. Originally she was the British ship *Enterpe* and after a brief interval under the Hawaiian flag, she became an American ship. In 1926 she was towed to San Diego and restored by her present owners, the Maritime Museum Association of San Diego.

“Ships are to little purpose without skillful seamen.”

—*Richard Hakluyt*.

Viking Memorial—Landfinder—*The Raven*

A Viking ship replica graces Lincoln Park, northeast of Center Street, near the zoo in Chicago, Ill. This Viking ship was donated by the Norwegian people on 6 November 1920. In 1893 this ship sailed from Bergen, Norway to New London, Conn. in 44 days and arrived at Chicago for the World's Fair, July 12th of that year, by way of the Erie Canal and the Great Lakes. The crew con-

sisted of Captain Magnus Andersen, two mates, eight sailors and a steward.

This type of ship was used by the Vikings in their ocean going explorations. This could have been the type and size ship that Leif Ericsson sailed in when he touched the east coast of North America about the year 1000.

“Let him who knows not how to pray go to sea.”

—*John Ray, English Proverb.*

The commerce and the navy of a people have a common identity and are inseparable companions. Each is necessary for the other, and both are essential to national prosperity and strength.

GIDEON WELLES,
Secretary of the Navy,
Annual Report to the President, 4 December 1865.

U.S. Monitor *Kickapoo*—The photograph was probably taken prior to her transfer to Admiral Farragut's West Gulf Blockading Squadron in July 1864. An interesting point is that the Eads' turret forward is outwardly identical to the Ericsson turret aft.

Hand colored pen and ink sketch of U.S. Monitor *Squando* apparently drawn by a watch-stander on the ship. The drawing was found in the ship's log at the National Archives.

Appendix II

MONITORS
of the
UNITED STATES NAVY
1861-1937

USS *Tallahassee* serving as a submarine tender during the World War I period—U.S.S. Submarines *K-5* and *K-6* are shown alongside on 10 December 1916 in a picture taken in Hampton Roads.

MONITORS

The first of her kind, *Monitor*, showing the scars of her historic battle with the Confederate ironclad *Virginia*.

Appendix II

MONITORS

In its own way, the 19th century was a time of change as remarkable and far reaching in its effect as that of today. This change not only entered into power at sea to make it even more potent than in its great past, but much of the change originated in or gained its impulse from the Navy.

Each era has produced several types of warships that of necessity range from small, fast ships to the heaviest and most powerful. The Ship-of-the-Line, short for Ship-of-the-Battleline, was the "Battleship" of the age of sail—the mightiest of warships that could give the most punishment and take the most. It was the citadel of seapower.

Steam propulsion, large rifled cannon and other developments brought a revolution. This slowly gathered headway up to the Civil War. Then almost overnight the world was startled into awareness of a new era by the dramatic events in Hampton Roads that culminated in the battle between *Monitor* and *Virginia* (*Merrimack*), 9 March 1862.

On that day the Ship-of-the-Line passed into history as the first strength of navies. No one type was on hand to replace it.

The next generation would witness much experimentation and wide diversity of thought concerning the new champion of the seas. Interestingly, as it evolved, both *Monitor* and *Virginia* provided key elements. They were grandparents of the mighty battleship that steamed majestically upon the stage of history as the 20th century opened.

Because of the success of *Monitor*, the United States built a large number of this heavily armored, turreted, low freeboard type—which gained the generic title "monitors". The appendix that follows is the first thorough and deeply researched study covering all of them. It is the result of deep interest and assiduous application by Lt. Richard H. Webber, USNR-R.

Lieutenant Webber began this study while serving in the Naval History Division on a full tour

of duty. When he finished his time in uniform and returned to the rough seas of civil life, he continued to work on this appendix even though swamped by law studies. He has completed this gem and shaped it for this volume during short tours of Naval Reserve training duty and civilian assignment with the Division.

I have read the manuscript in its various stages of development. Each time I have been impressed that what could have been simply a prosaic, statistical study has instead, while maintaining accuracy, become one filled with vivid interest. It is an ornament to our work and to Lieutenant Webber as a developing historian.

After the Civil War the Nation let its Navy decline beyond the danger point as it has imprudently after most wars. Yet even in these doldrum days wise leaders in the Navy achieved progress. This fine study brings out some of it.

As he peruses it, the reader will see some of the diversity of concept as naval thinkers sought to achieve the champion of the sea that would best serve the United States as she sped toward world leadership. Steadily there is growth toward a combination of *Monitor* and *Virginia*. As a few monitors were modernized or new ones laid down beginning in the 1870's, these monitors added freeboard and superstructure to develop toward the true ship type of hull represented by *Virginia*. With their centerline turrets and usually single caliber battery they were the true forerunners of the *Dreadnaught*.

This evolution and many other changes in the "new Navy" of the 1880's-90's resulted in the battleship which served our Nation well in its brief span of predominance. Today we live in another period of evolutionary change. It races at jet speed but in many respects is like that of the century ago. Of four battleships still in reserve, *New Jersey* recently recommissioned. Happily, as

another appendix covers, four States have preserved their namesakes as stirring mementoes of the courage, skill and devotion of the men who manned them.

This handful of surviving champions of another era sees three types of warships now contesting for the honor of supremacy—the aircraft carrier, the heavy guided-missile ship, the Polaris submarine. Will they evolve into a single type? Or with the vast expansion of capabilities air and underwater operations have brought navies in this century, will we have co-champions, each serving in its medium? This and many other interesting thoughts will come from Lieutenant Webber's fine study that follows. E.M.E.

The original *Monitor*, designed by John Ericsson and built under his supervision, was only the first of her type to serve in the U.S. Navy. Between 4 October 1861, the date that the contract for *Monitor* was signed, and 1937, the year in which *Cheyenne* (ex-*Wyoming*) was stricken from the Navy List, 71 monitors were ordered for the Navy, of which about 50 actually saw commissioned service. Many ships completed after the close of the Civil War in 1865–66 ran their trials and were immediately laid up at various Navy yards, never to be commissioned. For example, of the 20 ships of the *Casco* class only eight were commissioned, and of these, three were converted to torpedo boats before completion.

Between 1861 and 1865 the U.S. Navy made great strides in the design of turreted ironclads. The *Monitor* was a relatively small, single-turreted vessel mounting two XI-inch Dahlgren smoothbores as her main armament. Her size, low power

and speed, and certain design defects limited her to service on protected waters such as harbors and rivers. On her second excursion into the North Atlantic, in December 1862, she foundered off Cape Hatteras. The four ships of the *Kalamazoo* class laid down in 1863–64, on the other hand, were to have been true ocean-going "battleships." The largest ships ordered by the Navy during the Civil War except for the casemated ironclad *Dunderberg*, their designed displacement being about 5,700 tons, their armament of four XV-inch Dahlgren smoothbores, would have presented a formidable challenge to any of the European ironclads built during the same period. The experiences gained from the combat operations of the earlier monitors were incorporated into the *Kalamazoos* in the form of an improved ventilation system, heavier armor, higher speed, and improved habitability. Perhaps unfortunately for the growth and development of the Navy during the latter third of the 19th century, appropriations for the completion of this class were not forthcoming and construction was suspended to all intents and purpose in November 1865, when none of the ships had even been launched. Thus the Navy would not have an armored ship capable of matching her European counterparts until 1895 when *Maine* and *Texas* commissioned.

Monitors were not only built for coastal service. Nine, specifically designed for use on the Mississippi River and its tributaries, were laid down in the Midwest during the Civil War. Of these, six, *Neosho* and *Osage*, and the four ships of the *Milwaukee* class, were built to the designs of James B. Eads under his personal supervision. The four

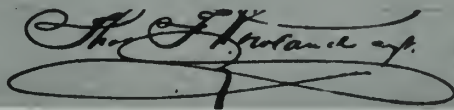

General plan of the U.S. Iron Clad Steamer *Monitor* "deduced from the original drawings of Captain John Ericsson and from actual measurements taken from the vessel"

This Agreement made and entered
into this ^{Twenty fifth} day of October A.D. 1861
by and between Thomas J. Rowland Agent
in behalf of the "Continental Iron Works"
Green Point Brooklyn of the first part and
Captain J. Ericsson of New York Major
John F. Winslow and John A. Griswold
of Troy N. Y., and C. S. Bushnell of New
Haven, Connecticut parties of the second part
Witnesseth that the party of the first
part for and in consideration of a certain
sum hereinafter mentioned to be paid to him
by the parties of the second part, hereby
covenants and agrees to furnish all the
tools and facilities, and do all the labor
necessary to execute the iron work of an
Iron Battery hull, (it being understood that
the new ship house now being erected is
at the expense of the parties of the second
part) said battery to be constructed from
the plans and directions which have been
or may be furnished the said party of
the first part by Captain Ericsson.
The party of the first part hereby further
agrees to do the said work in a thorough
and workmanlike manner and to the
entire satisfaction of Captain Ericsson

of the first part, the parties of the second part
hereby covenant and agree to pay the party

Thomas J. Rowland Agent

in the shortest possible space of time. And the party of the first part agrees to launch said Battery safely and at his own risk, and cost on the East River then and there ~~or~~ delivering her to the parties of the second part. It is also understood that in consideration of the liberal price hereafter stipulated to be paid by the party of the second part that in case the work is not prosecuted with all the vigor and energy practicable then and in that case Captain Brisson is hereby empowered to instruct the party of the first part to employ a greater number of men or to work a greater number of hours, and which instruction the party of the first part hereby agrees to comply with in order that the work may be completed in the shortest possible space of time as contemplated by this agreement. The parties of the second part hereby agree to furnish all the material for the construction of said Battery delivering the same at the "Continental Iron Works" as soon as practicable after receiving a specification of the materials required for the construction of said Battery. In consideration of the full and faithful ~~or~~ performance of these presents by the party of the first part, the parties of the second part hereby covenant and agree to pay the party

of the first part the sum of seven and one half (7½) cents per pound (net weight) of iron used in the construction of said hull by the party of the first part. Payments to be made weekly in proportion to the progress of the work, the balance remaining to be paid when the hull is launched.

The parties to this instrument hereby or mutually agree that should any alteration in the plans furnished by Captain Ericson be desired after the same have been executed the party of the first part shall make any alterations that may be deemed desirable by Captain Ericson at the expense of the parties of the second part. Witness the hands and seals of the said parties the day and year before written.

Milwaukees, built at the Union Iron Works outside St. Louis, each mounted a turret designed by Eads, as opposed to the Ericsson turrets of all other Civil War monitors. The Eads turret, handled by steam machinery, was probably the most sophisticated of the period. Other monitors, particularly certain of the *Casco* class, were built in the Midwest but were not designed specifically for river warfare.

After the Civil War, the ironclad fleet was allowed to deteriorate for want of sufficient funds to operate or adequately maintain the ships. In 1874-75, Secretary of the Navy Robeson began to rebuild selected monitors under the guise of repairs. In order to finance this effort, many of the old monitors were sold and it was during this period that the entire *Casco* class was disposed of. The five monitors upon which reconstruction efforts were concentrated were the four ships of the *Miantonomoh* class and *Puritan*. Although *Miantonomoh* recommissioned briefly during 1882-83, she was not complete, and none of

the ships actually completed modernization until 1891 when *Miantonomoh* was commissioned. As modernized, these monitors were new steel ships with lines characteristics of the monitors ordered during the last two decades of the 19th century.

In 1889 *Monterey* was laid down, to be followed in 1899 by the four monitors of the *Arkansas* class. However, conditions which had made the monitors so formidable during the Civil War had changed. Captain W. L. Rodgers, USN, in a paper entitled "The Influence of National Policies on Ships' Design," said:

The development was entirely suited to peculiar conditions, the outcome of a pre-existing political situation . . . The country at large and indeed the Navy . . . concluded that the ships which had given satisfaction once, necessarily would do so again . . . That very summer of the War (1898) Congress authorized the last monitors, obsolete before they were commenced.

U. S. Iron Clad War Vessel
PURITAN

Upper left, shiphouse at the Continental Iron Works in which USS *Monitor* was constructed during the winter of 1861-2; bottom, *Monitor* vs. *Virginia*.

USS *Monterey* in dry dock, 22 April 1896—She was the first ship to use the graving dock at what is now Puget Sound Naval Shipyard, Bremerton, Wash. The ram bow and full body, characteristic of “New Navy” monitors, can be seen.

Alexander C. Brown wrote probably the most trenchant epitaph for American monitors in his “Monitor-Class Warships” where he noted:

Monitors found their final employment as submarine tenders in World War I for which their low freeboard hulls made them well-suited. It is significant to note, however, that in this humble role they were ministering to the needs of that type of craft which had logically replaced them for as originally en-

visaged, monitors were designed to combine heavy striking power with concealment and the presentation of a negligible target area . . .

The scope of this study is a relatively narrow one, concentrating as it does upon monitors of the U.S. Navy. It is further limited by the criteria used to determine what ships were monitors. The principal criteria was that a ship so designated mount one or more revolving turrets. This excluded such a ship as *Keokuk*, a casemated iron-

This fine contemporary lithograph of *Roanoke* is an example of the ship “portraits” published by Endicott & Co. of New York, N.Y. Endicott & Co. was noted for its excellent craftsmanship and scrupulous attention to detail.

clad of the Civil War, and *Katahdin*, an ironclad ram of the "new Navy." Another criteria was that the ship have low freeboard and a low length to beam ratio. The latter excluded early American battleships such as *Oregon* which could be argued to meet other criteria. *Roanoke*, a razeed steam frigate converted to a turreted ironclad during the Civil War, has been grouped with the monitors although, technically speaking, her finer lines should disqualify her. The reason for her inclusion is that *Roanoke* was an early outgrowth of the "monitor" concept and seems to fit best in this group.

Design statistics have been supplied in most cases and, wherever possible, actual builder's dimensions have been included. The length is length overall as opposed to length between perpendiculars and the beam is extreme beam vice molded beam. Armament is that which the ship mounted when commissioned or, in cases of ships not completed, the designed armament. In this latter case, the dimensions are taken from the last series of plans found. The *Kalamazoo* class, for example, went through several revisions of design in which their dimensions were changed. Service speed has been taken from ships' logs or reports of trials whereas designed speed was drawn from contract specifications, where found, or other sources reporting on the projected capabilities of a particular ship or class of ships. Service speed has been defined, for purposes of this study, as maximum sustained speed in serv-

ice, although, where available, trial speed has been substituted.

This study, begun as a hobby, could not have been completed but for the kindness of Rear Admiral Ernest M. Eller, USN (Ret), and Captain F. Kent Loomis, USN (Ret), who made it possible for me to complete the research and writing during a tour of active duty and whose able comments and advice were invaluable. Credit must also be given to Lt. John C. Roberts, USNR, who collaborated with me on much of the research relative to James B. Eads and warship construction on the Mississippi River and its tributaries. Dr. William J. Morgan, Head of the Historical Research Section of the Naval History Division, Commander Clayton F. Johnson, USN, Head of the Ship's History Section of the Naval History Division, and Mr. James L. Mooney, editor of the *Dictionary of American Naval Fighting Ships*, were always willing to assist me with helpful comments and suggestions during the writing phase in particular. Other members of the Naval History Division who were most generous in their assistance were, Mr. Frederick S. Hicks, Miss Jo Ann Kluse, Mr. Frederick S. Meigs, and Mr. Richard A. Von Doenhoff. Thanks are also due to the numerous people at the Franklin Institute in Philadelphia, the National Archives, the Library of Congress, and many other museums and historical societies who so graciously assisted me in the preparation of this study.

COASTAL MONITORS

Monitor class (1) ; *Monitor*

The principle of the revolving turret equipped with heavy guns was, as John Ericsson himself was first to admit, an old one. However, it remained for Ericsson's engineering genius to give the principle practical application in the form of *Monitor*, the first turreted ironclad warship. The pioneering efforts of Ericsson in the United States and Captain Cowper Coles, R.N., in Great Britain would, after some 80 years of continuing development, culminate in the construction of USS *Missouri*, one of the most sophisticated battleships ever built.

At the time of her keel laying in October 1861 *Monitor* represented a complete break with traditional naval design. Instead of a standard ship hull *Monitor* had a large armored "raft" 172 feet by 43 feet 8 inches supported by a box-like iron hull 124 feet by 34 feet. The "raft" was designed to increase stability in a seaway thereby giving the guns a more stable platform for accurate fire and, also, to protect the hull structure proper from the effects of ramming. Numerous other technical advances were incorporated into *Monitor* including forced ventilation of living spaces, an armored pilothouse, and a protected anchor which could be raised without exposing any members of the crew to hostile fire. The contract price for *Monitor* was only \$275,000, a small investment for the creation of such an important weapons system.

It was with good reason that the London *Times* remarked, following receipt of news of the *Monitor-Virginia* engagement :

Whereas we had available for immediate purposes 149 first-class warships, we have now two, these two being the *Warrior* and her sister *Ironsides* [*sic*, *Black Prince*]. There is not now a ship in the English Navy, apart from these two, that it would not be madness to trust to an engagement with that little *Monitor*.

However, to put this observation in proper perspective, one must recall that Great Britain then had 13 other ironclads in some phase of construction and that the British ironclads were designed to fight in a seaway and could. Perhaps the single most serious fault of American monitors, and for that matter all monitors, was that they could not fight their main batteries in a seaway. The turret had to be combined with increased freeboard before it was generally accepted in the world's navies.

Statistics:

Length overall : 172'
Extreme beam : 41'6"
Draft : 10'6"
Depth of hold : 11'4"
Designed speed : 9 knots
Displacement : 987 tons ; 776 tons (old tonnage)¹
Engines : 2 Ericsson vibrating lever engines
Horsepower : 320 indicated horsepower
Boilers : 2 Martin
Bunker capacity : 100 tons coal

Screws : Single screw, 9' diameter
Complement : 49
Armament : 2 XI-inch Dahlgren smoothbores
Turret diameter : 20' inside
Armor : Turret, 8" ; side 4½"

Monitor:

Date of contract : 4 October 1861
Launched : 30 January 1862
Commissioned : 25 February 1862, Lt. John L. Worden
Builder :

Hull : Contract for ship awarded to John Ericsson ; hull subcontracted to Continental Iron Works, Greenpoint, N.Y.

Service speed : 6 knots

Passaic class (10) ; *Camanche*, *Catskill*, *Lehigh*, *Montauk*, *Nahant*, *Nantucket*, *Passaic*, *Patapsco*, *Sangamon*, *Weehawken*.

The *Passaic* class were single-turreted monitors designed as enlarged versions of the original *Monitor*. As such they were larger in all basic dimensions and incorporated a number of significant improvements. Among these were the substitution of a XV-inch Dahlgren smoothbore for one of the XI-inch carried by *Monitor*, the installation of a permanent stack, a pilot house on top of the turret, permanent standing ventilators, and an increase in the thickness of the armor. Contracts for the *Passaic* class were let in the spring of 1862 and the ships, with the exception of *Camanche*, were launched between 30 August 1862 and 17 January 1863. The lead ship of the class, *Passaic*, was commissioned 5 November 1862 and the last, again with the exception of *Camanche*, 15 April 1863. *Camanche* was built at the Jersey City, N.J., yard of Joseph Coldwell by Donohue, Ryan, and Secor, shipped in pieces to San Francisco and there reassembled. She was launched 14 November 1864 and commissioned 24 May 1865. The contract price for each ship was \$400,000.

Statistics:

Length overall : 200'
Extreme beam : 46'
Draft : 10'6"
Depth of hold : 12'6"
Designed speed : 7 knots
Displacement : 1,875 tons ; 844 tons (old tonnage)
Engines : 2 Ericsson vibrating lever engines
Horsepower : 320 indicated horsepower
Boilers : 2 Martin
Bunker capacity : 150 tons coal (approx.)
Screws : Single screw, 12' diameter
Complement : 75 (approx.)
Armament : 1 XV-inch and 1 XI-inch Dahlgren smoothbore ; *Camanche*, 2 XV-inch Dahlgren smoothbores ; *Lehigh*, *Patapsco*, 1 XV-inch Dahlgren smoothbore, 1 150-pdr. Parrott rifle.
Turret diameter : 21' inside
Armor : Turret, 11" ; side, 5"

¹"Old tonnage" was derived from volume by various arbitrary formulas.

 Service speed: 5 knots; 8½ knots on trials

Nahant (15 June 1869 *Atlas*, 10 August 1869 *Nahant*):

Launched: 7 October 1862
 Commissioned: 29 December 1862, Comdr. John Downes
 Builder:
 Hull: Harrison Loring at his City Point Works, South Boston, Mass.
 Machinery: Harrison Loring at his City Point Works, South Boston, Mass.
 Service speed: 5 knots

Nantucket (15 June 1869 *Medusa*, 10 August 1869 *Nantucket*):

Launched: 6 December 1862
 Commissioned: 26 February 1863, Comdr. Donald McN. Fairfax

²The reasons for the delayed completion of *Camanche* were several. "The contractors were obliged to give portions of the material of the *Camanche* to aid in the construction of other ironclads then building in New York, and required by the government for immediate use, as the rolling mills of the country were not of sufficient capacity to roll the kinds of iron required for that class of vessels as fast as it was wanted. When the *Camanche* was ready for shipment to San Francisco, the Government took the principal parts of her engines to replace parts of the engine of the *Weehawken*, which had broken down at Port Royal. The delay in replacing these parts of the machinery caused the *Camanche* to arrive in San Francisco in the winter (of 1863) instead of in the spring of that year." *Minutes of the Selfridge Board.*

Aquila, the ship which carried the disassembled *Camanche* around Cape Horn, sank at her pier in San Francisco on 16 November 1863, prior to being unloaded. The completion of *Camanche* was probably delayed for several months by the subsequent salvage operations.

³Peter Donohue and James F. Ryan were both from San Francisco, Calif.

Roanoke class (1): *Roanoke*

Roanoke was originally one of the proud class of steam frigates which included *Merrimack*. The latter serving as CSS *Virginia* became the first Confederate ironclad. Shortly after the battle in Hampton Roads between the original *Monitor* and *Virginia* it was decided to convert *Roanoke* into a seagoing turreted ironclad. Accordingly she was razed, her sides and deck were plated, and three Ericsson turrets were placed on board. Theoretically *Roanoke* was the most powerful monitor to be commissioned during the Civil War but, although she served in the North Atlantic Blockading Squadron for many months, she was never regarded as successful. The weight of the three turrets caused her to roll heavily, even in a slight seaway, and the hull was found to be too weak to adequately support them. Accordingly most of *Roanoke's* service was as a station or guard ship. It might be argued that *Roanoke* was technically not a monitor because of her

standard warship hull. However, her revolving turrets and low freeboard made her more like a monitor than any other extant type of warship.

Statistics:

Length overall: 265' ⁴

Extreme beam: 52'6"

Draft: 24'3"

Designed speed: 10 knots

Displacement: Not found; 3,435 tons (old tonnage)

Engines: 2 Horizontal direct acting engines

Horsepower: Not found

Boilers: 4 Martin

Bunker capacity: 550 tons coal

Screws: Single screw

Complement: 350 (approx.)

Armament: Forward turret, 1 XV-inch Dahlgren

smoothbore, 1 150-pdr. Parrott rifle; middle turret,

1 XV-inch Dahlgren smoothbore, 1 XI-inch Dahlgren

smoothbore; after turret, 1 XI-inch Dahlgren

smoothbore, 1 150-pdr. Parrott rifle

Turret diameter: 21' inside

Armor: Turret, 11"; side, 4½"

⁴ The length overall and extreme beam of *Roanoke* after her conversion have been difficult to establish. A plan of the turret deck found in the National Archives indicated a length overall of 278 feet. However, a contemporary lithograph noted her length as 265 feet and her beam as 52 feet 6 inches. As *Roanoke* was merely razed and armor plated the original dimensions of the ship remained approximately the same and for this reason the lithograph dimensions appear reliable. The addition of a ram might have altered the length overall to some extent but in the absence of adequate plan views it is difficult to estimate to what extent. The *Scientific American* of 28 July 1862 described the ram in the following terms: "This beak resembles a huge ax and is formed of plates twenty and a half inches thick, thus making nine inches of iron on the front edge."

Roanoke⁵

Builder: Novelty Iron Works, New York, N.Y.

Service speed: 6 knots

Dictator class (1); Dictator

Dictator and her near sister *Puritan* were contracted for in the summer of 1862 when the Navy was looking for a monitor which would be a true seagoing ship. *Dictator* was a single turreted, single screw monitor of unprecedented size and cruising range. Only the never completed *Puritan*, the four *Kalamazoos*, and *Dunderberg* would have surpassed her in size. In response to complaints from officers commanding monitors the overhang of the armored "raft" was considerably reduced and the raft itself was given finer "ship" lines. The apparent difficulty with the "raft" was that in a seaway the interaction of the ship and the waves tended to separate the raft from the hull, causing leakage. In fact, this is one of the explanations offered for the loss of the original *Monitor* off Cape Hatteras on 30–31 December 1862. *Dictator* was

⁵The hull of *Roanoke* was built at the Norfolk Navy Yard, Portsmouth, Va.; the machinery being constructed by Anderson, Delaney & Co., Richmond, Va. She was launched 13 December 1855 and commissioned 4 May 1857. On 20 March 1862 *Roanoke* was decommissioned for conversion into a seagoing ironclad.

designed as a high-speed monitor but, like most of this type, failed to reach her contract speed. The contract price was \$2,300,000 for *Dictator* and *Puritan* together.

Statistics:

Length overall: 312'

Builder:

Hull: Contract for ship awarded to John Ericsson; hull subcontracted to Delameter Iron Works, New York, N.Y.

This gathering of San Francisco notables was probably occasioned by the imminent launching of USS *Camanche* from the yard of Danohue, Ryan and Secor on 14 November 1864. USS *Camanche* was the only monitor to serve on the West Coast until the arrival of USS *Monadnock* in 1866.

USS *Camanche* fitting out alongside the pier shown in the center background of the two construction photographs. She was finally commissioned in May 1865.

Machinery: Machinery subcontracted to De-lameter Iron Works, New York, N.Y.
 Service speed: 9 knots

Puritan class (1) ; *Puritan*

The contract for *Puritan* was let to John Ericsson during the summer of 1862. The Navy indicated that it wanted *Puritan* to be a double turreted monitor but Ericsson resisted. His reasoning was that on a given displacement the weight involved in constructing a second turret could be better used in increasing armament and armor with the result that a single turreted monitor would always be more powerful than a multiturreted monitor of the same displacement. The counter argument was that by concentrating all armament in a single turret Ericsson was taking a chance that a minor mechanical accident in the turret machinery, for example, could put the whole ship out of action. Ericsson won the fight with the Navy and the design was altered to his specifications. However, delays in construction and the casting of the XX-inch smoothbores resulted in *Puritan's* not being com-

pleted by the end of the Civil War. Construction was suspended in 1865 and begun again in 1874 under the guise of repairing. When *Puritan* was finally completed in 1898 she was a completely different ship from that contracted for in 1862. The original contract price was \$2,300,000 for *Puritan* and *Dictator* together.

Statistics (original design, 1862) :^a

- Length overall: 340'
- Extreme beam: 50'

- Boilers: 6 Martin

^a For statistics on *Puritan* as commissioned in 1896, see "New Navy" Monitors, *Puritan* class, p. 787 ; for a further note on her reconstruction, see p. 754.

U.S. Monitor *Camanche* as she appeared in 1898—The Civil War monitors which were not fully rebuilt but which remained on the Navy List received additional deck ventilators and a light hurricane deck over the years, the once long and low clean lines becoming cluttered and ugly.

Deck of U.S. Monitor *Catskill*, off Charleston during early 1865—The Commanding Officer, Lt. Comdr. Edward Barrett, is seated in front of the armored pilothouse on top of the turret. Barrett's executive officer, probably Lt. Charles W. Tracy, is standing at his right. The XV-inch and XI-inch Dahlgren smoothbores which formed the armament may be seen through the gunports in the turret. The XV-inch on the left could not be run out of the port because of its size and had to be fired inside the turret through a box mounted in the interior.

U.S. Monitor *Lehigh* while operating on the James River during the spring of 1863

Deck and hold plans of U.S. Ironclad *Roanoke* prepared at the New York Navy Yard in February 1874

Bunker capacity: 1,000 tons coal
 Screws: Twin screw, 21' diameter
 Complement: Not found
 Armament: 2 XX-inch
 Turret diameter: 26' inside
 Armor: Turret, 15''; side, 6''

Puritan:

Date of contract: 28 July 1862
 Launched: 2 July 1864
 Commissioned: Never completed

Builder:

Hull: Contract for ship awarded to John Ericsson; hull subcontracted to Continental Iron Works, Greenpoint, N.Y.

Machinery: Machinery subcontracted to the Allaire Works, New York, N.Y.

Service speed: No service

Onondaga class (1); Onondaga

Onondaga was the first double-turreted monitor to be completed for service. After commissioning in March 1864 she was assigned to the North Atlantic Blockading Squadron. Operating in the James River *Onondaga* had only one brief skirmish with Confederate ironclads to mark an otherwise uneventful career. Subsequent to a Special Act of Congress the builder, George W. Quintard, was permitted to refund the purchase price to the U.S. Navy and *Onondaga* was returned to him 12 July 1867. Quintard, in turn, sold the ship to the French Navy, in which she served as a coast defense battleship until 1903. The original contract price was \$625,000.

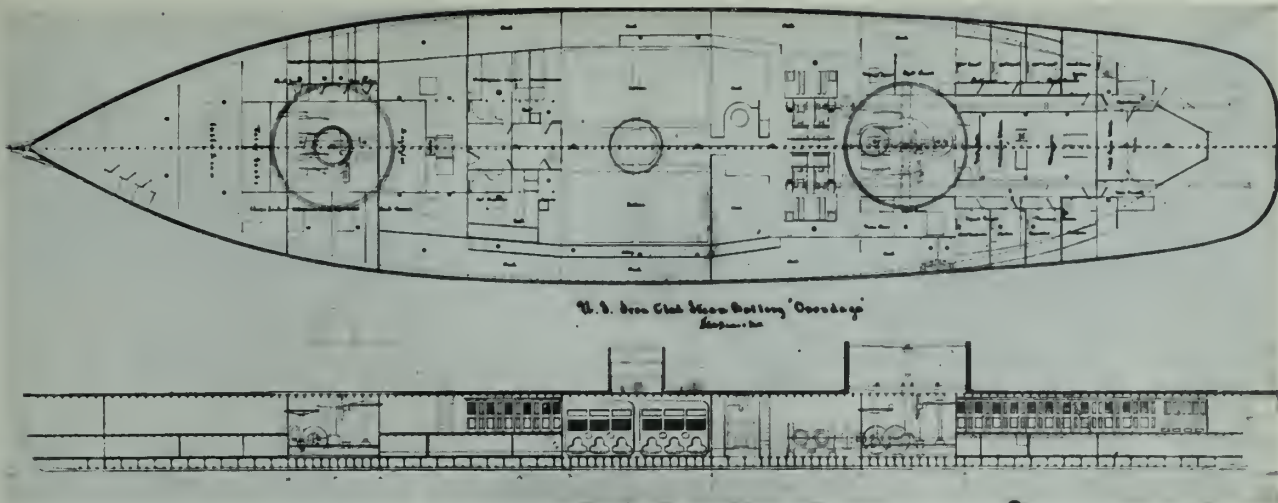

Statistics:

Length overall: 226'⁷
 Extreme beam: 49'3''
 Draft: 12'10''
 Depth of hold: 13'2''
 Designed speed: 9 knots
 Displacement: Not found; 1250 tons (old tonnage)
 Engines: 4 horizontal back acting engines
 Horsepower: 420 indicated horsepower
 Boilers: 4 Martin
 Bunker capacity: 268 tons coal but only sufficient buoyance for 160 tons
 Screws: Twin screw, 10' diameter
 Complement: 150 (approx.)
 Armament: 2 XV-inch Dahlgren smoothbores, 2 150-pdr. Parrott rifles
 Turret diameter: Double-turreted, 21' inside
 Armor: Turret, 11''; side, 5½''

Onondaga:

Date of contract: 26 May 1862
 Launched: 29 July 1863
 Commissioned: 24 March 1864, Captain Melancton Smith

⁷The plans and specifications of *Onondaga* indicate that she was to be 226 feet overall, with a beam of 49 feet, 3 inches. However, Chief Engineer James W. King, USN, in his 1877 report on European navies, described her as being 228 feet, 7½ inches × 51 feet, 2 inches × 13 feet, 2 inches. (The latter dimensions are probably more indicative of *Onondaga* as completed. Contractor designed ships appeared to vary more from the original specifications than Navy or Ericsson designs.)

Plan view of U.S. Monitor *Onondaga*

USS *Onondaga* on the James River during the Civil War—The bulletproof shields installed around the tops of the turrets on many monitors during 1863–65 are clearly visible.

Builder

Hull: Contract for ship awarded to George W. Quintard; hull subcontracted to Continental Iron Works, Greenpoint, N.Y.

Machinery: George W. Quintard at his Morgan Iron Works, New York, N.Y.

Service speed: 7 knots

Miantonomoh class (4); *Agamenticus*, *Miantonomoh*, *Monadnock*, *Tonawanda*

Although the four double-turreted monitors of the *Miantonomoh* class were laid down in 1862 only one, *Monadnock*, was completed in time to see Civil War service. However, following the war both *Miantonomoh* and *Monadnock* were sent on long ocean voyages as a demonstration of their efficiency. The former visited ports of the leading naval powers of Europe during 1866 and created a generally favorable impression of American warship design. *Monadnock* was transferred to the Pacific coast, reaching San Francisco by rounding Cape Horn. As a

class these ships were regarded by American naval officers as the best monitors built during the Civil War and when the "rebuilding" began in 1874–75 these four ships were chosen to be repeated. It should also be noted that apart from the four unfinished *Kalamazoos* this was the only class of monitors to be built in naval shipyards, a favorable reflection on the quality of those yards even during the mid-19th century.

Statistics (as commissioned, 1864–65):^a

- Length overall: 258'6"
- Extreme beam: 52'9"
- Draft: 12'8"
- Depth of hold: 14'
- Designed speed: Not found

^a For statistics on the monitors bearing these names as commissioned in 1891–96, see "New Navy" monitors, *Amphitrite* class, p. 787; for a further note on the reconstruction of these ships see p. 754.

U.S. Monitor *Agamenticus* as she appeared shortly after her completion in 1865—The *Miantonomahs* were the only Civil War monitors originally built with hurricane decks, with the possible exception of USS *Dictator*.

Displacement: 3,400 tons (approx.); 1,564 tons (old tonnage)
 Engines: *Agamenticus* and *Monadnock*, 2 Ericsson vibrating lever engines; *Miantonomah* and *Tonawanda*, 2 Isherwood horizontal back-acting engines
 Horsepower: Not found
 Boilers: 4 Martin
 Bunker capacity: 300 tons coal
 Screws: Twin screw, 10' diameter
 Complement: 150 (approx.)
 Armament: 4 XV-inch Dahlgren smoothbores
 Turret diameter: 23' inside
 Armor: Turret, 10"; side, 5"

Agamenticus (15 June 1869 *Terror*):

Date of contract: Not applicable
 Launched: 19 March 1863
 Commissioned: 5 May 1865, Lt. Comdr. C. H. Cushman
 Builder:
 Hull: Portsmouth Navy Yard, Kittery, Maine
 Machinery: I. P. Morris, Towne & Co., Philadelphia, Pa.
 Service speed: 9 knots

Miantonomah:

Date of contract: Not applicable
 Launched: 15 August 1863
 Commissioned: 18 September 1865, Comdr. Daniel Ammen
 Builder:
 Hull: New York Navy Yard, Brooklyn, N.Y.
 Machinery: Novelty Iron Works, New York, N.Y.
 Service speed: 6½ knots

Monadnock:

Date of contract: Not applicable
 Launched: 23 March 1864
 Commissioned: 4 October 1864, Captain John M. Berrien
 Builder:
 Hull: Boston Navy Yard, Charlestown, Mass.
 Machinery: I. P. Morris, Towne & Co., Philadelphia, Pa.
 Service speed: 9 knots

Tonawanda (15 June 1869 *Amphitrite*):

Date of contract: Not applicable
 Launched: 6 May 1864
 Commissioned: 12 October 1865, Comdr. William Ronckendorff
 Builder:
 Hull: Philadelphia Navy Yard, Philadelphia, Pa.
 Machinery: Merrick & Sons, Philadelphia, Pa.
 Service speed: 6½ knots

Canonicus class (9); *Canonicus*, *Catawba*, *Mahopac*, *Manayunk*, *Manhattan*, *Oneota*, *Saugus*, *Tecumseh*, *Tippecanoe*.

The ships of the *Canonicus* class were the first to incorporate the lessons of combat experience gained during

the *Monitor-Virginia* clash and the attacks on Charleston as well as the practical ones gained from day-to-day experience with what was virtually an entirely new approach to warship design. Although their outward appearance was very similar to the *Passaics*, the single-turreted monitors of the *Canonicus* class represented a major design advance. A protective glacis 5 inches thick and 15 inches high was placed around the base of the turret to prevent the turret from being jammed by a chance hit at its base; side armor was strengthened by the addition of a 4-inch stringer; deadwood aft was cut away in an effort to make the propeller more efficient; and ventilation was improved by the installation of more powerful blowers and a tall permanent vent from the head and galley. Perhaps more significantly, armament was increased to two XV-inch Dahlgren smoothbores from the one XV-inch and one XI-inch of the *Passaic* class. The contracts for the *Canonicus* class were let in September–October 1863; the first launching, of *Canonicus*, took place on 1 August 1863 and the last, of *Mahopac*, on 17 May 1864. The five ships which saw Civil War service were commissioned between April and September 1864. The contract price for each ship of the class was \$460,000.

Statistics:

Length overall: 225; *Catawba*, *Oneota*, 225'; *Tippecanoe*, 224; *Mahopac*, *Manhattan*, *Tecumseh*, 223'
 Extreme beam: 43'3"; *Mahopac*, *Manhattan*, *Tecumseh*, 43'4"; *Catawba*, *Oneota*, 43'3"; *Tippecanoe*, 43'0"
 Draft: 11'6" (approx.); *Manayunk*, 12'6"
 Depth of hold: 13'4"; *Mahopac*, *Manayunk*, *Manhattan*, *Saugus*, *Tecumseh*, 13'4"; *Catawba*, *Oneota*, 13'3"
 Designed speed: 13 knots
 Displacement: 2,100 tons; 1,034 tons (old tonnage)
 Engines: 2 Ericsson vibrating lever engines
 Horsepower: 320 indicated horsepower
 Boilers: 2 Stimers
 Bunker capacity: 150 tons coal (approx.); *Canonicus*, 150 tons; *Saugus*, 145 tons; *Mahopac*, 140 tons.
 Screws: Single screw, 13' diameter
 Complement: 100 (approx.)
 Armament: 2 XV-inch Dahlgren smoothbores
 Turret diameter: 21' inside
 Armor: Turret, 10"; side, 5" (plus 4" stringer)

Canonicus (15 June 1869 *Scylla*, 10 August 1869 *Canonicus*):

Date of contract: 15 September 1862
 Launched: 1 August 1863
 Commissioned: 16 April 1864, Comdr. Enoch G. Parrott
 Builder:
 Hull: Harrison Loring at his City Point Works, South Boston, Mass.
 Machinery: Harrison Loring at his City Point Works, South Boston, Mass.
 Service speed: 9 knots on trials

U.S. Monitor *Miantonomoh* on her historic trip to Europe in 1866-67—The ship is seen during a visit to Malaga, Spain, 24 December 1866—3 January 1867. The photograph was probably taken on 26 December 1866 when the log made specific mention of the ship being crowded with visitors.

under the command of Commander John C. Beaumont. U. S. N.
 Wednesday December 26th 1866. 273

Record of the miscellaneous events of the day.

From Midnight to 4. Weather clear and pleasant with light breeze from N. W.
 (Signed) D. McKay
 Atty Ensign

From 4 to 8. Weather pleasant light breeze from N. W.
 (Signed) J. F. Blanchard
 Atty Ensign

From 8 to Meridian. Weather pleasant with light breeze from N. W. At 9.30 quarters for inspection. At 11.15 got underway and steamed for Malaga Harbor. At 12 anchored in the harbor.
 (Signed) J. C. Young
 Atty Ensign

From Meridian to 4. At 13. "Augusta" made signal 48. answered with (1547). (222). "Augusta" answered (2292) Replied with (222). "Augusta" answered (1547). Weather clear and pleasant with light breeze from N. W. At 1.30 moved ship in Malaga Harbor. At 2 got spritine. Ship crowded with visitors.

 Atty Ensign

USS *Dictator* on the ways at Delameter Iron Works, New York, N.Y.—From the advanced stage of completion and the overcoats on the figures in the foreground, it seems likely that the photograph was taken in the winter of 1863, shortly prior to the launching of *Dictator* on 26 December 1863. Note the minimal overhang of the armored "raft" and the large screw, 21 feet, 6 inches, in diameter.

Catawba:

Date of contract : 10 September 1862

Launched : 13 April 1864

Commissioned : Never, but completed 10 June 1865 ; sold to Alex Swift & Co., Cincinnati, Ohio in 1868, who in turn sold her to Peru on 2 April 1868 ; served in the Peruvian Navy as *Atahualpa*

Builder :

Hull : Alex. Swift & Co. and Niles Works, Cincinnati, Ohio

Machinery : Alex. Swift & Co. and Niles Works, Cincinnati, Ohio

Service speed : Maximum sustained sea speed reported to be 6 knots in Peruvian service

Mahopac (15 June 1869 *Castor*, 10 August 1869 *Mahopac*) :

Date of contract : 15 September 1862

Launched : 17 May 1864

Commissioned : 22 September 1864, Comdr. William A. Parker

Builder :

Hull : Secor & Co., New York, N.Y., at the yard of of Joseph Coldwell, Jersey City, N.J.

Machinery : Secor & Co., New York, N.Y., at the Fulton Foundry, Jersey City, N.J. ; boilers and main engines subcontracted⁹

Service speed : At $\frac{5}{8}$ power 6.3 knots on trials

Manayunk : (15 June 1869 *Ajax*)

Date of contract : 15 September 1862

Launched : 18 December 1864¹⁰

Commissioned : No Civil War service, completed 27 September 1865

Builder :

Hull : Snowden & Mason, Pittsburgh, Pa., at their yard in South Pittsburgh

Machinery : Snowden & Mason, Pittsburgh, Pa., at their facility in Brownsville, Pa.

Service speed : 4.5 knots on trial run up the Ohio River

⁹ Among the boiler and machinery subcontractors were John Dolan & Co., East Brooklyn, N.Y. ; Samuel Secor, New York, N.Y. ; New Jersey Locomotive Works, Jersey City, N.J. ; Atlantic Steam Engine Works, Brooklyn, N.Y. ; and Lazell, Perkins & Co., Bridgewater, Mass.

¹⁰ *Manayunk* was ready to be launched in April 1864 ; but, according to the builder, the very low state of the Ohio River delayed the launching until December.

A lithograph of USS *Dictator* as she probably appeared during the Civil War—No photographs of USS *Dictator* have been located except for the preceding construction photograph.

Manhattan (15 June 1869 *Neptune*, 10 August 1869 *Manhattan*):

Date of contract: 15 September 1862
 Launched: 14 October 1863
 Commissioned: 6 June 1864, Comdr. J. W. A. Nicholson
 Builder:
 Hull: Perine, Secor & Co., New York, N.Y., at the yard of Joseph Coldwell, Jersey City, N.J.¹¹
 Machinery: Perine, Secor & Co., New York, N.Y., at the Fulton Foundry, Jersey City, N.J.; boilers and main engines subcontracted
 Service speed: 8 knots on trials

Oneota:

Date of contract: 10 September 1862
 Launched: 21 May 1864
 Commissioned: Never, but completed 10 June 1865; sold to Alex. Swift & Co., Cincinnati, Ohio, in 1868, who in turn sold her to Peru on 2 April 1868; served in the Peruvian Navy as *Manco Capac*
 Builder:
 Hull: Alex. Swift & Co. and Niles Works, Cincinnati, Ohio
 Machinery: Alex. Swift & Co., and Niles Works, Cincinnati, Ohio
 Service speed: Maximum sustained sea speed reported to be 6 knots in Peruvian service

Saugus (15 June 1869 *Centaur*, 10 August 1869 *Saugus*):

Date of contract: 13 October 1862
 Launched: 16 December 1863
 Commissioned: 7 April 1864, Comdr. Edmund R. Colhoun
 Builder:
 Hull: Harlan & Hollingsworth & Co., Wilmington, Del.
 Machinery: Harlan & Hollingsworth & Co., Wilmington, Del.
 Service speed: 8 knots

Tecumseh:

Date of contract: 15 September 1862
 Launched: 12 September 1863
 Commissioned: 19 April 1864, Comdr. Tunis A. M. Craven
 Builder:
 Hull: Secor & Co., New York, N.Y., at the yard of Joseph Coldwell, Jersey City, N.J.
 Machinery: Secor & Co., New York, N.Y., at the Fulton Foundry, Jersey City, N.J.; boilers and main engines subcontracted
 Service speed: 8 knots on trials

Tippecanoc (15 June 1869 *Vesuvius*, 10 August 1869 *Wyandotte*):

Date of contract: 15 September 1862; construction commenced 28 September 1862
 Launched: 22 December 1864
 Commissioned: Never, but completed December 1865; delivered to the U.S. Navy 15 February 1866
 Builder:
 Hull: Miles Greenwood, Cincinnati, Ohio at the shipyard of John Litherbury¹² in Cincinnati
 Machinery: Miles Greenwood, Cincinnati, Ohio
 Service speed: Not found

Casco Class (20); *Casco*, *Chimo*, *Cohocs*, *Etlah*, *Klamath*, *Koka*, *Modoc*, *Napa*, *Naubuc*, *Naussett*, *Shawnee*, *Shiloh*, *Squando*, *Suncook*, *Tunxis*, *Umpqua*, *Wassuc*, *Wassaw*, *Yazoo*, *Yuma*.

During the summer of 1862 the Navy began the preparation of specifications for a class of "light-draft" monitors which would be able to fight effectively on the shallow bays, sounds, and rivers which bordered much of the Confederacy. Threats such as that later posed by the C.S. Ram *Albermarle* could not be countered by the conventional monitors with their relatively deep draft. The end product was a twin-screw, single-turreted monitor with a designed draft of slightly over 6 feet. Armor was sacrificed to meet the demands of shallow draft, resulting in the *Cascos* being among the most lightly armored American monitors ever built. Perhaps the most radical innovation to be incorporated into the *Casco* design was the provision of special ballast tanks which would permit the ships to go into action partially submerged.¹³

Contracts for the class were let in the period March–June 1863; delivery of 13 being specified for 6 months after the contract signing. The builders of the remaining seven were allowed 8 months, but were to be paid only \$386,000 as against the \$395,000 received by the 6-month contractors.¹⁴ Due to delays in the furnishing of plans and constant design changes the ships lagged badly from the start. In the spring of 1864 when *Chimo* was launched it became clear that grave errors had been made in the calculations of displacement. *Chimo* had only 3 inches freeboard without her turret and stores as opposed to the designed 15 inches ready for sea. Accordingly, it was decided to complete the five most advanced ships, less *Tunxis*, as tor-

¹² Litherbury had previously superintended the construction of four *City* class gunboats built by James B. Eads at Carondelet, Mo. He also undertook the conversion of *Lexington*, one of the first three Union gunboats on the Ohio River.

¹³ The function of the tanks were described in the *Army and Navy Journal* of 31 October 1864: "The hull of the vessel will be divided, so that in fact there are two distinct hulls, but are fastened together so as to leave an opening of 2 feet between each hull. This space is to be used as a water tank, which, in action, will be fitted with water and add doubly to secure the vessel against torpedoes and infernal machines." The author might have added that the lower silhouette resulting from flooding the tanks would diminish the chances of the ship taking a hit.

¹⁴ The "6-month" ships were *Casco*, *Chimo*, *Cohocs*, *Klamath*, *Modoc*, *Napa*, *Naubuc*, *Squando*, *Suncook*, *Umpqua*, *Wassaw*, *Yazoo*, and *Yuma*; the "eight-month," *Etlah*, *Koka*, *Naussett*, *Shawnee*, *Shiloh*, *Tunxis*, and *Wassuc*.

¹¹ The contract was awarded to the new corporate entity of Perine, Secor & Co., because Wilham Perine, originally awarded the contract, was unable to show the Navy that he himself had access to the required building facilities.

U.S. Monitor *Catawba* of the *Canonicus* class as *Atahualpa* in the Peruvian Navy—American monitors rarely, if ever, used sails except on long ocean passages. Actually the lithograph may depict *Atahualpa* as she appeared upon departing New Orleans for Peru in 1868. Under the circumstances it would not be surprising to see sails.

pedo boats and to deepen the hulls of the remaining 14 by 22 inches in order to enable them to carry their monitor armament.¹⁵ *Tunxis* was completed to the original design, with minor modifications, but proved unsuccessful and was deepened during the winter of 1864–65 at the yard of Wm. Cramp & Son, Philadelphia, Pa. Launch dates of the *Casco* class ranged from May 1864 to the middle of 1865 and only eight were completed in time to see commissioned service during the Civil War. Of the eight none saw combat; those ships which were in the war zones generally acting as station or guard ships.

¹⁵ The ships selected for conversion to torpedo boats were *Casco*, *Chimo*, *Napa*, *Naubuc*, and *Modoc*. Not even these conversions achieved speeds of over 5 knots and, as such, were virtually useless as torpedo boats. The cost of deepening the remaining 15, including *Tunxis*, varied according to the degree of completion at the time the change was ordered. These costs were as follows: *Cohoes*, \$89,000; *Etlah*, \$82,500; *Klamath*, \$89,000; *Koka*, \$58,665.86; *Nausett*, \$89,000; *Shawnee*, \$90,000; *Shiloh*, \$82,500; *Squando*, \$90,000; *Suncook*, \$87,500; *Tunxis*, \$115,500; *Umpqua*, \$85,000; *Wassuc*, \$55,275.60; *Warsaw*, \$89,140.25; *Yazoo*, \$68,000; *Yuma*, \$89,000.

Statistics:

Length overall: 225' *Etlah*, 225'8"; *Squando*, 225'4½"; *Modoc*, *Naubuc*, 225'
 Extreme beam: 45'; *Etlah*, 45'6"; *Naubuc*, 45'3";
Squando, 45'1¼"; *Modoc*, 45'1"
 Draft: 6'4½" (designed); *Squando*, 8'3"; *Etlah*, 8';
Nausett, 7'8¾"; *Casco*, 7'4"; *Naubuc*, 7'1" (less
 gun and ordnance stores)¹⁶
 Depth of hold: 9'; *Squando*, 11'⅝"; *Modoc*, 9'1";
Naubuc, 8'11"¹⁷
 Designed speed: 9 knots
 Displacement: 1,175 tons; 614 tons (old tonnage);
Squando, 1,618 tons; *Nausett*, 1,487 tons
 Engines: 2 Steamers' direct-acting inclined engines
 Horsepower: 600 indicated horsepower

¹⁶ The draft of *Casco* and *Naubuc*, while substantially in excess of the designed draft, was less than that of *Etlah*, *Nausett*, or *Squando* because the former did not carry a turret, mounted only one XI-inch, and had reduced deck plating. Also, the addition of 22 inches to the depth of the monitors increased the displacement by 130 tons which, in turn, increased the draft.

¹⁷ The depth of hold of *Squando* is a reflection of the 22-inch deepening of the hull.

U.S. Monitor *Mahopao* on the Appomattox River during the Civil War—The booms extending from the starboard side support netting which served as a primitive minesweeping device. Confederate mooring mines known as "torpedoes", represented a very real threat to all Union warships. The U.S.S. Monitors *Milwaukce*, *Osage*, *Patapsco*, and *Tecumseh* were lost to mines. The black area results from damage to the original glass negative.

Engraving by Harley depicting U.S. Monitor *Puritan* as she would have appeared when completed to her original Civil War design.

Boilers: 2 Stimers' horizontal tubular
 Bunker capacity: Monitors 130 tons coal (approx.);
 torpedo boats 60 tons coal (approx.)¹⁵
 Screws: Twin screw, 9' diameter
 Complement: 60 (approx.)
 Armament: Monitors, 2 XI-inch Dahlgren smooth-
 bores, *Tunxis*, 1 XI-inch Dahlgren smoothbore and
 1 150-pdr. Parrott rifle (13 Sep 1864); torpedo
 boats, 1 XI-inch Dahlgren smoothbore, *Chimo*, 1
 150-pdr. Parrott rifle, and Wood-Lay spar torpedo
 equipment
 Turret diameter: 20' inside diameter (monitors only)
 Armor: Turret, 8"; pilothouse, 10" (8" in torpedo
 boats); side, 3"

Casco (15 Jun 1869 *Hero*):

Date of contract: 14 March 1863
 Launched: 7 May 1864
 Commissioned: 4 December 1864, Acting Master
 Charles A. Crooker
 Builder:
 Hull: Atlantic Iron Works, Boston, Mass.
 Machinery: Atlantic Iron Works, Boston, Mass.
 Service speed: 5 knots

Chimo (15 Jun 1869 *Orion*, 10 Aug 1869 *Piscataqua*):

Date of contract: 17 March 1863
 Launched: 5 May 1864
 Commissioned: 20 January 1865, Acting Master
 John C. Dutch
 Builder:
 Hull: Aquilla Adams, Boston, Mass., at his
 Marine Iron Works
 Machinery: Aquilla Adams, Boston, Mass. (prob-
 ably at an engine factory owned by him)
 Service speed: 4 knots

Cohoes (15 Jun 1869 *Charybdis*, 10. Aug 1869 *Cohoes*):

Date of contract: 17 April 1863
 Launched: 31 May 1865
 Commissioned: Never; but delivered to U.S. Navy at
 New York Navy Yard 19 January 1865
 Builder:
 Hull: Contract for ship awarded to M. Franklin
 Merritt, Stamford, Conn.; hull subcontracted
 to Continental Iron Works, Greenpoint, N.Y.
 Machinery: Subcontracted to Hewes & Philips,
 Newark, N.J.
 Service speed: No service

Etlah (15 Jun 1869 *Hectate*, 10 Aug 1869 *Etlah*):

Date of contract: 24 June 1863
 Launched: 3 July 1865
 Commissioned: Never; but delivered to U.S. Navy 12
 March 1866
 Builder:
 Hull: Charles W. McCord, St. Louis, Mo.
 Machinery: Charles W. McCord, St. Louis, Mo.
 Service speed: 5 knots on 12 March 1866 trial

Klamath (15 Jun 1869 *Harpy*, 10 Aug 1869 *Klamath*):

Date of contract: 26 March 1863
 Launched: 20 April 1865
 Commissioned: Never; but delivered to and accepted
 by U.S. Navy 6 May 1866
 Builder:
 Hull: Alex. Swift & Co., Cincinnati, Ohio, at the
 yard of S. T. Hambleton & Co., Cincinnati, Ohio
 Machinery: Subcontracted to Moore & Richard-
 son, Cincinnati, Ohio
 Service speed: 5.7 knots on trial

Koka (15 Jun 1869 *Argos*, 10 Aug 1869 *Koka*):

Date of contract: 24 April 1863
 Launched: 18 May 1865
 Commissioned: Never; but delivered to U.S. Navy at
 Philadelphia Navy Yard 28 November 1865
 Builder:
 Hull: Wilcox & Whiting, Camden, N.J.
 Machinery: Wilcox & Whiting, Camden, N.J.
 Service speed: No service

Modoc (15 Jun 1869 *Achilles*, 10 Aug 1869 *Modoc*):

Date of contract: 4 June 1863
 Launched: 21 March 1865
 Commissioned: Never; but completed 23 June 1865
 Builder:
 Hull: Jeronimus S. Underhill, New York, N.Y.,
 at the New York Iron Shipyard
 Machinery: Jeronimus S. Underhill, New York,
 N.Y.
 Service speed: No service

Napa (15 Jun 1869 *Nemesis*, 10 Aug 1869 *Napa*):

Date of contract: 2 March 1863
 Launched: 26 November 1864
 Commissioned: Never; but completed 4 May 1865
 Builder:
 Hull: Harlan & Hollingsworth & Co., Wilming-
 ton, Del.
 Machinery: Harlan & Hollingsworth & Co., Wil-
 mington, Del.
 Service speed: No service

Naubuc (15 Jun 1869 *Gorgon*, 10 Aug 1869 *Minnetonka*):

Date of contract: 2 April 1863
 Launched: 19 October 1864

¹⁵ However, *Modoc*, a torpedo boat, probably carried between 75 and 80 tons during her trials. The apparent inconsistency might be explained by the fact that the torpedo boats had bunker capacity equal to that of the monitors but that the amount which could be carried safely from the point of view of reserve buoyancy was much less. *Onondaga* was a case in point.

Plan of the spar torpedo equipment designed for installation on USS *Casco*, USS *Chimo*, USS *Napa*, USS *Naubuc*, and USS *Modoc*—USS *Napa* and USS *Modoc* were not commissioned during the Civil War.

Plan of U.S. Monitor *Koka*—USS *Koka* was one of the fifteen ships of the *Casco* class to be redesigned and completed as monitors, although she never saw commissioned service.

Commissioned: 27 March 1865, Acting Master Gilbert Dayton
Builder:
Hull: Wilham Perine, New York, N.Y., at his Perine's Union Iron Works, Williamsburgh, N.Y.
Machinery: Subcontracted to Dolan & Farron, Williamsburgh, N.Y.
Service speed: Not found

Nausett (15 Jun 1869 *Aetna*, 10 Aug 1869 *Nausett*):

Date of contract: 10 June 1863
Launched: 26 April 1865
Commissioned: 10 August 1865, Acting Master William V. Grozier
Builder:
Hull: Donald McKay at his shipyard in East Boston, Mass.
Machinery: McKay & Aldus, East Boston, Mass.¹⁹
Service speed: 5 knots

Shawnee (15 Jun 1869 *Eolus*, 10 Aug 1869 *Shawnee*):

Date of contract: 2 April 1863
Launched: 13 March 1865
Commissioned: 18 August 1865, Lt. Comdr. Edward P. Williams
Builder:
Hull: Curtis & Tilden, East Boston, Mass. at their shipyard
Machinery: Curtis & Tilden, East Boston, Mass. (probably subcontracted)
Service speed: 5.4 knots

Shiloh (16 Jun 1869 *Iris*):

Date of contract: 24 June 1863
Launched: 14 July 1865²⁰
Commissioned: Never; but delivered to and accepted by the U.S. Navy 12 March 1866
Builder:
Hull: Contract for ship awarded to George C. Bestor, Peoria, Ill.; hull built at the yard of Charles W. McCord, St. Louis, Mo.²¹
Machinery: Subcontracted to Charles W. McCord, St. Louis, Mo.
Service speed: No service

Squando (15 Jun 1869 *Ercbus*, 10 Aug 1869 *Algoma*):

Date of contract: 4 May 1863
Launched: 31 December 1864
Commissioned: 6 June 1865, Acting Master George H. Leinas
Builder:
Hull: Contract for ship awarded to McKay & Aldus, East Boston, Mass.; hull built at the shipyard of Donald McKay, East Boston, Mass.
Machinery: McKay & Aldus, East Boston, Mass.
Service speed: 4.2 knots

¹⁹ Donald McKay was an East Boston shipbuilder. His brother Nathaniel and George Aldus operated a boiler factory in East Boston. Interestingly enough, both firms were located on Border Street. McKay & Aldus built about one-half of the motive machinery for *Nausett* but failed to complete it for reasons as yet unknown.

²⁰ An attempt was made to launch *Shiloh* on 3 July 1865. However, according to the inspector, ". . . the bow not being tripped as soon as the stern hung back and threw the stern cradles off the ways. The bow then started, but the stern dragging on the ground began to lag, and the vessel finally stopped at the waters edge, with the bow slightly in advance—then by wedging up and cutting off the ends of the ways which supported the vessel she was gradually pushed down the bank by means of hydraulic jacks, and on the morning of the 14th inst. she was afloat, without the slightest injury and scarcely leaking a drop. . . ."

²¹ Bestor and McCord were virtually partners, building *Etlah* and *Shiloh* under the same roof, making contracts for materials together and so forth. Consequently it does not seem entirely correct to describe them as separate individuals although this has been done for the sake of convenience. They had previously cooperated in the construction of *Ozark* with McCord building the machinery.

Suncook (15 Jun 1869 *Spitfire*, 10 Aug 1869 *Suncook*):

Date of contract: 17 March 1863
Launched: 1 February 1865
Commissioned: 27 July 1865, Acting Master L. H. Beattie
Builder:
Hull: Globe Works, South Boston, Mass.
Machinery: Globe Works, South Boston, Mass.
Service speed: Not found

Tunxis (15 Jun 1869 *Hydra*, 10 Aug 1869 *Otsego*):

Date of contract: 9 March 1863
Launched: 4 June 1864
Commissioned: 12 July 1864, Lt. Comdr. Henry Erben
Builder:
Hull: Reaney, Son & Archbold, Chester, Pa. at their Pennsylvania Iron Works
Machinery: Reaney, Son & Archbold, Chester, Pa.
Service speed: 4 knots

Umpqua (15 Jun 1869 *Fury*, 10 Aug 1869 *Umpqua*):

Date of contract: 9 March 1863
Launched: 21 December 1865
Commissioned: Never; but completed 7 May 1866
Builder:
Hull: Snowden & Mason, Pittsburgh, Pa., at Brownsville, Pa.
Machinery: Snowden & Mason, Pittsburgh, Pa.
Service speed: No service

Wassuc (15 Jun 1869 *Stromboli*, 10 Aug 1869 *Wassuc*):

Date of contract: 2 June 1863
Launched: 25 July 1865
Commissioned: Never; but completed 28 October 1865
Builder:
Hull: George W. Lawrence & Co., Portland, Me. at the Lawrence Iron Works²²
Machinery: George W. Lawrence & Co., Portland, Me., at the Lawrence Iron Works
Service speed: No service

Warsaw (15 Jun 1869 *Niobe*):

Date of contract: 13 March 1863
Launched: 4 May 1865
Commissioned: Never; but completed 21 October 1865
Builder:
Hull: A. & W. Denmead & Son, Baltimore, Md.
Machinery: A. & W. Denmead & Son, Baltimore, Md.
Service speed: No service

Yazoo (15 Jun 1869 *Tartar*, 10 Aug 1869 *Yazoo*):

Date of contract: 2 March 1863
Launched: 8 May 1865
Commissioned: Never; but completed 15 December 1865
Builder:
Hull: Contract for ship awarded to Merrick & Sons, Philadelphia, Pa.; hull subcontracted to Wm. Cramp & Sons, Philadelphia, Pa.
Machinery: Merrick & Sons, Philadelphia, Pa.
Service speed: No service

Yuma (15 Jun 1869 *Tempest*, 10 Aug 1869 *Yuma*):

Date of contract: 26 March 1863
Launched: 30 May 1865
Commissioned: Never; but delivered to and accepted by U.S. Navy 6 May 1866

²² The keel of *Wassuc* was laid down at the facilities of the Globe Works in South Boston, Mass. However, when the Navy discovered this, work was ordered to be suspended because it had been the Navy Department's intention to spread the ironclad contracts around, undoubtedly as result of political pressure, and Lawrence had been awarded the contract because he was from Portland, Maine. However, Lawrence retained the contract and began work at his own yard in Portland during October 1863, the completed beams, etc. having been shipped to Portland.

U.S. Monitor *Wassuc*, one of the fifteen *Cascos* actually completed as monitors—However, she was never commissioned as this lithograph would indicate. It can only be concluded that the lithograph was prepared in anticipation of *Wassuc's* completion and commissioning. Also, it is interesting to note that the publishers, Endicott & Co., used the same plate for all ships of a given class, changing only the caption.

Builder:

Hull: Alex. Swift & Co., Cincinnati, Ohio at the yard of S. T. Hambleton & Co., Cincinnati, Ohio

Machinery: Subcontracted to Moore & Richardson, Cincinnati, Ohio

Service speed: No service

Kalamazoo class (4); *Kalamazoo*, *Passaconaway*, *Quinsigamond*, *Shackamaxon*

The four ships of the *Kalamazoo* class were the largest warships of any type ordered by the U.S. Navy during the Civil War (with the exception of *Dunderberg*) although specifications were drafted for a 10,000-ton casemate battleship. Intended to fight their four XV-inch guns in a seaway the *Kalamazoos* were the closest that the U.S. Navy came to including armored oceangoing "battleships" until the 1890's. Despite numerous assertions to the contrary in the American press the *Kalamazoo* and, possibly, the four ships of the *Miantonomoh* type were the only monitors that could have fought contemporary European warships on equal terms outside protected coastal areas. The contract price, for machinery only, was \$580,000 for *Kalamazoo* and *Quinsigamond* and \$590,000 for *Passaconaway* and *Shackamaxon*. Construction on all four ships proceeded but slowly during the Civil War and construction was suspended in the fall of 1865, never to resume. Being built with improperly seasoned timber and left exposed to the elements the ships gradually rotted and were eventually broken up on the stocks, none of the four ever having been launched.

Statistics:

Length overall: 345'
 Extreme beam: 56'8"
 Draft: 17'6"
 Depth of hold: 18'10"
 Designed speed: 10 knots
 Displacement: 5,660 tons; 3,220 tons (old tonnage)
 Engines: 4 horizontal, direct-acting engines (2 sets)
 Horsepower: Not found
 Boilers: 8 Martin
 Bunker capacity: Not found
 Screws: Twin screw, 15' diameter
 Complement: Not found
 Armament: 4 XV-inch Dahlgren smoothbores

Turret diameter: 24' inside

Armor: Turret, 15''; side, 6''²³

Kalamazoo (15 June 1869 *Colossus*):

Date of contract: Not applicable²⁴

Launched: Never; broken up on the stocks in 1884

Commissioned: Never

Builder:

Hull: New York Navy Yard, Williamsburg, N.Y.

Machinery: Delameter Iron Works, New York, N.Y.

Service speed: No service

Passaconaway (15 June 1869 *Thunderer*, 10 August 1869 *Massachusetts*):

Date of contract: Not applicable

Launched: Never; broken up on the stocks in 1884

Commissioned: Never

Builder:

Hull: Portsmouth Navy Yard, Kittery, Maine

Machinery: Delameter Iron Works, New York, N.Y.

Service speed: No service

Quinsigamond (15 June 1869 *Hercules*, 10 August 1869 *Oregon*):

Date of contract: Not applicable

Launched: Never; broken up on the stocks in 1884

Commissioned: Never

Builder:

Hull: Boston Navy Yard, Charlestown, Mass.

Machinery: Atlantic Iron Works, Boston, Mass.

Service speed: No service

Shackamaxon (15 Jun 1869 *Hecla*, 10 Aug. 1869 *Nebraska*)

Date of contract: Not applicable

Launched: Never; broken up on the stocks in 1874

Commissioned: Never

Builder:

Hull: Philadelphia Navy Yard, Philadelphia, Pa.

Machinery: Pusey, Jones & Co., Wilmington, Del.

Service speed: No service

²³ The side armor consisted of two layers of rolled 3-inch wrought iron plates. The plating for *Passaconaway* was ordered from M. K. Moorhead & Co. of Pittsburgh, Pa.

²⁴ Contracts for machinery, armor plating, and the turrets were let during 1863. The work allotted to civilian contractors was practically complete at the time work was suspended.

USS *Onondaga* as she appeared while serving in the French Navy under original name—She was carried on the French navy list as a coast defense ship.

Body plan of U.S. Monitor *Tonawanda*

U.S. Torpedo Boat *Casco*, name ship of the light draft *Casco* class of monitors, shown on the James River near Dutch Gap during March–April 1865.

RIVER MONITORS

Neosho class (2) ; *Neosho*, *Osage*

Neosho and *Osage* were the first river monitors designed by James B. Eads of St. Louis, Mo. Noted for their shadow draft, the single-turreted *Neoshos* were also unusual in that they were the only monitors to be propelled by stern wheels. The "turtleback" which was to become the hallmark of Eads' designs first appeared in these ships. Contracts for the two ships of the *Neosho* class were let in mid-1862 and, launched within a month of each other in early 1863, *Neosho* and *Osage* commissioned on 13 May 1863 and 10 July 1863 respectively. Rear Admiral Porter, while commanding the Mississippi Squadron, noted that the *Neoshos*, ". . . do very well for light work, but are not at all suitable for rough weather or heavy service. . . ." Nevertheless, the class was successful from the aspect of riverine warfare. The actual cost of each ship was approximately \$200,000.

Statistics:

Length overall: 180'²⁵
Extreme beam: 45'
Draft: 4'6" (full load)
Depth of hold: 9'
Designed speed: Not found
Displacement: Not found; 523 tons (old tonnage)
Engines: 2 (probably noncondensing horizontal engines of the type found in the *Winnebago* class)
Horsepower: 400
Boilers: 4 (probably horizontal tubular)
Bunker capacity: 50 tons coal
Screws: Stern wheel; diameter 19', width 17'
Complement: 100
Armament: 2 XI-inch Dahlgren smoothbores
Turret diameter: 20' inside
Armor: Turret, 6''; side, 2½''

Neosho (15 June 1869 *Vixen*, 10 August 1869 *Osecola*):

Date of contract: 21 May 1862
Launched: 18 February 1863
Commissioned: 13 May 1863, Comdr. J. C. Febiger
Builder:
Hull: James B. Eads at his Union Iron Works, Carondelet, Mo.
Machinery: Probably subcontracted to the Fulton Iron Works, St. Louis, Mo.
Service speed: 7.5 mph.

Osage:

Date of contract: 21 May 1862
Launched: 13 January 1863
Commissioned: 10 July 1863, Acting Volunteer Lt. Joseph P. Couthouy
Builder:
Hull: James B. Eads at his Union Iron Works, Carondelet, Mo.
Machinery: Probably subcontracted to the Fulton Iron Works, St. Louis, Mo.
Service speed: 7.5 mph.

Ozark class (1) ; *Ozark*

A single-turreted river monitor, *Ozark*, like the never commissioned *Marietta* and *Sandusky*, carried a substan-

tial deckhouse aft (built along traditional Mississippi steamboat lines) which provided additional quarters for the crew. In addition to her two XI-inch guns mounted in the turret, *Ozark* carried one X-inch and three IX-inch pivot guns which had to be fought in the open, a virtual impossibility in a war where the river banks were thickly populated by Confederate sharpshooters. Like her eastern counterparts, but unlike *Neosho* and *Osage*, *Ozark* carried an armored pilothouse atop her turret. Begun in 1862, *Ozark* was launched 18 February 1863 and was then towed to St. Louis for installation of her turret and machinery, arriving there 27 February. She did not commission until 18 February 1864. The actual cost of *Ozark* was about \$215,000.

Statistics:

Length overall: 180'
Extreme beam: 50'
Draft: 5'
Depth of hold: 7'4"
Designed speed: 9 mph. in still water
Displacement: Not found; 578 tons (old tonnage)
Engines: 4 (type not found)
Horsepower: Not found
Boilers: 6 boilers (probably horizontal tubular)
Bunker capacity: 100 tons coal
Screws: Quadruple screws, 7' diameter
Complement: 120
Armament: 2 XV-inch Dahlgren smoothbores; 1 X-inch, 3 IX-inch Dahlgren smoothbores mounted in early summer 1864
Turret diameter: 20' inside diameter
Armor: Turret, 6''; side, 2½''

Ozark:

Date of contract: 14 May 1862
Launched: 18 February 1863
Commissioned: 18 February 1864, Acting Volunteer Lt. George W. Brown
Builder:
Hull: Contract for ship awarded to George C. Bestor, Peoria, Ill.; hull subcontracted to Hambleton, Collier & Co. at their Mound City Marine Ways, Mound City, Ill.
Machinery: Charles W. McCord at his Franklin Foundry, St. Louis, Mo.
Service speed: 2½ knots

Marietta class (2) ; *Marietta*, *Sandusky*

Although *Marietta* and *Sandusky* were laid down during the summer of 1862 neither was completed until late 1865, too late to be of service in the Civil War. The reports of the hull and machinery inspectors often mentioned that more men could or should be employed. Letters were sent to the contractors stressing the need for haste, and Commander Hull himself made several visits to Pittsburgh, but nothing seemed to substantially alter the continued slow pace of construction. Although the *Mariettas* were designed by the contractors, numerous changes were incorporated during construction at the insistence of Navy inspectors. Since neither plans nor representations of the vessels as completed are extant it is impossible to be sure what they actually looked like. It is probable, however, that they had a deckhouse aft and a single turret forward like *Ozark* in this respect. If the original drawings were followed *Marietta* and *Sandusky* had the towering twin smokestacks associated with Mississippi River steamboats,

²⁵ The written specifications for the *Neosho* class, found in RG45, National Archives, called for a ship 165' x 45' x 8'. However, it was not uncommon for design changes to be made after the specifications were drawn up and in this case, the 180' length overall figure is given strong support by a reliable newspaper account in the *Missouri Democrat* of 14 January 1863.

Photograph of U.S. Monitor *Osage*, probably taken shortly after completion—The armored casing of the sternwheel is conspicuous, as is the “turtleback”, characteristic of an Eads design.

USS *Osage* shown on the Red River during the 1864 expedition in support of General Banks—Additional deck structures erected since the previous photograph can be seen. Thomas O. Selfridge, Jr., who commanded USS *Osage* at this time, spoke in his memoirs of using a periscope mounted on the turret to direct fire of the battery.

and a low pyramidal pilot house mounted on the main deck, somewhat similar in concept to that placed on the original *Monitor*. However, there are indications that the pilothouse was eventually placed on top of the turret as in the other later types of monitors. The contract price for each ship was \$188,000.

Statistics:

Length overall: 170' ²⁶
Extreme beam: 50'
Draft: 5'
Depth of hold: 6' 6"
Designed speed: 9 mph. in still water
Displacement: Not found; 479 tons (old tonnage)
Engines: 2 (western steamboat type)
Horsepower: not found
Boilers: 4 (probably horizontal tubular)
Bunker capacity: 144 tons coal
Screws: Quadruple screw, 6'6" diameter; triple rudders
Complement: 100
Armament: 2 XI-inch Dahlgren smoothbores
Turret diameter: 20' inside
Armor: Turret, 6"; side, 1½"

Marietta (15 June 1869, *Circe*; 10 August 1869, *Marietta*) :

Date of contract: 16 May 1862
Launched: Probably between 1 and 6 December 1864
Commissioned: Never; but completed 16 December 1865 and accepted by the U.S. Navy 25 April 1866
Builder:
Hull: Joseph Tomlinson, Andrew Hartupee, and Samuel Morrow ²⁷
Machinery: Joseph Tomlinson, Andrew Hartupee, and Samuel Morrow
Service speed: No service

Sandusky (15 June 1869, *Minerva*; 10 August 1869, *Sandusky*) :

Date of contract: 16 May 1862
Launched: Between 13 and 17 January 1865
Commissioned: Never; but completed 26 December 1865 and accepted by the U.S. Navy 25 April 1866
Builder:
Hull: Joseph Tomlinson, Andrew Hartupee, and Samuel Morrow
Machinery: Joseph Tomlinson, Andrew Hartupee, and Samuel Morrow
Service speed: No service

Milwaukee class (4); *Chickasaw*, *Kickapoo*, *Milwaukee*, *Winnebago*

The *Milwaukee* class, designed primarily for river warfare, spent most of their commissioned service during the Civil War serving with the West Gulf Blockading Squadron. ²⁸ Admiral Farragut who had *Chickasaw* and *Winnebago* under his command at the Battle of Mobile Bay noted that ". . . no vessels in his fleet performed more efficient service." The double-turreted quadruple screw *Milwaukee* class were perhaps the most sophisticated successful monitors of the Civil War. Designed by James B. Eads, the ships had the "turtleback" deck characteristics of an Eads' design. Perhaps the greatest single improvement over other classes of monitors was the mounting of an Eads turret

²⁶ An armored shield projecting from the stern and designed to protect the propellers and rudders from a chance hit added an additional 7 feet to the length overall.

²⁷ Contrary to some accounts these three men were not all business partners. Hartupee and Morrow did business as Hartupee & Co. Pittsburgh business directories for the Civil War period indicate that Tomlinson and Hartupee & Co. had entirely different places of business. Thus, the contract could best be characterized as a joint effort by two businesses.

²⁸ The steam log of *Kickapoo* contains a peevish comment written during the ship's passage from the mouth of the Mississippi to Mobile Bay. After reporting on the satisfactory state of the engineering plant the author added that the ship had no compass, no barometer, no log line, and no instruments for determining latitude or longitude. Apparently neither *Kickapoo's* builder nor the Navy foresaw that she would be needed for service in the Gulf of Mexico.

forward on each ship of the class. ²⁹ Eads had prepared the drawings for *Osage* and *Ncosho* but Secretary of the Navy Welles was unwilling to replace the proven Ericsson design without previous testing. The *Winnebago* also had an armored conning tower which doubled to some extent as a fire control center.

Statistics:

Length overall: 229'
Extreme beam: 56'
Draft: 6'
Depth of hold: 8'6"
Designed speed: 9 knots
Displacement: 1,300 tons; 970 tons (old tonnage)
Engines: 4 noncondensing horizontal engines
Horsepower: Not found
Boilers: 7 horizontal tubular
Bunker capacity: 150 tons coal (approx.) ³⁰
Screws: Quadruple screw, 7'6" diameter; triple rudders
Complement: 120 (approx.)
Armament: 4 XI-inch Dahlgren smoothbores
Turret diameter: Double-turreted, 21' inside
Armor: Turret, 8"; side, 3" ³¹

Chickasaw (15 June 1869 *Samson*, 10 August 1869 *Chickasaw*) :

Date of contract: 26 May 1862
Launched: 10 February 1864
Commissioned: 14 May 1864, Acting Master James Fitzpatrick
Builder:
Hull: Contract for ship awarded to Thomas Gaylord of Gaylord, Son & Co., Cincinnati, Ohio; hull built at the Union Iron Works, Carondelet, Mo. ³²

²⁹ The *Scientific American* of 28 November 1863 described the Eads turret on *Winnebago* in the following terms: "She has two turrets, one Ericsson and the other Eads' patent. The latter turret differs from Ericsson's, among other things, in having a portion of the shell entered down to, and the whole weight of the turret resting on spheres at the bottom of the vessel. The guns are placed on a huge platform, loaded in the hold, and raised in the turret by steam power. They are also run out by steam; the recoil is received on steam cylinders, and the whole apparatus, guns and all, is operated by one man (an engineer). . . ."

³⁰ On 17 November 1864 *Chickasaw's* bunkers contained 148 tons of coal and after coaling on 29 March 1865, 156 tons. *Kickapoo's* maximum coal load was 156 tons, after coaling on 15 February 1865.

³¹ The side armor of the *Winnebago* was unique in that it was made up of heavy 3-inch thick iron plates. The armor on most other monitors was laminated, being built up on 1-inch thick plates to the desired thickness. This was not done because laminated armor was superior (on the contrary, it was decidedly inferior) but because until relatively late in the Civil War there were very few rolling mills which could roll plate thicker than 1 inch.

³² The Union Iron Works, at which *Neosho* and *Osage* were also built, was situated several miles below the center of St. Louis, on the Mississippi River. Eads described the process of establishing the yard in a letter dated 19 June 1862 to Naval Constructor John Lenthall, Chief of the Bureau of Construction and Repair:

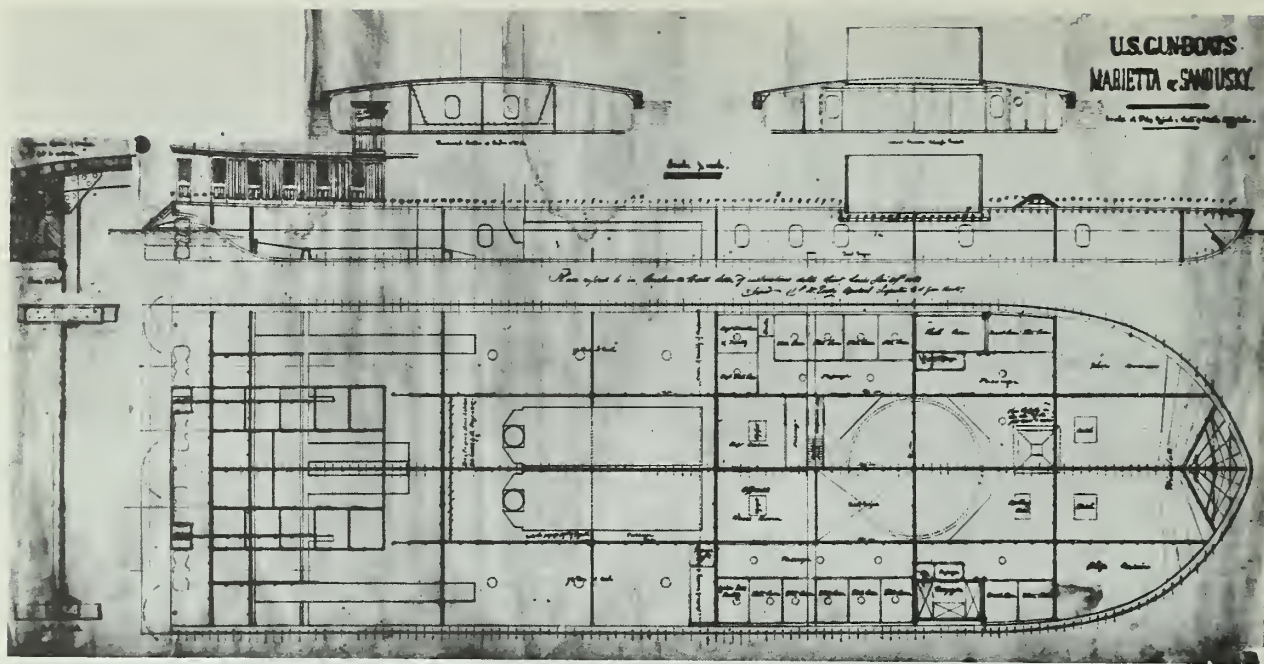

"The construction of iron boats being quite a novel thing with us I am necessarily delayed at the start in making preparation to do the work well and quickly. I have erected a large machine shop (200 x 60 ft.) expressly for the purpose and are [sic] erecting 4 large ship houses under which to build the boats. I believe they will be the first boats ever built in the West under shelter. One house will be about 340 ft. by 64 ft. It is nearly finished and the others are underway."

The *Missouri Democrat* of 26 January 1863 reported that work was going on day and night, at night under gaslight, and on 6 April 1863 remarked that as early as November 1862 Eads had between 500 and 600 men employed at the Union Iron Works. Commander Joseph B. Hull, USN, then superintending construction of gunboats for the Mississippi Squadron, wrote on 6 July 1864 to Secretary of the Navy, Gideon Welles and Chief Engineer James W. King describing the yard:

Saint Louis, Mo., July 6th 1864

"SIR, In obedience to your order of the [5]th inst received this day by telegram we have examined the Union Iron Works of James B. Eads, situated at Carondelet, 7 miles below this city and have to report as follows. The lot enclosed by plank fences

Footnote continued on page 785.

Plans initially submitted to the Navy by the contractors for U.S. Monitors *Marietta* and *Sandusky*—The ships were not completed until nearly 2 years after these plans were probably drawn and, accordingly, it is not possible to be sure that there were not major design changes prior to their acceptance by the Navy in 1866.

U.S. Monitor *Ozark* while part of the Mississippi Squadron in 1864—The deckhouse and exposed pivot guns may be seen clearly. USS *Ozark*'s pilothouse resembles that which was placed on the main deck of the *Milwaukee* class. The pilothouse on most monitors was approximately 6 feet high but that on USS *Ozark* appears to be about 12 feet in height.

Machinery: Probably built at the Fulton Iron Works, St. Louis, Mo.³³

Service speed: 9 plus knots on trial

Kickapoo (15 June 1869 *Cyclops*, 10 August 1869 *Kewadin*):

Date of contract: 27 May 1862

Launched: 12 March 1864

Commissioned: 8 July 1864, Acting Volunteer Lt. D. C. Woods

is about 600 feet front on the river by 400 feet on the street. Through this street the Iron Mountain Rail Road passes having a side track into the Yard. There is also an adjoining lot on the north side not enclosed. Within the enclosure there are four Shiphouses built in pairs. One Machine and Smlthery building. Two Storehouses. Two houses in which turrets were erected. One small Saw mill for light work. Two ranges of Coal & Iron sheds. One small building for generating gas and one Office and Drawing room. The Ship houses are about the following general dimensions

"Viz:

No. 1—300 feet long by 60 feet wide

No. 2—225 feet long by 60 feet wide

No. 3—230 feet long by 60 feet wide

No. 4—225 feet long by 60 feet wide

"They are of the ordinary [frame] wood construction lighted from the roofs sides. In two of them the launching ways are complete, and in the other two they are laid only from the river to the high water mark. In all however the foundations are laid. The Machine and Smlthery building is also temporary frame wood and [is] one story high, lighted from the roof. It is about 300 feet long by 85 feet wide and contains machinery and forges etc. as follows. Viz: 22 small forges. Two ordinary heating furnaces. One small [trip] hammer and all the necessary blacksmiths, tools and appliances. 5 Lathes from smallest up to medium 5 Planing Machines from smallest up to 24 feet bed.

8 Drilling Machines, assorted sizes

7 Punching Machines, assorted sizes

3 Shearing Machines, assorted sizes

2 Bolt Cutting Machines

1 Gas Pipe Machine

1 Slotting Machine

1 Large armor plate planing machine

1 Large Facing Lathe

1 Large Set Rolls 10 feet long by 16 inches diameter

1 Set Rolls small size

"Also all the attachments . . .

"There is no foundry for making casting of either Iron or Brass attached to the establishment. With this exception the facilities are sufficient for repairing any vessels or machinery of the Mississippi Squadron or building Iron or Wood vessels of the Rivers. It is proper to state that there are several Foundries in the City and a Dry Dock near the Works. As regards the value of the Works for rent per annum we can only base our opinion on a comparison with similar Works under Case and have to state that in as much as the buildings will require some repairs and

Builder:

Hull: Contract for ship awarded to G. B. Allen and Oliver B. Filley doing business as G. B. Allen & Co., St. Louis, Mo.; hull built at the Union Iron Works, Carondelet, Mo.

Machinery: Probably built at the Fulton Iron Works, St. Louis, Mo.

Service speed: 9 knots

Milwaukee:

Date of contract: 27 May 1862

Launched: 4 February 1864

Commissioned: 27 August 1864, Acting Volunteer Lt. James W. Magune

Builder:

Hull: Contract for ship awarded to James B. Eads, St. Louis, Mo.; hull built at the Union Iron Works, Carondelet, Mo.

Machinery: Probably built at the Fulton Iron Works, St. Louis, Mo.

Service speed: 9 knots

Winnebago (15 June 1869 *Tornado*, 10 August 1869 *Winnebago*):

Date of contract: 27 May 1862

Launched: 4 July 1863

Commissioned: 27 April 1864, Acting Master A. S. Megathlin

Builder:

Hull: Contract for ship awarded to James B. Eads, St. Louis, Mo.; hull built at the Union Iron Works, Carondelet, Mo.

Machinery: Probably built at the Fulton Iron Works, St. Louis, Mo.

Service speed: 9 knots

both buildings and Machinery require to be kept in order we think \$7,500 00/100 per annum a fair valuation.

Respectfully Your Obedt Servt, J. B. HULL

Commander USN

G. W. KING

Chf. Engr. USN

"Hon GIDEON WELLES
Secty. of the Navy"

³³ Gerard B. Allen, who with Oliver B. Filley operated the Fulton Iron Works, was the Allen of Allen & Co. which contracted for *Kickapoo*. The close business relationships among Eads, Gaylord, Filley, and Allen which were obvious during the construction of the *City* class gunboats during the fall and winter of 1861-62 apparently culminated in this "sharing of the pie" of the *Winnebago* class contracts.

This drawing of the *Milwaukee* class was submitted to the Navy Department by James B. Eads as part of a proposal for warship construction. The ships generally followed the drawing as completed. However, one boiler was added to the middle pair and the pilothouse aft of the forward turret, designed by Eads as a truncated cone, was substantially altered.

USS *Puritan*

"NEW NAVY" MONITORS

Puritan class (1) ; *Puritan*

The never finished *Puritan* of the Civil War underwent the same kind of rebuilding as the four *Miantonomohs*. Although her original plans called for a single turret carrying 4 XX-inch Dahlgren smoothbores, the revised design of the "repaired" ship called for two turrets. It is important to realize that all of the "repaired" ships were actually completely modern ships of war bearing only a vague resemblance of the first ships of the name. All five of these ships had the superstructures, military mast, and tall stack which also identified the monitors built between 1889 and 1903.

Statistics (as commissioned, 1896) :³⁴

Length overall: 296'3"
 Extreme beam: 60'1½" (measured on load water line)
 Draft: 18' (mean)
 Designed speed: Not found
 Displacement: 6,060 tons
 Engines: 2 horizontal compound engines
 Horsepower: 3,700 indicated horsepower
 Boilers: 8 single-ended cylindrical
 Bunker capacity: 410 tons coal
 Screws: Twin screw, diameter not found
 Complement: 200 (approx.)
 Armament: 4 12-inch breech loading rifles and assorted 4-inch and 6-pdrs.
 Armor: Turret, 8'; side, 14"

Puritan (BM-1)

Date of contract: Not applicable
 Launched: 6 December 1882
 Commissioned: 10 December 1896, Captain J. R. Bartlett
 Builder: John Roach & Son, Chester, Pa., and New York Navy Yard, Brooklyn, N.Y.
 Service speed: 12.40 knots on trials

Amphitrite class (4) ; *Amphitrite*, *Miantonomoh*, *Monadnock*, *Terror*

The Civil War monitors of the *Miantonomoh* class, although regarded as the best of this type of warship by American naval officers, deteriorated rapidly after the war. The wood armor backing and other timbers in the ships' hulls suffered from dry rot and within the first ten years after the war their combat value had become almost nil. Accordingly, in 1874-75 Secretary of the Navy George Robeson decided to carry out extensive "repairs" on the ships. The repairs were so extensive involving the construction of new iron hulls as to result in entirely new ships. However, since the funds for new construction had not been appropriated by the Congress, Robeson maintained the fiction that the ships were actually still the Civil War monitors and so the names never dropped from the Navy List. A national scandal resulted when this and the fact that Robeson had been paying for the new ships with old came to light. But, Robeson's actions marked the beginnings of the movement to reestablish the United States as a strong naval power.

The *Amphitrites* were begun in private yards and completed in naval shipyards, construction having been sus-

pending for a time and progress slow throughout. *Monadnock* was one of the only two monitors to cross the Pacific, doing so in 1898.

Statistics (as commissioned, 1891-96) :³⁵

Length overall: 262'9"; *Miantonomoh*, *Terror*, 263'1"; *Monadnock*, 262'3"
 Extreme beam: 55'10"; *Terror*, 55'6"; *Monadnock*, 55'5"; *Amphitrite*, *Miantonomoh*, 55'4" (all measured on load water line)
 Draft: 14'6" (mean); *Terror*, 14'8"
 Depth of hold: 17'
 Designed speed: 12 knots; *Monadnock*, 14.5 knots
 Displacement: 3,990 tons
 Engines: 2 horizontal compound engines; *Monadnock*, 2 horizontal triple-expansion engines
 Horsepower: 1,600 indicated horsepower; *Monadnock*, 3,000 indicated horsepower
 Boilers: *Amphitrite*, 4 Babcock & Wilcox; *Miantonomoh*, *Terror*, 6 single-ended cylindrical; *Monadnock*, 4 single-ended cylindrical
 Bunker capacity: 270 tons coal (approx.); *Monadnock*, 386 tons coal³⁶
 Screws: Twin screw, 12' diameter
 Complement: 150 (approx.)
 Armament: 4 10-inch breech loading rifles and assorted 4-inch and 6-pdrs.
 Armor: *Amphitrite*, turret, 7½"; side, 9"³⁷
 Miantonomoh, turret, 11½"; side, 7"
 Monadnock, turret, 7½"; side, 9"
 Terror, turret, 11½"; side, 7"

Amphitrite (BM-2) :

Date of contract: Not applicable
 Launched: 7 June 1883
 Commissioned: 23 April 1895, Captain W. C. Wise
 Builder: Harlan & Hollingsworth, Wilmington, Del. and Norfolk Navy Yard, Portsmouth, Va.
 Service speed: 10.50 knots on trials

Miantonomoh (BM-5) :

Date of contract: Not applicable
 Launched: 5 December 1876
 Commissioned: 27 October 1891, Captain Montgomery Sicard³⁸
 Builder: John Roach & Son, Chester, Pa. and New York Navy Yard, Brooklyn, N.Y.
 Service speed: 10.50 knots on trails

Monadnock (BM-3) :

Date of contract: Not applicable
 Launched: 19 September 1883
 Commissioned: 20 February 1896, Captain G. W. Sumner

³⁵For statistics on the monitors bearing these names as originally commissioned in 1864-65, see Coastal Monitors, *Miantonomoh* class, p. 768; for a further note on their reconstruction, see p. 754.

³⁶The ships normally carried 250 tons of coal when operating.
³⁷The side armor described here was actually what is now known as a "belt". The thickness given here and in other post Civil War monitors is taken at the water line.

³⁸*Miantonomoh* was in commission briefly during 1882 and 1883, during which time she went from Philadelphia to Washington, and, later, to New York where the final phases of her reconstruction were completed. During this period she carried no main armament.

³⁴For statistics on *Puritan* as originally designed and laid down in 1862, see Coastal Monitors, *Puritan* class, p. 763; for a further note on her reconstruction, see p. 754.

USS *Amphitrite* underway off the Boston Navy Yard, 27 August 1901

USS *Monadnock* under construction in 1892—The indented area running the length of the hull provided the support for the wood backing of the armor belt.

USS *Amphitrite* under construction at the Norfolk Navy Yard—The wood backing for the armor has been set in place but the belt is not yet installed. The tall military mast which was typical of the “New Navy” monitors has already been set in place.

USS *Monadnock* enroute from San Francisco to Manila in 1898—Note the amount of water being taken over the main deck of the “new” monitor in a relatively slight sea.

Plan of U.S. Monitor *Monadnock*.

Builder: Phineas Burgess at the Continental Iron Works, Vallejo, Calif., and Mare Island Navy Yard, San Francisco, Calif.

Service speed: 11.63 knots on trials

Terror (BM-4):

Date of contract: Not applicable

Launched: 24 March 1883

Commissioned: 15 April 1896, Captain P.F. Harrington

Builder: Wm. Cramp & Sons, Philadelphia, Pa., and New York Navy Yard, Brooklyn, N.Y.

Service speed: 10.50 knots on trials

Monterey class (1); *Monterey*

The double-turreted *Monterey* was the first monitor to be laid down for the new steel Navy of the 1880's. Built in San Francisco for service on the Pacific Station she represented an effort to strengthen the force of armored ships in the Pacific. In 1887, when *Monterey* was authorized, *Monadnock*, then rebuilding, was the only potentially effective American armored vessel in the Pacific although *Camanche* was still available. One of the design features of the Civil War *Casco* class which added to their displacement problems reappeared in *Monterey* although in a much more refined and successful form. This feature was the provision of large water-ballast tanks which enabled her freeboard to be decreased by flooding prior to action. The actual cost of *Monterey* was \$2,065,779.30.

Monterey and *Monadnock* were the only two monitors to cross the Pacific. Both ships were sent to the Philippines to strengthen Dewey's fleet. However, they did not arrive until August of 1898, too late to participate in the Battle of Manila Bay.

Statistics:

Length overall: 260'11"
 Extreme beam: 59'½" (measured on load water line)
 Draft: 14'10" (mean)
 Designed speed: Not found
 Displacement: 4,084 tons
 Engines: 2 vertical triple-expansion engines
 Horsepower: 5,250 indicated horsepower
 Boilers: 4 Babcock & Wilcox
 Bunker capacity: 230 tons coal
 Screws: Twin screw, 10'2" diameter
 Complement: 190 (approx.)
 Armament: 2 12-inch and 2 10-inch breech loading rifles and assorted 6-pdrs.
 Armor: Turret, 8"; side, 13"

Monterey (BM-6):

Date of contract: 14 June 1889

Launched: 28 April 1891

Commissioned: 13 February 1893, Captain Louis Kemp

Builder: Union Iron Works, San Francisco, Calif.

Service speed: 13.60 knots on trial

Arkansas class (4); *Arkansas*, *Connecticut*, *Florida*, *Wyoming*

The *Arkansas* class was the last group of monitors to be constructed for the U.S. Navy although the navies of Great Britain and Italy built and used monitors for shore bombardment during World War I and the former used them during World War II as well. Single turreted monitors, they mounted the most modern heavy guns in the U.S. Navy at the time they were built, 12 inch 40 calibre weapons. The *Arkansas* class did not see any combat during World War I and instead served as submarine tenders. Alexander C. Brown, writing in the Society of Naval Architects and Marine Engineers *Historical Transactions* noted in a penetrating comment that:

Monitors found their final employment as submarine tenders in World War I for which their low freeboard hulls made them well suited. It is significant to note, however, that in this humble capacity they were ministering to the needs of that type of craft which had logically replaced them for as initially envisaged monitors were designed to combine heavy striking power with concealment and the presentation of a negligible target area . . .

Statistics:

Length overall: 255'1"
 Extreme beam: 50' (measured on load water line)
 Draft: 12'6" (mean)
 Designed speed: 12.50 knots
 Displacement: 3,225 tons
 Engines: 2 vertical triple-expansion engines
 Horsepower: 2,400 indicated horsepower
 Boilers: 4; *Arkansas*, Thornycroft; *Connecticut*, Niclausse; *Florida*, Mosher; *Wyoming*, Babcock & Wilcox
 Bunker capacity: 350 tons coal (approx.); *Wyoming*, 129 tons coal
 Screws: Twin screw, 16' diameter (approx.)
 Complement: 220 (approx.)

USS *Wyoming* on the building ways at the Union Iron Works, San Francisco, Calif.—The photograph was taken 30 June 1900.

Outboard profile of USS *Monterey*

USS *Florida* being outfitted at the Crescent Shipyard of Lewis Nixon, Elizabethport, N.J.—The photograph was taken sometime in 1901-02. Another characteristic of the “New Navy” monitors was the towering stack.

Launch of USS *Arkansas* at Newport News Shipbuilding and Drydock Co., Newport News, Va., 10 November 1900.

U.S. Monitor *Miantonomoh* lying at Boston in 1874—Her armor, turrets and other fittings have been removed and she is in reality only a hulk. At the same time construction of the second monitor to be named USS *Miantonomoh* was beginning.

Armament: 2 12-inch breech loading rifles and assorted 4-inch and 6-pdrs.
Armor: Turret, 10'' ; side, 8''

Arkansas (2 March 1909 *Ozark* (BM-7)) :

Date of contract : 11 October 1898
Launched : 10 November 1900
Commissioned : 28 October 1902, Comdr. C. E. Vreeland
Builder : Newport News Shipbuilding & Drydock Co., Newport News, Va.
Service speed : 12.03 knots on trials

Connecticut (January 1901 *Nevada*, 2 March 1909 *Tonopah* (BM-8)) :

Date of contract : 19 October 1898
Launched : 24 November 1900
Commissioned : 5 March 1903, Comdr. T. B. Howard

Builder : Bath Iron Works, Bath, Maine
Service speed : 13.04 knots on trials

Florida (20 June 1908 *Tallahassee* (BM-9)) :

Date of contract : 11 October 1898
Launched : 30 November 1901
Commissioned : 18 June 1903, Comdr. J. C. Fremont
Builder : Lewis Nixon at the Crescent Shipyard, Elizabethport, N.J.
Service speed : 12.40 knots on trials

Wyoming (1 January 1909 *Cheyenne* (BM-10)) :

Date of contract : 5 October 1898
Launched : 8 September 1900
Commissioned : 8 December 1902, Comdr. V. L. Cottman
Builder : Union Iron Works, San Francisco, Calif.
Service speed : 11.80 knots on trials

USS *Arkansas* fitting out at the Newport News Shipbuilding and Drydock Co., 1 July 1902—Her armament is completely installed and the ship is only four months away from commissioning. The ship in the aft background is the battleship USS *Missouri*.

Although the last monitor was stricken from the Navy List before World War II, the type nevertheless played a role in the career of the Navy's greatest wartime leader. USS *Tonopah* served periodically as Lt. Chester W. Nimitz's (later Fleet Admiral Nimitz) flagship when he was Commander, Atlantic Submarine Flotilla, from 20 May 1912 to 30 March 1913.

Plans of Ships and Stations, with Related Records

Plans of ships and shore establishments. 1794–1910. Entry 126.

Plans, tracings, and blueprints of U.S. Navy monitors are included in this entry. The sets of plans are generally very complete including plans of decks, turrets, inboard and outboard profiles, magazines, armor, etc. The development of a design can often be traced through successive sets of plans. Unfortunately, the plans of river monitors built during the Civil War are not included in this collection. However, a few detail machinery drawings are found in the Records of the Bureau of Engineering. Entry 1028.

Records Relating to Claims Involving Vessels

Records relating to claims in connection with the construction of Civil War naval vessels. 1861–1909. Entry 186.

Papers relating to monitors, consisting of correspondence between superintending construction, inspectors, and contractors and the Navy Department during construction of the vessels. The contracts and reports of inspectors are particularly valuable.

Published Court of Claims records in cases involving naval vessels. 1878–1910. 88 Vols. or pamphlets. Entry 195.

Printed volumes or pamphlets containing such documents as evidence and depositions of claimant and defendant, findings of fact, and correspondence relating to the construction of the vessels. Of particular interest is testimony relating to actual builders' measurements of individual monitors after completion.

Miscellaneous Records Relating to United States Vessels

Contracts for construction of naval vessels. 1861–1864. 2 Vols. Entry 235.

Appendix III

CIVIL WAR NAVAL ORDNANCE

Our work in Naval History consistently benefits from the assistance of students of history who, as a consuming hobby, have become experts in the field of their interest. Their hobbies differ widely but one characteristic unifies them—yearning to find the truth and willingness to share it with others.

From this reservoir of knowledgeable scholars we are privileged to present in this volume the following study of Civil War Naval Ordnance by Eugene B. Canfield. The latest of the special Civil War studies we are making more widely available, it appropriately ornaments this third volume of our important fighting ship series.

Mr. Canfield joined General Electric at Pittsfield in 1946 and has made important contributions to fire control system development for shipboard use including the monumental Polaris program. He has also provided key design data in the three axis shipboard tracking antenna and the Atlas

radio guidance system used to place the Gemini and Mercury astronauts into orbit. A graduate of Syracuse University, Mr. Canfield has patents or patents pending on Directrol Gearless Power Drive and several control devices. He has authored a recent book and articles in electromechanical controls and ordnance fields. In “spare” time he has become expert on the 18th and 19th centuries’ ordnance and owns an outstanding library on the subject. A registered professional engineer in both New York and Massachusetts, Mr. Canfield lives in Pittsfield, Mass., with his wife and three children.

All those interested in the Civil War, in ordnance, in ships, will welcome this excellent study on Naval Ordnance of the Civil War period that this talented writer has so well expressed and illustrated.

E.M.E.

CIVIL WAR NAVAL ORDNANCE

by

Eugene B. Canfield

On January 8, 1847 a relatively unknown lieutenant in his late thirties reported to the Washington Navy Yard for ordnance duty. So slightly was he regarded that the officer in charge received him coldly and put him off for 2 weeks. Yet, soon he and his commanding officer were steadfast friends, and such was his ability that when he was placed in command of the South Atlantic Blockading Squadron in June 1863, he had invented a system of boat howitzers, contributed to the development of the naval lock, created the shell guns and a lesser known series of rifles, designed a 15-inch smoothbore for monitor armament, and even originated a .69 caliber rifled musket.¹ The Lieutenant, of course, was John Adolphus Dahlgren and it is to him more than to any other individual that the Navy owed the proficiency of its Civil War ordnance.

Aside from the guns developed specifically for the monitor turrets, three basic categories were used:

- (a) Boat guns or howitzers;
- (b) Broadside guns; and
- (c) Pivot guns.

The general types of guns were shell guns, shot guns, rifles and howitzers. In addition, at least in the Confederate Navy, a few Carronades² remained from a bygone era.

Although Dahlgren attended to the design of rifled guns as early as 1856, they were not given

the same emphasis as in the army, possibly because of the different conditions and problems met afloat. In any case, most of the rifled guns were the designs of Robert P. Parrott, although Dahlgren rifles as well as those of Sawyer and James saw service. In the Confederacy, many Brooke rifles were used.

While generalizations can be made concerning Civil War ordnance, variation and experimentation was the rule. Small, or even significant differences may be found between two pieces of the same type. In addition, many old or obsolete pieces, especially in the Confederacy, were rifled, banded or otherwise modified by a variety of methods so that they no longer represented a standard class of ordnance. Method of updating also could vary depending upon the foundry and the sophistication of its techniques, the time, and the individuals in charge.

Shell Guns

Although Dahlgren's work on boat guns preceded the shell gun designs, his system of shell guns represents the effort for which he is most famous. However, his shell guns were not the first shell guns to arm U.S. ships, 8-inch guns of 63 and 55 cwt. having been established in 1845. Subsequently, a 10-inch shell gun of 86 cwt. also was brought into service. These guns generally followed the form of the *canon-obusier* developed for the French Navy by General Henri Joseph Paixhans. Paixhans initial effort commenced about 1821 and by 1841 the first tube had been cast. Dahlgren wrote, "Paixhans had so far satisfied naval men of the power of shell guns as to obtain their admission on shipboard; but by unduly developing the explosive element, he had sacrificed accuracy and range. . . . The difference between the system of Paixhans and my own was simply that Paixhans guns were strictly shell guns, and were not designed for shot, nor for great penetration or accuracy at long ranges. They were, therefore, auxiliary to, or as-

¹ Known as the Plymouth musket, it was a development from the French *Carabine a Tige*. Ten thousand were in service in 1864.

² Carronades are short iron guns having relatively little weight for their caliber. They have no trunnions and are fastened to their carriage by a loop underneath in a fashion similar to the Dahlgren boat guns. Carronades were first brought into British service in 1779, the 68-, 42-, 32-, and 24-pounders still being listed as retained ordnance after 1870. The Carronade, named after the Carron Works in Scotland, is somewhat obscure in origin, some crediting it to General Robert Melville and others to Charles Gascoigne, manager of the company. In any case, the guns were at first called Gasconades and one may conjecture the possibility of a play upon words, for gasconade, derived from the French Gascons, means a boast or vaunt of something very improbable. CS Ram *Manassas* was armed with a single 24- or 32-pounder Carronade.

Commander Dahlgren and the Dahlgren gun. From *Harper's Weekly*, 20 April 1861 (p. 244)

sociates of, the shot-guns. This made a mixed armament, was objectionable as such, and never was adopted to any extent in France. . . .”

“My idea was, to have a gun that should generally throw shells far and accurately, with the capacity to fire solid shot when needed. Also to compose the whole battery *entirely* of such guns.”

The first draft of the 9-inch shell gun was completed January 8, 1850. Commodore Warrington, Chief of Bureau of Ordnance and Hydrography, approved the building of an experimental model on January 10 and an order was placed on the West Point Foundry. Weight of the gun was about 9,080 pounds and the cast iron was to have a density (specific gravity) not less than 7.230 and tensile strength of at least 33,000 pounds per square inch. This original gun, as can be seen from the figure, had a slightly different form from the later designs and had only a single vent.

On May 21, 1850, the gun was landed at the Navy Yard. Practice with the gun was quite successful and encouraged both Dahlgren and Commodore Warrington. Meanwhile, in May of 1850, Dahlgren refined the 9-inch gun, developing the curvature of the reinforce and adding two vents. Although subsequent designs show minor changes including the use of a single central vent³ in place of the two side vents, this appears to be the design used during the Civil War.

Design for the 11-inch shell gun was submitted March 24, 1851. By April 30, Commodore Warrington had approved the building of a model by Cyrus Alger of the South Boston Foundry. It appears this first gun was used experimentally for several years and finally burst at the 1959th round July 18, 1855. In addition to shells, the gun had fired 655 solid shot.

In some respects, the trial 9-inch gun built in 1857 was even more remarkable. After firing 1,500 rounds of standard 72-pound shell with 10 pounds of powder charge, the gun was successively loaded with shot until 10 shot with a total weight of 903 pounds was reached. With 20 pounds of charge, the overloaded tube finally burst. The 10 shot had filled the bore to within $7\frac{3}{4}$ inches of the muzzle.

³ Upon the death of Commodore Warrington, October 12, 1851, Commodore Charles Morris was placed in command of the Bureau of Ordnance and Hydrography. Apparently Morris insisted on a single central vent and “would not permit me to have my own vent in my own model of IX-inch and X-inch.” After Morris’ death in 1856, one of Dahlgren’s first acts was “to restore the side vents to all his guns.”

In 1854, Congress authorized the Secretary of the Navy to build six first-class steam frigates. These six were the famous *Merrimack* class⁴ and Dahlgren’s new shell guns were to constitute the armament, the 9-inch being adopted for the gun decks. However, the Bureau refused to adopt the 11-inch pivot insisting instead upon a lighter 10-inch pivot. Because *Niagara* was to carry 11-inch, however, a few 11-inch were included in the initial production order as follows:

	9-inch	10-inch	11-inch
Alger & Co., Boston-----	28	7	7
Parrott, Cold Spring-----	28	7	7
Knap & Wade, Pittsburg----	50	-----	-----
Anderson, Richmond-----	50	-----	-----
	156	14	14

Dispute concerning the ability to handle heavy guns aboard ship continued. Finally, in 1857, in order to convince his critics, Dahlgren obtained *Plymouth*, sloop-of-war, as a “gunnery practice ship.” He then replaced the original armament with four 9-inch shell guns, one 11-inch shell pivot gun, two 24-pdr. and one 12-pdr. howitzer, all of Dahlgren design. Also, the 9-inch broadside guns were mounted on the two-wheel Marsilly carriage rather than the four-wheel common carriage. *Plymouth*’s 6-month cruise was completely successful, and the Secretary of the Navy concluded in his 1857 Annual Report that, “The result of the operations of *Plymouth* seem to dispel all remaining doubt whether the heavy cannon which she carried would be manageable, and not only to justify the previous adoption of such ordnance in the steam frigates recently built, but also to render it expedient to extend this plan of armament.” Firing of the 72½-pound shell from the 9-inch gun could be accomplished once every 40 seconds by an experienced crew.

Vents in all naval guns were 0.2 inch in diameter. Because the vent became enlarged or worn more quickly than other parts of the piece, two were arranged in the Dahlgren shell guns. One was filled with zinc, the other being used until it became sufficiently enlarged to endanger the safety of the piece. It was then filled with zinc and the first one opened. Other times the right vent only was bored, the left vent being unbored or partially bored.

Normally, the 10- and 11-inch guns were used in pivot and the 9-inch in broadside, but there were a

⁴ Others of the class were *Wabash*, *Minnesota*, *Roanoke*, *Colorado*, and *Niagara*. *Niagara* was built as a large sloop-of-war and strangely was armed exclusively with 11-inch guns.

few exceptions. USS *New Ironsides* had a broadside battery of 11-inch shell guns mounted on iron carriages and slides somewhat similar to a pivot mounting. At Charleston, she was able to fire the 11-inch guns once every 1.74 minutes for about an hour or once every 2.86 minutes for 3 hours, and it was believed that a rate of 1.33 minutes per round could be sustained for a short time. The 11-inch guns also formed a part of the armament for many of the monitors.

Shot Guns

In the decade or more preceding the Civil War, a large variety of 32-pdr. shot guns was available for the armament of naval vessels. These essentially were copies of "the last English decree on the subject" and were constructed in 27, 32, 42, 46, 51,

The Marsilly carriage was the usual mounting for the 9-inch shell gun. From 1866 *Ordnance Manual*.

and 57 cwt. sizes.⁵ A few other sizes may even be found. The most predominant sizes just previous to and during the war were of 27, 32, 42, and 57 cwt. These guns were generally mounted on the four-wheel common carriage and formed a portion of the armament of many ships.

In addition to the 32-pdrs., a 64-pdr. of 106 cwt. was available for mounting as a pivot gun on a slide carriage, though it was nearly obsolete. During June 1864, an 8-inch shot gun of 10,100 pounds and a 9-inch shot gun of 12,000 pounds were designed with a cylindrical chamber, but these guns likely saw little if any service.

⁵ The British had an even larger variety of 32-pdrs designed by Dundas, Monk, Blomfield and others. A hundredweight, cwt, is 112 pounds. Quotation is from *Memoir of John A. Dahlgren* by Madeleine V. Dahlgren, Charles L. Webster & Co., 1891. Dahlgren's second wife was quoting from his notes.

Although these tubes were classified as shot guns, shells were also available and were supplied to ships in appropriate proportions. For the 32-pdr., the shot weighed 32.5 pounds while the shell weighed approximately 26 pounds when filled with 0.9 pound of powder. Firing at a vertical screen 40 feet wide by 20 feet high at a distance of 1,300 yards with a 32-pdr. of 57 cwt., only three out of 10 shots hit the target, two direct and one on ricochet. The average range to first splash was 1,324 yards with deviations from 1,238 yards to 1,383 yards. While not necessarily the firing rate for this particular practice, the long 32-pdr., like the 9-inch shell gun, could be fired once every 40 seconds. Since a 9-inch shell weighed 73.5 pounds complete with sabot, it is apparent duties other than lifting and loading the projectile limited the rate of fire for these two pieces. In noting the armament of various ships, the 32-pdrs. of 42 and 57 cwt. are the most prevalent.

Rifles

Most of the rifled cannon used in the Civil War were the product of Captain Robert P. Parrott and the West Point Foundry at Cold Spring, N.Y. The Parrott rifles were first made in 1860 and consisted of a cast iron tube with a wrought iron reinforced band shrunk around the breech. Sizes varied from the 3-inch 10-pdr. to the 10-inch 300-pdr., although none of the latter and few of the former saw naval service. The 30-pdr. was one of the most popular and reliable sizes and was furnished with both truck and pivot carriages, as was the smaller 20-pdr. The 8-inch 150-pdr. was normally mounted in pivot or placed in the monitor turrets, although a Marsilly carriage as well as the more usual pivot carriage was available for the smaller 6.4-inch 100-pdr.

In September 1862, the 100-pdr. was fired from 130 feet at a target having 6 inches of wrought iron armor plates. Penetration was achieved with a 14-pound charge and 70-pound shot. It was also found that the 8-inch Parrott, with 150-pound bolts and only a 16-pound charge could break through but not punch 4½-inch plates.

The heavy 6.4-, 8-, and even 10-inch rifled guns used in both Army and Navy were almost exclusively those of Robert Parrott. The bursting of some of these guns at Charleston, and later at Fort Fisher weakened confidence in the durability of

the guns and brought some discredit to his name. In fact, the Parrott guns were quite remarkable. Rodman, Blakely, Brooke, Dahlgren and others who were working to improve the state-of-art all suffered from the bursting of large caliber cannon, especially rifles. The technology to make reliable large caliber weapons did not yet exist, and when it was developed, cast iron was made obsolete.

Another rifle that saw use, especially on some of the river gunboats, was the invention of General Charles T. James. The guns were old army 42-pdr. smoothbores rifled possibly by Ames at Chicopee, Mass., and supplied with 81¼-pound shot or 64¼-pound shell. While the James rifles and projectiles were primarily noted for their performance at Fort Pulaski and Pensacola, they also performed well in naval service.

Heavy rifles for the Confederate Navy were designed by John M. Brooke. They somewhat resembled the Parrott guns in that the cast iron tubes were reinforced by single and later double wrought iron bands shrunk around the breech. Manufacturing was done at the Tredegar works in Richmond or at the Naval Gun Foundry and Ordnance Works, Selma, Ala. The most predominant sizes were the 6.4- and 7-inch, although an 8-inch was also produced.⁶ Except under the banding, the tubes were not turned, but remained in the condition in which they left the mold. For the double-banded 7-inch rifle, nine individual bands each 2 by 6 inches were actually used. Six bands made up the inner layer. After the inner layer was turned in the lathe, the three outer bands were put on, "and the gun is again returned to the mill in order to have the exterior of the outer band turned off."

In February 1863 at Drewry's Bluff, Brooke practiced against an armored target composed of four layers of 2-inch plates and 22 inches of timber backing. Using a gun from CSS *Richmond*, presumably 7-inch, he "broke three layers of plates, so that the pieces came out, and broke the remaining plate and pushed it firmly in the wood . . ." The range was 200 yards and a 25-pound charge was used to propel the 140-pound bolt. However, proof firing was accomplished with a 16-pound charge and a 111-pound bolt. Other weights of projectile including a 102-pound shell were also available. The 6.4-inch guns were mounted on

⁶ Brooke also designed 10- and 11-inch banded smoothbores.

The 7½-inch Dahlgren rifle, shown with Brooke and Parrott rifles, was never used on board ship. Other Dahlgren rifles, except the 12- and 20-pdr. bronze pieces, were of the same form. Original drawing by author.

Marsilly carriages while the 7-inch guns were mounted on pivot carriages. Both carriages were essentially the same as those of the Union fleet.

In general, the Brooke rifles, as well as other cannon produced in the Confederacy, were quite subject to evolutionary changes as well as other small differences peculiar to the foundry and the sophistication of the workers and their equipment. Consequently, various differences exist between models of the same type.

As might be expected, Dahlgren also became interested in heavy rifled cannon and made computations for a 16,000-pound model in 1856. By 1860, Dahlgren was firing a 50-pdr. with considerable success. Shortly, designs had also been completed for 30-, 80- and 150-pdr. rifles, although relatively few were built. The first 80-pdr. was completed August 28, 1861, and placed aboard USS *Underwriter*. USS *Hetzl* received serial No. 10 which burst spectacularly on February 7, 1862: "At 5:15 rifled 80-pdr. aft, loaded with 6 pounds of powder and solid Dahlgren shot, 80 pounds, burst, in the act of firing, into four principal pieces; the gun forward of trunnions fell on deck, one third of breech passed over mastheads and fell clear of ship on starboard bow, one struck on port quarter, and the fourth piece, weighing about 1,000 pounds, driven through the deck and magazine, bringing upon the keelson; set fire to the ship. . . ." The tube weighed 7,900 pounds.

Dahlgren rifles were cast without trunnions, and the trunnions were supplied by a breech strap attached to the finished casting. As in the shell guns, two vents were present, although only one was completely bored through to the chamber. Very few of the rifles saw service, and most of them were 50-pdrs. Before his system of rifles was perfected, Dahlgren was given other duties as Rear Admiral and commander of the South Atlantic Blockading Squadron.

Armament for the Monitors

On March 9, 1862 Gustavis V. Fox, Assistant Secretary of the Navy and Lt. Henry A. Wise, Bureau of Ordnance, watched the encounter between *Monitor* and *Merrimack* from a small tugboat in Hampton Roads. Although *Monitor* was left in possession of the battleground, neither contestant had been materially injured and it was apparent that something more powerful than *Mon-*

itor's 11-inch Dahlgren shell guns⁷ was required. Coming ashore at Fort Monroe, Fox was attracted by an experimental 15-inch Rodman columbiad lying nearby. This obviously was the needed gun. Therefore, in April, Dahlgren completed a 15-inch design to fit the 20-foot interior of the new Ericsson ironclads. The first 15-inch guns were mounted alongside 11-inch shell guns since the 15-inch guns could not be produced quickly enough to provide two for each turret. The carriages were made of iron and the gun ports were so small that the 26.5-inch muzzles could not protrude. Consequently, a smoke-box was devised as shown in the illustration to protect the gun crew from the blast of the explosion.

Early testing was carried out in attacks on Fort McAllister, Ga. On January 27, 1863, Commander John Worden, of *Monitor* fame, and now captain of the new *Montauk*, fired twenty-six 15-inch projectiles at the fort from a range of 1,600 yards. "The firing from turret seemed slow and deliberate to those in engine room; the smoke from guns was forced rapidly into fireroom at each discharge, but was well diluted with air by the fans, and rapidly passed out through furnaces and smokepipe, causing no unusual discomfort." Rear Admiral DuPont commented, "We have obtained valuable information in the success of the working of the XV-inch gun . . . My own previous impressions of these vessels . . . have been confirmed, viz, that whatever degree of impenetrability they might have, there was no corresponding quality of aggression or destructiveness as against forts, the slowness of fire giving full time for the gunners in the fort to take shelter in the bombproofs."

On February 28, Worden first proved the effectiveness of the 15-inch guns by destroying Confederate steamer *Nashville* lying aground under the protection of Fort McAllister. The range to the steamer was approximately 1,200 yards; only eight 15-inch shells and six 11-inch shells were required to set the wooden ship afire. Average time for firing the 15-inch gun was a little over 6 minutes with a minimum time of 3 minutes. On other

⁷ *Monitor's* 11-inch shell guns were Nos. 27 and 28 made at the West Point Foundry in 1859. Forty-one cast iron shot weighing approximately 170 pounds were fired with 15-pound charges and hit *Merrimack* 20 times, breaking six of the top layer of plates. *Merrimack's* armor was two layers of 2-inch thick rolled plates sloping at an angle of 35 degrees. It was later determined that charges of 30 pounds could be used in 11-inch guns.

occasions and with other monitors, the average firing time might be as much as 10 minutes.

Captain Drayton of *Passaic* reported that "pointing was done for both guns with the XI-inch, the port of the other being entirely closed by the concussion box." Furthermore, the smoke or concussion box was nearly knocked down, and the small projection on the cartridge would not enter the chamber so that priming powder had to be used to ignite the charge. Perhaps because of this, half of the 34 original guns had the teat chambers reamed out to parabolic form and the muzzle was turned down to 21 inches, the diameter of the 13-inch gun.⁸ Later, for the *Canonicus* class, the gun ports were enlarged to eliminate the smoke box and the 15-inch guns were redesigned with a 16-

⁸ Dahlgren actually preferred to arm the monitors with 13-inch guns.

inch long muzzle. *Canonicus* and her sisters carried two 15-inch guns in their turrets.

Normally, the crew for firing the 15-inch gun consisted of 14 men, but often only eight men were preferred as being equally efficient with less crowding. Three types of projectile were provided and the 440-pound solid shot could be fired with 60-pound charges at close quarters, although 50 pounds was the normal charge. Cored shot of 400 pounds was recommended for use against masonry. The 330-pound shell contained 13 pounds of powder and was ordinarily fired with a 35-pound charge. It contained three navy time fuses of 3½, 5, and 7 seconds.

Final justification for the 15-inch gun came on June 17, 1863 when *Weehawken's* cored shot penetrated *Atlanta's* 4-inch armor plating and broke the heavy iron casting at the top of the pilot house.

The original 15-inch cannon designed by Dahlgren for the monitor turrets—Vent is slightly altered from original concept. Original drawing by author.

MONITOR TURRET.

Van Nostrand, Publisher.

J. Van Nostrand, Jr.

Monitor turret showing arrangements for 15-inch guns—*Passaic* class monitors had smoke boxes to enclose the muzzle as shown at left. Longer guns and larger ports were used with *Canonicus* class monitors as shown at right. From 1866 *Ordnance Manual*. (Note: The *Canonicus* class is referred to on this plan as the *Tecumseh* class. See Appendix II).

Surrender occurred after only 15 minutes of fighting.

In addition to the heavy smoothbores, a few of the monitors were equipped with the 8-inch 150-pdr. Parrott rifles. Of the *Passaic* class, *Lehigh* and *Patapsco* had them in place of the 11-inch shell guns, and finally the 11-inch of *Passaic* was replaced with a 150-pdr. rifle. The twin-turreted *Onondaga* also had a 150-pdr. Parrott alongside the 15-inch smoothbore in each turret. The extra range of the rifles was occasionally useful in reaching targets unattainable with the smoothbore.

Mortars were not widely used by naval forces during the Civil War and opinions regarding them were generally controversial. However, the 17,200-pound 13-inch monsters were used in mortar boats on the Mississippi River. Their greatest use was in bombarding Forts Jackson and St. Philip below New Orleans with 8,000 of the 200-pound shells.⁹ Most of the shells fell on and about Fort Jackson and, since the fuses were erratic, some of the shells bored 18 to 20 feet into the soft ground before exploding.

Because mortars were usually fired at an elevation of 45°, it was necessary to provide different charges for targets at different ranges. Safety required that the measuring of powder and filling of cartridge bags be done in the magazine. The cartridges were then sent to the mortar in leather passing boxes. Unlike most other cannon where the cartridge bag was placed in the chamber and pierced by the priming wire as it was pushed down the vent, mortar cartridge bags were opened and the powder carefully emptied into the chamber. The cotton bag was then used to wipe off the shell before it was lowered into the bore, and finally was used to wipe out the mortar before sponging. The bags were never returned to the magazine during action as small amounts of loose powder remaining in the bags might fall out on the deck eventually forming a powder train from the mortar to the magazine. The performance of the mortar flotilla is commendable in that no accidents occurred during the 7 days of firing. One schooner, *Dan Smith*, fired 493 shells. Maximum range to Fort St. Philip was 4,710 yards and required a 23-pound charge against the wind. Best sustained rate of fire was 2½ minutes per projectile, although projectiles could be fired every 5 minutes with greater ease.

Boat Guns and Howitzers

The Navy system of boat guns and howitzers dates from Dahlgren's earliest endeavors at the Washington Navy Yard. He noted that, "The first trial was a little bronze howitzer of my design,

⁹ Of the 21 vessels in the mortar flotilla, only 20 had mortars. One mortar schooner was sunk on the second day of firing. Some accounts indicate more than 16,000 shells were fired but calculations based on reports from the mortar flotilla indicate 8,000 is more nearly correct. This is still a phenomenal quantity, representing 800 tons of metal.

of two hundred and twenty pounds, cast in an old brass furnace . . . bored and finished on a lathe." The work was done in 1848. Even before the Civil War, the pieces saw service at various places around the world. One 24-pdr. and eleven 12-pdrs. accompanied Commodore Perry on his expedition to Japan in 1853-54. The Japanese were so impressed they requested and were given one of the howitzers. All the pieces were made of bronze and were of very simple form. They were attached to their boat or field carriages by a loop underneath the tube in a manner similar to the carronade. Three smoothbores were available: light and medium weight 12-pdrs., and a 24-pdr. A 12-pdr. rifle was available along with a 20-pdr. rifle, although the latter is relatively ignored in the ordnance manuals.¹⁰

The boat-carriage was composed of a bed to carry the howitzer, a slide on which the bed moved in recoiling, and a wooden plate beneath the slide. William B. Cushing's open launch, in which he successfully torpedoed and sank *Albemarle*, was equipped with a 12-pdr. howitzer on a boat carriage. The howitzer was fired just before the launch bumped over *Albemarle*'s protecting log boom to explode the torpedo.

The field-carriage was made of wrought iron and, in contrast to land service practice, a small wheel was located at the end of the trail to help the carriage over rough ground, for the carriage was to be hauled by sailors rather than horses. In firing, however, the pin of the trail-wheel was removed and the wheel turned upon the trail in order to reduce recoil. No limber was provided since it was not intended that the howitzer would be moved any great distance from the landing place. If movement was necessary, ammunition was slung from the axle or carried in the pouches of the men.

The basic ammunition for the smoothbores was shell, shrapnel or spherical case, and canister. Shot was never provided. The medium 12-pdr. with its field carriage weighed less than 1,250 pounds, and considerably less than the 2,355-pound army 12-pdr. Napoleon with carriage. Consequently, it could be maneuvered relatively easily by hand, but was not expected to be subjected to

as severe an environment as the army field gun. Canister could be fired at a maximum rate of eight rounds per minute although one round in 15 to 18 seconds was typical. On the boat-carriage in a launch, maximum firing rate was approximately five rounds per minute.

Projectiles and Fuzes

The number and variety of projectiles for Civil War ordnance are legion. Many varieties were supplied without official sanction, especially for the rifles. Most spherical shells were fitted with the Navy time-fuse, consisting of a composition driven in a paper case and then inserted in a metal stock which screwed into a bouching fitted to the shell. The fuse composition was covered with a water cap to prevent the flame from being extinguished as the projectile ricocheted over the water. A simple labyrinth was filled with mealed powder to communicate fire to the fuse composition. Protection from moisture and accidental ignition was provided by a safety cap. Likewise, a safety plug at the bottom of the fuse prevented fire from being communicated to the powder in the shell if the fuse was ignited accidentally. On loading, the safety cap was carefully removed and the shell pushed home with the axis of the fuse along the bore and away from the charge. On firing, the fuse was ignited by the flame coming around and over the top of the shell, the safety plug being dislodged by the shock of discharge. The illustration shows the water cap screwed into a brass fuse plug which in turn was firmly driven into the fuse hole of the projectile. Apparently, this type of fuse also saw service and was similar to the standard sea-coast fuse.

Shells for the 12- and 24-pdr. howitzers and all spherical shrapnel were fitted with the Bormann fuse which also was standard for the army field artillery. Maximum burning time of a little over 5 seconds was approximately correct for a range of 1,200 yards. Face of the fuse was marked in seconds either by arabic numerals or dots. In operation, a cut was made beside the appropriate time index mark exposing the ring of composition to the flame of discharge. At the desired time, the fire was communicated to the priming magazine which exploded driving its flame into the charge of the shell or shrapnel. In loading the projectile, the fuse was always toward the muzzle with the cut of the fuse up to be certain the com-

¹⁰ The 71st Regiment New York Militia had two Dahlgren boat howitzers at Bull Run. After the battle, these, along with other artillery pieces were listed by the Confederate E. P. Alexander in his report of captured equipment.

position would be ignited by the flame of discharge migrating over the top of the projectile. If inadvertently the fuse was placed toward the charge, the fuse might be blown in and the projectile would explode as it left the muzzle.

Firing of naval guns was accomplished by means of a percussion lock. Locks were first introduced into the British Navy by Sir Charles Douglas in 1782 replacing the slow-match and other methods of firing. The U.S. percussion lock used during the Civil War dated from approximately 1842 and was patterned after the method of Hidden. For 32-pdrs. and similar pieces, the lock was attached to an oblong mass of metal about the vent called the lockpiece. On shell guns, the hammer was fitted in a slit cut into a lug cast near the vent. The lock was also attached to the Parrott and other rifles.

To fire the piece, a percussion primer in the shape of a 2½-inch-long quill barrel topped with a wafer or flat head was first inserted in the vent. Then the lanyard was steadily and quickly drawn (not jerked) rotating the hammer on its bolt until it was brought down on the vent setting off the percussion primer. Continued pull on the lanyard drew the hammer clear of the vent avoiding the erosion caused by gasses rushing from the vent. To obtain this action, an inch-long slot was cut at the rear of the hammer. In contrast to the locks on small arms, no springs were included in the mechanism.

The hammer for the boat-howitzers was different and simpler than the standard navy lock. Although the lanyard rotated the hammer in the same way, there was no slot. Instead, the hammer remained on the vent, and a perforation through the head minimized erosion as the gasses escaped. However, the face of the hammer was a nipple that could be unscrewed and replaced if erosion became excessive.

Parrott designed and developed a considerable variety of projectiles for the rifles he produced at the Cold Spring Foundry. The base rings which expanded into the rifling on being fired from the piece took many forms. For the larger calibers, the brass ring was cast into a recess provided with numerous toothlike projections to assure that the ring, which gripped the rifling, also rotated the projectile. The blunt noses of the shot, some solid and others hollow, were hardened and chilled to make them more effective for armor

piercing. Against armor, ordinary cast iron shot would become mashed and cause little damage.

Both Hotchkiss and Schenkl projectiles were also used in the rifles. The Schenkl projectile consisted of a cast iron body with a cone shaped tail. A papier mache sabot was expanded into the rifling by being forced on the cone by the action of the charge. Projections on the cone insured that the rotary motion was imparted to the projectile. A basic problem with this ammunition was the material for the sabot. Sometimes moisture would swell the papier mache so that the projectile could not be loaded into the piece. Other times, the sabot material was hard and would crumble on firing, permitting the projectile to tumble in flight.¹¹ However, the Schenkl percussion fuse was quite successful and remained in naval use long after the Civil War. It consisted of a hollow metallic stock containing a plunger held in place by a small screw. On discharge from the piece, the screw would break and the plunger was free to float. On impact, the percussion cap would be set off igniting the primer within the plunger and exploding the shell.

The Hotchkiss projectile consisted of three parts, the body, a cup on the rear of the body, and a lead ring filling the intermediate space. On discharge, the cup would be pushed forward compressing the lead into the grooves. Another feature for projectiles having time fuses was the three longitudinal grooves along the outside to insure passage of the flame to ignite the fuse. Hotchkiss projectiles were generally quite successful, and were relatively free from tumbling.¹²

Along with his other efforts, John Dahlgren also developed a projectile for his rifles. As shown on page 814, the projectile consisted of an iron body with a lead base cast over projections on the rear. Along the middle of the body several ribs were formed. These ribs were inclined slightly to the axis of the projectile so that they would be parallel to the rifling and were turned to a diameter 0.02 inch less than the bore of the gun. Their purpose was to provide a relatively small but finished bearing surface for the projectile against

¹¹ A more complete description of Schenkl projectiles and fuzes by the same author is presented in *Civil War Times Illustrated*, June 1966, page 24.

¹² Henry L. Abbot, commanding the siege artillery at Petersburg, felt the projectile strained the guns and did not like to use it in the larger calibers.

the bore of the gun.¹³ The groove around the periphery of the lead base was filled with lubricating material. The 80-pdr. Dahlgren rifle that burst aboard USS *Hetzel* was furnished with Hotchkiss and Cochran projectiles as well as the Dahlgren type.

Confederate Brooke projectiles were diversified in shape and method of producing rotation. The four types shown may be found on drawings with Brooke's signature. Two of the projectiles have raised rings (similar to the bourrelet on modern projectiles) which were carefully turned to the proper dimensions, the remainder of the surface being rough as it came from the mold. These also have the ratchet sabot of bronze or copper. The base of the projectile was usually divided into seven equal sectors with their surfaces inclined to the axis preventing the sabot from slipping on the base. The sabot was secured by a central screw. Another type of ratchet-ring sabot, in which a soft metal ring was cast upon the base of the projectile, was personally designed by Brooke.

A very simple method of making projectiles take the rifling was apparently developed in late 1862 when steel for navy solid shot became scarce. The shot was forged of wrought iron and an annular groove was turned in the base to form a lip.

¹³ Projectiles of this type generally have been identified as of Confederate origin, probably because Henry L. Abbot found a sample among his collection of Confederate ammunition fired into his batteries at Petersburg. Whether the sample (see *Siege Artillery in the Campaigns against Richmond* by H. L. Abbot, Washington 1867, plate 6, fig. 66) was copied by the Confederates or was reclaimed U.S. ammunition is unknown. Abbot's inability to recognize the Dahlgren naval projectile is some indication of the lack of communication between the Army and Navy on ordnance matters. Dahlgren's patent No. 32986 is dated Aug. 6, 1861.

On discharge, the lip expanded into the rifling and the rotation was transmitted to the shot.¹⁴

Other types of guns and projectiles than herein described were used with varying degrees of success. Information on some types may be found easily while a dearth of information exists on others. Often, especially in the Navy, an element of secrecy existed preventing the publication of dimensions or scale drawings of various weapons. However, the secrecy seemed to have been more a personal attitude on the part of various individuals than an official government directive. Thus, Dahlgren's *Shells and Shell Guns* published in 1856 doesn't contain a single illustration of either shell or shell gun, although other reasons may also have existed. Nevertheless, range tables are readily available. One of the few statements regarding security may be found in the *1866 Ordnance Manual* and warns the reader not "to show or explain to foreigners or others the construction of any fuzes, except so far as necessary for the service of the guns."

The period of the Civil War was one of a rapidly changing ordnance technology. Various lessons learned over a period of several hundred years were still being practiced. Yet, new ideas and new materiel were being introduced daily. Both the North and the South grasped much of the new ordnance technology and effectively put it to use to their own purpose and advantage.

¹⁴ The drawings with Brooke's signature are in the possession of the National Archives. One drawing titled "The Ratchet-ring Sabot Designed by John M. Brooke Comdr. CSN" bears the date Nov. 24, 1863. The drawing of the solid wrought iron shot is dated Oct. 8, 1862.

NOTES

¹ For monitor turrets.
² For short gun. Long gun had 146-inch bore length, weighed 42,900 lbs.
³ Apparently few of these guns saw service. Charge given is the maximum.
⁴ Shrapnel ranges for the 32-pdrs. is essentially the same as with shot. The shrapnel weighed 32 lbs.
⁵ This piece is often mistakenly labeled as being of 33 cwt.
⁶ Not to be confused with the army 30-pdr. which had a 120-inch bore and weighed 4,200 lbs.
⁷ Army 42-pdr. sea-coast gun rifled on the James system.
⁸ Horatio Ames of Salisbury, Conn., made at least 5 pieces by his wrought iron process. Others were made of cast iron. Dahlgren gave the weight as 54 cwt. and Ames as about 5,500 lbs. Dimensions are from measurements of actual piece.
⁹ Double banded. Measurements graciously furnished by Capt. Slade Cutter, USN Ret., U.S. Naval Historical Display Center, Washington, D.C. Length of bore is estimated.

¹⁰ Double banded.
¹¹ A 12-pdr. light howitzer of 430 lbs. and 44-inch bore length was also available in limited supply.
¹² A few pieces of this model were made of iron or possibly cast steel weighing 790 lbs.
¹³ Maximum range given in table for elevation of 45°.

The data in this table have been compiled from various contemporary works. These sources frequently conflict because of variations in individual guns, powder, measuring techniques or even changes in the state-of-art. Range tables often disagree because of projectile dispersion and other differences in conditions at the time of firing. While the table includes the major types of guns, no attempt has been made to include every available type.

E. B. CANFIELD,
 October 16, 1966.

Initial Velocity of Guns

Type	Projectile	Weight, pounds	Charge, pounds	Initial Velocity, ft./sec.
15-inch Dahlgren.	Cored shot.	400	60	1,480
32-pdr. of 57 cwt.	Shot	32	9	1,700
32-pdr. of 42 cwt.	Shot	32	6	1,450
150-pdr. Parrott.	Short shell.	152	16	1,234
100-pdr. Parrott.	Long shell.	101	10	1,250

Cost of Guns

Type	Weight, pounds	Cost
15-inch Dahlgren	42,000	\$6,500
11-inch Dahlgren	15,900	1,391
9-inch Dahlgren	9,200	690
150-pdr. Parrott	16,500	1,900
100-pdr. Parrott	9,800	1,200
30-pdr. Parrott	3,500	500
20-pdr. Parrott	1,750	380
13-inch Mortar	17,188	1,341

NOTE.—The cost given above is representative but varied during the course of the war. Thus, the price of the 9-inch Dahlgren was 7.5 cents per pound until it was raised to 9.75 cents per pound in July 1863.

Admiral Dahlgren and Dahlgren gun on board USS *Pawnee* in Charleston Harbor.

“If the Navy be, indeed, the right arm of defense, her guns and ordnance . . . are the main sinews and arteries, the neglect of which would soon render it feebled and palsied. . . .”

—Memoirs of John A. Dahlgren, 1891, by *Madeline V. Dahlgren*.

Born in 1809, John Adolphus Dahlgren became a Midshipman in 1826. In 1847 he organized an ordnance workshop at the Washington Navy Yard, which later became the Naval Gun Factory. He later developed a howitzer widely used in the Civil War, and designed the famous Dahlgren gun. In 1850 he urged construction of frigates armed entirely with heavy guns, anticipating the dreadnaughts of the next century. He later published several significant and widely-read works on ordnance. When the Civil War began, he took command of the Washington Navy Yard on President Lincoln’s recommendation. He became a close friend and advisor of Lincoln, who relied greatly on his technical judgment. In 1862 he became Chief of the Bureau of Ordnance; in 1863, after a vote of appreciation from Congress, he became a Rear Admiral. Commanding the South Atlantic Blockading Squadron from 1863 to 1865, he participated in the bombardment of Fort Wagner and successfully commanded the naval forces in the 2-year siege of Charleston. He also supported General W. T. Sherman in his capture of Savannah. He commanded the South Pacific Squadron from 1866 to 1868, then again became Chief of the Bureau of Ordnance. A year later he assumed command of the Washington Navy Yard once more. Rear Admiral Dahlgren died in 1870.

Rightly called the “father of naval ordnance,” he revolutionized the science of ordnance with his original work and set a standard for other navies. His technical genius made a major contribution to victory in the Civil War. A blue-water sailor as well as a scientist, Admiral Dahlgren brilliantly commanded a powerful naval force through 2 years of arduous wartime service, leaving behind him an example of productive study and gallantry in action.

NUMERICAL LIST

NOTE.—Data before conversion entered under original classification and hull number in Vol. I, Appendix II, pp. 203-222.

CAG-1 (BOSTON) Class

CAG-1 BOSTON (Reclassified 1/4/52 from CA-69)

Built at Bethlehem Steel Co., Quincy, Mass.
Contract 7/1/40, Keel laid 6/30/41, Launched 8/26/42
Commissioned 6/30/43, Capt. John H. Carson commanding
Decommissioned 10/26/46
Converted at New York Shipbuilding Corp., Camden, N.J.
Contract 12/4/51, Commenced 4/11/52, Completed 10/4/55
Recommissioned 11/1/55, Capt. Charles B. Martell commanding

CAG-2 CANBERRA (Reclassified 1/4/52 from CA-70)

Built at Bethlehem Steel Co., Quincy, Mass.
Contract 7/1/40, Keel laid 9/3/41, Launched 4/19/43
Commissioned 10/4/43, Capt. Alexander R. Early commanding
Decommissioned 3/7/47
Converted at New York Shipbuilding Corp., Camden, N.J.
Contract 1/28/52, Commenced 6/30/52, Completed 6/1/56
Recommissioned 6/15/56, Capt. Charles Mauro commanding

CAG-1 thru CAG-2:

Length Overall: 673'5"; Extreme Beam: 70'10"
Full Load Displacement: 17,750 tons; Max. Draft: 26'6"
Designed Accommodations: Off: 110, Enl.: 1620
Designed Speed: Over 30 knots
Armament:
 Gun Turrets: (2) 8"/50 triple
 Gun Mounts: (2) 5"/38 twin, (4) 3"/50 twin
 Missile Systems: (2) Terrier
Engines: No.: 4, Mfg.: GE, Type Drive: TR
Boilers: No.: 4, Mfg./Type: B/WSHC
Propulsion: Props.: 4, Designed Shaft Horsepower: Over 120,000.

CLG-3 (GALVESTON) Class:

CLG-3 GALVESTON (Reclassified CLG-93 from CL-93 1/4/56, from CLG-93 to CLG-3 5/23/57)

Built at Cramp Shipbuilding Co., Philadelphia, Pa.
Contract 10/29/40, Keel laid 2/20/44, Launched 4/22/45
Construction completed 5/24/46 (not commissioned—laid up).
Converted at Philadelphia Naval Shipyard, Philadelphia, Pa.
Contract 1/4/56, Commenced 8/15/56, Completed 9/14/59
Commissioned 5/28/58, Capt. John R. Colwell commanding

CLG-4 LITTLE ROCK (Reclassified 5/23/57 from CL-92)

Built at Cramp Shipbuilding Co., Philadelphia, Pa.
Contract 10/29/40, Keel laid 3/6/43, Launched 8/27/44
Commissioned 6/17/45, Capt. William E. Miller commanding
Decommissioned 6/24/49
Converted at Philadelphia Naval Shipyard, Philadelphia, Pa.
Contract 12/21/56, Commenced 1/30/57, Completed 5/6/60
Recommissioned 6/3/60, Capt. Jewett O. Phillips, Jr. commanding

CLG-5 OKLAHOMA CITY (Reclassified 5/23/57 from CL-91)

Built at Cramp Shipbuilding Co., Philadelphia, Pa.
Contract 9/11/40, Keel laid 12/8/42, Launched 2/20/44

Commissioned 12/22/44, Capt. Charles B. Hunt commanding
Decommissioned 6/30/47
Converted at Bethlehem Pacific Coast Steel Corp., San Francisco, Calif.
Contract 1/10/57, Commenced 5/21/57, Completed 8/31/60
Recommissioned 9/7/60, Capt. Ben W. Sarver commanding

CLG-3 thru CLG-5:

Length overall: 610'1"; Extreme Beam: 66'4"
Full Load Displacement: 14,400 tons; Max. Draft: 26'0"

Designed Accommodations:

Off.: 70 (CLG-3), 78 (CLG-4), 92 (CLG-5)
Enl.: 1099 (CLG-3), 1365 (CLG-4), 1249 (CLG-5)

Designed Speed: Over 30 knots

Armament:

Gun Turrets: (2) 6"/47 triple
Gun Mounts: (1) 5"/38 twin
Missile Systems: (1) Talos
Engines: No.: 4, Mfg.: GE, Type Drive: TR
Boilers: No.: 4, Mfg./Type: B/WSHC
Propulsion: Props.: 4, Designed Shaft Horsepower: Over 100,000

CLG-6 (PROVIDENCE) Class

CLG-6 PROVIDENCE (Reclassified 5/23/57 from CL-82)

Built at Bethlehem Steel Co., Quincy, Mass.

Contract 9/9/40, Keel laid 7/27/43, Launched 12/28/44

Experimental gunnery ship *Mississippi* (AG-128), the former battleship BB-41, made giant contributions in gunnery and ordnance developments. She launched the Navy into the age of the guided missile war ships. Her Terrier missile installation was completed in the Norfolk Yard by 9 August 1952, followed by successful firing in the Cape Cod area, off Georges Bank, 28-29 January 1953. Her newly developed Terrier missile systems made their first appearance in the active fleet in *Boston* (CAG-1) when recommissioned as a guided missile cruiser 1 November 1955, followed by *Canberra* (CAG-2) when recommissioned as a guided missile cruiser 15 June 1956.

Commissioned 5/15/45, Capt. William B. Jackson, Jr. commanding
Decommissioned 6/14/48
Converted at Boston Naval Shipyard, Boston, Mass.
Contract 7/23/56, Commenced 6/1/57, Completed 12/3/59
Recommissioned 9/17/59, Capt. Kenneth L. Veth commanding

CLG-7 SPRINGFIELD (Reclassified 5/23/57 from CL-66)

Built at Bethlehem Steel Co., Quincy, Mass.
Contract 7/1/40, Keel laid 2/13/43, Launched 3/9/44
Commissioned 9/9/44, Capt. Felix L. Johnson commanding
Decommissioned 1/31/50
Converted at Bethlehem Steel Co., Quincy, Mass.
Contract 1/10/57, Commenced 8/1/57, Completed 1/6/60
Recommissioned 7/2/60, Capt. Francis D. Boyle commanding

CLG-8 TOPEKA (Reclassified 5/23/57 from CL-67)

Built at Bethlehem Steel Co., Quincy, Mass.
Contract 7/1/40, Keel laid 4/21/43, Launched 8/19/44
Commissioned 12/23/44, Capt. Thomas L. Wattles commanding
Decommissioned 6/18/49
Converted at New York Naval Shipyard, New York
Contract 7/23/56, Commenced 8/18/57, Completed 4/14/60
Recommissioned 3/26/60, Capt. Frank L. Pinney, Jr. commanding

CLG-6 thru CLG-8

Length Overall: 610'1"; Extreme Beam: 66'4" (CLG-6); 66'6" (CLG-7&8)
Full Load Displacement: 14,000 tons; Max. Draft 26'0"

Designed Accommodations:

Off.: 98 (CLG-6); 89 (CLG-7&8)
Enl.: 1,288 (CLG-6); 1,245 (CLG-7); 1,206 (CLG-8)

Designed Speed: Over 30 knots

Armament:

Gun Turrets: (1) 6"/47 triple (CLG 6-7); (2) 6"/47 triple (CLG-8)
Gun Mounts: (1) 5"/38 twin (CLG 6-7); (3) 5"/38 twin (CLG-8)

Missile Systems: (1) Terrier

Engines: No.: 4, Mfg.: GE, Type Drive: TR

Boilers: No.: 4, Mfg./Type: B/WSHC

Propulsion: Props.: 4, Designed Shaft Horsepower: Over 100,000

CG(N)-9 (LONG BEACH) Class:

CG(N)-9 LONG BEACH (ex CLG(N)-160, ex CG(N)-160)

Built at Bethlehem Steel Co., Quincy, Mass.

Contract 10/15/56, Keel laid 12/2/57, Launched 7/14/59

Commissioned 9/9/61, Capt. Eugene P. Wilkinson commanding

CG(N)-9

Length Overall: 721'3"; Extreme Beam: 73'3"

Full Load Displacement: 17,100 tons; Max. Draft 30'7"

Designed Accommodations: Off.: 79, Enl.: 1,081

Designed Speed: Over 30 Knots

Armament:

Gun Mounts: (2) 5"/38 single

Missile Systems: (1) Talos, (3) Terrier, (1) ASROC Group

Engines: No.: 2, Mfg.: FE, Type: Water-cooled nuclear reactors, 2 pressure geared steam turbines

Propulsion: Props.: 2, Designed Shaft Horsepower: Over 75,000

Guided missile cruiser USS *Albany* (CG-10) on 30 January 1963 successfully fired three surface-to-air test missiles simultaneously—the first such launching by any navy in the world.

CG-10 (ALBANY) Class:

CG-10 ALBANY (Reclassified 11/1/58 from CA-123)

Built at Bethlehem Steel Co., Quincy, Mass.
Contract 8/7/42, Keel laid 3/6/44, Launched 6/30/45
Commissioned 6/15/46, Capt. Harold A. Carlisle commanding
Decommissioned 6/30/58
Converted at Boston Naval Shipyard, Boston, Mass.
Contract 11/25/57, Commenced 1/2/59, Completed 11/2/62
Recommissioned 11/3/62, Capt. Ben B. Pickett commanding

CG-11 CHICAGO (Reclassified 11/1/58 from CA-136)

Built at Philadelphia Naval Shipyard, Philadelphia, Pa.
Contract 8/7/42, Keel laid 7/28/43, Launched 8/20/44
Commissioned 1/10/45, Capt. Richard R. Hartung commanding
Decommissioned 6/6/47
Converted at San Francisco Naval Shipyard, San Francisco, Calif.
Contract 9/23/58, Commenced 7/1/59, Completed 12/1/63
Recommissioned 5/2/64, Capt. John E. Dacey commanding

CG-12 COLUMBUS (Reclassified 9/30/59 from CA-74)

Built at Bethlehem Steel Co., Quincy, Mass
Contract 9/9/40, Keel laid 6/28/43, Launched 11/30/44
Commissioned 6/8/45, Capt. Allen Hobbs commanding
Decommissioned 5/8/59
Converted at Puget Sound Naval Shipyard, Bremerton, Wash.
Contract 9/23/58, Commenced 6/1/59, Completed 11/30/62
Recommissioned 12/1/62, Capt. Gideon M. Boyd commanding

CG-10 thru CG-12

Length Overall: 674'11"; Extreme Beam: 70'10"
Full Load Displacement: 17,700 tons, Max. Draft: 34'0"

Designed Accommodations:

Off: 75 (CG-10), 61 (CG-11), 102 (CG-12)

Enl: 1187 (CG-10), 1146 (CG-11), 1606 (CG-12)

Designed Speed: Over 30 knots.

Armament:

Gun Mounts: (2) 5"/38 single

Torpedo Tubes: (2) triple

Missile Systems: (2) Talos, (2) Terrier, (1) ASROC Group

Engines: No.: 4, Mfg.: FE, Type Drive: TR

Boilers: No.: 4, Mfg./Type: B/WSHC

Propulsion: Props: 4, Designed Shaft Horsepower: Over 100,000

Skate at the North Pole.

Part B
Addenda to Appendix III, Volume I
SUBMARINES 1959-1967

DIESEL-ELECTRIC SUBMARINES—SS

SS-1 through SS-577: Data in Vol. 1, Appendix III, pp. 227-262

For hull numbers SSN-578 & 579 see "Nuclear Submarines SSN" below.

SS-580 BARBEL

Built at Portsmouth Naval Shipyard, Portsmouth, N.H.
Contract: 8/24/55, Keel laid 5/18/56, Launched 7/19/58
Commissioned 1/17/59, Lt. Comdr. Ord Kimzey, Jr., commanding

SS-581 BLUEBACK

Built at Ingalls Shipbuilding Corp., Pascagoula, Miss.
Contract: 6/25/56, Keel laid 4/15/57, Launched 5/16/59
Commissioned 10/15/59, Lt. Comdr. Robert H. Gautier commanding

SS-582 BONEFISH

Built at New York Shipbuilding Corp., Camden, N.J.
Contract 6/29/56, Keel laid 6/3/57, Launched 11/22/58
Commissioned 7/9/59, Lt. Comdr. Elmer H. Kiehl commanding

SS-580 through SS-582:

Length Overall: 219'6"
Extreme Beam: 29'
Surface Displacement: 2,155 tons; Mean Draft 27'11"
Submerged Displacement: 2,650
Accommodations: Off.: 8, Enl.: 69
Armament: Torpedo Tubes: 6
Designed Speed: Surfaced: 15.5 knots; Submerged: 18.3 knots
Engines: Mfr.: FM; Type Drive: DED
Motors: Mfr.: GE
Batteries: Mfr.: Exide Cells: 504
Fuel: Gallons: Classified
Designed Shaft Horsepower: 4,800
Propulsion: Props.: 1

583 and subsequent hull numbers assigned to SSN or SSBN (q.v.)

**EXPERIMENTAL AUXILIARY
SUBMARINE—AG(SS)**

AG(SS)-555 DOLPHIN (Experimental deep-diving submarine)

Built at Portsmouth Naval Shipyard, Portsmouth, N.H.
Authorized 8/10/60, Keel laid 11/9/62, Launched 22 May 1968

AG(SS)-555 (Designed Characteristics):

Length Overall: 152'; Extreme Beam: 19'4"
Submerged Displacement: 950 tons
Accommodations: Off.: 3, Enl. 15, Scientists: 4
Engines: Mfr.: GM, Type Drive: DE Mfr.: Yardnay
Propulsion: Props.: 1, Designed Shaft Horsepower: 1,650

NUCLEAR SUBMARINES—SSN

"Underway on nuclear power" was the terse message sent 17 January 1955 from *Nautilus* (SSN 571) as she moved out for her first sea trials. These words were destined to introduce a new dimension to American seapower. Thanks to nuclear power, submarines (including the Fleet Ballistic Missile classes) can be deployed at sea almost indefinitely to keep the peace watch. *Nautilus*, the world's first atomic-powered warship, had opened the era of nuclear propulsion in the United States Navy.

In January 1947, the first official Navy approval of a program for the development of submarine nuclear power plants was given by Chief of Naval Operations, Fleet Admiral Chester W. Nimitz. The following year the Atomic Energy Commission received from the Bureau of Ships, design and engineering proposals for the construction of a shipboard nuclear power plant.

The events leading to the milestone of *Nautilus* really began in 1939 when Navy scientists met for talks with Enrico Fermi about his theories on controlled nuclear fission. Dr. Ross Gunn, head physicist at the Naval Research Laboratory, aware of the astronomical amounts of fuel consumed by Navy ships, also had an idea. It was nuclear ship propulsion, also untested and hinging upon the accuracy of Fermi's theory. One of the early supporters of Gunn's vision was Rear Admiral Harold G. Bowen (later Vice Admiral) who was then Chief of the Bureau of Engineering. To Gunn,

the immediate problem was getting fissionable material in quantity. His early work, along with that of Dr. Phillip H. Abelson, was of great benefit to the Manhattan Project in the development of the atomic bomb. For a period, the making of the bomb transcended the efforts toward nuclear-propelled ships.

Following World War II, Navy scientists again set their sights toward nuclear ship propulsion. The Manhattan District was experimenting with atomic piles for the controlled production of power, and it also agreed in principle that ship propulsion probably offered the best immediate application for them. Thus, following the approval of Fleet Admiral Nimitz in 1947, a small group of Navy engineering officers was sent to Oak Ridge to investigate the feasibility of a submarine nuclear propulsion plant. Led by Vice Admiral (then Captain) Hyman G. Rickover, this group formed the nucleus team supervising the development and construction of *Nautilus* and led to the formal establishment within the Bureau of Ships (now Naval Ships System Command) and the Atomic Energy Commission of a nuclear submarine program, with Vice Admiral Rickover in charge.

In March 1948, Dr. Vannevar Bush, Chairman of the Research and Development Board, stated that there was a strategic need for nuclear powered submarines. Ten months later, the Atomic Energy Commission let contracts for a prototype land-based reactor built at the National Reactor Station, Arco, Idaho. It became operational in March 1953, providing trained operators and invaluable data on new equipment for *Nautilus*. It has since served as a school for Navy trainees. The culmination and also a beginning, took place the morning of 17 January 1955 when Rear Admiral Eugene P. Wilkinson (then Commander) flashed the profound message from *Nautilus* as she left the yard of the Electric Boat Co., Groton, Conn.: "Underway on nuclear power."

"... For much of my life, I have had faith in the submarine . . . and our great land of America. Each by being true to itself—seeking efficiency and power for noble ends—has been a blessing . . ."

—Fleet Admiral Chester W. Nimitz.

ALPHABETICAL LIST

ASPRO (SSN-648)
 BARB (SSN-596)
 BERGALL (SSN-667)
 DACE (SSN-607)
 FINBACK (SSN-670)
 FLASHER (SSN-613)
 FLYING FISH (SSN-673)
 GATO (SSN-615)
 GRAYLING (SSN-646)
 GRÖENLING (SSN-614)
 GUARDFISH (SSN-612)
 GUITARRO (SSN-665)
 GURNARD (SSN-662)
 HADDO (SSN-604)
 HADDOCK (SSN-621)
 HALIBUT (SSN-587)
 HAMMERHEAD (SSN-663)
 HAWKBILL (SSN-666)
 JACK (SSN-605)
 LAPON (SSN-661)
 NARWHAL (SSN-671)
 NAUTILUS (SSN-571)
 PARGO (SSN-650)
 PERMIT (SSN-594)
 PINTADO (SSN-672)
 PLUNGER (SSN-595)
 POGY (SSN-647)
 POLLACK (SSN-603)

 QUEENFISH (SSN-651)
 RAY (SSN-653)
 SAND LANCE (SSN-660)
 SARGO (SSN-583)
 SCAMP (SSN-588)
 SCORPION (SSN-589)
 SCULPIN (SSN-590)
 SEA DEVIL (SSN-664)
 SEADRAGON (SSN-584)
 SEAHORSE (SSN-669)
 SEAWOLF (SSN-575)
 SHARK (SSN-591)
 SKATE (SSN-578)
 SKIPJACK (SSN-585)
 SNOOK (SSN-592)
 SPADEFISH (SSN-668)
 STURGEON (SSN-637)
 SUNFISH (SSN-649)
 SWORDFISH (SSN-579)
 TAUTOG (SSN-639)
 THRESHER (SSN-593)
 TINOSA (SSN-606)
 TRITON (SSN-586)
 TULLIBEE (SSN-597)
 WHALE (SSN-638)

Launching of *Blueback* (SS-581), one of the last fleet submarine with diesel-electric power contracted for and launched by the U.S. Navy. She incorporates all recent developments in submarine construction, with the exception of nuclear power, and far surpasses her predecessor types of diesel-electric submarines.

Nuclear-Powered Submarines (Multiple Ship Classes)

Characteristics	578 class (SKATE) 4 submarines	585 class ¹ (SKIPJACK) 6 submarines	593 class (THRESHER) 14 submarines	637 class (STURGEON) 24 plus
Length overall	267'8"	251'9"	278'6" 295'8" (SSN 605)	292'3"
Extreme beam	25'	31'7"	31'8"	31'8"
Displacement:				
Surfaced	2,570 tons	3,075 tons	3,700 tons ² 4,000 tons (SSN 605).	3,800 tons.
Submerged	2,861 tons	3,500 tons	4,300 tons 4,500 tons (SSN 605).	4,600 tons.
Propulsion	1 water-cooled nuclear reactor—steam turbine.	1 water-cooled nuclear reactor—steam turbines.	1 water-cooled nuclear reactor—steam turbines.	1 water-cooled nuclear reactor—steam turbine.
Torpedo tubes	6 (bow), 2 (stern)	6 (bow)	4 midships	4 (midships.)
Navigation system	Gyro only	Gyro only	SINS MK 2 Gyro	SINS MK 3 Gyro.
Accommodations:				
Officer	11	10	12	12.
Enlisted	82	89	88	95.

¹ SKIPJACK (SSN 585) was the first nuclear-powered submarine with hull streamlined to "teardrop shape."

² SSN 613-615 were laid down with original class dimensions but were later

lengthened by 13'9" to allow for increased shipboard equipment. Displacement tonnage corresponds to 637 class.

Nuclear-Powered Submarines (Single Ship Classes)

Characteristics	571 class (NAUTILUS) 1 submarine	575 class (SEAWOLF) 1 submarine	586 class (TRITON) 1 submarine	587 class (HALIBUT) ¹ 1 submarine	597 class (TULLIBEE) 1 submarine
Length overall	323'9"	337'6"	447'5"	350'	273'

Displacement:					
Surfaced	3,533 tons	3,741 tons	5,939 tons	3,850 tons	2,216 tons.
Submerged	4,092 tons	4,287 tons	7,773 tons	4,895 tons	2,607 tons.
Propulsion	1 water-cooled nuclear reactor —steam turbine.	1 water-cooled nuclear reactor —steam tur- bine. ²	2 water-cooled nuclear reac- tors—steam turbines.	1 water cooled nuclear reactor —steam turbine.	1 water cooled nuclear reactor —steam turbine.
Torpedo tubes	6 (bow)	6 (bow)	4 (bow) 2 (stern)	4 (bow) 2 (stern).	4 tubes.
Navigation system	Gyro only	Gyro only	Gyro only	SINS MK 2 gyro.	SINS MK 2 gyro.
Accommodations:					
Officer	13	13	17	12	7.
Enlisted	92	94	159	112	50.

¹ HALIBUT, originally classified a nuclear-powered guided missile submarine (SSGN-587), was armed with a *Regulus I* Missile Launcher. She launched the first guided missile ever fired from a nuclear powered submarine 2/25/60 off Oahu, Hawaii, and completed her last *Regulus* mission in 1964

when the *Regulus* Deterrent Program was terminated. She was reclassified to SSN-587 7/25/65.

² SEAWOLF (SSN-575) was originally powered by a liquid-sodium-cooled reactor that was replaced by a water-cooled reactor during overhaul (12/59-7/60).

NUMERICAL LIST

SSN-571 NAUTILUS

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
 Contract: 8/20/51, Keel laid 6/14/52, Launched 1/21/54
 Commissioned 9/30/54, Comdr. Eugene P. Wilkinson commanding
 Class: *Nautilus*

572-574 Diesel-electric powered submarines. See Vol. I, Appendix III, p. 261

SSN-575 SEAWOLF

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
 Contract: 7/21/52, Keel laid 9/15/53, Launched 7/21/55
 Commissioned 3/30/57, Comdr. Richard B. Laning commanding
 Class: *Seawolf*

576-577 Diesel-electric powered submarines. See Vol. I, Appendix III, p. 261

SSN 578 SKATE

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
 Contract 7/18/55, Keel laid 7/21/55, Launched 5/16/57
 Commissioned 12/23/57, Comdr. James F. Calvert commanding
 Class: *Skate*

SSN-579 SWORDFISH

Built at Portsmouth Naval Shipyard, Portsmouth, N.H.
 Contract: 7/18/55, Keel laid 1/25/56, Launched 8/27/57
 Commissioned 9/15/58, Lt. Comdr. Shannon D. Cramer, Jr., commanding
 Class: *Skate*

580-582 Diesel-electric powered submarines. See Vol. I, Appendix III, p. 261

SSN-583 SARGO

Built at Mare Island Div., San Francisco Bay Naval Shipyard, Vallejo, Calif.
 Contract: 9/29/55, Keel laid 2/21/56, Launched 10/10/57
 Commissioned 10/1/58, Lt. Comdr. Daniel P. Brooks commanding
 Class: *Skate*

SSN-584 SEADRAGON

Built at Portsmouth Naval Shipyard, Portsmouth, N.H.
 Contract: 9/29/55, Keel laid 6/20/56, Launched 8/16/58
 Commissioned 12/5/59, Lt. Comdr. George P. Steele III commanding
 Class: *Skate*

SSN-585 SKIPJACK

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
 Contract 10/5/55, Keel laid 5/29/56, Launched 5/26/58
 Commissioned 4/15/59, Lt. Comdr. William W. Behrens, Jr. commanding
 Class: *Skipjack*

SSN-586 TRITON (Reclassified from SSRN 3/1/61)

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
 Contract: 10/5/55, Keel laid 5/29/56, Launched 8/19/58
 Commissioned 11/10/59, Capt. Edward L. Beach commanding
 Class: *Triton*

SSN-587 HALIBUT (Reclassified from SSGN 8/15/65)

Built at Mare Island Div., San Francisco Bay Naval Shipyard, Vallejo, Calif.
 Contract: 3/9/56, Keel laid 4/11/57, Launched 1/9/59
 Commissioned 1/4/60, Lt. Comdr. Walter Dedrick commanding
 Class: *Halibut*

SSN-588 SCAMP

Built at Mare Island Div., San Francisco Bay Naval Shipyard, Vallejo, Calif.
Contract: 7/23/56, Keel laid 1/23/59, Launched 10/8/60
Commissioned 6/5/61, Lt. Comdr. Walter N. Dietzen, Jr. commanding
Class: *Skipjack*

SSN-589 SCORPION

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract: 1/3/57, Keel laid 8/20/58, Launched 12/19/59
Commissioned 7/29/60, Lt. Comdr. Norman B. Bessac commanding
Class: *Skipjack*

SSN-590 SCULPIN

Built at Ingalls Shipbuilding Corp., Pascagoula, Miss.
Contract: 1/18/57, Keel laid 2/3/58, Launched 3/31/60
Commissioned 6/1/61, Lt. Comdr. Cleo N. Mitchell, Jr. commanding
Class: *Skipjack*

SSN-591 SHARK

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
Contract: 1/31/57, Keel laid 2/24/58, Launched 3/16/60
Commissioned 2/9/61, Lt. Comdr. John F. Fagan, Jr. commanding
Class: *Skipjack*

SSN-592 SNOOK

Built at Ingalls Shipbuilding Corp., Pascagoula, Miss.
Contract: 1/18/57, Keel laid 4/7/58, Launched 10/31/60
Commissioned 10/24/61, Lt. Comdr. Howard Bucknell III commanding

SSN-593 THRESHER

Built at Portsmouth Naval Shipyard, Portsmouth, N.H.
Contract 1/15/58, Keel laid 5/28/58, Launched 7/9/60
Commissioned 8/3/61, Comdr. Deane W. Axene commanding
Class: *Thresher* (lost 4/10/63)

SSN-594 PERMIT

Built at Mare Island Div., San Francisco Bay Naval Shipyard, Vallejo, Calif.
Contract: 1/27/58, Keel laid 7/16/59, Launched 7/1/61
Commissioned 5/29/62, Lt. Comdr. Robert H. Blount commanding
Class: *Thresher*

SSN-595 PLUNGER

Built at Mare Island Div., San Francisco Bay Naval Shipyard, Vallejo, Calif.
Contract: 3/23/59, Keel laid 3/2/60, Launched 12/9/61
Commissioned 11/21/62, Comdr. William M. Adams, Jr. commanding
Class: *Thresher*

SSN-596 BARB

Built at Ingalls Shipbuilding Corp., Pascagoula, Miss.
Contract: 3/3/59, Keel laid 11/9/59, Launched 2/12/62
Commissioned 8/24/63, Comdr. Charles D. Grojean commanding
Class: *Thresher*

SSN-597 TULLIBEE

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract: 11/15/57, Keel laid 5/26/58, Launched 4/27/60
Commissioned 11/9/60, Comdr. Richard E. Jortberg commanding
Class: *Tullibee*

USS *Nautilus* (SSN-571)

For hull number SSBN 598 through 602 see "Fleet Ballistic Missile Submarines-SSBN" below.

SSN-603 POLLACK

Built at New York Shipbuilding Corp., Camden, N.J.
Contract: 3/3/59, Keel laid 3/14/60, Launched 3/17/62
Commissioned 5/26/64, Comdr. Harvey E. Lyon commanding
Class: *Thresher*

SSN-604 HADDO

Built at New York Shipbuilding Corp., Camden, N.J.
Contract: 3/3/59, Keel laid 9/9/60, Launched 8/18/62
Commissioned 12/16/64, Comdr. John G. Williams commanding
Class: *Thresher*

SSN-605 JACK

Built at Portsmouth Naval Shipyard, Portsmouth, N.H.
Contract: 3/13/59, Keel laid 9/16/60, Launched 4/24/63
Commissioned 3/31/67, Lt. Comdr. Louis T. Urbanczyk, Jr. commanding
Class: *Thresher*

SSN-606 TINOSA

Built at Portsmouth Naval Shipyard, Portsmouth, N.H.
Contract: 12/17/58, Keel laid 11/24/59, Launched 12/9/61
Commissioned 10/17/64, Comdr. Robert B. Brumsted commanding
Class: *Thresher*

SSN-607 DACE

Built at Ingalls Shipbuilding Corp., Pascagoula, Miss.
Contract: 3/3/59, Keel laid 6/6/60, Launched 8/18/62
Commissioned 4/4/64, Comdr. John A. Walsh commanding
Class: *Thresher*

For hull numbers SSBN 608 through 611 see "Fleet Ballistic Missile Submarines-SSBN" below.

SSN-612 GUARDFISH

Built at New York Shipbuilding Corp., Camden, N.J.
Contract: 6/9/60, Keel laid 2/28/61, Launched 5/15/65

Commissioned 12/20/66, Comdr. G. H. Hines commanding
Class: *Thresher*

SSN-613 FLASHER

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract: 6/9/60. Keel laid 4/14/61, Launched 6/22/63
Commissioned: 7/22/66, Comdr. Kenneth M. Carr commanding
Class: *Thresher*

SSN-614 GREENLING

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract: 6/9/60, Keel laid 8/15/61, Launched 4/4/64
Commissioned: 11/3/67, Comdr. Guy H. B. Schaffer commanding
Class: *Thresher*

SSN-615 GATO

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract: 6/9/60, Keel laid 12/15/61, Launched 5/14/64
Class: *Thresher*

For hull numbers SSBN 616 through 620 see "Fleet Ballistic Missile Submarines-SSBN" below.

SSN-621 HADDOCK

Built at Ingalls Shipbuilding Corp., Pascagoula, Miss.
Contract: 8/24/60, Keel laid 4/24/61, Launched 5/21/66
Class: *Thresher*

For hull numbers SSBN 622 through 636 see "Fleet Ballistic Missile Submarines-SSBN" below.

SSN-637 STURGEON

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract: 11/30/61, Keel laid 8/10/63, Launched 2/26/66
Class: *Sturgeon*

USS *Sturgeon* (SSN-637)

SSN-638 WHALE

Built at General Dynamics Corp., Quincy Div., Quincy, Mass.
Contract: 11/30/61, Keel laid 5/27/64, Launched 10/14/66
Class: *Sturgeon*

SSN-639 TAUTOG

Built at Ingalls Shipbuilding Corp., Pascagoula, Miss.
Contract: 11/30/61, Keel laid 1/27/64, launched 4/15/67
Class: *Sturgeon*

For hull numbers SSBN 640 through 645 see "Fleet Ballistic Missile Submarines-SSBN" below.

SSN-646 GRAYLING

Built at Portsmouth Naval Shipyard, Portsmouth, N.H.
Contract: 9/5/62, Keel laid 5/12/64, launched 6/22/67
Class: *Sturgeon*

SSN-647 POGY

Built at New York Shipbuilding Corp., Camden, N.J.
Contract: 3/23/63, Keel laid 5/5/64, launched 6/3/67
Class: *Sturgeon*

SSN-648 ASPRO

Built at Ingalls Shipbuilding Corp., Pascagoula, Miss.
Contract: 3/26/63, Keel laid 11/23/64
Class: *Sturgeon*

SSN-649 SUNFISH

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract: 3/26/63, Keel laid 1/15/65, Launched 10/14/66
Class: *Sturgeon*

SSN-650 PARGO

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract: 3/26/63, Keel laid 6/3/64, Launched 9/17/66
Class: *Sturgeon*

SSN-651 QUEENFISH

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
Contract: 3/26/63, Keel laid 5/11/64, launched 2/25/66
Commissioned 4/12/67, Lt. Comdr. Jackson B. Richard commanding
Class: *Sturgeon*

SSN-652 PUFFER

Built at Ingalls Shipbuilding Corp., Pascagoula, Miss.
Contract: 3/26/63, Keel laid 2/8/65
Class: *Sturgeon*

SSN-653 RAY

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
Contract: 3/26/63, Keel laid 1/4/65, launched 6/21/66
Commissioned 4/12/67, Comdr. Albert L. Kelln, commanding
Class: *Sturgeon*

For hull numbers SSBN 654 through 659 see "Fleet Ballistic Missile Submarines-SSBN" below.

SSN-660 SAND LANCE

Built at Portsmouth Naval Shipyard, Portsmouth, N.H.
Contract: 10/24/63, Keel laid 1/15/65
Class: *Sturgeon*

SSN-661 LAPON

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
Contract: 5/28/64, Keel laid 7/26/65, Launched 12/16/66
Class: *Sturgeon*

SSN-662 GURNARD

Built at Mare Island Div., San Francisco Bay Naval Shipyard, Vallejo, Calif.
Contract: 10/24/63, Keel laid 12/22/64, Launched 5/20/67
Class: *Sturgeon*

SSN-663 HAMMERHEAD

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
Contract: 5/28/64, Keel laid 11/29/65, Launched 4/15/67
Class: *Sturgeon*

SSN-664 SEA DEVIL

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
Contract: 5/28/64, Keel laid 4/12/66
Class: *Sturgeon*

SSN-665 GUITARRO

Built at Mare Island Div., San Francisco Bay Naval Shipyard, Vallejo, Calif.
Contract: 12/18/64, Keel laid 12/9/65
Class: *Sturgeon*

SSN-666 HAWKBILL

Built at Mare Island Div., San Francisco Bay Naval Shipyard, Vallejo, Calif.
Contract: 12/18/64, Keel laid 9/12/66
Class: *Sturgeon*

SSN-667 BERGALL

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract: 3/9/65, Keel laid 4/16/66
Class: *Sturgeon*

SSN-668 SPADEFISH

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
Contract: 3/9/65, Keel laid 12/21/66
Class: *Sturgeon*

SSN-669 SEAHORSE

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract: 3/9/65, Keel laid 8/13/66
Class: *Sturgeon*

SSN-670

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
Contract: 3/9/65, Keel laid 6/26/67
Class: *Sturgeon*

SSN-671 NARWHAL

Built at General Dynamics Corp., Electric Boat Div.,
Groton, Conn.
Contract: 7/28/64, Keel laid 1/17/66
Class: *Sturgeon*

SSN-672 PINTADO

Built at Mare Island Div., San Francisco Bay Naval
Shipyard
Contract: 12/29/65, Keel laid 8/22/67
Class: *Sturgeon*

FLEET BALLISTIC MISSILE SUBMARINES—SSBN

In 1955 the Navy stated its long range objective to develop a ballistic missile for use in submarines. This was within an overall plan for the development of the liquid-propelled Jupiter missile after the National Security Council recommended, and the President approved, "That a 1,500-mile ballistic missile system be developed."

In 1956 the Secretary of Defense authorized the Navy to proceed with the development of the Polaris missile, a smaller solid-propellant missile, and to terminate participation in the Jupiter program. By the end of 1956 the Secretary of the Navy had established the Navy Ballistic Missile Committee to direct the high-priority Fleet Ballistic Missile System and had given the Special Projects Office, headed by Rear Admiral William F. Raborn, U.S. Navy, the responsibility for the development of the entire missile system. The first Fleet Ballistic Missile test flight occurred 11 January 1958.

Also, in January 1958, construction was begun on the first three FBM submarines. The first one, GEORGE WASHINGTON (SSBN-598), had been laid down as SCORPION (SSN-598), but was cut in two and had a 130-foot missile launch tube section inserted. She launched 9 June 1959, commissioned 30 December 1959, and successfully launched the first two Polaris missiles ever fired by a submerged submarine 20 July 1960. Polaris first went on patrol 15 November 1960 when GEORGE WASHINGTON deployed from Charleston, S.C., for an operational patrol which set a new record of 66 days, 10 hours submerged continuously.

On 8 February 1961, submarine tender PROTEUS (AS-19) sailed to establish the first Polaris advanced base at Holy Loch, Scotland. After a distinguished record in World War II, she had been converted in the Charleston Naval Shipyard

to serve as the Nation's first tender to service and repair FBM submarines and their Polaris missiles. She and four new tenders are now operational: HUNLEY (AS-31), HOLLAND (AS-32), SIMON LAKE (AS-33), and CANOPUS (AS-34).

The entire Polaris program has been keynoted by dedicated efforts and coordination of thousands of military men, a significant portion of American industry, and the development of new concepts of logistics and industrial management never before adapted to military administration. The Fleet Ballistic Missile Weapon System includes 41 Fleet Ballistic Missile Submarines now operational.

ALPHABETICAL LISTING—SSBN

ABRAHAM LINCOLN (SSBN-602)
ALEXANDER HAMILTON (SSBN-617)

Accommodations:			
Officer.....	12.....	15.....	20.
Enlisted.....	100.....	129.....	148.

¹ 598 class submarines have been retubed and given Polaris A-3 Capability during first overhaul period. Polaris A-1 officially retired from active Fleet duty 14 October 1965 when ABRAHAM LINCOLN (SSBN-602) returned to the United States for her initial overhaul.

² 616 class: First 8 submarines were deployed with Polaris A-2.
³ 616 class: First 5 submarines have air ejection system. The last 22 have foamed resin jacket to replace shock cylinders between launcher tubes and outer tubes.

NUMERICAL LIST—SSBN

SSBN-598 (GEORGE WASHINGTON) Class

SSBN-598 GEORGE WASHINGTON

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract 12/31/57, Keel laid 11/1/57, Launched 6/9/59
Commissioned 12/30/59, First deployment 11/15/60
Comdr. James B. Osborn, commanding Blue Crew
Comdr. John L. From, Jr., commanding Gold Crew

SSBN-599 PATRICK HENRY

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract 12/31/57, Keel laid 5/27/58, Launched 9/22/59
Commissioned 4/9/60, First deployment 12/30/60
Comdr. Harold E. Shear commanding Blue Crew
Comdr. Robert J. L. Long commanding Gold Crew

SSBN-600 THEODORE ROOSEVELT

Built at Mare Island Div., San Francisco Bay Naval Shipyard, Vallejo, Calif.
Contract 3/13/58, Keel laid 5/20/58, Launched 10/3/59
Commissioned 2/11/61, First deployment 7/19/61
Comdr. William E. Sims commanding Blue Crew
Comdr. Oliver H. Perry, Jr., commanding Gold Crew

SSBN-601 ROBERT E. LEE

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
Contract 7/30/58, Keel laid 8/28/58, Launched 12/18/59
Commissioned 9/16/60, First deployment 5/2/61
Comdr. Reuben F. Woodall commanding Blue Crew
Comdr. Joe Williams, Jr., commanding Gold Crew

SSBN-602 ABRAHAM LINCOLN

Built at Portsmouth Naval Shipyard, Portsmouth, N.H.
Contract 8/1/58, Keel laid 11/1/58, Launched 5/14/60
Commissioned 3/11/61, First deployment 8/28/61

Comdr. Leonard Erb commanding Blue Crew
Comdr. Donald M. Miller commanding Gold Crew

For hull numbers SSN 603 through 607, see "Nuclear Submarines" above.

SSBN-608 (ETHAN ALLEN) Class

SSBN-608 ETHAN ALLEN

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract 7/17/58, Keel laid 9/14/59, Launched 11/22/60
Commissioned 8/8/61, First deployment 6/26/62
Capt. Paul L. Lacy, Jr., commanding Blue Crew
Comdr. William W. Behrens, Jr., commanding Gold Crew

SSBN-609 SAM HOUSTON

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
Contract 7/1/59, Keel laid 12/28/59, Launched 2/2/61
Commissioned 3/6/62, First deployment 10/10/62
Capt. William P. Willis, Jr., commanding Blue Crew
Comdr. Jack H. Hawkins commanding Gold Crew

SSBN-610 THOMAS A. EDISON

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract 7/1/59, Keel laid 3/15/60, Launched 6/15/61
Commissioned 3/10/62, First deployment 11/7/62
Capt. Charles M. Young commanding Blue Crew
Comdr. Walter Dedrick commanding Gold Crew

SSBN-611 JOHN MARSHALL

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
Contract 7/1/59, Keel laid 4/4/60, Launched 7/15/61
Commissioned 5/21/62, First deployment 12/31/62
Comdr. Robert W. Stecher commanding Blue Crew
Comdr. Robert D. Donovan commanding Gold Crew

For hull numbers SSN 612 through 615, see "Nuclear Submarines" above.

SSBN-616 (LAFAYETTE) Class

SSBN-616 LAFAYETTE

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract 7/22/60, Keel laid 1/17/61, Launched 5/8/62
Commissioned 4/23/63, First deployment 1/4/64
Comdr. Patrick J. Hannifin commanding Blue Crew
Comdr. James T. Strong commanding Gold Crew

SSBN-617 ALEXANDER HAMILTON

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract 7/22/60, Keel laid 7/26/61, Launched 8/18/62
Commissioned 6/27/63, First deployment 3/16/64
Comdr. Norman B. Bessac commanding Blue Crew
Comdr. Benjamin F. Sherman, Jr., commanding Gold Crew

SSBN-618 THOMAS JEFFERSON

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
Contract 7/22/60, Keel laid 2/3/61, Launched 2/24/62
Commissioned 1/4/63, First deployment 10/28/63
Capt. Leon H. Rathbun, Jr., commanding Blue Crew
Comdr. Charles Priest, Jr., commanding Gold Crew

SSBN-619 ANDREW JACKSON

Built at Mare Island Div., San Francisco Bay Naval Shipyard, Vallejo, Calif.
Contract 7/23/60, Keel laid 4/26/61, Launched 9/15/62
Commissioned 7/3/63, First deployment 4/28/64
Comdr. Alfred J. Whittle, Jr., commanding Blue Crew
Comdr. James B. Wilson commanding Gold Crew

SSBN-620 JOHN ADAMS

Built at Portsmouth Naval Shipyard, Portsmouth, N.H.
Contract 7/23/60, Keel laid 5/19/61, Launched 1/12/63
Commissioned 5/12/64, First deployment 11/3/64
Comdr. Lando W. Zech, Jr., commanding Blue Crew
Comdr. Paul J. Early commanding Gold Crew

For hull number SSN-621 see "Nuclear Submarines" above.

SSBN-622 JAMES MONROE

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
Contract 1/31/61, Keel laid 7/31/61, Launched 8/4/62
Commissioned 12/7/63, First deployment 6/1/64
Comdr. William H. Sandeford commanding Blue Crew
Comdr. Warren R. Cobean, Jr., commanding Gold Crew

SSBN-623 NATHAN HALE

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract 1/31/61, Keel laid 10/2/61, Launched 1/12/63
Commissioned 11/23/63, First deployment 5/25/64
Comdr. Joseph W. Russel commanding Blue Crew
Comdr. Samuel S. Ellis commanding Gold Crew

SSBN-624 WOODROW WILSON

Built at Mare Island Div., San Francisco Bay Naval Shipyard, Vallejo, Calif.
Contract 2/9/61, Keel laid 9/13/61, Launched 2/22/63
Commissioned 12/27/63, First deployment 7/2/64
Comdr. Cleo N. Mitchell, Jr., commanding Blue Crew
Comdr. Walter N. Dietzen, Jr., commanding Gold Crew

SSBN-625 HENRY CLAY

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
Contract 1/31/61, Keel laid 10/23/61, Launched 11/30/62
Commissioned 2/20/64, First deployment 8/17/64
Comdr. Thomas A. Bryce commanding Blue Crew
Comdr. John C. Lewis commanding Gold Crew

SSBN-626 DANIEL WEBSTER

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
Contract 1/31/61, Keel laid 12/28/61, Launched 4/27/63
Commissioned 4/9/64, First deployment 9/28/64
Comdr. Marvin S. Blair commanding Blue Crew
Comdr. Lloyd S. Smith commanding Gold Crew

Inaugural cruise of George Washington.

THE WHITE HOUSE
WASHINGTON

19 November 1963

Dear Admiral Galantin:

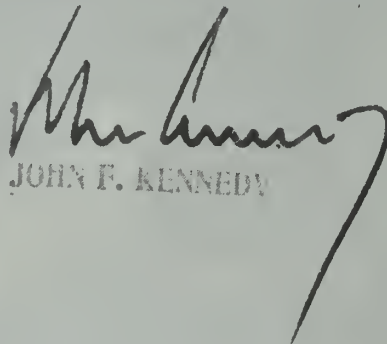

The Polaris firing I witnessed from the USS OBSERVATION ISLAND on 16 November was a most satisfying and fascinating experience. It is still incredible to me that a missile can be successfully and accurately fired from beneath the sea. Once one has seen a Polaris firing the efficacy of this weapons system as a deterrent is not debatable.

Thank you very much for allowing me to see a Polaris firing. Certainly, those of us who saw it are more conscious of the professional competence of our naval forces.

Would you please express my appreciation to the Commanding Officer and crew of the USS ANDREW JACKSON for their splendid performance.

With best wishes,

Sincerely,

JOHN F. KENNEDY

Rear Admiral I. J. Galantin, USN
Special Projects Officer
Main Navy
Washington, D. C.

SSBN-627 JAMES MADISON

Built at Newport News Shipbuilding & Dry Dock Co.,
Newport News, Va.
Contract 5/24/61, Keel laid 3/5/62, Launched 3/15/63
Commissioned 7/28/64, First deployment 1/17/65
Comdr. Joseph L. Skoog, Jr., commanding Blue Crew
Comdr. James D. Kearny commanding Gold Crew

SSBN-628 TECUMSEH

Built at General Dynamics Corp., Electric Boat Div.,
Groton, Conn.
Contract 5/24/61, Keel laid 6/1/62, Launched 6/22/63
Commissioned 5/29/64, First deployment 1/24/65
Comdr. Arnett B. Taylor commanding Blue Crew
Comdr. George S. Carlisle commanding Gold Crew

SSBN-629 DANIEL BOONE

Built at Mare Island Div., San Francisco Bay Naval
Shipyards, Vallejo, Calif.
Contract 7/21/61, Keel laid 2/6/62, Launched 6/22/63
Commissioned 4/23/64, First deployment 12/25/64
Comdr. George P. Steele III commanding Blue Crew
Comdr. Allen B. Crabtree commanding Gold Crew

SSBN-630 JOHN C. CALHOUN

Built at Newport News Shipbuilding & Dry Dock Co.,
Newport News, Va.
Contract 7/20/61, Keel laid 8/18/62, Launched
6/22/63
Commissioned 9/15/64, First deployment 3/22/65
Comdr. Deane L. Axene commanding Blue Crew
Comdr. Frank A. Thurtell commanding Gold Crew

SSBN-631 ULYSSES S. GRANT

Built at General Dynamics Corp., Electric Boat Div.,
Groton, Conn.
Contract 7/20/61, Keel laid 8/18/62, Launched 11/2/63
Commissioned 7/17/64, First deployment 2/6/65
Comdr. John L. From, Jr., commanding Blue Crew
Comdr. Carlton A. K. McDonald commanding Gold
Crew

SSBN-632 VON STEUBEN

Built at Newport News Shipbuilding & Dry Dock Co.,
Newport News, Va.
Contract 7/20/61, Keel laid 9/4/62, Launched
10/18/63
Commissioned 9/30/64, First deployment 3/28/65
Comdr. John P. Wise commanding Blue Crew
Comdr. Jeffrey C. Metzger, Jr., commanding Gold Crew

SSBN-633 CASIMIR PULASKI

Built at General Dynamics Corp., Electric Boat Div.,
Groton, Conn.
Contract 7/20/61, Keel laid 1/12/63, Launched 2/1/64
Commissioned 8/14/64, First deployment 3/6/65
Capt. Robert L. J. Long commanding Blue Crew
Comdr. Thomas B. Brittain, Jr., commanding Gold
Crew

SSBN-634 STONEWALL JACKSON

Built at Mare Island Div., San Francisco Bay Naval
Shipyards, Vallejo, Calif.
Contract 7/21/61, Keel laid 7/4/62, Launched
11/30/63
Commissioned 8/26/64, First deployment 4/9/65
Comdr. John H. Nicholson commanding Blue Crew
Comdr. Richard A. Frost commanding Gold Crew

SSBN-635 SAM RAYBURN

Built at Newport News Shipbuilding & Dry Dock Co.,
Newport News, Va.
Contract 7/20/61, Keel laid 12/3/62, Launched
12/20/63
Commissioned 12/2/64, First deployment 6/4/65
Capt. Oliver H. Perry, Jr., commanding Blue Crew
Comdr. William A. Williams III commanding Gold
Crew

SSBN-636 NATHANAEL GREENE

Built at Portsmouth Naval Shipyards, Portsmouth,
N.H.
Contract 7/21/61, Keel laid 5/21/62, Launched
5/12/64
Commissioned 12/19/64, First deployment 6/21/65
Comdr. Robert E. Crispin commanding Blue Crew
Comdr. William M. Cossaboom commanding Gold
Crew

For hull numbers 637 through 639 see "Nuclear Sub-
marines" above.

SSBN-640 BENJAMIN FRANKLIN

Built at General Dynamics Corp., Electric Boat Div.,
Groton, Conn.
Contract 4/24/62, Keel laid 5/25/63, Launched 12/5/64
Commissioned 10/22/65, First deployment 5/6/66
Capt. Donald M. Miller commanding Blue Crew
Comdr. Ross N. Williams commanding Gold Crew

USS *Benjamin Franklin* (SSBN-640), the 30th of the 41 Polaris submarines

SSBN-641 SIMON BOLIVAR

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
 Contract 4/24/62, Keel laid 4/17/63, Launched 8/22/64
 Commissioned 10/29/65, First deployment 4/27/66
 Comdr. Charles H. Griffiths commanding Blue Crew
 Comdr. Charles A. Orem commanding Gold Crew

SSBN-642 KAMEHAMEHA

Built at Mare Island Div., San Francisco Bay Naval Shipyard, Vallejo, Calif.
 Contract 8/15/62, Keel laid 5/2/63, Launched 1/16/65
 Commissioned 12/10/65, First deployment 8/6/66
 Comdr. Roth S. Leddick commanding Blue Crew
 Comdr. Robert W. Diekieson commanding Gold Crew

SSBN-643 GEORGE BANCROFT

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
 Contract 11/1/62, Keel laid 8/24/63, Launched 3/20/65
 Commissioned 1/22/66, First deployment 7/26/66
 Capt. Joe Williams, Jr., commanding Blue Crew
 Comdr. Walter M. Douglass commanding Gold Crew

SSBN-644 LEWIS AND CLARK

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
 Contract 11/1/62, Keel laid 7/29/63, Launched 11/21/64
 Commissioned 12/22/65, First deployment 6/23/66
 Comdr. John F. Fagen commanding Blue Crew
 Comdr. Kenneth A. Porter commanding Gold Crew

SSBN-645 JAMES K. POLK

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
 Contract 11/1/62, Keel laid 11/23/63, Launched 5/22/65
 Commissioned 4/16/66, First deployment 10/14/66
 Comdr. Frank D. McMullen, Jr., commanding Blue Crew
 Comdr. Robert M. Douglass commanding Gold Crew

For hull numbers 646 through 653 see "Nuclear Submarines" above.

SSBN-654 GEORGE C. MARSHALL

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
 Contract 6/28/63, Keel laid 3/2/64, Launched 5/21/65
 Commissioned 4/29/66, First deployment 10/25/66
 Comdr. Warren R. Cobean, Jr., commanding Blue Crew
 Comdr. Edwin L. McCutcheon commanding Gold Crew

SSBN-655 HENRY L. STIMSON

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
 Contract 6/28/63, Keel laid 4/4/64, Launched 11/13/65
 Commissioned 8/20/66, First deployment 2/23/67
 Capt. Richard E. Jortberg commanding Blue Crew
 Comdr. Robert H. Weeks commanding Gold Crew

SSBN-656 GEORGE WASHINGTON CARVER

Built at Newport News Shipbuilding & Dry Dock Co., Newport News, Va.
 Contract 7/29/63, Keel laid 8/24/64, Launched 8/14/65
 Commissioned 6/15/66, First deployment 12/21/66
 Capt. Robert D. Donovan commanding Blue Crew
 Comdr. Carl J. Lidel commanding Gold Crew

SSBN-657 FRANCIS SCOTT KEY

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
 Contract 7/29/63, Keel laid 12/5/64, Launched 4/23/66
 Commissioned 12/3/66
 Capt. Frank W. Graham commanding Blue Crew
 Comdr. Joseph B. Logan commanding Gold Crew

SSBN-658 MARIANO G. VALLEJO

Built at Mare Island Div., San Francisco Bay Naval Shipyard
 Contract 7/29/63, Keel laid 7/7/64, Launched 10/23/65
 Commissioned 12/16/66
 Comdr. Douglas B. Guthe commanding Blue Crew
 Comdr. John K. Nunneley commanding Gold Crew

SSBN-659 WILL ROGERS

Built at General Dynamics Corp., Electric Boat Div., Groton, Conn.
 Contract 7/29/63, Keel laid 3/20/65, Launched 7/21/66
 Commissioned 4/1/67
 Capt. Robert Y. Kaufman commanding Blue Crew
 Comdr. William J. Coubell commanding Gold Crew

660 and subsequent hull numbers classified SSN (*q.v.*)

THE POLARIS MISSILES

Polaris, named for the North Star, is a two-stage ballistic missile powered by solid fuel rocket motors and guided by a self-contained inertial guidance system independent of external commands or control. There are currently two generations of Polaris, A-2 and A-3. Polaris A-1 was officially retired from active fleet duty when USS ABRAHAM LINCOLN (SSBN 602), the last of the first five SSBNs to carry it, returned to the United States 14 October 1965, for her initial overhaul.

The 1,200 nautical mile range Polaris A-1, was 28 feet long, 4½ feet in diameter, and weighed about 30,000 pounds. Each of its motors exerted thrust through four nozzles in the motor base. Thus vector (direction) control was exercised by devices called jetavators. Both motor cases were made of steel.

The first underwater launching of a Polaris test vehicle from a submarine was successfully conducted by the Navy's first Polaris carrying submarine USS GEORGE WASHINGTON (SSBN-598) on 20 July 1960, while cruising submerged off Cape Canaveral, Florida. Less than three hours later she successfully launched a second Polaris missile.

The 1,500 nautical mile range operational Polaris A-2 missile is similar to the A-1 in general appearance and diameter. However, A-2 is 30 inches longer and uses a more powerful solid propellant than A-1. Pioneering features include a second stage rocket motor case made of wound glass fiber instead of steel and rotating nozzles instead of jetavators.

The first test of an A-2 missile from a submerged submarine was successfully conducted on 23 October 1961, by USS ETHAN ALLEN (SSBN-608) off the Florida coast.

Polaris A-3 is a significantly greater advance over the A-2 than was the A-2 over A-1. In terms of hardware design, Polaris A-3 is approximately an 85 percent new missile.

The first launching of the 2,500 nautical mile range operational Polaris A-3 from a submerged submarine took place 26 October 1963 from USS ANDREW JACKSON (SSBN-619) while cruising submerged off the Florida coast. The completely successful test was followed by another from the same submarine 11 November 1963.

A Polaris 2,500 mile range A-3 missile fired from USS *Lewis and Clark* (SSBN-644)

The Polaris A-3 missile became operational 28 September 1964 when USS DANIEL WEBSTER (SSBN-626) began her initial operational patrol with 16 A-3's on board. USS DANIEL BOONE (SSBN-629) began the initial operational patrol in the Pacific 25 December 1964. The FBM weapon system became truly a global deterrent.

While the Polaris A-3 will leave no spot unreachable by the Polaris submarines hidden in the oceans of the world, the effectiveness of the Polaris system is best measured by the deterrent strength this capability gives our country in its ceaseless efforts to prevent nuclear war and to maintain peace.

THE POSEIDON MISSILE

On 18 January 1965, President Johnson announced in a special message to the Congress that his administration proposed to develop a new missile for the Fleet Ballistic Missile Weapon System—Poseidon.

Poseidon is named after the god of the sea in Greek mythology. This name is particularly appropriate for this seabased missile. The mythological Poseidon was known as the "earth-shaker" because of his ability to cause earthquakes far inland. But he was also known as "the preserver" because he could send calm seas.

Poseidon, which is designated C-3, will be 100 percent different from the Polaris A-3. It will be 6 feet in diameter, as opposed to the 4½-foot Polaris. It will be 3 feet longer than the 31-foot A-3. Yet despite this increase in size the growth potential of the ballistic missile submarine launching system will enable the Navy to fit Poseidon missiles into the same 16 missile tubes that carry Polaris.

Poseidon will have double the payload of the Polaris A-3. It will be twice as accurate. As a result, its effectiveness against a hardened target will be some eight times greater than the latest version of Polaris. Increased accuracy and flexibility will permit its use against a broader range of possible targets with added assurance of penetration of enemy defenses. Like Polaris A-3, it will be able to reach any spot on earth from its submerged nuclear-powered nesting place.

Submarine Ballistic Missiles

Polaris Missiles (A-1, A-2, A-3) Descriptive Summary Comparison

Characteristics	Polaris A-1	Polaris A-2	Polaris A-3
Length.....	28. 5'	31'	31'.
Diameter.....	54''	54''	54''.
Weight.....	15T.		
Powered stages.....	2	2	2.
Motor case materials.....	1st stage—steel; 2d stage—steel.	1st stage—steel; 2d stage—Glass Fiber. ¹	1st stage—glass fiber; ² 2d stage—glass fiber. ²
Nozzles.....	4	4	4.
Controls.....	1st stage—Jetavators; ¹ 2d stage—Jetavators. ¹	1st stage—Jetavators; ¹ 2d stage—Rotating nozzles. ¹	1st stage—Rotating nozzles; ¹ 2d stage—Fluid injection. ¹
Propellant.....	Solid; Polyurethane; Ammonium perchlorate; light metals.	Solid; 1st stage—Polyurethane etc., as in A-1; 2d stage—Double base.	Solid; Formulation not releasable; 2d stage—Double base.
Guidance.....	All inertial.	All inertial.	All inertial. ³
Range.....	1,200 N.M. (1,375 S.M.)	1,500 N.M. (1,725 S.M.)	2,500 N.M. (2,880 S.M.).
Warhead.....	Nuclear	Nuclear	Nuclear.

¹ Devised and first flown by Navy in Polaris development program. (Small Glass-Fiber motor case had previously flown in Vanguard program. Polaris was first large Glass-Fiber rocket motor case).

² First large ballistic missile to use glass motor cases for all stages.

³ Inertial guidance system of Polaris A-1 and A-2 was smallest system built at that time. Inertial guidance system of A-3 is about two-thirds smaller than A-1, A-2 system.

NUMERICAL LIST

AS-1 through AS-18: Data in Vol. I, Appendix III, see pp. 264-266

AS-19 PROTEUS

Built at Moore Shipbuilding & Drydock Co., Oakland, Calif.
Contract 12/30/40, Keel laid 9/15/41, Launched 11/12/42
Commissioned 1/31/44, Capt. Robert W. Berry commanding
Decommissioned 9/26/47—Placed in service at New London, Conn.
Converted* at Charleston Naval Shipyard, Charleston, S.C.
Recommissioned 7/8/60, Capt. Richard B. Laning commanding
First deployment 2/8/61

AS-19:

Length Overall: 529'6" (1944); 573'6" (1960)
Extreme Beam: 73'4" (1944); 73'4" (1960)
Full Load Displacement: 18,000 tons (1944); 20,295 tons (1960)
Maximum Navigational Draft: 23'6" (1944); 25'7" (1960)

Accommodations: Off.: 84, Enl.: 1,555 (1944). Off.: 80, Enl.: 1,338 (1960)

Armament: (1944) 5"/38: (4); 40mm: (4) twin; 20mm: (23) single. (1960) 5"/38: (1)

Designed Speed: 18.5 knots (1944); 12 knots (1960)
Engines: No.: 2; Mfr.: GM; Type Drive: DER
Propulsion: Props.: 2; Designed Shaft Horsepower: Over 7,000

AS-20 through AS-26: Data in Vol. I, Appendix III, pp. 264-266

AS-27 through AS-30: Redesignated Destroyer Tenders

AS-31 (HUNLEY) Class

AS-31 HUNLEY

Built at Newport News Shipbuilding & Dry Lock Co., Newport News, Va.
Contract 8/31/61, Keel laid 3/5/62, Launched 9/28/61

Commissioned 6/16/62, Capt. Douglas N. Syverson commanding
First deployment 3/21/64

AS-32 HOLLAND

Built at Ingalls Shipbuilding Corp., Pascagoula, Miss.
Contract 8/31/61, Keel laid 3/5/62, Launched 1/19/63
Commissioned 9/7/63, Capt. Charles W. Styler, Jr., commanding
First deployment 3/21/64

AS-31 through AS-32

Length Overall: 599'
Extreme Beam: 90'3"
Full Load Displacement: 17,909 tons
Maximum Draft: 24'8"
Accommodations: Off.: 90; Enl.: 1,411
Armament: (4) 3"/50
Designed Speed: 19.5 knots
Engines: No.: 1; Mfr.: FM; Type Drive: D.E.
Propulsion: Props.: 1; Designed Shaft Horsepower: Over 12,000

AS-33 (SIMON LAKE) Class:

AS-33 SIMON LAKE

Built at Puget Sound Naval Shipyard, Bremerton, Wash.
Contract 8/8/62, Keel laid 1/7/63, Launched 2/8/64
Commissioned 11/7/64, Capt. James B. Osborn commanding
First deployment 7/28/65

AS-34 CANOPUS

Built at Ingalls Shipbuilding Corp., Pascagoula, Miss.
Contract 9/19/63, Keel laid 3/2/64, Launched 2/12/65
Commissioned 11/4/65, Capt. John W. Barrett commanding

AS-33 through AS-34

Length Overall: 643'8"
Extreme Beam: 85'
Full Load Displacement: 19,934 tons (AS-33); 21,099 tons (AS-34)
Maximum draft: 23'6"
Accommodations: Off.: 79; Enl.: 1,294
Armament: (2) 3"/50
Designed Speed: 19.3 knots
Engines: No.: 1; Mfg.: DEL; Type Drive: DE
Propulsion: Props.: 1; Designed Shaft Horsepower: Over 12,000

AS-35 Construction deferred. Contract not awarded.

AS-36 (L. Y. SPEAR) Class:

AS-36 L. Y. SPEAR

Built at General Dynamics Corp., Quincy Div., Quincy, Mass.
Contract 5/12/65, Keel laid 5/5/66

AS-37 DIXON

Built at General Dynamics Corp., Quincy Div., Quincy, Mass.
Contract 4/20/66

AS-36 through AS-37 (Designed Characteristics):

Length Overall: 643'8"
Extreme Beam: 85'
Full Load Displacement: 22,640 tons
Maximum Draft: 24'8"
Accommodations: Off.: 96; Enl.: 1,252
Armament: 5"/38 (2)
Propulsion: Props.: 1; Designed Shaft Horsepower: Over 18,000

*NOTE.—Especially converted (1/19/59-7/8/60) as the Nation's first tender to service and repair FBM submarines and their Polaris missiles. Conversion called for a six-deck-high addition amidships, 44 feet long and with a beam of 73 feet, weighing 500 tons. This conversion was achieved by cutting the ship in drydock, sealing the after end which contained mostly machinery, flooding the forward end, floating the after end into position 44 feet down, and building the 44-foot section in place in the drydock. The ship was cut in half amidships on 7-8 June 1959, and the mass welding work was completed on 22 July 1959. The work proceeding from that point was completed some 11 months later.

DDG-2 (CHARLES F. ADAMS) Class:

NOTE.—Converted into the World's first guided missile destroyer to test feasibility of utilizing missile weapons systems on board destroyers. She also received the first American warship installation of the Denny-Brown stabilization system to minimize rolling and thus provide a more stable platform for functional test and evaluation of the missile system. The stabilizers were two 45-square-foot retractable fins extending out from amidships and located below her waterline. The missile installation was removed in the Charleston Naval Shipyard (Jun-Oct 1962), and she reverted to DD-712. Reclassification from DD-712 to DDG-712 (12/1/56); to DDG-1 (5/27/57); to DDG-712 (10/2/62). Data as DD-712 in Volume I, Appendix IV, p. 216 (*q.v.*)

Designed Speed: Over 32 knots
Engines: No.: 2, Mfr.: GE (DDG's 2-3, 7-8, 10-13, 15-22); WESTGH (DDG's 4-6, 9, 14, 23-24); Type Drive: TR
Boilers: No.: 4, Mfr./Type: BW2DR (DDG's 2-3, 7-8, 10-13, 15-22); FW2DR (DDG's 4-6, 9, 14, 23-24); CE2DR (DDG's 15-19).
Propulsion: Props.: 2, Designed Shaft Horsepower: 70,000

DDG-25 PERTH (Built for Australia—Foreign Military Sales)

Built at Defoe Shipbuilding Co., Bay City, Mich.
Contract 1/2/62, Keel laid 9/21/62, Launched 9/26/63
Delivered 7/1/65

DDG-26 HOBART (Built for Australia—Foreign Military Sales)

Built at Defoe Shipbuilding Co., Bay City, Mich.
Contract 1/2/62, Keel laid 10/26/62, Launched 1/9/64
Delivered 12/9/65

DDG-27 BRISBANE (Built for Australia—Foreign Military Sales)

Built at Defoe Shipbuilding Co., Bay City, Mich.
Contract 1/29/64, Keel laid 2/15/65, Launched 5/5/66
Delivered 1/30/67

DDG-28 UNNAMED (Building for Federal Republic of Germany—Foreign Military Sales)

Built at Bath Iron Works, Bath, Maine
Contract 3/30/65, Keel laid 3/1/66, Launch scheduled: 8/11/67

DDG-29 UNNAMED (Building for Federal Republic of Germany—Foreign Military Sales)

Built at Bath Iron Works, Bath, Maine
Contract 3/30/65, Keel laid 4/12/66, Launch scheduled: late 1967

DDG-30 UNNAMED (Building for Federal Republic of Germany—Foreign Military Sales)

Built at Bath Iron Works, Bath, Maine
Contract 3/30/65, Keel scheduled: 8/16/67

DDG-31 DECATUR (reclassified 9/15/66 from DD-936)

Built at Bethlehem Steel Co., Quincy Mass.
Contract 2/3/54, Keel laid 2/1/55, Launched 10/1/55
Commissioned 12/17/56, Comdr. John J. Skahill commanding
Placed in commission, in reserve 11/1/65
Converting at Boston Naval Shipyard, Boston, Mass.
Contract 12/22/64, Commenced 6/15/65, Completion scheduled 8/21/67

DDG-32 JOHN PAUL JONES (Reclassified 3/15/67 from DD-932)

Built at Bath Iron Works Corp, Bath, Maine
Contract 12/15/52, Keel laid 1/18/54, Launched 5/7/55
Commissioned 4/5/56, Comdr. Robert W. Hayler, Jr., commanding
Decommissioned 12/20/65, Converting at Philadelphia Naval Shipyard
Contract 12/22/64, Commenced 12/2/65, Scheduled completion 10/27/67

DDG-31 through DDG-32:

Length Overall: 418'5"
Extreme Beam: 45'2" (DDG-32); 45'1" (DDG-31)
Full Load Displacement: 3,985 tons; Max. Nav. Draft: 20'5"
Designed Accommodations: Off.: 22, Enl.: 315
Designed Speed: Over 33 knots
Armament: Gun Mounts: (1) 5"/54 Single; (1) Tartar Missile System; (1) ASROC group; (2) triple torpedo tubes
Engines: No.: 2, Mfr.: WESTGH; Type Drive: TR
Boilers: No.: 4; Mfr./Type: F/W (DDG-31), B/W2DR (DDG-32)
Propulsion: Props.: 2, Designed Shaft Horsepower: Over 70,000

DDG-33 PARSONS (Reclassified 3/15/67 from DD-949)

Built at Ingalls Shipbuilding Corp., Pascagoula, Miss.
Contract 1/27/56, Keel laid 6/17/57, Launched 8/19/58
Commissioned 10/29/59, Comdr. William R. Loomis commanding
Decommissioned 1/19/66
Converted at Long Beach Naval Shipyard, Long Beach, Calif.
Contract 12/22/64, Commenced 6/30/65, Completion scheduled: 1/17/68

DDG-34 SOMERS (Reclassified 3/15/67 from DD-947)

Built at Bath Iron Works, Bath, Maine
Contract 1/27/56, Keel laid 3/4/57, Launched 5/30/58
Commissioned 4/3/59, Comdr. Edward J. Cummings, Jr., commanding
Decommissioned: 4/11/66
Converted at Mare Island Div., San Francisco Bay Naval Shipyard
Contract 12/22/64, Commenced 3/30/66, Completion (Schedule: 2/23/68)

DDG-33 through DDG-34:

Length Overall: 418'5"; Extreme Beam: 45'2"
Full Load Displacement: 3,990 tons, Max. Nav. Draft: 20'5"
Designed Accommodations: Off.: 22, Enl.: 315
Designed Speed: Over 33 knots
Armament: Gun Mounts: (1) 5"/54 single; (1) Tartar Missile System; (1) ASROC Group; (2) triple torpedo tubes; (2) depth charge projectors; (1) depth charge track
Engines: No.: 2, Mfr.: GE; Type Drive: TR
Boilers: No.: 4; Mfr./Type: B/W
Propulsion: Props.: 2, Designed Shaft Horsepower: Over 70,000

DDG-35 MITSCHER (Reclassified 3/15/67 from DL-2)

Built at Bath Iron Works Corp., Bath, Maine
Contract 8/3/49, Keel laid 10/3/49, Launched 1/26/52
Commissioned 5/15/53, Comdr. Terrell W. Connor commanding
Decommissioned 3/18/66, Converted at Philadelphia Naval Shipyard
Contract 12/22/64, Commenced 6/14/66, Completion (Schedule 1968)

DDG-36 JOHN S. McCAIN (Reclassified 3/15/67 from DL-3)

Built at Bath Iron Works Corp., Bath, Maine
Contract 8/3/48, Keel laid 10/24/49, Launched 7/12/52
Commissioned 10/12/53, Comdr. E. R. King commanding
Decommissioned 6/25/66, Converted at Philadelphia Naval Shipyard
Contract 12/22/64, Commenced 6/14/66, Completion scheduled 1968

DDG-35 through DDG-36:

Length Overall: 492'4"; Extreme Beam: 49'9"
Full Load Displacement: 5,200 tons; Max. Nav. Draft:
21'1"
Designed Accommodations: Off.: 28, Enl.: 348
Designed Speed: Over 35 knots
Armament: Gun Mounts: (2) 5"/54 single; (1)
Tartar Missile System; (1) ASROC Group; (2)
triple torpedo tubes
Engines: No.: 2, Mfr.: GE; Type Drive: TR
Boilers: No.: 4, Mfr./Type: F/WSFD
Propulsion: Props.: 2, Designed Shaft Horsepower:
Over 80,000

FRIGATES—DL

- DL-1 (NORFOLK) Class:
DL-1 NORFOLK (Originally called Destroyer Leader:
Data in Volume I, Appendix IV, p. 326)
DL-2 (MITSCHER) Class: (Originally called Des-
troyer Leader: Data on DL-2 through DL-4 in Volume
I, Appendix IV, p. 326)
DL-2 MITSCHER (Converted to DDG-35 *q.v.*)
DL-3 JOHN S. McCAIN (Converted to DDG-36 *q.v.*)
DL-4 WILLIS A. LEE
DL-5 WILKINSON
DL-6 through DL-8: Redesignated before keel laying as
DLG-6 through DLG-8 (*q.v.*)

GUIDED MISSILE FRIGATES—DLG

WORDEN (DLG-18)

NUMERICAL LIST

- DLG-9 (COONTZ) Class:
DLG-6 FARRAGUT
Built at Bethlehem Steel Co., Shipbuilding Div.,
Quincy, Mass.
Contract 1/27/56, Keel laid 6/3/57, Launched 7/18/58
Commissioned 12/10/60, Comdr. Roger E. Spreen com-
manding
DLG-7 LUCE (Ex Dewey)
Built at Bethlehem Steel Co., Shipbuilding Div.,
Quincy, Mass.
Contract 1/27/56, Keel laid 10/1/57, Launched
12/11/58
Commissioned 5/20/61, Comdr. David H. Bagley com-
manding
DLG-8 MACDONOUGH
Built at Bethlehem Steel Co., Shipbuilding Div.,
Quincy, Mass.
Contract 1/27/56, Keel laid 4/15/58, Launched 7/9/59
Commissioned 11/4/61, Comdr. William G. Hurley
commanding
DLG-9 COONTZ
Built at Puget Sound Naval Shipyard, Bremerton,
Wash.
Contract 11/18/55, Keel laid 3/1/57, Launched
12/6/58
Commissioned 7/15/60, Comdr. Herbert H. Ries com-
manding
DLG-10 KING
Built at Puget Sound Naval Shipyard, Bremerton,
Wash.
Contract 11/18/55, Keel laid 3/1/57, Launched
12/6/58
Commissioned 11/17/60, Comdr. Melvin E. Bustard
commanding
DLG-11 MAHAN
Built at San Francisco Naval Shipyard, San Fran-
cisco, Calif.
Contract 11/18/55, Keel laid 7/31/57, Launched
10/7/59
Commissioned 8/25/60, Comdr. Herbert D. Mills, Jr.,
commanding
DLG-12 DAHLGREN
Built at Philadelphia Naval Shipyard, Philadelphia,
Pa.
Contract 7/23/56, Keel laid 3/1/58, Launched 3/16/60
Commissioned 4/8/61, Comdr. Cary E. Landis com-
manding
DLG-13 WILLIAM V. PRATT
Built at Philadelphia Naval Shipyard, Philadelphia,
Pa.
Contract 7/23/56, Keel laid 3/1/58, Launched 3/16/60
Commissioned 11/4/61, Comdr. Boyd E. Gustafson
commanding
DLG-14 DEWEY
Built at Bath Iron Works Corp., Bath, Maine
Contract 10/26/56, Keel laid 8/10/57, Launched
11/30/58
Commissioned 12/7/59, Comdr. Elmo R. Zumwalt, Jr.,
commanding

DLG-15 PREBLE

Built at Bath Iron Works Corp., Bath, Maine
 Contract 10/26/56, Keel laid 12/16/57, Launched
 5/23/59
 Commissioned 5/9/60, Comdr. Edward G. Fitz-
 Patrick commanding

DLG-6 through DLG-15:

Length Overall: 512'6", Extreme Beam: 52'6"
 Full Load Displacement: 5,709 tons
 Accommodations: Off.: 28, Enl.: 347
 Designed Speed: Over 32 knots
 Armament: Gun Mounts (1) 5"/54 single; (2) 3"/50
 twin (1) Terrier Missile System; (1) ASROC
 Group; (2) triple torpedo tubes
 Engines: No.: 2; Mfr.: DEL (DLG's 6-8, 15); AC
 (DLG's 9-14); Type Drive: TR
 Boilers: No.: 4, Type/Mfr.: F/W (DLG's 6-8); B/W
 (DLG's 9-15)
 Propulsion: Props.: 2, Designed Shaft Horsepower:
 over 85,000

DLG-16 (LEAHY) Class:**DLG-10 LEAHY**

Built at Bath Iron Works, Bath, Maine
 Contract 11/7/58, Keel laid 12/3/59, Launched 7/1/61
 Commissioned 8/4/62, Capt. Robert L. Baughan, Jr.,
 commanding

DLG-17 HARRY E. YARNELL

Built at Bath Iron Works Corp., Bath, Maine
 Contract 11/7/58, Keel laid 5/31/60, Launched 12/9/61
 Commissioned 2/2/63, Capt. Charles E. Nelson,
 commanding

DLG-18 WORDEN

Built at Bath Iron Works Corp., Bath, Maine
 Contract 11/7/58, Keel laid 9/19/60, Launched 6/2/62
 Commissioned 8/3/63, Capt. Scott Lothrop com-
 manding

DLG-19 DALE

Built at New York Shipbuilding Corp., Camden, N.J.
 Contract 11/7/58, Keel laid 9/6/60, Launched 7/28/62
 Commissioned 11/23/63, Capt. Robert R. Crutchfield
 commanding

DLG-20 RICHMOND K. TURNER

Built at New York Shipbuilding Corp., Camden, N.J.
 Contract 11/7/58, Keel laid 1/9/61, Launched 4/6/63
 Commissioned 6/13/64, Capt. Douglas C. Plate
 commanding

DLG-21 GRIDLEY

Built at Puget Sound Bridge & Dry Dock Co., Seattle,
 Wash.
 Contract 11/7/58, Keel laid 7/15/60, Launched
 7/31/61
 Commissioned 5/25/63, Capt. Percy A. Lilly, Jr.
 commanding

DLG-22 ENGLAND

Built at Todd Shipyard Corp., San Pedro, Calif.
 Contract 11/7/58, Keel laid 10/4/60, Launched 3/6/62
 Commissioned 12/7/63, Capt. William J. Caspari
 commanding

DLG-23 HALSEY

Built at San Francisco Naval Shipyard, San Fran-
 cisco, Calif.
 Contract 12/5/58, Keel laid 8/26/60, Launched 1/15/62
 Commissioned 7/20/63, Capt. Herbert H. Anderson
 commanding

DLG-24 REEVES

Built at Puget Sound Naval Shipyard, Bremerton,
 Wash.
 Contract 12/8/58, Keel laid 7/1/60, Launched 5/12/62
 Commissioned 5/15/64, Capt. Wynne A. Stevens
 commanding

DLG-16 through DLG-24:

Length overall: 533'; Extreme Beam 54'10"
 Full Load Displacement: 7,630 tons; Max. Nav.
 Draft: 25'3"
 Design Accommodations: Off.: 18, Enl.: 359
 Designed Speed: Over 31 knots
 Armament: Gun Mounts: (2) 3"/50 twin; (1) Ter-
 rier Missile System; (1) ASROC Group; (2) triple
 torpedo tubes; (1) DASH System
 Engines: No.: 2; Mfr.: GE (DLG 16-18); DEL
 (DLG 19-22); AC (DLG 23-24); Type Drive: TR
 Boilers: No.: 4; Type/Mfr.: B/W (DLG 16-18);
 F/W (DLG 19-24)
 Propulsion: Props.: 2, Designed Shaft Horsepower:
 Over 85,000

DLG (N)-25 (BAINBRIDGE) Class: 1 Ship**DLG (N)-25 BAINBRIDGE**

Built at Bethlehem Steel Co., Shipbuilding Div.,
 Quincy, Mass.
 Contract 9/26/56, Keel laid 5/15/59, Launched
 4/15/61
 Commissioned 10/6/62, Capt. Raymond E. Peet com-
 manding

DLG (N)-25:

Length Overall: 565'; Extreme Beam 57'10"
 Full Load Displacement: 8,580 tons
 Accommodations: Off.: 34, Enl.: 463
 Designed Speed: Over 32 knots
 Armament: Gun Mounts: (2) 3"/50 twin; (2) Ter-
 rier Missile Systems; (1) ASROC Group; (2)
 triple torpedo tubes
 Propulsion: (2) GE water-cooled nuclear reactors—
 geared steam turbines; Props.: 2, Designed Shaft
 Horsepower: Over 69,000

DLG-26 (BELKNAP) Class:**DLG-26 BELKNAP**

Built at Bath Iron Works Corp., Bath, Maine
 Contract 5/18/61, Keel laid 2/5/62, Launched
 7/20/63
 Commissioned 11/7/64, Capt. John T. Law command-
 ing

DLG-27 JOSEPHUS DANIELS

Built at Bath Iron Works Corp., Bath, Maine
 Contract 5/18/61, Keel laid 4/23/62, Launched
 12/2/63
 Commissioned 5/8/65, Capt. Harry A. Cummings
 commanding

DLG-28 WAINWRIGHT

Built at Bath Iron Works Corp., Bath, Maine
 Contract 5/18/61, Keel laid 7/2/62, Launched
 4/25/64
 Commissioned 1/8/66, Capt. Robert P. Foreman com-
 manding

DLG-29 JOUETT

Built at Puget Sound Naval Shipyard, Bremerton,
 Wash.
 Contract 9/20/61, Keel laid 9/25/62, Launched
 6/30/64
 Commissioned 12/3/66, Capt. Robert S. Hayes com-
 manding

DLG-30 HORNE

Built at Hunters Point Div., San Francisco Bay Naval Shipyard, San Francisco, Calif.
Contract 9/20/61, Keel laid 12/12/62, Launched 10/30/64
Commissioned 4/15/67, Capt. Stansfield Turner commanding

DLG-31 STERETT

Built at Puget Sound Naval Shipyard, Bremerton, Wash.
Contract 9/20/61, Keel laid 9/25/62, Launched 6/30/64
Commissioned 4/8/67 Capt. Edward A. Christofferson commanding

DLG-32 WILLIAM H. STANDLEY

Built at Bath Iron Works Corp., Bath, Maine
Contract 1/16/62, Keel laid 7/29/63, Launched 12/19/64
Commissioned 7/9/66, Capt. Cornelius F. Moul commanding

DLG-33 FOX

Built at Todd Shipyards Corp., San Pedro, Calif.
Contract 1/16/62, Keel laid 1/15/63, Launched 11/21/64
Commissioned 5/8/66, Capt. Robert O. Welander commanding

DLG-34 BIDDLE

Built at Bath Iron Works Corp., Bath, Maine
Contract 1/16/62, Keel laid 12/9/62, Launched 7/2/65
Commissioned 1/21/67, Capt. Mylon T. Scott commanding

DLG-26 through DLG-34:

Length Overall: 547'; Extreme Beam: 54'10"
Full Load Displacement: 7,900 tons; Max. Draft: 18'6"
Accommodations: Off.: 31, Enl.: 387
Designed Speed: Over 30 knots
Armament: Gun Mounts: (1) 5"/54 single, (2) 3"/50; (1) Terrier Missile System; (1) ASROC Group; (2) triple torpedo tubes, (2) single torpedo tubes; (1) DASH System
Engines: No.: 4, Mfr.: GE (DLG's 26-28, 32-34); DEL (DLG's 29-31, 33) Type Drive: TR
Boilers: No. 4, Mfr./Type: B/W (DLG's 26-28, 32, 34), CE (DLG's 29-31, 33)
Propulsion: Props.: 2, Designed Shaft Horsepower: Over 85,000

DLG(N)-35 (TRUXTUN) Class: 1 Ship:

DLG(N)-35 TRUXTUN

Built at New York Shipbuilding Corp., Camden, N.J.
Contract 6/23/62, Keel laid 6/17/63, Launched 12/19/64
Commissioned 5/27/67, Capt. David D. Work commanding

DLG(N)-35

Length Overall: 564'; Extreme Beam 58'
Full Load Displacement: 9,056 tons
Accommodations: Off.: 36, Enl.: 465
Designed Speed: Classified
Armament: Gun Mounts: (1) 5"/54 single, (2) 3"/50 single; (2) Twin Terrier Missile-ASROC Systems; (2) torpedo tubes
Propulsion: (2) GE water-cooled nuclear reactors—geared steam turbines; Props.: No.: 2, Designed Shaft Horsepower: Classified

pp. 331-349, *q.v.*

DE-1033 (CLAUD JONES) Class:

DE-1033 **CLAUD JONES**

Built at Avondale Marine Ways, Avondale, La
Contract 5/4/56, Keel laid 6/1/57, Launched 5/27/58
Commissioned 2/10/59, Lt. Comdr. Warren M. Cone
commanding

DE-1034 **JOHN R. PERRY**

Built at Avondale Marine Ways, Avondale, La.
Contract 5/4/56, Keel laid 10/1/57, Launched 7/29/58
Commissioned 5/5/59, Lt. Comdr. Wilton L. Atkinson
commanding

DE-1035 **CHARLES BERRY**

Built at American Shipbuilding Co., Lorain, Ohio
Contract 7/31/58, Keel laid 10/29/58, Launched
3/17/59
Commissioned 11/25/59, Lt. Comdr. Rembrandt C.
Robinson commanding

DE-1036 **McMORRIS**

Built at American Shipbuilding Co., Lorain, Ohio
Contract 7/31/58, Keel laid 11/5/58, Launched 5/26/59
Commissioned 3/4/60, Lt. Comdr. Martin Zenni com-
manding

DE-1033 through DE-1036 (Designed Characteristics):

Length Overall: 311' 9½"; Extreme Beam: 37'
Full Load Displacement: 1,750 tons; Max. Nav Draft
17'2"

Designed Accommodations: Off.: 15, Enl.: 160
Designed Speed: Over 22 knots

Armament:

Gun Mounts: (2) 3"/50 single

Torpedo Tubes: (2) triple

ASROC Group:

Depth Charge Projectors: 2

Engines: No.: 4, Mfg.: FM, Type Drive: Geared-Re-
duction

Propulsion: Props.: 1, Designed Shaft Horsepower:
Over 9,000

DE-1037 (BRONSTEIN) Class:

DE-1037 **BRONSTEIN**

Built at Avondale Shipyards, Inc., Westwego, La.
Contract 6/13/60, Keel laid 5/16/61, Launched 3/31/62
Commissioned 6/15/63, Lt. Comdr. Stanley T. Counts
commanding

DE-1038 **McCLOY**

Built at Avondale Shipyards, Inc., Westwego, La.
Contract 6/15/60, Keel laid 9/15/61, Launched 6/9/62
Commissioned 10/21/63, Comdr. Thomas Sherman
commanding

DE-1037 through DE-1038 (Designed Characteristics):

Length Overall: 371'6"; Extreme Beam 40'8"
Full Load Displacement: 2,650 tons, Max. Draft 14'0"

Designed Accommodations: Off.: 16, Enl.: 180

Designed Speed: Over 25 knots

Armament:

Gun Mounts: (1) 3"/50 twin, (1) 3"/50 single

Torpedo Tubes: 2

ASROC Group: 1

DASH System: 1

Engines: No.: 1, Mfg.: DEL, Type Drive: TR

Boilers: No.: 2, Mfg./Type D

Propulsion: Props.: 1, Designed Shaft Horsepower:
20,000

DE-1040 (GARCIA) Class:

DE-1040 **GARCIA**

Built at Bethlehem Steel Co., Shipbuilding Div., San
Francisco, Calif.

Contract 6/22/61, Keel laid 10/16/62, Launched
10/3/63

Commissioned 12/21/64, Comdr. Donald A. Smith
commanding

DE-1041 BRADLEY

Built at Bethlehem Steel Co., Shipbuilding Div., San Francisco, Calif.
 Contract 6/22/61, Keel laid 1/17/63, Launched 3/26/64
 Commissioned 5/15/65, Comdr. Robert H. Robeson commanding

DE-1043 EDWARD McDONNELL

Built at Avondale Shipyards, Inc., Westwego, La.
 Contract 1/3/62, Keel laid 4/1/63, Launched 2/15/64
 Commissioned 2/15/65, Comdr. Daniel L. Banks, Jr., commanding

DE-1044 BRUMBY

Built at Avondale Shipyards, Inc., Westwego, La.
 Contract 1/3/62, Keel laid 8/1/63, Launched 6/6/64
 Commissioned 8/5/65, Comdr. George F. Tonson commanding

DE-1045 DAVIDSON

Built at Avondale Shipyards, Inc., Westwego, La.
 Contract 1/3/62, Keel laid 9/30/63, Launched 10/2/64
 Commissioned 12/7/65, Comdr. Henry L. Stanfield commanding

DE-1047 VOGEL

Built at Defoe Shipbuilding Co., Bay City, Mich.
 Contract 3/21/63, Keel laid 11/21/63, Launched 2/4/65
 Commissioned 11/25/66, Comdr. William F. Keller commanding

DE-1048 SAMPLE

Built at Lockheed Shipbuilding & Construction Co., Seattle, Wash.
 Contract 3/20/63, Keel laid 7/19/63, Launched 4/28/64

DE-1049 KOELSCH

Built at Defoe Shipbuilding Co., Bay City, Mich.
 Contract 3/21/63, Keel laid 2/19/63, Launched 6/8/65
 Commissioned 6/10/67, Comdr. John A. Buck commanding

DE-1050 ALBERT DAVID

Built at Lockheed Shipbuilding & Construction Co., Seattle, Wash.
 Contract 3/20/63, Keel laid 4/29/64, Launched 12/19/64

DE-1051 O'CALLAHAN

Built at Defoe Shipbuilding Co., Bay City, Mich.
 Contract 3/2/63, Keel laid 2/19/64, Launched 10/20/65

DE-1040 through DE-1051 (Designed Characteristics) :

Length Overall: 414'6"; Extreme Beam: 44'3"
 Full Load Displacement: 3403 tons; Max. Draft: 14'5"
 Designed Accommodations: Off.: 17, Enl.: 231
 Designed Speed: Over 27 knots
 Armament:
 Gun Mounts: (2) 5"/38 single
 Torpedo Tubes: 4
 ASROC Group: 1
 DASH System: 1
 Engines: No.: 1, Mfg.: Westgh., Type Drive: TR
 Boilers: No.: 2, Mfg./Type FW/PFS
 Propulsion: Props.: 1, Designed Shaft Horsepower: Over 30,000

DE-1052 (KNOX) Class:**DE-1052 KNOX**

Built at Todd Shipyards Corp., Seattle, Wash.
 Contract 7/22/64, Keel laid 10/5/65, Launched 11/19/65

DE-1053 ROARK

Built at Todd Shipyards Corp., Seattle, Wash.
 Contract 7/22/64, Keel laid 2/2/66, Launched 4/24/67

DE-1054 GRAY

Built at Todd Shipyards Corp., Seattle, Wash.
 Contract 7/22/64, Keel laid 11/19/66, Launched 10/3/67

DE-1055 HEPBURN

Built at Todd Shipyards Corp., Seattle, Wash.
 Contract 7/22/64, Keel laid 6/1/66, Launched 3/25/67

DE-1056 CONNOLE

Built at Avondale Shipyards Inc., Westwego, La.
 Contract 7/22/64, Keel laid 3/23/67

DE-1057 RATHBURNE

Built at Lockheed Shipbuilding & Construction Co., Seattle, Wash.
 Contract 7/22/64, Keel laid 9/1/66

DE-1058 MEYERKORD

Built at Todd Shipyards Corp., San Pedro, Calif.
 Contract 7/22/64, Keel laid 9/1/66, Launched 7/15/67

DE-1059 W. S. SIMS

Built at Avondale Shipyards, Inc., Westwego, La.
 Contract 7/22/64, Keel laid 4/10/67

DE-1052 through DE-1059: (Designed Characteristics) :

Length Overall: 438'0"; Extreme Beam: 46'9"
 Full Load Displacement: 3,877 tons; Max. Draft: 16'2"
 Designed Accommodations: Off.: 17, Enl.: 226
 Designed Speed: Over 27 knots
 Armament:
 Gun Mounts: (1) 5"/54 single, DP
 Torpedo Tubes: (2) MK 32 TT
 ASROC Group: (1)
 DASH System:
 Engines: No.: 4, Mfg.: FM, Type Drive: TR
 Boilers: No.: 2, Mfg./Type C.E./NSFO
 Propulsion: Props.: 1, Designed Shaft Horsepower: Over 30,000

ESCORT RESEARCH SHIP—AGDE**AGDE-1 GLOVER**

Built at Bath Iron Works, Corp., Bath, Maine
 Contract 6/28/61, Keel laid 7/29/63, Launched 4/17/65
 Commissioned 11/13/65, Comdr. William W. Wilson commanding

AGDE-1:

Length Overall: 414'6"; Extreme Beam: 44'3"
 Full Load Displacement: 3,500 tons, Max. Draft 14'6"
 Designed Complement: Off.: 17, Enl.: 231
 Armament:
 Gun Mounts: (1) 5"/38 single
 Torpedo Tubes: (2)
 ASROC Group:
 DASH System:
 Engines: No.: 1, Mfg.: Westh., Type Drive: TR
 Designed Shaft Horsepower: Over 30,000
 Boilers.: 2, Mfg.: FW/Type AFSG

USS *Knox* (DE-1052)

Propulsion: Single Pump Jet; Pressure Fired Steam Generator

NOTE.—*Glover* is a *Garcia* class escort ship modified for research use in the development of future classes of escorts. The ship is also designed to provide living and office space for civilian Project Director and approximately 30 civilian scientists.

GUIDED MISSILE ESCORT SHIP—DEG

ALPHABETICAL LIST

BROOKE (DEG-1)
 JULIUS A FURER (DEG-6)
 RAMSEY (DEG-2)
 RICHARD L. PAGE (DEG-5)
 SCHOFIELD (DEG-3)
 TALBOT (DEG-4)

NUMERICAL LIST

DEG-1 (BROOKE) Class:

DEG-1 BROOKE

Built at Lockheed Shipbuilding & Construction Co., Seattle, Wash.
 Contract 1/4/62, Keel laid 12/19/62, Launched 7/19/63
 Commissioned 3/12/66, Comdr. Robert L. Walters, commanding

DEG-2 RAMSEY

Built at Lockheed Shipbuilding & Construction Co., Seattle, Wash.
 Contract 1/4/62, keel laid 2/4/63, Launched 10/15/63

DEG-3 SCHOFIELD

Built at Lockheed Shipbuilding & Construction Co., Seattle, Wash.
 Contract 1/4/62, Keel laid 4/15/63, Launched 12/7/63

DEG-4 TALBOT

Built at Bath Iron Works Corp., Bath, Maine
 Contract 5/24/63, Keel laid 5/4/64, Launched 1/6/66
 Commissioned 4/22/67, Comdr. Edwin Woods commanding

DEG-5 RICHARD L. PAGE

Built at Bath Iron Works Corp., Bath, Maine
 Contract 5/24/63, Keel laid 1/4/65, Launched 4/4/66

DEG-6 JULIUS A. FURER

Built at Bath Iron Works Corp., Bath, Maine
 Contract 5/24/63, Keel laid 7/12/65, Launched 7/22/66

DEG-1 through DEG-6 (Designed Characteristics):

Length Overall: 414'6"; Extreme Beam: 44'3"
 Full Load Displacement: 3,426 tons; Max. Draft: 14'6"

Designed Accommodations: Off.: 17, Enl.: 231

Designed Speed: Over 27 knots

Armament:

Gun Mounts: (1) 5"/38

Missile Systems: (1) Tartar, (1) ASROC Group

Torpedo Tubes: 4

DASH System: 1

Engines: No.: 1, Mfg.: Westgh., Type Drive: TR

Boilers: No.: 2, Mfg./Type: FWPFSS

Propulsion: Props.: 1, Designed Shaft Horsepower: Over 30,000

AIRCRAFT CARRIERS 1963-1967

CVA-66 AMERICA

Built at Newport News Shipbuilding & Dry Dock Co.,
Newport News, Va.

Contract 11/25/60, Keel laid 1/9/61, Launched 2/1/64

Commissioned 1/23/65, Capt. Lawrence Heyworth,

Jr., commanding

Class: *Kitty Hawk*

CVA-67 JOHN F. KENNEDY

Built at Newport News Shipbuilding & Dry Dock Co.,
Newport News, Va.

Contract 4/30/64, Keel laid 10/22/64, Launched
5/27/67

Class: *John F. Kennedy*

CVA-66 and CVA-67:

Length Overall: 1,047'6" (CVA-66) ; 1,051'6" (CVA-
67)

Extreme Beam: 129'4" (CVA-66) ; 128'6" (CVA-67)

Extreme Width at Flight Deck: 252'

Full Load Displacement: 78,500 tons (CVA-66) ;
83,000 tons (CVA-67)

Mean Draft: 36' (CVA-66), 37'3" (CVA-67)

Designed Speed: Over 30 knots

Designed Accommodations: Off.: 470, Enl.: 4,495
(CVA-66) ; Off.: 501, Enl.: 5,222 (CVA-67)

Aircraft: 90-100 plus; Catapults: 4

Armament: (2) Twin Terrier Missile Systems (CVA-
66). Authorized: Basic Point Defense Missile Sys-
tem (CVA-67)

Engines: No.: 4, Mfr.: GE; Type Drive: TR

Boilers: No.: 8, Mfr./Type: FWSFD (CVA-66),
BWSFD (CVA-67)

Propulsion: Props.: 4, Designed Shaft Horsepower:
Over 200,000

Artist's conception of USS *Nimitz* (CVAN-68)

Appendix V

SHIPS NAMED A THROUGH F SINCE PUBLICATION OF VOLUMES I AND II

We often hear the words, “. . . Being the product of human effort it probably has errors, but we have made strong efforts to reduce them.” Errors which crept into Volumes I and II have been corrected in the errata list contained in Appendix VI. Since many ships have come into being since 1958, the Appendices which appeared in Volumes I and II require updating. While no battleships have been added, new cruisers, submarines, submarine tenders, destroyers, escort vessels, auxiliary and amphibious types, and the new and more powerful aircraft carriers have joined the Fleet.

Appendix V is an alphabetical listing of ships that have been named since issuance of Volumes I and II whose names begin with the letters A, B, C, D, E, and F.

Certain common, repetitive terms are abbreviated within the Appendix and are listed as follows:

- (B)—Builder.
- (C)—Commissioning date.
- (K)—Keel date.
- (L)—Launch date.
- (S)—Sponsor or sponsors.
- (b)—Blue crew.
- (g)—Gold crew.

ABRAHAM LINCOLN (SSBN-602)

(B) Naval Shipyard, Portsmouth, N.H.; (K) 11/1/58; (L) 5/14/60; (S) Miss Mary L. Beckwith; (C) 3/11/61, Comdr. Leonard Erb (b) and Comdr. D. M. Miller (g).

ALAMOGORDO (ARDM-2) ex-ARD-26

(B) Pacific Bridge Co., Alameda, Calif., in 1944; Converted at Bethlehem Steel Corp., Shipbuilding Div., Baltimore, Md., in 1964-65; (C) 8/3/65, Lt. J. G. Grienberger.

ALBERT DAVID (DE-1050)

(B) Lockheed Shipbuilding and Construction Co., Seattle, Wash.; (K) 4/29/64; (L) 12/19/64; (S) Mrs. Albert L. David; scheduled to be commissioned in July 1968.

ALEXANDER HAMILTON (SSBN-617)

(B) General Dynamics Corp., Electric Boat Div., Groton, Conn.; (K) 7/26/61; (L) 8/18/62; (S) Mrs. Valentine Hollingsworth, Jr.; (C) 6/27/63, Comdr. N. B. Bessac (b) and Comdr. B. F. Sherman, Jr. (g).

AMERICA (CVA-66)

(B) Newport News Shipbuilding and Dry Dock Co., Newport News, Va.; (K) 1/9/61; (L) 2/1/64; (S) Mrs. David L. McDonald; (C) 1/23/65, Captain Lawrence Heyworth, Jr.

ANCHORAGE (LSD-36)

(B) Ingalls Shipbuilding Corp., Pasagoula, Miss.; (K) 3/13/67; Scheduled to be launched in February 1968; Scheduled to be commissioned in December 1968.

ANDREW JACKSON (SSBN-619)

(B) Mare Island Naval Shipyard, Vallejo, Calif.; (K) 4/26/61; (L) 9/15/62; (S) Mrs. Estes Ke-fauver; (C) 7/3/63, Comdr. A. J. Whittle, Jr. (b) and Comdr. J. B. Wilson (g).

ANNAPOLIS (AGMR-1) ex-GILBERT ISLANDS (AKV-39)

Name assigned 6/22/63; Converted at Naval Shipyard, New York, N.Y., in 1962-63; (C) 3/7/64, Captain J. J. Rowan.

ANTELOPE (PG-86)

(B) Tacoma Boatbuilding Co., Inc., Tacoma, Wash.; (K) 6/1/65; (L) 6/18/66; (S) Mrs. Paul V. Snow; Scheduled to be commissioned in October 1967.

ANTIGO (YTB-792)

(B) Marinette Marine Corp., Marinette, Wis.; (K) 9/27/66; (L) 4/17/67; Scheduled to be placed in service in September 1967.

APALACHICOLA (YTB-767)

(B) Mobile Ship Repair Inc., Mobile, Ala.; (K) 5/1/63; (L) 10/26/63; Placed in service 6/16/64.

APOPKA (YTB-778)

(B) Marinette Marine Corp., Marinette, Wis.; (K) 10/15/64; (L) 7/7/65; Placed in service in August 1965.

ARCATA (YTB-768)

(B) Mobile Ship Repair Inc., Mobile, Ala.; (K) 5/15/63; (L) 11/30/64; Placed in service in March 1965.

ARLINGTON (AGMR-2) ex-Saipan (AVT-6)

Name assigned 4/8/65; Converted at Alabama Dry Dock and Shipbuilding Co., Mobile, Ala., in 1963-66; (C) 8/27/66, Captain C. A. Darrah.

ASHEVILLE (PG-84)

(B) Tacoma Shipbuilding Co., Tacoma, Wash.; (K) 4/15/64; (L) 5/1/65; (S) Mrs. R. E. Harris; (C) 8/6/66, Lt. Henry Dale.

ASPRO (SSN-648)

(B) Ingalls Shipbuilding Corp., Pascagoula Miss.; (K) 11/23/64; Scheduled to be launched 9/30/67; Scheduled to be commissioned in October 1968.

AUSTIN (LPD-4)

(B) Naval Shipyard, New York, N.Y.; (K) 2/4/63; (L) 6/27/64; (S) Miss Lynda Bird Johnson; (C) 2/6/65, Captain D. E. Bergin, Jr.

BAINBRIDGE (DLGN-25)

(B) Bethlehem Steel Co., Shipbuilding Div., Quincy, Mass.; (K) 5/15/59; (L) 4/15/61; (S) Mrs. Robert L. Goodale; (C) 10/6/62, Captain R. E. Peet.

BARB (SSN-596)

(B) Ingalls Shipbuilding Corp., Pascagoula, Miss.; (K) 11/9/59; (L) 2/12/62; (S) Mrs. E. B. Fluckey; (C) 8/24/63; Comdr. C. D. Grojean.

BARNEY (DDG-6)

(B) New York Shipbuilding Corp., Camden, N.J.; (K) 5/18/59; (L) 12/10/60; (S) Mrs. Harry D. Wortman; (C) 8/11/62, Comdr. J. J. Doak, Jr.

BARTLETT (AGOR-13)

(B) Northwest Marine Iron Works, Portland, Oreg.; (K) 11/18/65; (L) 5/24/66; (S) Mrs. Richard M. Gummere, Jr.; Scheduled to be placed in service in March 1968; Civilian crew.

BEACON (PG-99)

(B) Peterson Builders, Inc., Sturgeon Bay, Wis.; Scheduled to be laid down in June 1968; Scheduled to be launched in December 1968; Scheduled to be commissioned in 1969.

BELKNAP (DLG-26)

(B) Bath Iron Works Corp., Bath Maine; (K) 2/5/62; (L) 7/20/63; (S) Mrs. Leonard B. Cresswell; (C) 11/7/64; Captain J. T. Law

BELMONT (AGTR-4) ex-MCV 94, SS IRAN VICTORY, AG-167

(B) Oregon Shipbuilding Corp., Portland, Oreg.; (K) 1/25/44; (L) 3/25/44; (S) Mrs. Peter Hegge; Name assigned 6/8/63; Converted at Willamette Iron and Steel Co., Portland, Oregon, in 1963-64; (C) 11/2/64, Comdr. J. E. Henderson.

BENJAMIN FRANKLIN (SSBN-640)

(B) General Dynamics Corp., Groton, Conn.; (K) 5/25/63; (L) 12/5/64; (S) Mrs. Leon V. Chaplin and Mrs. Francis L. Moseley; (C) 10/22/65, Captain D. M. Miller (b) and Lt. Comdr. R. N. Williams (g).

BENJAMIN STODDERT (DDG-22)

(B) Puget Sound Bridge and Dry Dock Co., Seattle, Wash.; (K) 6/11/62; (L) 1/8/63; (S) Mrs. Henry Ravenel; (C) 9/12/64, Comdr. W. M. Meginniss.

BERGALL (SSN-667)

(B) General Dynamics Corp., Groton, Conn.; (K) 4/16/66; Scheduled to be launched in April 1968; Scheduled to be commissioned in 1969.

BERKELEY (DDG-15)

(B) New York Shipbuilding Corp., Camden, N.J.; (K) 6/1/60; (L) 7/29/61; (S) Mrs. James P. Berkeley; (C) 12/15/62, Comdr. W. E. Harper, Jr.

BIDDLE (DDG-5)

(B) New York Shipbuilding Corp., Camden, N.J.; (K) 5/18/59; (L) 6/4/60; (S) Mrs. Fred A. Bantz; (C) 5/5/62, Comdr. Paul Roth; Renamed CLAUDE V. RICKETTS 7/22/64.

BIDDLE (DLG-34)

(B) Bath Iron Works Corp., Bath, Maine; (K) 12/9/63; (L) 7/2/65; (S) Mrs. William H. Bates; (C) 1/21/67, Captain M. T. Scott.

BLUE RIDGE (AGC-19)

(B) Naval Shipyard, Philadelphia, Pa.; (K) 2/27/67; Scheduled to be launched in August 1968; Scheduled to be commissioned in May 1969.

BRADLEY (DE-1041)

(B) Bethlehem Steel Co., Shipbuilding Div., San Francisco, Calif.; (K) 1/17/63; (L) 3/26/64; (S) Mrs. Willis W. Bradley; (C) 5/15/65; Comdr. R. H. Robeson.

BRONSTEIN (DE-1037)

(B) Avondale Shipyards Inc., Westwego, La.; (K) 5/16/61; (L) 3/31/62; (S) Mrs. Robert B. Pirie; (C) 6/15/63, Lt. Comdr. S. T. Counts.

BROOKE (DEG-1)

(B) Puget Sound Bridge and Dry Dock Co., Seattle, Wash.; (K) 12/19/62; (L) 7/19/63; (S) Mrs. Bruce R. Day and Mrs. Campbell Hooton; (C) 3/12/66, Comdr. R. L. Walters.

BRUMBY (DE-1044)

(B) Avondale Shipyards Inc., Westwego, La.; (K) 8/1/63; (L) 6/6/64; (S) Miss Muriel Fitzgerald and Miss Cornelia Fitzgerald; (C) 8/5/65, Comdr. G. F. Tolson.

BUCHANAN (DDG-14)

(B) Todd Pacific Shipyards, Inc., Seattle, Wash.; (K) 4/23/59; (L) 5/11/60; (S) Mrs. Charles Fisher; (C) 2/7/62, Comdr. D. A. Webster.

BUTTE (AE-27)

(B) General Dynamics Corp., Quincy, Mass.; (K) 7/21/66, (L) 8/9/67; Scheduled to be commissioned in 1968.

CAMDEN (AOE-2)

(B) New York Shipbuilding Corp., Camden, N.J.; (K) 2/17/64; (L) 5/29/65; (S) Mrs. Benedict J. Semmes, Jr.; (C) 4/1/67, Captain C. P. Rozier.

CANON (PG-90)

(B) Tacoma Boatbuilding Co., Inc., Tacoma, Wash.; (K) 6/28/66; (L) 7/22/67; Scheduled to be commissioned in April 1968.

CANOPUS (AS-34)

(B) Ingalls Shipbuilding Corp., Pascagoula, Miss.; (K) 3/2/64; (L) 2/12/65; (S) Mrs. Earl L. Sackett; (C) 11/4/65, Captain J. M. Barrett.

CASIMIR PULASKI (SSBN-633)

(B) General Dynamics Corp., Groton, Conn.; (K) 1/12/63; (L) 2/1/64; (S) Mrs. John A. Gronouski; (C) 8/14/64; Captain R. L. J. Long (b) and Comdr. T. B. Brittain, Jr., (g).

CHARLES H. DAVIS (AGOR-5)

(B) Christy Corp., Sturgeon Bay, Wls.; (K) 6/15/61; (L) 6/30/62; (S) Mrs. Roy A. Gano; Placed in service 1964; Civilian crew.

CHARLESTON (AKA-113)

(B) Newport News Shipbuilding and Drydock Co., Newport News, Va.; (K) 12/5/66; Scheduled to be launched in December 1967; Scheduled to be commissioned in 1968.

CHEHALIS (PG-94)

(B) Tacoma Boatbuilding Co., Inc., Tacoma, Wash.; (K) 8/15/67; Scheduled to be launched in July 1968; Scheduled to be commissioned in 1969.

CHESANING (YTB-769)

(B) Mobile Ship Repair Inc., Mobile, Ala.; (K) 7/17/63; (L) 2/5/64; Placed in service 6/23/64.

CHEYENNE (TAG-174) ex-MCV-693, SS MIDDLESEX VICTORY, SS WYOMING

(B) Oregon Shipbuilding Corp., Portland, Oreg.; (K) 5/8/45; (L) 6/26/45; (S) Mrs. William H. Curtis; Name assigned 11/20/62; Placed in service 12/29/62; Civilian crew.

CHICOPEE (YTM-747) ex-Army LT-1966

(B) Higgins Inc., New Orleans, La.; Placed in service in 1963 on loan from U.S. Army.

CLAUDE V. RICKETTS (DDG-5)

BIDDLE (DDG-5) (g.v.) was renamed CLAUDE V. RICKETTS 7/22/64.

CLEVELAND (LPD-7)

(B) Ingalls Shipbuilding Corp., Pascagoula, Miss.; (K) 11/30/64; (L) 5/7/66; (S) Mrs. Thomas H. Moorer; (C) 4/21/67, Captain R. H. Hogsed.

COCHRANE (DDG-21)

(B) Puget Sound Bridge and Drydock Co., Seattle, Wash.; (K) 7/31/61; (L) 7/18/62; (S) Mrs. Richard L. Cochrane and Mrs. Edward L. Cochrane, Jr.; (C) 3/21/64, Comdr. F. W. Benson, Jr.

CONCORD (AFS-5)

(B) National Steel and Shipbuilding Co., San Diego, Calif.; (K) 3/26/66; (L) 12/17/66; (S) Mrs. Ulysses S. G. Sharp, Jr.; Scheduled to be commissioned in May 1968.

CONNOLE (DE-1056)

(B) Avondale Shipyards, Inc., Westwego, La.; (K) 3/13/67; Scheduled to be launched in March 1968; Scheduled commissioning date not available.

CONYNGHAM (DDG-17)

(B) New York Shipbuilding Corp., Camden, N.J.; (K) 5/1/61; (L) 5/19/62; (S) Mrs. Carl Albert; (C) 7/13/63; Comdr. Edwin P. Smith.

CORONADO (LPD-11)

(B) Lockheed Shipbuilding and Construction Co., Seattle, Wash.; (K) 5/3/65; (L) 7/30/66; (S) Mrs. Stanhope Ring; Scheduled to be commissioned in 1969.

CORPUS CHRISTI BAY (T-ARVH-1) ex-ALBEMARLE (AV-5)

Name assigned 3/27/65; Converted at Naval Shipyard, Charleston, S.C., in 1964-66; Placed in service 1/11/66; Civilian crew.

CROCKETT (PG-88)

(B) Tacoma Boatbuilding Co., Inc., Tacoma, Wash.; (K) 6/18/65; (L) 6/4/66; (S) Mrs. Charles L. Horjes; (C) 6/24/67, Lt. Michael H. Freeman.

DACE (SSN-607)

(B) Ingalls Shipbuilding Corp., Pascagoula, Miss.; (K) 6/6/60; (L) 8/18/62; (S) Mrs. Gerald E. Ford; (C) 4/4/64, Comdr. J. A. Walsh.

DAHLONEGA (YTB-770)

(B) Mobile Ship Repair Inc., Mobile, Ala.; (K) November 1963; (L) 3/23/64; Placed in service 1964.

DALE (DLG-19)

(B) New York Shipbuilding Corp., Camden, N.J.; (K) 9/6/60; (L) 7/28/62; (S) Mrs. Daniel J. Flood; (C) 11/23/63, Captain R. R. Crutchfield.

DANIEL BOONE (SSBN-629)

(B) Mare Island Naval Shipyard, Vallejo, Calif.; (K) 2/6/62; (L) 6/22/63; (S) Mrs. James H. Wakelin, Jr.; (C) 4/23/64, Comdr. G. P. Steele (b) and Lt. Comdr. A. B. Crabtree (g).

DANIEL WEBSTER (SSBN-626)

(B) General Dynamics Corp., Groton, Conn.; (K) 12/28/61; (L) 4/27/63; (S) Mrs. W. Osborn Goodrich; (C) 4/9/64, Comdr. M. S. Blair (b) and Comdr. L. S. Smith, Jr., (g).

DAVIDSON (DE-1045)

(B) Avondale Shipyards Inc., Westwego, La.; (K) 9/30/63; (L) 10/2/64; (S) Mrs. Lylal A. Davidson; (C) 12/7/65, Comdr. H. L. Stanfield.

DEFIANCE (PG-95)

(B) Peterson Builders, Inc., Sturgeon Bay, Wis.; Scheduled to be laid down 9/25/67; Scheduled to be launched in June 1968; Scheduled to be commissioned in 1969.

DENVER (LPD-9)

(B) Lockheed Shipbuilding and Construction Co., Seattle, Wash.; (K) 2/7/64; (L) 1/23/65; (S) Mrs. John A. Love; Scheduled to be commissioned in 1968.

DE STEIGUER (AGOR-12)

(B) Northwest Marine Iron Works, Portland, Oreg.; (K) 11/12/65; (L) 3/21/66; Scheduled to be placed in service in 1968; Civilian crew.

DETROIT (AOE-4)

(B) Puget Sound Naval Shipyard, Bremerton, Wash.; (K) 11/29/66; Scheduled to be launched July 1968; Scheduled to be commissioned in 1969.

DIXON (AS-37)

(B) General Dynamics Corp., Quincy, Mass.; Scheduled to be laid down 9/7/67; Scheduled to be launched in May 1968; Scheduled to be commissioned in 1969.

DOLPHIN (AGSS-555)

(B) Portsmouth Naval Shipyard, Portsmouth, N.H.; (K) 11/9/62; Scheduled to be launched in May 1968; Scheduled to be commissioned in 1968.

DUBUQUE (LPD-8)

(B) Ingalls Shipbuilding Corp., Pascagoula, Miss.; (K) 1/25/65; (L) 8/6/66; (S) Mrs. Harold E. Hughes; Scheduled to be commissioned in September 1967.

DULUTH (LPD-6)

(B) New York Naval Shipyard, Brooklyn, N.Y.; (K) 12/18/63; (L) 8/14/65; (S) Mrs. C. Bruce Solomonson; (C) 12/18/65, Captain M. G. Tremaine.

DURHAM (AKA-114)

(B) Built at Newport News Shipbuilding & Drydock Co., Newport News, Va.; (K) 4/24/67; (L) 7/10/67; (S) Scheduled to be commissioned in January 1969.

EDWARD McDONNELL (DE-1043)

(B) Avondale Shipyards, Inc., Westwego, La.; (K) 4/1/63; (L) 2/15/64; (S) Mrs. Edward McDonnell; (C) 2/15/65, Comdr. D. L. Banks, Jr.

ENGLAND (DLG-22)

(B) Todd Shipyard Corp., San Pedro, Calif.; (K) 10/4/60; (L) 3/6/62; (S) Mrs. Clair Engle; (C) 12/7/63, Captain W. J. Caspari.

ENSENADA (YF-852)

(B) Erie Concrete & Steel Supply Co., Erie, Pa.; (K) March 1945; (L) August 1945; Placed in service 1964.

FINBACK (SSN-670)

(B) Newport News Shipbuilding and Dry Dock Co., Newport News, Va.; (K) 6/26/67; Scheduled to be launched in November 1968; Scheduled to be commissioned in 1969.

FLAGSTAFF (TAGM-21) ex-MC 1272, SS MISSION SAN JUAN

Renamed MERCURY (TAGM-21) 9/1/65.

FLAGSTAFF (PGH-1)

(B) Grumman Aircraft Engineering Corp., Stuart, Fla.; (K) 7/15/66; Scheduled to be launched in November 1967; Scheduled to be commissioned in 1968.

FLASHER (SSN-613)

(B) General Dynamics Corp., Groton, Conn.; (K) 4/14/61; (L) 6/22/63; (S) Mrs. P. B. Fay, Jr.; (C) 7/22/66, Comdr. K. M. Carr.

FLYER (TAG-178) ex-MC-1209, SS WATERWITCH, SS AMERICAN FLYER

(B) Moore Drydock Co., Oakland, Calif.; (K) 10/30/44; (L) 12/20/44; (S) Miss Margaret Helen Finnell; Placed in service 2/9/65; Name assigned 3/22/65; Civilian crew.

FLYING FISH (SSN-673)

(B) General Dynamics Corp., Electric Boat Div., Groton, Conn.; (K) 6/30/67; Scheduled to be launched in March 1969; Scheduled commissioning date not available.

FOX (DLG-33)

(B) Todd Shipyards Corp., Los Angeles Div., San Pedro, Calif.; (K) 1/15/63; (L) 11/21/64; (S) Mrs. Charles E. Bennett; (C) 5/8/66, Captain R. O. Welander.

FRANCIS HAMMOND (DE-1067)

(B) Todd Shipyards Corp., San Pedro, Calif.; (K) 7/15/67; Scheduled to be launched in April 1968; Scheduled commissioning date not available.

FRANCIS SCOTT KEY (SSBN-657)

(B) General Dynamics Corp., Groton, Conn.; (K) 12/5/64; (L) 4/23/66; (S) Mrs. Marjorie Key

Thorne and Mrs. William T. Jarvis; (C) 12/3/66, Captain F. W. Graham (b) and Lt. Comdr J. B. Logan (g).

FREDERICK COUNTY (LST-1184)

(B) National Steel & Shipbuilding Co., San Diego, Calif.; Scheduled to be laid down in December 1967; Scheduled to be launched in June 1968; Scheduled commissioning date not available.

FURER (DEG-6)

Renamed JULIUS A. FURER (g.v.) 4/5/66.

FURMAN (TAK-280) ex-MCV-174, SS FURMAN VICTORY

(B) Oregon Shipbuilding Corp., Portland, Oreg.; (K) 1/23/45; (L) 3/6/45; (S) Mrs. Carl Donaugh; Converted at American Shipbuilding Co., Toledo, Ohio, in 1963-64; Name assigned 9/14/64; Placed in service 10/14/64; Civilian crew.

“I regard the steady increase of naval strength as not a war, but a peace measure—a measure of defense involving grave questions of commercial security and national independence. Negotiation and diplomacy will be exhausted before war is made upon a nation of brave men, powerful, and ready for the conflict.”

—JAMES C. DOBBIN, *Secretary of the Navy, Annual Report to the President, 1855.*

JAMES C. DOBBIN,
Secretary of the Navy,
Annual Report to the President, 1855.

NAVY SHIPBUILDING PROGRAM
FISCAL YEAR 1967

The 1967 Shipbuilding Program provides for the construction of the following ships:

COMBATANT WARSHIPS		
Nuclear-powered Aircraft Carrier (CVAN) . . .	1	
Nuclear-powered Attack Submarines (SSN) . . .	5	
Nuclear-powered Guided Missile Frigate (DLGN)	1	
AMPHIBIOUS WARFARE SHIPS		
Dock Landing Ship (LSD)	1	
Tank Landing Ships (LST)	11	
MINE WARFARE SHIPS		
Ocean Minesweepers (MSO)	5	
PATROL SHIPS		
Escort Ships (DE)	10	
AUXILIARY SHIPS		
Ammunition Ships (AE)	2	
Combat Store Ship (AFS)	1	
Oceanographic Research Ship (AGOR)	1	
Surveying Ships (AGS)	2	
Replenishment Fleet Oilers (AOR)	2	
Submarine Rescue Ship (ASR)	1	
Salvage Tugs	2	
LANDING AND SERVICE CRAFT (MISCELLANEOUS)		311

The nuclear-powered attack carrier in the building program will be an improved version of

ENTERPRISE (CVA(N)-65). She will be powered with the new two-reactor plant that has been under development by the Atomic Energy Commission. The carrier will have a length overall of 1,092 feet, a waterline beam of 134 feet, and a full-load displacement of approximately 91,300 tons.

The nuclear-powered attack submarines (SS(N)) are the same class as the previous years' program. Designed for maximum effectiveness against all types of ships, particularly enemy submarines, these high-speed, 300-foot, 4,650-ton submarines will be equipped with a long-range detection system and the antisubmarine rocket (Subroc).

The guided missile frigate (DLG(N)) will be nuclear-powered and equipped with the Tartar missile. This 10,100-ton ship will be capable of operating offensively, either independently or with strike, antisubmarine, or amphibious forces against submarine, air and surface threats. She will have an overall length of 596 feet and a maximum beam of 60 feet.

Of great interest in this building program will be the submarine rescue ship (ASR), the first of a new class of ASRs. She will have the capability

to provide mobile search and rescue facilities and limited mobile salvage facilities for submarines. In addition this ASR will have the capability to provide target, weapon recovery, and escort services to submarines and trained divers and equipment for rescue and salvage to other units when needed. This ship is designed with the capability of handling and tending the Navy's new deep-submergence vehicles. The catamaran design of this ASR is unique; it will give greater stability when operating equipment at depth. Overall length will be 238 feet, maximum beam 86 feet and full-load displacement is in excess of 3,000 tons.

The 311 miscellaneous landing and service craft include barges, lighters, and various landing craft of all sizes whose combined functions consist of landing men, vehicles, and equipment from ship to shore.

"Tomorrow the shipbuilding which we are planning now will encounter its test in the events and missions which may occur then—our effort today must be adequate to the tasks of tomorrow."

—*David L. McDonald, Admiral, U.S. Navy, Chief of Naval Operations.*

The constantly-evolving scientific Navy is deployed and ready to maintain the peace.

LSD—dock landing ship

PG—patrol gunboat

AGOR—oceanographic research ship

AD—destroyer tender

AE—ammunition ship

AKA—attack cargo ship

AFS—combat store ship

LST—tank landing ship

AOE—fast combat support ship

PGH—patrol gunboat (hydrofoil)

MSO—minesweeper, ocean (non-magnetic)

ATS—salvage tug

AOR—replenishment oiler

AGS—surveying ship

ASR—submarine rescue ship

Appendix VI

ERRATA, VOLUMES I AND II

Errors creep into any human undertaking. Despite efforts to make the *Dictionary of American Naval Fighting Ships* as accurate as possible, some errors went unnoticed into print. Through the assistance of a number of kind readers we have since been able to compile a list of errata, excluding most typographical errors. "Line" is counted

from the first or last line of the text of the entry indicated or of the column if the entry starts or finishes in another column. "Stat." denotes the statistics section of the entry. The original material is in quotation marks with the corrected insertions underlined.

VOLUME I (REPRINT WITH CORRECTIONS 1964)

Page	Entry	Column	Line	Corrections
28	<i>Alfred</i>	1	Stat.....	Change "280" to 300
34	<i>Alioth</i>	1	1.....	Change "25 July" to <u>2 August</u>
35	<i>Almandite</i>	1	2.....	Add <u>renamed <i>Almandite</i> 9 January 1942</u> before "purchased"
40	<i>America</i> (SL).....	1	4 up.....	Change "2" to <u>3</u>
67	<i>Ashland</i>	1	3.....	Add, <u>Inspector of Naval Material, San Francisco</u> before "; commissioned"

¹ The corrected entries for *Dochra* through *Dodger II* follow on page 869 :

Dochra

A merchant name retained.

(Str: dp. 10,000; l. 380'; b. 51'; dr. 22'11"; s. 10 k.; cpl. 82; a. 2 4")

Dochra (No. 1758) was built in 1906 by Swan, Hunter and Wingham Richardson, Ltd., Newcastle, England; transferred from the Shipping Board 21 October 1917; and commissioned the same day, Lieutenant Commander C. H. R. Longbottom, USNR, in command.

Between 21 November 1917 and 16 March 1919, *Dochra* made six voyages from Halifax, Nova Scotia; Norfolk; and New York to French ports, carrying 11,874 tons of cargo, mostly beef and other foodstuffs, for the A.E.F. and naval forces operating in European waters. On 29 June 1918 she sailed from Halifax with a convoy but lost company during the night. Two days later, while seeking to rejoin her companions, she was overtaken by the German submarine *U-151* and shelled. *Dochra* beat off the attack, evaded the enemy, and returned to Halifax safely.

After the war *Dochra* sailed from New York 25 March 1919; delivered a cargo of supplies for the fleet at Guantanamo Bay, Cuba; then returned to Norfolk 15 April. She was decommissioned at New York 10 May 1919 and delivered to the Shipping Board for return to her owners the same day.

Doddridge

A county in West Virginia.

Doddridge was the name assigned to AK-176; however, the contract for construction was canceled on 16 August 1945.

Dodge County, see *LST-722*

Dodger II

Former name retained.

Dodger II (No. 46) was purchased by the Navy and commissioned on 6 July 1917. She was assigned to the

3rd Naval District, where she was assigned patrol duty. Following decommissioning, *Dodger II* was stricken from the Navy List 11 March 1919 and sold.

Dogfish

Any of various small sharks.

(SS-350: dp. 1,526; l. 311'9"; b. 27'3"; dr. 15'3"; s. 20 k.; cpl. 66; a. 1 5", 10 21" tt.; cl. *Gato*)

Dogfish (SS-350) was launched 27 October 1945 by Electric Boat Co., Groton, Conn.; sponsored by Mrs. A. M. Morgan; and commissioned 29 April 1946, Commander T. S. Baskett in command.

Dogfish sailed out of New London on local duties and cruised to the Caribbean and Bermuda to conduct training. She was overhauled and extensively modernized at Philadelphia Naval Shipyard from August 1947 to April 1948, and then served in experimental projects as well as normal operations at New London. From 31 October to 19 November 1948 she took part in large-scale fleet exercises ranging from the waters off Florida to Davis Strait between Labrador and Greenland.

She cruised to Scotland, England, and France between 4 February and 3 April 1949; joined in a convoy exercise off Cape Hatteras in February and March 1952; and operated along the East Coast and in the Caribbean during the next 3 years.

Dogfish sailed from New London 1 March 1955 for her first tour of duty with the 6th Fleet in the Mediterranean, returning to her home port 6 June. She called at Halifax, Nova Scotia, from 4 to 14 June 1956 during NATO Operation "New Broom." On 8 November she stood by and fought the fires on trawler *Agda* during local operations out of New London. She cruised to Faslane Bay, Scotland, between 31 January and 12 April 1958 to evaluate new equipment, and from 23 May to 8 August 1959 served in the Mediterranean once more. In October and November she took part in NATO antisubmarine exercises. After extensive overhaul, she resumed local operations from New London through 1962.
